## HOW AND WHERE TO LOOK FOR DATA

The Service Data is arranged by sections. Each Section has its own Tab and Special Index.

All subjects appear on the Car Model Pages. Here, Cross References direct you to the "Special Shop Notes" ahead of each Car Make and to separate Sections for the complete treatment of Individual Units, Types of Equipment, or Systems installed.

**IMPORTANT:** Use the Special and "Car Application" Indexes for each Section.

### LOCATION OF SUBJECTS

This guide directs you to the SUB-HEADING under which the Subject appears on the Car Model Pages and to other Sections for complete treatment of Equipment Units and Systems. There are Special Indexes in each separate Section.

SUBJECT	CAR MODEL SECTION Page Sub-Heading	OTHER SECTIONS Equip. Units & Systems	SUBJECT	CAR MODEL SECTION Page Sub-Heading	OTHER SECTIONS Equip. Units & Systems
ACCELERATING PUMP.....	Tune-Up & Carburetor.....	Carburetor Section	CASTER.....	Front Suspension.....	Front Suspension Section
AIR CLEANER.....	Carb. Equipment		CLUTCH & CONTROLS.....	Clutch.....	Clutch & Control Section
ARMATURE NUMBERS.....	Starter & Generator		COIL.....	Ignition	
AXLES (FRONT).....	Front Suspension.....	Front Suspension Section	COMPOUND CARBURETION.....	Carburetor.....	Carburetor Section
AXLES (REAR).....	Rear Axle.....	Rear Axle & Suspension Section	COMPRESSION PRESSURE.....	Tune-Up & Engine	
AUTOMATIC ADVANCE.....	Tune-Up & Ignition		CONDENSER.....	Ignition	
AUTOMATIC CHOKE.....	Carb. Equipment.....	Carburetion Equip. Section	CONNECTING RODS & BEARINGS.....	Engine & Shop Notes	
AUTOMATIC VALVE TAPPET TAKE-UP.....	Engine (Valves).....	Miscellaneous Section	CONVERTIBLE TOP CONTROLS.....	Misc. Mechanical.....	Miscellaneous Section
BATTERY.....	Battery		COOLING SYSTEM.....	Cooling	
BEARINGS.....	Engine & Shop Notes		CRANKSHAFT & BEARINGS.....	Engine & Shop Notes	
BRAKES & BOOSTERS.....	Brakes.....	Brake Section	CURRENT REGULATORS.....	Regulator.....	Electrical Equip. Section
BREAKER GAP.....	Tune-Up & Ignition		CUTOUT RELAYS.....	Cutout Relay Or Regulator.....	Electrical Equip. Section
BULB SPECIFICATIONS.....	Lighting		CYLINDER BORE.....	Engine & Shop Notes	
*CAM ANGLE.....	Tune-Up & Ignition		CYLINDER HEAD.....	Engine & Shop Notes	
*Delco-Remy Cam Angle specifications are correct with worn-in breaker arm rubbing block (plus or minus 2° to compensate for eccentricity and bearing wear). New breaker arm (with new rub- bing block) should be set for 3° less Cam Angle than specified.  Auto-Lite Cam Angle specifications are correct for breaker gap specified by car manufacturer except where special gap setting specified under "Cam Angle" on car model page.			CYLINDER SLEEVES.....	Engine & Shop Notes	
CAMBER.....	Front Suspension.....	Front Suspension Section	DIRECTION SIGNALS.....	Lighting.....	Electrical Equip. Section
CAMSHAFT & BEARINGS.....	Engine & Shop Notes		DISTRIBUTOR.....	Ignition.....	Electrical Equip. Section

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right hand side of cowl under engine hood. Letter following serial number indicates body type. First No. 654-6501.

**ENGINE NUMBER:**—Stamped on front left hand upper half of crankcase. First number 6601 (654).

## TUNE-UP

**COMPRESSION:**—Ratio—8.2-1. Std. aluminum head.  
Pressure—Approximately 105 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 20" with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-6. 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018-.020" (after 1000 miles).

Cam Angle—Closed 38° (distr. °).

Automatic Advance—10° at 1500 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Standard Setting—3° BTDC. Flywheel mark '/' (1 tooth before DC mark '1/6') at indicator.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle adjusting screw approximately midway between 'miss' and 'roll' points. Idle speed 7-8 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top edge of float bowl.

Accelerating Pump—Inner hole (Summer), outer hole (Winter).

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.008-.010" all valves—running clearance with engine hot.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

**Ignition Switch:**—Oakes-Hershey co-Incidental ignition switch and steering post lock. Switch used on cars with Startix has two 'on' positions. Lower or 'STX' position of lever is normal running position with Startix operative. Upper or 'IGN' position should be used to check ignition or whenever automatic cranking is not desired.

**COIL:** Auto-Lite IG-4065. On right side of engine.

Ignition Current—2.5 amperes idling, 4.5-5.5 amperes at 6.0 volts with engine stopped.

**CONDENSER:** Auto-Lite No. IGB-1025.

Capacity—.20-.25 microfarads.

**DISTRIBUTOR:** Auto-Lite IGB-4318. Single breaker, 6 lobe cam, full automatic advance type.

Breaker Gap—.020-.024" (first 1000 miles with new points), .018-.020" (after first 1000 miles).

Cam Angle or Dwell—Closed 38°, Open 22° (distributor).

Breaker Arm Spring Tension—17-20 ozs.

Automatic Advance			
Distributor	Engine		
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	540	4	1080
4	780	8	1560
6	1020	12	2040
8	1260	16	2520
10	1500	20	3000

**Distributor Removal:**—Mounted on cylinder head. To remove, take out hold-down screw in advance arm, lift distributor out.

## IGNITION TIMING

Std. Setting Flywheel Deg. Piston Position  
All engines ..... 3° BTDC ..... 0042° BTDC

To Set Timing—With #1 piston on compression, turn engine over until piston is 3° before top dead center, stop when flywheel mark '/' lines up with

indicator in inspection hole in flywheel housing. This mark is 3° or approximately 1 tooth before top dead center mark '1/6'. Then loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

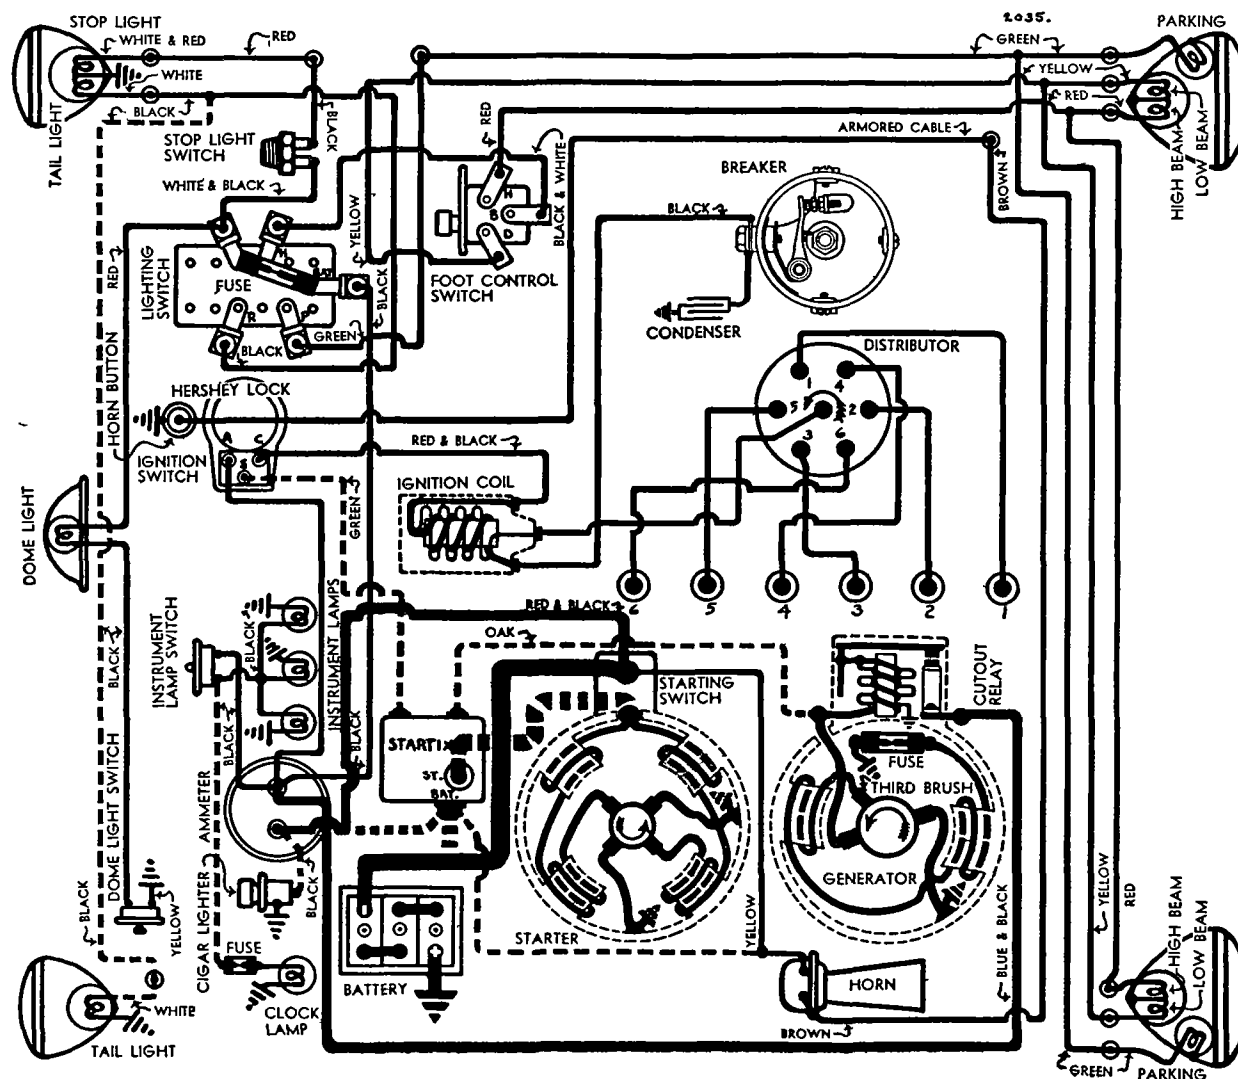

## CARBURETOR

Stromberg Model EX-22.  $1\frac{1}{4}$ " Single Barrel, Down-draft type with manual choke control.

For complete data, refer to Carburetor Index.

**NOTE:**—Do not adjust carburetor until engine is warmed up so that engine will idle at hot or slow idling speed.

**Idle Adjustment:**—With engine hot and choke valve fully released (choke button in against dash), set throttle stopscrew to idle engine at 7-8 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires

smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Pump lever has two holes for pump link engagement. Set as follows:  
Outer hole (Max. stroke)—Winter temperatures.  
Inner Hole (Min. stroke)—Summer temperatures.

**Throttle Cracking**—No adjustment required.

### CARB. EQUIPMENT

**Air Cleaner**—AC. #1525997 oil-wetted type standard, heavy duty oil bath type optional.

**Fuel Pump**—AC. Type B #1521814. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—K-S Telegauge hydrostatic type. K-S Part No. 5297 (dash unit), 5310 (tank unit). See article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

### BATTERY

**BATTERY**—U.S.L. Type RN-15A. 6 volt, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 2.9 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under right hand front seat.

### STARTER

**Auto-Lite MAJ-4032 (Std.), MAJ-4035 (RHD), MAJ-4033 (with Startix).** Armature No. MAJ-2006.

**Drive**—Inboard Bendix Type R11FX-10.

**Cranking Engine**—155 R.P.M. 170 amperes at 5.2 volts.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—44-56 ozs. (MAJ-4032, 33), 31-42 ozs. (MAJ-4035) with new brushes.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4100	5.5	57
.3 "	2500	5.5	100
2.25 "	1450	5.0	200
4.6 "	960	4.5	300
7.3 "	575	4.0	400
10.3 "	225	3.5	500
12.0 "	Lock	3.0	550
17.0 "	Lock	4.0	750

**Removal**—Starter flange mounted on right front face of flywheel housing. To remove, take out 3 flange mounting screws.

**Starting Switch**—(MAJ-4032, 35) SW-3737S. Mounted on starter and operated through pull cable by button on instrument panel. Pull required to close switch contacts must be 2.3 lbs. minimum measured at end of lever.

(MAJ-4033). Startix Type D. Automatic starting controlled by ignition switch. See article in Equipment Section.

For complete data, refer to Electrical Equipment Index.

### GENERATOR

**Auto-Lite Model GAR-4603-5.** Armature GAR-2077. Air-cooled. Third brush control type.

**Charging Rate Adjustment**—Take off commutator cover band. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate.

Standard Charging Rate Setting—20 amperes (cold), 16 amperes (hot), 2300 R.P.M. or 25 M.P.H.

#### Performance Data

Cold		Hot	
Amperes	Volts	R.P.M.	Volts
0	6.4	720	6.4
4	6.8	860	6.8
8	7.25	1000	7.25
12	7.7	1160	7.7
16	8.1	1360	8.1
20	8.5	1660	8.4
22.4	8.8	2300	

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-36 ozs. (new brushes).

**Field Current**—3.70-4.10 amperes at 6.0 volts.

**Field Fuse**—5 ampere under cover on generator field frame near cutout relay.

**Motoring Current**—4.65-5.15 amperes at 6.0 volts.

**Removal**—Pivot mounted at right front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Adjusted in usual manner by swinging generator out. Belt tension should be just sufficient to drive generator and water pump without slipping.

### CUTOUT RELAY

**Auto-Lite Model CB-4021.** Mounted on generator. For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.5-7.25 volts, 800 R.P.M.

**Cuts Out**—5-2.5 ampere discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

### LIGHTING

**LIGHTING (654)**—Headlamps. Lamps aimed straight ahead. Upper and lower beams controlled by foot selector switch on toeboard.

#### Switches

**Lighting**—Soreng-Manegold Model A-5640-A.

**Foot Selector**—Delco-Remy.

**Stop Light**—Motometer No. 58012 hydraulic type.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Instrmt., Clock	3	63
Stop and Tail	21-3	1158
Dome	6	81

### MISC. ELECTRICAL

**FUSES**—Lighting—20 ampere on lighting switch.

Clock Lamp—10 ampere on clock.

Generator Field—5 ampere on generator.

**HORNS**—Schwarze Vibrator type. Current draw 6 amp.

### ENGINE

**ENGINE SPECIFICATIONS**—Lycoming Model WF. Six cylinder 'L' head type.

**Bore**—3 1/16". **Stroke**—4 3/4".

**Displacement**—210 cubic inches.

**Rated Horsepower**—22.5 (SAE).

**Developed Horsepower**—85 at 3500 R.P.M.

**Compression Ratio and Pressure**—6.2-1 Std. aluminum head. No optional ratios. Pressure approximately 105 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of approx. 20" with engine idling at 7-8 M.P.H.

**PISTONS**—Nelson Bohnalite, aluminum alloy, split skirt, Invar Strut type.

**Length**—3 3/4".

**Weight**—16 ozs. (stripped), 21.92 ozs. (with rings and pin).

**Removal**—Pistons and rods removed from below.

**Clearance**—Top .020". Skirt .0015". See Fitting Pistons.

**Replacement Pistons**—Pistons furnished .003" and .005" oversize.

**Fitting New Pistons**—Use .0015" feeler stock 1/2" wide. Pull required to withdraw feeler from between piston and cylinder wall on side opposite slot must be between 5-10 lbs.

**Installing Pistons**—Slot should be toward left or camshaft side of engine.

**PISTON RINGS**—Two compression, two oil control rings per piston, all above pin. Lower ring grooves drilled with eight 1/16" oil drain holes (#3), eight 1/8" holes and oil holes to piston pin bosses (#4).

Ring	Width	End Gap	Side Clearance
Comp. (all)	1/8"	.008-.012"	.0015-.003"
Oil Cont. (3)	1/8"	.010-.013"	.001-.0025"
Oil Cont. (4)	3/16"	.010-.013"	.001-.0025"

**PISTON PIN**—Diameter—.8750-.8748". Length—2.52-2.50". Pin is locked in rod. No bushing used in pist'n. **Pin Fit in Piston**—Tight push fit at 70° F. (selective).

**CONNECTING ROD**—Length—9 1/2" (center-to-center). Weight—37.4 ozs. with bushings and caps.

**Crankpin Journal Diameter**—2 1/8".

**Lower Bearing**—Spun babbitt-lined. No shims.

**Clearance**—.001-.0025" (total), .004-.009" (total side-play).

**Bearing Adjustment**—Adjust by filing bearing caps when wear exceeds .004". No shims used.

**Installing Rods**—Rods are numbered and must be installed in same numbered cylinders. Lower bearings are offset. Install rods with narrow half of bearing toward nearest main bearing. Oil jet holes in upper half of lower bearing must be toward camshaft side of engine.

**CRANKSHAFT**—Four bearing. Integral counterwgt. Journal Diameters—2 3/8" all bearings.

**Clearance**—.001-.00162".

**Bearing Type**—Bronze-backed, babbitt-lined.

**Bearing Adjustment**—Take up bearings when wear exceeds .003". Check adjustment by assembling .002" feeler 1/2" wide between bearing and shaft. Crankshaft should turn by hand with feeler in place and bearing caps tight.

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

**End Thrust:** Taken by No. 3 intermediate bearing. Endplay .005" minimum, .010" maximum.

**CAMSHAFT:**—5 Bearing. Non-adjustable chain drive. Bearing Type—Bronze and cast-iron.

Clearance—.0025-.0035".

**End Thrust:**—Taken by thrust button riveted to inside face of chain case cover. Endplay .015".

**Timing Chain:**—Whitney. Width  $1\frac{1}{4}$ ". Pitch  $\frac{1}{2}$ ". Length  $24\frac{1}{2}$ " or 49 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so there are 12 links on lower side of chain between marks. This is equal to 13 teeth inclusive of teeth meshed opposite marks. With sprockets in this position, pistons 1 and 6 will be on top dead center with dead center mark on flywheel at indicator on housing. This setting correct for all engines.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	19/16"	3424-.3425"	5¼"
Exhaust	1 13/32"	3420-.3425"	5¼"

	Seat Angle	Lift	Stem Clearance
Intake	30°	5/16"	.0045-.008"
Exhaust	45°	5/16"	.0045-.008"

**Valve Guides:**—Pressed in block and finish reamed to size providing correct stem clearance.

**Valve Springs:**—Springs have 'closed coils' at one end. Install springs with closed coil end up.

	Spring Pressure	Spring Length
Valve Closed	42-47 lbs	2 3/16"
Valve Open	88-94 lbs	1¾"

**VALVE TIMING**

**Tappet Clearance:** .008-.010" all valves, engine hot.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open  $7\frac{1}{2}$ ° BTDC. Close  $37\frac{1}{2}$ ° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 5° ATDC.

**NOTE:**—Figures correct with .012" tappet clearance.

**To Check Valve Timing:**—Set tappet clearance #1 intake valve at .012". This valve should open with piston #1 .0253" before top dead center when flywheel mark '1/6' (dead center mark) is approximately 2.29 teeth before the indicator on the flywheel housing. Reset tappet clearance at .008-.010" with engine hot.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—15 lbs. idling, 40 lbs. maximum engine R.P.M. with warm oil.

**Oil Pressure Relief Valve:**—Located in bracket bolted on left hand side of crankcase. Operates at 30 lbs. Adjustable by changing spacer washers between plug and relief valve spring (plug at lower end of bracket).

**Crankcase Capacity:**—6 quarts (refill).

**CLUTCH**

**CLUTCH:**—Long Model 9AB-CS. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See Clutch Section for complete data.

**Facings:**—Moulded type, 2 required. Inside Diam.  $5\frac{3}{4}$ ". Outside Diam. 9". Thickness .137".

**Adjustment:**—Free movement of clutch pedal must be 1". To adjust, loosen transverse bolt at lower end

of clutch pedal, change position of pedal (bolt hole is slotted).

**Removal:**—Drop drive shaft by disconnecting front universal, remove transmission, take off pan on underside of clutch housing. Take out cap screws mounting clutch on flywheel, turning all screws out evenly to relieve spring tension, remove clutch from below through pan opening.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliot ends and semi-elliptic springs.

**Kingpin Inclination:**— $7\frac{1}{2}$ ° crosswise.

**Camber:**— $1\frac{1}{2}$ °. No adjustment.

**Caster:**— $3\frac{1}{2}$ °-4°. Adjust by using wedge shims between spring and spring pad on axle.

**Toe In:**— $\frac{1}{8}$ - $3/16$ ". Adjust in usual manner by changing length of tie rod.

**Tread:**—59" (front), 62" (rear).

**STEERING GEAR**

**Steering Gear:**—Ross Model 140 Cam-and-Lever type. See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, single anchor type. Hand lever applies rear wheel brakes. See article in Brake Section for complete adjustment procedure.

See Brake Section for complete data.

**Drum Diameter:**—12".

**Lining:**—Moulded type. Width  $1\frac{1}{2}$ ". Thickness  $3/16$ ". Length  $24\frac{9}{32}$ " per wheel.

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** First No. 4501 (Eight 852), 34501 (Supercharged 852). Stamped on right side of cowl under engine hood.

**ENGINE NUMBER:**—Stamped on left hand upper half of crankcase at front of engine.

## TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 Std. aluminum head.

NOTE—6.5-1 al. head used on Schgd. 851.

Pressure—Approximately 105 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 20" with engine idling at 5-6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Eight—Champion J-6. 14 mm. Metric. Supercharged Eight—Champion J-9. 14 mm. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.013-.017" (Eight—after 1000 miles), .018-.020" (Supercharged Eight).

Cam Angle—27.5° closed—Eight, 36° closed—Supercharged Eight (Distr. °).

Synchronization (Schgd. Eight)—Movable contacts open 45° (distr.) after fixed set.

Automatic Advance (Eight)—10° at 1500 RPM (distr.).

Automatic Advance (Schgd. Eight)—5½° at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Standard Setting—3-4° BTDC. Flywheel mark '1' (1-1½ teeth before DC mark '1/8') at indicator on right side of engine. NOTE—On Schgd. Eight, contacts open alternately at 45-45° (distr.) intervals.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Two screws (Eight), one (Supercharged) midway between 'miss' and 'roll' points. Idle speed 5-6 MPH.

Float Level—Fuel level 15/32" (Eight), 5/8" (Supercharged Eight) below top edge of bowl.

Accelerating Pump—Inner hole (Summer), outer hole (Winter).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.008-.010" all valves, engine hot.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock. Switch has two 'on' positions. Lower or 'STX' position of lever is normal running position with Startix operative. Upper or 'IGN' position should be used to check ignition or whenever automatic cranking is not desired.

**COIL:** Auto-Lite CE-4001G (Eight), CE-4001 (Supercharged Eight). Mounted on right side of engine. Ignition Current—3 amperes idling, 4.5-5.5 amperes at 6.0 volts stopped.

**CONDENSER:** Auto-Lite No. IG-2671 (Eight), IGB-1025C (Supercharged Eight). Capacity—.20-.25 mfd.

**DISTRIBUTOR (EIGHT):** Auto-Lite IGP-4002. Single

breaker, 8 lobe cam, full automatic advance type. No synchronization required.

Breaker Gap—.013-.017" (.015-.019" for first 1000 miles with new points).

Cam Angle or Dwell—Closed 27.5°. Open 17.5° with .017" breaker gap.

Breaker Arm Spring Tension—18 ozs. min., 20 ozs. max.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	540	4	1080
4	780	8	1560
6	1020	12	2040
8	1260	16	2520
10	1500	20	3000

**DISTRIBUTOR (SCHGD. EIGHT):** Auto-Lite IGH-4027. Two breaker, 4 lobe cam, full automatic advance. Contacts must be synchronized (see Timing).

**Firing Interval:**—Contacts open alternately at 45° intervals corresponding to 90° engine firing intervals.

Breaker Gap—.018-.020".

Cam Angle or Dwell—Closed 36°. Open 9° with .020" gap (both sets together when synchronized).

Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
1	700	2	1400
2	990	4	1980
3	1280	6	2560
4	1560	8	3120
5.5	2000	11	4000

**Distributor Removal:**—Mounted on cylinder head. To remove, take out hold-down screw in advance arm.

CONTINUED N NEXT PAGE

C NTINUED FR M PRECEDING PA E

**IGNITION TIMING**

**Standard Setting:** Flywheel Degs. Piston Position  
All engines (Eight)..... 3° BTDC.....0042° BTDC  
All engines (SCHgd).....3-4° BTDC.....0042° BTDC  
**NOTE**—No synchronization necessary on distributor model IGP-4002 (Eight).

**Timing**—With #1 piston on compression, turn engine over until piston is 3-4° before top dead center, stop when flywheel mark '1' lines up with indicator in inspection hole in right front face of flywheel housing. This mark is approximately 1-1½ teeth before the top dead center mark '1/8'. Then loosen advance arm clamp bolt, rotate distributor until contacts (stationary—mounted directly on breaker plate, on IGH-4027 distributor) begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

**Synchronization (Movable Contacts)**—Manufacturer recommends use of a Winn Synchrometer to synchronize contacts. No flywheel marks are provided and some type of equipment must be used for this purpose. Change position of movable sub-plate carrying second set of contacts by loosening two lock screws and shifting plate until movable contacts open exactly 45° after stationary set. Distributor firing intervals are regular 45-45-45 distributor deg.

**CARBURETOR****EIGHT**

**Carburetor (Eight):** Stromberg Model EE-1, 1" dual downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine hot, close throttle, see that choke control button on dash is in off position (choke valve fully released), set throttle stop-screw so that engine idles at 5-6 M.P.H. Turn inner idle adjusting screw in until engine misses, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly; repeat with outer idle adjusting screw. Readjust throttle stop-screw for correct idling speed.

**Accelerating Pump Setting**—Pump lever has two holes for pump link engagement. Set as follows:

Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.  
**Throttle Cracking**—No adjustment required. See separate article in Carburetion Section.

**SUPERCHARGED EIGHT**

**Carburetor (Schgd. 8):** Stromberg Model EX-32 1½" plain tube, downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine hot, close throttle, see that choke control button on dash is in off position (choke valve fully released), set throttle stop screw so that engine idles at 5-6 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop-screw for correct idling speed.

**Accelerating Pump Setting**—Pump lever has two holes for pump link engagement. Set as follows:  
Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1525598 11-wetted type standard, heavy duty 11-bath type optional.

**Fuel Pump:**—AC. Type B #1522146 diaphragm type  
*For complete data, refer to Carburetion Equip. Index.*  
**Gasoline Gauge:**—K-S Telegauge hydrostatic type.  
K-S Part No. 5297 (dash unit—both models), 5652 (tank unit—Eight), 5310 (tank unit—Schgd. 8).  
*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—U.S.L. Type XY-15A. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).  
**Starting Capacity**—122 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.3 minutes.  
**Grounded Terminal**—Positive (+) terminal.  
**Location**—Under right hand front seat.

**STARTER**

**Auto-Lite Model MAB-4063.** Armature MAB-2006.  
**Drive**—Inboard Bendix Type R11FX-10.  
**Cranking Engine**—140 R.P.M. 160 amperes at 5.2 v.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—44-56 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.5	575
22.5 "	Lock	4.0	750

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out 3 flange mounting screws.

**Starting Switch:**—Startix Type D. Automatic starting controlled by ignition switch. See article in Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Auto-Lite Model GAR-4603-5.** Armature GAR-2077. Air-cooled. Third brush control type.

**Charging Rate Adjustment**—Take off commutator band. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate. Brush held in position by friction.

**Standard Charging Rate Setting**—20 amperes (cold), 16 amperes (hot), 2300 R.P.M. or 25 M.P.H.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	760
4	6.8	860	4	6.8	925
8	7.25	1000	8	7.25	1125
12	7.7	1160	12	7.7	1350
16	8.1	1360	16	8.1	1680
20	8.5	1660	19.2	8.4	2600
22.4	8.8	2300			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-36 ozs. (new brushes).

**Field Current**—3.70-4.10 amperes at 6.0 volts.

**Field Fuse**—5 ampere under cover on generator field frame near cutout relay.

**Motoring Current**—4.65-5.15 amperes at 6.0 volts

**Removal:**—Generator pivot mounted at right front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Adjusted in usual manner by swinging generator out until belt tension just sufficient to drive generator and water pump without slipping.

**CUTOUT RELAY**

**Auto-Lite Model CB-4021.** Mounted on generator.  
*For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.5-7.25 volts, 800 R.P.M.  
**Cuts Out**—5-2.5 ampere discharge current.  
**Contact Gap**—.015-.045".  
**Air Gap**—.010-.030" with contacts closed.

**LIGHTING**

**LIGHTING:**—Headlamps—Headlamps aimed straight ahead. Upper and lower beams controlled by foot selector switch on toeboard.

**Switches**

**Lighting**—Soreng-Manegold Model A-5640-A.

**Foot Selector**—Delco-Remy.

**Stop Light**—Motometer No. 50812 hydraulic type.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrmt., Clock	3	63
Stop and Tail (L.H.)	21-3	1158
Tail (R.H.)	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere on lighting switch.

Clock Lamp—10 ampere on clock.

Generator Field—5 ampere on generator.

**HORNS:**—Schwarze Vibrator type. Horn current 6 amperes each.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—Lycoming Model GG and GH (Supercharged). 8 cylinder In Line, 'L' head.

**Bore**—3 1/16". **Stroke**—4¾".

**Displacement**—279.92 cubic inches.

**Rated Horsepower**—30.01 (SAE).

**Developed Horsepower**—115 at 3600 R.P.M., 150 at 4000 R.P.M. (Supercharged).

**Compression Ratio and Pressure**—6.2-1 Std. aluminum head. Pressure approximately 105 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of 20" with engine idling at 5-6 M.P.H.

**PISTONS (EIGHT):** Bohn, aluminum alloy, Invar strut, split skirt type.

**Length**—3¾".

**Weight**—16 ozs. stripped, 21.92 ozs. with rings and pin.

**Removal**—Pistons and rods removed from below.

**Clearance**—Top .00975-.00825", Skirt .0015".

**Replacement Pistons:**—Pistons furnished in .003" and .005" oversizes.

**Fitting New Pistons:**—Use .0015" feeler stock ½" wide inserted between piston and wall on side opposite slot to check clearance. Pull required to withdraw feeler must be between 5-10 lbs.

**Installing Pistons:**—Slot should be toward left or camshaft side.

**PISTONS (SCHGD. EIGHT):** Ray-Day, Ray-Day metal alloy type. Length—3¾".

**Weight**—14.40 ozs. stripped, 19.84 ozs. with rings and pins.

**Removal**—Pistons and rods removed from below.

**Clearance**—Top .01125-.01325". Skirt .002-.0025".

**Fitting New Pistons:**—Use .002" feeler ½" wide inserted between piston and cylinder wall at right

## ENGINE

## CONTINUED FROM PRECEDING PAGE

angles to pin bosses to check clearance. Pull required to withdraw feeler should be 6-11 lbs.

**PISTON RINGS—(FOR BOHN PISTONS):**—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled with eight 1/16" oil drain holes (#3), eight 1/8" oil holes and oil holes to piston pin bosses (#4).

Ring	Width	End Gap	Side Clearance
Comp. (all) .. 1/8"		.008-.013"	.0015-.003"
Oil (#3) .. 1/8"		.008-.013"	.001-.0025"
Oil (#4) .. 3/16"		.008-.013"	.001-.0025"

**PISTON RINGS—(ENGS. WITH RAY DAY PISTONS):**—Two compression, one oil control ring per piston, all above pin. Rings are Perfect Circle #70 (comp.), #85 (oil control).

NOTE—Compression rings are stepped or grooved and must be installed with the groove downward.

Ring	Width	End Gap	Side Clearance
Comp. (all) .. 1/8"		.008-.013"	.0015-.003"
Oil Cont. .... 3/16"		.007-.015"	.001-.0025"

**PISTON PIN:**—Diameter—.8750-.8748". Length—2.520-.2500". Pin is locked in rod. No bushing used in piston. Pins furnished for service standard and .003" oversize.

Pin Fit in Piston—Tight push fit at 70°F.

**CONNECTING ROD:**—Length—9 1/2".

Weight—2.34 lbs.

Crankpin Journal Diameter—2 1/8".

Lower Bearing—Spun babbitt-lined type. No shims. Clearance—.001-.0025". Sideplay—.004-.009".

Bearing Adjustment:—Adjust by filing bearing caps when wear exceeds .004".

Installing Rods:—Rods are numbered and must be installed in same numbered cylinders. Lower bearings are offset. Install rod with narrow half of bearing toward nearest main bearing. Oil jet holes in upper half of lower bearing must be toward camshaft side of engine on all rods.

**CRANKSHAFT:**—Five bearing. Counterweights used on Supercharged only. Lancashire type vibration dampener used on all models.

Journal Diameters—2 3/8" all bearings.

Bearing Type—Bronze-backed, babbitt-lined.

Clearance—.001-.00162".

Bearing Adjustment:—Take up bearings by filing bearing caps when wear exceeds .003". Check adjustment by assembling .002" feeler 1/2" wide between bearing and shaft. Crankshaft should turn by hand with feeler in place and bearing cap tight.

End Thrust:—Taken by center (#3) bearing. Endplay .005" minimum, .010" maximum.

**CAMSHAFT:**—Six bearing. Non-adjustable chain drive. Bearing Type—Bronze and cast-iron (non-supercharged), steel-backed, babbitt-lined bushings (Supercharged). Clearance—.0025-.0035".

End Thrust:—Taken by thrust pin riveted on inside face of chain case cover. Endplay .015".

Timing Chain:—Whitney. Width 1" (non-supercharged), 1 1/4" (Supercharged). Pitch 1/2". Length 24 1/2" or 49 links.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that there are 12 links or 13 teeth (inclusive of teeth meshed opposite marks) between marks. With sprockets in this position, pistons #1 and 8 will be on top dead center

with dead center mark on flywheel lined up with indicator on housing.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake .....	1 9/16"	.3420-.3425"	5 1/4"
Exhaust .....	1 13/32"	.3420-.3425"	5 1/4"

	Seat Angle	Lift	Stem Clearance
Intake .....	30°	5/16"	.0045-.008"
Exhaust .....	45°	5/16"	.0045-.008"

Valve Guides:—Pressed in block and finish reamed to provide correct stem clearance (see table above).

Valve Springs:—Springs have 'closed coils' at one end. Install springs with closed coil end up.

	Spring Pressure	Spring Length
Valve Closed .....	42-47 lbs.	2 3/16"
Valve Open .....	88-94 lbs.	1 7/8"

## VALVE TIMING

Tappet Clearance: .008-.010" all valves, engine hot.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 7 1/2° BTDC. Close 37 1/2° ALDC.

Exhaust Valves—Open 50° BLDC. Close 5° ATDC.

To Check Valve Timing—Set tappet clearance #1 intake valve at .012". This valve should open with piston #1 .0253" before top dead center when flywheel mark '1/8' (dead center mark) is approximately 2.29 teeth before the indicator on the flywheel housing. Reset tappet clearance at .008-.010" with engine hot.

## LUBRICATION

LUBRICATION:—Pressure. Gear type oil pump located in crankcase.

Normal Oil Pressure:—15 lbs. idling, 40 lbs. at maximum engine R.P.M. with warm oil.

Oil Pressure Relief Valve:—Located in bracket bolted on left hand side of crankcase. Operates at 30 lbs. Adjustable by changing spacing washer between plug and relief valve spring (plug at lower end of bracket).

Crankcase Capacity:—8 quarts (refill).

## SUPERCHARGER

SUPERCHARGER:—Centrifugal type mounted at left of engine and driven through accessory sprocket and shaft by separate chain in chain case. Chain is adjustable.

Chain Adjustment:—Accessory sprocket mounted on eccentric with slotted mounting holes. Adjusted by loosening screws and rotating eccentric to take up chain slack.

## CLUTCH

CLUTCH:—Long Model 9AB-6CI. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Moulded type, 2 required. Inside Diam. 5 1/2". Outside Diam. 9 3/4". Thickness .137".

Adjustment—Free movement of clutch pedal should be 1". To adjust, loosen transverse bolt at lower end of clutch pedal, change position of pedal (bolt is slotted).

Removal—Drop drive line (disconnect at front universal), remove transmission, take off pan under clutch housing, take out screws mounting clutch on flywheel, turning all screws out evenly, remove clutch from below through pan opening in housing.

## TRANSMISSION

Detroit. Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse).

See Transmission Section for complete data.

Removal: Remove speedometer pinion assembly (not required on Dual-ratio cars with speedometer pinion in rear axle). Disconnect propeller shaft at front universal joint, remove hand brake lever, take out transmission mounting bolts, pull transmission straight back until clutch shaft is clear, lower transmission and remove.

## UNIVERSALS

Mechanics Model 3C. Roller bearing type. Two used.

See Universals Section for complete data.

## SHOCK ABSORBERS

Delco. Direct acting, hydraulic type.

See Shock Absorber Section for complete data.

## REAR AXLE

## STANDARD

Columbia Model 17000A-6. Semi-floating, Spiral Bevel gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio—4.08-1 Std.

Backlash—.003-.005". Shim adjustment.

Removal: Disconnect propeller shaft at rear universal joint, disconnect hand brake linkage, hydraulic brake lines, and shock absorbers. Disconnect spring U-bolts and spring shackles, remove axle assembly from beneath car.

## REAR AXLE

## SPECIAL EQUIPMENT

Columbia Model 800A-5. Two-speed, semi-floating, Spiral Bevel gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio—4.55-1 (Low), 3.03-1 (High).

Removal: Same as for standard axle (above) after control unit vacuum lines have been disconnected. CAUTION—Speedometer pinion assembly must be removed before axle shaft taken out (pinion mounted in axle housing). When re-installing speedometer pinion, see that pinion has .010" endplay.

## FRONT SUSPENSION

Front Suspension:—Conventional 'I' beam section front axle with Reverse-Elliot ends and semi-elliptic springs.

Kingpin Inclination—7 1/2° crosswise.

Caster—2° maximum without load, 3° maximum loaded. Adjusted by inserting wedge shims between spring and spring pad on axle.

Camber—1 1/2°. No adjustment.

Toe In—1/8-3/16". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

Steering Gear: Ross Model 615 Cam & Lever type.

See Steering Gear Section for complete data.

## BRAKES

BRAKES:—Service—Bendix Hydraulic, Duo-Servo, single anchor type. Hand lever applies rear wheel brakes. See article in Brake Section for complete adjustment procedure.

See Brake Section for complete data.

Drum Diameter—12".

Lining—Moulded type. Width 2". Thickness 3/16".

Length 24 9/32" per wheel.

Clearance—.010" at heel and toe of each shoe.

Hand Brake Adjustment:—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** First number 60-001 (Series 60), 63-001 (Series 63), 65-343 (Series 65). Stamped on left frame side member below engine oil level gauge (Series 60 and all Series 63, 65 Export Cars), on left side of cowl under engine hood (Series 63, 65).

**ENGINE NUMBER:** First number 60-001 (Series 60), 63-001 (Series 63), 65-501 (Series 65). Stamped on left side of crankcase directly above starter Bendix

## TUNE-UP

**COMPRESSION PRESSURE:** 90 lbs. at 150 RPM. (60, 63), 135 lbs. at 200 RPM. (65).

**VACUUM READING:** Steady 18-20" idling at 7 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUGS:** Auto-Lite A-9 (Series 60, 63), Champion H-10 (Series 65). 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.018" (.022" for new points).

**Cam Angle**—41° closed (with .020" gap).

**Breaker Arm Spring Tension**—17-20 ounces.

**Automatic Advance**—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

**Standard Setting**—2° BTDC (Series 60, 63), 4° BTDC (Series 65) with DC mark on flywheel 3/16" (Series 60, 63), 3/8" (Series 65) ahead of indicator.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw approximately 1½ turns open (on Tillotson carburetor, set screw ¼ turn in from "missing" point). Idle speed 500 Engine RPM or 7 MPH. **NOTE**—See Carburetor for High Speed adjustment on Tillotson carburetor.

**Float Level**—1 5/32" bottom of float to throttle body gasket seat with needle valve closed.

**VALVES:** See Valve Timing.

**Tappet Clearance (Series 60, 63)**—.006" Intake, .009" Exhaust with engine warm (130° F.).

**Tappet Clearance (Series 65)**—.011" Intake, .012" Exhaust with engine warm.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

**Ignition Switch:**—Douglas #2980 Ignition Lock Assembly. Coil connection not armored.

**Ignition Lock**—Douglas.

**COIL:** Auto-Lite Model IG-4065. Service Coil IG-4070. Mounted on the dash.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite No. IGB-1025.

**Capacity**—20-25 microfarads.

**DISTRIBUTOR:** Auto-Lite IGW-4105A, IGW-4105B, IGW-4105C. Single breaker, 4 lobe cam, full automatic advance type.

**Breaker Gap**—.018" (.022" for new set of points).

**Cam Angle or Dwell**—41° closed, 49° open (distributor degrees with .020" gap).

**Breaker Arm Spring Tension**—17-20 ozs.

**Rotation**—Clockwise viewed from the top.

**Automatic Advance—IGW-4105-A**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
.8	500	1.2	1000
1	600	2	1200
2	900	4	1800
3	1200	6	2400
4	1500	8	3000
5	1800	10	3600

## Automatic Advance—IGW-4105-B

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	450	0	900
.4	500	.8	1000
2	700	4	1400
4	940	8	1880
6	1190	12	2380
8	1430	16	2860
10	1680	20	3360
11	1800	22	3600

## Automatic Advance—IGW-4105-C

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	800	4	1600
5	1400	10	2800
8	2000	16	4000
10	2400	20	4800

**Removal:**—Distributor mounted on bracket at front of engine. To remove, loosen clampscrew in mounting bracket, lift distributor out.

## IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 60, 63	2° BTDC	.0016" BTDC.
Series 65	4° BTDC	.0048" BTDC.

**To Set Timing**—With #1 piston on compression, turn engine over until piston reaches firing position when point on flywheel 3/16" (Series 60, 63), 3/8" (Series 65) ahead of dead center mark "/" lines up with indicator under cover on flywheel housing. Loosen distributor clampscrew, rotate distributor until contacts begin to open, tighten clampscrew.

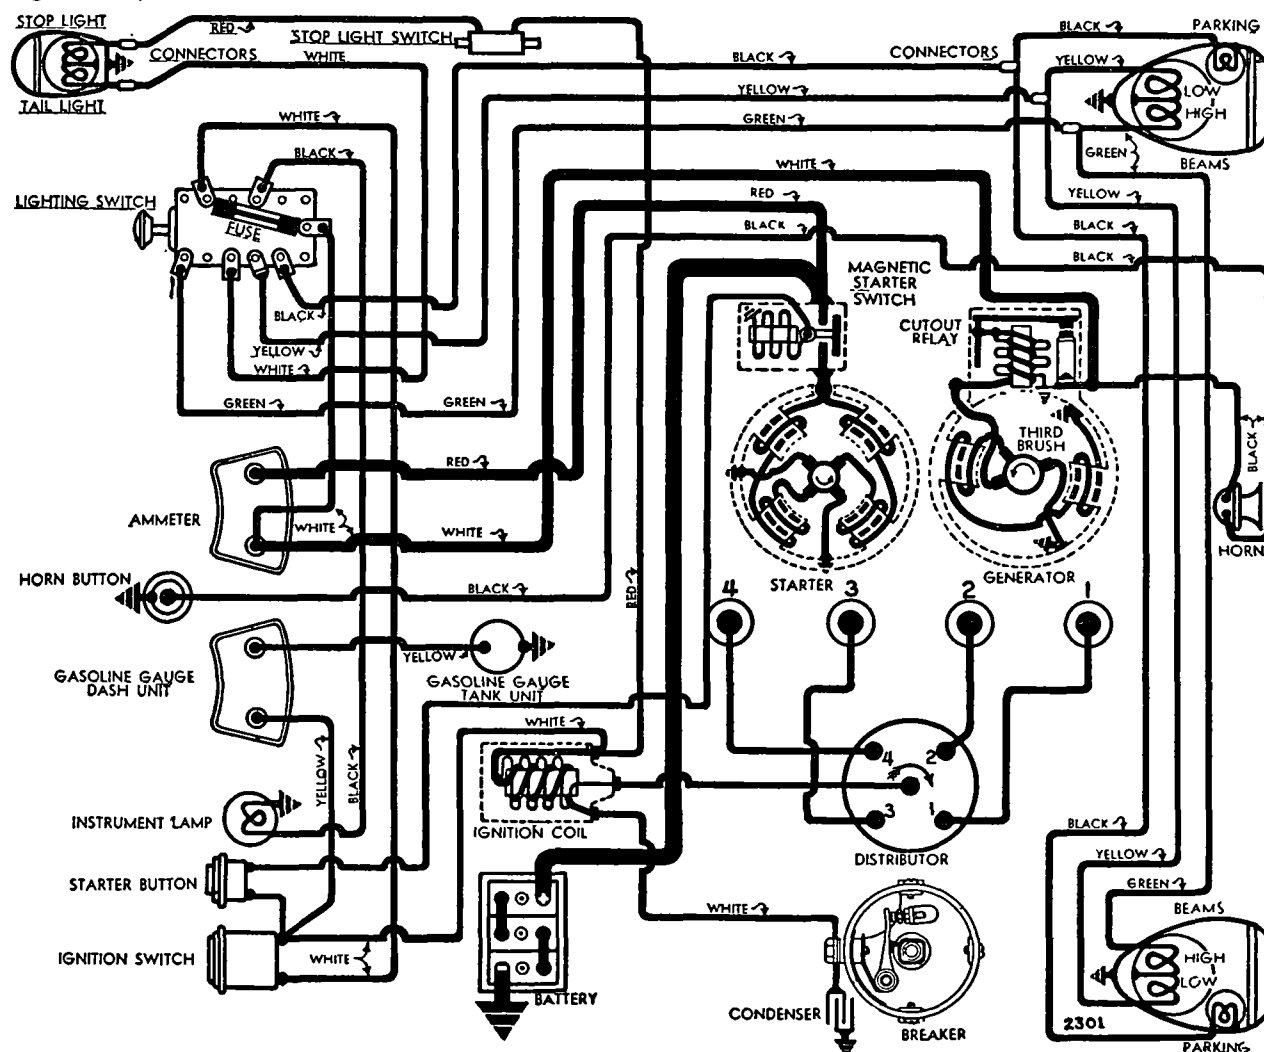

## CARBURETOR

SERIES 60 & 63

**CARBURETION:**—Carburetor, Tillotson Model M-10B. ¾" single barrel updraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Carburetor has two adjustments (Idle or Low Speed, and High Speed) and adjustments must be made in correct order as given below. 'Preliminary' adjustment optional.

**Preliminary Adjustment**—Turn idling adjusting screw in lightly until seated, then back screw out  $1\frac{1}{2}$  turns. Turn high speed (main) adjusting needle in lightly until seated, then back needle out 1 turn. Start engine and run until it is thoroughly warmed.

**Idle Adjustment**—With engine warm and running, set throttle stopscrew so that idle speed is approximately 500 R.P.M. Turn idle adjusting screw out slowly until engine begins to miss, then turn screw in  $\frac{1}{8}$  turn. Reset throttle stopscrew for correct 500 R.P.M. idling speed. Engine should idle smoothly.

**High Speed Adjustment**—Should be made with engine under load (can be made by jacking up rear wheels, engaging gears, and applying brakes just enough to secure temporary noticeable drag on engine or by opening throttle so that engine runs at speed equivalent to 30 M.P.H.). Turn main adjusting needle valve in until engine begins to slow down, then back needle out  $\frac{1}{8}$  turn (make adjustment slowly and determine end point exactly).

## CARBURETOR

### SERIES 65

**CARBURETION**:—Carburetor—Zenith Model 61A5. 13/16" single barrel updraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—This carburetor has Idle (low speed) adjustment only. No high speed adjustment used.

**Idle Adjustment**—With engine warm and idling, set idle adjusting screw so that engine fires smoothly. Idle screw should be set approximately  $1\frac{1}{2}$  turns out from inner seated position and setting should be varied only slightly. Set throttle stopscrew for idle speed of 7 MPH.

**Float Level**—Bottom of float at free end should be  $1\frac{5}{32}$ " from gasket seat of throttle body with needle valve closed (invert throttle body to check).

## CARB. EQUIPMENT

**Air Cleaner**:—AC #A1529203. Oil-wetted type Std. Gasoline Gauge:—Stewart (Stewart-Warner) Electric. Dash Unit—No. 99166 (Instrument Cluster), Tank Unit—No. 97550.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**U.S.L. Type RM-11A or Auto-Lite PN-11F**, 6 volt, 11 plate, 67 ampere hour capacity (20 hour rate). Starting Capacity—85 amperes for 20 minutes. Zero Capacity—300 amperes for 1.6 minutes. Grounded Terminal—Negative (—) terminal. Dimensions—Width 7". Length 6 15/16". Height 8 5/8". Location—On right side of cowl under hood.

## STARTER

**STARTER**:—Auto-Lite MAK-4001. Armature MAK-2006. Drive—Special Inboard Bendix Type RCE11-10. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—38-61 ozs. (new brushes).

Performance Data				
Torque	R.P.M.	Volts	Amperes	
0 ft. lbs.	5000	5.5	70	
1.35 "	1880	5.0	200	
.3 "	3240	5.5	100	
3.1 "	1000	4.5	300	
4.8 "	220	4.0	400	
4.5 "	Lock	3.0	380	
7.0 "	Lock	4.0	520	

**Removal**:—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, remove starter with switch.

**Starting Switch**:—Magnetic type mounted on dash controlled by pushbutton on instrument panel.

## GENERATOR

**GENERATOR**: Auto-Lite GAS-4104B or GAS-4139A.

Armature No. GAS-2076. Third brush control type. Maximum Output—10 amperes (cold), 8 amperes (hot), 8.0 volts, 2600 RPM., 40 MPH., std. setting.

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, clockwise to decrease charging rate. Third brush held in position by friction.

Cold Performance Data				
Amperes	Volts	R.P.M.	Amperes	Volts
0	6.4	880	0	6.4
2	6.6	985	2	6.8
4	6.9	1100	4	7.0
6	7.2	1230	6	7.35
8	7.3	1420	8	7.7
10	7.6	1650	10.2	8.0
12	7.8	2000		
14	8.0	2800		

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—15-20 ozs. (new brushes).

**Field Current**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current**—4.64-4.94 amperes at 6.0 volts.

**Removal**:—Generator cradle mounted at left front of engine with fan belt drive. To remove, loosen drive belt, take out clamp bolt in mounting clamp band, lift generator out.

**Belt Adjustment**:—Loosen fan shaft clamp nut, raise fan until belt can be pulled out of vertical line (midway between pulleys) not more than 1" with single finger pull, tighten clamp nut.

## CUTOUT RELAY

Auto-Lite No. CB-4014. Mounted on generator.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In**—6.5-7.25 volts, 5 MPH.

**Cuts Out**—5-2.5 ampere discharge current (after charging at 15 amperes).

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

## LIGHTING

**LIGHTING**:—Headlamps—Corcoran-Brown. Pre-focused type. Upper and lower beams controlled by lighting switch.

**Headlamp Adjustment**—Aim headlamp upper beam straight ahead at lamp center height.

### Switches

**Lighting**—H.A. Douglas No. 5794.

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument	3	63
Stop & Tail	21-3	1158

## MISC. ELECTRICAL

**FUSES**: Lighting—20 ampere. On lighting switch.

**HORN**:—Schwartz No. 93. Vibrator type.

**Horn Current**—7 amperes.

## ENGINE

**ENGINE SPECIFICATIONS**:—Four cylinder, 'L' head type. Cylinders cast en-bloc and bolted to aluminum alloy crankcase (integral with flywheel housing).

### SERIES 60 & 63

**Bore**—2.2". **Stroke**—3".

**Displacement**—45.6 cu.ins. **Rated HP**—7.8 S.A.E.

**Developed Horsepower**—20 at 4000 R.P.M.

**Compression Ratio**—7.0-1 Al. or CI. head.

**Compression & Vacuum Reading**—See Tune-Up.

### SERIES 65

**Bore**—2.26". **Stroke**—3.125"

**Displacement**—50.144 cu. ins. **Rated HP**—8.17.

**Developed Horsepower**—22 at 3800 RPM.

**Compression Ratio**—7.4-1 Std. Cast Iron head.

**Compression & Vacuum Reading**—See Tune-Up.

**PISTONS**:—Bohn Autothermic, aluminum alloy, steel strut, split skirt, cam ground type with tin-plate finish. Length—2.083".

**Weight**—5.125 ozs. (without rings or pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .0125-.017". Skirt .0005".

**Replacement Pistons**:—Pistons furnished in standard size and .003", .005", .010", .020", .030" oversize.

**Fitting New Pistons**:—Use .0025" feeler installed between pistons and cylinder wall on side opposite slot at right angles to piston pin. Pull required to withdraw feeler must be 7-12 lbs.

**Installing Pistons**:—Slot toward left hand side.

**PISTON RINGS**:—Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled with oil drain holes.

**Ring** Width End Gap Side Clearance

Compr. .0925-.0935" .010-.020" .001-.0015"

Oil Contr. .1235-.1240" .010-.018" .001-.0015"

**Replacement Rings**:—Furnished standard size and .003", .005", .010", .020", .030" oversize.

**PISTON PIN**:—Diameter—.6095". Length—1.9375". Pin is locked in connecting rod by clampscrew.

**Pin Fit in Piston**—Free to .0002" clearance. When correctly fitted and installed, 2 lbs. pressure at end of rod should be required to rock rod.

**Replacement Pins**:—Furnished .003", .005" oversize.

**CONNECTING ROD**:—Weight 11 ozs. Length 5.75".

**Crankpin Journal Diameter** (60, 63)—1 5/16"

**Crankpin Journal Diameter** (65)—1.25".

**Lower Bearing**—Spun babbitt-lined type. No shims.

**Clearance**—.0008-.0022". Sideplay—.004-.009".

**Bearing Adjustment**:—None (no shims). Replace rods. Do not file rods or bearing caps.

**Installing Rods**:—Lower bearings offset. Install with wide half away from center of engine.

**CRANKSHAFT**: 2 bearing (60, 63), 3 bearing (65).

**Journal Diameters** (60, 63)—2 1/2" all bearings.

**Journal Diameters** (65)—1.9975" (1), 2.4975" (2, 3).

**Bearings** (60, 63)—Babbitt-lined bushings front

(with separate retainer) and rear (with integral retainer).

**Bearings** (65)—Babbitt-lined bushings front (with integral retainer) and rear (with separate retainer). Center bearing conventional split type.

**Clearance**—.001-.003".

**Bearing Adjustment**:—None. Replace bearings. Crankcase should be heated to temperature of boiling water (212°) to remove and install bearings.

To remove bearing retainers proceed as follows:

**Front Bearing Removal**—Remove timing gear cover, pull both timing gears, take out four capscrews in retainer flange, use gear puller to remove bearing.

**Center Bearing Removal** (65 only)—Conventional split type bearing.

**Rear Bearing Removal**—Remove transmission and Clutch (see Transmission and Clutch Sections for

**ENGINE****CONTINUED FROM PRECEDING PAGE**

directions), remove flywheel by removing 4 bolts and prying centering flange off crankshaft carefully. Remove nuts on bolts in bearing retainer flange, screw capscrews in each of two tapped holes in retainer, turn screws up evenly to force retainer and bearing out.

**FLYWHEEL NOTE**—On 1937-38 engines flywheel secured by 1 nut on end of crankshaft.

**Replacement Bearings**—:003", .006", .009" undersize. **End Thrust**—By rear bearing. **Endplay**—.004-.006".

**CAMSHAFT**—Three bearing. Helical gear drive.

**NOTE**—Front camshaft bushing retained by setscrew in upper part of crankcase. Screw must be removed in order to remove bushing.

**Bearing Type**—Bronze Bushings. **Clearance**—.002". **Replacement Bearings**—Front bushing furnished finished to size. Other bushings must be reamed.

**End Thrust**—By rear face of camshaft gear hub and front end of front camshaft bushing. When installing timing gears, install camshaft gear first, tighten nut securely with endplay removed and shaft free.

**Timing Gears**—Cast iron helical gears.

**Camshaft Setting**—Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

**VALVES**—Intake marked 'INL', exhaust 'EXH' under head.

**Series 60, 63—Valve Specifications**

Head Diameter	Stem Diameter	Length
All Valves	1 1/32"	.279"
		3 1/4"

Seat Angle	Lift	Stem Clearance
All Valves	30°	.257"
		.0022"

**Series 65—Valve Specifications**

Head Diameter	Stem Diameter	Length
Intake Valves	1.125"	.279"
		3.25"
Exhaust Valves	1.03125"	.279"
		3.25"

Seat Angle	Lift	Stem Clearance
All Valves	45°	.257"
		.0012-.0032"

**Valve Guides**—Pressed in block. Top of guide should be 1" below valve port. Finish ream new guides to inside diameter of .2807-.2817".

**Valve Lifters**—Plunger type. Operate in individual guides in cylinder block. Guides removable from lower end after block removed from crankcase. Serviced by installing new lifter and guide assembly. **Lifter Clearance in Guide**—.001".

**Valve Springs**—Spring free length 1.6875".

Spring Pressure	Spring Length
Valve Closed	28 lbs.
Valve Open	44 lbs.
	1"

**VALVE TIMING**

**Tappet Clearance (Series 60, 63)**—.006" Intake, .009" Exhaust with engine warm (130° F.).

**Tappet Clearance (Series 65)**—.011" Intake, .012" Exhaust with engine warm.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 19° BTDC. Close 50° ALDC. **Exhaust Valves**—Open 57° BLDC. Close 12° ATDC.

**To Check Timing**—Check tappet clearance of #1 intake valve (.011" warm). This valve should open with piston 19° or .115" before top dead center when point on flywheel 1 5/32" before 'I' (TDC) mark lines up with indicator on housing under pit cover.

**LUBRICATION**

**LUBRICATION**: Pressure system. Oil pump feeds oil to all main and connecting rod bearings, front and rear camshaft bearing (center camshaft bearing lubricated by splash).

**NOTE**—Oil pump is vane type (Series 60, 63), gear type (Series 65).

**Oil Pump**: Located in crankcase at rear of engine. To remove pump, remove cylinder block from crankcase, take off flat cover on crankcase over oil pump driving gear, pull this gear, remove woodruff key in shaft. Remove oil pan, take out two screws holding oil pump body to crankcase, withdraw pump. Install pump in same manner.

**65 NOTE**—Pump screen (on elbow on pump cover in crankcase should be cleaned at 10000 mile intervals (average conditions), 2000-3000 mile intervals (extremely dusty or dirty conditions).

**Normal Oil Pressure**: Over 10 lbs. at 30 MPH (Series 60, 63), 30 lbs. at 50 MPH (Series 65).

**Oil Pressure Regulator**—Spring-loaded ball check valve type located on right hand side of crankcase above pump (in large plug). Not adjustable.

**Crankcase Capacity**—6 pints or 3 quarts.

**COOLING**

**COOLING**—Circulation—Thermo-syphon (no pump).

**NOTE**—When installing lower water connection on left hand side of cylinder block, install shortest screw in rear hole.

**Capacity**—6 qts. (60), 4 qts. (63), 6 qts. (65).

**CLUTCH**

**CLUTCH**—Rockford Model UCLA-3-1748. Single plate, dry disc type.

**See Clutch Section for complete data.**

**Facings**—Moulded type, 2 used. Inside Diam. 6.5". Outside Diam. 8.4375". Thickness .125". **NOTE**—Front facing is riveted to face of flywheel (before Engine No. 65-500), or floats between flywheel and driven disc (after Engine No. 65-500), rear facing is riveted to pressure plate (all cars). Driven disc is not lined.

**Adjustment**—Clutch pedal free travel should be 2" (Series 60, 63), 1" (Series 65). Adjust by turning clevis on clutch throw-out link rod.

**Removal**—Disconnect drive shaft at front universal flange, remove flywheel housing top cover, take out screws in flywheel housing rear cover, remove rear cover and transmission as a unit. Take out screws in clutch cover around flywheel rim (turn all screws out evenly to relieve pressure), lift clutch out.

**NOTE**—Car manufacturer recommends that engine be removed for easier access to clutch.

**NOTE**—When installing clutch, turn clutch cover screws in loosely (so that driven disc can be moved by hand), place transmission in position on mounting studs and maneuver driven disc so that clutch shaft enters disc hub and pilot bearing in crankshaft, remove transmission and tighten clutch cover screws securely (do not disturb clutch disc).

**TRANSMISSION**

**TRANSMISSION**—Warner Model AS1-T84E. Constant mesh, synchro-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse).

**See Transmission Section for complete data.**

**Removal**—Disconnect drive shaft at front universal flange, drop shaft, take off nuts on transmission mounting studs, pull transmission back.

**NOTE**—If transmission removed for work on clutch, take out rear flywheel cover screws and remove transmission and cover as an assembly.

**UNIVERSALS**

**UNIVERSAL JOINTS**—Detroit Series 4100. Roller bearing Ball and Trunnion type. 2 used.

**See Universals Section for complete data.**

**REAR AXLE**

**REAR AXLE**—Spicer Model 10. Semi-floating, spiral bevel gear type with Hotchkiss drive.

**See Rear Axle Section for complete data.**

**Ratio**—5.87-1 (Series 60, 63), 5.25-1 (Series 65).

**Backlash**—.006-.008".

**Removal**—Disconnect drive shaft at rear universal. Disconnect brake cables and shock absorber links. Free spring clips at axle housing (or disconnect spring shackles to remove springs with axle), remove axle assembly from beneath car.

**Axle Shaft Removal**—Remove wheel, take out four capscrews in bearing retainer flange, remove grease retainer, bearing shims, brake flange. Use axle shaft puller to remove shaft and bearing.

**Wheel Bearing Adjustment**—Controlled by shims under bearing retainer at outer end of axle shaft. Remove wheel, take out capscrews in retainer, remove retainer to adjust. **Endplay**—.008".

**SHOCK ABSORBERS****SERIES 60 & 63**

**SHOCK ABSORBERS**—Own Make. Double faced, adjustable, friction disc type. One at front, two at rear.

**Servicing**—Center bolt should be removed, lubricated with light oil and replaced at 15,000 mile intervals. To remove center bolts on rear units, disconnect rear spring front shackle bolt. This will allow shock absorber to drop down and provide clearance.

**NOTE**—To eliminate squeaks in shock absorbers, remove friction disc (after taking out center bolts), clean with a scraper and roughen with tool (do not use emery or sandpaper), oil center bolt when replacing (keep oil off of discs).

**SHOCK ABSORBERS****SERIES 65**

**SHOCK ABSORBERS (PASS. CARS)**—Monroe. Front: Model 1415 (right), 1414 (left). Rear: Conv'tble Sedan 1422 (right), 1423 (left); Others Bantam No. 8899 (right), 8900 (left). Single acting, hydraulic. **See Shock Absorber Section for complete data.**

**SHOCK ABSORBERS (STATION WAGON & COMM'L)**—Own Make. Friction disc type. Same as used on previous models. **See Series 60 data (above).**

**FRONT SUSPENSION**

**Front Suspension**—Conventional 'I' beam section front axle with transverse spring. Axle positioned by torque arm at each end.

**Kingpin Inclination**—1°30' crosswise.

**Caster**—11° (60, 63), 15° (65). Not adjustable.

**Camber**—1°30'-1°45' (60, 63), 1°15' (65). Not adj.

**Toe In**—.0625-.125". Adjust tie rod.

**Steering Geometry (Toe-out on turns)**—With outer wheel turned 20°, inner wheel 24°18'.

**STEERING GEAR**

**Steering Gear**: Lavine Model A, Worm-and-Ball type (1937-38); Ross Model T-12 or S-12, Cam-and-Lever type (1939-40-41). **NOTE**—T-12 is Twin-lever type. **See Steering Gear Section for complete data.**

**BRAKES**

**BRAKES**—Service—Own Make. Four wheel, mechanical type. Hand lever applies all four service brakes. **Drums**—Steel. Diameter 8".

**Lining**—Moulded type. Width 1.125". Thickness .1718". Length per wheel 17" (60, 63), 13" (65).

**Clearance**—Shoes are self-centralizing.

**Hand Brake**—See Service Brakes above.

**HOOD ASSEMBLY****1938-39 MODELS**

**HOOD SIDE PANEL REMOVAL:** 1938 Models. Remove panel bolts at body and radiator shell, hood fastener rod screws at radiator shell, lift panel off.  
1939 Models. Remove the panel bolt at the rear upper end of side panel at shroud bracket, loosen front fender to shroud bolts. Remove headlamps by taking out three  $\frac{3}{8}$ " capscrews and two bolts holding side panels to headlamp reinforcement plate. Remove bolts holding side panel to front fender hood side and radiator shell, lift panel out.

**1941-48 MODELS**

**HOOD LOCK:** Hood hinged at both sides and can be raised from either side. '41 cars use lock handle (with model name 'Special', etc.) which must be pulled out and safety catch under handle which must be pushed in to release hood. On '42-48, press in on red dot on front end of handle and pull out on rear end of handle to release hood. Prop hood in open position by means of support on cowl.  
**CAUTION—**Handle must be in open position when lowering hood, then locked.

**1941-48 MODELS**

**HOOD REMOVAL:** Unlatch both hood fasteners (at each side), release safety catches and lift hood off.

**1941 MODELS**

**HOOD ADJUSTMENT:** Hood Fastener. Fasteners must pass over and inside of ribs in fastener plates under edge of hood at each side. Outer edges of fasteners must be parallel to hood flanges when locked. Adjust by removing cotter pin holding operating link in rear fastener. Change operating link rod length by turning rod in or out of trunnion on handle until outer edge of fasteners are parallel to fender flange with fastener closed.

**Hood Pilot—**Adjust pilots in fender (to rear of each fastener) for proper hood fit to fender and cowl.  
**Grille to Hood Nose—**Hood clearance between hood nose and top center grille strip should be  $\frac{1}{8}$ ". Adjust bolted bracket at top rear of grille on radiator stamped cover.

**Rear Brackets—**U shaped hood hinge located at upper rear corner of each front fender at cowl. These hinges or brackets prevent hood from contacting door if door opened as hood is raised. With hood raised, rear corner of hood must contact shroud. To adjust, bend outer edge of bracket until hood corner contacts shroud.

**1942-48 MODELS**

**HOOD ADJUSTMENT:** Hood Lock. Hood fastener tension can be adjusted by loosening bolt at each side of fastener loop and adjusting clips up or down until correct tension obtained. Hood fastener handle can be adjusted for proper opening and closing by loosening three bolts (two at top, one at bottom) on anchor plate and shifting plate to front or rear until handle seats properly. Fastener lever arm on anchor plate must snap past center and against stop to lock hood (check lever arm when adjusting lock handle).

**Alignment—** $\frac{1}{8}$ " clearance between hood and shroud, front doors, and fenders should be maintained. To adjust hood, loosen two bolts at each hinge and shift hinges to front or to rear until proper hood fit obtained. Alignment between hood and body can be adjusted by loosening attaching bolts at ends of hood-reinforcement rods (bolt holes in ends of rods slotted providing variation of overall width of hood to fit hood to fenders and body uniformly).

**FRONT END SHEET METAL****1939 MODELS**

**FRONT END ASSEMBLY:** Radiator shell, fenders, fender skirts and hood sides all bolted together and mounted as one unit as follows: One bolt in center of radiator mounting strap engages slotted hole in front frame cross-member (shims on bolt control height, slotted hole permits entire assembly to be moved fore-and-aft or sideways for alignment). Five bolts on each fender skirt at rear attach assembly to body shroud panel (bolt hole clearance permits assembly to be raised or lowered for alignment). All parts of assembly must be bolted together so that exposed joints are flush.

**Alignment—**See that radiator to frame bolt (at front), five fender to shroud bolts on each side, and shroud to hood side bracket on each side are loose to permit movement. Install upper hood and hinge assembly leaving front and rear saddle bolts loose. Shift entire front end assembly backward or forward for correct hood opening, adjust height at front end by adding or removing shims on front mounting bolt, adjust height at rear by raising or lowering entire assembly on rear mounting bolts to meet shroud bracket (bend bracket if necessary). Center radiator shell at front hood hinge saddle by loosening strut rods (between shell and fender skirt brace) and bending shell in proper direction (hold in position while tightening strut rods).

**Front Fender Removal—**May be removed separately as follows: Remove capscrews and nuts at shroud (rear end), remove bolts holding fender skirt and side panel to fender, remove headlamp, remove fender bolts at radiator shell and grille.

**1940 MODELS**

**FRONT END ASSEMBLY:** Radiator, fenders, and headlamps mounted on front fender iron assembly and reinforcement plate extending under radiator shell, fender and headlamp with cross bar ahead of radiator core attached to fenders. Assembly held by one bolt in center of front frame cross-member and attached to body at hood side panels, front fenders and fender skirt.

**FRONT FENDERS****1940 MODELS**

**FRONT FENDER REMOVAL:** Fender forms hood side panel, headlamp shell and part of radiator shell. May be removed as follows: Disconnect headlamp wires at junction block and fresh air intake at dash. Remove radiator grille, lower front fender bolts at radiator lower panel and radiator pan, bolts and nuts at cowl (on Series 50, 70, remove trim pad at front door hinge pillar for access to nuts), bolts holding fender assembly to upper radiator shell panel, fender iron to mounting strap, lift fender off.

**1941 MODELS**

**FRONT FENDER REMOVAL:** Fender forms hood side panel, headlamp shell, and part of radiator shell. Fender can be removed as follows: Disconnect headlamp wires at rear of junction blocks. Remove stamped cover over radiator (fastened to upper flange of front fenders) and insert pin in hole to secure fender to radiator mounting strap. Remove radiator side grille (work from above after stamped cover removed). Remove fender bolts from top flange of skirt, radiator lower panel, and skirt at gravel deflector. Remove cowl trim board and nuts (inside car). Remove fender-to-rocker panel bolts at lower rear corner of fender. Remove fender-to-cowl bolt at hinge pillar and lift off fender.

**1942-48 MODELS**

**FRONT FENDER REMOVAL:** Front fender removal procedure is as follows: Disconnect headlamp and parking lamp wires from junction block and remove wires from clips on skirt and support under fender. Remove fender attaching bolts at following points: grille, lower tie panel, gravel deflector to skirt, at angle iron on body, at rocker panel (lower rear end of fender), at inner edge where fender attached to skirts. Fender can then be taken off car leaving skirts on car. To remove front skirt, take out attaching bolts at radiator pan along bottom and at skirt support at rear. Rear skirt can be removed as follows: With wires removed as for fender removal (above), disconnect heater and ventilator hoses from skirt, remove skirt-to-frame rail bolts at rear, take out three lower radiator core-to-mounting strap bolts, loosen top bolt (do not remove), remove skirt-to-hood baffle bolt, take off skirt.

**1942 MODELS**

**FENDER EXTENSIONS:** Front Fenders (40, 60, 90).

Fender extensions mounted on front doors and can be removed as follows: Insert a thin flat tool under moulding to unlock clips and remove upper and lower mouldings. Remove bolts exposed by removal of mouldings and remove lower half of extension panel. Remove extension-to-body bolt and clamps at upper flange and take off upper half of panel. Rocker panel extension can be removed by taking out screws at upper and lower edges.

**Front Fenders (50, 70)—**Fender extensions on these models (including coupes which have extensions carried through full length of door) can be removed as follows: Insert a thin flat tool under upper moulding to unlock clips and remove moulding. Remove bolts under this moulding and under lower edge of extension (open door for access to these bolts, front bolt accessible by aligning hole in front fender rear support with bolt). On Coupe models, remove screws at rear bracket on door. Lift off lower panel. For removal of upper panel, take out bolts and clamps at upper flange and bolt holding brace to front brackets, remove panel. Rocker panel extension can be removed by taking out bolts underneath at extension brackets. **NOTE—**On 50, 70 Coupes, extension on body between door and rear fender is of one-piece construction and can be removed by taking off mouldings and bolts under mouldings, and taking out screws at lower and leading edge of extension.

**Rear Fenders (50, 70 Sedans)—**Rear fender extensions on these models are attached to rear doors and can be removed and installed as follows: Remove mouldings by taking out bolt at rear of each moulding from inside door and then unlock clips using a thin flat tool under mouldings. Take out bolts exposed by removal of mouldings and screws along inner edge of door. Release extension from clip at upper center edge by raising lower edge, take off extension. Rear rocker panel extension can be removed by taking out bolts to fender and bracket at rear of extension. Rear fender extension can be assembled as follows: Place clamp at 45° angle to ground with bolt in upper end of slot, and tighten bolt to door. Install extension on door and attach top and bottom bolts at inner edge loosely. Install two bolts attaching extensions to brackets on door at lower front under moulding and tighten securely. Lock extension to door by driving clamp upward as far as possible with a flat thin tool at flange of

## C NTINUED FR M PRECEDING PAGE

the inner extension panel. Install all bolts along edge of door and mouldings on extension. NOTE—Wheelhouse covers provided with adjustment between front and rear halves allowing in and out alignment with extension panel on rear door.

## 1946-48 MODELS

**FENDER EXTENSIONS:** Front Fender (Series 40)—Front fender extensions on these cars are attached to front door by brackets and bolts and clamps. To remove extension, open front door, remove bolts along lower edge and at front end (visible with door open), then carefully lift up on extension to free it from clamps along upper flange. To install extension, first make certain that clamps are located between bosses pressed in door panel and that clamp screws are tight in lower ends of upper holes in clamps (screws have shoulders to provide tension on clamps when screws are tight). Hook edge of extension upper flange over ends of clamps and carefully press extension down into place, install bolts at front end and along lower edge. Adjust as required so that constant clearance of 1/16" is secured between extension and fender.

**Front Fender Front Section (Series 50, 70)**—This section is attached to four brackets on front door by bolts. To remove extension, open front door, remove clamp at front upper corner, loosen three safety nuts retaining extension on upper bracket, remove all capscrews at front, rear, and lower brackets, move extension to rear to disengage bolts from upper bracket and lift off (NOTE—all screws and bolts are accessible through opening at bottom with the door open). To install extension, Reverse removal instructions (above) tightening the bolts in the front and rear brackets before tightening safety nuts in upper bracket (this will insure upper bolts being forced into place in slots in upper bracket). Install clamp at front upper corner with long edge over extension flange. Adjustment for alignment of extension with fender and rear section can be made by shifting brackets on door. Make certain that constant clearance of 1/16" is secured between extension and front fender. CAUTION—Install all mounting bolts with lockwasher and plain washer

**Front Fender Rear Section (Series 50, 70)**—This section attached to rear door (or rear quarter) by bolts to front and lower brackets, and is hooked to upper bracket on body. There is also a tab which slides under rear fender (or fender extension). To remove extension, open front door, remove bolts from front bracket and two lower brackets, slide extension forward and lift off. To install extension, engage tab under rear fender or fender extension, slide extension to rear to engage two hooks with pins on body bracket, install bolts in front lower brackets. Extension can be adjusted for alignment by shifting brackets on door panel. CAUTION—Install all mounting bolts with lockwasher and plain washer under bolt head.

**Rear Fender Extension (Series 50, 70)**—Attached to rear door by five screws and one clamp. To remove extension, open rear door, remove capscrew from support bracket (accessible through opening at bottom), remove four round-headed screws at inside rear edge of door, lift up on extension to free it from clamp at upper flange. To install extension, make certain that clamp located between bosses on door panel and that clampscrew is tight in lower end of upper hole in clamp (screw has shoulder to

provide tension on clamp with screw tight). Hook edge of upper flange on extension over upper end of clamp and press extension down into place. Install the four round-headed screws in edge of door with plain washer and seal washer on each screw, install capscrew in support bracket with lockwasher and plain washer under screw head.

**Rear Wheel Shield (All Series)**—To remove shield, remove attaching bolt under front lower edge of shield (2-door models), open rear door and remove attaching bolt visible at front edge of shield (4-door models), raise forward end of shield to disengage hook at top, then tilt shield out at top to disengage hook at lower rear end. When installing shield on 4-door models, install front attaching bolt loosely, close door and align shield before tightening bolt.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

## BUICK

NOTE—On 1941-47 models using "crimped" head gaskets, cylinder head should be tightened initially and then the entire tightening procedure repeated to compensate for gradual flattening of crimping. **Tightening Torque**—See Tightening (Torque Wrench) Specifications above.

## 1941 MODELS

**COMPRESSION RATIO CHANGE (ON CARS WITH COMPOUND CARBURETION):**—On engines with first type Cylinder Head (see Production Change Note below) and compression ratio of 7.0-1, compression ratio can be lowered to correct spark rap by installing thicker head gaskets as listed below. See Cylinder Head Gasket Installation data below.

Model	Replacement Gasket	Compr. Ratio
40,50 .....	No. 1323288①.....	6.67-1
60,70,90 .....	No. 1297992②.....	6.68-1

①—This is production gasket used on later Series 41-40 cars with Single Carburetor.

②—This is 1940 type gasket which is .050" thick.

## 1941 MODELS

**CYLINDER HEAD & COMPRESSION RATIO PRODUCTION CHANGE (All Models):** For lower compression ratio on all Compound Carburetion engines, new cylinder heads with combustion chamber depth increased by .032" were used in production on all cars after following Engine Numbers: 4220016 (40 with Single Carburetor), 4208629 to 4210399 and all engines after 4215901 (40,50 with Compound Carburetion), 4197602 (60, 70, 90). See special head gasket data below. **IMPORTANT NOTE**—Since these new heads also used on 40 with Single Carburetor, new .050" gasket used (original gasket .070" thick) for approximately same compression ratio (6.5-1 first, 6.4-1 later). See Cyl. Head Gaskets below.

**Cylinder Head Marking:**—All cylinder heads machined for new compression ratio (above) marked 'L' at front end of spark plug cover face.

**Cylinder Head Gaskets:**—Gaskets unchanged on all Compound Carburetion Engines (.015" thick crimped type), change in compression ratio being effected by machining out head. On Series 41-40 with Single Carburetor, new thinner gasket (.050" thick—first type .070" thick) used to secure approximately same compression ratio with new head (same machined out head as used on other engines). NOTE—This new Series 41-40 gasket, Part No. 1323288, may be used on 1940 Series 40 & 50 cars. See Cylinder Head Gasket Installation data below.

## Compression Ratio &amp; Head Gaskets

Car Model	Ratio	Gasket	Ratio	Gasket
40 Single Carb.....	6.5-1.....	1321396.....	6.4-1.....	1323288
40,50 Compd. ....	7.0-1.....	1320433.....	6.7-1.....	1320433
60,70,90 Compd.....	7.0-1.....	1320436.....	6.7-1.....	1320436

## 1941-42 MODELS

**CYLINDER HEAD GASKET INSTALLATION:** Lacquer coated gaskets are used on all models (see Series 40 Note following). Whenever cylinder head removed, head and block should be thoroughly cleaned to remove any trace of lacquer from old gasket. Do not use any type of coating (gasket oil, or sealer) when installing this new lacquer-coated cylinder head gasket. Always use new gasket whenever cylinder head installed. These gaskets are crimped type. 1941 Series 50 and 70 require special installation procedure (see paragraph following).

**Series 40 Note:**—Two types of head gaskets used on this model: 1) Engines with one carburetor .070" thick steelbestos type. 2) Engines with Compound Carburetion .015" thick crimped type.

**1941 Engines:**—Various gaskets may be found on these engines. See Compression Ratio Change (First Cars with Compound Carburetion) and Cylinder Head & Compression Ratio Production Change (All Models)

## 1941 SERIES 40 &amp; 50

**CYLINDER HEAD GASKET INSTALLATION (Series 50 & 70):**—Engine dash protrudes over rear of engine and cylinder head must be pushed forward when it is removed in order to clear body. #16 push rod must be removed and installed with cylinder head in order to avoid damage to push rod. To install cylinder head and gasket with least possibility of damage to gasket, car manufacturer recommends following procedure be used: Loosen exhaust pipe and pull away from engine to allow clearance for gasket (carburetor and manifold assemblies may be left in position on exhaust pipe). Set cylinder head in position on top of engine before installing head gasket. Tilt head up on right side with edge of head resting on top of push rod cover. Tilt head up on left side just enough to insert cylinder head gasket from left side. Set head flat on block and gasket, align gasket with hole in head and block. To minimize possibility oil leak between edges of cylinder head gasket and push rod cover, head gasket should be pushed toward push rod cover as far as possible.

## 1946-47 MODELS

**CYLINDER HEAD & GASKET:** New type 1946-47 Cylinder Head for use with new type engine block (see Note below) has larger water passages at points where matching holes located in block (five holes at #8 cylinder, one vent hole at #1 cylinder). This head may be used on 1942 engines (intermediate water passages provided though not used when head installed on 1946-47 engine) with new type cylinder head gasket. **1946-47 Engine Block Note:**—This block has five larger water openings at #8 cylinder and no holes between this point and #1 cylinder (vent hole only at #1 cylinder). Water circulation is rearward through the block, then forward in the head to the outlet. **CAUTION—1942 type Cylinder Head and Gasket must not be used on 1946-47 Engines (smaller water passages at #8 cylinder will restrict water circulation and cause overheating)**

**Cylinder Head Gasket:**—New 1946-47 Head Gasket has larger water holes at #8 and #1 cylinders to correspond with head and block passages (above). This gasket is crimped steel type, .015" thick, and may be used on 1942 engines (intermediate water holes provided).

**CAUTION—This new type Head Gasket must always be used with new type Cylinder Head on 1946-47 engines. If 1942 type gasket used, smaller water passages at #8 cylinder will restrict water flow and cause overheating.**

## 1941 MODELS

**INSTALLING 14mm SPARK PLUGS ON FIRST CARS**  
New 14 MM. spark plugs were installed to correct complaints of spark plugs fouling and causing uneven engine operation. These 14 mm. spark plugs are installed as follows:

**Cylinder Head Fixture:**—Wooden holding fixture should be made up so that head can be mounted on bench with spark plug holes vertical.

**Drilling Cylinder Head:**—With cylinder head mounted on fixture on bench, thoroughly clean spark plug recess and mount drill guide bushing, No. J-1747-1, on spark plug seat using extreme care to see that bushing seats squarely on seat. Use ½" twist drill in portable electric drill to drill out spark plug hole. **CAUTION—Bushing must be used to guide drill and bushing must be installed squarely on seat to insure holes being drilled properly in cylinder head.**

**Tapping Cylinder Head:**—Use special tap guide bushing, No. J-1747-2, and regular 14 mm.-1.25 tap to thread each spark plug hole. Use extreme care to secure good threads.

**Installing Spark Plugs & Cylinder Head:**—When head is reworked as directed above, spark plug gasket seat will be tapered (not flat). Install spark plugs with one gasket. Check cylinder head gasket and install correct gasket for desired compression ratio as directed above (On first cars with compression ratio of 7.0-1, thicker gasket may be installed to lower compression ratio if complaints of spark rap being corrected). *See Compression Ratio Change data above.*

## ENGINE REMOVAL

## 1940 MODELS

**ENGINE ASSEMBLY:** Removal. Engine and transmission may be removed from car as follows: Remove hood and hood center hinge. Remove front end assembly (fenders and radiator) as a unit. Disconnect wires at junction boxes, radiator hose and other connecting parts. Remove battery, disconnect gear shift linkage, clutch linkage and fuel pump intake line. Take out screws attaching front of torque tube to transmission and bolts holding engine to engine mountings. **Do not loosen engine mountings on frame or complete realignment with rear axle will be required when engine installed.** Hoist engine and transmission assembly out of car.

**Installation:**—Lower engine and transmission carefully in place (engage torque tube connection without disturbing alignment). Tighten front engine support-to-mounting bolts and torque tube-to-transmission screws. Install transmission steady rest (use original number of shims at each end). Install rear engine support-to-mounting screws, raise rear of engine (with jack under transmission) until supports are clear of mountings at each side, then lower slowly until one support just rests on mounting and shim up opposite mounting to level engine supports. Install transmission steady rest brace rod (leave nuts at cross-member loose while tightening bolt at X-member, then tighten nuts at cross-member so that no tension placed on rod).

**Alignment:**—To check alignment, roll car on level floor with front wheels set straight ahead. Rear wheel tracks should overlap front wheel tracks an equal amount on each side. To adjust engine alignment, shift rear engine mountings on frame and shim transmission steady rest mounting at each end so that universal ball joint is exactly in center of car.

## ENGINE MOUNTINGS

## 1941-47 MODELS

**ENGINE MOUNTINGS:** Identification. Part numbers moulded in rubber section of mounting. When two part numbers used, part number determined by color name (black or red) following number. If rubber black use part number preceding the word black, if rubber red or mounting paint marked red, use part number preceding word red.

**Front Mounting:**—On Series 40, 50, 60, 70 same mounting used (also same on both right and left sides). Series 40, 50 mounting installed with bolt flange to rear, Series 60, 70 to front. Series 90 use similar type but bolt holes are different and right and left mountings are not the same.

**Center Mounting:**—Single mounting used on bottom front end of transmission. Mounting same for all series except that softer rubber used on Series 40,

50. Mounting secured to front face of transmission by two special head bolts, to top of frame cross-member by two bolts (bolt holes in support slotted for fore and aft positioning), and to forward side of cross member by one bolt and shims (to take up space for fore and aft positioning). Mounting not adjustable for up and down position.

**Transmission Support Mounting:**—Saddle type mounting under universal joint (torque ball) housing mounted on cross-member bolted to each leg of 'X' member. Brace rod connected between cross-member and under side of 'X' member. Shims provided at each end of cross-member. Softer rubber used in Series 40, 50 mounting. Install mounting with thin portion of rubber section to front. This mounting is a positioning member only (does not support weight of engine).

**Engine Mounting Adjustment:**—Loosen all mountings on frame, loosen transmission support rod at mounting, loosen transmission support cross-member at frame ends (with mounting tight at torque ball), and center torque tube and ball joint in frame X-member. For proper engine mounting adjustment proceed as follows: Tighten right and left front engine mountings to engine and frame. Tighten center engine mounting to transmission and frame cross-member (use shims to take up space between forward web of frame cross-member and lower mounting flange at lower bolt). Tighten transmission support mounting to transmission and transmission support (cross-member). Shim transmission support at frame ends without disturbing its normal position. Tighten rod at transmission support with no 'push' or 'pull' tension on rod.

## 1948 MODELS

**'CONTROLLED FREQUENCY' ENGINE MOUNTINGS:** Engine and transmission supported at 3 points on "Controlled Frequency" mountings (special synthetic rubber pads).

**Front Mountings.** At approximate center of crankcase at each side of engine. Mounting pads secured between brackets on frame and engine. Designed to support engine weight and provide torsional control. **Rear Mounting.** At rear of transmission. Consists of: 1) Transmission Support (between legs of frame X-member), 2) Rubber Mounting Pad (on support under transmission rear bearing retainer), 3) Rubber Thrust Pad (between rear of support and thrust plate extending down from rear bearing retainer). Steel shims fitted between thrust pad and support. Mounting pad supports part of weight and thrust pad takes drive thrust from rear wheels.

**Engine Mounting (& Centering) Adjustment:**

- 1) At front engine mountings. Tighten brackets at frame and crankcase, loosen front mounting pad top stud nuts at engine bracket on each side.
- 2) At rear mounting. Tighten at following points: a) transmission support ends at frame X-member, b) mounting pad at support and at transmission rear bearing retainer, c) thrust pad to thrust plate stud nuts at rear. Then loosen thrust pad to transmission support stud nuts at front. Remove steel shims ahead of thrust pad.
- 3) Then center engine as follows: Distance between front edge of crankshaft balancer (at horizontal center line) and center of nearest shock absorber bolt head at each side must be equal. If required shift engine sidewise (oversize holes in engine frame).

CONTINUED ON NEXT PAGE

**C CONTINUED FROM PRECEDING PAGE**

bracket at rubber mounting permit engine movement) until distance equal at each side (engine centered in frame). Tighten front mounting pad top stud nuts at each engine bracket.

4) **Shimming rear mounting.** Insert steel shims from above (with tabs upward on right side) to snugly fill space between front face of rubber thrust pad and rear face of transmission support (CAUTION—Engine and transmission must be seated normally on mounting pads). Tighten thrust pad to transmission support stud nuts at front. Then retighten front engine mounting pad stud nuts at each side of engine.

**ENGINE ALIGNMENT****1939 MODELS**

**ENGINE & REAR AXLE ALIGNMENT (40, 60):** New type drive (Inclined engine, front propeller shaft, frame mounted Universal Joint Ball) requires that engine and Universal Joint ball alignment must be accurately maintained for smooth and quiet operation. If alignment required by incorrect engine, rear axle, or universal removal, or if new frame installed, align engine as follows (NOTE—frame center-line marked on all frames at bottom rear flange of center cross-member plate).

**Engine Installation:**—Install engine mountings leaving all bolts finger-tight. Install engine, securely tighten bolts holding front support to front engine mountings, start (do not tighten) bolts holding engine to rear mountings. Attach rear axle to rear of transmission, tighten attaching screws (rear springs must not support car, support axle lightly at ball joint with jack, make certain that upward pressure not sufficient to affect alignment). Shift rear of engine sideways to align center mark on frame with mark on torque ball outer retainer (cold chisel marks), tighten front and rear engine mountings on frame. Check to see that flywheel housing contacts both rear engine mountings (use plain washers as shims, if required, to secure contact), tighten bolts holding engine on rear mountings.

**Torque Ball Installation:**—Install torque ball mounting assembly (mounting bracket and stud) on each rear leg of frame 'X' member with corrugated side of outer torque ball mounting washer (between frame and retainer) toward frame member. Loosen locknut on outer end of each torque ball mounting stud, adjust studs so that mounting washer is in solid contact with outer torque ball retainer but without exerting any pressure, tighten locknut on each stud partly (do not fully tighten locknut until after nut on opposite end of stud securely tightened). Install inner torque ball mounting washer (corrugated side toward frame member), lockwasher, and nut on each stud (do not tighten nut). Connect rear chassis springs and radius rod, install separate jack directly under each rear spring seat and allow jacks to support full weight of rear end of car. Tighten nuts on inner end of each torque ball mounting stud securely, then tighten torque ball mounting stud locknuts.

**1939 MODELS**

**ENGINE ALIGNMENT (80, 90):** Install and align engine as directed for Series 40, 60 above. Special torque ball installation and alignment procedure not required. See Transmission Steady Rest adjustment directions below.

**TORQUE BALL ADJUSTMENT****1948 MODELS**

**TORQUE BALL:** Operates between an inner and outer retainer bolted to transmission rear bearing retainer. Universal joint seal provided at rear of torque ball. Retainer packing backed with spring washer fitted at rear end of outer retainer (bears on torque ball). Shims provided between front flanged ends of inner and outer retainers for adjustment.

**Torque Ball Adjustment:** Proceed as follows:

**Disassembly:**—Disconnect and move rear axle assembly to the rear. Take off thrust plate and torque ball assembly from transmission rear bearing retainer (on 40, 50, be sure to mark top of outer retainer and use mark for reassembly). Remove packing and spring washer from outer retainer. Clean all parts. Replace worn or damaged parts.

**Reassembly and Adjustment:**—As follows:

1)—Install guide pins in upper bolt holes in transmission rear bearing retainer.

2)—Install one shim (with 3 notches in outer edge) and inner ball retainer (with oil drain hole and notch in edge down) on guide pins.

3)—Oil bearing surfaces of retainers and torque ball, and universal oil seal in torque ball with transmission lubricant.

**NOTE:**—If universal oil seal replaced, install seal with feather edge in towards ball, use bar or flat piece of metal and press seal flush with boss on flange of ball. Leather must be soft and pliable (soaked in neatfoot oil prior to installation).

4)—Assemble torque ball in outer retainer with "TOP" mark on ball and top of retainer (mark on 40, 50; flat portion on 70) together. **RETAINER PACKING AND SPRING WASHER ARE NOT INSTALLED AT THIS POINT.**

5)—Use Installing Tool J 2597 and push tool (sleeve and plug) through rear side of torque ball until leather edge of seal on plug (sleeve will drop off plug). Assemble torque ball and outer retainer (with TOP marks up) on guide pins, fill space between flanges of inner and outer retainers with shims (see Torque Ball Shims below). See that oil seal has seated on universal joint, remove tool plug.

**Torque Ball Shims:**—Four thicknesses (marked by notches on outer edge) as follows:

3 Notches .....004-.006"      2 Notches .....009-.011"  
1 Notch .....011-.013"      Unmarked .....013-.015"

6)—Install thrust plate and bolts in retainers (remove guide pins and install short bolts at these holes). **DO NOT TIGHTEN BOLTS.**

7)—Tighten retainer bolts evenly while continually moving torque ball by means of hardwood club inserted in end of universal joint. Use soft mallet and tap outer retainer if ball binds while tightening bolts. **CAUTION—For proper centering of ball and retainers, torque ball must be moved while tightening retainer bolts.**

8)—Torque ball should require 5 to 10 lbs. drag with 5½" leverage (insert hardwood club in universal, attach spring scale in groove on club 5½" behind rear edge of universal). **THIS IS CORRECT ADJUSTMENT WITHOUT OUTER RETAINER PACKING AND SPRING WASHER installed.** If torque ball not within this tension, repeat centering operation and recheck tension. If further adjustment required, add torque ball shims if too tight, or remove shims if too loose (see Torque Ball Shims above) until correct adjustment secured.

9)—Disassemble torque ball and outer retainer for installation of outer retainer packing. Install spring washer in retainer with gap at top and edge away from flange. Select new packing (furnished 7/16", 15/32", and ½" long) to give snug fit in retainer against spring washer with thin forward edge extending into rounded portion of retainer. Re-install torque ball assembly (exactly as described above). Spring washer will be almost flat if packing correctly installed.

10)—Check torque ball tension. **CORRECT ADJUSTMENT WITH OUTER RETAINER AND SPRING WASHER INSTALLED** should be 15 to 20 lbs. with 5½" leverage. If tension too small, install longer packing. If tension too great, install shorter packing. **CAUTION—Always use Tool J 2597 when installing torque ball to avoid damage to universal oil seal.**

11)—Re-install rear axle assembly.

**ORIGINAL BORE****1936-42 MODELS**

**CYLINDER BORE SIZES:** Original production (new engine) bore size indicated on all engines by number and color of paint marks on lower crankcase flange, under gasket, in line with each cylinder (not uniform for all cylinders of one block). See table below for sizes and markings.

**.010" Oversize Production Engines:**—Factory engines equipped with .010" (low limit) pistons marked by dash (—) following engine number.

**Color Markings:**—Cylinder bore paint marks on lower crankcase flange on right side extend from underneath oil pan gasket. Piston paint marks on underside of one or both piston bosses visible from below with oil pan removed (pistons need not be removed).

**PISTONS****1936-40 MODELS**

**PISTONS (ORIGINAL & REPLACEMENT):** Pistons graded for size in .0003" steps and marked by one or two color marks below pin bosses within piston skirt. Paper sticker on replacement pistons indicates piston size and cylinder bore for which intended. All replacement pistons furnished with pins fitted. See table below for piston size for all bore diameters.

**Oversize Production Engines:**—Some engines (marked by dash "—" following Engine Number) are factory-equipped with low limit of .010" Oversize Pistons (see .010" Oversize Table below for limits).

**Dome Head Pistons (1938-40):**—New 'Dome-shaped Head' pistons used on 1938-40 engines. See data following for piston changes made on these Dome Head pistons.

**1938-39:**—Starting with 1938 Engine Number 3530562 (40), 3524480 (60,80,90) pistons were modified by cutting dome back 1/32" from piston edge, increasing land clearance to .023-.040" (40), .026-.033" (60,80,90), and relieving top edge of skirt (at horizontal slot).

**1940:**—Same as 1938-39 above except that narrower top compression ring used (changed from ½" to 3/32"). This new ring has increased bearing surface in ring groove to prevent ring and land failure. Ring groove depth in piston increased from .148" to .166" (40,50), .162" to .179" (60,70,80,90). Top ring wall thickness increased from .140" to .155" (40,50), .155" to .172" (60,70,80,90).

## 1936-40 ORIGINAL PRODUCTION PISTONS

**Series 40, 50—Original Production**  
Piston Diameter 3 3/32", #1399803 ('36), 1394063 ('37), 1394421 ('38), 1394590 ('39), 1394812 ('40)

Piston & Engine Mark	Piston Diameter	Cylinder Diameter

••—White	3.4355-3.4358"	3.4378-3.4381"
•—Red	3.4358-3.4361"	3.4381-3.4384"
••—Red	3.4361-3.4364"	3.4384-3.4387"
•—Blue	3.4364-3.4367"	3.4387-3.4390"
••—Blue	3.4367-3.4370"	3.4390-3.4393"

**1941 REPLACEMENT PISTONS (REPLACEMENT SERVICE):** Pistons furnished in following sizes for service (not graded and marked as for earlier car models).

**Series 40, 50—Replacement Pistons**

Nominal Size	Piston Diameter	Part Number
Standard①	3.0910-3.0922"	1393028
.005" Oversize	3.0966-3.0972"	1393029
.010" Oversize	3.1016-3.1022"	1393030
.015" Oversize	3.1066-3.1072"	1393031
.020" Oversize	3.1116-3.1122"	1393032
.030" Oversize	3.1216-3.1222"	1393033

**Series 60, 70, 90—Replacement Pistons**

Nominal Size	Piston Diameter	Part Number
Standard①	3.4358-3.4370"	1393034
.005" Oversize	3.4414-3.4420"	1393035
.010" Oversize	3.4464-3.4470"	1393036
.015" Oversize	3.4514-3.4520"	1393037
.020" Oversize	3.4564-3.4570"	1393038
.030" Oversize	3.4664-3.4670"	1393039

①—Standard size pistons supplied for service are all high limit pistons (or same as .001" oversize pistons). Therefore no .001" oversize furnished.  
**Piston Diameter—**Measure at top of skirt at right angles to wrist pin bosses (greatest diameter) with pistons at 70° F. minimum.

CONTINUED N NEXT PAGE

## PISTONS

CONTINUED FROM PRECEDING PAGE

## 1942 PISTONS

**PISTONS (ORIGINAL PRODUCTION):** All pistons (cast-iron on 40A, 40B, 50; aluminum alloy on 60, 70, 90) graded for size in .0003" steps and marked by one or two color marks below pin bosses within skirt. Pistons fitted in .010" Oversize Production Engines are low limit .010" oversize pistons. All replacement pistons fitted with piston pins. See table below for piston size for all original cylinder sizes.

## Series 40A, 40B, 50—Original Production (Cast-iron)

## Piston Diameter 3 3/32"

Piston & Engine Mark	Piston Diameter	Cylinder Diameter
XX—Yellow	3.0887-3.0890"	3.0907-3.0910"
X —Yellow	3.0890-3.0893"	3.0910-3.0913"
• —Yellow	3.0893-3.0896"	3.0913-3.0916"
•• —Yellow	3.0896-3.0899"	3.0916-3.0919"

•• —Blue	3.4361-3.4364"	3.4390-3.4393"

## 1942 MODELS

**PISTON IDENTIFICATION:** Original equipment 1942 (heavier) aluminum alloy pistons and new 1946 type (lighter) pistons now being furnished for service on 1942 cars are not interchangeable and may be identified by Casting Number (inside piston).

## Aluminum Piston Casting Numbers

Series	Size	Heavy Type	Light Type
40, 50	Std., .005", .010" OS	1324716	1314308
40, 50	.015", .020", .030" OS	1324725	1319789
70	Std., .005", .010" OS	1324717	1315710
70	.015", .020", .030" OS	1324731	1319796

**CAUTION—**If necessary to mix these light and heavy pistons in a 1942 engine, pistons must be replaced in pairs (same type piston in paired cylinders as follows: No. 1 & 2, No. 3 & 4, No. 5 & 6, No. 7 & 8) to prevent engine roughness caused by difference of piston weight in paired cylinders.

## 1942 MODELS

**PISTONS (REPLACEMENT SERVICE):** Pistons now being furnished for service are 1946 aluminum alloy type and are lighter than aluminum alloy pistons furnished previously. See *Piston Identification* and *CAUTION* paragraph above. Refer to 1946 Replacement Piston data for parts numbers.

## 1946-48 MODELS

**PISTON IDENTIFICATION:** Original and replacement pistons furnished for service are new lighter weight aluminum alloy type and may be identified by Casting Number (inside piston) as follows:

Series	Size	Casting Number
40, 50	Std., .005", .010" OS	1314308
40, 50	.015", .020", .030" OS	1319789
70	Std., .005", .010" OS	1315710
70	.015", .020", .030" OS	1319796

► **CAUTION—**Heavier type 1942 pistons must not be used in 1946-48 engines (will affect engine balance and cause roughness).

## 1946-47-48 PISTONS

**PISTONS (REPLACEMENT SERVICE):** Pistons are lighter weight aluminum alloy type and are fitted with pins (pistons not furnished without pins).

## Series 40, 50 Replacement Pistons

Part No.	Nominal Size	Piston Diameter
1393028	Standard①	3.0910-3.0922"
1393029	.005" Oversize	3.0966-3.0972"
1393030	.010" Oversize	3.1016-3.1022"
1393032	.020" Oversize	3.1116-3.1122"
1393033	.030" Oversize	3.1216-3.1222"

## Series 70 Replacement Pistons

Part No.	Nominal Size	Piston Diameter
1393034	Standard①	3.4358-3.4370"
1393035	.005" Oversize	3.4414-3.4420"
1393036	.010" Oversize	3.4464-3.4470"
1393038	.020" Oversize	3.4565-3.4570"
1393039	.030" Oversize	3.4664-3.4670"

①—Standard pistons are "High Limit" type.

## PISTON RINGS

## 1936-48 MODELS

**REPLACEMENT PISTON RINGS:** Car manufacturer supplies oversize rings in sizes listed below.

Ring Oversize	For Piston Oversizes
.010"	.005" to .010"
.020"	.011" to .020"
.030"	.021" to .030"

**Replacement Ring Sets—**Cylinder bores up to .005" maximum taper can usually be serviced by installing Perfect Circle X-90 piston ring set. To correct oil consumption in slightly worn engines, use new regular compression rings and two oil control rings of #3 type (which has narrower cylinder wall contact than #4 ring and gives more control during break-in) in both #3 and #4 piston ring grooves. **Piston Ring Tools (1940 & later)—**Use Service Tool KMO-297-E (Series 40, 50), KMO-297-D (on Series 60, 70, 90) for removing and installing rings.

**Ring Fitting—**Fit rings to specifications listed on Buick car pages (.010" min. end gap on all rings). **Excessive Oil Consumption Note—**When installing rings to correct this condition use a fine hone very lightly on all bores (just enough to dull glaze surface and not changing bore size). This will allow quicker break-in of new rings.

## CONNECTING ROD &amp; BEARINGS

## 1937-41 SERIES 40 &amp; 50

**REPLACEMENT CONNECTING RODS FOR PREVIOUS SERIES 40, 50:** New connecting rod, No. 1393255 used in 1942 (with cast-iron pistons). Previous rods can be replaced (singly or in sets) with this new rod. All rods in engines with cast-iron pistons must be of this new type.

## CRANKSHAFT &amp; MAIN BEARINGS

## 1937-48 MODELS

**REPLACEMENT MAIN BEARINGS:** Bearings are furnished reamed to size or unreamed as follows: **Unfinished Bearings—**These bearings have extra babbit stock and require special reaming equipment for finishing bearing to size.

**Finished Bearings—**Reamed bearings are furnished singly or in complete matched sets. NOTE—Bearing shells are assembled with .000" to .002" projection above cap and crankcase to provide for seating of bearings when caps tightened.

## 1941-48 MODELS

**REAR MAIN BEARING OIL SEAL:** Consists of oil slinger on crankshaft operating in groove to rear of rear main bearing. Groove in bearing cap has drain hole to return oil collected in groove to crankcase. A special packing ring gasket is assembled in a separate groove in crankcase and cap to rear of oil slinger. Vertical joint between cap and crankcase is sealed by cork gaskets.

**Installation—**Use new cork gaskets and special packing ring gasket. Install packing ring gasket in crankcase and allow 3/64" of gasket to protrude above face of bearing, repeat operation for cap. Packing will be compressed to a tight fit when cap tightened in place. **CAUTION—**Run engine slowly when first started to prevent damaging packing.

## 1942 MODELS

**TIMING CHAIN COVER OIL SEAL:** Consists of spring loaded synthetic rubber seal assembled in crankshaft opening in timing chain cover to prevent oil leaking out to hub of torsion balancer.

**Installation—**With timing chain cover out of engine and old seal and gasket removed from hole in cover, clean oil seal seat in cover. Install new gasket in hole, then press new seal in place with the small diameter (or side with garter spring) to rear. Timing chain cover oil seal driver (H.M. Tool No. J-1870) is available for properly seating seal in cover (center cover when installing on engine).

## TAPPET CLEARANCE ADJUSTMENT

## 1941-48 MODELS

**TAPPET CLEARANCE ADJUSTMENT PROCEDURE:** .015" setting is road operating clearance (with oil and water temperatures stabilized). Since road operating oil and water temperatures cannot be obtained by running engine in shop for warm-up car manufacturer recommends following procedure (with variation in setting to compensate for different temperatures) for securing this setting: Run engine in shop at fast idle (700 RPM. min.) for 20 min., 30 minutes max., then adjust tappets using .017" feeler as 'Go', .018" feeler 'No Go' (if car has been run previously and engine oil is warm when shop warming up run started), or use .018" feeler

as 'Go', .019" feeler 'No Go' (If car not run previously and engine and oil are cold or at room temperature when shop warming up run started). CAUTION—Cars brought in from a hard run should be allowed to stand for 1 hour before tappet adjustment is made. Cars which have stood outside in cold weather should be warmed up for 30 minutes min. (shop run at fast idle) and then set tappet clearance .018" feeler 'Go', .019" 'No Go'.

## VALVE SYSTEM

### 1939-48 MODELS

**ROCKER ARMS AND COVERS:** Rocker arms are mounted on tubular shaft and held against side of shaft brackets by spring installed on shaft between adjacent rocker arms. Shaft retained in brackets by pilot setscrew installed in top of #2 bracket. When installing rocker arms, make certain that lug on side of arm at adjusting screw end is toward bracket (all rocker arms Series 40, 50, intake rocker arms Series 60, 70, 80, 90). Exhaust rocker arms for Series 60, 70, 80, 90 are straight (no offset or reference lug). **Rocker Arm Clearance**—.002-.004".

**Rocker Arm Lubrication Connection:**—Metering restriction for oil feed to hollow rocker arm shaft located in cylinder head and oil pipe fitted directly into top of #1 bracket. #1 and #2 brackets are same part and shaft pilot screw is self-tapping type. NOTE—This type design used on late 1938 engines.

**Rocker Arm Cover (1939):**—Covers interchangeable with 1938 except that center stud not used on 1939 engines (plug center stud hole if 1938 cover used on 1939 engine, remove center stud if new cover used on 1938 engine, studs for new cover are  $\frac{3}{8}$ " shorter and must be used with cover).

### 1941 MODELS

**NO. 16 PUSHROD INSTALLATION & REMOVAL** (Series 50 & 70): See cylinder head gasket installation (above) for removal and installation procedure.

## OIL PUMP

### 1936-48 MODELS

**OIL PUMP:** Oil Pump Drive Change. New type drive used starting with 1939 model. Oil pump driven by tongue on end of distributor shaft engaging slot on end of pump shaft. Distributor shaft only pinned to drive gear (both shafts pinned to gear on previous models).

**Drive Clearances**—Drive shaft bearing .001-.0025". Drive gear backlash .003-.005".

**Pump Gear Clearances**—Idler gear bearing .001-.0025". Backlash .003-.006". End Clear. .0005-.004". **Relief Valve Clearance**—.003-.006".

## CLUTCH NOTES

### 1938-48 MODELS

#### CLUTCH PEDAL OVER-CENTER RETURN SPRING:

Used on all models. Consists of spring connected to angular link attached to lower end of pedal or equalizer shaft and anchored to frame. This design allows spring to exert pressure to hold pedal down with clutch disengaged and out with clutch engaged. NOTE—Angular link not used on 38-40. Adjustment—Angular link is self-positioning on pedal shaft or equalizer shaft. Tighten frame mounting bolt nut as much as possible by turning nut up to limit of threads so that maximum spring tension is secured.

**IMPORTANT**—Spring tension must always be relieved (by backing off eye-bolt nut) before disconnecting clutch linkage.

### 1942-48 MODELS

**CLUTCH YOKE BOOT ASSEMBLY:** Consists of a flexible boot installed on release yoke to seal opening in flywheel housing. Boot is mounted on yoke at outer end by bolt which also attaches release rod nut lock and has a retainer spring at inner end which engages rim of hole in housing. When installing boot, make certain that spring fingers are properly engaged in housing and that release rod nut lock is correctly positioned.

NOTE—This boot first used on late 1942 cars.

## TRANSMISSION NOTES

### 1938-40 MODELS (EXCEPT 39-40 & 39-60)

**TRANSMISSION STEADY REST:** Transmission support at universal joint housing which is part of engine mounting. Consists of cross-member bolted to leg of 'X' member at each end and to universal joint housing at center. A positioning brace rod is connected between steady rest and 'X' member. Adjustment—Bolt holes in frame and support are slotted and shims installed at each of support for centering. Make certain that shims in place when installing steady rest, tighten nuts on two center bolts up tight against spacer, adjust steady rest so that no upward tension placed on transmission, adjust brace rod so that it is tight with no tension placed on rod. NOTE—Model 38-40 has one center screw (instead of two center bolts).

### 1941-47 MODELS

**TRANSMISSION STEADY REST:** See Transmission Support Mounting under ENGINE MOUNTING.

## BRAKE NOTES

### 1937-38-39 MODELS

**BRAKE ASSEMBLY REMOVAL FOR WORK ON FRONT SUSPENSION:** To avoid necessity for bleeding wheel cylinder, proceed as follows:

40, 60—Remove wheel, disconnect tie rod ball stud, remove hub and drum assembly, free backing plate and wire assembly to frame (without disturbing brake shoe assembly or brake line). 80, 90—Remove wheel, disconnect tie rod ball stud, loosen one caster adjuster cap screw  $\frac{1}{2}$  turn (do not disturb other cap screw), remove upper caster adjuster bolt nut and lower caster adjuster nut, remove complete brake assembly (with steering knuckle, hub, and drum) and wire to frame.

## ELECTRICAL SYSTEM NOTES

### 1946-47 MODELS

**DISTRIBUTOR SHEARED DRIVE PIN CORRECTION & IMPROVED LUBRICATION:** Some distributors on early cars did not have sufficient grease or facilities for greasing. These distributors (and distributors with frozen bearings) should be replaced (replaced by manufacturer under warranty). Distributors on which drive gear pin has sheared should be repaired by installing new pin, No. 822273, with sufficient number of No. 1848595 and No. 184-8596 washers for correct shaft endplay of .002-.007".

### 1946-47 MODELS

**STARTER PINION ENGAGEMENT & DISENGAGEMENT CORRECTION:** If starter drive clutch pinion does not engage with flywheel (on starters built before August 1, 1946), replace Shift Lever, Part No. 1884808, with redesigned part of same number which may be identified by zinc-plated finish (original lever painted black) which will correct interference between shift lever and collar. NOTE—Starters on which this correction has been made may be identified by spot of white paint on frame above name plate and by zinc-plated finish of lever. Starters built after Aug. 1, 1946 (Serial No. 6-H-1 up) have this new lever.

If Starter does not engage or cranks continuously (with new type Shift Lever described above)—Check for binding of solenoid contact disc and pushrod on terminal plate guide pin. Replace contact disc and pushrod assembly if guide hole is eccentric (replaced by manufacturer under warranty), straighten guide pin if bent.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—2,830,899. On right frame siderall at rear of right front wheel.

**ENGINE NUMBER:** First number 4-2,995,239. Stamped on right front of engine above crankcase ventilator.

## TUNE-UP

**COMPRESSION:**—Ratio 5.55-1. Pressure 118 lbs. at 1000 R.P.M. r 96 lbs. (approx.) at cranking speed f 135 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 400-450 R.P.M. or 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type H-9. 18 mm. Metric.

Gaps—.020-.025".

**NOTE:**—Gap may be set at .030" if necessary in extreme cases to secure good idling performance. This gap may result in high speed missing after some service.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° (closed).

► **CAUTION:**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

Automatic Advance—13° max. at 1050 RPM (distr.).

Vacuum Advance—6° distr. max. with 10-13" vac'm.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. with flywheel mark 'ADV' at indicator in flywheel housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both screws set midway between 'miss' and 'roll' points. Idle speed 400-440 RPM or 7-8 MPH.

Float Level—Fuel level 15/32" below top edge of bowl.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock.

Ignition Lock—Briggs & Stratton.

**COIL:** Delco-Remy 536-H. On right side of engine block near distributor.

Ignition Current—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1855968. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-F. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° (closed), 14° (open).

Breaker Arm Spring Tension—19-23 ozs.

Automatic Advance			
Distributor	Engine		
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3.5	500
7	400	14	800
13	1050	26	2100

**Vacuum Spark Control:**—Vacuum unit mounted on side of distributor, linked directly to breaker plate. Provides additional advance at speeds greater than 18 M.P.H. except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
6°	12°	10-13"

**Octane Selector:**—Adjustment at distributor providing advance or retard from standard setting (pointer midway on scale) to compensate for fuel characteristics. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out two hold-down screws in mounting flange.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting for fuel of 70 Octane rating as given. See Octane Selector for final setting.

Flywheel Degrees Piston Position

All Engines .....2° BTDC.....0015° BTDC

**To Set Timing (Synchroscope):**—Recommended by manufacturer. Insert one Synchroscope lead in #1 terminal in distributor cap, clip other lead to #1 spark plug cable. Direct Synchroscope light on flywheel through inspection hole in front face of housing above starter. Idle engine at speed not more than 400 R.P.M. Note position of flywheel timing mark 'ADV', loosen two distributor hold-down screws, rotate distributor slowly until timing mark coincides with reference line on housing, tighten

hold-down screws. If reference line on Octane Selector pointer does not coincide with center line on scale, loosen pointer lock screw, shift pointer, tighten lock screw.

**NOTE**—The 'ADV/' flywheel mark is less than  $\frac{1}{4}$ " before the dead center mark and is filled in with paint to be more easily distinguished.

**To Set Timing (Without Synchroscope)**—No means provided to crank engine (engage gears and roll car on floor). With #1 piston on compression, turn engine over until #3 exhaust valve (fifth valve from front of engine) begins to open, stop when flywheel mark 'ADV/' lines up with mark on housing (inspection hole in right front face of housing above starter). Use timing light or form spark gap between distributor high tension lead and housing to check contact opening. Loosen two hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws, loosen Octane Selector pointer lock screw, center pointer reference line on scale, tighten lock screw.

**Octane Selector**—Should be set for final ignition setting dependent upon fuel used. To adjust, loosen two distributor hold-down screws, rotate distributor clockwise so that pointer moves toward 'Low' end of scale for fuel of less than 70 Octane rating or counter-clockwise toward 'High' end of scale for fuel of higher rating until slight 'ping' noticeable at speeds between 10-15 M.P.H. but not at higher speeds when car is accelerated with wide open throttle.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-1, 1" dual, downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications. *For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is thoroughly warmed up with choke valve wide open and idling at slow or hot idling speed.

**Idle Adjustment**—Adjust throttle stop screw so that engine idles at 400-440 R.P.M. or 7-8 M.P.H. Turn idle adjusting screw for each carburetor barrel (in succession) in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump**—Not adjustable.

## CARB. EQUIPMENT

**Fast Idle**—Buick Cold Idle Control. See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment**—Linkage adjustment must be maintained to provide correct throttle opening for starting. With carburetor set for 7-8 M.P.H. idling speed and throttle button pushed in, rotate fast idle cam to extreme left against stop (fast idle position), adjust vacuum switch rod length so that switch lever reference line coincides with 'Fast Idle' line on housing. Hold cam in fast idle position, depress accelerator pedal, note throttle position when vacuum switch makes contact and starter operates. Gap between point of throttle stop screw and cam must be at least  $\frac{5}{32}$ ".

**Automatic Choke**—Delco-Remy Model 498-H.

*For complete data, refer to Carburetion Equip. Index.*  
**Choke Setting**—Connecting rod is engaged in inner hole in automatic choke lever marked 'R' for standard setting. Shift to center hole if over-richness experienced. Outer hole marked 'H' used only to correct over-richness of highly volatile gasoline.

**Air Cleaner**—AC. #1525959 or 1526659 oil-wetted type standard. #1525921 or 1526654 oil-bath type optional.  
**NOTE**—Smaller main metering jets must be used with the heavy duty oil-bath type cleaners. See Stromberg Jet Specification table in Carburetion Section.

**Fuel Pump**: AC Type W, No. 1521854. Diaphragm type.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric. #1515205 (dash unit), #1515416 (tank unit). See article in Carburetion Sec.  
*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco, Type 13-J. 6 volt, 98 A.H. capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Under right front seat.

## STARTER

**Delco-Remy Model 734-Z. Armature No. 823881.**  
**Drive**—Solenoid pinion shift and overrunning clutch.

**Cranking Engine**—135 R.P.M., 150 amperes at 4.5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	85
12 " "	Lock	3.37	525

**Removal**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange cap screws.

**Starting Switch**—Solenoid Switch Type 1512. Vacuum Switch Type 1594. Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal with ignition "on".  
*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 70 lb. pull with  $\frac{1}{2}$ " air gap drawing 65-71 amperes at 5 volts. Holds switch closed with draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—4 volts max. **Open**—1.6-2.0 volts.  
**Contact Gap**—.030-.045". **Air Gap**.010-.014" closed.

### Vacuum Switch

**Contacts Close**—10-14" rotation counter-clockwise from latch position.  
**Unlatch Action**—3.4-4.6" of Hg. approximately 30° from latch position.

## GENERATOR STANDARD

**Delco-Remy Model 936-C, Armature 1854856 (Std.), Model 931-Z, Armature 1853375 (Taxicab).** Third brush control type. Voltage Control Relay (step voltage control) Optl. on 936-C, Std. on 931-Z. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Connect test ammeter in charging line at 'BAT' terminal. On cars with step-voltage control, ground generator field 'F' terminal to frame. Loosen lock screw on commutator end plate, shift third brush adjusting handle (visible through upper ventilating hole on commutator endplate) counter-clockwise to increase or clockwise to decrease charging rate. Tighten lock screw and remove generator field ground.

**Maximum Charging Rate**—23 amperes (cold), 19 amperes (hot), 8.5-8.8 volts, 2760 R.P.M., 31 M.P.H. Manufacturer allows maximum generator output of 24 amperes (cold), 19 amperes (hot) with heavy accessory load when step-voltage unit is installed.

### Performance Data

Model 936-C			
	Amperes	Volts	R.P.M.
Cold	19-23	8.4-8.8	2400
Hot	16-20	8.1-8.5	3100

Model 931-Z			
Cold .....	22-24	8.6-9.0	1300
Hot .....	13.5-16.5	7.7-8.1	1600-1800

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ozs. (main), 16-20 ozs. (third brush).

**Field Current**—2.3-2.6 amperes (936-C), 3.5-4.0 amperes (931-Z) at 6.0 volts.

**Motoring**—500-700 R.P.M., 4.5-5.5 amperes at 6 volts.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out two pivot cap screws and one clamp bolt.

**Belt Adjustment**—Loosen clamp bolt and pivot screws, pull generator away from engine until belt deflection midway between generator and fan pulleys is  $\frac{1}{2}$ " with light pressure, tighten clamp bolt and screws.

## GENERATOR SPECIAL EQUIPMENT

**CANADIAN GENERATOR: Delco-Remy 936-V. Armature No. 1854856.** Third brush control in conjunction with Vibrating Voltage Regulator. All specifications, performance data, and adjustments same as for Model 936-W (Canadian production generator on Models 60, 80, 90). See next page.

**SPECIAL GENERATORS**—Model 961-N & 934-F. Two brush type used with Double Core Type Voltage & Current Regulators Model 5832 (961-N), 5599 (934-F). *Refer to Buick Series 60, 80, 90 (1936) article (following) for complete data.*

## CUTOUT RELAY

**Delco-Remy Model 270-B (Std. on Model 936-C Gen.).** Mounted on generator. Has ground contacts for starter solenoid relay control.

*For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.75-7.5 volts, 900 R.P.M., 10 M.P.H.  
**Cuts Out**—0-3.5 ampere discharge.

CONTINUED N NEXT PAGE

## C NTINUED FR M PRECEDING PAGE

Contact Gap—.018-.025".  
Air Gap—.018-.022" with contacts closed.

## REGULATOR

## STANDARD

Delco-Remy Model 5589 (936-C), 5555 (931-Z). Voltage Control Relay. Cutout Relay and non-vibrating type regulator in single case. Cutout Relay has special 'ground' contacts for starter solenoid control. For complete data, refer to Electrical Equipment Index.

## Cutout Relay

Cuts In—6.4-7.0 volts (5589), 6.3-6.9 volts (5555) at 900 RPM. or 10 MPH.  
Cuts Out—3 amperes maximum discharge current.  
Contact Gap and Air Gap—Same as for Mod. 270-B.

## Voltage Control Relay

Contacts Open—8.35-8.65 volts at 70° F.  
Contacts Close—7.3-7.7 volts at 70° F.  
Contact Gap—.008-.013".  
Contact Spring Tension—.7-9 ounces.

Air Gap—.028-.040" between armature and core (armature down against lower stop), .028-.040" armature travel (between armature and lower stop).

## REGULATOR

## SPECIAL EQUIPMENT

Special Equipment: Delco-Remy Model 5557. Used on Model 936-V Generator (Canadian Equipment). Vibrating Voltage Regulator.  
Refer to Buick Series 60, 80, 90 (1936) article (following) for complete data.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused, cross-beam type with special non-interchangeable lenses. Headlamps aimed straight-ahead with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in fourth or 'Country Beam' position.

Headlamp Beam Indicator—Located at top of instrument cluster (above speedometer dial). Lighted whenever 'Country Beam' or upper headlamp beams are lighted.

## Switches

Lighting—Delco-Remy Model 479-F, M, 479-L (Exp.).  
Foot Selector—Delco-Remy Model 471-T.  
Instrument Lamp—Delco-Remy Model 1404.  
Stop Lamp—Hydraulic type on brake distributor mounted on left front leg of 'X' member.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking Bulbs (Std.)	1.5	55
Fender (Optl.)	3	63-L
Instrument, Beam Indicator	1	51
Map Light	1.5	55
Tail	3	63-L
Stop	15	87-L
Dome	6	81-L

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 ampere in connector in lighting switch feed line (#6 terminal) from ammeter.

**HORNS:**—Klaxon Model K-33-S. Type 2051 (low note—right side), Type 2052 (high note—left side). Vibra-

tor type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2051 Low Note	11-13	.042-.046"
2052 High Note	10-12	.032-.036"

**Horn Relay:**—Model 268-W. Requires .25 amperes at 2 volt minimum to close contacts. Current draw .8 amperes.

Contact Gap—.015-.025". Spring Tension—6-8 ozs.  
Air Gap—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—Type—8 cylinder 'T' head.

Bore—3 3/32". Stroke—3 7/8".

Displacement—233 cubic inches.

Rated Horsepower—30.63 (AMA).

Developed Horsepower—93 at 3200 R.P.M.

Compression Ratio & Pressure—5.55-1 Std. cast-iron head. Pressure 118 lbs. at 1000 R.P.M. or approximately 98 lbs. at cranking speed of 135 RPM.

Vacuum Gauge—Steady reading of 18-20" of HG. with engine idling at 400-450 R.P.M. or 7-8 M.P.H.

NOTE—To drop oil pan for work on engine, first remove front stabilizer by disconnecting frame brackets and stabilizer links at lower control arms.

**PISTONS:**—Buick Anolite, Aluminum alloy, 'T' slot, cam ground type with anodized finish (special hard oxide bearing surface). Pistons cannot be ground. Recondition cylinders to take finished replacement pistons.

Weight—13.75 ozs. (stripped), 19.6 ozs. (with rings).

Length—3 4/5".

Removal—Pistons and rods removed from above.

Clearance—Top of skirt .0021", Limits .0018-.0024".

Replacement Pistons:—See Buick Shop Notes

**Fitting New Pistons:**—Check piston with micrometer gauge at point just below 'T' slot junction on both sides of vertical slot and below lower end of slot.

Finish cylinder bore to size giving correct clearance.

Feeler gauge 1/2" wide can be used on side opposite slot. Piston should fall of own weight with .0015" feeler and hold on .00225" feeler with engine temperature of 65-75° F.

**Installing Pistons:**—Slot should be toward left or away from camshaft.

**PISTON RINGS:**—Two compression, two oil control rings per piston all above pin. Both oil ring grooves drilled radially with ten 1/8" drain holes.

NOTE—Narrow heat deflector groove located above top ring groove. No ring fitted in this groove.

Ring	Width	End Gap	Side Clearance
Comp.	1/2"	.010-.015"	.002-.0035"
Oil Cont.	5/32"	.010-.018"	.0015-.003"

NOTE—Compression rings must be placed with undercut corner down. Service rings furnished .010", .020", .030" oversizes.

**PISTON PIN:**—Diameter 13/16". Length 2 11/16".

Pin is clamped in rod. Oversize pins not furnished. Pins are fitted and furnished with all replacement pistons.

Pin Fit in Piston—.0003-.0004" clearance at 70° F. or a hard push thumb fit.

NOTE—Use only 5 1/2" wrench in tightening pin bolt to avoid damage to hollow pin.

**CONNECTING ROD:**—Weight 29.37 ozs. Length 7 1/4".

Crankpin Journal Diameter—2".

Lower Bearing—Spun-babbitt lined type.

Clearance—.0008-.0018". Sideplay .005-.010".

Bearing Adjustment:—Shims. Do not file rods or caps.

Installing Rods:—Cap and rod must line up. Install rod with mark toward rear of engine and oil spray hole in lower bearing upper half toward camshaft.

NOTE—Special diameter ground bolts used for cap and rod assembly. Common bolts must not be used.

**CRANKSHAFT:**—Five bearing. Integral counterweights.

Journal Diameters—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

Bearing Type—Steel-backed, babbitt-lined. Bearings dowelled in crankcase and cap and assembled with .000-.002" projection. Line-ream new bearings. Clearance—.0007-.0022". 1/32" clearance at each end.

Bearing Adjustment:—Shims provided. Do not file caps.

End Thrust:—Taken by #3 (center) bearing. Endplay .004-.007".

**CAMSHAFT:**—Five bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 25/32".

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.0005-.0035". Endplay .002-.006".

End Thrust:—Taken by thrust plate assembled between front bearing and camshaft sprocket.

Timing Chain:—Link-Belt. Width 1". Pitch .500". Length 24 1/2" or 49 links.

Installing Chain—Install chain (new) with 1/4"-3/8" slack midway between sprockets. Replace when sideplay exceeds 2" or chain becomes noisy.

Camshaft Setting:—Sprockets marked. Mesh chain on sprockets so that brass washers on link pins are opposite marked teeth on each sprocket. These chain markers are 10 links apart.

**VALVES:**—Head Diameter Stem Diameter Length

Intake .....1 17/32".....3715-.3725".....4.5"

Exhaust .....1 11/32".....3711-.3719".....4.037"

Seat Angle Lift Stem Clearance

Intake .....45°.....332-.338"......0015-.0035"

Exhaust .....45°.....332-.338"......0021-.0039"

NOTE—Exhaust valve stems are copper-plated.

Valve Guides:—Press fit in head. Install with undercut end up and finish ream to size for correct clearance.

Valve Springs:—Double springs on all valves.

Inner Spring Pressure Length

Valve Closed .....21 1/2-26 1/2 lbs.....1 21/32"

Valve Open .....53-59 lbs.....1 5/16"

Outer Spring Pressure Length

Valve Closed .....31-36 lbs.....1 15/16"

Valve Open .....81 1/2-87 1/2 lbs.....1 19/32"

Total Spring Pressure

Closed—52 1/2-62 1/2 lbs. Open—134 1/2-146 1/2 lbs.

NOTE—Tapers on valve keys and spring caps have been increased.

Valve Lifters—Single piece cast-iron. Lifter guide holes reamed in crankcase. Clearance .0005-.0025".

Rocker Arms:—Drop-forged fitted with steel-backed, babbitt-lined bushings.

Clearance—.0005"-.0025".

NOTE—When installing bushings see that oil hole to push rod ball lines up with hole in bushing.

## VALVE TIMING

**Tappet Clearance**—.015" all valves. Engine hot.

**Valve Timing**:—See Camshaft Setting above. 'Timing Point' when valve .004" off seat with .015" tappet clearance or lash customarily listed instead of actual opening and closing points.

### Timing Points

Intake Valves ...Open 8° BTDC.....Close 58° ALDC.  
Exhaust Valves ...Open 58° BLDC.....Close 23° ATDC.

### Opening and Closing Points

Intake Valves ...Open 21½° BTDC..Close 71° ALDC.  
Exhaust Valves Open 71° BLDC..Close 36½° ATDC.

**Valve Timing Check**—#2 or #7 exhaust valve should be .150" open (actual opening as measured by dial indicator contacting valve spring cap), with #1 and 8 pistons on top dead center and flywheel mark "TDC/1-8" at indicator in inspection hole in right front face of flywheel housing above starter.

## LUBRICATION

**LUBRICATION**:—Pressure system from oil pump in crankcase through main oil channel in right side of crankcase.

**Oil Pump**:—Helical gear type in crankcase driven from distributor drive gear (slot in end of pump shaft engages lower pin in gear, upper pin engages distributor shaft). Ignition timing not disturbed by removal of pump.

**Oil Pump Clearances**—See *Buick Shop Notes*.

**Normal Oil Pressure**:—10 lbs. idling, 45 lbs. maximum at 35 M.P.H. and above.

**Oil Pressure Regulator**:—Operates at 45 lbs. Mounted on oil pump. Not adjustable.

**Crankcase Capacity**:—7 qts. (dry), 5 qts. (refill).

## CLUTCH

**CLUTCH**:—Own Make, Borg & Beck Driven Member. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions. See *Clutch Section for complete data*.

**Facings**—Woven type, 2 required. Inside Diam. 6⅞". Outside Diam. 9½". Thickness .133".

**Adjustment**—Clearance between pedal and underside of toeboard must be ⅜-¾". To adjust, loosen locknut and turn setscrew at rear of pedal above pedal stop. Free movement of clutch pedal must be ¾-1". To adjust, take out clevis pin connecting clutch rod and clutch fork, turn clevis on rod. One full turn of clevis changes pedal free movement 7/16".

**Removal**:—Remove rear end (take out flange bolts in front end of torque tube, pull rear end back to disconnect drive shaft at splined joint at universal), remove transmission and transmission support (support transmission at rear while it is being withdrawn), take off clutch pan, take out clutch mounting screws (turning all screws out evenly).

**NOTE**—When installing transmission support which is bolted to universal joint flange and frame, see that centering shims are in place at each end and that cross member is positioned so that rubber insulation is not compressed (bolt holes are slotted).

## FRONT SUSPENSION

**Front Suspension**:—Independent, linked parallelogram type with coil springs. See article in Steering Section for description and adjustment procedure. See *Front Suspension Section for complete data*.

**NOTE**—To avoid damage to brake assembly when work is being done on front suspension, disassemble as follows: Remove wheel, disconnect tie rod ball

stud, loosen one caster adjuster capscrew one-half turn (do not disturb second capscrew or caster adjustment will be lost), remove upper and lower caster adjuster bolt nuts, remove complete steering knuckle, hub and brake drum assembly and wire to frame to prevent damage to brake hose.

**King Pin Inclination**—3½-4½° crosswise.

**Camber**—Minus ¼ to plus ¾°. No adjustment.

**Caster**—3-3½°. Adjustable.

**Toe In**—1/16-1/8". Adjustable.

**Steering Geometry (Toe Out)**—Outer wheel turned 20°, inner wheel 23¼° plus or minus ¾°. Check tie rod ends, steering arms, kingpin, or wheel bearings for looseness.

## STEERING GEAR

**Steering Gear**:—Saginaw Worm-and-Double Roller type with center steering.

See *Steering Gear Section for complete data*.

## BRAKES

**BRAKES**:—Service—Buick (Bendix) Hydraulic Single-anchor four-wheel type. Hand lever applies rear wheel brakes. See article in Brake Section for complete adjustment procedure.

See *Brake Section for complete data*.

**NOTE**—Wheel cylinder diameters are 1 1/16" (front wheels), 1" (rear wheels) and no part of assembly is interchangeable between front and rear wheels.

**Brake Drum Diameter**—12".

**Brake Lining**—Ferodo BZ-10 Woven type. Width 1¾". Thickness 3/16". Length 9 15/16" (primary shoe), 12¾" (secondary shoe) or 22 11/16" per wheel.

**Brake Clearance**—.010" plus or minus .002" at heel and toe of each shoe.

**Hand Brake Adjustment**:—See *Service Brake Adjustment*.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number—2,830,899. On right frame siderail at rear of front wheel.

**ENGINE NUMBER:** First number (60) 6-3001000, (80) 8-3001000, (90) 9-3001000. Stamped on right front of engine above crankcase ventilator pipe.

**TUNE-UP**

**COMPRESSION:**—Ratio 5.45-1. Pressure—108 lbs. at 1000 R.P.M. or 94 lbs. (approx.) at cranking speed of 135 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 400 R.P.M. or 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type H-9. 18 mm. Metric. Gaps—.020-.025".

**NOTE:**—In extreme cases gaps may be set at .030" if necessary to secure good idling performance. This setting may result in high speed missing after some service.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle 31° (closed).

► **CAUTION:**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

Automatic Advance—15° max. at 1300 RPM (distr.). Vacuum Advance—6° max. (distr.) with 10-13" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—10° BTDC. with flywheel mark 'ADV' at indicator in flywheel housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both screws set midway between 'miss' and 'roll' points. Idle speed 400-440 RPM or 7-8 MPH.

Float Level—Fuel level 5/8" below top of bowl.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes Hershey type co-incidental ignition switch and steering post lock.

**Ignition Lock:**—Briggs & Stratton.

**COIL:** Delco-Remy 536-H. On right side of engine block near distributor.

Ignition Current—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1855968.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-E. Singl breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector.

Breaker Gap—.015". Limits .0125-.0175".  
Cam Angle or Dwell—31° (closed), 14° (open).  
Breaker Arm Spring Tension—19-23 ozs.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	250	3.5.....	500
7 .....	400	14 .....	800
15 .....	1300	30 .....	2600

**Vacuum Spark Control:**—Vacuum unit mounted on side of distributor, linked directly to breaker plate. Provides additional advance at speeds greater than 15 M.P.H. except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
6°	12°	10-13"

**Octane Selector:**—Adjustment at distributor providing advance or retard from standard setting (pointer midway on scale) to compensate for fuel characteristics. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in mounting flange.

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting for fuel of 75 Octane rating as given. See Octane Selector for final setting.

**Flywheel Degrees** **Piston Position**

All engines .....10° BTDC.....0442° BTDC

**To Set Timing (with Synchroscope)**—Recommended by manufacturer. Insert one Synchroscope lead in #1 terminal in distributor cap, clip second lead to #1 spark plug cable. Direct Synchroscope light at flywheel through timing inspection hole in right

front face of flywheel housing above starter. Idle engine at speed not greater than 400 R.P.M. Note position of flywheel timing mark 'ADV/'. If 'ADV' line does not coincide with line on housing, loosen two distributor hold-down screws, rotate distributor slowly until lines coincide, tighten hold-down screws. Check position of Octane Selector pointer. If reference line on pointer does not coincide with center line of scale, loosen pointer lock-screw, shift pointer, tighten lock-screw.

**NOTE**—The 'ADV/' ignition timing mark filled with paint.

**T Set Timing (Without Synchroscope)**—No means provided to crank engine (engage gears and roll car to turn engine over). With #1 piston on compression, turn engine over until #3 exhaust valve (fifth valve from front of engine) begins to open, stop when flywheel mark 'ADV/' lines up with mark on flywheel housing (timing inspection hole in right front face of housing above starter). Use timing light or form spark gap between distributor high tension lead and housing to check contact opening. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws. Check position of Octane Selector pointer. If reference line on pointer does not line up with center line on scale, loosen pointer lock-screw, shift pointer, tighten lock-screw.

**Octane Selector**—Should be adjusted for final ignition setting dependent upon Octane Rating of fuel used by car owner. Initial setting (above) correct for fuel of 75 Octane Rating. To adjust, loosen two distributor hold-down screws, rotate distributor clockwise so that pointer moves toward 'Low' end of scale for fuel of lower rating, or counter-clockwise (toward 'High' end of scale) for higher rating until a slight 'ping' is noticeable at speeds between 10 and 15 M.P.H. but not at higher speeds when car is accelerated with wide open throttle.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-22 1¼" dual, downdraft type. See Carburetion Section for adjustment, overhaul and Jet Specifications.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is thoroughly warmed up with choke valve wide open and idling at hot or slow idling speed.

**Idle Adjustment**—Set throttle stopscrew so that engine idles at 400 R.P.M. or 7-8 M.P.H. Turn idling adjusting screw for each carburetor barrel (in succession) in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump**—Not adjustable.

**Fast Idle**—Buick Cold Idle Control.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment**—Must be maintained to provide correct throttle opening for starting. With carburetor set for correct 7-8 M.P.H. hot idling speed and throttle button pushed in, rotate fast idle cam to extreme left against stop (fast idle position), adjust vacuum switch rod length so that switch lever reference line coincides with 'Fast Idle' line on housing. Hold cam in fast idle position, depress accelerator pedal, note throttle position when vacuum switch makes contact and starter operates.

Gap between throttle stopscrew and cam must be at least 5/32" at this point.

**Automatic Choke**—Delco-Remy Model 498-J.

*For complete data, refer to Carburetion Equip. Index.*  
**Choke Setting**—Connecting rod is engaged in inner hole in automatic choke lever marked 'R' for standard setting. Shift to center hole if over-richness is experienced. Outer hole marked 'H' used only for over-richness due to highly volatile gasoline.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1525960 (60), #1525982 (80,90) oil-wetted type standard, #1526618 (60,80), #1526619 (90) oil-bath type optional.

**NOTE**—Smaller main metering jets must be used with the heavy-duty oil-bath type cleaner. See Jet Specification table in Carburetion Section.

**Fuel Pump**—AC. Type AB #1521838. Diaphragm type combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric. #1515205 (dash unit), #1515416 (60 tank unit), #1515415 (80,90 tank unit).  
*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco, Type 15-G. 6 volt, 15 plate, 114 amp. hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.5 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Under right front seat.

## STARTER

**Delco-Remy Model 727-W (Std.), 729-B (60 RHD).**

**Armature No.** 820158.

**Drive**—Solenoid pinion shift and overrunning clutch.

**Cranking Engine**—115 R.P.M., 175 amperes at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5	65
16 ft. lbs.	Lock	3	600

**Removal**—Mounted on right front face of flywheel housing. To remove, take out capscrews.

**Starting Switch**—Solenoid Switch Type 1512 (727-W), 1530 (729-B). Vacuum Switch Type 1601. Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal with ignition 'on'.  
*For complete data, refer to Electrical Equipment Index.*

**Solenoid Switch Type 1512, 1530**

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with draw of 12-14 amperes (hold-in coil only).

**Solenoid Relay & Vacuum Switch.**

*All data same as for Series 40 (preceding page).*

## GENERATOR

### STANDARD

**Delco-Remy Model 936-P (All Series).** Armature No. 1854856. Third brush control type with Voltage Control Relay (step voltage control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Connect test ammeter in charging line at 'BAT' terminal, ground generator field 'F' terminal to frame. Loosen lock-screw on commutator end plate, shift third brush adjusting handle (visible through upper ventilating hole on commutator endplate) counter-clockwise to increase or clockwise to decrease charging rate. Tighten lock-screw and remove generator field ground.

**Maximum Charging Rate**—27 amperes (cold), 23 amperes (hot), 8.7-9.0 volts, 2770 R.P.M., approx. 36 M.P.H. Manufacturer allows maximum generator output of 24 amperes (cold), 19 amperes (hot) with heavy accessory load.

Performance Data			
	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current**—2.3-2.6 at 6 volts.

**Motoring**—500-700 R.P.M., 4.5-5.5 amperes at 6 volts.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out two pivot capscrews and one clamp bolt.

**Belt Adjustment**—Belt deflection midway between generator and fan pulleys should be ½" with light pressure.

## GENERATOR

### SPECIAL EQUIPMENT

**CANADIAN GENERATOR**—Delco-Remy 936-W. Armature No. 1854856. Third brush control in conjunction with vibrating voltage regulator. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data below and special article in Equipment Section. Do not shift third brush or run generator on open-circuit.

**Maximum Charging Rate**—As shown in table below. Reached at approx. 38 M.P.H. To check charging rate, connect test ammeter in charging line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

Performance Data			
	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation, Brush Spring Tension, Field Current, Removal and Belt Adjustment** same as for standard generator above.

**SPECIAL GENERATORS**—Model 961-N & 934-F. Two brush type used with Double Core Type Voltage & Current Regulators Model 5832 (961-N), 5599 (934-F). Refer to Buick Series 60,80,90 (1937) article following for complete data.

## REGULATOR

### STANDARD

**Delco-Remy Model 5594 (Std. Gen.).** Voltage Control Relay. Cutout Relay and non-vibrating type Voltage Regulator in single case. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**CONTINUED ON NEXT PAGE**

**C CONTINUED FROM PRECEDING PAGE****Cutout Relay**

Cuts In—6.4-6.8 volts, 900 R.P.M., 10 M.P.H.

Cuts Out—3 amperes maximum discharge current.

Contact Gap—.013-.025".

Air Gap—.018-.022" with contacts closed.

**Voltage Control Relay**

Contacts Open—8.35-8.65 volts at 70° F.

Contacts Close—7.3-7.7 volts at 70° F.

Contact Gap—.008-.013".

Contact Spring Tension—.7-.9 ounces.

Air Gap—.028-.040" between armature and core (armature down against lower stop), .028-.040" armature travel (between armature and lower stop).

**REGULATOR****SPECIAL EQUIPMENT**

Delc -Remy Model 5557 (Can. Gen.). Double Core Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator. Cutout Relay has extra 'ground' contacts for starter solenoid control. For data, refer to Electrical Equip. Index.

**Cutout Relay**

Cuts In—6.5-7.25 volts.

Cuts Out—3 ampere max. discharge at 6.3 volts.

Contact Gap—.018-.025".

Air Gap—.018-.022" with contacts closed.

**Voltage Regulator**

Setting—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator must be checked at these points.

Adjustment—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly. NOTE—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

Contact Gap—.015-.025".

Air Gap—.060-.070" between armature and center of core with armature down and fibre bumper just touching stop, .008-.013" between fibre bumper and stop with armature up.

**LIGHTING**

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused, cross-beam type with special non-interchangeable lenses. Headlamps aimed straight-ahead with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in fourth or 'Country Beam' position.

Headlamp Beam Indicator—Located at top of instrument cluster (above speedometer dial). Lighted whenever 'Country Beam' or upper headlamp beams are lighted.

**Switches**

Lighting—Delco-Remy Model 479-F.N; 479-L (Exp.).

Foot Selector—Delco-Remy Model 471-T.

Instrument Lamp—Delco-Remy Model 1404.

Stop Lamp—Hydraulic type on brake distributor on outside of left front leg of 'X' member.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking Bulbs (Std.)	1.5	55
Fender (Optl.)	3	63-L
Instrument, Beam Indicator	1	51
Map Light	1.5	55
Tail	3	63-L
Stop	15	87-L
Dome	6	81-L

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—Mounted on lighting switch (part of assembly). Non-adjustable. Contacts will remain closed with current of 25 amperes but will open in 1 min. with current of 38 amps. @ 70-80°F.

**FUSES:**—Dome Light and Rear Cigar Lighters (90). 30 ampere in connector in dome lamp feed wire from lighting switch at rear of instrument board.

**HORNS:**—Klaxon Model K-33-S. Type 2051 (low note—right side), Type 2052 (high note—left side). Vibrator type, blended tone, twin horns operated by relay. Refer to Series 40 (preceding page) for all horn data.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type 8 cylinder 'T' head.

Bore—3 7/16". Stroke—4 5/16".

Displacement—320.2 cubic inches.

Rated Horsepower—37.81 (AMA).

Developed Horsepower—120 at 3200 R.P.M.

Compression Ratio & Pressure—5.45-1 Std. cast-iron head. Pressure 108 lbs. at 1000 R.P.M. or approximately 95 lbs. at cranking speed of 135 R.P.M.

Vacuum Gauge—Steady reading of 18-20" of HG. with engine idling at 400 R.P.M. or 7-8 M.P.H.

NOTE—To drop oil pan for work on engine, first remove front stabilizer by disconnecting frame brackets and stabilizer links at lower control arms.

**PISTONS:**—Buick Anolite, Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide bearing surface). Pistons cannot be ground. Recondition cylinders to take finished replacement pistons.

Weight—22.56 ozs. (stripped), 25.81 ozs. (with rings).

Length—4.16".

Removal—Pistons and rods removed from above.

Clearance—Top of Skirt .0023". Limits .0020-.0026".

Replacement Pistons:—See Buick Shop Notes.

Fitting New Pistons:—Check piston with micrometer gauge at point just below "T" slot junction on both sides of vertical slot and below lower end of slot. Finish cylinder bore to take replacement pistons. Feeler gauge 1/2" wide can be used on side opposite slot. Piston should fall of own weight with .0015" feeler and lock on .00225" feeler. Engine at 65-75° F.

Installing Pistons:—Slot should be toward left or away from camshaft.

**PISTON RINGS:**—Two compression, two oil control rings per piston all above pin. Both oil ring grooves drilled radially with ten 1/8" drain holes. NOTE—Narrow heat deflector groove located above top ring groove. No ring fitted in this groove.

Ring	Width	End Gap	Side Clearance
Comp.	1/8"	.010-.015"	.002-.0035"
Oil Cont.	5/32"	.010-.018"	.0015-.003"

NOTE—Install compression rings with undercut corner down. Rings furnished .010", .020", .030" over-size.

**PISTON PIN:**—Diameter 7/8". Length 2 31/32".

Pin is clamped in rod. Oversize pins not furnished. Pins fitted and furnished with all new pistons.

Pin Fit in Piston—.0003-.0004" clearance at 70°F. or a hard thumb push fit.

NOTE—Use only a 5 1/2" wrench in tightening pin bolt to avoid damage to hollow pin.

**CONNECTING ROD:**—Weight 36.49 ozs. Length 8 1/4".

Crankpin Journal Diameter—2 1/4".

Lower Bearing—Spun-babbitt lined type.

Clearance—.0008-.0018". Sideplay .005-.010".

Bearing Adjustment:—Shims. Do not file rods or caps.

Installing Rods:—Cap and rod must line up. Install rod with mark toward rear and oil spray hole in lower bearing upper half toward camshaft.

NOTE—Special diameter ground bolts used for cap and rod assembly. Common bolts must not be used.

**CRANKSHAFT:**—Five bearing. Integral counterweights.

Journal Diameters—#1, 2 9/16"; #2, 2 5/8"; #3, 2 11/16"; #4, 2 3/4"; #5, 2 13/16".

Bearing Type—Steel-backed, babbitt-lined. Bearings dowelled in crankcase and cap and assembled with .000-.002" projection. Line ream new bearings.

Clearance—.0007-.0022".

Bearing Adjustment:—Shims. Do not file caps.

End Thrust:—Taken by #3 (center) bearing. Endplay .004-.007".

NOTE—Torsion balancer mounted ahead of fan pulley. Dynamically balanced before assembling and must be replaced as a complete assembly.

**CAMSHAFT:**—Five bearing. Non-adjustable chain drive

Journal Diameters—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 25/32".

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.0005-.0035". Endplay—.002-.006".

End Thrust:—Taken by thrust plate assembled between front bearing and camshaft sprocket.

Timing Chain:—Link-Belt. Width 1 1/4". Pitch .500". Length 50 links or 25".

Installing Chain—Install new chain with 1/4"-3/8" slack midway between sprockets. Replace when sideplay is over 2" or chain becomes noisy.

Camshaft Setting:—Sprockets marked. Mesh chain on sprockets so that brass washers on link pins are opposite marked teeth on each sprocket. These chain markers are 10 links apart.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3715-.3725"	4 5/8"
Exhaust	1 7/16"	.3711-.3719"	4 1/5"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347-.348"	.0015-.0035"
Exhaust	45°	.347-.348"	.0021-.0039"

NOTE—Exhaust valve stems are copper-plated.

Valve Guides:—Press fit in head. Installed with undercut end up and finish reamed to size for correct stem clearance.

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

**Valve Springs:**—Double springs on all valves.

Inner Spring	Pressure	Length
Valve Closed	21½-26½ lbs.	1 21/32"
Valve Open	53-59 lbs.	1 5/16"
Outer Spring	Pressure	Length
Valve Closed	31-36 lbs.	1 15/16"
Valve Open	81½-87½ lbs.	1 19/32"

**Total Spring Pressure**

Closed—52½-62½ lbs. Open—134½-146½ lbs.

**NOTE:**—Tapers on valve keys and spring caps have been increased and parts are now copper-plated.

**Valve Lifters:**—Single piece cast-iron. Lifter guide holes reamed in crankcase. Clearance—.0005-.0025".

**Rocker Arms:**—Drop-forged fitted with steel-backed babbit-lined bushings. Clearance—.0005-.0025".

**NOTE:**—When installing bushings, see that oil hole to push rod ball lines up with hole in bushing. Water connections at each end of oil temperature regulator must be drawn down at same time rocker arm shaft brackets are bolted down. Run engine and check fittings for water leaks before replacing rocker arm valve cover.

**VALVE TIMING**

**Tappet Clearance:** .015" all valves, engine hot.

**Valve Timing:**—See Camshaft Setting above. "Timing Point" when valve .004" off seat with .015" tappet clearance or lash customarily listed instead of actual opening and closing points.

**Timing Points**

Intake Valves .....Open 14° BTDC.....Close 71° ALDC.  
Exhaust Valves .....Open 56° BLDC.....Close 25° ATDC.

**Opening and Closing Points**

Intake Valves .....Open 27° BTDC.....Close 84½° ALDC.  
Exhaust Valves .....Open 69° BLDC.....Close 38½° ATDC.

**Valve Timing Check:**—#2 or #7 exhaust valve should be .155" open (actual opening is measured by dial indicator contacting valve spring cap), with #1 and 8 pistons on top dead center and flywheel mark "TDC/1-8" at indicator in inspection hole in right front face of flywheel housing above starter.

**LUBRICATION**

**LUBRICATION:**—Pressure system with oil pump in crankcase and main oil channel on right side.

**Oil Pump:**—Helical gear type in crankcase driven from distributor drive gear (slot in end of pump shaft engages lower pin in gear, upper pin engages distributor shaft). Ignition timing not disturbed by removal of pump.

**Oil Pump Clearances:**—See Buick Shop Notes.

**Normal Oil Pressure:**—10 lbs. idling, 45 lbs. maximum at 35 M.P.H. and above.

**Oil Pressure Regulator:**—Operates at 45 lbs. Mounted on oil pump. Not adjustable.

**Oil Temperature Regulator:**—Consists of water tube running through rocker arm shaft. Disassemble and remove oil deposit in tube after considerable mileage. See Rocker Arms above for assembly directions.

**Crankcase Capacity:**—10 qts. (dry), 8 qts. (refill).

**CLUTCH**

**CLUTCH:**—Own Make. Long Driven Member. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam. 6½". Outside Diam. 11". Thickness .137".

**Adjustment:**—Clearance between pedal and underside of toeboard must be ¾-5/8". To adjust, loosen locknut and turn setscrew at rear of pedal above pedal stop. Free movement of clutch pedal must be ¾-1". To adjust, turn adjusting nut on rod connecting pedal and clutch throwout yoke. One full turn of adjusting nut changes pedal lash 5/16".

**Removal:**—Remove rear end (take out flange bolts in front end of torque tube, pull rear end back to disconnect drive shaft at splined joint at universal), remove transmission and transmission support (support transmission at rear while it is being withdrawn), take off clutch pan, take out clutch mounting screws (turning all screws out evenly).

**NOTE:**—When installing transmission support which is bolted to universal joint flange and frame, see that centering shims are in place at each end and that cross member is positioned so that rubber insulation is not compressed (bolt holes are slotted).

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs. See article in Steering Section for description and adjustment procedure. See Front Suspension Section for complete data.

**NOTE:**—To avoid damage to brake assembly when work is being done on front suspension, disassemble as follows: Remove wheel, disconnect tie rod ball stud, loosen one caster adjuster cap screw one-half turn (do not disturb second cap screw or caster setting will be lost), remove upper and lower caster adjuster bolt nuts, remove complete steering knuckle, hub and brake drum assembly and wire to frame to prevent damage to brake hose.

**Kingpin Inclination:**—4½-5½° crosswise.

**Camber:**—Minus ¼° to plus ¾°. No adjustment.

**Caster:**—1¾-2¼°. Adjustable. Toe In—1/16-½".

**Steering Geometry:**—Outer wheel turned 20°, inner wheel (60, 80) 23¾°, (90) 24° plus or minus ¾°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller type with center steering.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Buick (Bendix) Hydraulic, Single Anchor, four-wheel type. Hand lever applies rear brakes. See article in Brake Section for complete data. See Brake Section for complete data.

**NOTE:**—Wheel cylinder diameters are 1¼" (front), 1 3/16" (rear) and no part of assembly is interchangeable between front and rear wheels.

**Brake Drum Diameter:**—12".

**Brake Lining:**—Ferodo BZ-10 Woven type. Width 2". Thickness 3/16". Length 9 15/16" (primary shoe), 12¾" (secondary shoe) or 22 11/16" per wheel.

**Brake Clearance:**—.010" plus or minus .002" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 2,999,497. On right frame siderail at rear of right front wheel.

**ENGINE NUMBER:**—1st number 4-3,166,225. On boss on lower right hand side of engine block behind starter.  
**NOTE:**—Dash (-) following engine number indicates that engine factory-equipped with .010" oversize pistons.

## TUNE-UP

**COMPRESSION:**—Ratio—5.7-1. Pressure—93-103 lbs. at 150 R.P.M. cranking speed.

**VACUUM READING:**—Steady reading of 18-20" with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 86 (sup. H-9). 14 mm. Metric. Gaps—.025".

**NOTE:**—If necessary, gap may be set at .030" to secure good idling, however high speed missing may occur after some service.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". **Cam Angle** 31° (closed).

► **CAUTION:**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

**Automatic Advance**—13° max. at 1650 RPM (distr.).  
**Vacuum Advance**—6° max. (distr.) with 10-13" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6° BTDC. with flywheel mark 'ADV' at indicator in flywheel housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both screws  $\frac{1}{8}$ — $\frac{1}{8}$  turn (Marvel Carb.), 1 $\frac{1}{2}$  turns (Stromberg Carb.) open. Idle speed 7-8 MPH.

**Float Level**—Fuel level  $\frac{3}{4}$ " (Marvel Carb.),  $\frac{5}{8}$ " (Stromberg Carb.) below top edge of bowl.

**Accelerating Pump** (Marvel Carb.)—#1 hole (min. stroke) Summer, #4 hole (max. stroke) Winter.

**Accelerating Pump** (Stromberg Carb.)—Maximum stroke standard for all-weather operation.

**Fuel Pump Pressure:** 3 $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes-Hershey type co-incidental ignition switch and steering post lock.

**Ignition Lock:**—Briggs & Stratton. #45922 (cylinder), #45900 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 536-H. On right side of engine block near distributor.

**Ignition Current**—2 $\frac{1}{2}$  amperes idling, 4 $\frac{1}{2}$  stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.

**Capacity**—20-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-Y. Single breaker, 8 lobe cam, full automatic advance type with integral vacuum spark control and Octane Selector.  
**Breaker Gap**—.015". Limits .0125-.0175".  
**Cam Angle or Dwell**—31° (closed), 14° (open).  
**Breaker Arm Spring Tension**—19-23 ounces.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start.....	250	2.0.....	500
6.0.....	500	12.0.....	1000
13.0.....	1650	26.0.....	3300

**Vacuum Spark Control:**—Vacuum unit mounted on side of distributor, linked directly to breaker plate.

Provides additional advance at speeds greater than 18 M.P.H. except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
6°	12°	10-13"

**Octane Selector:**—Consists of adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing (below) for setting.

**Distributor Removal:**—Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in mounting flange.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting (standard for fuel of 70 Octane Rating) as given. See Octane Selector (following) for final setting.

**Flywheel Degrees Piston Position**  
All Engines ..... 6° BTDC ..... 0144° BTDC.

**NOTE**—'ADV/' mark on engines prior to #4-3,201,034 is 2° or ¼" BTDC. These first engines should be timed 6° BTDC, using the 2° mark as follows: With cars timed in usual manner (contacts opening with "ADV/" mark at indicator), then rotate distributor clockwise two graduations on the Octane Selector scale before tightening hold-down screws. This will give correct 6° setting.

**To Set Timing (with Synchroscope)**—Recommended by manufacturer. Insert one Synchroscope lead in #1 terminal in distributor cap, clip second lead to #1 spark plug cable. Direct Synchroscope light at flywheel through timing inspection hole in right front face of flywheel housing above starter. Idle engine at speed not greater than 400 R.P.M. or 8 M.P.H. Note position of flywheel timing mark 'ADV/'. If 'ADV/' line does not coincide with line on housing, loosen two distributor hold-down screws, rotate distributor slowly until lines coincide, tighten hold-down screws. If pointer on Octane Selector does not register at '0' mark loosen pointer lock-screw, shift to '0' mark, tighten lock-screw.

**NOTE**—'ADV/' mark filled with white paint. Do not confuse with top dead center mark which immediately follows 'ADV/' mark.

**To Set Timing (Without Synchroscope)**—To crank engine engage gears and roll car on floor (with ignition turned 'off'). Turn engine over until #1 piston on compression (#3 exhaust valve, fifth valve from front of engine, begins to open), stop when flywheel mark 'ADV/' lines up with mark on housing above starter. Turn ignition 'on' and form spark gap between distributor high tension lead and housing to check contact opening. Loosen two hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws. Center pointer on Octane Selector by loosening lock-screws and shifting pointer, tighten lock-screw.

**Octane Selector**—Adjust for fuel used. For fuels of less than 70 Octane rating (loosen two hold-down screws) shift pointer to 'Low' end of scale, for fuels of higher rating shift to 'High' side of scale. Slight 'ping' should be noticeable at speeds between 10-15 M.P.H. but not at higher speeds when car is accelerated with wide open throttle.

## CARBURETOR

**CARBURETION:**—Carburetors—Stromberg Model AA-1 Marvel Model BD-1, CD-1B Late 1937. 1" dual, downdraft type. **NOTE**—Special types used for Std. and Optl. heavy-duty air cleaners.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm, choke valve wide open and engine idling at hot or slow idling speed, adjust throttle stop-screw so that engine idles at 7-8 M.P.H. Turn idle adjusting screw for each barrel (in succession) in until engine begins to lag or miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Final setting should be 1½ turns (Strom-

berg), ¾-7/8 turns (Marvel) of screw from closed or seated position. Readjust throttle stop-screw for correct idling speed.

**Accelerating Pump**—(Stromberg). Two holes for pump engagement. Set for maximum stroke unless too rich a charge occurs on accelerating.

(Marvel)—Four holes for pump link engagement.

#1—Minimum stroke—summer driving.

#2—Interm. stroke—warm temperatures.

#3—Normal stroke—standard setting.

#4—Maximum stroke—winter driving.

**Fast Idle:**—Buick Cold Idle Control.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment:**—Linkage adjustment must be maintained to provide correct throttle opening for starting. With carburetor set for 7-8 M.P.H. idling speed and throttle button pushed in, rotate fast idle cam to extreme left against stop (fast idle position), adjust vacuum switch rod length so that switch lever reference line lines up with 'Fast Idle' line on housing. Check accelerator pedal. Throttle should be wide open with pedal down against pedal stop (floor mat). Adjust by turning trunnion on accelerator rod. Accelerator rod spring length should be 9 15/16".

**Automatic Choke:**—Delco-Remy Model 490-A (Stromberg Carbs.), 498-H (Marvel BD-1), 1990001 (Marvel CD-1B).

*For complete data, refer to Carburetion Equip. Index.*

**Fuel Volatility Selector**—Change setting as required to provide correct choke action with fuel used. Std. setting second notch from 'Low' side of scale. Movement toward 'High' end compensates for too rich mixture, and toward 'Low' end for too lean mixture.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528010 oil-wetted type standard. #1528011 oil-bath type optional.

**NOTE**—If heavy duty oil-bath type cleaner installed, main metering (Stromberg), or power jet and metering pin jet (Marvel) must be changed. See Jet Specification Tables for each carburetor in Carburetion Section.

**Fuel Pump:** AC Type W, No. 1521854. Diaphragm type. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric #1515321 (dash unit), #1515444 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco, Type 13-J. 6 volt, 98 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Right side under front seat.

## STARTER

**Delco-Remy Model 734-Z.** Armature No. 823881.

**Drive**—Solenoid pinion shaft & overrunning clutch.

**Cranking Engine**—135 R.P.M., 150 amps. at 4.5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 " "	Lock	3.37	525

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take out flange cap-screws.

**Starting Switch:** Delco-Remy Sol.Sw.1542.Vacuum Sw. 1594 (used with Marvel carburetor), 1607 (used with Stromberg carburetor). Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal with ignition 'on'. Accelerator pedal and hand throttle must be in fully 'off' position prior to starter operation.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Solenoid switch should be used in servicing earlier models. Past switches not adaptable for use on 1937 models.

### Solenoid Switch

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—1.9 volts max. **Open**—1.0-1.2 volts. **Contact Gap**—.025-.045". **Air Gap**—.010-.013".

### Vacuum Switch

**Contacts Close**—10-14" counter-clockwise (1594), clockwise (1607), from latch position.

**Unlatch Action**—3.4-4.8" of HG. approximately 30° from latch position.

## GENERATOR

### STANDARD

**Delco-Remy Models 918-B, G.** Armature 1866410. New type 'split-field' generator (one straight-shunt coil, one third-brush shunt coil—see wiring diagram) with fixed third brush and vibrating voltage regulator control.

**NOTE**—Field coils changed in production.

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data **Maximum Charging Rate**—As given in table below. Reached at car speed of 40.8 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE**—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third).

**Field Current**—Shunt (1.44-1.56 amps. at 6 volts), third brush (.89-.94 amperes at 6 volts).

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot cap-screws and clamp screw.

**Belt Adjustment:**—Loosen clamp screw and pivot screws, pull generator away from engine until belt deflection midway between generator and fan pulleys is ½" with light pressure, tighten clamp screws.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Models 961-N, 934-F.** Both models two brush type used with Double Core Type Voltage & Current Regulators Model 5832 (961-N), 5599 (934-F). *Refer to Buick Series 60,80,90 (1937) article following for complete data.*

C NTINUED N NEXT PA E

CONTINUED FROM PRECEDING PAGE

**REGULATOR**

**Delco-Remy Model 5807. Double Core Type Voltage Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator. Cutout Relay has extra 'ground' contacts for starter control.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—6.9-7.6 volts, 8.1 M.P.H.

Cuts Out—0-3.0 amperes discharge at 6.3 volts.

Contact Gap—.020"

Air Gap—.020" with contacts closed.

**Voltage Regulator**

Setting—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

Adjustment—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly. NOTE—Regulator cover must be in place when testing. Do not run generator on open-circuit.

Contact Gap—.020".

Contact Spring Tension—2.7-3.5 ounces.

Air Gap—.063" between armature and center of core with armature down and fibre bumper touching stop; .010" between fibre bumper and stop with armature up.

**LIGHTING**

**LIGHTING:—Headlamps**—Guide Multi-beam, Pre-focused, cross-beam type with special non-interchangeable lenses. Foot selector switch provides for switching from upper beams to city beam (upper filaments, both lamps) with light switch in 3rd position and asymmetrical passing beam (lower filament left headlamp, upper filament right headlamp) with switch in 4th position or 'country driving' position.

**Headlamp Adjustment**—Headlamps must be adjusted with lenses in place (beam with lenses removed is approximately 4° to right), upper beams lighted, car unloaded. Aim left hand headlamp (side movement controlled by screw under hood, up and down movement by screw in hole in bottom of lamp body) so that upper edge of hot spot is on horizontal line (at lamp center height) and left edge at lamp vertical center-line. Aim right hand headlamp for same beam height, but center hot-spot on lamp vertical center-line (right cut-off of hot spot approx. 8" to right of center-line).

**Headlamp Beam Indicator**—Located at top of speedometer dial. Lighted whenever upper beams are in use. NOTE—Bulb is 1 cp. #55.

**Switches**

**Lighting**—Delco-Remy Model 480-W, R (Export).

**Foot Selector**—Delco-Remy Model 471-T.

**Instrument Lamp**—Delco-Remy Model 1404.

**Stop Lamp**—Delco-Remy Model 478-S. Hydraulic type mounted in brake distributor.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Fender, Instrument, Map	1½	55
Stop and Tail	21-3	1154
License (Coupe incl'd)	3	63
Dome	6	81

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:—Mod. No. 1865577.** Mounted on lighting switch and may be replaced separately. Contacts open within 1 minute at 38 amperes (70° and remain closed with 25 amps. Non-adjustable. Clock Fuse—2 ampere on clock.

**HORNS:—Klaxon Model K-33-S. Type 2051** (low note—right side), Type 2052 (high note—left side). Vibrator type, blended tone twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2051 Low Note	11-13	.042-.046"
2052 High Note	10-12	.032-.036"

**Horn Relay:—Mod. 271-A.** Points close at 2.7-4.0 volts.

Contact Gap—.020". Air Gap—.015".

**ENGINE**

**ENGINE SPECIFICATIONS:—8 cylinder, 'I' head.**

Bore—3 3/32". Stroke—4 1/8".

Displacement—248 cubic inches.

Rated Horsepower—30.63 (S.A.E.).

Developed Horsepower—100 at 3200 R.P.M.

Compression Ratio & Pressure—Std. 5.7-1 cast-iron head. Pressure 97-103 lbs. at 150 R.P.M. Check pressure with engine warm, all plugs removed, throttle wide open and starter cranking engine.

Vacuum Reading—18-20" steady at 7-8 M.P.H.

NOTE—To drop oil pan, remove front stabilizer.

**PISTONS:—Buick anolite, aluminum alloy, "T" slot, cam ground type.** Refinish cylinders to take finished replacement pistons. Length—3 4/5".

Weight—13.75 ozs. (stripped), 19.6 ozs. (with rings).

Removal—Pistons and rods removed from above.

Clearance—Top of skirt .0021". Limits .0018-.0024".

**Original Bore Size & Replacement Pistons:—See Buick Special Shop Notes.**

**Fitting New Pistons:—Micrometer Gauge**—Check at points just below "T" slot junction on both sides of vertical slot and below lower end of slot, finishing cylinder bore to size giving correct clearance.

**Feeler Gauge**—Use 1/2" wide stock inserted on side opposite slot. Piston should pass on .0015" feeler and hold on .00225" with engine at 65-75° F.

**Installing Pistons:—Slot to left or away from camshaft.**

**PISTON RINGS:—2 compression, 2 oil control rings per piston all above pin.** Oil ring grooves drilled radially with 5/32" drain holes (10 top groove, 8 lower groove).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.010-.015"	.0015-.003"
Oil Control	3/16"	.010-.015"	.0015-.003"

NOTE—"Top" mark on compression rings to top of piston. Rings furnished .010", .020", .030" ver-size.

**PISTON PIN:—Diameter—13/16". Length—2 11/16".**

Pin clamped in rod. Oversize pins not furnished. Replacement pistons have pins fitted.

**Pin Fit in Piston:—.0003-.0004" at 70° F. or light finger push.**

NOTE—5 1/2" wrench only, for use on pin bolt.

**CONNECTING ROD:—Weight—29.92 ozs. Length—7 5/8".**

Crankpin Journal Diameter—2".

Lower Bearing—Spun-babbitt lined type.

Clearance—.0008-.0018". Sideplay .005-.010".

**Bearing Adjustment:—Shims.** Do not file rods or caps.

**Installing Rods:—Align cap and rod.** Marks to rear of engine, oil spray hole toward camshaft.

NOTE—3/8" diameter ground bolts used for rod and cap assembly. Common bolts must not be used.

**CRANKSHAFT:—5 bearing.** Integral counterweights.

**Journal Diameters:—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".**

**Bearing Type:—Steel-backed, babbitt-lined.** Bearings dowelled in crankcase and cap and assembled with .000-.002" projection. Line-ream new bearings. Clearance—.0007-.0022". 1/32" clearance at each end.

**Replacement Bearings:—See Buick Shop Notes.**

**Bearing Adjustment:—Shims.** Do not file caps.

**End Thrust:—Center (#3) bearing.** Endplay .004-.007".

**CAMSHAFT:—5 bearing.** Non-adjustable chain drive.

**Journal Diameters:—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".**

**Bearing Type:—Steel-backed, babbitt-lined.**

Clearance—.0005-.0035". Endplay .002-.006".

**End Thrust:—Taken by thrust plate** assembled between front bearing and camshaft sprocket.

**Timing Chain:—Link-Belt.** Width 1". Pitch .500". Length 24 1/2" or 49 links.

**Installing Chain:—1/4 - 3/8" play** midway between sprockets on new chain. 1" maximum play if worn.

**Camshaft Setting:—Mesh chain with copper-plated washers** opposite mark on each sprocket. Chain markers 10 links apart.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	4 5/16"
Exhaust	1 11/32"	.3711-.3719"	4 3/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0015-.0035"
Exhaust	45°	.342"	.0021-.0039"

NOTE—Intake valves 'streamlined' tulip type.

**Valve Guides:—Press fit in head.** Install undercut end up. Finish ream to size for correct clearance.

**Valve Springs:—Double springs on all valves.**

Inner Spring	Pressure	Length
Valve Closed	15 1/2-20 1/2 lbs.	1 21/32"
Valve Open	45-51 lbs.	1 5/16"
Outer Spring	Pressure	Length
Valve Closed	26 1/2-31 1/2 lbs.	1 15/16"
Valve Open	63-73 lbs.	1 19/32"

**Total Spring Pressure**

Closed—42-52 lbs. Open—112-124 lbs.

NOTE—Valve springs not interchangeable with earlier models.

**Valve Lifters:—Single piece, cast-iron.** Lifter guide holes reamed in crankcase. Clearance .0005-.0025".

**Rocker Arms:—Drop-forged fitted with steel-backed, babbitt-lined bushings.** Rocker arm shaft brackets are of aluminum alloy.

Clearance—.001-.003".

NOTE—Install bushings with oil holes aligned.

## VALVE TIMING

**Tappet Clearance:** .015" all valves, engine hot.

**Valve Timing:** See Camshaft Setting above. "Timing Point" when valve .004" off seat with .015" tappet clearance or lash customarily listed instead of actual opening and closing points.

### Timing Points

Intake Valves—Open 13° BTDC. Close 68° ALDC.

Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

### Opening and Closing Points

Intake Valves—Open 26° BTDC. Close 81½° ALDC.

Exhaust Valves—Open 68° BLDC. Close 35° ATDC.

**Valve Timing Check:**—#2 or #7 exhaust valve should be .145" open (actual opening as measured by dial indicator contacting valve spring cap), with #1 and 8 pistons on top dead center and flywheel mark "TDC/1-8" lined up with indicator in inspection hole in right front face of flywheel housing above starter.

## LUBRICATION

**LUBRICATION:**—Pressure with oil pump in crankcase.

**Oil Pump:**—Helical gear type in crankcase driven from distributor drive gear (slot in end of pump shaft engages lower pin in gear, upper pin engages distributor shaft). Ignition timing not disturbed by removal of pump.

**Oil Pump Clearances:**—See Buick Shop Notes.

**Normal Oil Pressure:**—45 lbs. at normal speeds.

**Oil Pressure Regulator:**—Operates at 45 lbs. Mounted on oil pump. Not adjustable.

**Crankcase Capacity:**—7 qts. (dry), 6 qts. (refill).

## CLUTCH

**CLUTCH:**—Own (with Long 10CF-CI driven member). Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. I.D. 6". O.D. 10". Thickness .125".

**Adjustment:**—Clearance between pedal and underside of toeboard must be ⅜-⅝". To adjust, loosen locknut and turn setscrew at rear of pedal, above

pedal stop. Free movement—¾-1". To adjust take out clevis pin connecting clutch rod and clutch fork, turn clevis on rod. One full turn equal to 3/16" free movement.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch pan, screw out cover mounting screws evenly, remove assembly from below.

## TRANSMISSION

**TRANSMISSION:**—Buick, Synchro-mesh on second and high gears. All gears helical type.

See Transmission Section for complete data.

**Removal:**—Holst rear of car by frame, disconnect rear brake cables at equalizer bar and brake tube connection on torque tube at rear of X-member, remove spring seat U-bolts, flange bolts on front of torque tube, pull axle assembly back withdrawing propeller shaft from ball and universal joint. Remove transmission rear support and mounting bolts. Support at rear while withdrawing unit to avoid clutch plate distortion.

**NOTE:**—Centering shims at frame ends must be in place when installing rear transmission support.

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer (Bulck Design). Plain bearing type. 1 used.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Bulck, semi-floating, hypoid gear type with torque tube drive.

See Rear Axle Section for complete data.

Ratio—4.40-1.

Backlash—.008-.010". Shim adjustment.

**Removal:**—Axle shaft retained by horseshoe 'C' washer recessed in differential side gear. Remove housing cover, pinion shaft lock screw, pinion shaft and spacer block, push axle shaft in, remove 'C' washer, withdraw shaft. For complete axle assembly removal see Transmission Removal (above) and disconnect rear spring shackles.

**Wheel Bearing Adjustment:**—None.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1945-A, B (front), 1713-A, B (rear). Double acting, piston type. See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**NOTE:**—To avoid damage to brake hose for work on front suspension proceed as follows: remove wheel, disconnect tie rod ball stud, remove drum, knuckle and steering knuckle support (as a unit), wire to frame. Removing shock absorber bolts allows absorber unit to shift (caster will not be disturbed).

**Kingpin Inclination:**—3½-4½° crosswise.

**Camber:**—Minus ¼° to plus 1°. Not adjustable.

**Caster:**—¼° plus or minus ⅜°. Adjustable.

**Toe In:**—0-1/16". Adjustable.

**Steering Geometry (Toe Out):**—Inner wheel turned 23¼°, outer wheel 20°, plus or minus ¾°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Double Roller type with center steering.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix Hydraulic, single anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinders:**—Diameters: front 1 1/16", rear wheels 1". Front and rear assemblies not interchangeable.

**Drum Diameter:**—12".

**Lining:**—Ferodo BZ-10 woven. Length per wheel (front shoe 9 15/16", rear shoe 12¾"). Width 1¾". 3/16" thick.

**Clearance:**—.010" plus or minus .002" heel and toe each shoe.

**Braking Power:**—47% rear.

**Hand Brake Adjustment:**—See Service Brake (above).

**MODEL IDENTIFICATION**

**NOTE:**—Marvel equipped cars. Special Distributor, Starter Vacuum Switch & Automatic Choke used.

**SERIAL NUMBER:**—First number 2999497. On right frame siderail at rear of right front wheel.

**ENGINE NUMBER:**—First number (60) 6-3,176,225, (80) 8-3,176,225, (90) 9-3,176,225. Stamped on boss on lower right side of engine block behind starter.  
**NOTE:**—Dash (-) following engine number indicates engine factory-equipped with .010" oversize pistons.

**TUNE-UP**

**COMPRESSION:**—Ratio—5.75-1 std. cast-iron head.

**Pressure:**—100-106 lbs. at 150 R.P.M. Check pressure with engine warm, spark plugs removed, and starter cranking engine.

**VACUUM READING:**—18-20" steady at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 86 (sup. H-9). 14 mm. Metric. Gaps—.025".

**NOTE:**—In extreme cases gaps may be set at .030" if necessary to secure good idling performance. This may result in high speed missing after some service.

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.015". Cam Angle 31° (closed).

► **CAUTION:**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—10° BTDC. with flywheel mark 'ADV' at indicator in flywheel housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Both screws  $\frac{5}{8}$ — $\frac{7}{8}$  turn (Marvel Carb.),  $1\frac{3}{4}$  turns (Stromberg Carb.) open. Idle speed 7-8 MPH.

**Float Level:**—Fuel level  $\frac{3}{4}$ " (Marvel Carb.),  $\frac{5}{8}$ " (Stromberg Carb.) below top edge of bowl.

**Accelerating Pump (Marvel Carb.):**—#1 hole (min. stroke) Summer, #4 hole (max. stroke) Winter.

**Accelerating Pump (Stromberg Carb.):**—Maximum stroke standard for all-weather operation.

**Fuel Pump Pressure:**  $4\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes-Hershey type co-incidental Ignition switch and steering post lock.

**Ignition Lock:**—Briggs & Stratton. #45922 (cylinder), #45900 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 536-H. On right side of engine block near distributor.

**Ignition Current:**—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1865972. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Models 663-Z, 663-ZX. Single breaker, 8 lobe cam, full automatic advance type with integral vacuum spark control and Octane Selector.

**Breaker Gap:**—.015". Limits .0125-.0175".

**Cam Angle or Dwell:**—31° (closed), 14° (open).

**Breaker Arm Spring Tension:**—19-23 ounces.

**Automatic Advance—663-Z**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	2.....	500
6.....	500	12.....	1000
8.....	825	16.....	1650

**Automatic Advance—663-ZX**

Start.....	250	2.....	500
6.....	500	12.....	1000
10.....	1140	20.....	2280

**Vacuum Spark Control:**—Vacuum unit mounted on side of distributor, linked directly to breaker plate. Provides additional advance at speeds greater than 18 M.P.H. except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
5½°.....	11°	10-13"

**Octane Selector:**—Consists of adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing (below) for setting.

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out two mounting screws in mounting flange, disconnect vacuum line.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting for fuel of 75 Octane rating. See Octane Selector for final setting.

**Flywheel Degrees Piston Position**

All Engines .....10° BTDC.....0442° BTDC.

**To Set Timing (with Synchroscope)**—Recommended by manufacturer. Insert one Synchroscope lead in #1 terminal in distributor cap, clip second lead to #1 spark plug cable. Direct Synchroscope light at flywheel through timing inspection hole in right front face of flywheel housing above starter. Idle engine at speed not greater than 400 R.P.M. Note position of flywheel timing mark 'ADV/'. If 'ADV' line does not coincide with line on housing, loosen two distributor hold-down screws, rotate distributor slowly until lines coincide, tighten hold-down screws. Check position of Octane Selector pointer. If reference line on pointer does not coincide with center line of scale, loosen pointer lock screw, shift pointer, tighten lock screw.

**NOTE**—'ADV/' timing mark filled with paint.

**To Set Timing (Without Synchroscope)**—No means provided to crank engine (engage gears and roll car to turn engine over). With #1 piston on compression, turn engine over until #3 exhaust valve (fifth valve from front of engine) begins to open, stop when flywheel mark 'ADV/' lines up with mark on flywheel housing (timing inspection hole in right front face of housing above starter). Use timing light or form spark gap between distributor high tension lead and housing to check contact opening. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws. Check position of Octane Selector pointer. If reference line on pointer does not line up with center line on scale, loosen pointer lock screw, shift pointer, tighten lock screw.

**Octane Selector**—Should be adjusted for final ignition setting dependent upon Octane Rating of fuel used by car owner. Initial setting (above) correct for fuel of 75 Octane Rating. To adjust, loosen two distributor hold-down screws, rotate distributor clockwise so that pointer moves toward 'Low' end of scale for fuel of lower rating, or counter-clockwise (toward 'High' end of scale) for higher rating until a slight 'ping' is noticeable at speeds between 10 and 15 M.P.H. but not at higher speeds when car is accelerated with wide open throttle.

## CARBURETOR

**CARBURETION:**—Carburetors—Stromberg Model AA-2 or Marvel Mod. BD-1S (No. 10-1751 std. air cleaner), (No. 10-1752 heavy duty air cleaner). 1½" dual downdraft types. Stromberg aircraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm, choke valve wide open and engine idling at hot or slow idling speed, adjust throttle stop screw so that engine idles at 7-8 M.P.H. Turn idle adjusting screw for each barrel (in succession) in until engine begins to lag or miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Final setting should be 1¼ turns (Stromberg), ¾-7/8 turns (Marvel) of screw from closed or seated position. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump (Stromberg)**—Two holes for pump engagement. Set for maximum stroke unless too rich a charge occurs on accelerating.

(Marvel)—Four holes for pump link engagement.

#1—Minimum stroke—summer driving.

#2—Interm. stroke—warm temperatures.

#3—Normal stroke—standard setting.

#4—Maximum stroke—winter driving.

**Fast Idle:**—Buick Cold Idle Control.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment:**—Linkage adjustment must be maintained to provide correct throttle opening for starting. With carburetor set for 7-8 M.P.H. idling speed and throttle button pushed in, rotate fast idle cam to extreme left against stop (fast idle position), adjust vacuum switch rod length so that switch lever reference line lines up with 'Fast Idle' line on housing. Check accelerator pedal. Throttle should be wide open with pedal down against pedal stop (floor mat). Adjust by turning trunnion on accelerator rod. Accelerator rod spring length should be 9 15/16".

**Automatic Choke:**—Delco-Remy Model 490-A (Stromberg Carburetors), 498-H, 1990001 (Marvel Carb.).

*For complete data, refer to Carburetion Equip. Index.*

**Fuel Volatility Selector**—Change setting as required to provide correct choke action with fuel used. Standard setting second notch from 'Low' side of scale (move toward 'high' end if mixture too rich, toward 'low' end of scale if mixture too lean).

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1526989 oil-wetted type standard. #1528114 oil-bath optional.

**NOTE**—If heavy duty oil-bath type cleaner installed, main metering jet (Stromberg), or power jet and metering pin jet (Marvel) must be changed. *See Jet Specification Tables in Carburetor Section.*

**Fuel Pump:**—AC. Type AB #1521838 (1st 10,000 cars) combination fuel-and-vacuum pump. Type AK #1523195 (after 1st 10,000 cars) fuel pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric #1515321 (dash unit), #1515444 (tank unit—60), #1515440 (80, 90).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco, Type 15-G. 6 volt, 15 plate, 114 ampere hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.5 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Under right front seat.

## STARTER

**Delco-Remy Model 727-W (Std.), 729-B (60 RHD).** Armature No. 820158.

**Drive**—Solenoid pinion shift & overrunning clutch.

**Cranking Engine**—115 R.P.M., 175 amps. at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5	65
16 "	Lock	3	600

**Removal:**—Mounted on right front face of flywheel housing. To remove, take out cap screws.

**Starting Switch:**—Solenoid Switch 1542 (727-W), 1545 (729-B), Vacuum Switch 1594, 1607. Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal with ignition 'on'.

*For complete data, refer to Electrical Equipment Index.*

**Solenoid Switch Type 1542, 1545**

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with draw of 12-14 amperes (hold-in coil only).

**Solenoid Relay**

**Contacts Close**—1.9 volts max. **Open**—1.0-1.2 volts. **Contact Gap**—.025-.045". **Air Gap**—.010-.013".

**Vacuum Switch**

**Contacts Close**—10-14° counter-clockwise (1594), clockwise (1607), from latch position.

**Unlatch Action**—3.4-4.6" of HG. approximately 30° from latch position.

## GENERATOR

**STANDARD**

**Delco-Remy Models 918-A, F. Armature 1866410.** New type 'Split-field' generator (one straight-shunt coil, one third-brush coil—see wiring diagram) with fixed third brush and vibrating voltage regulator. **NOTE**—Field coils changed in production.

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data. **Maximum Charging Rate**—As given in table below. Reached at car speed of 48.5 (80), 44.5 (80), 41.9 (90) M.P.H. (cold). To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE**—Do not operate generator on open-circuit.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third).

**Field Current**—Shunt (1.44-1.56 amperes at 6 volts), third brush (.89-.94 amperes at 6 volts.)

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out mounting screws.

**Belt Adjustment:**—Loosen clamp screw and pivot screws, pull generator away from engine until belt deflection midway between generator and fan pulleys is ½" with light pressure.

## GENERATOR

**SPECIAL EQUIPMENT**

**Police Service**—Delco-Remy Model 961-N. Armature 1857866 or 934-F, Armature No. 1861561. Two brush type with voltage and current regulator control.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—As follows:

**Performance Data (Cold)**

	Amperes	Volts	R.P.M.
961-N	25	8.0	1850
934-F	26	8.1-8.3	1325

**Rotation**—Counterclockwise at commutator end. **Field Current**—2.0-2.2 amperes (961-N), 1.7-2.0 amperes (934-F) at 6.0 volts.

**Brush Spring Tension**—25 ounces each.

**Mounting & Belt Adjustment:**—Same as Std. (above).

## REGULATOR

**STANDARD**

**Delco-Remy Model 5807 (Std. Gen.). Double Core Type Voltage Regulator (with 'IGN' Terminal).** Cut-out Relay and vibrating type voltage regulator in

**CONTINUED ON NEXT PAGE**

**C** NTINUED FR M PRECEDING PAGE

single case. Cutout Relay has extra 'ground' contacts for starter solenoid control.  
For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay**

**Cuts In**—6.9-7.6 volts, 9.1 (60), 8.8 (80), 8.2 (90) MPH.  
**Cuts Out**—0-3.0 amperes discharge at 6.3 volts.  
**Contact Gap**—.018-.025".  
**Air Gap**—.018-.022" with contacts closed.

**Voltage Regulator**

**Setting**—7.5-7.9 volts Cold (70°), 7.4-7.6 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly  
**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open circuit.  
**Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

**REGULATOR****SPECIAL EQUIPMENT**

**Delco-Remy Model 5832** (961-N Generator). 5559 (934-F). Double Core Type Voltage & Current Regulator. Same design as Std. Model 5807 (above) with additional Current Regulator unit.

**Cutout Relay & Voltage Regulator**  
*Specifications same as for Model 5807 (above).*

**Current Regulator**

**Setting**—26-28 amperes (5832), 20-23 amperes (5599).  
**To Check**—Disconnect lead at regulator 'IGN' terminal (to eliminate voltage regulator action), connect ammeter in charging line at 'BAT' terminal, operate generator, note ammeter reading (should equal setting above).

**To Adjust**—Same as Voltage Regulator (above).

**Contact Gap, Contact Spring Tension, Fibre Bumper Air Gap**—Same as Voltage Regulator (above).

**Armature Air Gap**—.075" between armature and center of core (armature down and fibre bumper against stop).

**LIGHTING**

**Guide Multibeam** (same as Series 40). See *Series 40 article (preceding)* for complete data.

**Headlamp Beam Indicator**—See Series 40.

**Switches**

**Lighting**—Delco-Remy Model 480-W, R (Export).

**Foot Selector**—Delco-Remy Model 471-T.

**Instrument Lamp**—Delco-Remy Model 1404.

**Stop Lamp**—Delco-Remy Model 476-S.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Fender, Instrument, Map	1½	55
Stop and Tail	21-3	1154
License (Coupe Included)	3	63
Dome	6	81

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Model No. 1865577. Mounted on lighting switch and may be replaced separately. Contacts open in 1 minute with 38 amperes (70° F), remain closed at 25 amperes. Not adjustable.

**FUSES**—Dome Light & Rear Cigar Lighter (80, 90). 30 ampere in connector back of instrument panel.  
Electric Clock. Two ampere on clock.

**HORNS**—Klaxon Model K-33-S. Type 2051 (low note—right side), Type 2052 (high note—left side). Vibrator type, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2051 Low Note	11-13	.042-.046"
2052 High Note	10-12	.032-.036"

**Horn Relay**—Model 271-A. Points close at 2.7-4.0 v.  
**Contact Gap**—.015-.030". **Air Gap**—.010-.025"

**ENGINE**

**ENGINE SPECIFICATIONS**—8 cylinder, 'T' head.

**Bore**—3 7/16". **Stroke**—4 5/16".

**Displacement**—320.2 cubic inches.

**Rated Horsepower**—37.81 (S.A.E.).

**Developed Horsepower**—130 at 3400 R.P.M.

**Compression Ratio & Pressure**—Std. 5.75-1 cast-iron head. Pressure 100-106 lbs. at 150 R.P.M. Check pressure with engine warm, all plugs removed, throttle wide open and starter cranking engine.

**Vacuum Reading**—18-20" steady at 7-8 M.P.H.

**NOTE**—To drop oil pan, remove front stabilizer.

**PISTONS**—Buick Anolite, aluminum alloy, 'T' slot, cam ground type. Refinish cylinders to take finished replacement pistons. Length—4.161-4.163".

**Weight**—22.56 ozs. (stripped), 25.80 ozs. (with rings).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top of skirt .0023". Limits .0020-.0026".

**Original Bore Size & Replacement Pistons**—See *Buick Special Shop Notes*.

**Fitting New Pistons**—Micrometer Gauge—Check at points just below 'T' slot junction on both sides of vertical slot and below lower end of slot, finishing cylinder bores to give correct clearance. Feeler Gauge—Use ½" wide stock inserted on side opposite slot. Piston should pass on .0015" feeler and hold on .00225" with engine at 65-75° F.

**Installing Pistons**—Slot away from camshaft.

**PISTON RINGS**—Two compression, two oil control rings per piston all above pin. Oil ring grooves drilled radially with 5/32" drain holes (10 top groove 8 lower groove).

Ring	Width	End Gap	Side Clearance
Compression	.3/32"	.010-.015"	.0015-.003"
Oil Control	.3/16"	.010-.015"	.0015-.003"

**NOTE**—Install compression rings with mark 'Top' toward the top of piston. Oversize rings furnished in sizes .010", .020", and .030" oversize.

**PISTON PIN**—Diameter—7/8". Length—3 1/16"

Pin clamped in rod. Oversize pins not furnished. Replacement pistons have pins fitted.

**Pin Fit in Piston**—.0003-.0004" at 70° F. or light finger push.

**NOTE**—5½" wrench only, for use on pin bolt.

**CONNECTING ROD**—Weight—38.43 ozs. Length—8¼".

**Crankpin Journal Diameter**—2¼".

**Lower Bearing**—Spun-babbitt lined type.

**Clearance**—.0008-.0018". **Sideplay**—.005-.010".

**Bearing Adjustment**—Shims. Do not file rods or caps.

**Installing Rods**—Align cap and rod. Mark on rod and cap to rear of engine, oil hole toward camshaft.

**NOTE**—7/16" diameter ground bolts used for rod and cap assembly. Common bolts must not be used.

**CRANKSHAFT**—5 bearing. Integral counterweights.

**Journal Diameters**—#1, 2 9/16"; #2, 2½"; #3, 2 11/16"; #4, 2¾"; #5, 2 13/16".

**Bearing Type**—Steel-backed, babbitt-lined. Bearings dowelled in crankcase and cap.

**Clearance**—.0007-.0022".

**Replacement Bearings**—See *Buick Shop Notes*.

**Bearing Adjustment**—Shims. Do not file caps.

**End Thrust**—#3 (center) bearing. Endplay .004-.007"

**CAMSHAFT**—5 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 5/32"; #2, 2⅝"; #3, 2 3/32"; #4, 2 1/16"; #5, 1¾".

**Bearing Type**—Steel-backed, babbitt-lined.

**Clearance**—.0005-.0035". **Endplay**—.002-.006".

**End Thrust**—Taken by thrust plate assembled between front bearing and camshaft sprocket.

**Timing Chain**—Link-Belt. Width 1¼". Pitch .500". Length 50 links or 25".

**Installing Chain**—¼-¾" play midway between sprockets on new chain. 1" maximum play if worn.

**Camshaft Setting**—Mesh chain with copper-plated washers opposite mark on each sprocket. Chain markers 10 links apart.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3715-.3725"	4¾"
Exhaust	1 7/16"	.3711-.3719"	4 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"	.0015-.0035"
Exhaust	45°	.348"	.0021-.0039"

**NOTE**—Intake valves 'streamlined' tulip type.

**Valve Guides**—Press fit in head. Install undercut end up. Finish ream to size for correct clearance.

**Valve Springs**—Double springs on all valves.

Inner Spring	Pressure	Length
Valve Closed	15½-20½ lbs.	1 21/32"
Valve Open	45-51 lbs.	1 5/16"
Outer Spring	Pressure	Length
Valve Closed	26½-31½ lbs.	1 15/16"
Valve Open	63-73 lbs.	1 19/32"

**Total Spring Pressure**

Closed—42-52 lbs. Open—112-124 lbs.

**Valve Lifters**—Single piece, cast-iron. Lifter guide holes reamed in crankcase. Clearance .0005-.0025".

**Rocker Arms**—Drop-forged fitted with steel-backed, babbitt-lined bushings. Rocker arm shaft brackets are of aluminum alloy (no oil temp. regulator).

**Clearance**—.001-.003".

**NOTE**—Install bushings with oil holes aligned.

## VALVE TIMING

**Tappet Clearance:** .015" all valves, engine hot.

**Valve Timing:** See Camshaft Setting above. "Timing Point" when valve .004" off seat with .015" tappet clearance or lash customarily listed instead of actual opening and closing points.

### Timing Points

**Intake Valves—**Open 14° BTDC. Close 71° ALDC.

**Exhaust Valves—**Open 56° BLDC. Close 25° ATDC.

### Opening and Closing Points

**Intake Valves—**Open 27° BTDC. Close 84½° ALDC.

**Exhaust Valves—**Open 69° BLDC. Close 38½° ATDC.

**Valve Timing Check:**—#2 or #7 exhaust valve should be .155" open (actual opening as measured by dial indicator contacting valve spring cap), with #1 and 8 pistons on top dead center and flywheel mark 'TDC/1-8' at indicator in inspection hole in right front face of flywheel housing above starter.

## LUBRICATION

**LUBRICATION:**—Pressure with oil pump in crankcase.

**Oil Pump:**—Helical gear type in crankcase driven from distributor drive gear (slot in end of pump shaft engages lower pin in gear, upper pin engages distributor shaft). Ignition timing not disturbed by removal of pump.

**Oil Pump Clearances—**See Buick Shop Notes.

**Normal Oil Pressure:**—45 lbs. at normal speeds.

**Oil Pressure Regulator:**—Operates at 45 lbs. Mounted on oil pump. Not adjustable.

**Crankcase Capacity:**—9 qts. (dry), 8 qts. (refill).

## CLUTCH

**CLUTCH:**—Own Make, Long Driven Member (11CF-CI)

Single plate, dry disc type.

See Clutch Section for complete data.

**Facings—**Woven type, 2 required, 6½" I.D., 11" O.D., 9/64" thick.

**Adjustment—**Clearance between pedal and underside of toeboard must be ¾-¾". To adjust, loosen locknut, turn setscrew at rear of pedal above stop. Free movement of clutch pedal must be ¾-1". To adjust, turn nut on rod connecting pedal and yoke.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch pan, take out clutch cover mounting screws evenly, lower assembly.

## TRANSMISSION

**TRANSMISSION:**—Buick. Synchro-mesh on second and high gears. All gears helical type.

See Transmission Section for complete data.

**Removal:**—Hoist rear of car by frame, disconnect rear brake cables at equalizer bar and brake tube connection on torque tube at rear of X-member, remove spring seat U-bolts, flange bolts on front of torque tube, pull axle assembly back withdrawing propeller shaft from ball and universal joint. Remove brake master cylinder, pedal support, transmission rear support and mounting bolts. Support at rear while withdrawing transmission.

**NOTE:**—Replace centering shims in same position when installing rear transmission support.

## UNIVERSALS

**UNIVERSAL JOINT:**—Spicer. (Buick Design). Plain bearing type. One used.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Buick. Semi-floating, hypoid (60 only), spiral bevel gear type with torque tube drive.

See Rear Axle Section for complete data.

**NOTE:**—Bronze bushing used at front end of propeller shaft on Series 90 only.

**Ratio:**—3.9-1 (60), 4.222-1 (80), 4.625-1 (90).

**Backlash (Pinion & Ring Gear)**—.008-.010". Shims.

**Removal:**—Axle shaft retained by horseshoe 'C' washer (60), nut and cotter pin (80, 90), recessed in differential side gear. Remove housing cover, pinion shaft lockscrew, pinion shaft and spacer block, push axle shaft in, remove 'C' washer (60), nut and cotter pin (80, 90), withdraw shaft. For complete axle assembly removal disassemble axle as outlined under Transmission Removal, disconnect rear spring shackles, and withdraw housing from under car.

**Wheel Bearing Adjustment—**None.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Dele. Model Nos. as follows:

	Model 60	Models 80, 90
Front	1945-A, B	1902-D, C
Rear	1713-A, B	1713-C, D

All shocks are double acting, hydraulic types.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—3½-4½° (60), 4¼-5¼° (80), 4-5° (90).

**Camber:**—Minus ¼° to plus 1°. No adjustment.

**Caster:**—¼° plus or minus ¾° (60), 0° plus or minus ¾° (80, 90). Adjustable.

**Toe In:**—0-1/16". Adjustable.

**Steering Geometry:**—Outer wheel turned 20°, inner wheel 23¾° (60, 80), 24° (90) plus or minus ¾°.

See Buick Special Shop Notes for brake assembly removal for work on Front Suspension.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Double Roller type with center steering.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix Hydraulic, single anchor type. Hand lever applies rear service brakes.

See Brake Section for complete data.

### Series 60 Brake Specifications

All data same as for Series 40 except for lining width which is 2" for Series 60. Refer to 1937 Series 40 article (preceding) for complete data.

### Series 80, 90 Brake Specifications

**Wheel Cylinders—**Diameters: front 1¼", rear wheels 1 3/16". Not interchangeable front and rear.

**Drum Diameter—**12" (80), 14" (90).

**Lining—**Woven (Ferodo BZ-10) type. Width 2". Thickness 3/16" (80), ¼" (90). Length per wheel front shoe 9 15/16" (80), 12 1/16" (90), rear shoe 12¾" (80), 14¾" (90).

**Clearance:**—.010" + or — .002" at heel and toe.

**Braking Power—**47.4% rear.

**Hand Brake Adjustment:**—See Service Brake (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:—**First number (All Series) 13219848  
(Flint), 23238767 (South Gate, Calif.), 33245765  
(Linden, N. J.). On right frame rail at dash.

**ENGINE NUMBER:**—Stamped on boss on right side of crankcase above starter. First number 40-, 60-, 80-, 90-3396937 (first number same for all models).

NOTE—Dash (—) following engine number indicates engine equipped with .010" oversize pistons.

## TUNE-UP

**COMPRESSION:—**Ratios and pressures as follows:

Model	Compression Ratio	1000 RPM. Cranking Spd.	Compression Pressure.
38-40	6.15-1	126 lbs.	112 lbs.
38-60, 80, 90	6.35-1	130 lbs.	113.8 lbs.

**VACUUM READING:**—18-20" steady reading with engine idling at 7-8 MPH.

**FIRING ORDER: 1-6-2-5-8-3-7-4.** See diagram.

**SPARK PLUGS:** AC No. 46. 14 mm. Metric type.

**Gaps**—.025". **Limits** .023-.028".

**NOTE**—Gap may be set at .030", if necessary, to secure good idle. May cause high speed missing in use.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.015". Cam Angle 31° (closed).**

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

**Automatic & Vacuum Advance—See Distributor.**

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC (Series 40), 6° BTDC (Series 60, 80, 90) with flywheel mark 'ADV' at indicator in inspection hole in flywheel housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Both screws  $\frac{3}{4}$ -1 turn (All Series—Marvel Carb.), 1 turn (40—Stromberg Carb.),  $1\frac{1}{4}$  turn (60, 80, 90—Stromberg Carb.) open. Idle speed 7-8 MPH. (except Series 40 with Self-shifting Trans. —5-6 MPH. in Third Gear).

**Floot Level**—Fuel level 11/16" (Series 40—Marvel Carb.), 3/4" (60, 80, 90—Marvel Carb.), 19/32" (All Series—Stromberg Carb.) below top of bowl.

**Accelerating Pump**—#2 hole (medium stroke) std.

**Fuel Pump Pressure:** 3½ lbs. max. (Series 40—Type W Pump), 3 lbs. max. (Series 40—Type AF Pump), 4½ lbs. max. (Series 60, 80, 90).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. **Setting**—Coil wind-up should be  $\frac{1}{4}$  turn at 70°F. With coil engaged on heat valve shaft, wind up outer end  $\frac{1}{4}$  turn and engage prong on anchor stud. **Thermostatic Coil Checking**—To check thermostat on engine, install suitable lever  $1\frac{1}{2}$ " long on forward end of heat valve shaft and hook spring balance to outer end of lever. With thermostatic coil and entire manifold at 70°F., pull required to start lever should be 5-6 ozs. (40). 8-9½ ozs. (60, 80, 90).

**VALVES:** See Valve Timing.

**Tappet Clearance—.015" all valves, engine hot.**

**STARTING:** See Battery. Starter. Generator. Regulator.

## IGNITION

**Ignition Switch:—Oakes Steering Column & Ignition Lock No. 301615 (40, 60), 301616 (80, 90). Ignition Switch No. 301370.**

**Ignition Lock—Briggs & Stratton No. 45922 (Lock Cylinder). Key Series—8000-9499. Groove—15.**

**COIL: Delco-Remy Model 536-H.** On right side of crankcase in front of distributor.

**Ignition Current**— $2\frac{1}{2}$  amperes idling,  $4\frac{1}{2}$  stopped.

**CONDENSER: Delco-Remy Part No. 1869704.**

**Capacity—.20-.25 microfarad.**

**DISTRIBUTOR:** Delco-Remy Model 1110801. Single breaker, 8 lobe cam, full automatic advance type with Vacuum Spark Control and Octane Selector adjustment.

**Breaker Gap—.015". Limits .0125-.0175".**

**Cam Angle or Dwell—**31° (closed), 14° (open).

**Breaker Arm Spring Tension—22 oz.**

Rotation—Counter-clockwise viewed from the top.

Distributor	Automatic Advance	Engine	
Degrees	R.P.M.	Degrees R.P.M.	
Start .....	250	3.5..... 500	
7 .....	400	14 .....	800
13 .....	1500	26 .....	3000

**Vacuum Spark Control Model 681-H. Mounted on distributor and linked directly to breaker plate. Provides additional advance at speeds greater than 18 MPH, except when engine accelerated or operated with wide open throttle when spark is retarded by return spring. Plunger travel  $\frac{1}{8}$ " Maximum.**

## Vacuum Advance.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start .....	0 .....	5-7"
5-6½° .....	10-13° .....	10-13"

**Octane Selector**—Consists of manual adjustment at distributor providing 10° advance (toward 'High' on scale), 10° retard (toward 'Low' on scale) from center position. See Ignition Timing (below) for setting.

**Distributor Removal:**—On right side of crankcase. Disconnect vacuum line, take out two hold-down screws in mounting flange, pull distributor up.

NOTE—When installing distributor, see that cork oil seal in place in recess around shaft hole, turn

distributor shaft so that rotor opposite #1 segment, position distributor so that vacuum unit connection toward rear and parallel with center-line of engine, turn oil pump shaft with screwdriver so that slot lines up with pin in end of drive gear.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting below for fuel of 70 Octane Rating (Series 40), 76, (60, 80, 90). See Octane selector for final setting.

	Flywheel Degrees	Piston Position
38-40	4° BTDC	.0063° BTDC.
38-60, 80, 90	6° BTDC	.0149° BTDC.

**To Set Timing (With Synchroscope)**—Recommended by manufacturer. Clip one synchroscope lead to #1 spark plug cable, insert other lead in distributor cap terminal from which #1 spark plug wire removed. Direct synchroscope on flywheel through inspection hole in right front face of housing above starter. Idle engine at 400 RPM. Max. Loosen two distributor hold-down screws, rotate distributor until ADV mark lines up with line on housing, tighten hold-down screws. Loosen Octane Selector pointer lock screw (Allen wrench), center pointer on scale. See Octane Selector setting below.

**To Set Timing (without Synchroscope)**—With #1 piston on compression stroke, turn the engine over until 'ADV' mark on flywheel lines with reference line on housing at inspection hole in right front face of housing above starter. Adjust distributor so contacts just opening, center Octane Selector pointer (above), adjust Octane Selector

Octane Selector—Should be adjusted so that very light 'ping' secured when car accelerated between 10 and 20 MPH. In high gear with wide open throttle. To adjust, loosen the two distributor hold-down screws, rotate distributor and pointer toward 'High' end of scale for fuel of higher rating, or toward 'Low' end for fuel of lower rating.

**NOTE**—To correct excessive spark knock (not caused by incorrect spark plugs, inferior fuel, or incorrect timing) install special advance weight springs #1873545.

### CARBURETOR

**CARBURETION:**—Marvel or Stromberg Carburetors, Dual, Downdraft, 1" (40), 1¼" (60, 80, 90) type. Special type used when heavy duty oil-bath air cleaners installed (different jet calibrations).

	Model	Std. Air Clnr.	Oil-bath Clnr.
40	Marvel CD-1B	10-1798	10-1797
40	Strombg. AAV-1	A-18681	A-18691
60, 80, 90	Marvel CD-2B	10-1798	10-1799
60, 80, 90	Strombg. AAV-2	A-18682	A-18692

For complete data, refer to Carburetor Index.

**Idle Adjustment (All Models)**—With engine warm and idling at slow idle speed with choke valve wide open (Automatic Choke and Fast Idle inoperative), set throttle stopscrew for 7-8 MPH. Idling speed (except 40 with Self-shifting transmission, 5-6 MPH. in third gear), turn idle adjusting screw for each barrel (in succession) in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be approximately 1 turn (40-AAV-1), 1¼ turn (60, 80, 90-AAV-2), ¾-1 turn (all models—CD-1B, CD-2B) of screw open. Readjust stopscrew for idling speed.

**Accelerating Pump (All Models)**—Three holes in throttle lever for pump link engagement:  
#1 (Inner—Min.). Hot weather, high-test gas.  
#2 (Center)—All-year standard setting.  
#3 (Outer—Max.). Cold weather, low-test gas.  
**Fast Idle:**—Buick Cold Idle Control for all models.

For complete data, refer to Carburetion Equip. Index.

**Accelerator Linkage Adjustment:**—Not required. See Automatic Choke & Starter Vacuum Switch data.

**IMPORTANT NOTE**—(Model 40 with Self-Shifting Transmission):—See Buick Self-Shifting Transmission article in Transmission Section for throttle control lever setting (must be checked whenever linkage disconnected or disturbed).

**Automatic Choke:**—Delco-Remy Carburetor Control Model 1990101 (all carburetor models).

For complete data, refer to Carburetion Equip. Index.

**Volatility Selector Adjustment:**—Standard setting second notch on 'Low' side of scale. Turn adjusting nut toward 'High' end of scale for leaner setting, toward 'Low' end for richer setting.

### CARB. EQUIPMENT

**Air Cleaner:**—AC. Oil-wetted type Std. #1528533 (40), 1528535 (others), Heavy duty oil-bath type Optl. #1528534 (40), 1528616 (others).

**Fuel Pump:**—AC fuel pump std. (40), combination fuel and vacuum pump std. (60, 80, 90), optl. (40). Type W #1521854 (40 Std., first 54000), Type AF #1523703 (40 Std., after 54000), Type AJ #1523687 (40 Optl.), Type AB #1521838 (Std. 60, 80, 90).

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric. #1515347 (Dash Unit), #1515469 (40, 60 Tank Unit), #1515468 (80, 90 Tank).  
For complete data, refer to Carburetion Equip. Index.

### BATTERY

**BATTERY:**—Delco Model 17E-1. 6 volt, 17 plate, 115 ampere hour capacity (20 hour rate).

**Starting Capacity:**—137 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.3 minutes. Five second voltage—4.4 volts.

**Grounded Terminal:**—Negative (—) terminal grounded to Coil mounting bolt on engine block. **Dimensions:**—Width 4". Length 19 5/16". Height 9". **Location:**—On right side under engine hood.

**Series 80, 90 Export Battery:**—Delco Model 17K-1. 6 volt, 17 plate, 112 A.H. Capacity (20 hr. rate).

**Grounded Terminal:**—Negative (—) terminal. **Dimensions:**—Width 7". Length 10 3/8". Height 8 5/8".

### STARTER

**Delco-Remy 734-Z (40), 727-W, 729-B RHD (Others).** Armature—823881 (734-Z), 820158 (727-W, 29-B).

**Drive:**—Overrunning clutch (solenoid pinion shift).

**Rotation:**—Counter-clockwise at commutator end.

**Cranking Engine:**—(40) 135 RPM., 150 amperes, 4.5 volts. (60, 80, 90) 115 RPM., 175 amperes, 5 volts.

**Brush Spring Tension:**—24-28 ozs. each.

Performance Data—734-Z.			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

Performance Data—727-W, 729-B.			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:**—Solenoid Switch No. 1542 (734-Z, 727-W), 1545 (729-B). Vacuum Switch No. 1868512 (part of Automatic Choke assembly). Solenoid controlled through relay by accelerator pedal.

For complete data, refer to Electrical Equipment Index.

**Vacuum Switch.** Contacts close at 30-40° throttle opening. Open with 3-6" of Hg. (stay open with more than ½").

### GENERATOR

#### STANDARD

**Delco-Remy Model 1101052 (40), 1101053 (60), 1101055 (80, 90). Armature No. 1866789 (all models).** Split-field type with fixed third brush and vibrating voltage regulator control.

For complete data, refer to Electrical Equipment Index.

**NOTE:**—Generators same except for drive pulley. Interchangeable if correct pulley installed.

#### Pulley Specifications.

Groove	Top Width.	Diameter at rim.	Paint Color.
40	3/4"	3 1/2"	Black
60	7/8"	3 1/4"	Black
80, 90	7/8"	3 1/2"	Aluminum

**Charging Rate Adjustment:**—Adjusted by changing voltage regulator setting. See Regulator data.

**Maximum Charging Rate:**—As given in table below. Reached at car speed of approx. 40 (40), 43 (60), 44 (80), 42 (90) MPH. cold. To check, connect test ammeter in line at 'BAT' terminal on regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

#### Performance Data.

	Amperes.	Volts.	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—22-28 ounces (main), 16-20 ounces (third brush).

**Field Current:**—1.44-1.56 amperes at 6.0 volts (Shunt field), .89-.94 amps. at 6.0 volts (3rd brush field).

**Removal:**—New type pivot mounting (generator hung below pivot bracket). Removed in same manner as previous models.

**Belt Adjustment:**—Loosen all clamp bolts and pivot bolts, pull generator out and up until belt deflection midway between gen. and fan pulleys is ½".

### GENERATOR

#### SPECIAL EQUIPMENT

**City Police—Delco-Remy Model 1105528.** Used with Delco-Remy Regulator Model 5599.

Refer to Buick 1939 article for all data.

**State Police—Delco-Remy Model 1105857.** Used with Delco-Remy Regulator Model 1118237.

Refer to Buick 1940 article for all data.

### REGULATOR

**Delco-Remy Model 5807. Double Core Type Voltage Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator. Cutout Relay has extra 'ground' contacts for starter control.

For complete data, refer to Electrical Equipment Index.

#### Cutout Relay

**Cuts In:**—6.9-7.6 volts, approx. 800 RPM., 8 MPH.

**Cuts Out:**—0-3 amperes discharge.

**Contact Gap:**—.020". **Air Gap:**—.020" (closed).

## CONTINUED FROM PRECEDING PAGE

## Voltage Regulator

**Setting**—7.5-7.9 volts (70°F), 7.4-7.6 volts (150°F). Regulator over-compensated for temperature and must be checked at these points.  
**Adjustment**—Connect ammeter in charging line at 'BAT' terminal on regulator, disconnect lead on 'IGN' terminal and connect jumper between this terminal and 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature spring slightly.  
**NOTE**—Regulator cover must be in place when testing. Do not run generator on open-circuit.  
**Contact Gap**—.020". **Contact Sp. Tension**—2.7-3.5 oz.  
**Air Gap**—.063" between armature and center of core with armature down. .010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Guide Multi-beam, pre-focused type with non-interchangeable lenses (marked 'right' and 'left' at top). Beams same as on 1937 models except Fender Lamps lighted whenever City Beam or asymmetrical Passing Beam in use.

**Headlamp Adjustment**—Must be adjusted with lenses in place (beams 4° to right without lenses). With the Upper Beams 'on', aim left hand headlamp so that upper edge of bright spot is on horizontal line at lamp center height and left edge is at lamp vertical center-line (entire bright spot to right of vertical line). Aim right hand headlamp for same height but center bright spot on vertical center-line (right cut-off approx. 8" to right of center-line).

**Headlamp Beam Indicator**—In speedometer dial. Lighted whenever upper beams in use.

## Switches

**Lighting**—D-R No. 1994501, 1995001 (Exp).  
**Foot Selector**—Delco-Remy Model 471-T.  
**Instrument Light**—Delco-Remy Model 1404.  
**Stop Light**—Delco-Remy Model 476-S.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Fender, Instrument, Map	1½	55
Clock, Radio, Trunk	1½	55
Beam Indicator, Glove Cmnt.	1	51
Stop & Tail	21-3	1154
License Plate	3	63
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—No. 1865577. Mounted on lighting switch. Contacts remain closed with 25 ampere current but open within 1 minute with 38 ampere current (70°F). Non-adjustable

**FUSES**—Dome Light & Rear Cigar Lgtrs. (80, 90)—30 ampere in connector back of instrument panel.  
**Electric Clock**—2 ampere on back of clock.

**HORNS**—Klaxon Model K-33-S. Type 2051 (low note—right side), 2052 (high note—left side). Vibrator type blended tone twin horns operated by relay.

**Horn Type** Current (at 6 volts) Air Gap  
 2051 Low Note .....11-13 amperes......042-.046"  
 2052 High Note .....10-12 amperes......032-.036"

**Horn Relay**—Model 271-A. **Contact Gap**—.020".  
**Contacts Close**—2.7-4.0 volts. **Air Gap**—.015".

## ENGINE

## SERIES 40

**ENGINE SPECIFICATIONS**—8 cylinder, 'I' head.

**Bore**—3 3/32". **Stroke**—4 1/8".

**Displacement**—248 cubic inches.

**Rated Horsepower**—30.63 (S.A.E.).

**Developed Horsepower**—107 at 3400 R.P.M.

**Compression Ratio**—6.15-1 cast-iron head.

**Compression Pressure**—110-118 lbs. at cranking speed. Cylinders should be uniform within 6 lbs.

**Vacuum Reading**—18-20" steady at 7-8 M.P.H.

**PISTONS**—Buick new 'Dome-shaped head', Lo-Ex alloy, Tri-slot, cam ground type with anodized finish. Refinish cylinders to take finished replacement pistons. **Length**—4 9/32". **Weight**—14.5 ozs.  
**Removal**—Pistons and rods removed from above.  
**Clearance**—Land .018-.025". Skirt .0021" desired, .0015-.0021" limits. See Fitting (following).

**Original Bore Size & Replacement Pistons**—See Buick Special Shop Notes.

**Fitting New Pistons**—Micrometer Gauge—Check at points just below T-slot junction on both sides of vertical slot and below lower end of slot. Use light contact only. Clearance given above for 70°F.

**Feeler Gauge**—Piston (with pin) and engine must be 65-70°F. Insert 1/2x12" feeler in cylinder, piston (with pin parallel to crankshaft and T-slot on opposite side from feeler) should pass on .0015" feeler and hold on .00225" feeler.

**Installing Pistons**—T-slot away from camshaft.

**PISTON RINGS**—2 compression, 2 oil control rings per piston all above pin. Top compression ring carries relief on upper inner diameter. #2 comp. assembled with mark TOP toward piston head.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	1/8"	.010-.015"	.0015-.003"
Comp. (#2)	3/32"	.010-.015"	.0015-.003"
Oil Control	3/16"	.010-.015"	.0015-.003"

**Replacement Rings**—.010", .020", .030" oversize.

**PISTON PIN**—Diameter—13/16". Length—2 11/16".

Pin clamped in rod. Pins not furnished separately.  
**Pin Fit in Piston**—.0003-.0004" at 70°F. or easy finger push fit at room temperature.

**NOTE**—Use No. 25 wrench 5 1/2" long on pin bolt.

**CONNECTING ROD**—Weight—29.92 ozs. Length—7 5/8".

**Crankpin Journal Diameter**—2".

**Lower Bearing**—Spun-babbitt lined type.

**Clearance**—.0008-.0018". **Sideplay**—.005-.010".

**Bearing Adjustment**—Shims. Do not file rods or caps.

**Installing Rods**—Align cap and rod. Mark on rod and cap to rear, oil hole to camshaft.

**NOTE**—Max. weight variation 1/8 oz. Special ground bolts used for cap assembly.

**CRANKSHAFT**—5 bearing, integral counterweights with torsional balancer mounted on forward end.

**Journal Diameters**—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

**Bearing Type**—Steel-backed, babbitt-lined. See Buick Shop Notes for replacement bearings.

**Clearance**—.0007-.0022".

**Bearing Adjustment**—Shims. Do not file caps.

**End Thrust**—Center (#3) bearing. **Endplay**.004-.008".

**CAMSHAFT**—5 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type**—Steel-backed, babbitt bushings.

**Clearance**—.0005-.0035". **Endplay**—.002-.008".

**End Thrust**—Taken by thrust plate assembled between front bearing and camshaft sprocket.

**Timing Chain**—Link-Belt. Width 1". Pitch .500". Length 24 1/2" or 49 links.

**Camshaft Setting**—Mesh copper-plated washers (on chain) with marks on sprockets (on upper side).

**VALVES**—Head Diameter Stem Diameter Length

Intake .....1 17/32"......3715-.3725".....4 5/16"

Exhaust .....1 11/32"......3711-.3719".....4 3/64"

Seat Angle Lift Stem Clearance

Intake .....45°......348"......0015-.0035"

Exhaust .....45°......342"......0021-.0039"

**Valve Guides**—Press fit in block. Install with taper end to top. Finish ream to size.

**Valve Springs**—Double springs on all valves.

**Free length**: Inner 1 7/8". Outer 2 5/16".

**Inner Spring** Pressure Length

Valve Closed .....15 1/2-20 1/2 lbs.....1 21/32"

Valve Open .....45-51 lbs.....1 5/16"

**Outer Spring** Pressure Length

Valve Closed .....26 1/2-31 1/2 lbs.....1 15/16"

Valve Open .....67-73 lbs.....1 19/32"

**Valve Lifters**—Single piece, cast-iron. Lifter guide holes reamed in crankcase. Clearance .0005-.0025".

**Rocker Arms**—Drop-forged fitted with steel-backed babbitt bushings. Rocker arm shaft brackets are of aluminum alloy. Clearance—.001-.003".

## ENGINE

## SERIES 60, 80, 90

**ENGINE SPECIFICATIONS**—8 cylinder, 'I' head.

**Bore**—3 7/16". **Stroke**—4 5/16".

**Displacement**—320.2 cu. ins. **Rated H.P.**—37.81

**Developed Horsepower**—141 at 3600 R.P.M.

**Compression Ratio**—6.35-1 cast-iron head.

**Compression Pressure**—111-118 lbs. at cranking speed. Cylinders should be uniform within 6 lbs.

**Vacuum Reading**—18-20" steady at 7-8 M.P.H.

**PISTONS**—Buick new 'Dome-shaped head', Lo-Ex alloy, Tri-slot, cam ground type with anodized finish. Refinish cylinders to take finished replacement pistons. **Length**—4 7/16". **Weight**—17.7 ozs.

**Removal**—Pistons and rods removed from above.

**Clearance**—Land .021-.028". Skirt .0023" desired, .0017-.0023" limits. See Fitting (following).

**Original Bore Size & Replacement Pistons**—See Buick Special Shop Notes.

**Fitting New Pistons**—Micrometer Gauge—Check at points just below T-slot junction on both sides of vertical slot and below lower end of slot. Use light contact only. Clearance given above for 70°F.

**Feeler Gauge**—Piston (with pin) and engine must be at 65-75°F. Insert 1/2x12" feeler in cylinder, piston (with pin parallel to crankshaft and T-slot on opposite from feeler) should pass on .0015" feeler and hold on .00225" feeler.

**Installing Pistons**—T-slot away from camshaft.

**PISTON RINGS**—2 compression, 2 oil control rings per piston all above pin. Top compression ring carries relief on upper inner diameter. #2 comp. assembled with face marked TOP toward piston head.

Ring	Width	End Gap	Side Clearance
------	-------	---------	----------------

Comp. (#1) .....1/8"......010-.015"......0015-.003"

Comp. (#2) .....3/32"......010-.015"......0015-.003"

Oil Control .....3/16"......010-.015"......0015-.003"

**Replacement Rings**—.010", .020", .030" oversize.

**PISTON PIN**—Diameter—7/8". Length—3 1/16".

Pin clamped in rod. Pins not furnished separately.

**Pin Fit in Piston**—.0003-.0004" at 70°F. or easy finger push fit at room temperature.

**NOTE**—Use No. 25 wrench 5 1/2" long on pin bolt.

**CONNECTING ROD**—Weight—38.43 ozs. Length—8 1/4".

**Crankpin Journal Diameter**—2 1/4".

**Lower Bearing**—Spun-babbitt lined type.

**Clearance**—.0008-.0018". **Sideplay**—.005-.010".

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Bearing Adjustment:**—Shims. Do not file rods or caps.  
**Installing Rods:**—Align cap and rod. Mark on rod and cap to rear of engine, oil hole to camshaft.

**NOTE:**—Max. weight variation  $\frac{1}{8}$  oz. Special ground  $7/16"$  diam. bolts used for cap assembly.

**CRANKSHAFT:**—5 bearing, integral counterweights with torsional balancer mounted on forward end.

**Journal Diameters:**—#1, 2  $9/16"$ ; #2,  $2\frac{3}{8}"$ ; #3, 2  $11/16"$ ; #4,  $2\frac{3}{4}"$ ; #5, 2  $13/16"$ .

**Bearing Type:**—Steel-backed, babbit-lined. See Buick Shop Notes for replacement bearings.

**Clearance:**—.0007-.0022".

**Bearing Adjustment:**—Shims. Do not file caps.  
**End Thrust:**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.

**Journal Diameters:**—#1, 2  $5/32"$ ; #2,  $2\frac{1}{8}"$ ; #3, 2  $3/32"$ ; #4, 2  $1/16"$ ; #5,  $1\frac{3}{4}"$ .

**Bearing Type:**—Steel-backed, babbit bushings.  
**Clearance:**—.0005-.0035". Endplay—.002-.006".

**End Thrust:**—Taken by thrust plate assembled between front bearing and camshaft sprocket.

**Timing Chain:**—Link-Belt. Width 1". Pitch .500". Length 50 links or 25".

**Camshaft Setting:**—Mesh copper-plated washers (on chain) with marks on sprockets (on upper side).

**VALVES:** Head Diameter Stem Diameter Length

Intake .....1  $25/32"$ ......3715-.3725".....4  $13/32"$   
Exhaust .....1  $7/16"$ ......3711-.3719".....4  $7/32"$

Seat Angle Lift Stem Clearance  
Intake .....45°......347"......0015-.0035"  
Exhaust .....45°......348"......0021-.0039"

**Valve Guides, Valve Springs, Valve Lifters and Rocker Arms:** See Series 40 Engine on preceding page for data.

**VALVE TIMING**

**Tappet Clearance:** .015" all valves, engine hot.  
**Valve Timing (Series 40):** See Camshaft Setting.

**Timing Points**

Intake Valves—Open 13° BTDC. Close 68° ALDC.  
Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

**Opening and Closing Points**

Intake Valves—Open 26° BTDC. Close 81½° ALDC.  
Exhaust Valves—Open 68° BLDC. Close 35° ATDC.

**Valve Timing (60, 80, 90):** See Camshaft Setting.

**Timing Points**

Intake Valves—Open 14° BTDC. Close 71° ALDC.  
Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

**Opening and Closing Points**

Intake Valves—Open 27° BTDC. Close 84½° ALDC.  
Exhaust Valves—Open 69° BLDC. Close 38½° ATDC.

**NOTE:**—"Timing Point" when valve .004" off seat with .015" tappet clearance or lash customarily listed instead of actual opening and closing points.

**Valve Timing Check:**—#2 or #7 exhaust valve should be .145" (40), .155" (60, 80, 90) open (on dial indicator contacting valve spring cap), with #1 and 8 pistons on top dead center and flywheel mark "TDC/1-8" at indicator in inspection hole in right front face of flywheel housing above starter.

**LUBRICATION**

**LUBRICATION:**—Pressure with oil pump in crankcase.  
**Oil Pump:**—Helical gear drive from camshaft. Ignition timing not disturbed by pump removal.

**Oil Pump Clearances:**—See Buick Shop Notes.  
**Normal Oil Pressure:**—45 lbs. at 35 MPH.

**Oil Pressure Regulator:**—On pump. Opens at 45 lbs.

**Crankcase Capacity:**—Dry 7 qts. (40), 9 qts. (60, 80, 90); Refill 6 qts. (40), 8 qts. (60, 80, 90).

**COOLING**

**Capacity:**  $13\frac{1}{4}$  qts. (40), 17 qts. (60, 80, 90).

**Water Pump:**—Plain bushing, self-adjusting packing type (first 40, 60; all 80, 90), ball bearing packless type (40, 60 after Eng. No. 3524449).

See Water Pump Section for complete data.

**Removal:**—Remove fan belt, pump mounting bolts. Lift off pump and fan assembly.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts 148-153°F. Fully open 170-175°F.

**CLUTCH**

**CLUTCH:** Own Make. Single plate, dry disc type.

**NOTE:**—Driven Member is Long 10CF-CS (40), Borg & Beck type (60, 80, 90).

See Clutch Section for complete data.

**Facings (Series 40):**—Woven-joined type. Inside Diameter 6", Outside Diameter 10", Thickness .125".

**Facings (60, 80, 90):**—Molded-woven type. Inside Diameter 6½", Outside Diameter 11", Thickness ⅛".

**Pedal Return Spring:**—See Buick Shop Notes.

**Adjustment:**—Clearance between pedal and underside of toeboard must be ⅜-⅝". To adjust, loosen locknut, turn setscrew at rear of pedal above top.

Free movement of pedal must be ¾-1". To adjust, turn nut on yoke end of inner equalizer lever (40, 60), or on pedal rod (80, 90).

**Removal:**—Remove Rear Axle (see Rear Axle) and Transmission (see Transmission). Take off clutch underpan, release tension on pedal return spring by backing off nut on eye bolt, disconnect clutch linkage at yoke, remove spring washer (retains release bearing support), pull yoke out (with release bearing). Mark cover and flywheel, remove mounting screws evenly and lower assembly out. **NOTE:**—Metal spacers used between release levers and cover will facilitate removal of mounting screws.

**TRANSMISSION**

**TRANSMISSION:**—Buick—Constant mesh, synchromesh type with all helical gears.

See Transmission Section for complete data.

**Removal:**—Remove Rear Axle (see Rear Axle). Release nut on eye bolt of clutch pedal return spring. Remove pedal bracket and brake master cylinder. Take off steady rest rod, transmission support (with shims attached to each end), use Guide Pins (J-851) in upper mounting holes, withdraw transmission.

**NOTE:**—Brake master cylinder need not be removed on Series 40.

See Buick Special Shop Notes for Transmission Steady Rest Mounting data.

**SELF-SHIFTING TRANSMISSION**

**SELF-SHIFTING TRANSMISSION (SERIES 40):** Optional. Four speed type with automatic shifting.

See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINT:**—Spicer (Buick design). Plain bearing type. One used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Buick—Semi-floating, hypoid gear type with torque tube drive.

See Rear Axle Section for complete data.

**Ratio:**—4.40-1 (Series 40 Std.), 3.615-1 (40 with Self-shift trans.), 3.9-1 (60), 4.1818-1 (80), 4.555-1 (90).

**Backlash:**—.006-.010".

**Removal:**—Hoist rear of car, remove front floor, brake conduit from torque tube, disconnect brake line at rubber hose connection (end of torque tube), rear shocks at bottom, rear radius rod at frame, coil springs at lower end (tie ends to bumper), disconnect torque tube at U-joint, pull assembly out.

**Axle Shaft Removal:**—Remove housing cover, differential pinion shaft screw, shaft, and spacer block. Push axle assembly in, remove 'C' washer on inner end, withdraw shaft assembly. Right axle shaft ¾" (40, 60), 15/16" (80, 90) longer than left shaft.

**Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Coil springs, conventional axle. See Rear Axle Section for complete data.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:** Delco. Model 1947-A, B (40, 60 front), 1902-C, D (80, 90—front), 1100-S (all—rear). Double acting, hydraulic type. Direct acting (rear). See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**NOTE:**—See Buick Shop Notes for brake assembly removal for work on front suspension.

**Kingpin Inclination:**—3½-4½° (40, 60), 4¼-5¼° (80), 4-5° (90).

**Camber:**—Minus ¼° to plus 1°. Not adjustable.

**Caster:**—Minus ⅞° plus or minus ⅜°. Adjustable.

**Toe In:**—0-1/16". Adjustable.

**Steering Geometry (Toe Out):**—Inner wheel turned 23¼° (40), 23¾° (60, 80), 24° (90), outer wheel should be turned exactly 20° (All Series).

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller type.

See Steering Gear Section for complete data.

**BRAKES****SERIES 40 & 60**

**BRAKES:**—Service—Bendix hydraulic, rigid cylinder type. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Wheel Cylinders—Diameters:** Front 1 3/32". Rear 1".

**Drum—Centrifuse.** 12".

**NOTE:**—Drum turn down limit .030" cut.

**Lining—Ferodo BZ-10 (woven—primary), Manhattan 2320-K (moulded—secondary).** Length per wheel (front shoe 9 15/16", rear 12¾"). Width 1¼" (40), 2" (60). Thickness 3/16".

**Clearance:**—.010" plus or minus .002" at heel and toe.

**Hand Brake Adjustment:**—See Service Brakes (above).

**BRAKES****SERIES 80 & 90**

**BRAKES:**—Service—Bendix hydraulic, rigid cylinder type. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Wheel Cylinders—Diam.** Front 1¼". Rear 1 3/16".

**Drum—12" (80), 14" (90).** Cast-iron, ribbed.

**Lining—Ferodo BZ-10 (woven—primary), Manhattan 2320-K (moulded—secondary).** Length per wheel (front shoe 9 15/16"—80, 12 1/16"—90; rear 12¾"—80, 14¾"—90). Width 2". Thickness 3/16" (80), ¼" (90).

**Clearance:**—.010" plus or minus .002" at heel and toe.

**Hand Brake Adjustment:**—See Service Brakes (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number (all series) 13388547 (Flint), 23395088 (Calif.), 33405088 (Linden). On right frame side rail at dash.

**ENGINE NUMBER:**—First number (all series) 3572652 with prefix 4- (40), 6- (60), 8- (80), 9- (90). On boss on right side of crankcase above starter.

**NOTE:**—Dash (—) following engine number indicates engine equipped with .010" oversize pistons.

## TUNE-UP

**COMPRESSION:**— Compression Pressure.  
Model Ratio. 1000 RPM. Cranking Spd.  
39-40 ..... 6.1-1 ..... 126 lbs. .... 112 lbs.  
39,60,80,90 ..... 6.25-1 ..... 130 lbs. .... 113.8 lbs.

**VACUUM READING:**—18-20" steady at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 46. 14 mm. Metric type.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.015". Cam Angle 31° (closed).

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC (Series 40), 6° BTDC (60, 80, 90) with flywheel mark "ADV" at indicator in housing inspection hole on right side above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Both idle screws 1¾ turns (Carter Carb.), 1¼ turns (Stromberg Carb.) open. Idle speed 7-8 MPH.

Float Level (Carter Carb.)—3/16" top of float to gasket seat on bowl cover with needle valve seated.

Float Level (Stromberg Carb.)—Fuel level 19/32" below top edge of bowl.

Accelerating Pump—#2 center hole (medium stroke) standard for all-season operation.

Fuel Pump Pressure: 3 lbs. max. (40), 4½ lbs. max. (60, 80, 90).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.  
Setting—Coil wind-up ¼ turn at 70°F. With coil engaged on heat valve shaft, wind up outer end ¼ turn and engage prong on anchor stud.

Checking Thermostatic Coil—To check on engine, install suitable lever 1½" long on forward end of heat valve shaft, hook spring balance to outer end of lever. With thermostatic coil and entire manifold at 70°F., pull required to start lever should be 5-6 ozs. (40), 8-9½ ozs. (60, 80, 90).

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Steering Column & Ignition Lock No. 301833 (40,60), 301980 (40,60 RHD), 301832 (80,90), 301888 (80,90 RHD). Ignition Switch No. 301990 (all & 40,60 RHD), 301370 (80,90 RHD).

**Ignition Lock:**—Briggs & Stratton No. 45922 (Lock Cylinder). Key Series—8000-9499. Groove—15.

**COIL:** Delco-Remy 536-H. On right side of engine.

Ignition Current—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110801 (40, early 60), 1110805 (Later 60, All 80, 90). Single breaker, 8 lobe cam, full automatic advance type with integral vacuum spark control and Octane Selector.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° (closed), 14 (open.)

Breaker Arm Spring Tension—22 ozs.

Rotation—Counter-clockwise viewed from top.

Automatic Advance—1110801			
Distributor	Engine		
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3.5	500
7	400	14	800
13	1500	26	3000

Automatic Advance—1110805.			
Distributor	Engine		
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	2	500
8	600	16	1200
13	1500	26	3000

**Vacuum Spark Control 681-H**—Integral type (on distributor, linked to breaker plate). Provides additional advance at speeds above 18 MPH, except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel ⅛" maximum.

**Vacuum Advance.**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG).
Start	0°	5-7"
5-6°	10-12°	10-13"

**Distributor Removal:**—Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out. **NOTE:**—Oil pump now driven by tongue on lower end of distributor shaft. When installing distributor, mesh drive gear so that rotor at #1 segment in cap and normal timing secured with mounting screws approximately centered in slots.

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting (regular fuel 40, Ethyl fuel 60,80,90) given below. See 'Final Ignition Setting' (following) for correction dependent on operating conditions and fuel used.

	Flywheel Degrees	Piston Position
39-40	4° BTDC	.0063" BTDC
39-60,80,90	6° BTDC	.0149" BTDC

**Timing (With Synchroscope)**—Connect synchroscope in #1 spark plug lead, direct light on flywheel through inspection hole in right front face of flywheel housing above starter. Idle engine at 400 RPM, maximum. Loosen two distributor hold-down screws, rotate distributor until 'ADV' mark lines up with indicator on flywheel housing, tighten screws (screws should be approximately centered in slots). See Final Ignition Setting below.

**Timing (Without Synchroscope)**—With #1 piston on compression, turn engine over until 'ADV' mark on flywheel lines up with reference mark on housing (inspection hole in right front face of housing above starter). Loosen two hold-down screws, rotate distributor until contacts just open.

**Final Ignition Setting**—Should be adjusted for fuel used so that light 'ping' secured when engine accelerated with wide open throttle between 10 & 20 MPH. To adjust, loosen two distributor hold-down screws, move distributor in small steps (until correct setting secured) counter-clockwise (if ping too severe), clockwise (if no ping).

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter WDO Model 419-S (40—first cars), 440-S (40—later cars), Stromberg Model AAV-26 (60, 80, 90). Dual downdraft types. NOTE—Special Stromberg type used on 60, 80, 90 models with heavy duty air cleaner (special jet calibrations—See Stromberg Jet Specifications). For complete data, refer to Carburetor Index.

**Idle Adjustment (All Models)**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for 7-8 MPH. idling speed, turn idle adjusting screw for each barrel (in succession) in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in until engine fires smoothly. Readjust idling speed. Final setting of idle screws should be approximately 1¼ turns (Carter), 1¼ turns (Stromberg) out from inner seated position.

NOTE—If vacuum gauge used for idling adjustment, turn screws evenly in 'rich' direction until gauge reading is 1" less than obtainable maximum.

**Accelerating Pump Adjustment (All Models)**—Three holes provided in pump arm (Carter), throttle lever (Stromberg) for pump link or rod connection. Recommended settings are as follows:

- #1 (Inner—Min.) Hot weather, high-test gasoline.
- #2 (Center)—Std. normal all-year setting.
- #3 (Outer—Max.) Cold weather, low-test gasoline.

**Fast Idle:**—Integral type built-in each carburetor.

For complete data, refer to Carburetion Equip. Index.  
**Setting (Carter)**—Turn fast idle adjusting screw in to secure .018" throttle opening (gauge T109-44 between throttle valve edge and carburetor bore on side opposite idle port) with choke valve closed.  
**Setting (Stromberg)**—Turn fast idle adjusting screw in to contact lowest step of fast idle cam, then back screw off ½ turn.

**Automatic Choke:**—Built-in on each carburetor.

For complete data, refer to Carburetion Equip. Index.  
**Setting (Carter)**—1 Notch Rich (419-S), 1 Notch Lean (440-S) from center mark on piston housing.  
**Setting (Stromberg)**—Inverted 'V' mark on cover scale to line up with reference mark on housing.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC Oil-wetted type Std. #1528984 (40), 1528985 (60, 80, 90). Heavy duty oil-bath type Optl. #1528989 (40), 1528999 (60, 80, 90).

**Fuel Pump:**—AC diaphragm type. Type AF #1523703 (Std. 40). Combination fuel-and-vacuum pump AJ #1523687 (Optl. 40), AB #1523868 (60, 80, 90). For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric. #1516034 (dash unit), #1515493 (Tank unit 40,60), #1515494 (80,90). For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Delco Model 17E-1. 6 volt, 17 plate, 115 ampere hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.4 volts.

**Grounded Terminal**—Negative (—) grounded to ignition coil mounting bolt on engine block.

**Dimensions**—Width 4". Length 19 5/16". Height 9".

**Location**—Under engine hood on right side.

**Police Battery**—Delco Model 19E-1. 6 volt, 19 plate, 125 A.H. capacity (20 hour rate).

**Grounded Ter. & Location**—Same as Std. (above).

**STARTER**

**Delco-Remy Model 1107005 (Series 40), 1107908 (60, 80, 90 Std.), 1107909 (60, 80, 90 RHD).** All models have new pinion gear and clutch assembly.

**Armature No. 1867897 (1107005), 820158 (1107908, 9).**

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—(40) 135 RPM., 150 amperes, 4.5 volts. (60, 80, 90) 115 RPM., 175 amperes, 5 volts.

**Brush Spring Tension**—24-28 ounces.

**Performance Data—1107005.**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data—1107908, 1107909.**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:**—Solenoid Switch No. 1542 (1107005, 1107908), 1545 (1107909). Vacuum Switch No. 1990126 (60,80,90), Carter Car Starter 192-10U superseded by 192-11U (40). Vacuum switch mounted on carburetor.

For complete data, refer to Electrical Equipment Index.

**GENERATOR****STANDARD**

**Delco-Remy Model 1101052 (40), 1101053 (60), 1101055 (80, 90).** Armature No. 1866789 (all). Split field type with fixed third brush and external vibrating voltage regulator control. Ventilated.

For complete data, refer to Electrical Equipment Index.  
NOTE—Generators interchangeable except for drive pulley. See 1938 Buick pages for pulley data.

**Charging Rate Adjustment**—Change voltage regulator setting (not third brush). See Regulator data.  
**Maximum Charging Rate**—See table below. Reached at approximately 43 MPH. (40), 45 MPH. (60, 90), 47 MPH. (80). To check generator output, connect ammeter in charging line at 'BAT' regulator terminal, ground 'F' terminal to eliminate regulator.

**Performance Data.**

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. (main), 17 ozs. (3rd.).

**Field Current**—1.44-1.56 amperes at 6.0 volts (Shunt field), .89-.94 amperes at 6.0 volts (3rd. brush field).

**Removal:**—Pivot mounted at left front of engine. Take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, pull generator up and out until belt deflection midway between fan and generator is ½".

**GENERATOR****SPECIAL EQUIPMENT**

**City Police Service**—Delco-Remy Model No. 1105528 Armature 1861561. Two brush type with voltage and current regulation.

**Charging Rate Adjustment**—None. See Regulator.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	26	8.1-8.3	1325

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.7-2.0 amperes at 6.0 volts.

**Rotation, Mounting, Belt Adjustment**—Same as Std. generator (above).

**State Police Service**—Delco-Remy Model No. 1105857 with Regulator Model 1118237. Two brush type with voltage and current regulation.

Refer to 1940 Buick article for complete data.

**REGULATOR****STANDARD**

**Delco-Remy Model 5858. Double Core Type Voltage Regulator (No 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator in case on dash. NOTE—This regulator does not have 'IGN' terminal or starter solenoid ground contact terminal. For complete data, refer to Electrical Equipment Index.

**Cutout Relay.**

**Cuts In**—6.3-6.9 volts, 800 RPM., 8 MPH. approx.

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

NOTE—Relay compensated for temperature. Closing voltage same cold and hot.

**Voltage Regulator.**

**Setting**—7.5-7.9 volts (70°F), 7.4-7.6 volts (150°F). Over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800-3000 RPM., adjust charging current to 8-10 amperes (variable rheostat or 'AVR' set). Adjust by bending lower end of armature spring hanger slightly.

**Contact Gap**—.020". **Contact Spring**—3.5 ozs.

**Air Gap**—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

**Caution**—Regulator cover must be in place when testing. Do not run generator on open-circuit.

C NTINUED ON NEXT PA E

## CONTINUED FR M PRECEDING PAGE

## REGULATOR

## SPECIAL EQUIPMENT

**City Police—Delco-Remy Model 5599.** Double Core Type Voltage & Current Regulator.  
*Refer to 1937 Buick Series 60, 80, 90 article for all data on this model.*

**State Police—Delco-Remy Model 1118237.** Single Core Type Voltage & Current Regulator.  
*Refer to 1940 Buick article for complete data.*

## LIGHTING

**LIGHTING:**—Headlamps. Guide Multi-beam, pre-focused. Beam patterns same as for 1938 model (upper, lower, and asymmetrical passing beam—see diagram). Headlamp bulbs centered in reflector (were 4° off center on previous model).

**Headlamp Adjustment:**—With upper beams lighted, aim left hand lamp so that upper edge of bright spot at lamp center height and left edge at lamp vertical center-line (entire bright spot to right of center line). Aim right hand lamp for same height but center bright spot on lamp vertical center-line (right cut-off approx. 8" to right of center-line).

**Beam Indicator:**—In speedometer dial. Lighted when upper beams in use.

**Direction Signal:**—Refer to Electrical Equip. Index.

## Switches.

**Lighting—D.R. 1994508** (see note).

**Beam Selector—D.R. 471-T, 1997002.**

**Instrument—D.R. 1404.**

**Light Switch Servicing:**—New type with wire terminals making direct contact with switch slide. To free wires, pry out lower end of terminal with screwdriver and pull wire out (see that ball shaped tip snaps into hole in side of switch when replacing). To remove switch knob, press spring at back of knob in, pull knob off shaft. To remove switch mounting nut, pull spring at rear of switch down, press shaft back to enter 7/32" Allen wrench.

## Bulb Specifications.

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instr., Clock	1.5	55
Radio, Trunk, Frt. Compt.	1.5	55
Indicator, Glove Compt.	1	51
Direction Signal Pilot	1	51
Stop & Tail	21-3	1154
License Plate	3	63
Direction Signal (rear)	21	1129
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—On lighting switch. Contacts remain closed with 25 amperes but open in 2 minutes with 38 amperes at 70° F. Non-adjustable.

**FUSES:**—Dome Light & Rear Cigar Lights (80, 90)—30 ampere in connector back of instrument panel.

**Direction Signal:**—6 ampere 'SFE' type in connector back of instrument panel.

**Clock:**—2 ampere on back of clock.

**HORNS:**—Klaxon Model K-33-H, No. 1999501 (low note, right horn), 1999502 (high note, left horn). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)
1999501 Low Note	10-12 amperes
1999502 High Note	9-11 amperes

**Horn Relay:**—D.R. Models 271-A, 1116775.  
**Contact Gap:**—.020". **Air Gap:**—.015" (closed).  
**Contacts Close:**—2.3-3.5 volts.

## ENGINE

## SERIES 40

**ENGINE SPECIFICATIONS:**—Own Model 40. 8 cylinder, 'I' head type. Bore 3 3/32". Stroke 4 1/8".  
**Displacement:**—248 cubic ins. **Rated HP:**—30.63.  
**Developed Horsepower:**—107 at 3400 RPM.  
**Compression Ratio:**—8.1-1 Std. cast-iron head.  
**Compression Pressure:**—126 lbs. at 1000 RPM, 112 lbs. at cranking speed (uniform within 6 lbs.).  
**Vacuum Reading:**—18-20" idling at 7-8 MPH.

**PISTONS:**—Modified type 'Dome head,' aluminum alloy, tri-slot, cam-ground, anodized type.  
*See Buick Shop Notes for description and all Replacement Piston specifications and data.*

**Length:**—4 9/32". **Weight:**—14 1/4 ozs. (stripped).  
**Removal:**—Pistons and rods removed from above.  
**Clearance:**—.0021" (.0018-.0024") top of skirt.

**Fitting New Pistons:**—If micrometer used, check at points on each side of vertical slot at top of skirt, and at lower end of slot (light contact only). Clearance above correct for pistons at 70° F. If feeler gauge used, install 1/2" wide feeler between piston and cylinder wall on side opposite slot (piston inverted, pin parallel to crankshaft). Piston should pass on .0015" feeler, hold on .00225" feeler.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—Two compression, two oil control rings, all above pin (narrow heat-dam groove above top ring). Both oil ring grooves drilled for oil drains.  
**NOTE:**—Install top compression ring with relief on inner rim up, #2 ring with mark "TOP" up.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	1/8"	.010-.020"	.002-.004"
Compr. (#2)	3/32"	.010-.015"	.0015-.003"
Oil Contr.	3/16"	.010-.015"	.0015-.003"

**Replacement Rings:**—.010", .020", .030" oversize.

**PISTON PIN:**—Diameter .8127". Length 2 11/16".  
Pin clamped in rod. Not furnished separately (all replacement pistons have pins installed).  
**Pin Fit in Piston:**—.0003-.0004" at 70° F. (easy finger push fit at room temperature).  
**NOTE:**—Use #25 wrench (5 1/2") only on pin bolt.

**CONNECTING ROD:**—Length 7 5/8". Weight 30 3/4 ozs. (maximum variation 1/8 ounce).  
**Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Spun babbitt-lined type.  
**Clearance:**—.0008-.0018". **Sideplay:** .005-.010".

**Bearing Adjustment:**—Shims. Do not file rods or caps.  
**Installing Rods:**—Marks on rod and cap toward rear of engine, oil hole toward camshaft. Align rod and cap. **NOTE:**—Special ground bolts used on caps.

**CRANKSHAFT:**—5 bearing, integral counterweights.  
**Journal Diameters:**—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".  
**Bearings:**—Steel-backed, babbitt-lined type. *See Buick Shop Notes for Replacement Bearing data.*  
**Clearance:**—.0007-.0022".

**Bearing Adjustment:**—Shims. Do not file caps.  
**End Thrust:**—Center (#3) bearing. **Endplay:** .004-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.  
**Journal Diameters:**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".  
**Bearing Type:**—Steel-backed, babbitt bushings.  
**Clearance:**—.0005-.0035". **Endplay:**—.004-.008".

**End Thrust:**—Thrust plate between front bearing and camshaft sprocket.

**Timing Chain:**—Link Belt. Width 1". Pitch .500", Length 24 1/2" or 49 links.

**Camshaft Setting:**—Mesh copper-plated washers on chain with marks on sprockets (marks upward).

**VALVES:**—

	Head Diam.	Stem Diam.	Overall Length
Intake	1 17/32"	.3720"	5.1"
Exhaust	1 11/32"	.3715"	5.1"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0015-.0035"
Exhaust	45°	.342"	.0021-.0039"

**Valve Guides:**—Press fit in head, installed with taper end up. Finish ream for correct clearance.

**Valve Springs:**—Double springs on all valves. Spring free length 1 1/8" (inner), 2 5/16" (outer).

	Inner Spring.	Outer Spring.
Pressure		
Length		

Closed	15 1/2-20 1/2 lbs.	1 21/32"-28 1/2-31 1/2 lbs.	1 15/16"
Open	45-51 lbs.	1 5/16"-67-73 lbs.	1 19/32"

**Valve Lifters:**—Barrel type, cast-iron. Lifter guide holes reamed in block. Clearance .0005-.0025".

**Rocker Arms:**—*See Buick Shop Notes for installation and fitting directions.*

## ENGINE

## SERIES 60, 80, 90

**ENGINE:**—Own Series 60, 80, 90. 8 cylinder, 'I' or overhead valve type. Bore—3 7/16". Stroke—4 5/16".  
**Displacement:**—320.2 cubic inches. **Rated HP:**—37.81.  
**Developed Horsepower:**—141 at 3600 RPM.  
**Compression Ratio:**—6.25-1 Std. cast-iron head.  
**Compression Pressure:**—130 lbs. at 1000 RPM, 113.8 lbs. at cranking speed (uniform within 6 lbs.).  
**Vacuum Reading:**—18-20" idling at 7-8 MPH.

**PISTONS:**—Modified 'Dome-head,' aluminum alloy, tri-slot, cam ground, anodized finished type.  
*See Buick Shop Notes for description and all Replacement Piston specifications and data.*

**Length:**—4 7/16". **Weight:**—17.3 ozs. (stripped).

**Removal:**—Pistons and rods removed from above.  
**Clearance:**—.0023" (.0020-.0026") top of skirt.

**Fitting New Pistons:**—If micrometer used, check at points on each side of vertical slot at top of skirt, and at lower end of slot (light contact only). Clearance above correct for pistons at 70° F. If feeler gauge used, install 1/2" wide feeler between piston and cylinder wall on side opposite slot (piston inverted, pin parallel to crankshaft). Piston should pass on .0015" feeler and hold on .00225" feeler.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—Two compression, two oil control rings, all above pin (narrow heat-dam groove above top ring). Both oil ring grooves drilled for oil drains.  
**NOTE:**—Install top compression ring with relief on inner rim up, #2 ring with mark "TOP" up.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	1/8"	.010-.020"	.002-.004"
Compr. (#2)	3/32"	.010-.015"	.0015-.003"
Oil Contr.	3/16"	.010-.015"	.0015-.003"

**Replacement Rings:**—.010", .020", .030" oversize.

**PISTON PIN:**—Diameter 7/8". Length 3 1/16".  
Pin clamped in rod. Not furnished separately (all replacement pistons have pin installed).  
**Pin Fit in Piston:**—.0003-.0004" at 70° F. (easy finger push fit at room temperature).  
**NOTE:**—Use #25 wrench (5 1/2") only on pin bolt.

**CONNECTING ROD:**—Length 8 1/4". Weight 38 1/2 ozs.  
**Crankpin Journal Diameter:**—2 1/4".  
**Lower Bearing:**—Spun babbitt-lined type.  
**Clearance:**—.0008-.0018". **Sideplay:** .005-.010".

**ENGINE****SERIES 60, 80, 90 CONTINUED**

**Bearing Adjustment:**—Shims. Do not file rods or caps.  
**Installing Rods:**—Marks on rod and cap toward rear of engine, oil hole toward camshaft. Align rod and cap. NOTE—Special ground bolts used on caps.

**CRANKSHAFT:**—5 bearing. Integral counterweights.  
**Journal Diameters**—#1, 2 9/16"; #2, 2 5/8"; #3, 2 11/16"; #4, 2 3/4"; #5, 2 13/16".  
**Bearings**—Steel-backed, babbitt-lined type. See *Buick Shop Notes* for replacement bearing data.  
Clearance—.0007-.0022".

**Bearing Adjustment:**—Shims. Do not file caps.  
**End Thrust:**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.  
**Journal Diameters**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".  
**Bearing Type**—Steel-backed, babbitted bushings.  
Clearance—.0005-.0035". Endplay .004-.008".

**End Thrust:**—Thrust plate between front bearing and camshaft sprocket.

**Timing Chain:**—Link Belt. Width 1". Pitch .500". Length 25" or 50 links.

**Camshaft Setting:**—Mesh copper-plated washers on chain with marks on sprockets (marks upward).

VALVES:	Head Diam.	Stem Diam.	Overall Length
Intake	1 25/32"	3/720"	5 1/4"
Exhaust	1 7/16"	3/715"	5 1/4"
	Seat Angle	Lift	Stem Clearance
Intake	45°	347"	.0015-.0035"
Exhaust	45°	348"	.0021-.0039"

**Valve Guides, Valve Springs, Valve Lifters and Rocker Arms:** See *Series 40 Engine* on preceding page for data.

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves—engine hot.  
**Valve Timing (Series 40):** See *Camshaft Setting*.

**Timing Points (Valve .004" Open).**

**Intake Valves**—Open 13° BTDC. Close 68° ALDC.  
**Exhaust Valves**—Open 55° BLDC. Close 22° ATDC.

**Opening & Closing Points.**

**Intake Valves**—Open 26° BTDC. Close 81 1/2° ALDC.  
**Exhaust Valves**—Open 68° BLDC. Close 35° ATDC.

**Valve Timing (60, 80, 90):** See *Camshaft Setting*.

**Timing Points (Valve .004" Open).**

**Intake Valves**—Open 14° BTDC. Close 71° ALDC.  
**Exhaust Valves**—Open 56° BLDC. Close 25° ATDC.

**Opening & Closing Points.**

**Intake Valves**—Open 27° BTDC. Close 84 1/2° ALDC.  
**Exhaust Valves**—Open 69° BLDC. Close 38 1/2° ATDC.

**Valve Timing Check:**—With .015" tappet clearance, #2 or 7 exhaust valve should be .145" open (Series 40), .155" open (Series 60, 80, 90)—this is actual valve opening—use dial indicator with #1 & 8 pistons on TDC and flywheel mark 'TDC/1-8' at indicator in inspection hole in right front face of flywheel housing.

**LUBRICATION**

**LUBRICATION:**—Pressure type. See *Buick Shop Notes* for new oil pump drive and oil pump clearances.  
**Normal Oil Pressure**—45 lbs. at 35 MPH.  
**Oil Pressure Regulator**—On pump. Opens at 45 lbs. Non-adjustable type.  
**Crankcase Capacity**—Dry 7 qts. (Series 40), 9 qts. (60, 80, 90); Refill 6 qts. (40), 8 qts. (60, 80, 90).

**COOLING**

**Capacity:** 13 1/4 qts. (40), 17 qts. (60, 80, 90).

**Water Pump:**—New ball-bearing, packless type.

See *Water Pump Section* for complete data.

**Removal:**—Remove fan belt, pump pulley mounting bolts, lift out pump and fan assembly.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Open at 148-155°F.

**Temperature Gauge:**—AC #1510755 Thermo type.

See *Miscellaneous Section* for complete data.

**CLUTCH**

**CLUTCH:**—Own make with Borg & Beck 'Borglite' driven member. Single plate, dry disc type.

**NOTE:**—Series 40 Clutch is 'Crown Spring' type.

See *Clutch Section* for complete data.

**Facings (Series 40):**—Woven, grooved type. Inside Diameter 7". Outside Diameter 10". Thickness .125".

**Facings (60, 80, 90):**—Woven, grooved type. Inside Diameter 6 1/2". Outside Diameter 10 1/2". Thick. .125".

**Adjustment:**—Pedal free movement 3/4-1" (adjusting clevis and locknut on link at clutch fork). Pedal toeboard clearance (underside) 7/8" (setscrew and locknut at lower end of pedal).

**Removal:**—Remove Rear Axle & Transmission (see below), take off clutch underpan, release return spring (back off nut on spring eyebolt), disconnect linkage, remove yoke and release bearing retainer, mark clutch and flywheel, take out mounting screws in clutch cover flange.

See *Buick Shop Notes* for 'Over-center' return spring installation and adjustment.

**TRANSMISSION**

**TRANSMISSION:** Own Make. 3-speed, helical gear constant-mesh, synchro-mesh (second and high), sliding gear (low & reverse), steering col. shift.

See *Transmission Section* for complete data.

**Transmission Control:**—Buick 'Handi-shift' type.

See *Transmission Section* for complete data.

**Removal:** Remove Rear Axle (see directions below), disconnect shift linkage at transmission case, remove Steady-Rest Rod and Support with shims attached to each end (NOTE—Not used on Series 40, 60), remove upper mounting bolts, install special guide pins (J-851), remove lower mounting bolts, pull transmission back and out. For steering column shift linkage adjustments, see 1939 Buick Transmission Control article in *Transmission Section*.

**Transmission Steady Rest:**—See *Buick Shop Notes* for installation and adjustment directions.

**UNIVERSALS**

**UNIVERSAL JOINT:** Mechanics Type 2C (Series 40, 60), Spicer No. 302-2 (80, 90). One used.

See *Universals Section* for complete data.

**REAR AXLE**

**REAR AXLE:** Own Make. Semi-floating, hypoid gear type with torque tube drive. NOTE—New "straight line" drive used on Series 40, 60—see special removal instructions for these series below.

See *Rear Axle Section* for complete data.

**Ratio:**—4.44-1 (Std. 40), 3.9-1 (Std. 60, Optl. 40), 3.615-1 (Optl. 60), 4.182-1 (80), 4.555-1 (90).

**Backlash:**—.008-.010".

**Removal (40, 60):** Lift car, disconnect parking brake at equalizer, hydraulic brake line at frame connection, shock absorber links at lower end, axle

end of rear radius rod, lower end of chassis springs (wire springs to bumper for clearance). Disconnect front end of front torque tube at transmission end plate. Remove nut, lockwasher, torque ball mounting washer at inner end of each torque ball mounting stud, take out bolts holding torque ball mounting assembly to frame on each side, remove rear axle assembly. Do not loosen locknut on torque ball mounting stud or interchange torque ball mounting assemblies from one side of car to the other which will destroy Rear Axle and Engine alignment. See *Buick Shop Notes* for *Aligning Instructions*.

**Removal (80, 90):** Lift car, disconnect the parking brake at equalizer, hydraulic brake line at frame connection, lower end of shock absorber links, equalizer bar at axle end, lower end of chassis springs (wire springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly.

**Axle Shaft Removal:**—Same as 1938 (see 1938 data).

**Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Coil springs, conventional axle.

See *Rear Axle Section* for complete data.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS (40, 60):** Delco. 1948A (right frt.) 1948-B (left frt.), 2103-A, E (right rear), 2103-B, F (left rear). Double acting, hydraulic type. NOTE—Rear Shocks are new parallel cylinder type. Valves on rear shocks were changed during production. See *Shock Absorber Section* for complete data.

**SHOCK ABSORBERS (80, 90):**—Delco. Double acting, hydraulic type (inertia control on front shocks).

**Right Frt. Right Rear. Left Frt. Left Rear.**

Model 80 1902-D-60.....1751-R.....1902-C-60.....1751-S

Model 90 1902-D-61.....1751-R.....1902-C-61.....1751-S

See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination:**—3 1/2-4 1/2° (40, 60), 4 1/4-5 1/4° (80), 4-5° (90) Crosswise.

**Camber:**—Minus 1/4° to Plus 1°. Not adjustable.

**Caster:**—Minus 7/8° plus or minus 3/8°. Adjustable.

**Toe In:**—0-1/16". Adjustable.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 22 1/2° (40, 60), 23 3/4° (80), 24° (90) plus or minus 3/4°, Outer wheel turned exactly 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller  
See *Steering Gear Section* for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic type, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes. See *Brake Section* for complete data.

**Drums:**—Centrifuge (Series 40, 60), Cast-Iron (80, 90). Diameter 12" (40, 60, 80), 14" (90).

**Lining:**—Woven (primary), moulded (secondary). Width 1 3/4" (40), 2" (60, 80, 90). Thickness 1/4" (90), 3/16" (Others). Length 26 13/16" (90), 22 11/16" (Others).

**Clearance:**—.015" both ends of secondary shoe.

**Hand Brake:**—See *Service Brakes* above.

**NoRol:**—Optional equipment.

See *Brake Section* for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number (all series) 13596807 (Flint), 23601856 (Calif.), 33611856 (Linden). On right frame side rail at dash under hood.

**ENGINE NUMBER:**—First number (40,50) 3786214, (60, 70,80,90) 3812000 with prefix 4- (40), 5- (50), 6- (60), 7- (70), 8- (80), 9- (90). Stamped on boss on right side of crankcase to rear of fuel pump.

**NOTE**—Dash (—) following engine number indicates engine equipped with .010" oversize pistons.

## TUNE-UP

**COMPRESSION:**— Compression Pressure  
Model Ratio 1000 RPM. Cranking Spd.  
40-40, 50 6.1-1 126 lbs. 112 lbs.  
40-60, 70, 80, 90 6.25-1 130 lbs. 114 lbs.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 46. 14 mm. Metric type.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.015". Cam Angle 31° (closed).

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".  
Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC (40,50), 6° BTDC (60,70,80,90) with flywheel mark "ADV" at indicator in inspection hole on right of housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ½-1¼ turns open (Carter Carb.), 1¼ turns open (Stromberg Carb.), Idle speed 7-8 MPH.

Float Level (Carter Carb.)—3/16" top of float to gasket seat on bowl cover with needle valve seated.  
Float Level (Stromberg Carb.)—Fuel level 19/32" below top edge of bowl.

Accelerating Pump—#2 center hole (medium stroke) standard for all-season operation.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.  
Setting—Coil wind-up ¼ turn at 70° F. With coil engaged on heat valve shaft, wind up outer end ¼ turn and engage prong on anchor stud.

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves, engine hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 1116276 (40, 50, 60, 70), 1116277 (40, 50, 60, 70—RHD), 1116280 (80, 90), 1116281 (80, 90—RHD). Coil connection armored.  
**NOTE**—Ignition switch has 3 positions as follows: 1) 60° to right—Ign. OFF also LOCKED with key removed. 2) Vertical—Ign. ON with or without key in place. 3) 40° to left—Ign. OFF also UNLOCKED  
Ignition Lock—Briggs & Stratton No. 85253.  
Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115024, 1115026 (with radio). Mounted on engine side of dash. **NOTE**—Radio type coil has condenser installed under end cover.  
Ignition Current—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.  
Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110801 (Series 40, 50), 1110805 (60, 70, 80, 90). Single breaker, 8 lobe cam, full automatic advance type with integral vacuum spark control.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° (closed), 14° (open).

Breaker Arm Spring Tension—19-23 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110801			
Distributor	R.P.M.	Engine	R.P.M.
Degrees Start	250	Degrees 3.5	500
7	400	14	800
13	1500	26	3000

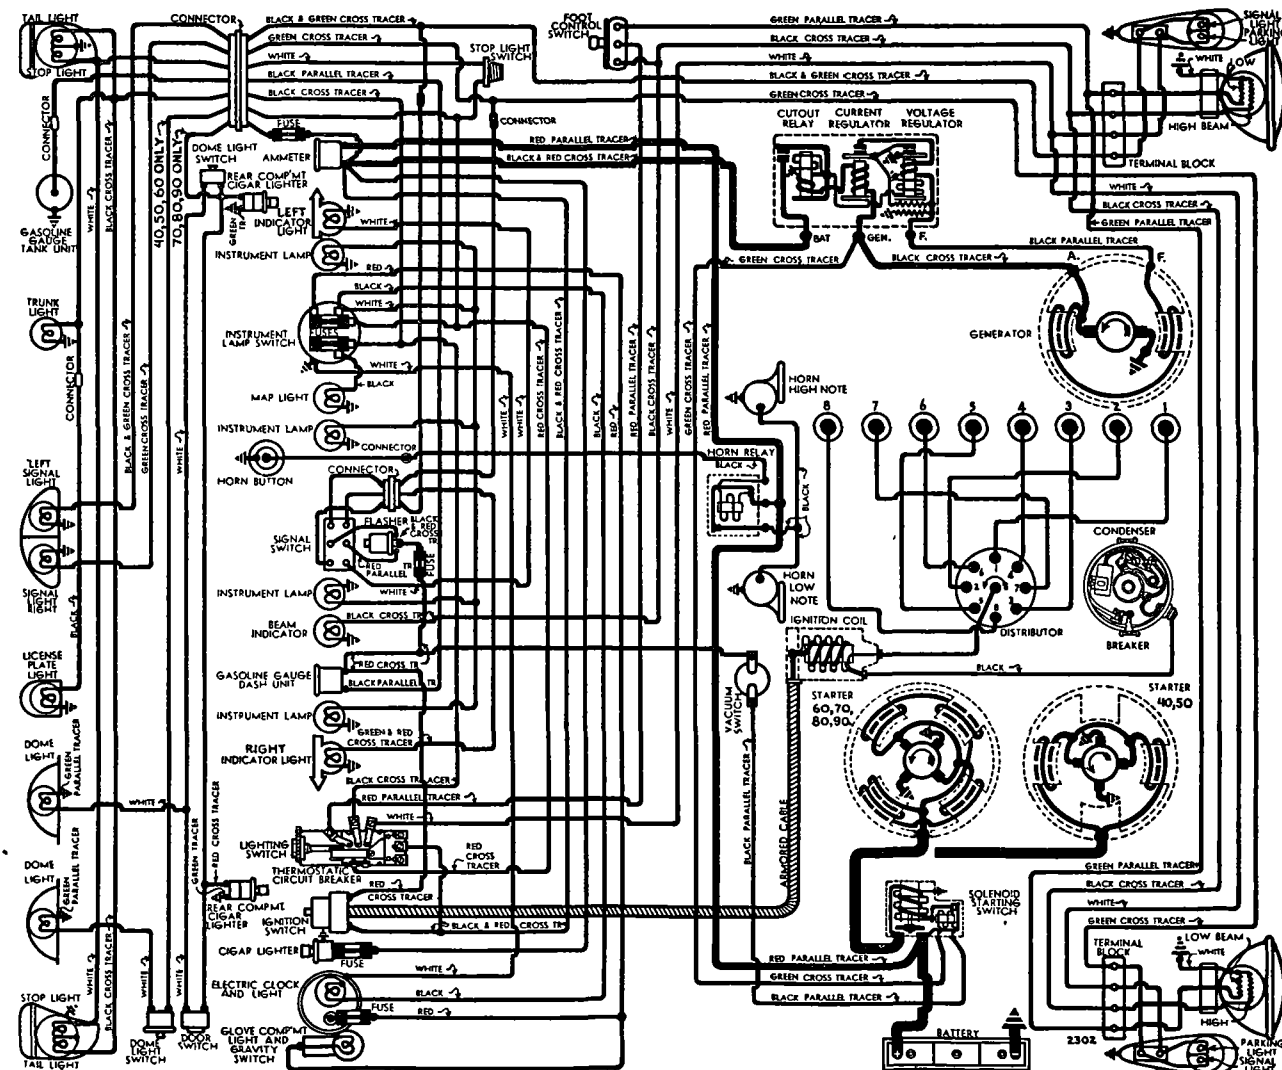

Automatic Advance—1110805			
Degrees Start	250	Degrees 2	500
8	600	16	1200
13	1500	26	3000

**Vacuum Spark Control 681-H**—Integral type (on distributor, linked to breaker plate). Provides additional advance at speeds above 18 M.P.H. except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel ⅛" maximum.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG).
Start	0	5-7"
5-6	10-12	10-13"

**Distributor Removal:**—Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out. **NOTE**—Oil pump driven by tongue on lower end of distributor shaft. When installing distributor, mesh drive gear so that rotor at #1 segment in cap and normal timing secured with mounting screws approximately centered in slots.

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting (regular fuel 40, 50, Ethyl fuel 60, 70, 80, 90) given below. See 'Final Ignition Setting' (following) for correction dependent on operating conditions and fuel used.

	Flywheel Degrees	Piston Position
40-40, 50	4° BTDC	.0063" BTDC
40-60, 70, 80, 90	6° BTDC	.0149" BTDC

**Timing (With Synchroscope)**—Connect synchroscope in #1 spark plug lead, direct light on flywheel through inspection hole in right front face of flywheel housing above starter. Idle engine at 400 RPM, maximum. Loosen two distributor hold-down screws, rotate distributor until 'ADV' mark lines up with indicator on flywheel housing, tighten screws (screws should be approximately centered in slots). See Final Ignition Setting below.

**Timing (Without Synchroscope)**—With #1 piston on compression, turn engine over until 'ADV' mark on flywheel lines up with reference mark on housing (inspection hole in right front face of housing above starter). Adjust distributor as above.

**Final Ignition Setting**—Should be adjusted for fuel used so that light 'ping' secured when engine accelerated with wide open throttle between 10 & 20 MPH. To adjust, loosen two distributor hold-down screws, move distributor in small steps counter-clockwise (if ping too severe), clockwise (if no ping).

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg or Carter, 1" (40, 50), 1¼" (others) dual downdraft types.

	Carter	Stromberg
40, 50	440-S or 474-S	AAV-16
60, 70, 80, 90	448-S	AAV-26

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7-8 MPH. idling speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (approximately 1¼ turns—Stromberg, ½-1¼ turns—Carter, from inner seated position. Readjust idle speed.

**NOTE**—If vacuum gauge used for idling adjustment, turn screws evenly in 'rich' direction until gauge reading is 1" less than obtainable maximum.

**Float Level (Carter)**—3/16" from top of float to cover (gasket removed with needle valve seated).

**Float Level (Stromberg)**—Fuel level 19/32" below top edge of bowl with engine idling.

**Accelerating Pump Setting**—Three holes are provided in pump arm (Carter—remove dust cover), throttle lever (Stromberg) for pump rod connection. Recommended settings are as follows:

- #1 (Inner—Min.) Hot weather, high-test gasoline.
- #2 (Center)—Std. normal all-year setting.
- #3 (Outer—Max.) Cold weather, low-test gasoline.

**Fast Idle:**—Integral type built-in each carburetor.

For complete data, refer to Carburetion Equip. Index.

**Setting (Carter)**—Adjust fast idle screw for .018" (440-S), .030" (448-S, 474-S) throttle opening with choke valve fully closed. **NOTE**—This .030" setting supersedes .012" originally specified for 448-S.

**Setting (Stromberg)**—Non-adjustable type.

**Automatic Choke:**—Carter Climatic Control (Carter), AAV-16, AAV-26 type (Stromberg).

For complete data, refer to Carburetion Equip. Index.  
**Setting (Carter)**—1 Notch Lean (440-S, 474-S), 3 Notches Rich (448-S).  
**Setting (Stromberg)**—Inverted 'V' mark on cover should line up with reference mark on housing.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1529294 (40, 50), #1529307 (60, 70, 80, 90) oil-wetted type Std. Heavy duty oil-bath type optional.

**Fuel Pump:**—AC Type AJ #1537100 (40, 50), #1523992 (60, 70, 80, 90). Combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.  
**Gasoline Gauge:**—AC Electric type. Dash unit—#1515367 (all). Tank unit—#1516167 (40, 50, 60, 70), #1516176 (80, 90)

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Delco Model 17E1 (Std.), 17K2 (RHD except 40). 6 volt, 17 plate, 115 A. H. Capacity (20 hr. Starting Capacity—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.4 volts.

**Grounded Terminal**—Negative (—) grounded to bolt on engine. Location Right side under engine hood.

**Taxicab Battery**—Delco Model 19E-1, 6 volt, 19 plate, 130 ampere hour capacity (20 hour rate).

**Grounded Terminal & Location**—Same as 17E-1.

**STARTER**

**STARTER:**—Delco-Remy 1107005 (40,50), 1107018 (40,50 RHD), 1107908 (60 to 90), 1107909 (60 to 90 RHD). See Electrical Equipment Section for recommended correction for burning of starter commutators.

**Armature** 1867897 (1107005), 820158 (1107908, 9), 810601 (1107018).

**Drive**—Overrunning clutch (solenoid pinion shift).

**Brush Spring Tension**—24-28 ounces.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—(40, 50) 135 RPM., 150 amp., 4.5 volts. (60, 70 80, 90) 115 RPM., 175 amperes, 5 volts.

**Performance Data—1107005, 1107018**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data—1107908, 1107909**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:**—Solenoid Switch No. 1542 (1107005, 1107908), 1545 (1107018, 1107909). Vacuum Switch D-R. No. 1990127 (Stromberg Carb.), Carter Car Starter 192-10U superseded by 192-11U (Carter Carb). Vacuum switches mounted on carburetor.

For complete data, refer to Electrical Equipment Index.

**GENERATOR****STANDARD**

Car Model	Delco-Remy Model	Pulley Diameter	Groove Width
40, 50	1102662	3 13/16"	13/16"
40 (3.9 Axle)	1102663	3 17/32"	13/16"
60, 70, 80	1102668	3 17/32"	15/16"
90	1102669	3 13/16"	15/16"

**NOTE**—Interchangeable when correct pulley installed. Two brush (shunt) type with current-voltage control.

**Armature No.**—1879002 (all models).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate**—32-34 amperes, 8.0 volts, 2000 RPM. (cold), 2400 RPM (hot), or approx. 20 MPH. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	30*	8.0	1825

\*—Not maximum output—See Current Regulator.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, pull generator up and out until belt deflection midway between fan and generator is ½".

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Delco-Remy Model 1106404 (City Police), 1105852 or 1105857 (State Police). Two brush type. All data same as Std. Generator (above) except as follows:

**Performance Data Cold**

	Amperes	Volts	R.P.M.
1106404	35	8.0	1040
1105852, 7	40	8.0	1850

**Field Current**—1.77-2.0 amperes (1106404), 1.62-1.82 amperes (1105852,7) at 6.0 volts.

**REGULATOR**

**REGULATOR:**—Delco-Remy Model 1118201 (Std. Generators), 1118229 (1106404 Gen.), 1118237 (1105852, 1105857 Gen.). Single Core Type. Vibrating type voltage and current regulators in case on dash.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts, hot, 880 RPM, 8-10 MPH.

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts hot (1118201), 7.0-7.2 volts hot (1118229 & 1118237) at operating temp.

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator hot (150° F.), retard generator speed until cut-out relay points open, then increase generator speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for Heavy (or other spring) adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

C NTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDIN PAGE

## Current Regulator

Setting—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature).

To Check—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

To Adjust—Same as Voltage Regulator (previous page) except both springs are the same weight.

Air Gap—.080" (check same as Voltage Regulator).

## LIGHTING

LIGHTING:—Headlamps—Guide 'Sealed Beam' type.

For complete data, refer to Electrical Equipment Index.

Headlamp Adjustment—Aim upper beam straight ahead with center of hot spot 3" below lamp center. Beam Indicator—In speedometer dial. Lighted when upper beams in use.

Direction Signal—Refer to Electrical Equip. Index.

## Switches

Lighting—Delco-Remy 1995008.

Beam Selector—D-R. 1997006 (50, 70), 8 (Others).

Direction Signal—Delco-Remy 1995501 (All—LHD), 1995502 (All—RHD).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Front Dir. Sig. & Park	21-3	1154
Instrument, Map, Clock	1.5	55
Radio, Trunk	1.5	55
Beam Indicator, Glove Comp.	1	51
Direction Signal Indicators	1	51
Stop & Tail	21-3	1154
License Plate	3	63
Rear Direction Signal	32	1133
Dome (except 46C & 66C)	6	81
Dome (46C & 66C only)	1.5	55

## MISC. ELECTRICAL

THERMOSTATIC RELAY:—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°. Not adj.

FUSES:—Dome Light & Rear Cigar Lighters (70,80,90)—30 ampere in feed wire at charge indicator.

Direction Signal—14 ampere in connector

Instrument Lamp Switch—Two 10 amperes. #1

Instrument & Clock Light, #2 Map Light & License.

Clock—2 ampere under red button on back of clock.

HORNS:—Delco-Remy Model K-33-H. No. 1999501, 519 (low note, right horn), 1999502, 520 (high note, left horn). Vibrator type, blended tone, operated by horn relay. No. 1999501 & 502 on early cars.

Type	Current (at 6 volts)	Air Gap
1999501 (Low)	16-18 amperes	.044-.049"
1999502 (High)	15-17 amperes	.034-.039"
1999519 (Low)	19-21 amperes	.044-.049"
1999520 (High)	18-20 amperes	.034-.039"

Horn Relay:—Delco-Remy Model 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

NOTE—Use relays marked by bar over last 3 figures of part number to correct relay sticking.

## ENGINE

## SERIES 40 &amp; 50

ENGINE SPECIFICATIONS:—Own 40, 50, 8 cylinder, 'I' head type. Bore—3 3/32". Stroke—4 1/8".

Displacement—248 cu. ins. Rated HP.—30.63.

Developed Horsepower—107 at 3400 RPM.

Compression Ratio—6.1-1 Std. cast-iron head.

Compression Pressure—126 lbs at 1000 RPM., 112 lbs. at cranking speed (uniform within 6 lbs.).

Vacuum Reading—Steady 18-20" idling at 7-8 MPH.

For Engine Removal data refer to Buick Shop Notes.

PISTONS:—Modified 'Dome Head', aluminum alloy, tri-slot, cam ground, anodized finished type.

See Buick Shop Notes for description and all Replacement Piston specifications and data. Length—4 9/32".

Weight—14 1/4 ozs. (Stripped), 20.16 (rings & pin).

Removal—Pistons and rods removed from above.

Clearance—.0021" (.0018-.0024") top of skirt.

Fitting New Pistons:—If micrometer used, check at points on each side of vertical slot at top of skirt, and at lower end of slot (light contact only). Clearance listed correct with pistons at 70° F. If feeler gauge used, install 1/2" wide feeler between piston and cylinder wall on side opposite slot (piston inverted, pin parallel to crankshaft). Piston should pass on .0015" feeler, hold on .00225" feeler.

Installing Pistons:—Slot away from camshaft.

PISTON RINGS:—Two compression (new top ring), two oil control rings, all above pin (heat-dam groove above top ring). Oil ring grooves drilled for oil drains. NOTE—Install top compression ring with relief up, #2 with mark 'TOP' up.

Ring Width End Gap Side Clearance

Compr. ① 3/32" .010-.020" .0015-.003"

Oil Control 3/16" .010-.015" .0015-.003"

①—Wall thickness Top .155", #2 .140".

Replacement Rings:—See Buick Shop Notes.

PISTON PIN:—Diameter—.8127". Length—2 11/16".

Pin clamped in rod. Not furnished separately (all replacement pistons have pins installed).

Pin Fit in Piston—.0003-.0004" at 70° F. (easy finger push fit at room temperature).

NOTE—Use #25 wrench (5 1/2") only on pin bolt.

CONNECTING ROD:—Length—7 5/8". Weight—30 3/4 ozs. Maximum weight variation 1/8 ounce.

Crankpin Journal Diameter—2".

Lower Bearing—Spun babbitt-lined type.

Clearance—.0008-.0018". Sideplay—.005-.010".

Bearing Adjustment:—Shims. Do not file rods or caps.

Installing Rods:—Marks on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap.

NOTE—Use special ground bolts on rod caps.

CRANKSHAFT:—5 bearing, 8 integral counterweights.

Journal Diameters—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

Bearings—Steel-backed, babbitt-lined type.

See Buick Shop Notes for Replacement Bearing data.

Clearance—.0007-.0022".

Bearing Adjustment:—Shims. Do not file caps.

End Thrust:—Center (#3) bearing. Endplay .004-.008".

CAMSHAFT:—5 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2 5/32"; #2, 2 3/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

Bearing Type—Steel-backed, babbitt bushings.

Clearance—.0005-.0035". Endplay—.004-.008".

End Thrust:—Thrust plate between front bearing and camshaft sprocket.

Timing Chain:—Link-Belt. Width 1". Pitch .500".

Length 24 1/2" or 49 links. Initial slack 1/4-3/8". 1" worn.

Camshaft Setting:—Mesh copper-plated washers on chain (10 links apart) with sprocket marks upward.

VALVES:—Head Diam. Stem Diam. Overall Length

Intake 1 17/32" 3720" 5.1"

Exhaust 1 11/32" 3715" 5.1"

Seat Angle Lift Stem Clearance

Intake 45° 348" .0015-.0035"

Exhaust 45° 348" .0021-.0039"

Series 50 Note—Cylinder head must be removed in order to take out #16 push rod.

Valve Guides:—Press fit in head, installed with taper end up. Finish ream for correct clearance.

Valve Springs:—Double springs on all valves. Spring free length 1 7/8" (inner), 2 5/16" (outer).

Inner Spring Outer Spring

Pressure Length Pressure Length

Closed 15 1/2-20 1/2 lbs. 1 21/32" 26 1/2-31 1/2 lbs. 1 15/16"

Open 45-51 lbs. 1 5/16" 67-73 lbs. 1 19/32"

Valve Lifters:—Barrel type, cast-iron. Lifter guide holes reamed in block. Clearance—.0005-.0025".

Rocker Arms:—See Buick Shop Notes for installation and fitting directions.

## ENGINE

## SERIES 60, 70, 80, 90

ENGINE SPECIFICATIONS:—Own 60, 70, 80, 90, 8 cylinder 'I' head type. Bore 3 7/16". Stroke 4 5/16".

Displacement—320.2 cu. ins. Rated HP.—37.81.

Developed Horsepower—141 at 3600 RPM.

Compression Ratio—6.25-1 Std. cast-iron head.

Compression Pressure—130 lbs. at 1000 RPM., 114 lbs. at cranking speed (uniform within 6 lbs.).

Vacuum Reading—Steady 18-20" idling at 7-8 MPH.

For Engine Removal data refer to Buick Shop Notes.

PISTONS:—Modified 'Dome Head', aluminum alloy, tri-slot, cam ground, anodized finished type.

See Buick Shop Notes for description and all Replacement Piston specifications and data. Length 4 7/16".

Weight—17 1/4 ozs. (Stripped), 24.96 (rings & pin).

Removal—Pistons and rods removed from above.

Clearance—.0023" (.0020-.0026") top of skirt.

Fitting New Pistons: Same as for Series 40 & 50 data listed in preceding column.

Installing Pistons:—Slot away from camshaft.

PISTON RINGS:—Two compression (new top ring), two oil control rings, all above pin (heat-dam groove above top ring). Oil ring grooves drilled for oil drains. NOTE—Install top compression ring with relief up, #2 with mark 'TOP' up.

Ring Width End Gap Side Clearance

Compr. ① 3/32" .010-.020" .0015-.003"

Oil Control 3/16" .010-.015" .0015-.003"

①—Wall thickness Top .172", #2 .150".

Replacement Rings:—See Buick Shop Notes.

PISTON PIN:—Diameter—.8747". Length—3 1/16".

Pin clamped in rod. Not furnished separately (all replacement pistons have pin installed).

Pin Fit in Piston—.0003-.0004" at 70° F. (easy finger push fit at room temperature).

NOTE—Use #25 wrench (5 1/2") only on pin bolt.

CONNECTING ROD:—Length 8 3/4". Weight 38 ozs. Maximum weight variation 1/8 ounce.

Crankpin Journal Diameter—2 1/4".

Lower Bearing—Spun babbitt-lined type.

Clearance—.0008-.0018". Sideplay—.005-.010".

Bearing Adjustment:—Shims. Do not file rods or caps.

Installing Rods:—Marks on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap.

NOTE—Use special ground bolts on rod caps.

**ENGINE****SERIES 60, 70, 80, 90 CONTINUED**

**CRANKSHAFT:**—5 bearing, 8 integral counterweights.  
**Journal Diameters:**—#1, 2 9/16"; #2, 2 5/8"; #3, 2 11/16"; #4, 2 3/4"; #5, 2 13/16".  
**Bearings:**—Steel-backed, babbitt-lined type.  
*See Buick Shop Notes for bearing replacement data.*  
**Clearance:**—.0007-.0022".

**Bearing Adjustment:**—Shims. Do not file caps.

**End Thrust:**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.  
**Journal Diameters:**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type:**—Steel-backed, babbitt bushings.  
**Clearance:**—.0005-.0035". Endplay—.004-.008".

**End Thrust:**—Thrust plate between front bearing and camshaft sprocket.

**Timing Chain:**—Link-Belt. Width 1". Pitch .500". Length 25" or 50 links. Initial slack 1/4-3/8". 1" worn.

 Exhaust ...1 7/16".....3715".....5 1/4"

Seat Angle Lift Stem Clearance  
 Intake .....45°.....347"......0015-.0035"  
 Exhaust .....45°.....342"......0021-.0039"

Series 70 Note—Cylinder head must be removed in order to take out #16 push rod.

**Valve Guides, Valve Springs, Valve Lifters and Rocker Arms:** *See Series 40, 50 Engine data on preceding page.*

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves—engine hot.

**Valve Timing (40, 50):**—See Camshaft Setting.

**Timing Points (Valve .004" Open)**

**Intake Valves:**—Open 13° BTDC. Close 68° ALDC.

**Exhaust Valves:**—Open 55° BLDC. Close 22° ATDC.

**Opening & Closing Points**

**Intake Valves:**—Open 26° BTDC. Close 81 1/2° ALDC.

**Exhaust Valves:**—Open 68° BLDC. Close 35° ATDC.

**Valve Timing (60, 70, 80, 90):**—See Camshaft Setting.

**Timing Points (Valve .004" Open)**

**Intake Valves:**—Open 14° BTDC. Close 71° ALDC.

**Exhaust Valves:**—Open 56° BLDC. Close 25° ATDC.

**Opening & Closing Points**

**Intake Valves:**—Open 27° BTDC. Close 84 1/2° ALDC.

**Exhaust Valves:**—Open 69° BLDC. Close 38 1/2° ATDC.

**Valve Timing Check:**—With .015" tappet clearance, #2 or 7 exhaust valve should be .145" open (Series 40, 50), .155" open (Series 60, 70, 80, 90)—actual valve opening—use dial indicator) with #1 & 8 pistons on TDC and flywheel mark 'TDC/1-8' at indicator (inspection hole, right front face of housing).

**LUBRICATION**

**LUBRICATION:**—Pressure type (gear type oil pump in crankcase). *See Buick Shop Notes for oil pump data.*  
**Normal Oil Pressure:**—45 lbs. at 35 MPH.

**Oil Pressure Regulator:**—On pump. Opens at 45 lbs. Non-adjustable type.

**Crankcase Capacity:**—Dry 8 qts. (40, 50), 10 qts. (60, 70, 80, 90). Refill 6 qts. (40, 50), 8 qts. (60, 70, 80, 90).

**COOLING**

**Capacity:** 13 1/4 qts. (Series 40, 50), 17 qts. (60, 70, 80, 90).

**Water Pump:**—Ball-bearing, packless type.

*See Water Pump Section for complete data.*

**Removal:**—Remove fan belt, pump mounting bolts, lift off pump and fan assembly.

**Thermostat:**—Harrison. In cyl. hd. water outlet.

**Setting:**—Opens at 148-155° F. Fully open 173°.

**Temperature Gauge:**—AC #1510906 Thermo gauge.  
*See Miscellaneous Section for complete data.*

**CLUTCH**

**CLUTCH:**—Own make with Borg & Beck 'Borglite' driven member. Single plate, dry disc type.

**NOTE:**—Series 40, 50 Clutch is "Crown Spring" type.  
*See Clutch Section for complete data.*

**Facings (40, 50):**—Spiral or Chevron wound woven type (Long), spiral wound, molded woven type (Borg & Beck). Inside Diameter 6 3/4" (Long), 6 1/2" (Borg & Beck). Outside Diameter 10". Thickness .125".

**Facings (60, 70, 80, 90):**—Spiral wound, molded woven type. Inside Diameter 6 1/2". Outside Diameter 10 1/2". Thickness .125".

**Adjustment:**—Pedal free movement 3/4-1" (adjusting clevis and locknut on link at clutch fork). Pedal toeboard clearance (underside) 7/8" (setscrew and locknut at lower end of pedal).

**Removal:**—Remove Rear Axle & Transmission (see below), take off clutch underpan, release return spring (back off spring eyebolt nut 50, 70, 80, 90), disconnect linkage, remove yoke and release bearing retainer, mark clutch and flywheel (reassemble to these marks), remove mounting screws in cover flange. **NOTE:**—Metal spacers may be used between release levers and cover to relieve spring tension. *See Buick Shop Notes for 'Over-center' return spring installation and adjustment.*

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with new remote shift.  
*See Transmission Section for complete data.*

**Transmission Control:**—Buick 'Handi-shift' type.  
*See Transmission Section for complete data.*

**Removal:**—Remove Rear Axle (see below), disconnect shift linkage at transmission, remove rear transmission support (wire shims to ends of support for correct replacement) and steady rest rod, remove upper mounting bolts, install guide pins (J-851), remove lower mounting bolts, pull transmission out. *For steering col. shift linkage adjustments, see 1940 Buick Transmission Control article in Transmission Sec. Transmission Steady Rest—See Buick Shop Notes for installation and adjustment instructions.*

**UNIVERSALS**

**UNIVERSAL JOINT:** Saginaw or Spicer No. 202-5 (Series 40, 50), No. 202-3 (60, 70, 80, 90). One used.  
*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:** Own Make. Semi-floating, hypoid gear type with torque tube drive. **NOTE:**—Series 40, 50, 60, 70 axle requires special removal instructions (below).  
*See Rear Axle Section for complete data.*

**Ratio:**—4.4-1 (Std. 40, 50), 3.9-1 (Std. 60, 70; Optl. 40), 3.6-1 (Optl. 60), 4.182-1 (80), 4.555-1 (90).

**NOTE:**—Outer face of axle shaft flanges paint marked for identification as follows: White 4.4-1, Red 3.9-1, Blue 3.6-1.

**Backlash:**—.008-.010".

**Removal (40, 50, 60, 70):** Hoist car, disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of

shock absorber links, rear radius rod at axle end, lower end of chassis springs (tie springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car. **► Series 40, 50, 60, 70 Note:**—Torque tube flanged at rear end and bolted to carrier but these bolts should never be disturbed except for gasket replacement.

**Removal (Series 80, 90):** Hoist car, disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs (wire springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car.

**Axle Shaft Removal:** *See Buick Rear Axle article.*

**NOTE:**—Right hand axle shaft is 3/4" (40, 50, 60, 70), 15/16" (80, 90), longer than left hand shaft.

**Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Coil springs, conventional axle.  
*See Rear Axle Section for complete data.*

**SHOCK ABSORBERS**

**Delco.** Double acting, hydraulic types as follows:  
 40, 50, 60, 70 Front—Model 1948-A (right & left).  
 40, 50, 60, 70 Rear—Model 2105-A, B (parallel cyl.).  
 80, 90 Front—Model 1902-E, F.  
 80, 90 Rear—Model 1751-R, S.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—3 1/2-4 1/2° (Series 40, 50, 60, 70), 4-5° (80, 90) Crosswise.

**Camber:**—Neg. 1/4° to Pos. 1°. Not adjustable.

**Caster:**—3/8° (Series 40, 50, 60, 70), 0° (80, 90) plus or minus 3/8°. Adjustable.

**Toe In:**—0-1/16". Adjust rods equally.

**Steering Geometry (Toe-out on turns):**—Inner wheel turned 22° (Series 40, 50, 60, 70), 24° (80, 90) plus or minus 3/4°, Inner wheel turned exactly 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller  
*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand brake applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—12" Centrifuge Type (Series 40, 50, 60, 70), 14" Cast Iron Type (80, 90).

**Lining:**—Woven—Ferodo BZ-10 (primary), Moulded Manhattan Raybestos #2320K (secondary).

	Width	Thickness	Length
40, 50.....	1 3/4"	3/16"	9 15/16"-12 3/4"
60, 70.....	2 1/4"	3/16"	10" -12 15/16"
80, 90.....	2"	1/4"	12 1/16"-14 3/4"

①—Primary Shoe—Secondary Shoe.

**Clearance:**—.015" at both ends of secondary shoe (with primary shoe forced out against drum).

**Hand Brake:**—See Service Brakes above.

**NoRoi:** Optional. *See Brake Section for complete data.*

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Vacuum Power type.  
*See Miscellaneous Section for complete data.*

**HOOD REMOVAL & ADJUSTMENT DATA, FRONT  
FENDER REMOVAL:—See Buick Shop Notes.****MODEL IDENTIFICATION**

**SERIAL NUMBER:—**First number (all Series) 1-3880108 (Flint), 2-3892008 (Calif.), 3-3897008 (Linden). On tag on right side of dash under engine hood.

**ENGINE NUMBER:—**First number (all Series) 4074859 with model prefix as follows: 4- (40), 5- (50), 6- (60), 7- (70), 9- (90). On right side of crankcase behind oil filter (40, 50), above starter (60, 70, 90).  
**NOTE:—**Dash (-) following engine number indicates engine equipped with .010" oversize pistons.

**TUNE-UP**

**COMPRESSION PRESSURE:** 142 lbs. (40—6.5-1 hd.), 148 lbs. (40, 50—7.0-1 hd.), 151 lbs. (60, 70, 90—7.0-1 hd.) at 1000 RPM.

►For directions on lowering compression on first Compound Carburetion cars to correct complaints of spark rap, refer to Buick Special Shop Notes.

**VACUUM READING:** Steady 18-20" idling 8-10 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 46. 14 mm. Metric type.

Gaps—.025" Limits .023-.028".

**NOTE:—**Small (10 mm.) plugs used on first cars have been changed to above type.

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.015". Cam Angle 31° (closed).

►CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".  
Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:—**2° BTDC (Series 40—1 Carb.), 4° BTDC (40, 50—Compd. Carb.), 6° BTDC. (60, 70, 90) with flywheel mark "ADV" at indicator in housing inspection hole on right side above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting (Single Carb.):—**Both idle screws ¾ turn open. Idle speed 8-10 MPH.

**Idle Setting (Compound Carb.):—**Refer to "Buick Compound Carburetion" article in Carburetor Section for complete tune-up procedure.

**Float Level (Carter Carb.):—**9/64" (float with cross-rib re-inforcement), 3/16" (float with vertical rib re-inforcement) from top seam of float to bowl cover with valve seated.

**Float Level (Stromberg Carb.):—**Fuel level 19/32" below top edge of bowl.

**Accelerating Pump:—**#2 hole (center hole—medium stroke) standard for all-season operation.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:—**Thermostatic coil type.  
**Setting:—**Coil wind-up ¼ turn at 70°F. Adjust counterweight spring clip so edge of counterweight is approx. 7/16" (40 Single Carb.), ¾" (All Compd. Carb.) past vertical centerline of counterweight pivot with valve closed (pin must prevent valve striking body when closed or open).

►**VALVE TAPPET CLEARANCE:** CAUTION—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:—**Delco-Remy No. 1116296 (40, 60, 90 LHD), 1116297 (40, 60, 90 RHD), 1116313 (50, 70 LHD), 1116314 (50, 70 RHD). Same design as 1940.  
**Ignition Lock:—**Briggs & Stratton No. 85370.  
Key Series—8000 to 9499. Groove—15.

**COIL: Delco-Remy Model 1115024 Std., 1115026 (with Radio).** On engine side of dash. **NOTE:—**Radio type has condenser mounted under coil end cover.

**Ignition Current:—**2½ amperes idling, 4½ stopped.

**CONDENSER: Delco-Remy Part No. 1869704.**

**Capacity:—**18-.25 microfarad.

**DISTRIBUTOR: Delco-Remy 1110801.** Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:—.015".** Limits .0125-.0175".

**Cam Angle or Dwell:—**31° closed, 14° open.

**Breaker Arm Spring Tension:—**19-23 ozs.

**Rotation:—**Counter-clockwise viewed from above.

Distributor	Automatic Advance	Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3.5	500
7	400	14	800
13	1500	26	3000

**Vacuum Spark Control Model 681-H.** On distributor Provides additional advance at speeds above 18 MPH. except when engine accelerated or operated with wide open throttle when spark retarded by return spring. Plunger Travel—1/8" max.

Distr. Degrees	Vacuum Advance	Eng. Degrees	Vacuum (" of HG)
Start	0°		5-7"
5-6°	10-12°		10-13"

**Distributor Removal:—**Mounted on right side of crankcase. To remove, disconnect vacuum line, take out 2 hold-down screws in advance arm, lift out.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting for fuel of 70 (40, 50), 76 (60, 70, 90) Octane Rating. See 'Final Ignition Setting' for fuel & operating condition correction.

**Flywheel Degrees Piston Position**  
40 (1 Carburetor) .....2° BTDC.....0015" BTDC.  
40, 50 (2 Carb.) .....4° BTDC.....0063" BTDC.  
60, 70, 90 (2 Carb.) .....6° BTDC.....0149" BTDC.  
**Timing Mark Note** (40, 50)—Ignition mark is a 2° serrated section on flywheel. Use leading edge of mark (4°) for 40 & 50 with Compound Carburetion, trailing edge of mark (2°) for 40 with 1 Carb.

**Timing (With Synchroscope)**—Recommended method. Connect synchroscope to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Idle engine at speed not greater than 350 RPM, loosen two distributor hold-down screws, rotate distributor until 'ADV' mark on flywheel (see 40, 50 note above), lines up with indicator. See Final Ignition Setting below.

**Timing (Without Synchroscope)**—With #1 piston on compression, turn engine over until 'ADV' mark on flywheel (see 40, 50 note above) lines up with indicator. Adjust distributor as directed above.

**Final Ignition Setting**—Adjust for fuel used so slight 'ping' secured accelerating with wide open throttle between 10-20 MPH. To adjust, loosen distributor hold-down screws, rotate distributor in small steps counter-clockwise (if ping too severe), clockwise (if no ping). See Compression Ratio change (to eliminate spark rap) above.

## CARBURETOR

**CARBURETION:**—Carburetor (Series 40—Single Carburetor)—Carter Type WCD Model 487-S or Stromberg Model AAV-16 Code 7-37. 1" dual downdraft. For special Tune Up & Idle Adjustment directions, refer to Carb. Index for 'Buick Compound Carburetion.'

**Compound Carburetion (Series 40, 40A, 50, 60, 70, 90):**—Two Carter Type WCD, or Stromberg Model AAV-16 & AA-1, carburetors used together. 1" dual downdraft types. For Carburetor Production Changes, and Special Tune Up instructions required for Compound Carburetion, refer to Carburetor Index for 'Buick Compound Carburetion' and Buick (Carter) or Buick (Stromberg) Carburetor articles.

**IMPORTANT SERVICE NOTE**—For instructions on Sealing of Manifolds (first cars), Compression Ratio and Spark Plug production changes, refer to Carburetor Index for 'Buick Compound Carburetion' article.

**Accelerating Pump Setting (Front Carburetor only on Compound Carburetion Cars)**—3 holes in throttle lever (Stromberg), 2 holes in pump arm (later type Carter Compd. Carb. only) for pump link connection. Adjust as follows (#1 & 3 only on Carter): #1 (Inner—Min.) Hot weather, high-test gasoline. #2 (Center—Med.) Std. normal all year setting. #3 (Outer—Max.) Cold weather, low-test gasoline.

**Float Level (All Carburetors)**—Adjust as follows: Carter—9/64" for first type float (cross-rib reinforcement), 3/16" for second type float (11 vertical rib reinforcement & all Later Compound Carburetor models. Measure from top seam of each float to bowl cover with valve seated. Refer to Carter 'WCD' Carburetor article in Carburetor Section for Float Level Gauge & aligning data.

**Stromberg**—Fuel level 19/32" below top edge of bowl with engine idling (5 lbs. pressure) or even with bottom of inspection hole on side of bowl). Metering Jets & Rods—See Carter & Stromberg Jet Tables in Carburetor Section.

**Fast Idle (Front Carburetor only on Compound Carburetion Cars):**—Integral (built in carburetor). For complete data, refer to Carburetion Equip. Index.

**Setting (Carter)**—Back off throttle stopscrew so throttle valves closed. With choke valve tightly closed, adjust fast idle screw for .012" (487-S, 509-S, 528-S), .015" (490-S, 533-S), throttle opening (turn screw in 2½ turns from point where it just contacts high step of fast idle cam).

**Setting (Stromberg)**—Close choke valve against #53 drill (.0595"), adjust by bending fast idle cam connector rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

**Automatic Choke (Front Carburetor only on Compound Carburetion Cars):**—Climatic Control (Carter), AAV-16 Type (Stromberg). Built-in type. For complete data, refer to Carburetion Equip. Index.

**Setting (Carter)**—Centered (Index mark on cover at reference mark on housing) for all models.

**Setting (Stromberg)**—1 Notch Lean (40—Single Carb.), 'V' mark on cover lined up with housing mark (All Cars with Compound Carburetion).

## CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542111 (40), 1529803 (50, 60, 70, 90). Heavy duty oil-bath type. NOTE—Screen at forward end of air intake tube should be cleaned by blowing out with air (disconnect air tube).

**Fuel Pump:**—AC Type AJ. Pump Exchange Part No. 529 (40, 50), 530 (60, 70, 90). Fuel- & vacuum type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric. No. 1516304 (Dash Unit), 1516277 (Tank Unit exc. 90), 1516284 (90). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Delco Model 17E2 (Std.), 17K2 (RHD Exp). 6 volt, 17 plate, 120 Ampere Hour (20 hr. rate).

**Starting Capacity**—140 amperes for 20 minutes. **Zero Capacity**—300 amperes for 4.5 minutes. Five second voltage—4.4 volts.

**Grounded Terminal**—Negative (—) to engine block. **Location**—On right side under engine hood.

## STARTER

**STARTER:**—Delco-Remy 1107005 (40, 50), 1107018 (40, 50 RHD), 1107908 (60, 70, 90), 1107909 (60, 70, 90 RHD). **Armature**—1867897 (1107005), 820158 (1107908, 9), 810601 (1107018). **Brush Spring Tension**—24-28 ozs. **Drive**—Solenoid pinion shift & overrunning clutch. **Rotation**—Counter-clockwise at commutator end. **Cranking Engine**—(40, 50) 135 RPM, 150 amperes, 4.5 volts (60, 70, 90) 115 RPM, 175 amperes, 5 volts.

**Performance Data—1107005, 1107018**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data—1107908, 1107909**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, remove flange screws.

**Starting Switch:**—Solenoid Switch No. 1542 (1107005, 1107908), 1545 (1107018, 1107909) controlled by Vacuum Switch D-R No. 1990127 (Stromberg Carb.), Carter Car Starter No. 192-11U (Carter Carb.). For complete data, refer to Electrical Equipment Index.

## GENERATOR

## STANDARD

**GENERATOR:**—Two brush (shunt) type. Interchangeable on all models with correct pulley.

**NOTE**—Air scoop and heat deflector installed on commutator end on cars with Compound Carburetion.

Car Model	Delco-Remy Model	Pulley Diameter	Groove Width
40, 50	1102679	3 13/32"	11/16"
60, 70, 90	1102668	3 17/32"	15/16"

**Armature**—No. 1877806 (all models).

**Charging Rate Adjustment**—None (controlled by regulator and dependent on battery condition).

**Maximum Charging Rate**—32-34 amperes, 8.0 volts, 2400 RPM, 26 MPH (exc. 90), 24 MPH (90). Actual charging rate controlled by voltage regulator.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1825

①—Not maximum output. See Current Regulator.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—½" deflection with light pressure midway between generator and pump pulleys.

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Delco-Remy Model 1106404 (40 Single Carb., All 60, 70, 90—City Police), 1106409 (40, 50 Compd. Carb.—City Police), 1105857 (All—State Police). Refer to the 1942 Buick article for complete data on these models and special regulators used with these generators.

## REGULATOR

**REGULATOR:**—Delco-Remy 1118201. Single Core Type. Vibrating Current & Voltage regulator on dash.

**For complete data, refer to Electrical Equipment Index.**

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Should be checked with cover in place and hot.

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

C N T I N U E D O N N E X T P A E

## CONTINUED FROM PRECEDING PAGE

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for other (2nd.) spring adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting**—34-36 amperes hot (at operating temp.).

**To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), current reading should agree with setting (above).

**To Adjust**—Same as for Voltage Regulator (above).

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**—Headlamps—Guide 'Sealed Beam' type. For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center hght.).

**Beam Indicator**—In speedometer dial. Lighted when Upper Beams in use.

**Direction Signal**—Refer to Electrical Equip. Index.

## Switches

**Lighting**—Delco-Remy No. 1995016.

**Beam Selector**—Delco Remy 1997008 or 1997009.

**Directional Signal**—Delco-Remy No. 1995503 (LHD-Brown), 1995504 (RHD-Brown), 1995507 (LHD-Grey), 1995508 (RHD-Grey).

**Defroster, Heater, Dash Light**—Delco-Remy 1997744.

**Glove Comp't. Light & Switch**—D-R. No. 1997747.

## Bulb Specifications

Position	Candlepower	Mazda No.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70°. Not adj.

**FUSES**—Dome Light (50, 60, 70, 90). 30 ampere. In connector in lead on back of instrument panel.

**Cigar Lighter**—30 ampere. In back of lighter.

**Direction Signal**—14 ampere. In connector.

**Instrument Lights**—10 ampere. On switch.

**Clock**—2 ampere. In connector in clock lead.

**Heater & Defroster**—14 ampere. On switches.

**HORNS**—Delco-Remy No. 1999519 (Low Note, right horn), 1999520 (High Note, left horn). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999519 (low note)	19-21 amperes	.045-.049"
1999520 (high note)	17-19 amperes	.035-.039"

**Horn Relay**—Delco-Remy 1116775.

**Contact Gap**—.025". Air Gap—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

## SERIES 40 &amp; 50

**ENGINE SPECIFICATIONS**—Own 40, 50, 8 cylinder, 'I' head type. Bore—3 3/32". Stroke—4 1/8".

**Displacement**—248 cu. ins. Rated HP—30.63.

**Developed Horsepower**—115 at 3500 RPM (40 Single Carb.), 125 at 3800 RPM (40 Comp. Carb., 50).

**Compression Ratio**—6.5-1 (First 40—Single Carb.), 6.4-1 (Later 40—Single Carb.), 7.0-1 (First 40, 50—Compd. Carb.), 6.7-1 (Later 40, 50—Compd. Carb.). See Buick Shop Notes for Compression Ratio change, New Cylinder Heads, and special Head Gasket Data.

**Compression Pressure**—142 lbs. (6.5-1 hd.), 148 lbs. (7.0-1 hd.) at 1000 RPM (uniform within 6 lbs.).

**Vacuum Reading**—Steady 18-20" idling 8-10 MPH. See Buick Shop Notes for Engine Mounting Adj. data.

**PISTONS**—Fireball, turbulator top, aluminum alloy, transverse slot, full skirt, cam ground type with anodized finish. No 'T-slot' used. See Buick Shop Notes for size identification (color marks) and Replacement Piston data. Length—4 5/16".

**Weight**—13.78 ozs. (stripped), 19.84 (rings and pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0021" (.0018-.0024") at top of skirt.

**Fitting New Pistons**—If micrometer used, check at point 90° from pin hole just below transverse slot. Clearance listed correct with piston at 70°. If feeler gauge used, insert 1/2" x 12" feeler between piston and cylinder wall at right angle to pin bosses (piston inverted, pin parallel to crankshaft). Piston should pass on .0015" feeler, hold on .00225".

**Installing Pistons**—Hollowed side to camshaft.

**PISTON RINGS**—Two compression (#1 notched, #2 taper faced), two slotted oil rings (#3 heavy duty, #4 regular) per piston, all above pin (heat-dam groove above top ring groove).

**NOTE**—Install top compression ring with relief up, #2 compression with mark TOP up.

Ring	Width	End Gap	Side Clearance
Compr. ①	3/32"	.010-.020"	.0015-.0035"
Oil Control	3/16"	.010-.020"	.0015-.003"
①—Wall thickness	Top .155", #2 .140"		

**Replacement Rings**—See Buick Shop Notes for data.

**PISTON PIN**—Diameter—.8127". Length—2 11/16". Pin clamped in rod. Pins not furnished separately. All replacement pistons have fitted pins installed.

**Pin Fit in Piston**—.0003-.0004" @ 70° (easy finger push). **NOTE**—Pin clamp bolt tension 25-30 ft. lbs.

**CONNECTING ROD**—Length—7 5/8". Weight—28.46 ozs.

**Crankpin Journal Diameter**—2".

**Lower Bearing**—Spun babbit-lined type.

**Clearance**—.0008-.0018". Sideplay—.005-.010".

**Bearing Adjustment**—Shims. Do not file rods or caps.

**Installing Rods**—Marks on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap.

**NOTE**—Use special ground bolts & palnuts on caps.

**CRANKSHAFT**—5 bearing, 8 integral counterweights.

**Journal Diameters**—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

**Bearings**—Steel-backed, duxex-lined, slip-in type. See Buick Shop Notes for Replacement Bearing data and Rear Main Oil Seal Installation.

**Clearance**—.0007-.0022".

**Bearing Adjustment**—Shims. Do not file caps.

**End Thrust**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT**—5 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type**—Steel-backed, babbit bushings.

**Clearance**—.0005-.0035".

**End Thrust**—Thrust plate between front bearing and camshaft sprocket. Endplay—.004-.008".

**Timing Chain**—Link-Belt. Width 1". Pitch .500".

**Lgth.** 24 1/2" or 49 links. Initial slack 1/4-3/8". 1" worn.

**Camshaft Setting**—Mesh copper-plated washers on chain (10 links apart) with sprocket marks upward.

**VALVES**—Head Diam. Stem Diam. Overall Length

Intake ..... 1 17/32" ..... 3720" ..... 5 7/64"

Exhaust ..... 1 11/32" ..... 3715" ..... 5 7/64"

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 348" ..... .0015-.0035"

Exhaust ..... 45° ..... 348" ..... .0021-.0039"

**Series 50 Note**—#16 push rod must be removed and installed with cylinder head. See Buick Shop Notes

**Valve Guides**—Press fit in head, installed with stepped end up. Finish ream for correct clearance.

**Valve Springs**—Double springs on all valves. Spring free length 1 7/8" (inner), 2 5/16" (outer).

Inner Spring Outer Spring

Pressure Length Pressure Length

Closed 15 1/2-20 1/2 lbs. 1 21/32" 26 1/2-31 1/2 lbs. 1 15/16"

Open 45-51 lbs. 1 5/16" 67-73 lbs. 1 19/32"

**Valve Lifters**—Barrel type, cast iron. Lifter guide holes reamed in block. Clearance—.0005-.0025".

**Rocker Arms**—See Buick Shop Notes for installation

## ENGINE

## SERIES 60, 70, 90

**ENGINE SPECIFICATIONS**—Own 60, 70, 90, 8 cylinder, 'I' head type. Bore—3 7/16". Stroke—4 5/16".

**Displacement**—320.2 cu. ins. Rated HP—37.81.

**Developed Horsepower**—165 at 3800 RPM.

**Compression Ratio**—7.0-1 (First cars), 6.7-1 (Later cars). See Buick Shop Notes for Compression Ratio change, new Cylinder Heads, and special service Cylinder Head Gasket data.

**Compression Pressure**—151 lbs. at 1000 RPM (all cylinders uniform within 6 lbs.).

**Vacuum Reading**—Steady 18-20" idling 8-10 MPH. See Buick Shop Notes for Engine Mounting Adj. data.

**PISTONS**—Fireball, turbulator top, aluminum alloy, transverse slot, full skirt, cam ground type with anodized finish. No 'T-slot' used. See Buick Shop Notes for size identification (color marks) and Replacement Piston data. Length 4 9/16".

**Weight**—17.94 ozs. (stripped), approx. 1.56 lbs. (with rings and pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0023" (.0020-.0026") at top of skirt.

**Fitting New Pistons**—Same as for Series 40 & 50 data listed in preceding column.

**Installing Pistons**—Hollowed side to camshaft.

**PISTON RINGS**—Two compression (#1 notched, #2 taper faced), two slotted oil rings (#3 heavy duty, #4 regular) per piston, all above pin (heat-dam groove above top ring). **NOTE**—Install top comp. ring with relief up, #2 with mark TOP up.

**Ring** Width End Gap Side Clearance

Compr. ① ..... 3/32" ..... .010-.020" ..... .0015-.0035"

Oil Control ..... 3/16" ..... .010-.020" ..... .0015-.003"

①—Wall thickness Top .172", #2 .150".

**Replacement Rings**—See Buick Shop Notes for data.

**ENGINE****SERIES 60, 70, 90 CONTINUED**

**PISTON PIN:**—Diameter—.8747". Length—3 1/16". Pin clamped in rod. Pins not furnished separately. All replacement pistons have fitted pins installed. Pin Fit in Piston—.0003-.0004" @ 70° (easy finger push). NOTE—Pin clamp bolt tension 25-30 ft. lbs.

**CONNECTING ROD:**—Length—8 1/4". Weight—35.58 ozs. Crankpin Journal Diameter—2 1/4".

Lower Bearing—Spun babbitt-lined type.

Clearance—.0008-.0018". Sideplay—.005-.010".

**Bearing Adjustment:**—Shims. Do not file rods or caps. Installing Rods:—Marks on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap.

**CRANKSHAFT:**—5 bearing, 8 integral counterweights. Journal Diameters—#1, 2 9/16"; #2, 2 5/8"; #3 2 11/16"; #4, 2 3/4"; #5, 2 13/16".

Bearings—Steel-backed, duxex-lined, slip-in type. See Buick Shop Notes for Replacement Bearing data and Rear Main Bearing Oil Seal Installation.

Clearance—.0007-.0022".

**Bearing Adjustment:**—Shims. Do not file caps.

**End Thrust:**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive. Journal Diameters—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type:**—Steel-backed, babbitt bushings.

Clearance—.0005-.0035".

**End Thrust:**—Thrust plate between front bearing and camshaft sprocket. Endplay—.004-.008".

**Timing Chain:**—Link-Belt. Width 1". Pitch .500". Length 25" or 50 links. Initial slack 1/4-3/8". 1" worn. Camshaft Setting:—Mesh copper-plated washers on chain (10 links apart) with sprocket marks upward.

**VALVES:**—Head Diam. Stem Diam. Overall Length  
Intake ..... 1 25/32" ..... 3720" ..... 5 1/4"  
Exhaust ..... 1 7/16" ..... 3715" ..... 5 1/4"

Seat Angle Lift Stem Clearance  
Intake ..... 45° ..... 347" ..... .0015-.0035"  
Exhaust ..... 45° ..... 342" ..... .0021-.0039"

Valve Guides, Valve Springs, Valve Lifters and Rocker Arms: See Series 40, 50 Engine data on preceding page.

**VALVE TIMING**

►Tappet Clearance: CAUTION—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

**Valve Timing (Series 40, 50):** See Camshaft Setting. Timing Points (Valve .004" Open)

Intake Valves—Open 13° BTDC. Close 68° ALDC.

Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

Opening and Closing Points

Intake Valves—Open 26° BTDC. Close 81 1/2° ALDC.

Exhaust Valves—Open 68° BLDC. Close 35° ATDC.

**Valve Timing (60, 70, 90):** See Camshaft Setting.

Timing Points (Valve .004" Open)

Intake Valves—Open 14° BTDC. Close 71° ALDC.

Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

Opening & Closing Points

Intake Valves—Open 27° BTDC. Close 84 1/2° ALDC.

Exhaust Valves—Open 69° BLDC. Close 38 1/2° ATDC.

**Valve Timing Check:**—With .015" tappet clearance, #2 or 7 exhaust valve should be .145" open (Series 40, 50), .155" open (Series 60, 70, 90)—(actual valve opening—use dial indicator) with #1 & 8 pistons on TDC and flywheel mark 'U.D.C./1&8' at indicator (inspection hole, right front face of housing).

**LUBRICATION**

**LUBRICATION:**—Pressure type (gear type oil pump in crankcase). See Buick Shop Notes for oil pump data. Normal Oil Pressure—45 lbs. at 35 MPH. Oil Pressure Regulator—On pump. Opens at 45 lbs. Crankcase Capacity—Dry 8 qts. (Series 40, 50), 10 qts. (60, 70, 90), Refill—6 qts. (40, 50), 8 qts. (60, 70, 90).

**COOLING**

Capacity (Series 40, 50)—13 qts. (14 1/4 with heater).

Capacity (60, 70, 90)—16 3/4 qts. (18 with heater).

Pressure Valve—In filler cap. Opens at 7 lbs.

Water Pump:—Ball-bearing, packless type.

See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet.

Setting—Opens at 148-155°F. Fully open 173°F.

Temperature Gauge:—AC #1511070 Thermo gauge.

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Own Make with Borg & Beck 'Borglite' or Long Driven Member. Single plate, dry disc type. NOTE—Series 40, 50 clutch is "Crown Spring" type. See Clutch Section for complete data.

Facings (Series 40, 50)—Molded-woven (Borg & Beck), Woven (Long). Inside Diameter 6 1/2" (Borg & Beck), 6 3/4" (Long). Outside Diameter 10". Thickness 1/8".

Facings (60, 70, 90)—Molded-woven (Borg & Beck), Woven (Long). Inside Diameter 6 1/2". Outside Diameter 10 1/2". Thickness 1/8".

NOTE—Install driven member oil baffle to rear.

**Pedal Adjustment:**—Free movement 3/4-1" (adjusting screw and locknut on link at clutch fork).

See Buick Shop Notes for Pedal Return Spring data.

**Removal:**—Remove Rear Axle & Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel (reassemble to marks), remove mounting screws in cover. NOTE—Metal spacers may be used between release levers and cover to relieve spring tension.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift.

See Transmission Section for complete data.

**Transmission Control:**—Buick 'Handi-shift' type. See Transmission Section for complete data.

**Removal:**—Remove Rear Axle (see below), remove rear transmission support (wire shims to ends of support for correct replacement) and steady rest rod, place engine jacks (J-1580) on frame cross member with pilot end in hole in housing at each side of engine mounting, tighten jacks to take load off mounting, disconnect shift linkage, remove transmission mounting bolts (install guide pins J-851) and 2 nuts freeing rear engine mounting (bolt heads seat in notches), adjust jacks to take strain off mounting bolts, remove transmission.

Transmission Support Mounting Adjustment—See Buick Shop Notes.

**UNIVERSALS**

**UNIVERSAL JOINT:** Saginaw or Spicer No. 202-5 (Series 40, 50, 60, 70), Saginaw (Series 90). One used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with torque tube drive.

See Rear Axle Section for complete data.

**Ratio:**—4.4-1 (Std. 40-One Carb.), 4.1-1 (Std. 40, 50—Cmpd. Carb.), 3.9-1 (Std. 60, 70; Optl. 40—One Carb., 50), 3.6-1 (Optl. 60, 70), 4.2-1 (Std. 90).

NOTE—Ratio stamped on underside of housing and paint marked on outer end of axle shaft flange as follows: White 4.4-1, None 4.1-1, Red 3.9-1, Blue 3.6-1, None 4.2-1 (90).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car. Disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs (tie springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car. Series 40, 50, 60, 70 Note—Torque tube flanged at rear end and bolted to carrier but these bolts should never be disturbed except for gasket replacement.

**Axle Shaft Removal:** See Rear Axle Section article.

**Rear Suspension:**—Coil springs, conventional axle.

See Rear Axle Section for complete data.

**SHOCK ABSORBERS**

**Delco:**—Double acting, hydraulic types as follows: 40, 50, 60, 70, 90 Front Model 1948A (right & left). 40, 50, 60, 70 Rear—Model 2105-C, D (parallel cyl.). 90 Rear—Model 1757-A, B.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—3 1/2° crosswise with 1 1/8° Camber 40, 50, 60, 70) 4 3/4° with 7/8° Camber (Series 90). Camber (Std. Springs)—Neg. 1/8° to Pos 1 1/8° (40, 50, 60, 70), Neg. 3/8° to Pos. 7/8° (90).

**Caster:**—Positive 3/8° ± 3/8°. Adjustable.

**Toe In:**—0-1/16". Adjust both tie rods equally.

**Steering Geometry Inner whl** 22° ± 3/4°. Outer 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Ball Bearing Worm-and-Nut

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—12" Centrifuge type (Series 40, 50, 60, 70), 14" Cast Iron type (Series 90).

**Lining:**—Woven—Ferodo BZ-10-2C (primary shoe), Moulded Manhattan Raybestos #2320K (secondary).

	Width	Thickness	Length
40, 50	1 3/4"	3/16"	9 15/16"—12 3/4"
60, 70	2 1/4"	3/16"	10"—12 15/16"
90	2	1/4"	12 1/16"—14 3/4"

①—Primary Shoe—Secondary Shoe.

**Clearance:**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

**NoRol:** Optional. See Brake Section for complete data.

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Vacuum Power type. See Miscellaneous Section for complete data.

**HOOD ADJUSTMENT, FRONT FENDER REMOVAL & CAP ADJUSTMENT:**—Refer to Buick Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. (All Series) 1-4257742 (Flint), 2-4273684 (South Gate, Calif.), 3-4263684 (Linden, N. J.). On tag on right side of body dash panel under engine hood. NOTE—Prefix (1, 2, 3-) indicates assembly plant as indicated above.

**ENGINE NUMBER:**—First No. (All Series) 4457941 with model prefix as follows: A- (40A), 4- (40B), 5- (50), 6- (60), 7- (70), 9- (90). On right side of crankcase ahead of oil filter (40A, B, 50), above starter (60, 70, 90). NOTE—Dash (-) following engine number indicates engine equipped with .010" oversize pistons.

### TUNE-UP

**COMPRESSION PRESSURE:** 112 lbs. (40A, 40B with one carburetor), 115 lbs. (all others) cranking speed.

**VACUUM READING:**—Steady 18-20" idling 8-10 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4.

**SPARK PLUGS:**—AC No. 46, 14 MM. Metric type. Gaps—.025". Limits .023-.028".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.015". Cam Angle 31° (closed).

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175". Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—4° BTDC (Series 40—One Carb.), 6° BTDC (40, 50—Compd. Carb.), 6° BTDC (60, 70, 90) with flywheel mark "ADV" at indicator in housing inspection hole on right side above starter.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting (Single Carb.)—Both idle screws ¾ turn open. Idle speed 8-10 MPH.

Idle Setting (Compound Carb.)—Refer to "Buick Compound Carburetion" article in Carburetor Section for complete tune-up procedure.

Float Level (Carter Carb.)—9/64" (float with cross-rib re-inforcement), 3/16" (float with vertical rib re-inforcement) from top seam of float to bowl cover with valve seated.

Float Level (Stromberg Carb.)—Fuel level 19/32" below top edge of bowl.

Accelerating Pump—#2 hole (center hole—medium stroke) standard for all-season operation.

Fuel Pump Pressure: 4¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Setting—Coil wind-up ¼ turn at 70°F. Adjust counterweight spring clip so edge of counterweight is approx. 7/16" (40 Single Carb.), ¾" (All Compd. Carb.) past vertical centerline of counterwt. pivot (valve closed). Pin must prevent valve striking body.

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116313 (40-A LHD), 1116296 (40-B, 60, 90 LHD), 1116297 (40-B, 60, 90 RHD), 1116325 (50, 70 LHD), 1116332 (50, 70 RHD). Three position switch (same design as 1941). **Ignition Lock**—Briggs & Stratton No. 85371. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model No. 1115024 Std., No. 1115026 (with Radio). On engine side of dash. NOTE—Radio type has condenser mounted under coil end cover. **Ignition Current**—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1869704. Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110801 with 681H Vacuum Spark Control (all Series). Full automatic advance type with auxiliary vacuum spark control. Breaker Gap—.015". Limits .0125-.0175". Cam Angle or Dwell—31° closed, 14° open. Breaker Arm Spring Tension—19-23 ozs.

**Rotation:**—Counter-clockwise viewed from above.

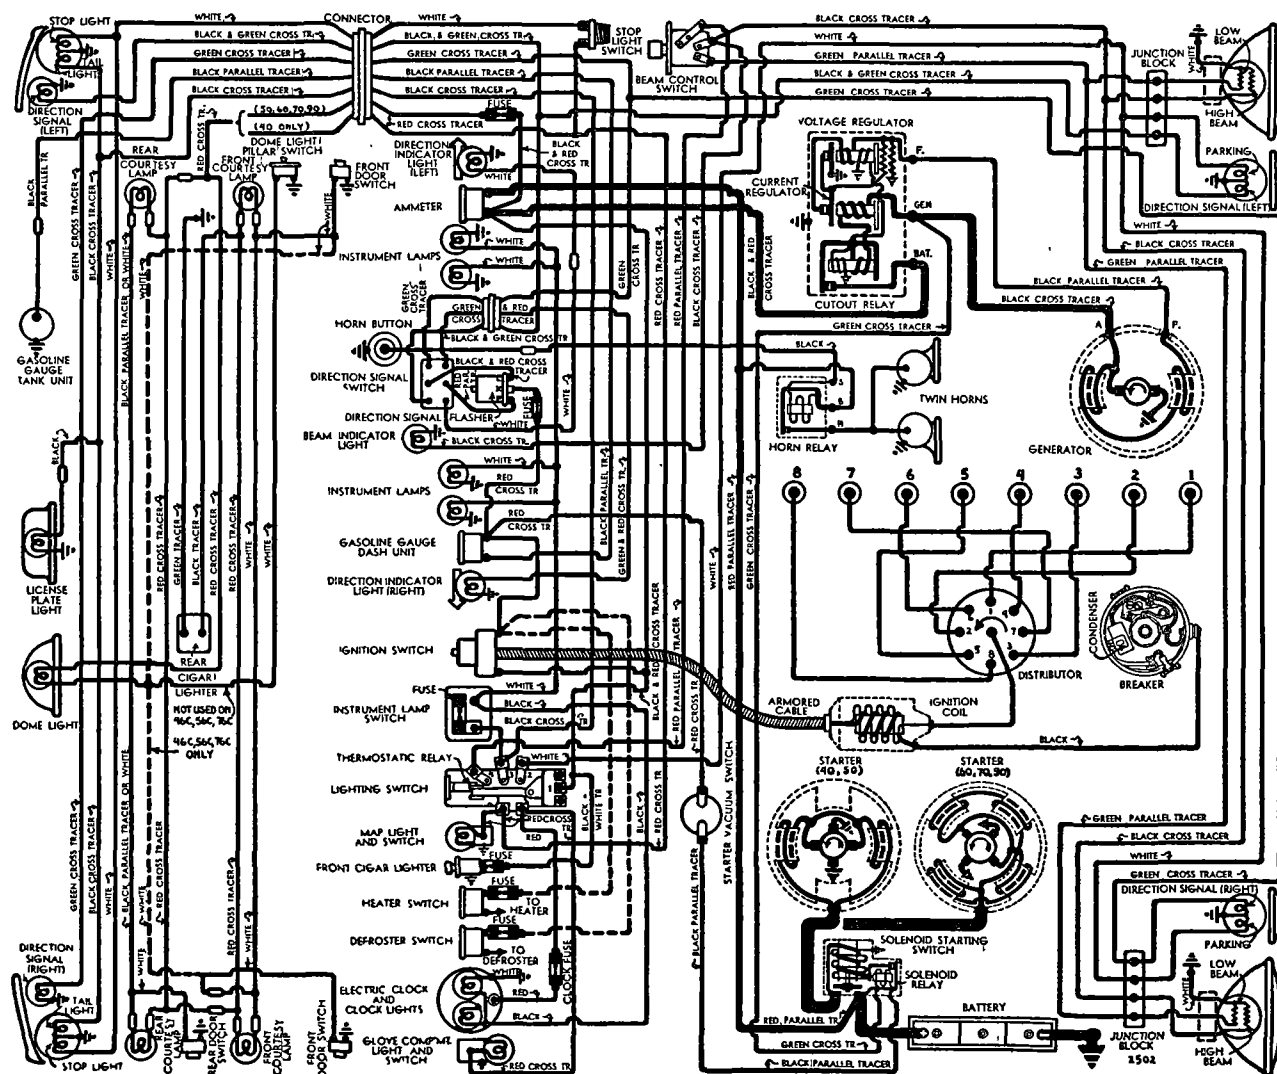

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	Engine R.P.M.
Start	250	3.5	500
7	400	14	800
13	1500	26	3000

**Vacuum Spark Control Model 681-H.** On distributor (integral type linked directly to breaker plate). Provides additional advance at speeds above 18 MPH, except when engine accelerated or operated with wide open throttle when spark retarded by return spring. Plunger Travel—1/8" max.

#### Vacuum Advance

Distr. Degrees	Eng. Degrees Vacuum (" of HG)
Start	0° 5-7"
5-6°	10-12° 10-13"

**Distributor Removal:**—Mounted on right side of crankcase. To remove, disconnect vacuum line, take out 2 hold-down screws in advance arm, lift out.

## IGNITION TIMING

**IGNITION TIMING:**—For 74-76 Octane (regular) fuel (40A, 40B Single Carb.), 78-80 Octane (Ethyl) fuel (All Compound Carburetion Cars).

**Flywheel Deg. Piston Pos.**  
40A, B; 50 (Single Carb.).....4° BTDC.....0063° BTDC.  
40A, B; 50 (Compd. Carb.).....6° BTDC.....0144° BTDC.  
60, 70, 90 .....6° BTDC.....0149° BTDC.  
**Timing Mark Note (40A, B, 50)**—Ignition mark is 2° serrated section on flywheel. Use leading edge of mark (6°) for 40A, B, 50 with Compound Carburetion, trailing edge of mark (4°) for 40A, B, 50 with 1 Carb. **Timing (with Synchroscope)**—Connect synchroscope in #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at speed not greater than 350 RPM, loosen two distributor hold-down screws, rotate distributor until 'ADV' mark on flywheel (see Timing Mark above for Models 40-A, 40-B, 50) lines up with indicator. See Final Ignition Setting **Timing (without Synchroscope)**—With #1 piston on compression, turn engine over until 'ADV' mark on flywheel (see Timing Mark above for Models 40-A, 40-B, 50) lines up with indicator on housing. Adjust distributor as directed above. **Final Ignition Setting**—Adjust for fuel used so slight 'ping' secured accelerating with wide open throttle between 10-20 MPH. To adjust, loosen distributor hold-down screws, rotate distributor in small steps counter-clockwise (if ping too severe), clockwise (if no ping noted).

## CARBURETOR

**CARBURETION:**—Single Carburetor (Series 40-A, B before Motor No. 4540297). Carter Type WCD Model 487-S or Stromberg AAV-16 Code 7-37. 1" dual type. Single Carburetor (Series 40A, B; 50 beginning with Motor No. 4540297):—Carter WCD Model 551-S or Stromberg AAV-16 Code 7-66. 1" dual downdraft type.

Single Carburetor (Series 60, 70 beginning with Motor No. 4540297):—Carter WCD Model 549-S or Stromberg AAV-26 Code 7-57. 1 1/4" dual downdraft type. Refer to Carb. Index (Buick Compound Carburetion) for special Tune Up and Idle Adjustment Directions. Compound Carburetion (Series 40-A, 40-B, 50, 60, 70, 90):—Two Carter Type WCD, or Stromberg Model AAV-16 & AA-1, carburetors used together. 1" dual downdraft types. For Carburetor Production Changes, and Special Tune Up instructions required for Compound Carburetion, refer to the Carburetor Index for 'Buick Compound Carburetion' and Buick (Carter) or Buick (Stromberg) Carburetor articles.

**Accelerating Pump Setting (Front Carburetor only on Compound Carburetion Cars)**—3 holes in throttle lever (Stromberg), 2 holes in pump arm (Carter all models) used for pump link connection. Adjust as follows (#1 and 3 only on Carter Compd.): #1 (Inner—Min.) Hot weather, high-test gasoline. #2 (Center—Med.) Std. normal all year setting. #3 (Outer—Max.) Cold weather, low-test gasoline. **Float Level (All Carburetors)**—Adjust as follows: Carter—3/16" from top seam of float to machined surface of bowl cover (remove gasket and invert to check). Adjust both floats exactly alike. Set floats vertically so that sides aligned with indicator bosses cast on bowl cover (or use Carter gauge T109-162).

Stromberg—Fuel level 19/32" below top edge of bowl with engine idling (level even with bottom of inspection hole on side of bowl).

**Metering Jets & Rods**—Refer to Carburetor Index for Carter & Stromberg Downdraft Carburetor Jet Tables.

**Fast Idle (Front Carburetor only on Compound Carburetion Cars)**—Integral (built-in carburetor). For complete data, refer to Carburetion Equip. Index. **Setting (Carter)**—Back off throttle stopscrew so throttle valves closed. With choke valve tightly closed, adjust fast idle screw for .012" (487-S, 528-S, 551-S), .015" (533-S), .018" (549-S) throttle opening by turning screw in 2 1/2 turns from point where it just contacts high step of fast idle cam. **Setting (Stromberg)**—Close choke valve against #53 drill (.0595"), adjust by bending fast idle cam connector rod so that locking lever on the throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

**Automatic Choke (Front Carburetor only on Compound Carburetion Cars)**—Climatic Control (Carter), AAV-16 Type (Stromberg). Built-in type. For complete data, refer to Carburetion Equip. Index. **Setting (Carter)**—Centered (index mark on cover at reference mark on housing) for all models. **Setting (Stromberg)**—1 Notch Lean (40A, B; 50 with Single Carburetor), At Index with 'V' mark on cover centered on housing mark (All Other Models).

## CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542111 (40-A, 40-B Single Carb.). 1542218 (All Cars with Compd. Carb.). Use Replacement Filter Element Assembly: #1542137 (for 1542111), #1542179 (for 1542218). NOTE—Silencer used on air intake on Compd. Carb. cars. **Fuel Pump:**—AC 'AJ' #1537337—Exch. No. 529 (40-A, 40-B, 50), #1537338—Exch. No. 530 (60, 70, 90). Fuel & vacuum type. Pressure—4 3/4 lbs. (4-5 1/4). For complete data, refer to Carburetion Equip. Index. **Gasoline Gauge:**—AC Electric. No. 1516304 (Dash Unit), 1516277 (Tank Unit, exc. 90), 1516284 (90). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—(40A, B; 50) Delco 15E-2. 15 plate, 100 ampere hour capacity (20 hour rate). **Starting Capacity**—120 amperes for 20 minutes. **Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.25 volts. **Grounded Terminal**—Negative (—) to engine block. **Location**—On right side under engine hood. (60, 70, 90) Delco 17E-2. 17 plate, 120 AH. capacity. **Starting Capacity**—140 amperes for 20 minutes. **Zero Capacity**—300 amperes for 4.5 minutes. Five second voltage—4.4 volts. **Grounded Terminal & Location**—See 15E-2 above.

## STARTER

**STARTER:**—Delco-Remy 1107049 (40,50), 1107057 (40,50 RHD), 1107929 (60,70,90), 1107935 (60,70,90 RHD). **Armature** 1887897 (1107049, 57), 820158 (1107929, 35). **Drive**—Solenoid pinion shift & overrunning clutch. **Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—24-28 ounces. **Cranking Engine**—(40, 50) 135 RPM, 150 amperes, 4.5 volts (60,70,90) 115 RPM, 175 amperes, 5 volts.

Performance Data—1107049, 1107057			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525
Performance Data—1107929, 1107935			
0 ft. lbs.	5500	5.67	65
16 "	Lock	3.0	600

**Removal:**—Flange mounted on right front face of fly-

wheel housing. To remove, remove flange screws. **Starting Switch:**—Delco-Remy Solenoid Switch No. 1118019 controlled by Delco-Remy Vacuum Switch No. 1990127 (for Stromberg Carburetors), or Carter Car Starter No. 192-11U (Carter Carburetor).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

**GENERATOR:**—Delco-Remy 1102679 (40, 50 Std.), 1102668 (60, 70, 90 Std.), 1106409 (City Police 40-1 Carb.), 1106404 (City Police—All Compd. Carb.), 1105857 (All State Police). Two Brush (shunt) type Std. generators interchangeable between models with correct pulley. NOTE—Generators on Compd. Carb. cars have air scoop and heat deflectors on commutator end. **Armatures**—No. 1877806 (1102668, 1102679 Gens.). **Pulley Note**—Pulleys on Std. Gen. can be identified as follows: Pulley Diameter 3 13/32" (40,50), 3 17/32" (60, 70, 90); Groove Width 11/16" (40, 50), 15/16" (60, 70, 90). **Charging Rate Adjustment**—None (see Regulator). **Maximum Charging Rate**—32-34 amperes, 8.0 volts 2400 RPM or 25 MPH (40A,70), 24MPH (40B,50,90), 26 MPH (60). Actual charging rate controlled by voltage regulator.

## Performance Data—Cold

	Amperes	Volts	R.P.M.
1102668, 79	30①	8.0	1825
1106404, 9	35①	8.0	1040
1105857	40①	8.0	1850

①—Not maximum output. See Current Regulator.

Brush Spring Tension—25 ounces each.

Field Current—1.75-1.9 amperes (1102668, 79), 1.77-2.0 amperes (1106404, 9), 1.62-1.82 amperes (1105857) at 6.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts. **Belt Adjustment:**—1/2" deflection with light pressure midway between generator and pump pulleys.

## REGULATOR

**REGULATOR:**—Delco-Remy 1118201 (1102668,79 Gen.), 1118229 (1106404,9 Gen.), 1118237 (1105857 Gen.). Single Core Type. Voltage & Current Regulator. For complete data, refer to Electrical Equipment Index. **CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts (1118201), 7.0-7.2 volts (1118229, 1118237) Hot (at operating temperature). **To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM, and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equip-

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

ment Section for other (2nd) spring adjustment. **Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting**—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature). **To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150° F.), reading should agree with setting (above). **To Adjust**—Same as for Voltage Regulator (above). **Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**—Headlamps—Guide 'Sealed Beam' type. For complete data, refer to *Electrical Equipment Index*. **Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height). **Beam Indicator**—In top edge of speedometer dial. Lighted when Upper (Country) beam in use. **Direction Signal**—Refer to *Electrical Equip. Index*.

## Switches

**Lighting**—Delco-Remy No. 1995016. **Beam Selector**—Delco-Remy No. 1997010. **Directional Signal**—Delco-Remy. Two types used: Plastic LHD—1995510 (Brown), 1995513 (Pearl Grey). Die Cast—1995503 (LHD Brown), 199507 (LHD Grey), 1995504 (RHD Brown), 1995508 (RHD Grey). **Map Light**—Delco-Remy No. 1997762. **Glove Comp.** D-R 1997747 (40,60,90), 1997771 (50,70).

## Bulb Specifications

Position	Candlepower	Mazda No
Headlamps		Sealed Beam
Park & Front Dir. Signal	21-3	1154
Rear Direction Signal	21	1129
Instr., Map, Clock, Glove Comp.	1.5	55
Trunk (50,70), Radio	1.5	55
Beam & Dir. Sig. Indicators	1	51
Stop & Tail	21-3	1154
Rear License	3	63
Dome, Courtesy (Step)	6	82

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

**FUSES**—Dome Light & Rear Cigar Lighters (50, 60, 70, 90 & 41SE). 30 ampere. Back of instrument panel. **Cigar Lighters**—30 ampere. In back of lighter. **Direction Signal**—14 ampere. In connector. **Instrument Lights**—14 ampere. On back of switch. **Clock**—2 ampere. In connector in clock lead. **Convertible Top**—9 ampere. In switch feed line.

**HORNS**—Delco-Remy No. 1999519 or 543 (Low Note, right horn), 1999520 or 544 (High Note, left horn). Vibrator type, blended tone, operated by relay.

Type	Current (at 6 volts)	Air Gap
519 or 543 (low)	19-21 amperes	.044-.049"
520 or 544 (high)	18-20 amperes	.034-.039"

**Horn Relay**—Delco-Remy Model 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed). **Contacts Close**—2.75-4.0 volts.

## ENGINE

## SERIES 40 &amp; 50

**ENGINE SPECIFICATIONS**—Own 40, 50. 8 cylinder, 'T' head type. Bore—3 3/32". Stroke—4 1/8". Displacement—248 cubic ins. Rated HP—30.63. Developed Horsepower—110 at 3400 RPM (40 Single Carb.), 118 at 3600 RPM (40 Compd. Carb., 50). Compression Ratio—6.0-1 (40 Single Carb.), 6.3-1 (40 Compound Carb., 50) cast-iron heads. Compression & Vacuum Reading—See Tune-up data. Refer to Buick Shop Notes for Cylinder Head Gasket Installation & Engine Mounting Adjustment data.

**PISTONS**—Cast iron, cam ground, turbulator top, full skirt, with Lubrite finish. Length—4 1/4". Refer to Buick Shop Notes for Original Cylinder and Piston Size Identification (color marks). Weight—1.528 lbs. with bushings), 1.898 lbs. (with rings and pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0017-.0023" at top of skirt (65-75° F.).

**Fitting Cast Iron Pistons**: Pistons must only be fitted with piston and block at 65-75° F. If micrometer used, check piston at top of skirt 90° from pin hole, cylinders at smallest diameter between top and center of bore 90° from crankshaft. If feeler gauge used, insert 1/2" x 12" feeler between piston and cylinder wall at right angle to pin bosses (piston inverted, pin parallel to crankshaft). Piston should pass through bore of own weight on .0015" feeler, hold of own weight on .00225".

**Replacement Pistons**: See Buick Shop Notes for new 1946 type Replacement service pistons.

**Installing Pistons**—Head hollow side to camshaft. **PISTON RINGS**—4 rings, all above pin. #1 Compression (upper inner edge stepped), #2 Comp. (taper faced, side marked TOP up), #3 & #4 Oil (slotted type, both alike & can be installed either side up).

Ring	Width	End Gap	Side Clearance
Compression①	3/32"	.010-.020"	.0015-.0035"
Oil Control	3/16"	.010-.020"	.0015-.003"

①—Wall thickness: Top .155", #2 .135".

**Replacement Rings**—Refer to Buick Shop Notes.

**PISTON PIN**—Diameter—.8124-.8129" Length—2 11/16". Pin clamped in rod. Pins not furnished separately. All replacement pistons have fitted pins installed. **Pin Fit in Piston**—.0003-.0004" at 70° (easy finger push). NOTE—Pin clamp bolt tension 25-30 ft. lbs.

**CONNECTING ROD**—Length—7 5/8". Weight—28.46 ozs. NOTE—New shot-blasted rod (Part No. 1393255) used with Cast Iron pistons. Refer to Buick Shop Notes for Rod Replacement data (previous models).

**Lower Bearing Diameter**—2".

**Lower Bearing**—Spun babbit-lined type.

**Clearance**—.0008-.0018". Sideplay—.005-.010".

**Bearing Adjustment**—Shims. Do not file rods or caps. **Installing Rods**—Marker on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap. NOTE—Use special ground bolts & palnuts on caps.

**CRANKSHAFT**—5 bearing, 8 integral counterweights. **Bearing Diameters**—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

**Bearings**—Steel-backed, duxex-lined, slip-in type. Finished bearings replaced in complete sets only.

Refer to Buick Shop Notes for Replacement Bearing servicing and Rear Main Bearing Oil Seal Installation. **Clearance**—.0007-.0025".

**Bearing Adjustment**—Shims. Do not file caps.

**End Thrust**—Center (#3) bearing. Endplay .004-.008".

**CAMSHAFT**—5 bearing. Non-adjustable chain drive. See Buick Shop Notes for Timing Chain Cover Oil Seal.

**Bearing Diameters**—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type**—Steel-backed, babbit bushings.

**Clearance**—.0005-.0035".

**End Thrust**—Thrust plate between front bearing and camshaft sprocket. Endplay—.004-.008".

**Timing Chain**—Link-Belt. Width 1". Pitch .500". Lgth. 24 1/2" or 49 links. Initial slack 1/4-3/8". Worn 1".

**Camshaft Setting**—Mesh copper-plated washers on chain (10 links apart) with sprocket marks upward.

**VALVES**—Head Diam. Stem Diam. Overall Length  
Intake .....1 17/32".....3715-.3725".....5 7/64"  
Exhaust .....1 11/32".....3711-.3719".....5 7/64"

Seat Angle Lift Stem Clearance

Intake .....45°.....348"......0015-.0035"  
Exhaust .....45°.....342"......0021-.0039"

**Valve Guides**—Press fit in head, install with stepped end up. Ream for proper clearance on valve stem.

**Valve Springs**—Double springs on all valves. Spring free length 1 19/32" (inner), 2 11/32" (outer).

## Inner Spring

Pressure Length Pressure Length  
Closed 17 1/2-22 1/2 lbs. ....1 1/4".....29 1/2-34 1/2 lbs. ....1 1/4"

Open .....48-54 lbs. ....1 1/4".....74-80 lbs. ....1 1/4"

**Valve Lifters**—Barrel type. Diam. .9975-.9985". Guide holes reamed in block. Clearance—.0005-.0025".

**Rocker Arms**—Refer to Buick Shop Notes for data.

## ENGINE

## SERIES 60, 70, 90

**ENGINE SPECIFICATIONS**—Own 60, 70, 90. 8 cylinder, 'T' head type. Bore—3 7/16". Stroke—4 5/16". Displacement—320.2 cubic ins. Rated HP—37.81. Developed Horsepower—165 at 3800 RPM.

Compression Ratio 6.7-1 (2 Carb.), 6.3-1 (1 Carb.). Compression & Vacuum Reading—See Tune-up data.

Refer to Buick Shop Notes for Cylinder Head Gasket Installation & Engine Mounting Adjustment data.

**PISTONS**—Fireball, turbulator top, aluminum alloy, transverse slot, full skirt, cam ground type with anodized finish. No. 'T-slot' used. Length 4 9/16". Refer to Buick Shop Notes for Original Cylinder and Piston Size (color marks) & Replacement Pistons.

**Weight**—1.178 lbs. (stripped), 1.658 lbs. (complete, including rings and pin).

**Removal**—Pistons and rods removed from above. **Clearance**—.0026-.0032" at top of skirt (65-75° F.).

**Fitting New Pistons**—Piston fits should only be made with piston and block at 65-75° F. If micrometer used, check piston at top of skirt 90° from pin hole, cylinders at smallest diameter between top and center of bore 90° from crankshaft. If feeler gauge used, insert 1/2" x 12" feeler between piston and cylinder wall at right angle to pin bosses (piston inverted, pin parallel to crankshaft). Piston should pass through bore of own weight on .002" feeler, hold of own weight on .00275" feeler.

**Replacement Pistons**: See Buick Shop Notes for new 1946 type Replacement service pistons.

**Installing Pistons**—Head hollow side to camshaft. **PISTON RINGS**—4 rings, all above pin. #1 Compression (upper inner edge stepped), #2 Comp. (taper faced, side marked TOP up), #3 & #4 Oil (slotted type, both alike & can be installed either side up).

Ring	Width	End Gap	Side Clearance
Compression①	3/32"	.010-.020"	.0015-.0035"
Oil Control	3/16"	.010-.020"	.0015-.003"

①—Wall thickness: Top .165", #2 .145".

**Replacement Rings**—Refer to Buick Shop Notes.

**PISTON PIN**—Diameter—.8744-.8749" Length—3 1/16". Pin clamped in rod. Pins not furnished separately. All replacement pistons have fitted pins installed.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**Pin Fit in Piston**—.0003-.0004" at 70° (easy finger push). **NOTE**—Pin clamp bolt tension 25-30 ft. lbs.

**CONNECTING ROD**:—Length— $8\frac{1}{4}$ ". Weight—35.58 ozs.

**Lower Bearing Diameter**— $2\frac{1}{4}$ ".

**Lower Bearing**—Spun babbitt-lined type.

**Clearance**—.0008-.0018". **Sideplay**—.005-.010".

**Bearing Adjustment**:—Shims. Do not file rods or caps.

**Installing Rods**:—Marker on rod and cap toward rear of engine, oil hole to camshaft. Align rod and cap.

**CRANKSHAFT**:—5 bearing, 8 integral counterweights.

**Bearing Diameters**—#1, 2  $9\frac{1}{16}$ "; #2,  $2\frac{5}{8}$ "; #3, 2  $11\frac{1}{16}$ "; #4,  $2\frac{3}{4}$ "; #5, 2  $13\frac{1}{16}$ ".

**Bearings**—Steel-backed, duxex-lined, slip-in type.

**Finished bearings** replaced in complete sets only.

**Refer to Buick Shop Notes for Replacement Bearing Servicing and Rear Main Bearing Oil Seal Installation.**

**Clearance**—.0007-.0025".

**Bearing Adjustment**:—Shims. Do not file caps.

**End Thrust**:—Center (#3) bearing. **Endplay**—.004-.008".

**CAMSHAFT**:—5 bearing. Non-adjustable chain drive.

**See Buick Shop Notes for Timing Chain Cover Oil Seal.**

**Bearing Diameters**—#1, 2  $5\frac{1}{32}$ "; #2,  $2\frac{1}{8}$ "; #3, 2  $3\frac{1}{32}$ "; #4, 2  $1\frac{1}{16}$ "; #5,  $1\frac{3}{4}$ ".

**Bearing Type**—Steel-backed, babbitt bushings.

**Clearance**—.0005-.0035".

**End Thrust**:—Thrust plate between front bearing and camshaft sprocket. **Endplay**—.004-.008".

**Timing Chain**:—Link-Belt. Width 1". Pitch .500". Length 25" or 50 links. Initial slack  $\frac{1}{4}$ – $\frac{3}{8}$ ". Worn 1".

**Camshaft Setting**:—Mesh copper-plated washers on chain (10 links apart) with sprocket marks upward.

**VALVES**:—Head Diam. Stem Diam. Overall Length

Intake	.....1 25/32".....	3715-3725".....	5 1/4"
Exhaust	.....1 7/16".....	3711-3719".....	5 1/4"

	Seat Angle	Lift	Stem Clearance
Intake	.....45°.....	.....347".....	.....0015-.0035"
Exhaust	.....45°.....	.....348".....	.....0021-.0039"

**Valve Guides**:—Press fit in head, install with stepped end up. Ream for proper clearance on valve stem.

**Valve Springs**:—Double springs on all valves. Spring free length 1 19/32" (inner), 2 11/32" (outer).

	Inner Spring	Outer Spring
	Pressure	Length
Closed	17 1/2-22 1/2 lbs.....	1 1 1/4".....
Open	48-54 lbs.....	1 1/4".....

**Valve Lifters**:—Barrel type. Diam. .9975-.9985". Guide holes reamed in block. **Clearance**—.0005-.0025".

**Rocker Arms**:—Refer to Buick Shop Notes for data.

**VALVE TIMING**

► **Tappet Clearance**: **CAUTION**—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

**Valve Timing (Series 40, 50)**: See Camshaft Setting.

**Timing Points (Valve .004" Open)**

**Intake Valves**—Open 13° BTDC. Close 68° ALDC.

**Exhaust Valves**—Open 55° BLDC. Close 22° ATDC.

**Opening and Closing Points**

**Intake Valves**—Open 26° BTDC. Close 81 1/2° ALDC.

**Exhaust Valves**—Open 68° BLDC. Close 35° ATDC.

**Valve Timing (60, 70, 90)**: See Camshaft Setting.

**Timing Points (Valve .004" Open)**

**Intake Valves**—Open 14° BTDC. Close 71° ALDC.

**Exhaust Valves**—Open 56° BLDC. Close 25° ATDC.

**Opening & Closing Points**

**Intake Valves**—Open 27° BTDC. Close 84 1/2° ALDC.

**Exhaust Valves**—Open 69° BLDC. Close 38 1/2° ATDC.

**Valve Timing Check**—With .015" tappet clearance,

#2 or 7 exhaust valve should be .145" open (Series 40, 50), .155" open (Series 60, 70, 90)—(actual valve opening—use dial indicator) with #1 & 8 pistons at TDC and flywheel mark 'U.D.C./1&8' at indicator (inspection hole under cover above starter).

**LUBRICATION**

**LUBRICATION**:—Pressure type (gear type oil pump in crankcase. See Buick Shop Notes for Oil Pump data.

**Normal Oil Pressure**:—45 lbs. at 35 MPH.

**Oil Pressure Regulator**:—On pump. Opens at 45 lbs.

**Crankcase Capacity**—Dry— $7\frac{1}{2}$  qts. (Series 40, 50), 9 qts. (60, 70, 90). Refill— $5\frac{1}{2}$  qts. (40, 50), 7 qts. (60, 70, 90).

**COOLING**

**Capacity (Series 40, 50)**—13 qts. (14 1/4 with heater).

**Capacity (60, 70, 90)**—16 3/4 qts. (18 with heater).

**Pressure Valve**—In filler cap. Opens at 7 lbs.

**Water Pump**:—Ball-bearing, packless type.

**See Water Pump Section for complete data.**

**Thermostat**:—Harrison. In cylinder head outlet.

**Setting**—Opens at 148-155°F. Fully open 173°F.

**Temperature Gauge**:—AC #1511070 Thermo gauge.

**See Miscellaneous Section for complete data.**

**CLUTCH**

**CLUTCH**:—Own Make with Borg & Beck 'Borglite' or Long Driven Member. Single plate, dry disc type.

**NOTE**—Series 40, 50 Clutch is "Crown Spring" type.

**See Clutch Section for complete data.**

**Facings (Series 40, 50)**—Woven type. Inside Diameter 6". Outside Diameter 10". Thickness 1/8".

**Facings (60, 70, 90)**—Woven type. Inside Diameter 6 1/2". Outside Diameter 10 1/2". Thickness 1/8".

**Pedal Adjustment**:—Free movement 3/4-1" (adjusting screw and locknut on link at clutch fork). Toeboard clearance set by rubber bumper under toeboard.

**Removal**:—Remove Rear Axle & Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

**NOTE**—Metal spacers may be used between release levers and cover to relieve spring tension.

**TRANSMISSION**

**TRANSMISSION**:—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering col. shift.

**See Transmission Section for complete data.**

**Transmission Control**:—Buick 'Handi-shift' type.

**See Transmission Section for complete data.**

**Removal**:—Remove Rear Axle (see below), remove rear transmission support (wire shims to ends of support for correct replacement) and steady rest rod, place engine jacks (J-1580) on frame cross member with pilot end in hole in housing at each side of engine mounting, tighten jacks to take load off mounting, disconnect shift linkage, and remove transmission mounting bolts (install guide pins J-851), remove 2 nuts freeing rear engine mounting (bolt heads seat in notches), adjust jacks to take strain off mounting bolts, remove transmission.

**Transmission Support Mounting Adjustment**—See Buick Shop Notes.

**UNIVERSALS**

**UNIVERSAL JOINT**: Saginaw or Spicer No. 202-5 (Series 40), No. 202-13 (Series 50). Saginaw type only (Series 60, 70, 90). One used.

**See Universals Section for complete data.**

**REAR AXLE**

**REAR AXLE**:—Own Make. Semi-floating, hypoid gear type with torque tube drive.

**See Rear Axle Section for complete data.**

**Ratio**—4.4-1 (Std. 40B, 50), 4.1-1 (Std. 40A, 70; Optl. 40B), 3.9-1 (Std. 60), 4.55-1 (Std. 90).

**NOTE**—Ratio is stamped on underside of housing. Axles not paint marked on end of axle shaft flange except for 4.44-1 Ratio axle—White.

**Backlash**—.006-.010". Screw adjustment.

**Removal**:—Hoist rear end of car. Disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs (tie springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car.

**Series 40, 50, 60, 70 Note**—Torque tube flanged at rear end and bolted to carrier but these bolts should never be disturbed except for gasket replacement.

**Axle Shaft Removal**:—See Buick Rear Axle article.

**Wheel Bearing Adjustment**—None.

**Rear Suspension**:—Coil springs, conventional axle.

**See Rear Axle Section for complete data.**

**SHOCK ABSORBERS**

**Delco**—Double acting, hydraulic types as follows:

40, 50, 60, 70 Front—Model 1948A (right & left).

40, 50, 60, 70 Rear—Model 2105-C, D (parallel cyl.).

90 Front—Model 1948A. 90 Rear—Model 1757-A, B.

**See Shock Absorber Section for complete data.**

**FRONT SUSPENSION**

**Front Suspension**:—Independent, linked parallelogram type with coil springs.

**See Front Suspension Section for complete data.**

**Kingpin Inclination**— $4\frac{1}{4}$ ° crosswise (40, 50, 60, 70),  $5\frac{1}{4}$ ° crosswise (90) with 3/8° Camber.

**Camber**—3/8° Positive (Limits 1/8° Pos. to 5/8° Neg.). Must be alike for both wheels within 3/4°.

**Caster**—3/8° Positive (Limits 1 1/8° Pos. to 0°). Must be alike for both wheels within 1/2°.

**Toe In**—1/16-1/8". Adjust both tie rods equally.

**Steering Geometry**—With inner wheel turned  $21\frac{1}{2}$ ° ± 3/4°, outer wheel turned exactly 20°.

**STEERING GEAR**

**Steering Gear**: Saginaw Ball Bearing Worm-and-Nut

**See Steering Gear Section for complete data.**

**BRAKES**

**BRAKES**:—Service—Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Stepon lever applies rear wheel service brakes.

**See Brake Section for complete data.**

**Drums**—12" Centrifuge type (Series 40, 50, 60, 70), 14" Cast Iron type (Series 90).

**Lining**—Woven—Ferodo BZ-10-2C (primary shoe), Moulded Manhattan Raybestos #2320K (secondary).

	Width	Thickness	Length
40, 50	.....1 3/4".....	.....3/16".....	.....9 15/16".....
60, 70	.....2 1/4".....	.....3/16".....	.....10".....
90	.....2 ".....	.....1/4".....	.....12 1/16".....

①—Primary Shoe—Secondary Shoe.

**Clearance**—.015" at each end of secondary (rear) shoe with primary shoe forced out against drum.

**Hand Brake**:—Stepon type. See Service Brakes above.

**NoRol**: Optional. See Brake Section for complete data.

**MISC. MECHANICAL**

**Power Operated Convertible Top**: Electric type.

**See Miscellaneous Section for complete data.**

**HOOD ADJUSTMENT, FRONT FENDER REMOVAL, FRONT & REAR FENDER EXTENSION ADJUSTMENT:** See Buick Shop Notes.

## MODEL IDENTIFICATION

### STARTING SERIAL NUMBERS

Year	Flint Mich.	South Gate, Cal.	Linden N. J.	Kansas City, Kan.
1946.....	1 4364445.....	2 4380001.....	3 4390001.....	
1947.....	1 4524131.....	2 4530001.....	3 4542001.....	4 4536001
1948 .....	1-4801266.....	2-4820001.....	3-4824001.....	4-4830001

Atlanta Ga.

1948 ..... 6-4834001

**Location**—On plate on right side of cowl under hood ('46-47), on left front door hinge post ('48). **Identification**—First digit of number indicates the assembly plant as follows: 1) Flint, 2) California, 3) Linden, 4) Kansas City, 6) Atlanta.

**ENGINE NUMBER:** Stamped on boss on right side of crankcase below pushrod cover.

**1946 Numbers**—First numbers as follows: 4558037 4 (for 40), 4558037 5 (for 50), 4558297 7 (70).

**1948 Numbers**—First numbers as follows: 49998814 (for 40), 49998815 (for 50), 49998817 (70).

**Identification**—Last digit of number indicates the Series: 4—Series 40, 5—Series 50, 7—Series 70.

## TUNE-UP

**COMPRESSION PRESSURE:** 112 lbs. (for 40 and '46-47 50), 114 lbs. (1948 50 and All 70), 118 lbs. (for 1948 Dynaflo) at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 8 MPH. or 450 RPM. for all models.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUG GAPS:** .025". Limits .023-.028". Plug Type: AC No. 48. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". Limits .0125-.0175".

**Cam Angle or Dwell**—31° closed, 14° open.

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

**Breaker Arm Spring Tension**—19-23 ounces.

**Automatic & Vacuum Advance**—See Distributor.

**IGNITION TIMING:** 4° BTDC. (40, 50), 6° BTDC. (70).

► **CAUTION**—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.

**Timing Procedure**—See Ignition Timing.

**Flywheel Mark**—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel 1/8" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter. **Final Ignition Setting**—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws approximately 1 turn (1/2-1) turn open and set for smooth idle (turn screws out for richer mixture). Idle speed 8 MPH. or 450 RPM.

**Float Level (Carter)**—3/16" (608S, SA; 609S, SA), 5/32" (608SC, 609SC, 663S, 664S) top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection hole on side of float bowl with engine idling.

**Float Level (Stromberg Carb.)**—Fuel level 19/32" below top edge of float bowl or even with bottom of

inspection hole on side of bowl, engine idling.

**Accelerating Pump (Carter Carb.)**—2 holes in arm. Inner hole minimum charge, Outer hole maximum. **NOTE**—No seasonal pump adjustment on 608S, SA and 609S, SA carburetors.

**Accelerating Pump (Stromberg Carb.)**—Center hole (med. stroke) normal for all-season operation.

**Fuel Pump Pressure**—4 1/2-5 1/2 lbs. at pump outlet port or 4-5 lbs. at carburetor inlet.

► **MANIFOLD HEAT CONTROL:** Thermostatic coil type. Setting—Thermostatic coil wind-up should be 1/4 turn at 70° F. Adjust counterweight spring clip so that edge of counterweight is approximately 7/16" past vertical center line of pivot with valve closed

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH ('46-47):** D-R No. 1116296 (Series 40 LHD.), 1116297 (Series 40 RHD.), 1116325 (Series 50, 70 LHD. exc. Conv.), 1116357 (Series 50, 70 LHD. Convertible), 1116332 (Series 50, 70 RHD.).

**NOTE**—Armored cable used on 1946-47 cars only.

**IGNITION SWITCH (1948):** Delco-Remy Numbers:

Special—1116359 (LHD), 1116297 (RHD).

Super & Rdmsr.—1116360 (LHD), 1116332 (RHD).

Convertible (Super & Rdmsr.)—1116361 (LHD).

**NOTE**—Switch on Convertible has silver contacts. **Ignition Lock**—Briggs & Stratton No. 85370 (Lock Cylinder), No. 85317 (Lock Case).

**Key Series**—3000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Nos.: 1115024 (Early 1946), 1115026 with radio condenser (Late 1946, All 1947, RHD Cars 1948), 1115328 (1948 LHD Cars). **NOTE**—Armored cable not used with 1115328 coil.

**Location**—On engine side of dash (1946-47 cars), on right side of engine (1948 cars).

**Ignition Current**—2 1/2 amperes idling, 4 1/2 stopped.

► 1946-47 CARS HAVE ARMORED IGNITION CABLE (IGNITION SWITCH TO COIL)

**CONDENSER:** Delco-Remy Part No. 1869704.  
Capacity—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110801. Single breaker, full automatic advance type with auxiliary vacuum spark control and manual adjustment

► **1946-47 CAUTION**—To Correct Sheared Drive Gear Pins and Improve Lubrication on Early Distributors, see "Electrical System Notes" in Buick Shop Notes.  
Breaker Gap—.015". Limits .0125-.0175".  
Cam Angle—31° closed, 14° open.

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".  
Breaker Arm Spring Tension—19-23 ounces.  
Rotation—Counter-clockwise viewed from above.

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	3.5.....	500
7.....	400	14.....	800
13.....	1500	26.....	3000

**Vacuum Spark Control:** Delco-Remy No. 681-H. Integral type (mounted on distributor, linked directly to breaker plate). Provides additional advance at speeds above 18 MPH. except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Maximum plunger travel 1/8".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
5 1/2°.....	11°	10-13"

**Distributor Removal:** Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out.

## IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 40①, 50③.....	4° BTDC	.0063" BTDC.
Series 70②.....	6° BTDC	.0149" BTDC.
①—Regular Fuel.	②—Ethyl Fuel.	
③—Regular Fuel 1946-47, Ethyl Fuel 1948.		

► **CAUTION**—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.  
Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel 1/8" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.

► **TIMING MARK NOTE**—On first 1946 cars, timing mark on Series 40, 50 is a 1/4" wide knurled section on flywheel, painted yellow, with leading edge marked "ADV. 4°" and trailing edge marked "2°"; on Series 70, mark is a yellow painted line stamped "ADV. 6°". On these early 1946 cars, set ignition at leading edge of timing mark or within 1/8" (1°) of leading edge.

**Timing (With Synchroscope)**—Connect synchroscope to #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at speed not greater than 350 RPM., loosen two distributor hold-down screws, rotate distributor until "ADV" mark on flywheel (see Flywheel Mark Note above) lines up with indicator, tighten hold-down screws. Refer to Final Ignition Setting  
**Timing (Without Synchroscope)**—With #1 cylinder on compression, turn engine over until "ADV" mark

on flywheel lines up with indicator in inspection hole in right front face of housing. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws.  
**Final Ignition Setting**—Must be within yellow band of flywheel mark (leading edge desired). If timing advanced, engine roughness may result even with high octane fuel. If timing retarded to overcome heavy "ping", engine performance and economy will be lessened (higher octane fuel should be used). A very light "ping" may occur with part throttle on a hard pull, or during acceleration with wide open throttle between 10-20 MPH. Do not retard timing to eliminate this light "ping."

## CARBURETOR

Carter WCD or Stromberg AAV types. Dual (double barrel) downdraft types with Automatic Choke.

Series	Carter WCD	Stromberg
40, 50 ('46-47).....	608S, SA, SC	AAV-16 Code 7-66
40, 50 (1948).....	663S	①AAV-167 Code 7-69
70 (1946-47).....	609S, SA, SC	AAV-26 Code 7-57
70 (1948).....	664S	①AAV-267 Code 7-70

①—Equipped with new Stromberg Vacuum Starting Switch.  
Code No. (Stromberg)—Stamped either on body or on a metal tag attached to the body.

See Carburetor Section for complete data.  
**Adjustment (Idle Setting, Accelerating Pump Setting, and Float Level)**—See Tune-up data.

**Metering Jets & Rods**—See Carburetor Section for Carter & Stromberg Jet Specifications.

**Throttle Linkage Adjustment (Synchro-Mesh Transmission):** Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

**Throttle Linkage Adjustment (Dynaflow Drive Cars):** With engine idling at 450 RPM., clearance between edge of bracket (attached to dash at lower end of vertical equalizer shaft) and ear on lever (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever stop striking boss on carburetor). Check choke unloader operation. Check Dash-Pot Setting (following).

**Dash Pot Setting (Dynaflow Drive Cars):** Turn adjusting screw on lever ahead of dash pot plunger for 1/64-1/32" clearance between fast idle cam and fast idle screw with choke valve held closed.

**Fast Idle:** Carter Dual (WCD) Carburetor type or Stromberg Type (AAV-16, 26, 167, 267 Carburetors). See Carburetion Equipment Section for data.  
**Setting (Carter Carb.)**—Adjust fast idle screw on throttle shaft lever for .012" (Ser. 40, 50: 608S, SA), .015" (40, 50: 608SC, 663S), .018" (70: All carbs.)

throttle opening with choke valve tightly closed and screw on "high" step of fast idle cam.  
**Setting (Stromberg)**—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

**Automatic Choke:** Carter Climatic Control (Dual Carb.) or Stromberg AAV-16, 26, 167, 267 Type. See Carburetion Equipment Section for complete data.  
**Setting (Carter Carb.)**—Centered (index mark on cover centered on reference mark on housing).  
**Setting (Stromberg)**—"V" mark on cover one graduation Lean (40, 50), Centered (70).

## CARB. EQUIPMENT

**Air Cleaner:** AC. No. 1542101 (40, 50), 1542436 (70) heavy duty oil-bath type.  
**Filter Element**—AC 1543732 (40, 50), 1528460 (70).  
**Servicing**—Clean and refill with 1 pint of SAE. No. 50 engine oil at 5000 mile intervals.

**Fuel Pump:** AC. Type AJ. Diaphragm type combination fuel-and-vacuum pump.  
**Exchange Pump Type**—AC No. 529 (40, 50), 530 (70).  
**Pressure**—4 1/2-5 1/2 lbs. at fuel pump outlet port or 4-5 lbs. at carburetor inlet.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** AC Electric type.  
**Dash Unit**—AC No. 1516304 ('46-47), 1517078 ('48).  
**Tank Unit**—AC No. 1516277.

See Carburetion Equipment Section for data.

## BATTERY

Delco Type 15E2 or 15E4 (40, 50), 17E2 or 17E4 (70), 17K4 (Export 50, 70), 19E4 (Optl. Comm'l). 6 Volt.  
**Capacity**—No. Plates 20 Hr. Rate Starting (20 Min.)  
15E2, 4.....15.....100 A.H.....120 Amperes  
17E2, 4.....17.....120 A.H.....140 Amperes  
17K4.....17.....115 A.H.....137 Amperes  
19E4.....19.....130 A.H.....150 Amperes  
**Zero Capacity**—300 Amps. (0°F) 5-Second Voltage  
15E2, 4.....3.5 Minutes.....4.25 Volts  
17E2, 4.....4.5 Minutes.....4.4 Volts  
17K4.....4.3 Minutes.....4.4 Volts  
19E4.....5.3 Minutes.....4.35 Volts  
**Grounded Terminal**—Negative (—) to engine block.  
**Location**—On right hand side under engine hood.

## STARTER

Delco Model No. 1107049 (40, 50 LHD.), 1107929 (70 LHD.), 1107057 (40, 50 RHD.), 1107935 (70 RHD.).  
Armature 1867897 (1107049, 57), 820158 (1107929, 35).

► **1946-47 CAUTION**—To correct Starter Shifts which will not engage or disengage, see "Electrical System Notes" in Buick Shop Notes.

**Drive**—Overrunning clutch (solenoid pinion shift).  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ozs.  
**Cranking Engine**—40, 50) 90 RPM, 150 amperes, 4.5 volts; (70) 90 RPM, 175 amperes, 5 volts.

Performance Data—1107049, 57				
Torque	ft. lbs.	R.P.M.	Volts	Amperes
0	.....	5000	5.0	85
12	.....	Lock	3.37	525

16	.....	Lock	3.0	600

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PA E

**Removal:** Starter is flange mounted on right front face of flywheel housing. To remove, disconnect cables, remove flange mounting screws.

**Starting Switch:** Delco-Remy Solenoid No. 1118019 controlled by Vacuum Switch on Carburetor.

**Vacuum Switch** (Carter Carburetors)—Carter Car Starter Model 192-11U.

**Vacuum Switch** ('46-47 Stromberg)—Delco-Remy No. 1990127 for AAV-16 & AAV-26 carburetors.

**Vacuum Switch** (1948 Stromberg)—Stromberg No. 385000 for AAV-167 & AAV-267 carburetors.

See *Electrical Equipment Section* for complete data.

**Dynaflow Neutral Safety Switch**—Delco-Remy 1997838. Connected in starter control circuit so that starter operative only with selector lever in "N" Neutral or "P" Parking position.

See *Dynaflow Drive article in Transmission Section* for Neutral Safety Switch Adjustment.

## GENERATOR

**Delco-Remy Model No. 1102679** (40, 50), 1102668 (70). Two brush (shunt) type with voltage and current regulation. NOTE—Generators are interchangeable between models if correct pulley is installed.

**Armature**—Delco-Remy No. 1877806.

**Charging Rate Adjustment**—None (see Regulator).

**Maximum Charging Rate**—32-34 amperes, 8.0 volts, 2400 RPM or approx. 25 MPH.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1825

①—Not maximum output. See Current Regulator.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Removal:** Generator pivot mounted at left front of engine. To remove, disconnect leads, take out pivot and clamp bolts.

**Belt Adjustment:** 1/2" belt deflection with light pressure at point midway between generator and fan.

## REGULATOR

**Delco-Remy Model 1118201. Single Core Type.** Voltage and current regulator.

See *Electrical Equipment Section* for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Checking & Adjustment**—See *Electrical Equip. Section*.

## Current Regulator

**Setting**—34-36 amperes hot (operating temp.).

**Air Gap**—.080" (check same as Voltage Regulator).

**Checking & Adjustment**—See *Electrical Equip. Section*.

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type.

See *Electrical Equipment Section* for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—In upper edge of speedometer dial. Lighted when Upper (Country) Beam in use.

**Direction Signal:** See *Electrical Equipment Section*.

**Direction Signal Indicators**—In center of right and left instrument clusters. Lighted when direction signal operating.

## Switches

**Lighting**—Delco-Remy No. 1995016.

**Beam Selector**—D-R No. 1997008, 1997015 (RHD).

**Instrument**—Delco-Remy No. 1997762.

**Glove Compt.**—Delco-Remy 1997747 (40), 1997771 (50, 70).

**Direction Signal** ('46-47)—D-R 1995527 LHD Metallic Brown, 1995503 (LHD—Brown), 1995507 (LHD—Light Grey), 1995525 (LHD—Dark Grey), 1995528 (RHD—Metallic Brown), 1995504 (RHD—Brown), 1995508 (RHD—Light Grey), 1995526 (RHD—Dark Grey), 1995535 (LHD—Beige), 1995536 (RHD—Beige).

**Direction Signal** (1948)—Delco-Remy 1995537 (std. LHD), 1995539 (Dynaflow Cars), 1995538 (RHD).

**Back-Up Light**—Delco-Remy No. 1997825 (regular transmission), 1997839 (Dynaflow Drive Cars).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 Watt	92500
Park & Frt. Dir. Sig.	21-3	1154
Rear Dir. Sig. (50, 70)	21-3①	1154
Rear Dir. Sig. (40)	21	1129
Beam & Dir. Sig. Indicators	1	51
Instr., Map, Clock, Radio	1.5	55
Glove & Trunk Compt.	1.5	55
Dome & Courtesy	6	82
Stop & Tail	21-3	1154
Rear License	3	63L
①—21 cp. (3 cp. filament not used).		

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

**FUSES:** Clock—2 ampere SFE. In clock lead.

**Instr. & Clock Lights**—14 amp. SFE. On switch.

**Direction Signal**—14 ampere SFE. In flasher lead.

**Cigar Lighter (Front)**—15 ampere. In lighter.

**Cigar Lighter (Rear) & Dome Light** (50, 70)—30 ampere. In connector back of instrument panel.

**HORNS:** Delco-Remy No. 1999519 (Low Note—Right Horn), 1999520 (High Note—Left Horn). Vibrator type, blended tone, twin horns operated by relay.

**Current** (at 6 volts) **Air Gap**

1999519 (Low Note).....19-21 amperes.....044-.049"

1999520 (High Note).....18-20 amperes.....034-.039"

**Horn Relay:** Delco-Remy No. 1116775.

**Contacts Close**—2.75-4.0 volts.

**Contact Gap**—.025" **Air Gap** .015" (contacts closed).

## ENGINE

**ENGINE SPECIFICATIONS (SERIES 40, 50):** Eight Cylinder, Overhead Valv ("I" Head) type.

**Bore**—3 3/32". **Stroke**—4 1/8".

**Displacement**—248 cu. ins. **Rated H. P.**—30.63.

**Developed H.P.** (All 40, '46-47 50)—110 at 3600 RPM.

**Developed H.P.** (1948 50)—115 at 3600 RPM.

**Compression Ratio** (All 40, '46-47 50)—6.3-1.

**Compression Ratio** (1948 50)—6.6-1.

**1948 NOTE**—.050" thick Steelbestos gasket on 40,

.015" thick sheet steel gasket used on Series 50.

**Compression & Vacuum Reading**—See *Tune-up data*.

**ENGINE SPECIFICATIONS (SERIES 70):** Eight cylinder, Overhead Valve ("I" Head) type.

**Bore**—3 7/16". **Stroke**—4 5/16".

**Displacement**—320.2 cu. ins. **Rated H. P.**—37.81.

**Developed Horsepower**—144 (70), 150 (Dynaflow Drive) at 3600 RPM.

**Compression Ratio**—6.6-1 Std., 6.9-1 Dynaflow Cars.

**Compression & Vacuum Reading**—See *Tune-Up data*.

**TIGHTENING TORQUES:** See *Buick Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Buick Shop Notes*.

► **New 1946-47 Type Cylinder Head & Gasket:** See *Buick Shop Notes* for new type Cylinder Head and Head Gasket required for use with new 1946-47 Engine

► **CAUTION**—1942 type Cylinder Head and Gasket must not be used on 1946-47 engines (smaller water passages at #8 cylinder will restrict water circulation and cause overheating).

► **1948 NEW "CONTROLLED FREQUENCY" ENGINE MOUNTINGS:** See *Buick Shop Notes*.

**PISTONS:** New light weight aluminum alloy, four ring, Turbulator Top, Cam ground, transverse slot type with Anodized finish.

► **CAUTION**—Do not install 1942 type heavier pistons in 1946-47 engines (will affect engine balance). See *Buick Shop Notes* for Piston Identification and Interchangeability.

**Weight**—13.776 ozs. (40, 50), 17.94 ozs. (70) stripped.

**Length**—4 21/64" (40, 50), 4 9/16" (70).

**Removal**—Pistons and rods removed from above.

**Clearance**—See *Fitting New Pistons*.

	Top Land	Top — Skirt	Bottom
Series 40, 50	.023-.030"	.0021"	①
Series 70	.026-.033"	.0023"	②
①—.00185" clearance ('46-47), .0016" ('48).			
②—.0020" clearance ('46-47), .0018" ('48).			

**Replacement Pistons:** See *Buick Shop Notes*.

**Fitting New Pistons:** Use feeler stock 1/4" wide ("GO" gauge), 1/2" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine centerline, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge as follows:

**Clearance Limits "GO" Feeler Gauge "NO GO"**

Series 40, 50.....0018-.0023".....0015".....002"

Series 70 .....0020-.0026".....0015".....002"

► **NOTE**—Cylinder walls on 1946-47 engines are "Lubrited" after finishing to provide protective coating and prevent scuffing and scoring during break-in. This coating is black and will wear through in service. Cylinders in service showing this black-and-bright surface are normal.

**1948 Note**—Cylinder walls not Lubrited (coated).

**Installing Pistons:** Hollow side of piston head toward camshaft side of engine.

**PISTON RINGS:** Two compression, two slotted oil control rings per piston, all above pin.

**1948 Note**—New "Flex-fit" bottom oil ring used.

## ENGINE

CONTINUED FROM PRECEDING PAGE

## 1946-47 Piston Rings

Ring	Width	End Gap	Side Clearance
① Comp. (#1, 2)	3/32"	.015"	.0015-.0035"
Oil (#3, 4)	3/16"	.015"	.0015-.003"

## 1948 Piston Rings

Ring	Width	End Gap	Side Clearance
① Compr. (#1, 2)	3/32"	.015"	.0015-.0035"
Oil (#3)	.1875"	.015"	.0015-.0035"
Oil (#4)	.1860"	②	.0015-.0035"
①—Wall Thickness .160" (40, 50 Upper), .140" (40, 50 Lower), .170" (70 Upper), .150" (70 Lower).			
②—Width of oil ring gap .0015" (segmental).			

Replacement Rings: See Buick Shop Notes.

**PISTON PIN:** Clamped in rod (pin hole in new pistons diamond-bored and oil-grooved).  
 Diameter—13/16" (40, 50), 7/8" (70).  
 Length—2 11/16" (40, 50), 3 1/16" (70).  
 Pin Fit in Piston—.0003-.0004" clearance or easy finger push fit at 70°F.

**Replacement Pins:** Pins are fitted and furnished with new pistons (pistons not furnished without pins).

**CONNECTING ROD:** Length—7 5/8" (40, 50), 8 1/4" (70).  
 Weight—28.464 ozs. (40, 50), 35.584 ozs. (70).  
 Crankpin Journal Diameter—2" (40, 50), 2 1/4" (70).  
 Lower Bearing—Centrifugal cast (spun) babbitt.  
 Clearance—.0008-.0018". Sideplay—.005-.010".

**Bearing Adjustment:** Shims. Do not file rods or caps.

**Replacement Bearings:** Install replacement rods.

**Installing Rods:** Marks on rods and bearing caps together and toward rear of engine. Oil hole toward camshaft.

**CRANKSHAFT:** Five bearing, counterweighted type.  
 Bearing Diameters (40, 50)—#1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".  
 Bearing Diameters (70)—#1, 2 9/16"; #2, 2 5/8"; #3, 2 11/16"; #4, 2 3/4"; #5, 2 13/16".  
 Bearings—Steel-backed, Durex lined, slip-in type.  
 Replacement bearings furnished singly or in sets.  
 Clearance—.0007-.0025".

**Bearing Adjustment:** Solid shims. Do not file caps.

**Replacement Bearings:** See Buick Shop Notes for data and Rear Main Bearing Oil Seal installation.

**End Thrust:** #3 (center bearing). Endplay .004-.008"

**CAMSHAFT:** 5 bearing. Non-adjustable chain drive.  
 Bearing Diameters (All Series)—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearing Type:** Steel-backed, babbitt bushings.  
 Clearance—.0005-.0035".

**End Thrust:** Thrust plate between front bearing and camshaft sprocket. Endplay—.004-.008".

**Timing Chain:** Link belt. Width 1". Pitch .500". Length 49 links or 24 1/2" (40, 50), 50 links or 25" (70).

**Camshaft Setting:** Mesh copper-plated washers on chain (10 links apart) with sprocket marks (crankshaft and camshaft turned so that marks are up).

VALVES:				
Series 40, 50				
	Head Diameter	Stem Diameter	Length	
Intake	1 17/32"	.3715-.3725"	5 7/64"	
Exhaust	1 11/32"	.3715"	5 7/64"	
	Seat Angle	Lift	Stem Clearance	
Intake	45°	.348"	.0015-.0035"	
Exhaust	45°	.342"	.0021-.0039"	

## Series 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3720"	5 1/4"
Exhaust	1 7/16"	.3715"	5 1/4"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"	.0015-.0035"
Exhaust	45°	.348"	.0021-.0039"

**Valve Guides:** Press fit in head. Install with stepped end up. Ream for proper clearance of valve stem.

**Valve Springs:** Double Springs on all valves. Spring free length 1 29/32" (inner), 2 11/32" (outer).

Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
Closed	20 lbs. 1 21/32"	32 lbs. 1 15/16"	
Open	51 lbs. 1 5/16"	77 lbs. 1 19/32"	

**Valve Lifters:** Diameter .9975-.9985". Barrel type.  
 Clearance—.0005-.0025".

**Rocker Arms:** See Buick Shop Notes.

## VALVE TIMING

▶ **Tappet Clearance:** CAUTION—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.

**Valve Timing:** See Camshaft Setting above.

**Timing Points (Valve .004" Open)**

Series 40, 50			
Intake Valves—Open	13° BTDC.	Close	68° ALDC.
Exhaust Valves—Open	55° BLDC.	Close	22° ATDC.

**Series 70**  
 Intake Valves—Open 14° BTDC. Close 71° ALDC.  
 Exhaust Valves—Open 56° BLDC. Close 25° ATDC.  
**Valve Timing Check:** With .015" tappet clearance, #2 or #7 exhaust valve should be .145" open (Series 40, 50), .155" open (Series 70), with #1 & 8 pistons at top dead center and flywheel mark "UDC/18&8" at indicator in inspection hole in right front face of housing. NOTE—This is actual valve opening and should be checked with dial indicator mounted on cylinder head.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing chain, and rocker arms. Oil pump mounted in crankcase. NOTE—Screen located in cylinder head under rocker arm oil lead restricted fitting should be removed and cleaned at 10000 mile intervals (disconnect oil line and remove fitting).

**Crankcase Capacity—Refill—**5 1/2 qts. (40, 50), 7 qts. (70). Dry Capacity 6 1/2 qts. (40, 50), 8 qts. (70).

NOTE—If oil filter is dry, add 1 1/2 qts. to capacities.

**Normal Oil Pressure—**35 lbs. at 35 MPH.

**Oil Pressure Regulator—**On oil pump housing.

Opens at 45 lbs. No adjustment.

**Oil Pump:** See Buick Shop Notes.

**Crankcase Ventilation:** Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

**Servicing—**Wash both filter elements in kerosene every 5000 miles (when carb. air cleaner serviced).

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap. Re-circulation of water through engine (with thermostat closed) is controlled by separate spring-loaded by-pass valve

**Capacity—**Without Heater—13 qts. (40, 50), 16 3/4 qts. (70). With heater—14 1/4 qts. (40, 50), 18 qts. (70).  
**Pressure Valve—**AC No. 850509 (Std. pressure cap). Opens at 7 lbs. (std.), 13 lbs. (Dynaflow cars).

**Water Pump:** Packless, sealed ball-bearing type.

▶ **1948 NOTE—**2 types of pumps used (different seal design), interchangeable as assemblies (parts not furnished for first type). NOTE—Pumps identified by casting number 1330139 (1st), 1336756 (2nd). See Water Pump Section for complete data.

**Belt Adjustment—**See Generator Belt Adjustment.

**Thermostat:** Harrison. In cylinder head water outlet.  
**Setting—**Starts to open 152°F. Fully open 173°F.

**Temperature Gauge:** AC 1511070 '46-47, 1512091 '48.  
 See Miscellaneous Section for complete data.

## CLUTCH

**Own Make with Borg & Beck or Long Driven Member.** Single plate, dry disc type. Series 40, 50 clutches are "Crown Spring" type.

See Clutch Section for complete data.

**Facings—**Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
Series 40, 50	6"	10"	.125" (1/8")
Series 70	6 1/2"	10 1/2"	.125" (1/8")

**Pedal Adjustment:** Free travel 3/4-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toeboard.

**Clutch Over-Center Spring:** See Buick Shop Notes.

**Removal:**—Remove Rear Axle & Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

## TRANSMISSION

**Own Make.** All Helical Gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with steering column mounted shift control. See Transmission Section for complete data.

**Transmission Control:** Buick type remote control. See Transmission Section for complete data.

**Removal (1946-47):** Remove Rear Axle, then remove rear transmission support (wire shims to ends of support for correct replacement) and steady rest rod, place engine jacks (J-1580) on frame cross member with pilot end in hole in housing at each side of engine mounting, tighten jacks to take load off mounting, remove selector and shift levers, transmission mounting bolts (install guide pins J-851), remove 2 nuts freeing rear engine mounting (bolt heads seat in notches), adjust jacks to take strain off mounting bolts, remove transmission. See Buick Shop Notes for Transmission Support Mounting adjustment data on 1946-47 cars.

**Removal (1948):** Disconnect Rear Axle (see Rear Axle), drain transmission, fill with clean gasoline or kerosene and run approx. 15 seconds in Neutral, drain cleaner. Disconnect speedometer cable, lower shift rod, and selector rod. (On 40, 50 only, take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever). Install support bar (see Note

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out 2 attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

*For instructions on Shimming Rear Mounting when installing transmission on 1948 cars, see "Engine Mountings" in Buick Shop Notes.*

**Engine Support Bar Note**—Consists of length of 2 x 4 (approx. width of frame) with hole through each end to take hooked rods (hook rests on top of frame. Raise and lower support by nuts on rods. **Lubrication Note**—When transmission reinstalled in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

## DYNAFLOW DRIVE

## OPTL. ON 1948 ROADMASTER SERIES 70

**Own Make.** Torque Converter and hydraulically operated planetary unit with manual control. *See Transmission Section for complete data.*

- **Throttle Linkage Adjustment and Dash Pot Setting on Dynaflo Drive Cars:** See **CARBURETOR**. **Lubrication**—Check fluid level in transmission every 1000 miles, drain and refill every 10,000 miles.
- **Use only Special Buick Oil for Dynaflo Drive.** Capacity—11 quarts.

**Checking Fluid Level**—Engine must be idling with selector lever at "N" (neutral) and transmission oil warm. Raise right side of floor mat, take off cover in floor above transmission, lift out oil gauge rod. Add fluid to "FULL" mark level with engine idling.

- **CAUTION**—Engine must be idling with transmission in Neutral and transmission oil warm when checking Dynaflo Drive Fluid Level.

## UNIVERSALS

Saginaw (All Series) or Spicer 202-13X (40, 50). One used (in torque ball at rear of transmission). *See Universals Section for complete data.*

## REAR AXLE

**Own Make.** Hypoid Gear, Semi-floating type with Torque Tube Drive. *See Rear Axle Section for data.*

- **CAUTION**—Gear Set and Case Assembly on 1946-47 cars are heavier than parts used on 1942 cars. *See Buick Rear Axle article in Rear Axle Section for parts identification and interchangeability data.*
- Ratio**—4.454-1: Std. 40, 50. 4.1-1: Std. 70 and Late Dynaflo, Optl. 40, 50. 3.9-1: Std. on Early Dynaflo. 3.64-1: Optl. 70.
- Backlash**—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car. Disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs (tie springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car.

- **CAUTION**—Torque tube should not be disconnected from carrier (except for gasket replacement).

**Axle Shaft Removal:**—See Buick Rear Axle article. **Wheel Bearing Adjustment**—None.

**Rear Suspension:** Coil springs & conventional axle. *See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

Delco Model 1948-A (front), Model 2105-C,D (rear). Double acting, hydraulic (parallel cylinder rear). *See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4¼° crosswise for ¾° Camber. **Camber**—¾° Positive (⅛° Pos. to ⅝° Neg.) and equal for both wheels within ¼°. At curb weight. **Caster**—¾° Positive (¼° Pos. to 1½° Pos.) equal for both wheels within ½°. At curb weight. Adjustable. **Toe In**—1/16-¼". Adjust both tie rods equally. **Steering Geometry (Toe out on Turns)**—With outer wheel turned 20°, inner wheel turned 21½° ± ¾°.

## STEERING GEAR

Saginaw, Ball bearing Worm-and-Nut type. *See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Parking "Step-on" lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums**—Cast Iron type, Diameter 12".

**Lining**—Moulded type (all shoes). Width 1¼" (40, 50), 2¼" (70). Thick. 3/16". Lgth. per whl. 23 1/16". **Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Hand (Parking) Brake:** See Service Brakes (above). **NoRd:** Optional. *See Brake Section for complete data.*

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure). *See Miscellaneous Section for complete data.*

**HOOD ASSEMBLY****1938-40 MODELS**

**HOOD & SIDE PANEL REMOVAL:** Hood hinged at cowl and lifts from forward end. To raise hood, tilt radiator ornament back to free manual catch and automatic safety catch (See Note below), grasp forward edge of hood and lift up. **NOTE**—1938 V8 Models and all V16 Models equipped with manual safety catch under front edge of hood.

**Side Panels**—Upper corners secured by 2 bolts ('38), 2 screws ('39 & '40). Lower edge held by clips (all '38, V8 except '75 '39, V16 '40), by thumb-screws ('75 & '90 '39), by three screws (V8 '40). To remove panel, take out screws or loosen bolts in upper corners, free lower edge by freeing from clips or removing screws, lift panel off.

**Side Panel Rattle Note 38-50**—To eliminate rattles at panel clamps along lower edge, install short rubber tubes (Part No. 1428136) over clamp ends. Loose horizontal chrome strips on side panels may be tightened by removing panel and crimping louvre metal at points where strips have loosening in service. Rubber wedges (Part No. 1428099) to be installed between vertical braces and metal vanes of louvres are available to correct chrome strip rattle.

**1941-47 MODELS**

**HOOD LOCK:** Radiator ornament controls manual and automatic safety catch. To raise hood, tilt ornament back, lift up on forward edge of hood. **CAUTION**—Do not hold radiator ornament down when closing hood (will damage manual catch).

**Hood Latch Bar Adjustment**—Hood latch bar should be  $\frac{3}{4}$ " above lower edge of hood reinforcing panel (under hood nose) with radiator ornament down. This clearance can be obtained by lengthening or shortening radiator ornament link at turnbuckle. Latch bar catches on radiator shroud provided with elongated mounting holes and catches should be moved forward until hood fits snugly when closed.

**1948 MODELS**

**HOOD LOCK (60S, 61, 62):** Hood hinged at cowl with locking handle at lower left side of instrument panel. Safety catch under front edge of hood.

**Lock Plate Adjustment**—Loosen four lock plate capscrews at radiator shroud, lower hood slowly to allow pilot to center lock plate, raise hood without disturbing position of plate, tighten capscrews. Check hood safety catch as directed below.

**CAUTION**—If lock plate tightened out of position, it is possible hood may be locked so that it cannot be opened.

**Hood Lock Control Cable Adjustment**—Raise hood, push hood lock handle on instrument panel in, loosen lock cable anchor block screw, adjust for  $\frac{1}{16}$ " clearance between anchor block and lock plate action lever, tighten anchor block screw.

**Hood Safety Lock Catch Adjustment**—Raise hood, loosen 2 safety lock catch capscrews on radiator shroud, lower hood until safety latch engages catch, position catch for a minimum of  $\frac{1}{4}$ " engagement on latch, tighten capscrews.

**1948 MODELS**

**HOOD LOCK (75, 76):** Hood hinged at cowl with radiator ornament hood lock. Ornament controls both lock and safety catch.

**Hood Ornament Adjustment**—Close hood, set ornament on high point of cam (midway between locked and unlocked position), insert  $\frac{1}{4}$ " drill between goddess and top of ornament base just ahead of and

touching ornament hook (setting correct when drill touches at these three points). To adjust, loosen lower jam nuts, shift striker pin to rear (if clearance excessive) or to front (if insufficient clearance), tighten jam nuts. Tension to unlock hood should be 25-30 lbs. (check with spring scale hooked under neck of goddess). Adjust by raising or lowering striker pin and roller (without disturbing fore-and-aft position).

**1941 MODELS**

**HOOD REMOVAL:** Hood and side panels are integral. To remove hood, raise hood and prop front end up. Remove counter-balancing springs by removing clevis pin on cowl at top of springs (41-60S only), use tool J-1638 to remove springs at bottom (all other models). Remove two shoulder capscrews from hood links-to-cowl bracket, lift hood off. **CAUTION**—Do not loosen or remove cowl brackets which control hood alignment.

**Hood Alignment**—If hood alignment necessary when hood re-installed, see Front Sheet Metal Assembly Alignment below for directions.

**Hood Spring Note**—Right and left hood springs not interchangeable. Install springs with top hook off-set toward rear of car.

**1942-47 MODELS**

**HOOD REMOVAL:** All Models except 75. To remove hood, raise hood and prop front end up. Disconnect hood prop at each side by taking out pivot pin in lower end of prop at fender alignment bracket. Mark hood hinge position on cowl (when re-assembled to these marks hood alignment will be retained). Remove three cap screws at each hinge and lift off hood assembly.

**Model 75**—To remove hood, raise hood, prop front end up. Remove counter-balancing springs at bottom using Tool J-1638, take out two shoulder cap screws from hood links to cowl bracket, lift off hood.

**1948 MODELS**

**HOOD REMOVAL:** Remove nut in strainer at hood center moulding. Take out two hood-to-hinge bolts at each hinge (if shims used at this point, replace same number when reassembling). Lift off hood panel.

**Hood Alignment**—Hood fit to cowl can be adjusted by adding or removing shims at hood-to-hinge bolts. Hood panel bolt holes are enlarged to permit fore-and-aft or side-to-side hood adjustments.

**FRONT END SHEET METAL****1941 MODELS**

**FRONT GRILLE REMOVAL:** Raise hood, disconnect parking light wires. Remove six Phillip's head screws from radiator grille-to-fender at front, six countersunk screws from radiator grille-to-shroud top flange. Lift radiator grilles out and remove parking lights from back of grilles. To remove vertical fins, remove attaching clips holding fins in place and disassemble fins.

**Grille Alignment**—If grille alignment required when grilles re-installed, see Sheet Metal Assembly Alignment below for directions.

**1942-47 MODELS**

**RADIATOR GRILLE REMOVAL:** All Models (exc. 75). Raise hood, disconnect parking light wires at fender junction blocks and remove parking lights. Take out grille-to-fender screw behind each parking light and cross recessed grille-to-fender screw below light. Take off fog lamp bezel (or cover plate if lamp not used), remove two hex head screws under each bezel. Disconnect fender-to-bumper

shields from each end of central grille-to-bumper shield by removing 2 screws in each end of central shield. Remove grille to lower air deflector screws (one at each side) and 2 grille to center air baffle. Take off rubber hood pilot and remove six countersunk grille-to-radiator shroud top flange screws. Tilt grille forward and lift grille off car.

**Model 75**—Raise hood, disconnect park light wires. Remove six cross recessed radiator grille-to-fender screws at front, six countersunk radiator grille-to-shroud top flange screws. Lift radiator grilles out and remove parking lights from back of grilles. Remove vertical fins by taking off attaching clips.

**1948 MODELS**

**RADIATOR GRILLE REMOVAL:** Remove bumper (take out 2 bolts in mounting bracket on each side of frame). Remove painted lower grille fin (2 bolts in each end, 4 bolts along rear edge at bottom). Take out 6 cross head screws from top of grille, remove anti-squeak (between grille and shroud), remove grille.

**Grille Installation**—Reverse removal instructions.

**1948 MODELS**

**RADIATOR SHROUD REMOVAL:** Remove radiator grille (see above). Remove wiring harness from shroud after disconnecting wires at right front fender junction block and at horns. Remove horns and hood lock plate. Remove all bolts and capscrews around edge of shroud and fender-to-fender support bolts. Move right front fender away from shroud after loosening 4 fender-to-frame bolts. Lift out shroud.

**Shroud Installation**—Hold shroud in position by installing 4 capscrews at top of shroud to radiator support. Reverse removal instructions (above) but fender-to-fender support bolts should not be tightened until hood lock plate has been adjusted properly (see HOOD LOCK above) and fender-to-hood alignment has been made. Then tighten fender-to-fender support bolts and 4 fender-to-frame bolts at right fender.

**1940 MODELS**

**FRONT SHEET METAL ASSEMBLY:** Radiator, radiator grilles and front fenders all bolted together (may be removed or installed as a unit). One bolt in center of radiator support engages enlarged hole in frame front cross member (enlarged hole permits moving entire assembly fore-and-aft, shims under mounting bolt control height). Fender-to-body bolt holes also enlarged to permit shifting assembly.

**Alignment**—Assembly must be aligned in following order: 1) Install and center hood (proper clearance at cowl must also be secured). 2) Install fender and grille assembly (leaving bolts loose), align with hood and tighten bolts. 3) Adjust radiator tie rods and tighten for snug fit (check radiator shutter for free movement). **NOTE**—Do not attempt to change front end alignment by shifting tie rods

**1941 MODELS**

**FRONT SHEET METAL ASSEMBLY ALIGNMENT:** Assembly consists of Hood, Fenders, Radiator Core, Grilles and casings, baffles, and cradle assembly. Individual parts may be removed and installed separately without affecting alignment but if most parts removed, or if alignment required, entire assembly should be aligned as follows:

**Alignment**—With fenders off, assemble radiator core, grille casings, baffles, and cradle assembly loosely on front cross-member. Install hood loosely

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

on cowl hinge brackets and see that brackets are loose on cowl. With hood down, push cowl hinge brackets up until links strike on brackets (41-60S) or on hinge bracket flange (all other models), install lower front cowl hinge bracket-to-cowl bolts and tighten securely. Force back end of each bracket down (loop wire over notch in ear at back end of bracket and pull down on wire with pry bar hooked under frame) so that hood wrapped tightly to cowl, tighten lower rear bolt on each cowl hinge bracket securely, raise hood and tighten upper bolt in each bracket securely. Assemble front fenders loosely to radiator casing and baffle assemblies, remove kick pad in front compartment, install rear fender bolt nuts loosely from inside car. Align fenders to hood, door panel, and radiator casing assembly and tighten all mounting screws and nuts securely. Tighten radiator assembly on front cross-member (shim cradle, if necessary, to keep fenders aligned).

**Front Fender Tail Alignment (41-60S)**—Loosen screw in front face of door under weather strip and two screws in bottom face of door and align fender tail to front fender. Tighten screws.

**Sheet Metal Clearances**—3/32" at hood-to-fender catwalk and hood-to-radiator casing, 1/8" at hood-to-cowl (at top) and hood-to-door (at top), 5/32" hood-to-door (at bottom).

## 1942-47 MODELS

## FRONT SHEET METAL ASSEMBLY ALIGNMENT:

All Models except 75. Entire alignment procedure listed below required where Front Sheet Metal Assembly has been removed or disassembled. Where one piece only removed, follow procedure for that particular part. After radiator cradle, shroud assembly, grille and front fenders have been assembled loosely, align parts in following order:

1—Hood. With hood down, push hinge brackets up until link strikes on brackets, then tighten lower front bolt on both brackets. Force rear end of each bracket down (loop wire over notch in ear at rear end of bracket and pull down on wire with pry bar hooked under frame) so that hood wrapped securely to cowl with 1/8" hood-to-cowl clearance, tighten lower rear bolt with brackets held in this position. Raise hood and tighten upper bolt in each bracket.

2—Grille. Tighten screws at front end attaching radiator grille, shroud assembly, front fenders and shields. Fit top of grille with hood contacting six rubber bumpers evenly and securely. If proper fit not secured, shift entire front end assembly (shims between radiator support and bracket on frame control up-and-down positioning, enlarged radiator support hole permits fore-and-aft and crosswise positioning). With front end assembly properly positioned, tighten support bolt securely.

3—Fenders. Shift rear end of fenders to secure 1/8" clearance with hood and front edge of doors (bolt holes in cowl and fender brackets enlarged to allow proper positioning at these points). After correct clearance obtained, tighten bracket bolts first, then tighten fender-to-body bolt just ahead of rear bulkhead. With fender screws and bolts securely tightened, adjust fender dust shield plate under fender so that rubber anti-squeak around plate makes tight contact with underside of fender (this tight fit must be secured to prevent dirt and splash entering engine compartment), then tighten 9 plate-to-fender screws, 4 (5 on left) plate-to-frame bolts.

4—Fender Extension. Enlarged attaching bolt holes permit vertical and horizontal positioning of extension with bottom of fender. To obtain clearance for top of fender extension with door open, fenders must be adjusted (See Fenders above).

5—Fender Moulding. Moulding on fender must be positioned to line up with extension moulding since this extension moulding can be adjusted up-and-down at the front only.

6—Rocker Sill Extension. This extension bolted to body and is adjustable fore-and-aft to permit its being bolted to rear of fender. Vertical positioning required for 5/32" fender extension clearance.

## FRONT FENDERS

## 1942-47 MODELS

## FRONT FENDER REMOVAL: All Models except 75.

Front fender can be removed as follows; Raise hood, disconnect all wires at fender junction block, remove air intake tube by disconnecting tube at fender and dash. Take off parking lamp and remove radiator grille-to-fender screw behind light, and cross recessed grille-to-fender screw below light. Take off fog lamp bezel (or cover plate if lamp not used), remove two hex head screws under each bezel. Free fender-to-bumper shield from center bumper shield by taking out two screws. Remove screws at rear of fender (two at rocker sill, one at body at lower corner of fender). Remove fender dust shield plate under fender by taking out nine fender-to-plate screws and four (five on left fender) plate-to-frame bolts. Remove two fender-to-bracket screws at cowl and three fender-to-radiator shroud screws (from below). Free fender by taking out fender-to-fender support bolt (from above)

## 1948 MODELS

**FRONT FENDER REMOVAL:** Remove wheel and bumper. Disconnect headlamp wires at junction block. Remove flexible air hose. Remove fender bolts as follows: 1 bolt at cowl, 2 nuts at rocker panel extension (under Fender), 2 fender splash pan-to-frame bolts, 3 frame side bar bolts, 1 lower radiator shroud bolt, 2 lower grille fin bolts, 4 radiator shroud bolts at top, 1 fender support bracket bolt. Work fender to front to clear door moulding, remove fender.

**Left Front Fender Note.** In addition to the above the following must also be removed to take off left fender: Remove wiring harness from clamp on air duct. Free hood lock cable from fender. Remove Windshield Washer Assembly. Disconnect antenna lead and hoses. Remove fuel line clamp from fender and disconnect gas line from fuel pump.

**Front Fender Installation**—Reverse removal instructions given above. Fender bolt holes are enlarged for fore-and-aft positioning and can be raised or lowered to fit door and hood by use of shims at fender-to-fender support bolt and at fender-to-cowl bolt.

## ENGINE REMOVAL

## 1942-48 MODELS

**ENGINE REMOVAL:** Remove the engine assembly from car as follows: Jack up all four wheels and install a stand at each wheel, drain cooling system; disconnect battery cables, engine ground strap (at right front engine support), universal joints at each end of propeller shaft, and support engine at rear with a bar or jack. Loosen transmission and slide

back into frame X-member and place support under front end of transmission. (NOTE—Hydra-Matic transmission must be removed from car—Refer to Transmission Section for the Hydra-Matic Drive article for removal data). Remove clutch release mechanism from clutch housing. Take off hood (see Hood Removal above). Disconnect and remove accessories from cowl and engine (heater hose, radio ground cables, windshield washer, etc.). Take off all water hoses, air cleaner, carburetor, carburetor control linkage, fan belt, generator and water pump belt, generator, fan, and distributor. Disconnect exhaust pipe at right manifold and gasoline line at fuel pump. Place board or piece of sheet metal over radiator core to prevent damage to core while hoisting engine out of car. Loop rope under crankshaft pulley, then up and around exhaust crossover manifold. Attach hoist to rope and tighten hoist to take slack out of rope, then disconnect front engine supports (one on each side). Engine can then be lifted out of chassis.

1948 Cars—Remove distributor on these cars to avoid hitting cowl when engine hoisted from chassis.

## CYLINDER HEAD

## 1936-48 MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in sequence from the center of the head outwards. Cast Iron heads should be tightened cold and rechecked after the engine has been run and thoroughly warmed up.

V8 Models. Two capscrews at water outlet connection are 1/2" longer and must not be used at any other location (will break through water jacket and damage block). These capscrews may be identified by larger head.

V16 Models. Install short capscrews along lower edge of head, coat all screws with white lead before installation (necessary to prevent water leaks).

## CADILLAC &amp; LA SALLE V8

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## 1938-40 MODELS

## CYLINDER HEAD IDENTIFICATION (V8 MODELS):

Cadillac 72, 75; La Salle 50, 52. Same cylinder head used on both (provides higher compression ratio on 72, 75). All production cylinder heads marked with piston displacement and compression ratio as follows: Right Hand Head 322-625 and 346-670, Left Hand Head—322-625 (La Salle 50, 52), 346-670 (Cadillac 72, 75). Replacement heads marked with both ratios (both right and left hand heads).

1938 Note—Early 346-670 heads marked 346-680.

Cadillac V8 (except 72, 75) — These engines equipped with cylinder heads having 6.25-1 ratio. These heads must be used on these models only.

## 1937-48 MODELS

**LOWERING COMPRESSION RATIO:** Special shims available for installation between cylinder head and block to reduce compression ratio for use of low octane fuel or special operating conditions.

**ORIGINAL BORE & PISTONS****1941-48 MODELS****ORIGINAL PRODUCTION ENGINE BORE & PISTON**

**SIZES:** Cylinder bores and pistons graded in sizes listed below. Can be identified as follows:

**Cylinder Bore Marking**—Letter stamped on top of block at outer edge of cylinder bore and position of letter indicates size variation as follows:

1941-42 Models—3 sizes for each letter. "—" if letter to left of bore center, "+" if to right of bore center, centered under bore if not "+" or "—".

1946-47-48 Models—2 sizes for each letter. "—" if letter to left of bore center, "+" if to right of bore center.

**Piston Marking**—Letter is marked on piston head.

1941 Piston & Cylinder Sizes		
Letter①	Piston Size	Cylinder Size
A	3.4979-3.4981"	3.5000-3.5002"
B	3.4981-3.4983"	3.5002-3.5004"
C	3.4983-3.4985"	3.5004-3.5006"
D	3.4985-3.4987"	3.5006-3.5008"
E	3.4987-3.4989"	3.5008-3.5010"
H	3.4989-3.4991"	3.5010-3.5012"
J	3.4991-3.4993"	3.5012-3.5014"
K	3.4993-3.4995"	3.5014-3.5016"
L	3.4995-3.4997"	3.5016-3.5018"
M	3.4997-3.4999"	3.5018-3.5020"

1942-48 Piston & Cylinder Sizes		
Letter①	Piston Size	Cylinder Size
A	3.4976-3.4978"	3.5000-3.5002"
B	3.4978-3.4980"	3.5002-3.5004"
C	3.4980-3.4982"	3.5004-3.5006"
D	3.4982-3.4984"	3.5006-3.5008"
E	3.4984-3.4986"	3.5008-3.5010"
H	3.4986-3.4988"	3.5010-3.5012"
J	3.4988-3.4990"	3.5012-3.5014"
K	3.4990-3.4992"	3.5014-3.5016"
L	3.4992-3.4994"	3.5016-3.5018"
M	3.4994-3.4996"	3.5018-3.5020"

①—Cylinder bore letter to left of center of bore indicates —, to right of center +.

**CAUTION**—Cylinder bores should always be measured with micrometer to make certain that bore has not been enlarged in field without being marked 'oversize'.

**PISTONS****1937-42 MODELS**

**REPLACEMENT PISTONS (WITH RINGS AND PIN):** aluminum alloy, T-slot, cam ground pistons with anodized finish furnished for service in sizes (with piston skirt diameter limits) listed below.

**V8 Engine Note**—Starting with 1939 engines, pistons have wider top land with narrower (3/32") top compression ring (1/8" ring prior to 1939).

CADILLAC V8 & LA SALLE V8 (Up to 1941)		
Nominal Size	Piston Skirt Diameter	
Standard .....	La Salle V8	Cadillac V8
Standard .....	3.3726-3.3746"	3.4979-3.4999"
.010" Oversize .....	3.3831-3.3846"	3.5084-3.5099"
.020" Oversize .....	3.3931-3.3946"	3.5184-3.5199"
.030" Oversize .....	3.4031-3.4046"	3.5284-3.5299"

CADILLAC V8 (1942)	
Nominal Size	Piston Skirt Diameter
Standard .....	3.4976-3.4996"
.010" Oversize .....	3.5084-3.5099"
.020" Oversize .....	3.5184-3.5199"
.030" Oversize .....	3.5284-3.5299"

CADILLAC V16 (1938-40)	
Nominal Size	Piston Skirt Diameter
Standard .....	3.2483-3.2503"

**CAUTION**—Cylinder bores should always be measured with micrometer (1 1/4" below top of block and at right angles to crankshaft) to make certain that bore has not been enlarged by refinishing in the field without being marked 'oversize'.

**1946-47-48 MODELS****REPLACEMENT PISTONS (WITH RINGS AND PIN):**

Three ring type pistons with piston rings placed lower on piston to provide better lubrication and reduce scuffing. Finished replacement pistons are furnished in the following sizes:

Nominal Size	Piston Skirt Diameter
Standard .....	3.4979-3.4999"
.010" Oversize .....	3.5089-3.5099"
.020" Oversize .....	3.5189-3.5199"
.030" Oversize .....	3.5289-3.5299"

**1941-48 MODELS**

**FITTING NEW PISTONS:** Pistons should be fitted by Micrometer Gauge Method or Feeler Gauge Method as described below to the following Skirt Clearance (with proper allowance for temperature variation):

Year	Skirt Clearance①
1941 Engines .....	.0020-.0022"
1942-48 Engines .....	.0023-.0025"
①—This is proper clearance with engine block and piston at 70° F. Subtract .0001" clearance (or 2/5 lb. pull on feeler gauge) for each 5.5° increase in piston temperature over 70°, add .0001" clearance (or 2/5 lb. pull) for each 5.5° decrease in piston temperature below 70°.	

**Micrometer Gauge Method:**—Measure cylinder bore with micrometer gauge at point 1 1/4" below top edge and at right angles to crankshaft. Set inside micrometer at cylinder bore size, then measure this gauge length with same outside micrometer used to measure piston. This method will eliminate any error introduced by using different gauges to measure cylinder and piston. Use outside micrometer to measure piston diameter at upper corner of "T" slot (adjacent to "T" slot and 1/8" below horizontal slot —piston must be measured at this point since skirt tapered with .0005-.002" larger diameter at lower end). Select piston of correct size to give skirt clearance listed above.

**Feeler Gauge Method:**—Use 1/2" feeler stock .002", .0025", or .003" thick (see Feeler Gauge Note and table below) on side of piston directly over "T" slot (center feeler on slot) with lower rounded end of feeler extending 1/2" down on piston skirt past horizontal slot (feeler must not extend further down on piston skirt because skirt is tapered with greater diameter at bottom). Install piston and feeler in cylinder with piston right side up and feeler toward side, measure pull required to withdraw feeler. Pull will vary in accordance with thickness of feeler gauge used and with piston temperature. See table below for correct pull for each feeler gauge thickness to obtain proper skirt clearance listed above.

Feeler Pull	Piston Clearance (70°F.)		
(In lbs.)	.002" Feeler	.0025" Feeler	.003" Feeler
1	.00225"	.00275"	.00326"
2	.002"	.00252"	.00304"
3	.00175"	.00228"	.0028"
4	.0015"	.00205"	.00258"
5	.00125"	.00182"	.00235"
6	.001"	.00157"	.00213"
7	.00075"	.00133"	.0019"

CONTINUED N NEXT PAGE

## C N TINUED FR M PRECEDIN PA E

**Feeler Gauge Note**—Feeler gauges used for piston clearance measurement should be clean and smooth with lower end rounded. Rusted or wrinkled feelers should be discarded and rough edges should be honed to prevent scratching cylinder wall.

**PISTON RINGS****1946-47-48 MODELS**

**REPLACEMENT PISTON RINGS:** Piston rings are furnished separately and as sets for these engines as listed below. Rings are new types as follows:

**Compression Ring**—Type 200. Rings are 5/64" wide with "recess" or step on inner edge and must be installed with this step upward.

**Oil Ring**—Type XWS 85. Slotted type.

**Piston Ring Part Numbers**

Size	Compr. Ring	Oil Ring	Ring Set
Standard	.....1451157.....	.....1451710.....	.....1097584
.010" Oversize	.....1451619.....	.....1451711.....	.....1097585
.020" Oversize	.....1451617.....	.....1451712.....	.....1097586
.030" Oversize	.....1451618.....	.....1451713.....	.....1097587

**PISTON PINS****1936-40 V8 MODELS**

**PISTON PIN SERVICING (V8 MODELS):** Removal. Heat piston in boiling water to expand pin hole, push pin out by hand from ribbed boss end (one boss marked by raised rib on underside within piston). Do not use arbor press to remove pins.

**Pin Bushing in Connecting Rod:**—Split type. Press out old bushing in arbor press (use sudden jerk to start bushing). Use special tool kit No. HM-250 to install new bushings. Insert bushing with split at right angles to rod center-line, and oil hole lined up with oil hole in rod, press bushing into rod with special bushing replacer and arbor press. Finish bushing by pressing burnishing bar through bushing (use kerosene as lubricant) using 2 or 3 ton arbor press, check pin fit, repeat burnishing operation until correct clearance secured.

**Installing Pin:**—Heat piston in boiling water, coat pin with engine oil, press pin in by hand from side opposite ribbed boss.

**1941-48 MODELS**

**PISTON PIN FITTING:** Piston pin holes in piston have bearingized finish and, if oversize pins are installed, holes should be honed to proper size as follows: Use Piston Pin Hone, Part No. KMO-336, mount hone in vise and revolve piston on hone slowly by hand—do not use electric drill to drive hone. Use very fine abrasive (Grit No. 240A), washing abrasive out frequently with gasoline or kerosene. **CAUTION**—Always wash piston thoroughly before inserting pin to gauge for size. Pins should be a free hand press fit in each piston boss with no perceptible play at 70° (clearance .0001-.0003" '41, .00005-.0001" '42-48).

**1938-40 V16 MODELS**

**PISTON PIN REMOVAL & INSTALLATION V16:** Rod web split at pin hole with clampscrew below pin (pin hole not split open) and pin must be removed and installed as follows: With locking screw removed, use tool J-1187 to spread split end of connecting rod, then tap pin out of piston and rod with brass drift. Install in same manner.

**CONNECTING ROD & BEARINGS****1936-48 MODELS**

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Connecting rod and main bearing clearance

can be checked as follows: Remove cap, wipe crankshaft journal and bearing insert free of oil, place piece of Plastigage across bearing, install cap (on connecting rods, crank pin should be at bottom dead center), tighten cap bolts to specified torque (see Tightening Specifications). Remove cap, check widest width of flattened Plastigage with scale on envelope. Replace rod bearings if over .0045", main bearings if over .005".

**1937-48 MODELS**

**CONNECTING RODS (V8 MODELS):** Rods are split at an angle at lower end to permit removal through top of block. Caps doweled in rod and held by special capscrews (unequal length) with lockwashers.

**Removal (Starting 1939)**—Car manufacturer recommends that connecting rod bearing caps be removed as follows: Use a blunt brass punch approx. diameter of bolt head and 3 or 4" long, place punch against bolt head directly in line with bolt, tap punch solidly with a heavy hammer which will loosen bolt threads. Use Connecting Rod Bolt Remover Tool J-1498 (assemble socket on bolt head, turn down hexagonal cap on lower end of tool until wrench wedged in position between floor and bolt to be removed) and loosen bolt by turning T-handle.

**Installation**—Special type connecting rod bearing cap bolts and lock washers used. When tightening bolts use a wrench with 12" handle (do not use Remover Tool J-1498 to tighten bolts). Numbers on rods must be toward bottom of engine and correspond and be on the same side as number on cap.

**Bearing Removal & Installation**—Bearing shells should be replaced when clearance exceeds .0045". Bearing shells can be replaced by taking off caps as described above, rods need not be removed. Bearing halves not interchangeable (upper half has oil holes for piston pin and cylinder wall lubrication). Install bearing shells with tangs engaging grooves in cap and rod. Align oil holes in upper half and rod.

**CRANKSHAFT & MAIN BEARINGS****1937-48 MODELS**

**MAIN BEARING SERVICING:** Bearing Removal. Bearing upper halves can be 'rotated' out without removing crankshaft. Install flattened cotter pin in oil hole in crankshaft so that pin engages bearing, turn crankshaft in reverse direction to push bearing out.

**Main Bearing Installation**—Clean all oil lines and the crankcase thoroughly. Then install the new upper bearing halves in same manner as old bearings removed ('rotate' bearings in place with cotter pin installed in oil hole, make certain that locating lug is in correct position).

**Rear Main Bearing Oil Seal Installation**—Remove crankshaft and rear main bearing shells (to avoid damage), clean all old packing out of groove in crankcase and bearing cap, use tool J-1177 to install new packing as follows: Install length of new packing in groove in crankcase, drive packing up into place with tool J-1177 by pounding on tool handle with hammer, hold tool in position and cut off each end of packing flush with bearing edge. Install packing in bearing cap in same manner. When installing rear main bearing cap in engine, install new cork plugs in grooves on each side of bearing cap to prevent oil leaks at this point. Plugs should be well greased to facilitate installation.

**CAMSHAFT & BEARINGS****1936-48 MODELS**

**CAMSHAFT:** Removal—Remove engine front dust pan, fan, generator, carburetor and manifolds, distributor, fuel pump, valve lifter assemblies, radiator core, crankshaft pulley, timing chain cover, camshaft retaining plate, and camshaft.

**1941 & Earlier Models**—Front Grille must also be removed to take out camshaft on these cars.

► **CAUTION**—Camshaft thrust plate must be installed with widest space to left of camshaft (to the right when viewed facing front of engine).

**Camshaft Bushing Servicing**—Remove old bushings by pressing them out of bearing supports using tool J-829 (transmission and flywheel housing must be removed to take out rear bushing). To install new bushings, coat bushings with white lead, install front bushing first, then rear bushing, finally center bushing. Use tool J-829 to press bushings in place and pilot tool in two other bushings while pressing third bushing in place. **CAUTION**—Make certain that oil holes in each bushing lined up with oil leads in support.

**1938-40 V16 MODELS**

**CAMSHAFT SERVICING (V16 MODELS):** Camshaft must be removed for all service operations.

**Removal & Installation:**—Remove front end assembly (radiator & ftr. fenders) as unit, disconnect the flexible pipes from gasoline lines to fuel pumps and jack up front of engine, remove crankshaft balancer and pulley, chain case cover, timing chain and camshaft sprocket, valves, valve lifters, vacuum pump and operating plunger. Install special camshaft tool J-1210 (attach by turning tool into tapped hole for sprocket screw), withdraw camshaft. When installing camshaft, make certain that front camshaft bearing is properly installed.

**VALVE SYSTEM****1936-48 V8 MODELS**

**VALVE SERVICING:** Valve Removal & Installation. Valve lifter assemblies must be removed before valves can be taken out. Use valve lifter J-257-X to compress springs for removal and installation of valve spring retainers and locks. Check valves for correct length (before installing lifters) with tool J-1055 measuring distance from end of valve stem to heel of cam (cam lobe turned 180° away from valve). If valve stem too long, grind off end of stem so that gauge will slide into place with valve seated. If tool not available, check clearance between end of valve stem and valve lifter plunger with plunger pressed down in lifter cylinder (lifter must be drained of oil for this check). Clearance should be .030-.070".

**Assembling Valve Lifters**—Two types of valve lifters used starting 1948 production. Assemble lifters as follows:

**Body & Plunger Type.** Install plunger (with spring under head) in cylinder, lock spring into cylinder by twisting plunger clockwise. Install body in lifter bracket, place lock ring in groove on upper end of body, and fill body with clean engine oil. Finally insert plunger and cylinder assembly in body. When installing lifter assemblies on engine, valve lifter bodies should be filled with oil and tool J-827 used to install lifter brackets in engine.

**Unit Type.** Turn plunger upside down and install ball, ball retainer, spring, and body over upturned end of plunger. Turn assembly right side up, fill plunger with oil (move ball with piece of wire to permit oil to fill body), refill plunger with oil. Install plunger cap on plunger (push plunger cap just far enough to expose groove on inner diameter of body), use Lock Wire Installer Tool J-2730 to install plunger cap lock wire. Install lifter in lifter bracket, place lock ring in groove on upper end of lifter body.

► **CAUTION**—Oil will be forced out of lifter if plunger cap pushed down beyond groove on inner diameter of body (for installation of plunger cap lock ring) before lifter installed in engine.

**Valve Lifter Servicing**—Oil the tops of the lifter assemblies after they have been installed. Connect oil feed pipes at supply end only and crank engine until all air is expelled from pipes, then connect pipes to lifter bracket connection. Check clearance between lifter and valve stem with plunger spring fully compressed and plunger seated in cylinder (all oil forced out). This clearance should be .030-.070". See *Valve Lifters in Miscellaneous Section for Hydraulic Valve Lifter data.*

## OILING SYSTEM

### 1936-48 MODELS

**LUBRICATION SYSTEM SERVICING:** Before installing new main and connecting rod bearings, or when installing lifters in engine in which sludge noted in valve compartment, clean entire engine lubricating system thoroughly as follows: Remove oil pump and baffle, remove plug at front end of crankcase oil header, blow out oil lines by applying kerosene and air (use kerosene gun) at upper end of valve silencer feed line and at oil header opening. Wash down valve chambers and crankcase with compressed air and kerosene. Check and clean small hole at lower end of each connecting rod, clean any clogged oil lines with wire brush. Clean oil pump, baffle, float screen, regulator valve, and oil pan with compressed air and kerosene.

**NOTE**—Oil filter used on 1936-37 V8 Models. Filter must be removed on these cars.

► **1946-48 Oil Lifter Lubrication Line Note**—New "inertia" type fitting located in this oil line. Oil is required to make a 90° turn before entering the lifter line and foreign particles in the oil tend to be carried past this point rather than entering the line and being carried to the lifters.

### 1938-40 MODELS

**LUBRICATION SYSTEM SERVICING (V16 MODEL):** Clean oil passages in block in same manner as for V8 models. If auxiliary relief valve for hydraulic valve lifter lines removed (located at rear of left hand lifter passage) make certain that relief hole turned so that oil will flow against camshaft and not on oil pump gears when valve reinstalled. Do not disturb plugs in crankcase directly above each valve lifter oil passage.

## OIL PUMP

### 1936-38 MODELS

**Oil Pump Specifications ('36-'38):**—Drive gear backlash .018" max., Endplay .003-.010" (new), .015" (worn). Driveshaft clearance in bushing .001-.0025" (new), .010" (worn). Pump gear clearance in body

.0025-.0085" (new), Endplay .002-.004" (new), .015" (worn).

### 1939-48 MODELS

**Oil Pump Specifications:** Pump body and drive shaft clearance—.0010-.0025" (new), .005" (worn limit). Pump body and pump gear clearance—.002-.004" (new), .006" (worn limit). Pump gear endplay—.001-.004" (new), .006" (worn limit). Pump drive gear backlash—.008-.012" maximum.

**Oil Pressure Regulator Specifications**—Clearance between valve plunger and housing—.0020-.0035" (new), .005" (worn limit). Regulator spring pressure—5¾-6¼ lbs. at 1 13/32". Spring free length 2 25/64".

## COOLING SYSTEM

### 1939 MODELS

**FAN PULLEY REPLACEMENT (V8 MODELS):** Two types of fan pulleys used in production. Second type (also used for service replacement) carries metal reinforcement cup 5/64" thick on inner side of hub.

**Cadillac V8**—New hub must be installed whenever pulley replaced. No allowance necessary for reinforcement cup (pulley attached to rear face of new hub before hub installed).

**La Salle**—When replacing first type pulley with second type, driving hub must be forced back 5/64" on shaft to maintain fan belt alignment (allowing for reinforcement cup thickness). When pressing hub on shaft, use end of shaft (not bearing) for support. **NOTE**—New fan hub must be installed whenever old hub removed from shaft in order to secure proper press fit on shaft.

## RADIATOR

### 1938-40 MODELS

**RADIATOR REMOVAL (ALL SERIES):** To remove radiator core, drain cooling system, remove hoses and radiator tie rods, disconnect shutter rod at thermostat (V8). Remove air cleaner (V8), ignition coils (V16), generator, fan and inlet elbow on left fuel pump (V16). Disconnect headlamp wires at block on right fender and remove harness from radiator (V8). Take out radiator mounting screws at each side and lift out core.

### 1941-48 MODELS

**RADIATOR CORE REMOVAL:** Drain radiator, remove radiator hoses, air cleaner and fan. Take out radiator-to-cradle assembly screws, lift out core.

**1941 Note**—Thermostat-to-shutter rod must be disconnected at thermostat in radiator top tank.

### 1941 MODELS

**RADIATOR SHUTTER THERMOSTAT:** Shutter Control Rod Adjustment—With cooling system cold (below thermostat opening temperature of 150°), disconnect thermostat lever from shutter control rod, loosen locknut and turn clevis on thermostat end of rod to lengthen rod until clevis eye is 1/16" past hole in thermostat lever (rod 1/16" too long), tighten locknut and connect rod (align clevis and lever by forcing rod to right). This setting provides initial pressure on shutters which tends to keep them closed when cold.

**Thermostat Checking**—To check thermostat for correct operation on car, disconnect shutter control rod and note force required to open thermostat when cold (below opening temperature of 150°). Pull of 45-50 lbs. on spring scale hooked to thermo-

stat stem should be required to open thermostat. If pull is less than 45 lbs., remove thermostat and check as follows: Place thermostat on brick in pan of water (thermostat must not come in contact with surface of pan), insert thermometer in water to check temperature, heat water and note thermostat operation. At 175°F, thermostat stem should raise 9/16" to open position and at 190°, stem should support weight of 20 lbs. without closing (Std. Thermostat). High-Reading thermostat should open 9/16" at 190°F. and support 20 lb. weight at 205°F. Before replacing thermostat check shutters for sticking or binding.

**Radiator Shutter Checking**—To check shutters for free operation, disconnect and remove control rod, hook spring scale in place of rod. Pull required to open shutters should not exceed 4 lbs. If pull exceeds 4 lbs., lubricate shutters and remove any cause of binding or sticking.

## CLUTCH NOTES

### 1938-48 MODELS

**CLUTCH BALANCING:** Make certain that balance marks lined up when clutch installed on flywheel, then check balance by running engine at speed of 24-30 MPH. with rear wheels jacked up and note if any excessive vibration apparent. If vibration noted, re-balance clutch as follows: Install one or two ½" thick washers with 5/16" hole on clutch cover mounting capscrew (start at point where clutch drilled for balancing), repeat test and note if vibration increased or decreased. Add or remove washers at each mounting capscrew until satisfactory balance secured.

**Clutch Housing Removal (V16):**—Clutch must be removed before housing can be taken off engine (housing will not clear clutch and flywheel).

### 1936-48 MODELS

**CLUTCH LOCKING PIN REMOVAL (ALL MODELS):** Replacement clutches furnished by car manufacturer equipped with three locking pins or blocks (one under each release lever). Pins released when clutch installed and cover plate tightened. These pins must be removed. Pins that are not removed will drop in clutch housing and may cause damage when car operated.

## TRANSMISSION NOTES

### 1941 MODELS

**TRANSMISSION EXTENSION HOUSING:** Production Change—Two types of extension housing used in production (changed after first 3500 cars) as noted below. First type housing must be changed to second type on these first cars, if rear axle with optional gear ratio installed, to permit installation of different speedometer pinion for new axle ratio. Second type housing only furnished for service.

**Extension Housing (First Type)**—Permits mounting of speedometer pinion for standard rear axle ratio only. Must be changed to second type if rear axle ratio changed.

**Extension Housing (Second Type)**—May be identified by letter 'R' stamped on transmission case under speedometer cable opening. This housing permits mounting of speedometer pinion for standard and all optional rear axle ratios.

C NTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**PROPELLER SHAFTS***1946-47-48 MODELS*

**COMMERCIAL CAR PROPELLER SHAFTS:** Two shafts are used with center (sealed) bearing at rear of front shaft mounted in support assembly attached to brackets on frame. Sliding joint formed at rear end of rear shaft. Yoke at transmission uses threaded plug and is prevented from slipping by snap ring on transmission shaft.

**Front Propeller Shaft Removal—**Disconnect front and intermediate universal joints by taking out capscrews on opposite trunnion bearing caps at

each joint. Take off 4 nuts from rubber insulator studs on bearing support (CAUTION—Do not disturb support mounting brackets at frame or original factory alignment will be upset).

**Center Bearing Disassembly—**Take off yoke on rear end of front shaft, slide off flat washer and deflector. Press center bearing support assembly off rear end of shaft. Remove deflector from front side of bearing support and press bearing and rubber cushion out of support. Separate bearing from cushion.

**Correction of Drive Line Wear—**New yokes with undersize splines available for replacement on Commercial Cars with click at splines and spline-

ways (after very high mileage). Yokes available for end of transmission shaft and on end of front propeller shaft. Splines on yokes are a few thousandths undersize and can be driven on shafts.

**REAR STABILIZER***1939 MODELS*

**REAR STABILIZER (60S, 75, 90): Installation.** Rear stabilizer link requires no readjustment from original factory setting. If stabilizer removed from car, reassemble in following order: With car at curb weight (no passenger load), attach stabilizer to axle first, then to frame bracket. Tighten adjusting nuts without disturbing position of rod.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—Same as engine number. Located on top of crankcase behind fan support. First number 6010001 (60), 3110001 (70, 75).

**ENGINE NUMBER:**—First number—36-60, 6010001; 36-70, 75, 3110001. Stamped on top of crankcase, behind fan support.

**TUNE-UP**

**COMPRESSION:**—Ratio 6.25-1 Std. 5.75-1 Optl. Pressure—155 lbs. (60), 170 lbs. (70, 75) at 1000 R.P.M. or approximately 105-110 lbs. at cranking speed for std. 6.25-1 head.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram.

Cylinder Numbering—Front to rear:

LEFT BANK—1-3-5-7. RIGHT BANK—2-4-6-8.

**SPARK PLUGS:** AC Type K7. 14 mm. Metric. Gaps—.025-.030".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.015" Cam Angle 31° (closed). Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—4° BTDC. with crankshaft pulley mark "IG/A" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws set midway between "miss" and "roll" points. Idle speed 6 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top edge of bowl. Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in service (automatic hydraulic type take-up).

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 431-L (60), 431-Z (60 RHD.), 435-A (70, 75). Switch and cable connected to ignition coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792 (Lock cylinder). Key Series—8000-9499. Groove—#15.

**COIL:** Delco-Remy Model 539-C. Mounted on dash. Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1855968. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-G. Singlebreaker, 8 lobe cam, full automatic advance type with auxiliary spark control and manual adjustment. Breaker Gap—Set at .015". Limits .012-.018". Cam Angle or Dwell—31° closed, 14° open. Breaker Arm Spring Tension—19-23 ounces.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	500	1	1000
12	2000	24	4000

**Vacuum Spark Control:**—Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring in unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	9-11"
7½°	15°	16-18"

**Distributor Removal:**—Mounted between cylinder banks at rear of engine. Take out two capscrews in mounting bracket.

**NOTE:**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear to that slot in upper end of shaft is offset toward rear of engine.

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines is as follows. See Manual Adjustment section below.

Flywheel Degrees      Piston Position

All engines ..... 4° BTDC ..... .0069° BTDC

**To Set Timing (Using Synchroscope):**—Recommended by manufacturer. Clip Synchroscope lead to #1 spark plug and direct light on crankshaft pulley at front of engine. Idle engine, loosen hold-down screw in advance arm, rotate distributor until pulley mark "IG/A" which is 4° before top dead

center mark "C.1/6" lines up with pointer on chain case cover, tighten hold-down screw.

**Timing (Without Synchroscope):**—Turn engine over until #1 piston (front piston left block) reaches firing position 4° before top dead center on compression stroke, stop when crankshaft pulley mark "IGN" at front of engine lines up with pointer on chain case cover, loosen hold-down screw in advance arm, rotate distributor until contacts begin to open, tighten hold-down screw.

**Manual Adjustment:**—With ignition set as above, slight "ping" should be noticeable when engine is accelerated with wide open throttle at speeds below 15 M.P.H. If ping is too severe, loosen hold-down screw in advance arm, rotate distributor one graduation on scale counter-clockwise to retard spark, repeat test. Adjustment permits 10° advance or retard from center "O" position.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

NOTE—Check engine for faulty spark plugs, excessive carbon deposits or localized 'hot spots' before changing the manual adjustment.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-25, 1¼" Dual, downdraft type. See Carburetion Section for adjustment, overhaul, and Jet Specifications.

For complete data, refer to Carburetor Index.

Settings (Idle Setting, Float Level, Accelerating Pump): See Tune-Up data.

**Fast Idle:**—Integral with Carburetor. See article on Fast Idle and Automatic Choke as used on EE-15 & EE-25 Carburetors in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.  
**Automatic Choke:**—Triple Range Automatic and manual choke control. See article on Automatic Choke as used on EE-15 and EE 25 Carburetors in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525988 oil-wetted type standard, #1525966 oil-bath type optional.

NOTE—Smaller main metering jets must be used in carburetor when heavy duty oil-bath type cleaner is used. See Stromberg Jet Specifications in Carburetion Section.

**Fuel Pump:**—AC. Type AB. #1522119 combination fuel and vacuum pump. See article in Carburetion Sec.

For complete data, refer to Carburetion Equip. Index.  
**Gasoline Gauge:**—AC. Electric. #1515303 (dash unit—all models), #1515419 (tank unit—60), #1515420 (tank unit—70, 75). See article in Carburetion Sec.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—(60) Delco, Type 17-K. 6 volt, 17 plate, 110 ampere hour capacity (20 hour rate).

Starting Capacity—131 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.4 minutes.

Grounded Terminal—Positive (+) terminal.

Location—Under left front seat (all models).

(Model 70, 75) Delco, Type 17-D. 6 volt, 17 plate, 130 ampere hour capacity (20 hour rate).

Starting Capacity—156 amperes for 20 minutes.

Zero Capacity—300 amperes for 5.0 minutes.

Grounded Terminal & Location—Same as above.

## STARTER

Delco-Remy Model 727-V, 729-C (36-60 RHD). Armature No. 820158.

Drive—Overrunning Clutch and manual pinion shift operated by solenoid switch.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	.65
16 ft. lbs.	Lock	3.0	.600

**Removal:**—Flange mounted on right front face of fly-wheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch:**—Solenoid Switch Type 1512 (727-V), 1532 (729-C). Pushbutton Switch Type 1405 (60), 1407 (70, 75). Solenoid switch controlled through relay by push button on instrument board. Operative only with ignition 'on.'

For complete data, refer to Electrical Equipment Index.

## GENERATOR

Delco-Remy Model 961-E. Armature No. 1857866. Straight shunt (two brush) type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit section below and special article in Equipment Section.

**Maximum Charging Rate:**—20 amperes (cold) with discharged battery as indicated on test ammeter connected in charging line at 'BAT' terminal on control unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1700 R.P.M. or 20 M.P.H.

## Performance Data—Generator Cold

Amperes	Volts	R.P.M.
22	8.0	1550

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—22-26 ounces.

Field Current—1.7-1.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take off left front wheel, remove cover in dust shield under left front fender by taking out three screws. Take out two generator pivot bolts and one clamp bolt, remove generator through opening.

**Belt Adjustment:**—Loosen generator pivot bolts and clamp bolt, pull generator out until belt deflection midway between pulleys is ¾-1" (measured from straightedge with ⅛" projection at center laid along belt).

## REGULATOR

Delco-Remy Model 5559. Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating Voltage & Current Regulators. For complete data, refer to Electrical Equipment Index.

NOTE—Units are sealed. Performance can be checked as directed below without breaking seals. Seals must be broken and cover removed (voiding warranty) to make adjustments.

## Cutout Relay

Cuts In—6.9-7.6 volts, 12 M.P.H.

Cuts Out—3 ampere max. discharge at 6.3 volts.

Contact Gap—.018-.025".

Air Gap—.018-.022" with contacts closed.

## Voltage Regulator

Setting—7.55-7.85 volts at 72° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

Checking & Adjustment—See Electrical Equipment Section.

Contact Gap—.015-.025".

Contact Spring Tension—3.5 ozs. minimum.

Air Gap—.060-.070" between armature and core with armature down so that fibre bumper just touches stop, .007-.010" between fibre bumper and stop with armature up.

## Current Regulator

Setting—20-22 amperes.

Checking & Adjustment—See Electrical Equipment Section.

Contact Gap—.015-.025".

Contact Spring Tension—3.5 ozs. minimum.

Air Gap—.070-.080" between armature and core with armature down so that fibre bumper just touches stop, .007-.010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused, Cross-beam type with special non-interchangeable lenses. Headlamps aimed straight-ahead with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp), controlled by foot selector switch with lighting switch in 'Country Driving' position. Headlamp Beam Indicators—Consists of four bulbs in lower half of speedometer which illuminate markers as follows:

City—Lower beam both headlamps.

Drive—Upper beam both headlamps.

Pass—Asymmetrical passing beam (see above).

Park—Parking bulbs in headlamps.

## Switches

Lighting—Delco-Remy Model 487-P (L.H.S.R.), 487-N (R.H.S.R.), 487-R (L.H. or R.H.S.R.).

Foot Selector—Delco-Remy Mod. 471-Z, 471-U (RHD)

Instrument Lamp—Delco-Remy Model 1406 (60), Model 1364 (70, 75).

Stop Lamp—Hydraulic type on distributor at rear of brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamp (Right)	50-32	2530-L
Headlamp (Left)	32-32	2330-L
Instrmt., Map, Qtr., Step, Tail	3	63
Parking, Clock	1.5	55
Beam Indicators	1	51
Stop, Dome	15	87

NOTE—Headlamp bulbs are Pre-focused, 'Long-life' type. In all states where 50 cp. bulbs are prohibited, the 32-32 cp. 2330-L bulb is used in both headlamps.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Model 411-A. Contacts remain closed with current of 25 amperes but open within one minute with load of 38 amperes. Non-adjustable.

**HORNS:**—Klaxon Model K-33-B, Type 1855 (low note), 1856 (high note). Vibrator type, twin horns with blended tone operated by horn relay.

Horn Type	Current at 6 Volts	Air Gap
1855	12-14	.045-.050"
1856	11-13	.036-.040"

**Horn Relay:**—Model 266-T. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amps. Contact Gap—.015-.025". Spring Tension—6-8 ozs. Air Gap—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 90 degree 'Vee' 'L' head type.

Bore—3⅜" (60), 3½" (70, 75). Stroke—4½".

Displacement—322 cu. in. (60), 346 cu. in. (70, 75).

Rated Horsepower—36.45 (60), 39.20 (70, 75).

Developed Horsepower—125 (60), 135 (70, 75) at 3400 R.P.M. Std. 6.25-1 head.

Compression Ratio—6.25-1 Std. cast-iron head. Optl. 5.75-1 cast-iron head.

Compression & Vacuum Reading—See Tune-Up.

NOTE—Upper crankcase and two cylinder blocks cast in one piece. Two cylinder head capscrews for water outlet elbow ½" longer than others and must be used for this purpose only. Cylinder head gaskets Part No. 1412661 (60), 1412662 (70, 75) are interchangeable (left and right banks) and must be installed with triangular hole on inner edge to rear,

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**PISTONS:**—Lynite, Lo-Ex aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface).

Length  $4\frac{1}{8}$ ". Weight 16.88 oz. (60), 18.304 (70, 75).

Removal—Pistons and rods removed from above.

Clearance—Top .023" (60), .025" (70, 75). Bottom of skirt .0019" (60), .0021" (70, 75). See Fitting Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished as follows:

	Model 36-60	36-70, 75
Standard	3.3726-3.3746"	3.4979-3.4999"
.003" Oversize	3.3761-3.3776"	3.5014-3.5029"
.005" Oversize	3.3781-3.3796"	3.5034-3.5049"
.010" Oversize	3.3831-3.3846"	3.5084-3.5099"
.015" Oversize	3.3881-3.3896"	3.5135-3.5149"

NOTE—Cylinder bores in same block held within .002" limits. Max. cylinder bore out-of-round .0005".

**Fitting New Pistons:**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and  $\frac{1}{2}$ " above lower edge. Using  $\frac{1}{2}$ " feelers inserted between piston and cylinder wall on side opposite slot, piston should drop of its own weight with .002" feeler and hold its own weight on .0025" feeler.

**Installing Pistons:**—T-slot to left for all pistons.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Lower ring grooves drilled radially with oil drain holes. Heat deflector groove above top compression ring groove.

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.007-.012"	.0015-.0028"
Oil Control	5/32"	.007-.015"	.0013-.0026"

NOTE—Worn limits for all rings .025" (End Gap), and .004" (Side Clearance).

**PISTON PIN:** Diameter— $\frac{7}{8}$ ". Length 2  $\frac{15}{16}$ " (60), 3  $\frac{1}{16}$ " (70, 75). Pin floats in piston and rod. Held by retaining rings. Split type bushing used in pin hole in rod. See NOTE below.

Pin Fit in Piston—.0004" press fit (rib end), .0001" clearance or free fit at 70° F. (other end).

Pin Fit in Rod Bushing—.0002-.0008" (new), .0015" max. (worn).

**Removal:**—Remove snap rings, place piston in boiling water for one minute, then push pin out by hand from rib end (one boss ribbed on underside).

NOTE—In removing and installing split-type bushing an arbor press and special tool kit (Tool No. HM-250) are necessary. Bushings must be pressed in, expanded, then burnished to give correct clearance.

**CONNECTING ROD:**—Weight 41.26 ozs. Length  $8\frac{3}{4}$ ".

Crankpin Journal Diameter—2.4590-2.4595".

Lower Bearing—Removable steel-backed, babbitt-lined shell type. No shims.

Clearance—.001-.0025" (new), .006" max. (worn). Sideplay .003-.006".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

NOTE—New lock washers (Part No. 1415487) must be used under connecting rod bolts. Wrench for tightening bolts must not be longer than 12". Tool No. J-835 recommended by manufacturer.

**Installing Rods:**—Numbers on bearing cap and rod must correspond and must point toward oil pan.

NOTE—Crankpin out-of-round .002" maximum.

**CRANKSHAFT:**—3 bearing, 6 counterweights, #2 and 5 held by capscrews, all others integral.

Journal Diameters— $2\frac{1}{2}$ " all bearings.

NOTE—Journal out-of-round .002" maximum.

**Bearing Type:**—Removable steel-backed, babbitt-lined shells. New bearings require no line-reaming.

Clearance—.0015" (new), .004" (worn).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. Upper halves rotated in and out with "T" shaped cotter pin in oil passage.

NOTE—When reinstalling rear main bearing cap use new wooden plugs in grooves.

**End Thrust:**—Taken by center (#2) bearing. Endplay .001-.005" (new), .010" (worn).

**CAMSHAFT:**—3 bearing. Non-adjustable chain drive. Journal Diameters—#1 and 2, 2.4076-2.4083"; #3, 2.0014-2.0021".

**Bearing Type:**—Removable steel-backed, babbitt-lined bushings.

Clearance—.002-.004" (new), .005" (worn limit).

NOTE—Use Tool J-829 to remove and install bearings. Bearing out-of-round must not exceed .002".

**End Thrust:**—Taken by thrust plate behind sprocket. No endplay permissible.

**Timing Chain:**—Morse #3377. Width  $1\frac{1}{4}$ ". Pitch  $\frac{3}{8}$ ". Length  $23\frac{1}{4}$ " or 62 links.

**Installing Chain:**—Install chain 'endless' as an assembly with both sprockets. Use Tool J-836 to pilot camshaft sprocket when installing on shaft.

**Camshaft Setting:**—Sprockets are marked. Install chain with sprocket 'O' marks adjacent and in line with straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	3.415-3.425"	5 33/64"
Exhaust	1.626-1.636"	3.405-3.415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
--	------------	------	----------------

Intake .45° .11/32" .001-.0023"

Exhaust .45° .11/32" .002-.0033"

NOTE—Valve lifter assemblies must be removed before valve springs can be compressed to remove spring keepers and free valves. Use Tool J-827 to hold plungers down when re-installing lifters.

**Valve Guides:**—Removable. Pressed in block with long stepped end down and finish reamed to provide clearance of .001-.0023" Int., .002-.0033" Exh.

**Valve Springs:**—Free length 2.210".

	Spring Pressure	Length
Valve Closed	62-69 lbs.	1 15/16"
Valve Open	140-151 lbs.	1 9/16"

**Valve Lifters:**—Mushroom type with Automatic valve tappet takeup. See article in Equipment Section

See Miscellaneous Section for complete data.

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open at TDC. Close 42° ALDC.

Exhaust Valves—Open 52° BLDC. Close 10° ATDC.

To Check Valve Timing—Intake valve for cylinder #1 (front cylinder—left bank) should open with piston on top dead center when mark 'C.1/6' on crankshaft pulley lines up with pointer.

## LUBRICATION

**LUBRICATION:**—Pressure system with main oil channel located in left hand crankcase wall.

**Oil Pump:**—Gear type located in oil pan at rear of engine. Driven through idler gear from camshaft.

**Oil Pump Drive Clearances:**—Drive shaft bushing .001-.0025" (new), .010" (worn). Endplay in accessory idler gear .002-.006" (new), .010" (worn). Endplay in spiral gear on drive shaft .003-.010" (new), .015" (worn). Backlash in spiral drive gears .018" max.

**Oil Pump Gear Clearances:**—Pump body and gears .0025-.0085" (new), .010" (worn). Pump gear endplay .002-.004" (new), .015" (worn).

**Normal Oil Pressure:**—15 lbs. idling, 30 lbs. at 60 M.P.H.

**Oil Pressure Regulator:**—Operates at 30 lbs. Located on oil pump. Not adjustable.

**Crankcase Capacity:**—7 qts. refill.

## CLUTCH

**CLUTCH:**—Long Model 11CF-CI (60), 11CF-CL (70, 75). Semi-centrifugal single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam.  $6\frac{1}{2}$ ". Outside Diam. 11". Thickness .135-.139".

**Adjustment:**—Free movement of clutch pedal should be  $\frac{3}{8}$ - $1\frac{1}{8}$ ". Adjust by turning nut on forward end of pedal rod directly below pedal equalizer link.

**Removal:**—Disconnect front universal joint, remove from propeller shaft, remove cross member carrying transmission rear support; remove front propeller shaft housing and propeller shaft (70, 75 only); disconnect clutch release mechanism (70, 75 only); remove transmission (pull straight back to avoid distortion to clutch disc), drop clutch housing pan and remove clutch release yoke retaining screw (60 only). Prick punch clutch cover, spring pressure plate and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly. Remove clutch.

NOTE—On Series 36-60 cars keep transmission in high gear or install brace across face of case to hold clutch connection in position, preventing high-speed synchronizing drum from pulling out of splines.

See Cadillac Shop Notes for clutch locking pin removal on replacement clutches.

## FRONT SUSPENSION

**Front Suspension:** Independent linked parallelogram type.

CAUTION—Series 36-60 after Engine No. 6014008 equipped with re-designed Front Suspension which requires different adjustment procedure over first type used on first 4008 cars.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4°51' (60), 5°38' (70, 75).

**Caster:**— $1\frac{1}{2}$ -2° (60),  $\frac{3}{4}$ - $1\frac{1}{4}$ ° (70, 75).

**Camber:**— $\frac{1}{4}$ -1° (60), 0- $\frac{1}{2}$ ° (70, 75).

**Toe In:**—0- $\frac{1}{16}$ ".

**Steering Geometry:**—Inner wheel turned  $21\frac{3}{4}$ - $23\frac{1}{4}$ ° (60),  $22$ - $23\frac{1}{2}$ ° (70, 75), outer wheel turned 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Double Roller

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Bendix Hydraulic, single anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinders:**—Diameters: front 1  $\frac{1}{16}$ " (60),  $\frac{1}{4}$ " (70, 75), rear 15/16" (60), 1  $\frac{1}{16}$ " (70, 75). No part of assembly is interchangeable.

**Drum Diameter:**—11.995-12.005" (60), 13.995-14.005" (70, 75). Out-of-round .007" max. Run ut (installed) .010" maximum.

**Lining:**—Moulded (primary), woven (secondary). Width 2" (60),  $2\frac{1}{4}$ " (70, 75). Thickness 3/16" (60),  $\frac{1}{4}$ " (70, 75). Length 10  $\frac{1}{8}$ "-60, 12  $\frac{1}{4}$ "-70, 75 (frt. wh. primary), 13"-60, 15"-70, 75 (all others).

Clearance—.010" between lining and drum.

**Hand Brake Adjustment:**—See Service Brake.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Same as engine number (below). Visible from left side with engine hood raised.

**ENGINE NUMBER:**—First number (60) 6030001, (65) 7030001, (70, 75) 3130001. Stamped on left side of crankcase at rear of left cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 Std. 5.75-1 Optl.

**Pressure:**—155 lbs. at 1000 RPM or approximately 105-110 lbs. at cranking speed (Std. 6.25-1 head).

**VACUUM READING:**—20-21" steady reading with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram.

**SPARK PLUGS:** AC No. 45 (sup. K-7). 14 mm. Metric. Gaps—.025-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.015". Cam Angle 31° (closed).

**Automatic Advance:**—12° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—5° BTDC. with crankshaft pulley mark "IG/A" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting:**—Both idle screws set midway between "miss" and "roll" points. Idle speed 6 MPH.

**Float Level:**—Fuel level  $\frac{5}{8}$ " below top of bowl.

**Accelerating Pump:**—Inner hole (min.)—Summer, Outer hole (max.)—Winter.

**Fuel Pump Pressure:**  $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—None in service (automatic hydraulic take-up).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco Remy Mod. 435-K (60), 435-H (65, 70, 75). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton. #45792 (cylinder), #80203 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 539-C. Mounted on dash.

**Ignition Current:**—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 829107.

**Capacity:**—20-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 665-G. Single breaker, 8 lobe cam, full automatic advance type with manual adjustment. NOTE—No vacuum spark control.

**NOTE:**—Distributor rotation clockwise (viewed from above) which is reversed from 1936 model. Distributor driven by oil pump drive gear.

**Breaker Gap:**—Set at .015". Limits .0125-.0175".

**Cam Angle r Dwell:**—31° closed, 14° open.

**Breaker Arm Spring Tension:**—19-23 ounces.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	500	1	1000
3	820	6	1640
6	1200	12	2400
9	1600	18	3200
12	2000	24	4000

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, take out two cap screws in mounting bracket.

**NOTE:**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so that slot in upper end of shaft is offset toward left or rear of engine.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines (with fuel of 70 Octane Rating) as follows. See Manual Adjustment section below for final setting giving best performance with type of fuel regularly used.

**Flywheel Degrees**

**Piston Position**

5° BTDC ..... 0114" BTDC

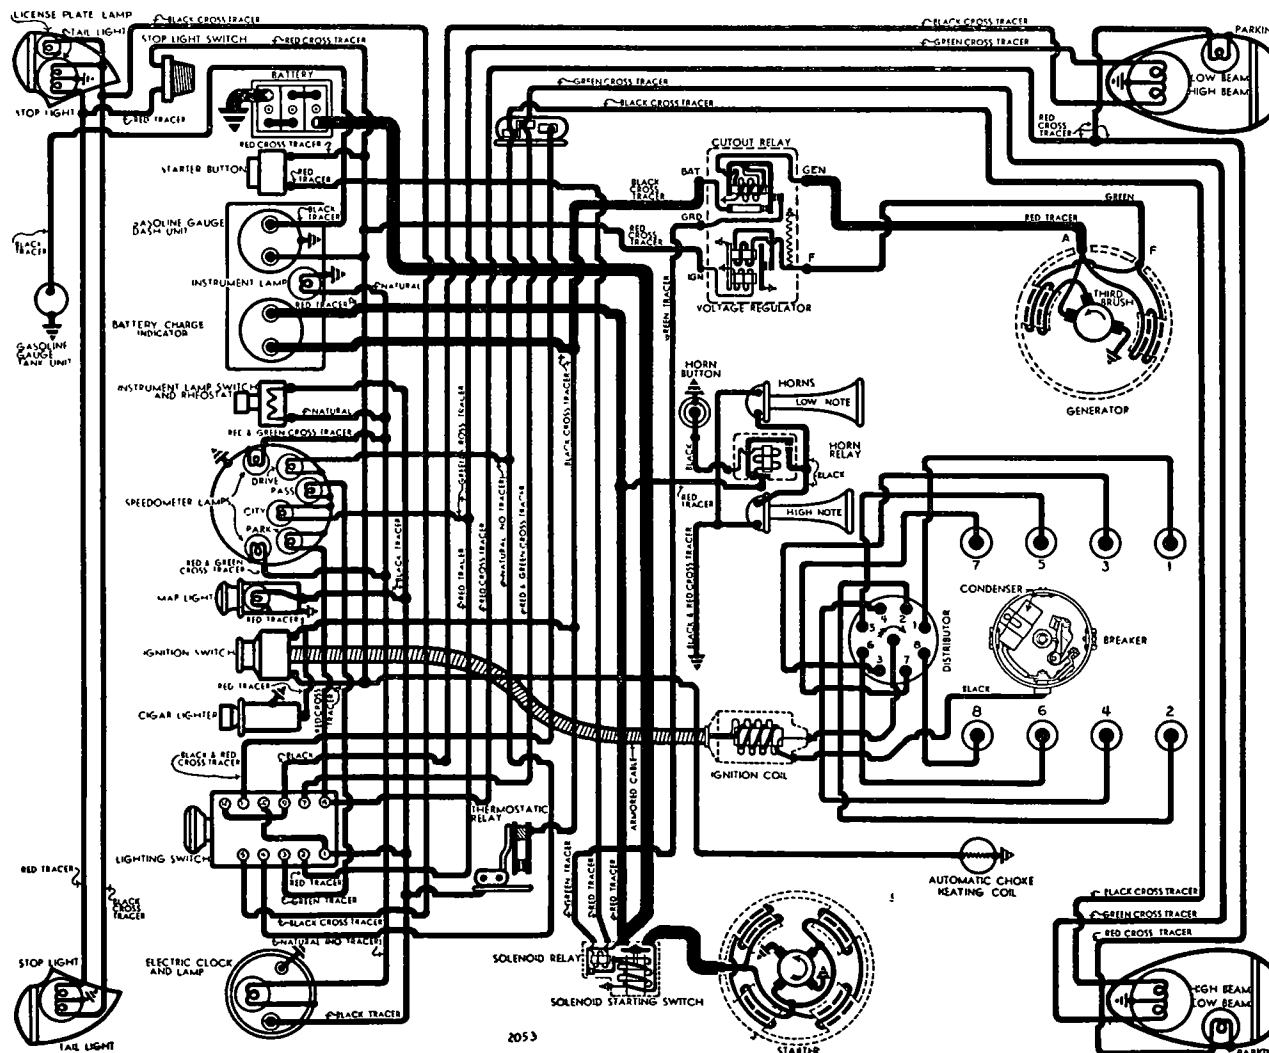

**To Set Timing (With Synchroscope)**—Recommended by manufacturer. Clip Synchroscope lead to #1 spark plug, direct light on crankshaft pulley at front of engine. Idle engine, loosen hold-down screw in advance arm, rotate distributor until 'IG/A' mark on pulley (which is 5° before dead center mark 'C.1/8') appears to line up with pointer on chain case cover, tighten hold-down screw. Adjust for

fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for piston #1 (front piston, left bank) with mark 'IG/A' on crankshaft pulley (5° before dead center mark 'C.1/8' lined up with pointer on chain case. Loosen hold-down screw on advance arm, center pointer on scale, tighten hold-down screw on advance arm. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Adjust for fuel (see Manual Adjustment).

**Manual Adjustment**—Slight ping should be evident at speeds below 15 M.P.H. when car accelerated with wide open throttle. To adjust, loosen hold-down screw on advance arm, rotate distributor one graduation, on scale clockwise (if ping too severe) counter-clockwise (if no ping noted), repeat test, adjust until best performance secured.

**NOTE:**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, or lean

Refer to 1937 V12 diagram for Series 70, 75 Generator and Regulator wiring.

carburetor setting before changing manual adjustment.

### CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Mod. AA-25, 1¼" Dual, Downdraft, Aircraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—Engine must be warmed up so that Automatic Choke and Fast Idle are inoperative. Set throttle lever stopscrew so that engine idles at 6 M.P.H. Turn each idle adjusting screw in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Both screws must be adjusted equally. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

Inner Hole (Min. stroke)—Summer temperatures.

Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—Integral with carburetor. No adjustment.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Integral with carburetor (linked directly to choke valve shaft). No adjustment.

*For complete data, refer to Carburetion Equip. Index.*

### CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528136 Std., #1528137 Heavy Duty, Oil-bath type.

**Fuel Pump:**—AC. Mod. AB #1522119. Diaphragm type combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric type. No. 1515338 (Dash unit), 1515442 (Tank unit—60); 1515420 (Tank unit Series 65, 70, 75).

*For complete data, refer to Carburetion Equip. Index.*

### BATTERY

#### SERIES 60 & 65

**BATTERY:**—Delco, Type 17-K, 6 volt, 17 plate, 110 amp. hour capacity (20 hour rate).

**Starting Capacity:**—131 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 4.4 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Under left front seat.

### BATTERY

#### SERIES 70 & 75

**BATTERY:**—Delco, Type 17-D, 6 volt, 17 plate, 130 amp. hour capacity (20 hour rate).

**Starting Capacity:**—156 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 5.5 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Under left front seat.

### STARTER

**Delco-Remy Model 727-V, 729-F (60 RHD).** Armature No. 820158. Overrunning Clutch and solenoid pinion shift type.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ounces.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter forward, remove from below.

**Starting Switch:**—Solenoid Switch Type 1542. Push-button Switch Type 1389 (60), Type 1407 (65,70,75). switch controlled through relay in switch case by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

#### Solenoid Switch Specifications

Closes against 70 lbs. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

#### Solenoid Relay Specifications

Contacts Close—1.9 volts max. Open—1.0-1.2 volts.

Contact Gap—.025-.045". Air Gap—.010-.013" (closed)

### GENERATOR

#### SERIES 60 & 65

**Delco-Remy Model 918-C.** Armature No. 1866789.

New type 'Split-Field' generator (one straight-shunt coil, one third-brush coil—see diagram) with fixed third brush and vibrating voltage regulator control.

**NOTE:**—Field coils changed in production.

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment:**—No adjustment at generator (fixed third brush). Adjusted by changing setting of Voltage Regulator. See Regulator data below.

**Maximum Charging Rate:**—As given in table below. Reached at 4000 R.P.M. or 51 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition. To check generator output, connect test ammeter in charging line at 'BAT' terminal on regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE:**—Do not operate generator at excessive speed with regulator cut out. Do not operate generator on open-circuit.

#### Performance Data

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current:**—1.44-1.56 amperes (shunt), .89-.94 amperes (third brush field) at 6.0 volts.

**Removal:**—Generator flange mounted between cylinder banks at front of engine. To remove, take out 2 bolts in mounting flange, slip off drive belt, lift generator out.

**Belt Adjustment:**—Loosen flange mounting bolts, lift generator up (pivots on left bolt, right bolt hole slotted to permit this movement) until slight amount of slack noted between generator and water pump pulleys, tighten mounting bolts.

**NOTE:**—Fan driven by separate belt, adjusted by loosening mounting nut on fan bracket.

### GENERATOR

#### SERIES 70 & 75

**Delco-Remy Model 961-K.** Armature No. 1857866. Two brush, straight shunt, 'Peak Load' type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regu-

lator and maximum output controlled by Current Regulator. See Control Unit section below.

**Maximum Charging Rate:**—25 amperes (cold) maximum at 1650 R.P.M. or 20 M.P.H. and above with discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

#### Performance Data—Generator Cold

Amperes	Volts	R.P.M.
25	8.0	1650

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ounces (all).

**Field Current:**—2.0-2.2 amperes at 6.0 volts.

**Removal:**—Generator flange mounted between cylinder banks at front of engine. To remove, take out 2 bolts in mounting flange, slip off drive belt, lift generator out.

**Belt Adjustment:**—Loosen flange mounting bolts, lift generator up (pivots on left bolt, right bolt hole slotted to permit this movement) until slight amount of slack noted between generator and water pump pulleys, tighten mounting bolts.

**NOTE:**—Fan driven by separate belt, adjusted by loosening mounting nut on fan bracket.

### REGULATOR

#### SERIES 60 & 65

**Delco-Remy Model 5817.** Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator. Cutout Relay has extra 'ground' contacts for starter control.

*For complete data, refer to Electrical Equipment Index.*

#### Cutout Relay

**Cuts In:**—6.9-7.6 volts.

**Cuts Out:**—0-3.0 ampere discharge current.

**Contact Gap:**—.018-.025".

**Air Gap:**—.018-.022" with contacts closed.

#### Voltage Regulator

**Setting:**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator over-compensated for temperature and must be checked at these points.

**Adjustment:**—Disconnect lead on 'IGN' regulator terminal, connect jumper between 'IGN' and 'BAT' terminals, connect ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes. Adjust regulator armature spring tension by bending spring hanger at lower end of armature spring slightly until setting is as given above.

**NOTE:**—Regulator cover must be in place when tests made. Do not operate generator on open-circuit.

**Contact Gap:**—.015-.025".

**Contact Spring Tension:**—2.7-3.5 ounces.

**Air Gap:**—.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

### REGULATOR

#### SERIES 70 & 75

**Delco-Remy Model 5818.** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage & Current Regulators. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

C NTINUED N NEXT PA E

## CONTINUED FR M PRECEDIN PA E

**NOTE**—Cover or regulator case is sealed. Units can be checked without breaking seals. Seals must be broken to remove cover for adjustments.

## Cutout Relay

**Cuts In**—6.7-7.6 volts.

**Cuts Out**—0-3.0 amperes discharge current.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

## Voltage Regulator

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator over-compensated for temperature and must be checked at these points.

**Checking**—To check without breaking seal, disconnect lead at 'IGN' terminal on case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M., adjust charging rate to 8-10 amperes. Voltmeter reading should agree with setting above.

**NOTE**—Cover should be in place when tests are made. Do not operate generator on open-circuit.

**Adjusting**—Seal must be broken and cover removed. With ammeter and voltmeter connected as above, set regulator by bending spring hanger at lower end of armature spring slightly until performance is correct (with cover in place). Remove jumper and restore original connections.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

## Current Regulator

**Setting**—26 amperes.

**Checking**—To check without breaking seal, disconnect 'IGN' lead at regulator, connect test ammeter in charging line at 'BAT' terminal. Operate generator and check performance.

**NOTE**—Do not allow generator voltage to exceed 8.5 volts with voltage regulator inoperative.

**Adjusting**—Seal must be broken and cover removed. Set regulator by bending spring hanger at lower end of armature spring slightly until performance is as noted above (cover must be in place when testing). Restore original connections.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.070-.080" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE**—Repolarize generator whenever Control Unit disconnected or removed by connecting jumper between 'GEN' and 'BAT' terminals momentarily after all leads connected. Disconnect 'BAT' lead first, connect this lead last.

## LIGHTING

**LIGHTING:—Headlamps**—Guide Multi-beam, Pre-focused type with special non-interchangeable lenses. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in third or Country Driving position.

**NOTE**—With lighting switch in second position, foot selector switch controls upper driving beam and lower city beam (for both headlamps).

**Headlamp Adjustment**—With driving (upper beam) lighted and lenses in place, aim left hand headlamp so that upper edge of hot spot is at lamp center height and left edge is at vertical line for lamp center (entire hot spot to right of this center line) at 25'. Aim right hand headlamp for same height but center hot spot on lamp-center vertical line (right cut-off of hot spot about 1' to right of center-line).

**Headlamp Indicators**—Consists of 4 bulbs in speedometer dial which illuminate markers as follows:

City—Lower beam, both headlamps.

Drive—Upper beam, both headlamps.

Pass—Special passing beam (see above).

Park—Parking bulbs in headlamps lighted.

## Switches

**Lighting**—Delco-Remy Model 480-S, 480-N (Exp.).  
**Foot Selector**—Delco-Remy Model 471-T, 471-U (RHD).

## Bulb Specifications

Position	Candlepower	Mazda No.
R. H. Headlamp (see note)	32-50	2530-L
L. H. Headlamp	32-32	2330-L
Parking, Instrument	1½	55
Clock, Indicators	1	51
Map, Quarter, License	3	63
Stop and Tail	21-3	1154-L
Dome	15	87

**NOTE**—In states where this bulb not legal, 32-32 cp., 2330-L bulb used in both headlamps. Type 1154 has stop pin which insures correct installation of bulb.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:—Part No. 1866707.** Mounted on lighting switch. Contacts open within 1 minute with load of 38 amperes. Not adjustable.

**HORNS:—Delco-Remy Model K-33-D, Type 1965** (low note), 1966 (high note). Vibrator type, twin horns with blended tone. Operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
1965	12-14 amperes	.045-.050"
1966	11-13 amperes	.036-.040"

**Horn Relay Model 271-A:—Contacts close at 2.7-4.0 volts.**

**Contact Gap**—.015-.030".

**Air Gap**—.010-.014" with contacts closed

## ENGINE

**ENGINE SPECIFICATIONS:—Own.** 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3½". Stroke—4½".

**Displacement**—346 cu. ins. **Rated HP.**—39.20.

**Developed Horsepower**—135 HP. at 3400 R.P.M.

**Compression Ratio**—6.25-1 Std. 5.75-1 Optl.

**Compression Pressure**—155 lbs. at 1000 R.P.M. or approx. 105-110 lbs. at cranking speed (std. head).

*See Cadillac Special Shop Notes for cylinder head installation instructions, and lowering compression ratio.*

**Vacuum Reading**—Steady 20-21" at idle speed.

**PISTONS:—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length**—4½".

**Weight**—18.30 oz. stripped. 25.13 oz. complete.

**Removal**—Pistons and rods removed from above.

**Clearance**—Skirt .0021". See Fitting New Pistons.

**Replacement Pistons:—Finished anodized pistons furnished Std.** (3.4979-3.4999"), .003" (3.5014-3.5029"), .005" (3.5034-3.5049"), .010" (3.5084-3.5099"), .015" (3.5135-3.5149") oversize.

**NOTE**—Hold all cylinders in same block within .002" size limits. Max. out-of-round .0005".

**Fitting New Pistons:—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide) used, insert feeler next to T-slot. Piston should fall of own weight with .002" feeler, hold tight on .0025" feeler.**

**Installing Pistons:—Slot to left, for all pistons.**

**PISTON RINGS:—Two compression, two oil control rings per piston, all above pin.**

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.007-.012"	.0015-.0028"
Oil Control	5/32"	.007-.015"	.0013-.0026"

**NOTE**—Worn limits .025" (gap), .004" (side clear.).

**Replacement Rings: .003", .005", .010", .015", .030" oversize.**

**PISTON PIN:—Diameter ⅞". Length 3 1/16".** Pin floats in piston and rod. Held by locking rings. *See Cadillac Shop Notes for special pin removal and installation instructions.*

**Pin Fit in Piston**—.0004" press fit (ribbed end), .0001" clearance or free fit at 70° F. (plain end).

**Pin Fit in Rod Bushing**—.0002-.0008" clearance (new), .0015" (worn limit).

**CONNECTING ROD:—Weight 37.472 oz. Length 8¾".**

**Crankpin Journal Diameter**—2.4590-2.4595".

**Lower Bearing**—Steel-backed, babbitt-lined.

**Clearance**—.0015-.0025" (new), .006" Max. (worn).  
**Sideplay**—.003-.008".

**Bearing Adjustment:—None** (no shims). Replace bearings. Do not file rods or caps.

*See Cadillac Special Shop Notes for connecting rod data and bearing installation.*

**Installing Rods:—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down toward oil pan.**

**CRANKSHAFT:—3 bearing. 6 counterweights.**

**Journal Diameters**—2½" all bearings.

**Bearing**—Steel or bronze backed, babbitt-lined.

**Clearance**—.0015" (new), .004" (worn limit).

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.  
*See Cadillac Special Shop Notes for main bearing removal instructions.*

**End Thrust:**—Taken by center bearing. Endplay .001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearings. Non-adjustable chain drive. Journal Diameters—#1 and 2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type:**—Steel-backed, babbitt-lined. Clearance—.0027-.0037" (new), .005" (worn limit).  
*See Cadillac Special Shop Notes for Camshaft Bushing removal and installation instructions.*

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Morse Type C #3682-RX Side guide type. Width 1 1/4". Pitch 3/8". Length 23 1/4" or 62 links.

**NOTE:**—Install chain 'endless' as an assembly with sprockets. Use tool J-836 to pilot camshaft sprockets.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with straightedge across centers.

**VALVES:**—Head Diameter Stem Diameter Length  
Intake ..... 1.876-1.886" ..... 3.415-3.425" ..... 5 33/64"  
Exhaust ..... 1.626-1.636" ..... 3.405-3.415" ..... 5 33/64"

Seat Angle Lift Stem Clearance  
Intake ..... 45° ..... 335" ..... .001-.0023"  
Exhaust ..... 45° ..... 345" ..... .002-.0033"

**NOTE:**—Worn limit for valve stem-to-guide clearance .006" Intake, .005" Exhaust.

*See Cadillac Special Shop Notes for valve removal and installation instructions.*

**Valve Guides:**—Pressed in block with long stepped end down and reamed to correct size.

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic mushroom type in removable guide brackets.

*See Miscellaneous Section for complete data.*

**Clearance:**—.001-.0025" (new), .005" (worn).

**Valve Springs:**—Pressure Length  
Valve Closed ..... 66 lbs. .... 1.926"  
Valve Open ..... 145 lbs. .... 1.581"

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter). *See Valve Servicing in Cadillac Shop Notes.*

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close at 42° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.

**To Check Timing:**—Intake valve for #1 cylinder opens with piston on top dead center when 'C.1/6' on vibration dampener lines up with pointer.

**LUBRICATION**

**LUBRICATION:**—Pressure system with gear type oil pump located in crankcase.

*See Cadillac Special Shop Notes for oil pump data and lubrication system servicing.*

**Normal Oil Pressure:**—30 lbs. at 60 MPH. 15 lbs. idle.  
**Oil Pressure Regulator:**—Located on oil pump.  
**Operates at 30 lbs.** Not adjustable.  
**Crankcase Capacity:**—7 qts. (refill).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal type. Belt-driven in tandem with generator.

*See Miscellaneous Section for complete data.*

**Water Capacity:** 25 quarts.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 148-153°F., fully open at 170°F. (High Reading Type—use with heaters). Starts to open 163-168°F. Fully open 185°F.

**Shutter Adjustment:**—Adjust clevis on threaded end of rod to secure 1/16" tensions (shutters closed).

**CLUTCH**

**CLUTCH:**—Long Model 11CF-CL. Semi-centrifugal, single plate dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven type. 2 required. Inside Diameter 6 1/2". Outside Diameter 11". Thickness .137".

**Adjustment:**—Free movement of pedal should be 7/8-1 1/8". To adjust, turn nut on forward end of connector link in front of clutch fork.

*See Cadillac Shop Notes for clutch locking pin removal on replacement clutches.*

**Removal:**—Remove transmission (see Transmission Section below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel to insure correct installation, take out 6 mounting bolts in cover flange, remove clutch from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh helical gear (second), synchro-mesh (second and high), sliding helical gear (low and reverse).

*See Transmission Section for complete data.*

**Removal:**—With car on blocks, remove floor boards, disconnect drive shaft at front universal joint, support engine with jack under oil pan (use wooden block to avoid damage to pan), free transmission extension at rear support cross-member, disconnect engine support stabilizer (all except 60) on right hand side (take out pin at forward end), disconnect exhaust pipe brace, free cross-member carrying engine rear support (4 bolts at each end on 60, 2 bolts on other models), disconnect speedometer cable. Take out transmission mounting cap screws, pull transmission straight back (plug clutch connection shaft bearing drain hole as soon as it is accessible to prevent lubricant loss). **NOTE:**—When installing, shift transmission in reverse and remove plug.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics Model 3-C. Needle bearing type.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own make. Hypoid gear (60), Spiral-bevel gear (65, 70, 75). Semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**NOTE:**—Manufacturer recommend Differential Carrier Assembly be returned to factory for servicing. Ratio—3.69-1 (60), 4.30-1 (65, 70, 75). No optl. ratios. Backlash—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove cap screws on differential carrier flange, pull carrier assembly out without disturbing axle housing.

**Axle Shaft Removal:**—Jack up car, remove rear wheels, pull wheel hub and brake drum assembly, disconnect brake line and remove backing plates (bleed brake line when re-installed). Use tool J-838, pull shaft and bearing assembly out.

**NOTE:**—Early axle shafts have no locating shoulder for wheel bearing. Install bearing with 5/32" clearance between inner edge of hub and bearing.

**Wheel Bearing Adjustment:**—None (sealed type).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. 1946C, D (60 front), 1751A, B (60 rear), 1951D, C (65, 70, 75 front), 2052A, B (65, 70, 75 rear). Double acting, hydraulic type.  
*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4° 51' (60), 5° 38' (65, 70, 75).  
**Caster:**—1/4-1° (60), 0° plus or minus 1/4° (65, 70, 75).  
**Car weight on wheels,** equal within 1/4".

**Camber:**—1/4-1° (60). 0-1/2° (65, 70, 75). Equal within 1/4" at both wheels.

**Toe In:**—1/16-3/32" (at rest), 0-1/16" (in motion).

**Steering Geometry:**—Inner wheel turned 21 3/4-23 1/4° (60), 22-23 1/2° (65, 70, 75). Outer wheel 20° (all).

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Roller type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix hydr., Duo-servo. Single Anchor type. Hand lever applies rear serv. brakes.

*See Brake Section for complete data.*

**Drum Diameter:**—12" (60, 65, 70), 14" (75). Centrifuse type. Out-of-round .007" max. Run-out (installed) .010" max. Drum turndown limit .030" cut.

**Lining:**—Molded type. Width 2 1/4" (except 60, 65, 70 rear wheels), 2" (60, 65, 70 rear wheels only); Thickness 3/16" (60, 65, 70), 1/4" (75); Length (per shoe) 12 15/16" (60, 65, 70), 12 1/4" (75—front shoe front brakes), 15" (75—all others).

**Clearance:**—.010" for all models.

**Hand Brake:**—See Service Brakes above.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Same as engine number (below). Visible from right side with engine hood raised.

**ENGINE NUMBER:** First number 4110001 (1936), 4130001 (1937). Stamped on crankcase on generator drive housing.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. 5.65-1 Optional. Pressure—145 lbs. at 1000 R.P.M., 160 lbs. at 3200 R.P.M. or approximately 100-105 lbs. at cranking speed for standard 6.0-1 head.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 320 R.P.M.

**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12. See diagram for spark plug cable connections on distributor.

**SPARK PLUGS:** AC No. 84 (sup. G-7). 18 mm. Metric. Gaps—.025-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020". Cam Angle 37° (closed).

**Synchronization**—Movable contacts open 37½° (distr.) after fixed set (unequal 37½-22½-37½° intervals).

**Automatic Advance**—19° max. at 1400 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—4° BTDC (1936), 10° BTDC (1937) with flywheel mark "IG/A" at indicator under inspection hole cover in flywheel housing. NOTE—Contacts open alternately at 37½-22½-37½° intervals.

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting**—Metering pin turned out not more than ¼ turn past point where smooth running secured (approx. 4 turns open). Idle speed 320 Eng. RPM. Carburetors must be equalized. See Carburetor article for complete instructions.

**Float Level**—Fuel level 13/16-15/16" below top edge of float bowl.

**Fuel Pump Pressure:** 4¼ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:** Delco-Remy Model 435-A (1936), 435-J (1937). Switch & Cable Assembly. Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton. #45792 (cylinder), #80203 (case). Key Series—3000-9499.

**COIL:** Delco-Remy Model 553-E. Two Coil unit.

**Ignition Current**—(For each coil)—2.2 amps. idling, 4.4 amperes stopped.

**CONDENSER:** Delco-Remy Part No. 1837231.

**Capacity**—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 667-C. Double breaker, 6 lobe cam, full automatic advance with manual adjustment (See Timing). Contacts open alternately, 37½° and 22½° intervals, corresponding to 75° and 45° firing intervals of engine (unequal firing inter-

vals cause by 45° included angle between cylinder banks). Contacts must be synchronized (see Timing).

**Breaker Gap**—Set at .020". Limits .018-.024".

**Cam Angle or Dwell**—Closed 37°, Open 23° (distr.). Each set operates independently.

**Breaker Arm Spring Tension**—17-21 ounces.

Automatic Advance			
Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start.....	300	2.....	600
12.....	800	24.....	1600
16.....	1100	32.....	2200
19.....	1400	38.....	2800

**Distributor Removal:**—Mounted between cylinder banks at front of engine. Take out two capscrews in mounting bracket.

**NOTE**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so that slot in upper end of shaft is offset toward front of engine.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows. See Manual Adjustment section below.

	Flywheel Degrees	Piston Pos.
1936 .....	4° BTDC.....	.0058° BTDC.
1937 .....	10° BTDC.....	.0369° BTDC.

**Timing (Stationary Contacts)**—Loosen hold-down screw in advance arm, center distributor pointer on quadrant scale by rotating distributor, tighten hold-down screw, take off cover plate over inspection hole in flywheel housing. With #1 piston on compression, crank engine by jacking up one rear wheel, placing car in gear and turning wheel, stop with piston before top dead center when flywheel mark "IG/A"

1936 V12 SERIES 36-80 & 36-85

lines up with indicator on housing, loosen taper lock screw in center of breaker cam, carefully locate cam so that stationary contacts (mounted directly on breaker plate) are beginning to open, tighten locking screw. Check rotor position and spark plug cable connections (see diagram). Then synchronize movable contacts as directed below.

**Synchronization (Movable Contacts)—1st method:** Turn engine over 75° or slightly less than ¼ revolution to firing position of piston #4, stop when fly-wheel mark 'IG/A' lines up with indicator on housing, loosen lock screws on movable sub-plate (carrying second set of contacts), turn eccentric adjusting screw until contacts begin to open, tighten locking screws.

**Synchronization—2nd Method:** Use synchronizing tool, Cadillac Part No. 109224. Install tool and adjust

so that stationary contacts begin to open when pointer opposite farthest indicating point on quadrant 'R.H.', turn engine over until pointer is directly opposite '12 L.H.' mark on quadrant. Loosen lock-screws on movable sub-plate, turn eccentric adjusting screw until contacts open, tighten lock-screw.

**Manual Adjustment—**With ignition set as above, slight 'ping' should be noticeable when engine is accelerated with wide open throttle at speeds below 15 M.P.H. If ping is too severe, loosen hold-down screw on pointer, rotate distributor one graduation on scale clockwise to retard spark, repeat test. Adjustment permits advance or retard of 10° from center 'O' position.

**NOTE—**Check engine for faulty spark plugs, excessive carbon deposits or localized 'hot spots' before changing the manual adjustment.

## CARBURETOR

**CARBURETION: Carburetor—**Detroit Model 51, 1½" expanding vane or air valve, updraft type. One carburetor used for each bank with interconnected throttles.

**NOTE—**Carburetor throttles must be synchronized. For complete data, refer to Carburetor Index.

**Automatic Choke—**Detroit semi-automatic type.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:** AC. No. 1528628 oil-wetted type (1936), No. 1528123 heavy duty oil-bath type (1937).

**Fuel Pump:**—AC. Type D #1522149. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**NOTE—**AC. Type K #1521542 vacuum pump mounted as separate unit.

**Gasoline Gauge:** AC Electric type. Dash Unit—1515303 (1936), #1515338 (1937). Tank Unit—#1515428 (1936), #1515420 (1937).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Delco, Type 21-D. 6 volt, 21 plate, 164 ampere hour capacity (20 hour rate).

**Starting Capacity—**195 amperes for 20 minutes.

**Zero Capacity—**300 amperes for 7.1 minutes.

**Grounded Terminal—**Positive (+) terminal.

**Location—**Under left front seat.

## STARTER

**Delco-Remy Model 580 (Std.), SM-1748 (RHD).** Armature No. 1837058.

**Drive—**Solenoid pinion shift and overrunning clutch type with reduction gears.

**Rotation—**counter-clockwise (armature shaft) at commutator end.

**Brush Spring Tension—**36-40 ounces each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	2200 .....	5.7 .....	70
35 ft. lbs. ....	Lock .....	3.0 .....	600

**Removal:**—Flange mounted on rear face of flywheel housing at right of transmission. T remove, take out 3 flange capscrews.

**Starting Switch:** Solenoid Switch No. 1515 or 1547. Pushbutton Switch 1405 or 1407. Switch controlled through relay by pushbutton on instrument panel. Operative only with ignition "on."

For complete data, refer to Electrical Equipment Index.

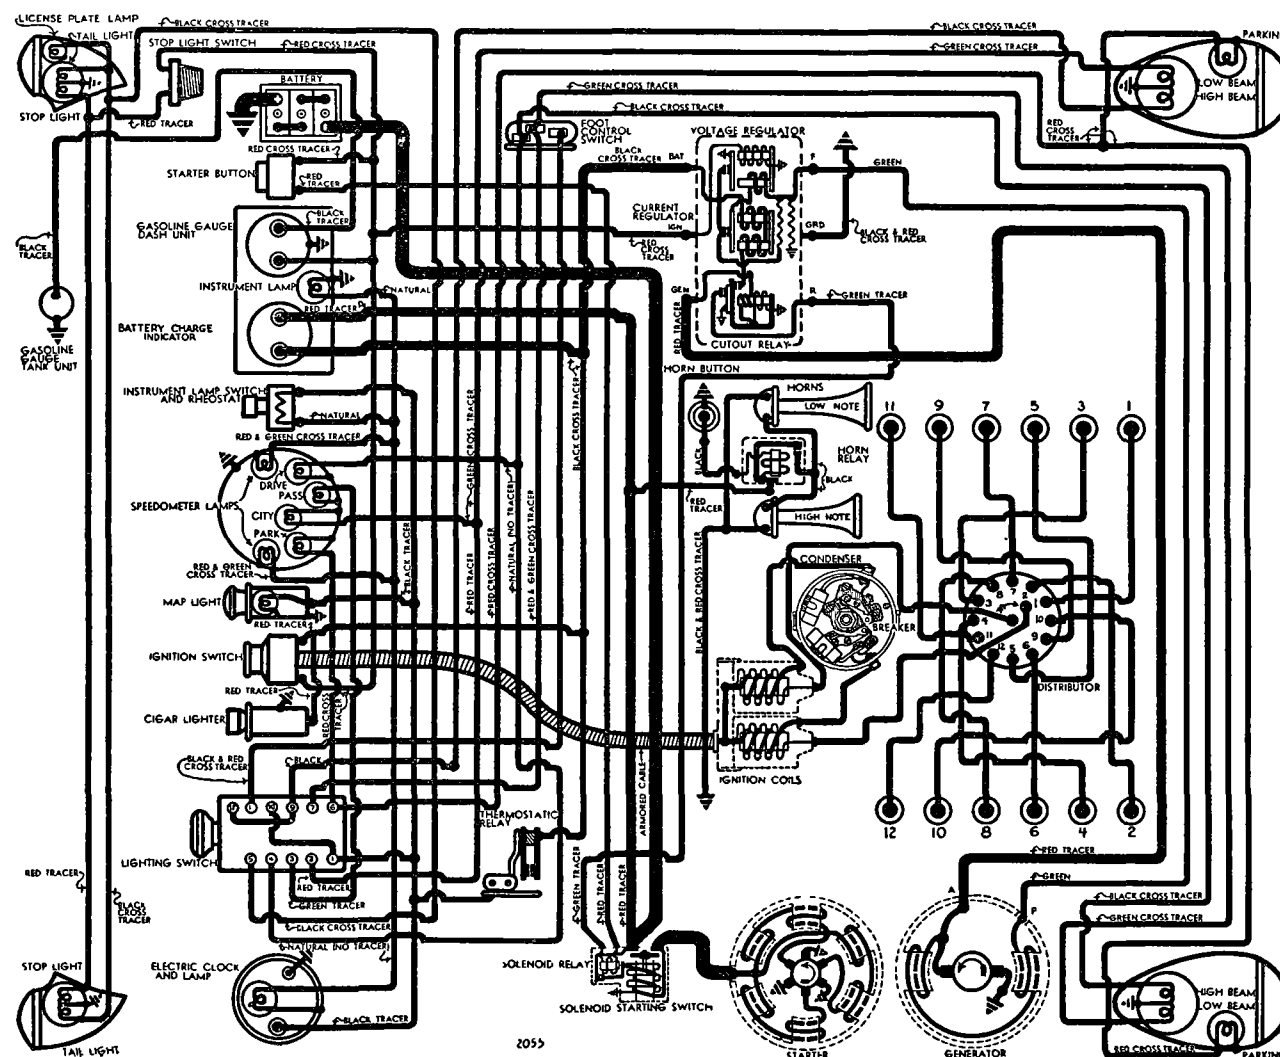

### Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close—**1.9 volts Max. **Open—**1.0-1.2 volts. **Contact Gap—**.035". **Air Gap—**.010" (closed).

CONTINUED FROM PRECEDING PAGE

**GENERATOR**

**Delco-Remy Model 933-M. Armature No. 1854448.** Two brush, straight shunt, 'Peak Load' type with external voltage and current regulation. Air cooled type.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit section below.

**Maximum Charging Rate**—26 amperes (cold) with discharged battery as indicated on test ammeter connected in line at 'BAT' terminal on Control Unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1700 R.P.M. or 20 M.P.H.

**Performance Data—Generator Cold**

Amperes	Volts	R.P.M.
26	8.0	1600

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces.

**Shunt Field Current**—1.7-2.0 amperes at 6 volts.

**Removal**—Flange mounted on rear face of timing chain case at right of engine. To remove, disconnect water pump drive coupling, take out flange mounting screws. Chain adjustment automatic, requires no attention during life of chain.

**REGULATOR**

**Delco-Remy 5559 or 5818. Double Core Voltage & Current Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage & Current Regulators. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Cover of regulator case is sealed. Units can be checked without breaking seal. Seals must be broken to remove cover for adjustments.

**Cutout Relay**

**Cuts In**—6.7-7.6 volts.

**Cuts Out**—0-3.0 ampere discharge current.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

**Voltage Regulator**

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator over-compensated for temperature and must be checked at these points.

**Checking**—To check without breaking seal, disconnect lead at 'IGN' terminal on case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M., adjust charging rate to 8-10 amperes. Voltmeter reading should agree with setting above.

**NOTE**—Cover should be in place when tests are made. Do not operate generator on open-circuit.

**Adjusting**—Seal must be broken and cover removed. With ammeter and voltmeter connected as above, set regulator by bending spring hanger at lower end of armature spring slightly until performance is correct (with cover in place). Remove jumper and restore original connections.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**Current Regulator.**

**Setting**—24-26 amperes.

**Checking**—To check without breaking seal, disconnect 'IGN' lead on regulator, connect test ammeter in charging line at 'BAT' terminal. Operate generator and check performance.

**NOTE**—Do not allow generator voltage to exceed 8.5 volts with voltage regulator inoperative.

**Adjusting**—Seal must be broken and cover removed. Set regulator by bending spring hanger at lower end of armature spring slightly until performance is as noted above (cover must be in place when testing). Restore original connections.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ounces minimum.

**Air Gap**—.070-.080" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE**—Repolarize generator whenever Control Unit disconnected or removed by connecting jumper between 'GEN' and 'BAT' terminals momentarily after all leads connected. Disconnect 'BAT' lead first, connect this lead last.

**LIGHTING**

**LIGHTING**—Headlamps—Guide Multi-beam, Pre-focused type, with special non-interchangeable lenses. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in third or Country Driving position.

**NOTE**—With lighting switch in second position, foot selector switch controls upper driving beam and lower city beam (for both headlamps).

**Headlamp Adjustment**—With driving (upper beam) lighted and lenses in place, aim left hand headlamp so that upper edge of hot spot is at lamp center height and left edge is at vertical line for lamp center (entire hot spot to right of this center line) at 25 feet. Aim right hand headlamp for same height but center hot spot on lamp-center vertical line (right cut-off of hot spot about 1 foot to right of center-line).

**Headlamp Indicators**—Consists of 4 bulbs in speedometer dial which illuminates markers as follows: City—Lower beam, both headlamps. Drive—Upper beam, both headlamps. Pass—Special passing beam (see above). Park—Parking bulbs in headlamps lighted.

**Switches**

**Lighting (1936)**—Delco-Remy Model 487-P (LHSR), 487-N (RHSR), 487-R (LH or RHSR).

**Lighting (1937)**—Delco-Remy Model 480-S (LHD), 480-N (RHD).

**Beam Selector**—Delco-Remy Model 471-Z (1936 LHD), 471-T (1937 LHD), 471-U (1936-37 RHD).

**Bulb Specifications**

Position	Candlepower	Mazda No.
R. H. Headlamp (see note)	32-50	2530
L. H. Headlamp	32-32	2330
Parking, Instrument	1½	55
Clock, Indicators	1	51
Map, Quarter, License	3	63
Tail (1936)	3	63
Stop (1936)	15	87
Stop & Tail (1937)	21-3	1154
Dome	15	87

**NOTE**—In states where this bulb not legal, 32-32 cp., 2330 bulb used in both headlamps. Type 1154 bulb has stop pin which insures correct installation.

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**: Delco-Remy 411-A (1936), No. 1866707 (1937). Mounted on lighting switch. Contacts remain closed with current of 25 amperes but open in 1 minute with load of 38 amperes. Not adjustable.

**HORNS**—Delco-Remy Model K-33-B, Type 1855 (low note), 1856 (high note). Vibrator type, blended tone, twin horns. Operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
1855	12-14 amperes	.045-.050"
1856	11-13 amperes	.036-.040"

**Horn Relay Model 271-A**—Contacts close at 2.7-4.0 volts.

**Contact Gap**—.015-.030".

**Air Gap**—.010-.014" with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS**: 12 cylinder, "I" or overhead valve type. Cylinder blocks for each bank cast en-bloc and separate from crankcase.

**Bore**—3½". **Stroke**—4".

**Displacement**—368 cu. ins.

**Rated Horsepower**—46.9.

**Developed Horsepower**—150 at 3600 RPM.

**Compression Ratio**—6.0-1 Std., 5.65-1 Optl. Lower compression ratio may be secured by installing special thick head gaskets.

**Compression Pressure**—145 lbs. at 1000 RPM or approximately 100-105 lbs. at cranking speed.

**Vacuum Reading**—20-21" steady at 320 RPM.

**PISTONS**—Lynite, Lo-Ex aluminum alloy. "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface).

**Length**—3 5/16". **Weight**—11.712 ozs. stripped, 16.976 ozs. with rings, pin, and locking screw.

**Removal**—Pistons and rods removed from below. **Clearance**—Top .019", Bottom .002". See Fitting New Pistons.

**Replacement Pistons**—Finished anodized pistons furnished .005", .015" oversize or reground blocks with pistons fitted furnished .015", .030" oversize.

**NOTE** Cylinder bores in same block held within .002" limits. Max. cylinder bore out-of-round .0005".

**Fitting New Pistons**—Check piston with micrometer gauge at point just below and to left of "T" slot junction midway between pin holes with piston at 70° F. Check cylinder bore with micrometer, finish to size giving correct clearance. Feeler gauges ⅜-½" wide can be used on side opposite slot. Piston should fall of own weight with .0015" feeler and lock on .002"

**Installing Pistons**—Install pistons with slot to left as viewed from the driver's seat.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**PISTON RINGS:**—Three compression, one oil control ring per piston, all above pin. Lower ring groove drilled radially with oil drain holes. Heat deflector groove above top compression ring groove.

Ring	Width	End Gap	Side Clearance
Comp (80, 85)	1/8"	.007-.012"	.0015-.0028"
Oil Cont	5/32"	.007-.015"	.0013-.0026"

NOTE—Worn limits on all rings .025" (End Gap) and .004" (Side Clearance).

**PISTON PIN:**—Diameter 7/8". Length 2.810-2.815". Pin is locked in piston by locking screw in one boss. Heat piston in boiling water and push pin out from lock-screw end (in from opposite end to install).

**Pin Fit in Piston:**—Locking screw end .0004" press fit or hand push fit with piston at 200-210° F. Free end .0001" clearance or hand push fit at 70° F.

**Pin Fit in Rod Bushing:**—.0002-.0008" (new), .0015" (worn).

NOTE—To remove and install split-type bushing manufacturer recommends special tool kit (No. HM-250). Bushings must be pressed in with an arbor press, expanded, then burnished.

**CONNECTING ROD:**—Weight 31.856 ozs. Length 9 1/4".

**Crankpin Journal Diameter:**—2 1/2".

**Lower Bearing:**—Spun babbitt. No shims. Clearance—.001-.0025". Sideplay .004-.007".

**Bearing Adjustment:**—None (no shims). Do not file caps. Replace rods.

**Installing Rods:**—Numbers on rods and caps must correspond and must be toward bottom of engine.

**CRANKSHAFT:** Four bearing type with integral counterweights.

**Journal Diameters:**—2 5/8" (all bearings).

**Bearing Type:**—Removable steel-backed, babbitt-lined shells. New bearings require no line reaming. Clearance—.001" (new), .004" (worn limit).

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves rotated in or out with "T" shaped cotter pin in oil passage). Do not file caps. NOTE—Use new wooden plugs with rear bearing cap.

**End Thrust:**—Taken by #3 main bearing. Endplay .001-.005".

**CAMSHAFT:** Four bearing type. Duplex chain drive with automatic take-up.

**Journal Diameters:**—#1, 2"; all others 2 1/8".

**Clearance:**—.0011-.0026" (new), .005" (worn limit).

**End Thrust:**—Taken by thrust plate at rear of camshaft sprocket. Endplay .005-.015". Replace plate if endplay exceeds .015".

**Timing Chain:**—Morse #766 Duplex. Width 1 1/2". Pitch 3/8". Length 41 1/4" or 110 links. See Equipment Section for complete data on Morse automatic idler sprocket.

See Miscellaneous Section for complete data.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.509-1.515"	.3392-.3397"	6 9/64"
Exhaust	1.384-1.390"	.3392-.3397"	6 9/64"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.001-.0025"
Exhaust	45°	11/32"	.001-.0015"

**Valve Tappet Clearance Take-up:**—Automatic hydraulic type built in rocker arm assembly on cylinder head. CAUTION—Clearance must be checked whenever valves ground or replaced.

See Miscellaneous Section for complete data.

**Valve Guides:**—One piece, removable. Install with long stepped end up and finish ream to correct clearance.

**Valve Springs:**—Double springs used on all valves.

NOTE—If valve spring pressure (installed) is less than 48 lbs. after valve grinding, correct by installing special .040" spacer, Part No. 889407, under valve spring retainer (will increase pressure 10.9 lbs.).

Inner Spring	Spring Pressure	Length
Valve Closed	18-21 lbs.	1 3/4"
Valve Open	49-54 lbs.	1 7/16"
Outer Spring	Spring Pressure	Length
Valve Closed	48-52 lbs.	1 15/16"
Valve Open	111-120 lbs.	1 9/16"

**Valve Lifters:**—Roller type lifters or cam slides operating in individual removable guides. Clearance in guide .001-.0025" (new), .005" (worn limit). Roller clearance on pin .0017-.003" (new), .004" (worn).

**VALVE TIMING**

**Tappet Clearance:**—None (automatic take-up).

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close at 44° ALDC.

**Exhaust Valves:**—Open at 39° BLDC. Close at 5° ATDC.

**To Check Valve Timing:**—No. 1 intake valve should open with piston on top dead center when flywheel mark '1C/11' lines up with indicator.

**LUBRICATION**

**LUBRICATION:**—Pressure system from oil pump in crankcase through oil tube in oil pan.

**Oil Pump:**—Gear type in crankcase. Driven through tongue-and-slot coupling by gear on camshaft.

**Oil Pump Drive Clearances:**—Drive shaft bushing .001-.0025" (new), .010" (worn limit). Drive gear endplay .009-.015" (new), .020" (worn limit). Drive gear backlash .018" maximum.

**Oil Pump Gear Clearances:**—Pump body and gears .0025-.0085" (new), .010" (worn limit). Pump gear endplay .002-.004" (new), .015" (worn limit).

**Normal Oil Pressure:**—30 lbs. at 60 M.P.H.

**Oil Pressure Regulator:**—Operates at 14 lbs. Not adjustable. Under plug on front of chain case cover.

**Crankcase Capacity:** 9 quarts.

**CLUTCH**

**CLUTCH—SERIES 80, 85:**—Long Model 11CF-C. Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven type. 2 required. Inside Diameter 6 1/2". Outside Diameter 11". Thickness .137".

**Adjustment:**—Free movement of clutch pedal should be 7/8-1 1/8". Adjust by turning nut on forward end of pedal rod directly below pedal equalizer link.

**Removal:**—Clutch removed in same manner as on V8 Series 70 & 75. Refer to 1936 or 1937 Cadillac V8 articles for complete removal directions.

See Cadillac Shop Notes for clutch locking pin removal on replacement clutches.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—5° 38' Crosswise.

**Caster:**—3/4-1 1/4° (1936), 0° plus or minus 1/4° (1937).

**Camber:**—0°-1/2°.

**Toe In:**—0-1/16" (all models).

**Steering Geometry:**—Inner wheel turned 22-23 1/2°, outer wheel 20° (all models).

NOTE—When checking camber, springs must be compressed sufficiently so that distance from lower face of frame sidemember to top face of spring lower support is 5 3/16" on all models.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES—SERIES 80, 85:**—Bendix Hydraulic, Single Anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drum Diameter:**—14". Out-of-round .007" max. Run-out (installed) .010" maximum.

**Lining:**—Molded (Primary 1936, All Shoes 1937), Woven (Secondary 1936 only). Width 2 1/4". Thickness 1/4". Length 12 1/4" (Front Wheel Primary Shoe) 15" (all others).

**Clearance:**—.010" for each shoe.

**Hand Brake:** See Service Brakes above.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Same as engine number. Stamped on generator drive chain housing on crankcase (visible from right side with engine hood up). First number 5110001 (1936) 5130301 (1937).

**ENGINE NUMBER:** Same as Serial Number (above).

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. 5.65-1 Optl.

Pressure—154 lbs. at 1000 R.P.M., 172 lbs. at 3200 R.P.M., or approximately 100-105 lbs at cranking speed for standard 6.0-1 head.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 320 R.P.M.

**FIRING ORDER:** 1-8-9-14-3-6-11-2-15-10-7-4-13-12-5-16. See wiring diagram for spark plug cable connection on distributor cap.

**SPARK PLUGS:** AC No. 84 (sup. G6). 18 mm. Metric. Gaps—.025-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.016". Cam Angle 31° (closed).

Synchronization—Movable contacts open 22½° (distr.) after fixed set. Regular 22½°-22½° firing intervals.

Automatic Advance—17° max. at 1100 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. with flywheel mark "IG/A" at indicator under inspection hole cover on housing. NOTE—Contacts open alternately at regular 22½°-22½° (distr.) firing intervals.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Metering pin turned out not more than ¼ turn from point where smooth running secured (approx. 4 turns open). Idle speed 320 Engine RPM. Carburetors must be equalized. See Carburetor article for instructions.

Float Level—Fuel level 13/16"-15/16" below top edge of bowl.

Fuel Pump Pressure: 4¼ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 431-F (1936) 435-R (1937). Switch and cable assembly. Connected to coil unit by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792 (cylinder). Key Series—8000-9499.

**COIL:** Delco-Remy 553-E. Two coil unit assembled as unit with ignition switch.

Ignition Current—(For each coil)—2.2 amperes idling, 4.4 amperes stopped.

**CONDENSER:** Delco-Remy Part No. 1837963.

Capacity—20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 4118. Double breaker 8 lobe cam, full automatic advance. Contacts open alternately at 22½° intervals corresponding to 45° firing intervals of engine. Contacts must be synchronized (see Timing).

Breaker Gap—Set at .016". Limits .014-.018".

Cam Angle r Dwell—Closed 31°. Open 14° (distributor degrees). Each set operates independently and controls one coil.

Breaker Arm Spring Tension—17-21 ounces.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	200	2.5.....	400
8.25.....	600	16.5.....	1200
17.....	1100	34.....	2200

**Distributor Removal:**—Mounted between cylinder banks at front of engine. Take out two capscrews in mounting bracket.

**NOTE:**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so that slot in upper end of shaft is offset toward front of engine.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows. See Manual Adjustment section below.

Flywheel Degrees Piston Position

All engines ..... 4° BTDC..... 0058° BTDC

**Timing (Stationary Contacts)**—Loosen hold-down screw in advance arm, center distributor pointer on quadrant scale by rotating distributor, tighten hold-down screw, take off cover plate over inspection hole in flywheel housing. With #1 piston on compression, crank engine by jacking up one rear wheel, placing car in gear and turning wheel, stop with piston 4° before top dead center when flywheel mark "IG/A" (which is 4° before top dead center mark "C/1-15") lines up with indicator on housing, loosen taper lock screw in center of breaker cam, carefully locate cam so that stationary contacts (mounted directly on breaker plate) are beginning to open, tighten locking screw, check rotor position and spark plug cable connections (see diagram). Then synchronize movable contacts as directed below.

**Synchronization (Movable Contacts)**—1st method: Turn the engine over 45° or exactly ½ revolution to firing position of piston #8, stop when fly-

wheel mark 'IG/A' lines up with indicator on housing, loosen lock screws on movable sub-plate (carrying second set of contacts), turn eccentric adjusting screw until contacts begin to open, tighten locking screws.

**Synchronization—2nd Method:** Use synchronizing tool, Cadillac Part No. 109224. Install tool and adjust so that stationary contacts begin to open when pointer opposite farthest indicating point on quadrant 'R.H.', turn engine over until pointer is directly opposite 'L.H.' mark on quadrant. Loosen lock-screws on movable sub-plate, turn eccentric adjusting screw until contacts open, tighten lock-screw.

**Manual Adjustment—**With ignition set as above, slight 'ping' should be noticeable when engine is accelerated with wide open throttle at speeds below 15 M.P.H. If ping is too severe, loosen hold-down screw on pointer, rotate distributor one graduation on scale clockwise to retard spark, repeat test. Adjustment permits advance or retard of 10° from center 'O' position.

**NOTE—**Check engine for faulty spark plugs, excessive carbon deposits or localized 'hot spots' before changing the manual adjustment.

## CARBURETOR

**CARBURETION:**—Carburetor—Detroit Model 51, 1½" expanding vane or air valve, updraft type. One carburetor used for each bank with interconnected throttles.

**NOTE—**Carburetor throttles must be synchronized.

*For complete data, refer to Carburetor Index.*

**Automatic Choke:**—Detroit semi-automatic type.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1526626 oil-wetted type standard.

**Fuel Pump:**—AC. Type D #1522149. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**NOTE—**AC. Type K #1521542 vacuum pump mounted as separate unit.

**Gasoline Gauge:**—AC Electric. #1515135 (Dash unit—1936), #1515335 (Dash unit—1937), #1515059 (Tank unit—all models).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco, Type 25-A. 6 volt, 25 plate, 196 ampere hour capacity (20 hour rate).

**Starting Capacity—**234 amperes for 20 minutes.

**Zero Capacity—**300 amperes for 9.5 minutes.

**Ground Terminal—**Positive (+) terminal.

**Location—**Under right front fender. Accessible from engine compartment with right hood raised.

## STARTER

**Delco-Remy Model 580. Armature 1837058.**

**Drive—**Solenoid pinion shift and overrunning clutch type with reduction gears.

**Rotation—**Counter-clockwise (armature shaft) at commutator end.

**Brush Spring Tension—**36-40 ounces each

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	2200.....	5.7.....	70
35 ft. lbs. ....	Lock.....	3.0.....	600

**Removal:**—Flange mounted on rear face of flywheel housing at right of transmission. To remove, take out 3 flange capscrews.

**Starting Switch:**—Solenoid Switch Type 1515. Push-button Switch 1379 or 1407. Solenoid sw. controlled through relay by push button on instrument board. Operative only with ignition 'on'.

*For complete data, refer to Electrical Equipment Index.*

## Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

## Solenoid Relay

**Contacts Close—**4 volts max. **Open—**1.6-2.0 volts.

**Contact Gap—**.030-.045" **Air Gap—**.010-.014" (closed)

## GENERATOR

**Delco-Remy Model 933-M. Armature 1854448.** Two brush, straight shunt, 'Peak Load' type with external voltage and current regulation. Air cooled type.

**Charging Rate Adjustment—**No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit section below.

**Maximum Charging Rate—**26 amperes (cold) with discharged battery as indicated on test ammeter connected in line at 'BAT' terminal on Control Unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1700 R.P.M. or 20 M.P.H.

## Performance Data—Generator Cold

Amperes	Volts	R.P.M.
26 .....	8.0.....	1600

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**22-26 ounces.

**Shunt Field Current—**1.7-2.0 amperes at 6 volts.

**Removal:**—Flange mounted on rear face of timing chain case at right of engine. To remove, disconnect water pump drive coupling, take out flange mounting screws. Chain adjustment automatic, requires no attention during life of chain.

## REGULATOR

**Delco-Remy Model 5559 or 5818. Double Core Voltage & Current Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage & Current Regulators. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**NOTE—**Cover of regulator case is sealed. Units can be checked without breaking seals. Seals must be broken to remove cover for adjustments.

## Cutout Relay

**Cuts In—**6.7-7.6 volts.

**Cuts Out—**3.0 ampere discharge current.

**Contact Gap—**.018-.025".

**Air Gap—**.018-.022" with contacts closed.

## Voltage Regulator

**Setting—**7.55-7.85 volts at 70° F. 7.45-7.55 volts at 150° F. Regulator over-compensated for temperature and must be checked at these points.

**Checking—**To check without breaking seal, disconnect lead at 'IGN' terminal on case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes. Voltmeter reading should agree with setting above.

**NOTE—**Cover should be in place when tests are made. Do not operate generator on open-circuit.

**Adjusting—**Seal must be broken and cover removed. With ammeter and voltmeter connected as above, set regulator by bending spring hanger at lower end of armature spring slightly until performance is correct (with cover in place). Remove jumper and restore original connections.

**Contact Gap—**.015-.025".

**Contact Spring Tension—**3.5 ozs. minimum.

**Air Gap—**.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

## Current Regulator

**Setting—**24-26 amperes.

**Checking—**To check without breaking seal, disconnect 'IGN' lead on regulator, connect test ammeter in charging line at 'BAT' terminal. Operate generator and check performance.

**NOTE—**Do not allow generator voltage to exceed 8.5 volts with voltage regulator inoperative.

**Adjusting—**Seal must be broken and cover removed. Set regulator by bending spring hanger at lower end of armature spring slightly until performance is as noted above (cover must be in place when testing). Restore original connections.

**Contact Gap—**.015-.025".

**Contact Spring Tension—**3.5 ounces minimum.

**Air Gap—**.070-.080" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE—**Repolarize generator whenever Control Unit disconnected or removed by connecting jumper between 'GEN' and 'BAT' terminals momentarily after all leads connected. Disconnect 'BAT' lead first, connect this lead last.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused type with special non-interchangeable lenses. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in Country Driving position.

**Headlamp Adjustment—**With driving (upper beams) lighted and lenses in place, aim left hand headlamp so that upper edge of hot spot is at lamp center height and left edge is at lamp-center vertical line (entire hot spot to right of this line) at 25 feet. Aim right hand headlamp for same height but center hot spot in lamp-center vertical line

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDING PAGE

with right hand cut-off of hot spot about 1 foot to right of center line.

**Headlamp Indicators**—Consists of 3 bulbs in special dial on instrument board which are lighted as follows:

Drive—Upper beam, both headlamps.

City—Lower beam, both headlamps.

Pass—Asymmetrical passing beam (see above).

**Switches**

**Lighting**—Delco-Remy Model 487-H, K (Exp.).

**Foot Selector**—Delco-Remy Model 471-Z (1936) 471-T (1937).

**Stop Light**—Delco-Remy Model 474-R (1936 only).

**Bulb Specifications**

Position	Candlepower	Mazda No.
R.H. Headlamp (see Note)	32-50	2530
L.H. Headlamp	32-32	2330
Parking, Instrument	1½	55
Clock, Indicators	1	51
Map, Quarter, License	3	63
Stop & Tail	21-3	1154
Dome	15	87

NOTE—In states where this bulb not legal, 32-32 cp., 2330 bulb used in both headlamps. Type 1154 bulb has stop pin which insures correct installation.

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Model 411-A. Mounted on dash. Contacts remain closed with current of 25 amperes but open within one minute with load of 38 amperes at 70-80° F. Not adjustable.

**HORNS**—Delco Model K-33-B Type 1855 (low note), 1856 (high note). Blended tone twin horns, operated by horn relay. Vibrator type.

Horn Type	Current at 6 volts	Air Gap
1855	12-14 amperes	.045-.050"
1856	11-13 amperes	.036-.040"

NOTE—Horns identified by letter stamped on front of power unit cover and projectors must be assembled as follows: 'S'—low note, short projector, 'L'—high note, long projector.

**Horn Relay Model 266-TK (1936) 271-A (1937)**—Contacts close at 2.7-4.0 volts.

**Contact Gap**—.015-.030".

**Air Gap**—.010-.014" with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS**: 16 Cylinder, "I" or overhead valve, 45° Vee type. Cylinder blocks for each bank cast en bloc and separate from crankcase.

**Bore**—3". **Stroke**—4".

**Displacement**—452 cu. ins.

**Rated Horsepower**—57.5.

**Developed Horsepower**—185 at 3800 RPM.

**Compression Ratio**—6.0-1 Std. 5.65-1 Optl. Lower compression ratio may be secured by installing special thick head gaskets.

**Compression Pressure**—154 lbs. at 1000 RPM or

approximately 100-105 lbs. at cranking speed.

**Vacuum Reading**—20-21" steady reading with engine idling at 320 R.P.M.

**PISTONS**—Lynite Lo-Ex aluminum alloy, "T" slot, cam ground type with anodized finish. Length 3 5/16".

**Weight**—10.96 ozs. (stripped), 16.144 ozs. (with rings, pin, and locking screw).

**Removal**—Pistons and rods removed from below. **Clearance**—Top .018". Bottom .0018". See Fitting New Pistons.

**Replacement Pistons**—Finished pistons furnished .005" and .015" oversize. Reground blocks (pistons fitted) furnished .015", .030" oversize (exchange basis). Hold all bores in same block within .002" limit and maximum out-of-round to .0005".

**Fitting New Pistons**—If micrometer used, check cylinder bore and pistons (just below and to left of "T" slot junction midway between pin holes with piston at 70°). If feeler gauges (⅜-½" wide) used, install on side opposite slot. Piston should fall of own weight with .0015" feeler and hold on .002" feeler.

**Installing Pistons**—Slot to left (viewed from driver's seat) for all pistons in both banks.

**PISTON RINGS**—Three compression, one oil control ring per piston, all above pin (no ring in heat deflector groove at top). Lower ring groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp.	.0930-.0935"	.007-.012"	.0015-.0028"
Oil Cont.	.1540-.1550"	.007-.015"	.0013-.0026"

NOTE—Worn limits .025" (end gap), .004" (side clearance).

**PISTON PIN**—Diameter .8742-.8745", Length 2.810-2.815". Pin locked in piston by locking screw in one boss. To remove pins, heat piston in boiling water, push out at lockscrew end (install from opposite end).

**Pin Fit in Piston**—.0004" press fit or hand push fit with piston at 200-210° F. (lockscrew boss), .0001" clearance or hand push fit at 70° F. (free end).

**Pin Fit in Rod Bushing**—.0002-.0008" clearance (new), .0015" (worn limit).

**CONNECTING ROD**—Weight 31.856 ozs. Length 9¼".

**Crankpin Journal Diameter**—2.4995-2.500".

**Lower Bearing**—Spun babbit. No shims.

**Clearance**—.0015". Sideplay .004-.007".

**Bearing Adjustment**—None. Replace rods. Do not file bearing caps.

**Installing Rods**—Numbers on rods and caps must correspond and point down toward oil pan.

**CRANKSHAFT**—Five bearing type with integral counterweights.

**Journal Diameters**—2⅝" all bearings.

**Bearing Type**—Removable steel-backed, babbit-lined. No shims.

**Clearance**—.001" (new), .004" (worn limit).

**Bearing Adjustment**—None. Replace bearings. Do not file caps. Rotate upper halves in or out without removing crankshaft.

**End Thrust**: Taken by #3 bearing.

**Endplay**—.001-.005"

**CAMSHAFT**: Five bearing type. Duplex chain drive with automatic take-up idler sprocket.

**Journal Diameters**—#1, 2"; all others 2⅝".

**Clearance**—.0011-.0026" (new), .005" (worn limit).

**End Thrust**—Taken by thrust plate at rear of camshaft sprocket. Endplay .005-.015". Replace plate when endplay exceeds .015".

**Timing Chain**—Morse #766 Duplex. Width 1½". Pitch .375". Length 41¼" or 110 links. See Mechanical Equipment Section for data on Morse automatic idler.

See Miscellaneous Section for complete data.

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with straightedge across shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1.509-1.515"	.3392-.3397"	6.220-6.228"
Exhaust	1.384-1.390"	.3392-.3397"	6.220-6.228"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.3476"	.0015"
Exhaust	45°	.3476"	.0025"

**Valve Tappet Clearance Take-up**—Automatic hydraulic type built in rocker arm assembly on cylinder head. CAUTION—Clearance must be checked whenever valves ground or replaced.

See Miscellaneous Section for complete data.

**Valve Guides**—Pressed in head with long stepped end up and finish reamed for correct clearance.

**Valve Lifters**—Roller type in individual removable guides. Clearance in guide .001-.0025" (new), .005" (worn limit). Roller clearance on pin .0017-.003" (new), .004" (worn limit).

**Valve Springs**—Double springs used on all valves.

	Inner Spring	Outer Spring
Valve Closed	19.5 lbs., 1.751"	50 lbs., 1.922"
Valve Open	51.5 lbs., 1.407"	115.5 lbs., 1.578"

NOTE—Whenever valves reconditioned, check spring pressure. Total for both springs should be 48-63 lbs. (measure with Tool No. J-444). Minor variations can be corrected by installing .040" spacers (Part No. 889407) under valve spring retainers. Each spacer increases pressure 11 lbs.

**VALVE TIMING**

**Tappet Clearance**—None (automatic take-up).

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 44° ALDC.

**Exhaust Valves**—Open 39° BLDC. Close 5° ATDC.

**To Check Valve Timing**—#1 intake valve should open with piston on top dead center when flywheel mark "1C/15" lines up with indicator.

**LUBRICATION**

**LUBRICATION**: Pressure system. Gear type oil pump mounted in crankcase.

**Oil Pump Drive Clearances**—Drive Shaft Bushing .001-.0025" (new), .010" (worn limit). Drive gear end play .009-.015" (new), .020" (worn limit). Drive gear backlash .018" maximum.

**Oil Pump Gear Clearances**—Between pump body and gears .0025-.0085" (new), .010" (worn limit). Pump gear endplay .002-.004" (new), .015" (worn limit).

**Normal Oil Pressure**—30 lbs. at 60 M.P.H.

**Oil Pressure Regulator**—Located under plug on front face of chain case cover. Opens at 14 lbs. Not adjustable.

**Crankcase Capacity**—10 quarts.

## CLUTCH

**CLUTCH (90)**:—Own make. Double plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Woven type, 4 required. Inside Diameter 6½". Outside Diameter 11". Thickness .135-.145".

**Adjustment**:—Free movement of pedal should be 1¼-1½". To adjust, turn adjusting nut on pedal rod.

**Removal**:—Remove transmission (see Transmission Section below). Take off four nuts on studs by which center driving plate mounted on flywheel (nuts accessible through holes in rear driving plate), remove clutch assembly.

## TRANSMISSION

**TRANSMISSION**:—Own Make. Constant mesh, synchro-mesh, helical gears (second and high), sliding spur gear for low and reverse.

*See Transmission Section for complete data.*

**Removal (90)**:—Disconnect universal joints and remove drive shaft, remove transmission rear support (as unit with cross-member), remove front propeller shaft and housing, disconnect clutch release mechanism, take out transmission mounting screws, pull transmission straight back (clutch housing integral with transmission case).

## UNIVERSALS

**UNIVERSAL JOINTS**: Mechanics Model 4C. Needle bearing type. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE**: Own Make. Three-quarter floating type with spiral bevel gears and Hotchkiss Drive.

*See Rear Axle Section for complete data.*

**NOTE**—Manufacturer recommends Differential Carrier Assembly be returned to factory for servicing.

**Ratio**—4.64-1 Std., 4.07-1, 4.31-1, 4.41-1 Optl.

**Backlash**—.004-.008". Screw adjustment.

**Removal**:—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on differential carrier flange, pull carrier assembly out without disturbing axle housing.

**Axle Shaft Removal (90)**:—Jack up rear end, remove wheel, take out capscrews in driving hub flange, pull driving hub and axle shaft out as an assembly.

**Wheel Bearing Adjustment**:—None required.

## SHOCK ABSORBERS

**SHOCK ABSORBERS**:—Delco Hydraulic, double acting type.

	Front	Rear
90 .....	1950D, C .....	2050C, D .....

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**:—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4° (1936), 4°30' (1937).

**Caster**—1° (1936), 0° plus or minus ¼° (1937).

**Camber**—¾-1½° (1936), 0-½° (1937).

**Toe In**—0 to 1/16". Adjustable.

**Steering Geometry**—Inner wheel turned 22-23½°, outer wheel 20°.

## STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Double Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

1936 M DELS

**BRAKES—SERIES 90**:—Service—Own Make. Internal-expanding, self-energizing, mechanically operated, vacuum power type. Hand lever applies rear service wheel brakes.

*See Brake Section for complete data.*

**Drum Diameter**—15.995-16.005". Out-of-round .007" maximum. Run-out (installed) .010" maximum.

**Lining**—Woven type. Width 2" (all shoes).

	Thickness	Length per Shoe
Top (aluminum) Shoe .....	245-.260"	15 19/32"
Lower (steel) Shoe .....	183-.198"	14¼"

**Clearance**—.007" (approximate).

**Hand Brake Adjustment**:—See Service Brakes.

**Power Unit**:—Bendix internal valve type vacuum cylinder mounted on frame 'X' member and linked to equalizer lever between front and rear wheel brake cross shafts.

*See Brake Section for complete data.*

## BRAKES

1937 M DELS

**BRAKES**:—Service—Bendix hydraulic, single anchor type with vacuum power operation (90 only). Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drum Diameter**—14".

**Lining**—Molded (Primary Shoes), Woven (Secondary Shoes). Width 2¼". Thickness ¼". Length per shoe 12¼" (Front Wheel Primary Shoe), 15" (all others).

**Clearance**—.010" for each shoe.

**Hand Brake**:—See Service Brakes above.

**Power Unit (Series 90)**:—Bendix internal valve type Vacuum Power cylinder linked to brake pedal lever.

*See Brake Section for complete data.*

**ENGINE HOOD & SIDE PANEL REMOVAL:**—See Cadillac Special Shop Notes for instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—Same as engine number below.

**ENGINE NUMBER:**—First number (60) 8270001, (60S) 6270001, (65) 7270001, (75) 3270001. Stamped on left side of crankcase at rear of left cylinder block and on left frame side member in rear of front engine support.

### TUNE-UP

**COMPRESSION:**—Ratio—8.25-1 (Std. 60, 60S, 65), 6.70-1 (Std. 75), 5.75-1 (Optl.—all models).

**Pressure:**—155 lbs. (60, 60S, 65), 170 lbs. (75) at 1000 R.P.M. or approximately 105-110 lbs. (60, 60S, 65), 110-115 lbs. (75) at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 20-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram for cylinder numbering and spark plug connections.

**SPARK PLUGS:** AC No. 45. 14 mm. Metric type. Gaps—.025-.027".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". **Cam Angle** 31° (closed).

**Automatic Advance**—12° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—5° BTDC. with crankshaft pulley mark "IG/A" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws midway between "miss" and "roll" points. Idle speed 7-8 MPH.

**Float Level**—Fuel level  $\frac{5}{8}$ " below top edge of bowl. **Accelerating Pump**—Inner hole (minimum stroke) normal setting.

**Fuel Pump Pressure:**  $4\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy 435-K (60, 60S), 1116255 (others). Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton No. 45792 (Lock Cylinder). Key Series—8000 to 9499. Groove—15.

**COIL:** Delco-Remy Model 539-C. Mounted on dash.

**Ignition Current**—2.2 amps. idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity**—20-.25 microfarads.

**DISTRIBUTOR:** Delco-Remy Model 1110604. Single breaker, 8 lobe cam, full automatic advance type with manual adjustment at distributor.

**Breaker Gap**—.0125-.0175".

**Cam Angle or Dwell**—31° closed, 14° open.

**Breaker Arm Spring Tension**—22 ounces.

**Rotation**—Clockwise viewed from top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	500	1.....	1000
3.....	820	6.....	1640
6.....	1200	12.....	2400
9.....	1600	18.....	3200
12.....	2000	24.....	4000

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, take out two capscrews in mounting bracket.

**NOTE:**—When installing distributor on engine, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so that slot in upper end of shaft is offset toward rear of engine.

### IGNITION TIMING

**IGNITION TIMING:**—Setting below for fuel ratings as follows:—60 & 65—70 octane rating, 75—ethylized or other high octane fuel. **NOTE:**—See Manual Adjustment (following) for final setting giving best performance with type of fuel regularly used.

**Flywheel Degrees**

5° BTDC

**Piston Position**

.0114° BTDC

**To Set Timing (With Synchroscope)**—Recommended by manufacturer. Clip Synchroscope lead to #1 spark plug, direct light on crankshaft pulley at front of engine. Idle engine, loosen hold-down screw in advance arm, rotate distributor until "IG/A" mark on pulley (which is 5° before dead center mark "C.1/6" appears to line up with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over

► SEE CADILLAC V16 (1938-39) DIAGRAM FOR SERIES 75 GENERATOR & REGULATOR WIRING

to firing position for piston #1 (front piston, left bank) with mark 'IG/A' on crankshaft pulley (5° before dead center mark 'C.1/6') lined up with pointer on chain case. Loosen hold-down screw on advance arm, center pointer on scale, tighten hold-down screw on advance arm. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Adjust for fuel (see Manual Adjustment).

**Manual Adjustment**—Slight ping should be evident at speeds below 15 M.P.H. when car accelerated with wide open throttle. To adjust, loosen hold-down screw on advance arm, rotate distributor one graduation on scale clockwise (if ping too severe), counter-clockwise (if no ping noted), repeat test, adjust until best performance is secured. **NOTE**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, or lean carburetor setting before changing manual adjustment.

## CARBURETOR

**CARBURETION**:—Carburetor—Stromberg Model AAV-25, 1¼" dual downdraft, aircraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—If engine idled after cold starting, open throttle momentarily. New choke design requires opening of throttle for proper choke release.

**Idle Adjustment**—With engine warm (fast idle and automatic choke inoperative) adjust throttle stop-screw so that engine idles at 6 M.P.H. Turn each idle adjusting screw in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Both screws must be adjusted equally. Readjust throttle stop-screw for correct idling speed if necessary.

**Accelerating Pump Setting**—Two holes provided in throttle lever for pump link engagement. Set as follows:

Inner hole (short stroke)—Normal operation.

Outer hole (long stroke)—Winter temperatures.

**Fast Idle**:—Integral with carburetor. No adjustment.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke**:—Integral with carburetor (linked directly to choke valve shaft). No adjustment.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**:—AC. #1528572 oil bath type used in conjunction with oil vent #864384.

**Fuel Pump**:—AC. Type AB #1523694. Diaphragm type. Combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**:—AC. Electric type. #1515346 (dash unit), #1515461 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**SERIES 60, 60S, 65**

**BATTERY (60, 60S, 65)**:—Delco, Type 17-K-1. 6 volt, 17 plate, 112 AH. capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.38 volts.

**Grounded Terminal**—Positive (+) terminal. Grounded to frame. Engine grounded to same point on right frame side member by strap connector (second ground at left front of engine on some models).

**Dimensions**—Length 10¾". Width 7". Height 8¾". **Location**—Under hood on right side. **NOTE**—To remove, take out through bolt on outer edge (under fender), raise battery carrier and battery to free clamps from frame and lower assembly to floor.

## BATTERY

**SERIES 75**

**BATTERY (75)**:—Delco, Type 17-D. 6 volt, 17 plate, 135 AH. capacity (20 hour rate).

**Starting Capacity**—156 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.5 minutes. Five second voltage—4.6 volts.

**Dimensions**—Length 11¾". Width 7". Height 9¾".

**Grounded Terminal & Location**—As above.

## STARTER

**Delco-Remy Model 727-V (Std. All Models), 1107904 (RHD. Series 60).**

**Armature**—No. 820158.

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal**:—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter forward, remove from below.

**Starting Switch**:—Solenoid Switch Type 1542. Push-button Switch Type 1996001. Solenoid Switch controlled through relay in case by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index*

### Solenoid Switch Specifications

Closes against 70 lbs. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

Contacts Close—1.9 volts Max.

Contacts Open—1.0-1.2 volts.

Contact Gap—.035". Air Gap—.010" (closed).

## GENERATOR

**SERIES 60, 60S, 65**

**Delco-Remy Model 1101051 (Series 60, 60S), 1101054 (65).** Armature No. 1866789. Split-field type with fixed third brush and vibrating voltage regulator control.

*For complete data, refer to Electrical Equipment Index.*

**Charging Rate Adjustment**—Adjusted by changing regulator setting. See Regulator data.

**Maximum Charging Rate**—As given in table below. Reached at 4000 R.P.M. or 50 M.P.H. cold. To check charging rate, connect test ammeter in line at 'BAT' terminal on regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE**—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current**—1.44-1.56 amperes at 6.0 volts (Shunt field), .89-.94 amperes at 6.0 volts (third brush field).

**Removal**:—Flange mounted at front of engine between cylinder banks. Belt driven in tandem with water pump (separate belt for fan). To remove, take out two flange mounting bolts.

**Belt Adjustment**:—Loosen both generator mounting bolts, lift generator up until only slight slack evident in belt (pivots on left bolt, right bolt hole slotted).

**NOTE**—Fan driven by separate belt with adjustment at fan bracket.

## GENERATOR

**SERIES 75**

**Delco-Remy Model 1102652.** Armature No. 1857866. Two brush (shunt) peak-load type with external vibrating type voltage and current regulation. *For all data on this generator (including wiring diagram), see Cadillac V16 (1938-39) article.*

## REGULATOR

**SERIES 60, 60S, 65**

**Delco-Remy Model 5817.** Two-unit Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating Voltage Regulator. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—0-3.0 amperes discharge.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.9 volts (70°F.), 7.4-7.6 volts (150°F.). Regulator over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at 'BAT' terminal on regulator, disconnect lead on 'IGN' terminal and connect jumper between this terminal and 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2000-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature slightly.

**NOTE**—Regulator cover must be in place when making tests. Do not operate generator on open-circuit.

**Contact Gap**—.020". **Contact Sp. Tens.**—2.7-3.5 ozs.

**Air Gap**—.063" between armature and center of core with armature down. .010" between fibre bumper and stop with armature up.

## REGULATOR

**SERIES 75**

**Delco-Remy Model 5818.** Double Core Type Voltage and Current Regulator (with 'IGN' Terminal). *For all data on this Regulator (including wiring diagram), see Cadillac V16 (1938-39) article.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDIN PA E

**LIGHTING**

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused type with non-interchangeable lenses (marked 'Right' and 'Left' at top). Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in Country Driving position.

**NOTE:**—With lighting switch in second position (City), foot selector switch controls upper 'driving' beam and lower 'City' beam (for both headlamps).

**Headlamp Adjustment:**—Adjust lamps only with doors in place. Aim right hand headlamp so that top edge of high intensity spot is on horizontal line at lamp center height and centered on vertical lamp-center line. Aim left hand headlamp for same height but high intensity spot must be to right of vertical lamp-center line. Adjusting screw for up-and-down motion accessible through hole in bottom of each lamp, screw for side motion on inner side of each lamp body (accessible after removing spring-retained cup).

**Headlamp Indicators:**—Located on lower edge of speedometer panel. Marked as follows:

Drive—Upper beam, both headlamps.

Pass—Special passing beam (see above).

City—Lower beam, both headlamps.

**Switches**

**Lighting:**—D-R No. 1994502, 1995005 (Exp.).

**Dimmer:**—D-R Model 471-T, 471-U (RHD).

**Dash Lamp:**—D-R Model 1406.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Stop and Tail	21-3	1154
Parking	1½	55
License, Quarter	3	63
Dome	15	87
Instrument, Clock, Ind.	1	51

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—No. 1866467. Mounted on lighting switch. Contacts remain closed with 25 ampere current but open within 1 minute with 38 ampere current (70°F.). Non-adjustable.

**HORNS:**—Klaxon Model K-33-D. Type 1967 (low note—left side), 1968 (high note—right side). Vibrator type, blended tone, twin horns operated by horn relay.

**NOTE:**—Horns mounted vertically behind radiator grille with horn relay on left front fender dust shield. Grille must be removed for horn service.

Horn Type	Current (at 6 volts)	Air Gap
1967 Low Note	12-14 amperes	.045-.050"
1968 High Note	11-13 amperes	.036-.040"

**Horn Relay:**—Model 271-A. Contact Gap—.020".

Contacts Close—2.7-4.0 volts. Air Gap—.015".

**ENGINE**

**ENGINE SPECIFICATIONS:**—Own. 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3½". Stroke—4½".

Displacement—346 cu. ins. Rated HP.—39.20.

Developed Horsepower—135 (60, 60S, 65), 140 (75) at 3400 R.P.M.

Compression Ratio—6.25-1 (Std. 60, 60S, 65), 6.70-1 (Std. 75), 5.75-1 Optl. (all models).

See Cadillac Special Shop Notes for cylinder head identification and interchangeability data.

Compression Pressure—155 lbs. (60, 60S, 65), 170 lbs. (75) at 1000 R.P.M. or approximately 105-110 lbs. (60, 60S, 65), 110-115 lbs. (75) at cranking speed.

Vacuum Reading—Steady 20-21" at idle speed.

**PISTONS:**—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length—4½". Weight—18.30 oz. stripped. 25.13 oz. complete.

Removal:—Pistons and rods removed from above Clearance—Skirt .0021". See Fitting New Pistons.

Replacement Pistons:—See Cadillac Shop Notes.

**NOTE:**—Hold all cylinders in same block within .002" size limits. Max. out-of-round .0005".

**Fitting New Pistons:**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide) used, insert feeler next to T-slot. Piston should fall of own weight with .002" feeler, hold tight on .0025" feeler.

Installing Pistons:—Slot to left, for all pistons.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.007-.012"	.0015-.0028"
Oil Control	5/32"	.007-.015"	.0013-.0026"

**NOTE:**—Worn limits .025" (gap), .004" (side clear.).

Replacement Rings: .003", .005", .010", .015", .030" oversize.

**PISTON PIN:**—Diameter ⅝". Length 3 1/16". Pin floats in piston and rod. Held by locking rings.

See Cadillac Shop Notes for special pin removal and installation instructions.

Pin Fit in Piston—.0004" press fit (ribbed end), .0001" clearance or free fit at 70°F. (plain end).

Pin Fit in Rod Bushing—.0002-.0008" clearance (new), .0015" (worn limit).

**CONNECTING ROD:**—Weight 37.472 oz. Length 8¾".

Crankpin Journal Diameter—2.4590-2.4595".

Lower Bearing—Steel-backed, babbitt-lined.

Clearance—.0015-.0025" (new), .006" Max. (worn)

Sideplay—.003-.008".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

**NOTE:**—Use new lockwashers under bearing cap bolts. Use only 12" wrench to tighten (Tool J-835).

Installing Rods:—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down toward oil pan.

**CRANKSHAFT:**—3 bearing. 6 counterweights.

Journal Diameters—2½" all bearings.

Bearing—Steel or bronze backed, babbitt-lined.

Clearance—.0015" (new), .004" (worn limit).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. Upper halves can be rotated out without removing shaft.

See Cadillac Special Shop Notes for Rear Main Bearing oil seal renewal (new type).

**End Thrust:**—Taken by center bearing. Endplay .001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearings. Non-adjustable chain drive. Journal Diameters—#1 and 2, 2.4071-2.4078"; #3, 2.0009-2.0016".

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.0027-.0037" (new), .005" (worn limit).

See Cadillac Special Shop Notes for Camshaft Bushing removal and installation instructions.

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Morse Type C #3682-R Side guide type. Width 1¼". Pitch ⅜". Length 23¼" or 62 links. **NOTE:**—Install chain 'endless' as an assembly with sprockets. Use tool J-836 to pilot camshaft sprocket

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with straightedge across centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	.3415-.3425"	5 33/64"
Exhaust	1.628-1.636"	.3405-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.001-.0023"
Exhaust	45°	.345"	.002-.0033"

**NOTE:**—Worn limit for valve stem-to-guide clearance .006" Intake, .005" Exhaust.

See Cadillac Special Shop Notes for valve removal and installation instructions.

**Valve Guides:**—Pressed in block with long stepped end down and reamed to correct size.

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters. Lifters are mushroom type operating in removable guide brackets.

See Miscellaneous Section for complete data.

Clearance—.001-.0025" (new), .005" (worn).

Valve Springs:	Pressure	Length
Valve Closed	66 lbs.	1.928"
Valve Open	145 lbs.	1.581"

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open at TDC. Close at 42° ALDC.

Exhaust Valves—Open 52° BLDC. Close 10° ATDC.

To Check Timing—Intake valve for #1 cylinder opens with piston on top dead center when 'C.1/6' on crankshaft pulley lines up with pointer.

**LUBRICATION**

**LUBRICATION:**—Pressure system with gear type oil pump located in crankcase.

See Cadillac Special Shop Notes for oil pump data.

Normal Oil Pressure—25 lbs. at 30 M.P.H.

Oil Pressure Regulator—Located on oil pump.

Operates at 30 lbs. Not adjustable.

Crankcase Capacity—7 qts. (refill).

**COOLING**

Capacity—24 qts. (60S), 25 qts. (others).

Pressure Valve—In radiator filler cap. Opens at 3½-4½ lbs.

**Water Pump:** Centrifugal type with self-adjusting packing. Belt driven in tandem with generator.

See Water Pump Section for complete data.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting**—(Std. Type) Starts to open 148-153°F., fully open at 170°F. (High Reading Type—use with heaters). Starts to open 163-168°F. Fully open 185°F.

**Shutter Adjustment**—Adjust clevis on threaded end of rod to secure 1/16" tension on thermostat with shutters closed.

## CLUTCH

**CLUTCH:**—Long Model 11CF-CI. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Woven joined type, 2 required. Inside Diam. 6½". Outside Diam. 11". Thickness .125".

**Adjustment:**—Free movement of pedal should be ⅞-1⅛". To adjust, turn nut on forward end of connector link in front of clutch fork.

**Removal:**—Remove transmission (see Transmission Section below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel to insure correct installation, take out mounting bolts in cover flange, remove clutch from below.

*See Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and clutch balancing data.*

## TRANSMISSION

**TRANSMISSION:**—Own make. Constant-mesh helical gear (second), synchro-mesh (second and high), sliding helical gear (low and reverse).

*See Transmission Section for complete data.*

**Transmission Control**—Own make. Remote control, type (shift lever mounted on steering column).

*See Transmission Section for complete data.*

**Removal:**—Disconnect shifter rods at levers on left hand side of case, disconnect drive shaft at front universal joint, support engine with jack under oil pan (use wooden block to avoid damage to pan), free transmission extension at rear support cross-member, disconnect engine support stabilizer on right hand side (take out pin at forward end), disconnect exhaust pipe brace, disconnect speedometer cable. Take out transmission mounting cap-screws, pull transmission straight back (plug clutch connection shaft bearing drain hole as soon as it is accessible to prevent lubricant loss).

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3-C. Needle bearing type, 2 used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**NOTE**—Manufacturer recommend Differential Carrier Assembly be returned to factory for servicing.

**Ratio**—3.92-1 (60, 60S), 4.58-1 (65, 75).

**Backlash**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal**—Jack up car, remove rear wheels, pull wheel hub and brake drum assembly, disconnect brake line and remove backing plates. Use tool J-838, pull shaft and bearing assembly out.

**Wheel Bearing Adjustment:**—None (sealed type).

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—1946-E, F (60, 60S), 1951-C, D (65, 75). Rear—1751-E, F (60), G, H (60S), 2052-A, D (65, 75). Double acting type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4°51' (60, 60S), 5°38' (65, 75)

**Caster**—(60, 60S) Neg. ¼° to Neg. 1¼°, (65, 75) Neg.

¼° to Pos. ¼° at curb weight (gasoline tank full).

**Camber**—Neg. ¼° to Pos. ½° (all). Adjustable.

**Toe In**—1/32-3/32" (at rest), 0-1/16" (in motion).

**Steering Geometry**—Inner wheel turned 23½° (60, 75), 23¾° (60S, 65). Outer wheel 20° (all).

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, Duo-servo, Single Anchor type. Hand lever applies rear brakes.

*See Brake Section for complete data.*

**Braking Power**—54½% Front (60, 60S, 65), 58%

Front (75), 45½% Rear (60, 60S, 65), 42% Rear (75).

**Brake Drums**—Diameter 11.995-12.005" (60, 60S, 65),

13.995-14.005" (75). Centrifuse type.

**Lining**—Moulded type. Width 2¼" (Front—all mod-

els, Rear—75 only), 2" (Rear—60, 60S), 2½" (Rear

—65). Thickness 3/16" (60, 60S, 65), ¼" (75). Length

per shoe 12 15/16" (60, 60S, 65), 12¼" (75—front

primary shoe), 15" (75—all others).

**Clearance**—.010" for all models.

**Hand Brake:**—See Service Brakes above.

**ENGINE HOOD & SIDE PANEL REMOVAL:**—See Cadillac Shop Notes for instructions.

### MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—First number (60S) 6290001, (61) 8290001, (75) 3290001. Stamped on left side of crankcase at rear of left cylinder block and on left frame side member opposite steering gear.

### TUNE-UP

**COMPRESSION:**—Ratio 6.25-1 (Std. 60S, 61), 6.70-1 (Std. 75), 5.75-1 (Optl. all models). Pressure—155 lbs. (60S, 61), 170 lbs. (75) at 1000 R.P.M. or approximately 105-110 lbs. (60S, 61), 110-115 lbs. (75) at cranking speed.

**VACUUM READING:** Steady 20-21" idling at 7-8 MPH.

**FIRING ORDER:** 1-8-7-3-6-5-4-2. See diagram.

**SPARK PLUGS:** AC No. 104. 10 mm. Metric type.

Gaps—.025-.030".

**NOTE:**—1939 spark plugs are new small type and must not be tightened excessively (7-10 ft. lbs.).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015" (.0125-.0175").

Cam Angle—31° (closed).

Automatic Advance—12° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC. with crankshaft pulley mark "IG/A" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 7-8 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top of bowl.

Accelerating Pump—Inner hole (min. stroke) normal.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 1865711 (61), 1116255 (60S, 75). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115128. Mounted on dash.

Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110604. Single breaker, 8 lobe cam, full automatic advance type with manual adjustment at distributor.

Breaker Gap—.0125-.0175".

Cam Angle or Dwell—31° closed, 14° open (distr.).

Breaker Arm Spring Tension—22 ounces.

Rotation—Clockwise viewed from the top.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	500	1	1000
3	820	6	1640
6	1200	12	2400
9	1600	18	3200
12	2000	24	4000

**Manual Adjustment:**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

**Removal:**—Distributor mounted between cylinder banks at rear of engine. To remove, take out two cap screws in mounting bracket. **NOTE:**—When installing distributor, turn crankshaft to firing position for #1 piston, mesh distributor drive gear so slot in upper end of shaft is offset toward rear or left hand side of engine.

### IGNITION TIMING

**IGNITION TIMING:**—As given below for fuel of 70 Octane rating (60S, 61), Ethylized or high-octane fuel (75). See Manual Adjustment (following) for correction dependent on fuel regularly used.

**Flywheel Degrees**

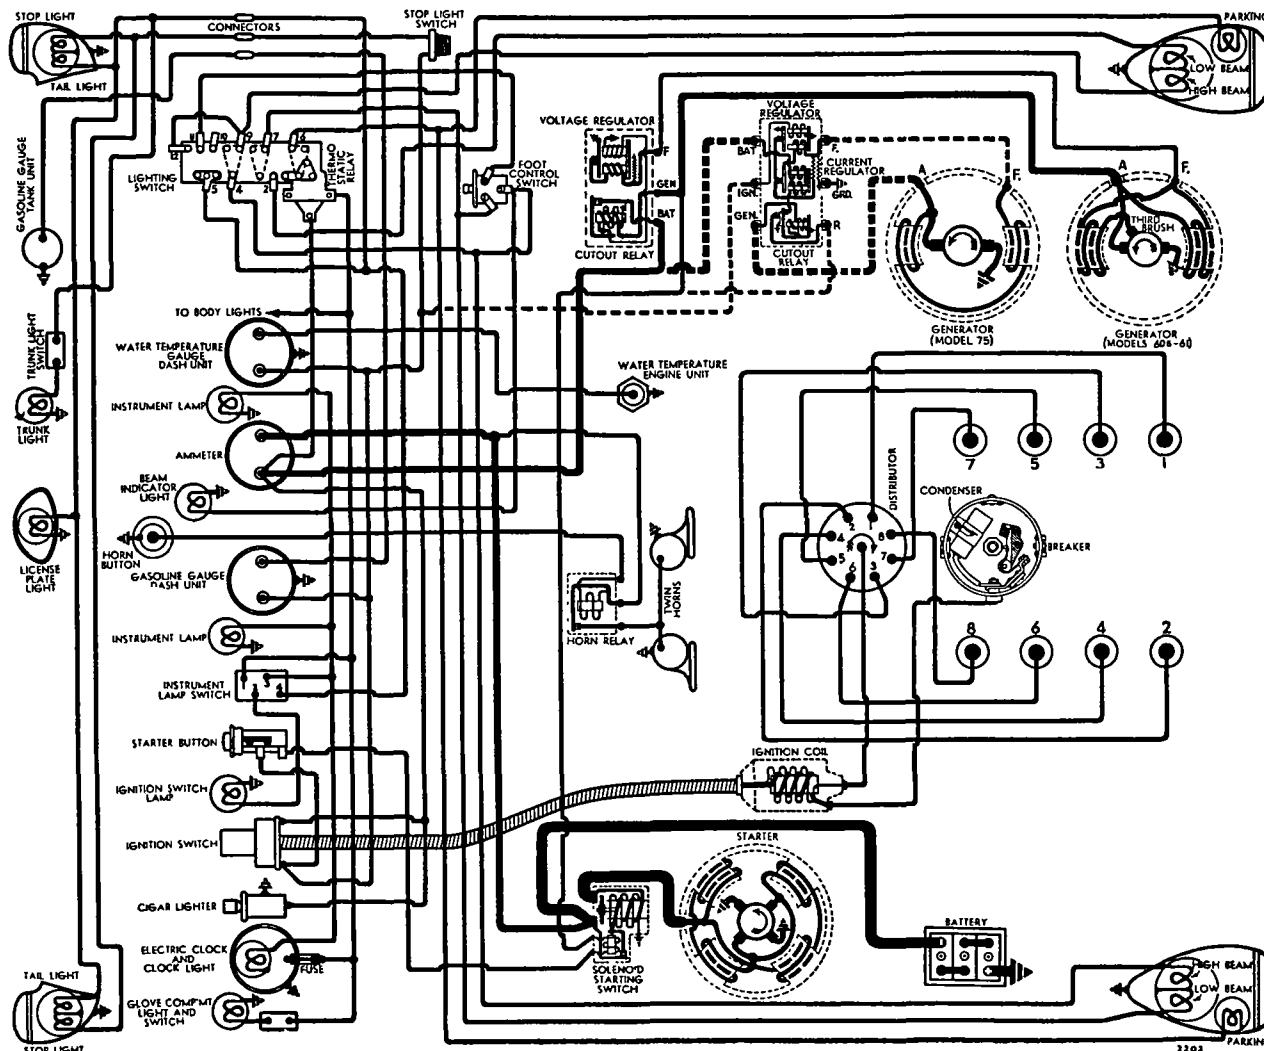

5° BTDC

**Piston Position**

.0114" BTDC

**Timing (With Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 spark plug, direct light on crankshaft pulley, idle engine. Loosen hold-down screw in advance arm, rotate distributor until 'IG/A' mark on pulley (5° before dead center Mark 'C.1/6') appears in line with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston (front piston, left bank) with crankshaft pulley mark 'IG/A' (5° be-

If re dead center mark 'C.1/6' lined up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, check Manual Adjustment.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time until correct performance secured.

**NOTE**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, lean carburetor setting before changing adjustment to correct ping.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model AAV-28, 1¼" dual, downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm so that Automatic Choke and Fast Idle inoperative, set throttle stopscrew for 7-8 MPH. idling speed. Turn each idle adjusting screw (one for each barrel) in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Reset stopscrew for correct 7-8 MPH. idling speed.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Connect as follows: Inner Hole (Min. Stroke)—Normal setting. Outer Hole (Max. Stroke)—When greater charge required.

**Fast Idle**—Integral type built-in carburetor.

For complete data, refer to Carburetion Equip. Index. Setting—Turn fast idle adjusting screw in until it contacts lowest step of fast idle cam, then back screw off ½ turn.

**Automatic Choke**—Integral type built-in carburetor. For complete data, refer to Carburetion Equip. Index. Setting—Inverted 'V' mark on cover scale should line up with reference mark on housing.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528980 oil-bath type used in conjunction with #864384 crankcase ventilator cleaner.

**Fuel Pump**—AC Type AB #1523866. Diaphragm type, combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC Electric type. #1515361 (dash unit), #1515485 (60S, 61), #1515486 (75) tank unit. For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Delco Model 17K-1. 6 volt, 17 plate, 112 A.H. Capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage 4.38 volts.

**Grounded Terminal**—Positive (+) grounded to frame (engine grounded to same point on right side of frame by strap—second ground at left front corner of engine on some models).

**Dimensions**—Length 10¾". Width 7". Height 8⅝". **Location**—Under right front fender (accessible from engine compartment).

**Commercial Battery**—Delco Model 19-Q. 6 volt, 19 plate, 122 A.H. Capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.8 minutes. Five second voltage 4.5 volts.

**Dimensions**—Same as 17K-1 except Height 8 9/16".

**Grounded Terminal, Location**—See 17K-1 above.

## STARTER

**Delco-Remy Model 1107912 Std., 1107913 60S RHD.**

**Armature**—No. 820158 (all models).

**Drive**—Solenoid pinion shift (overrunning clutch).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 ft. lbs.	Lock	3.0	600

**Removal**—Flange mounted on right front face of fly-wheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch**—Solenoid Switch Type 1542 (all). Mounted on starter, controlled through relay (in switch) by Control Switch Type 1996003 on instrument panel.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

Contacts Close—1.9 volts max. Open—1.0-1.2 volts.

Contact Gap—.035". Air Gap—.010" (closed).

## GENERATOR

SERIES 60S, 61,

**Delco-Remy Model No. 1101056. Armature Number 1866789. Split-field type with fixed third brush and vibrating type voltage regulator control.**

For complete data, refer to Electrical Equipment Index.

**Charging Rate Adjustment**—See regulator setting below. Do not attempt to change third brush position.

**Maximum Charging Rate**—29 amperes, 8.0 volts, 4000 R.P.M., 50 M.P.H. with discharged battery. Actual charging rate determined by regulator and dependent on battery condition. To check charging rate, connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'GEN' terminal and ground, ground regulator 'F' terminal to eliminate regulator action. NOTE—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
C ld	27-31	8.0	4000
Hot	25-28	8.0	4200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. (main), 17 ozs. (3rd).

**Field Current**—1.44-1.56 amperes at 6.0 volts (shunt field), .89-.94 amperes at 6 volts (third brush field).

**Removal**—Flange mounted between cylinder banks at front of engine, belt driven in tandem with water pump (separate belt for fan). To remove, take out flange mounting bolts.

**IMPORTANT AIR SCOOP NOTE**—When installing air scoop on generator, make certain that raised portion provides clearance at terminals and that scoop does not cover drive end oil cup.

**Belt Adjustment**—Loosen generator mounting bolts, lift generator up until only slight slack evident in belt (new type belt engages bottom of pulley groove not sides), tighten bolts. Generator pivots on left hand bolt, right bolt hole slotted. NOTE—Fan belt adjustment provided at fan bracket.

## GENERATOR

SERIES 75

**Delco-Remy Model 1102654. Armature No. 1873866. Two brush, shunt, peak-load type with vibrating voltage and current regulator control.**

Refer to 1938-39 Cadillac V16 article for all data on this two-brush generator.

**Removal & Belt Adjustment**—Same as for Models 60S and 61 given above.

## REGULATOR

SERIES 60S, 61

**Delco-Remy Model 5860. 2-unit Double Core Type Voltage Regulator (No 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator.**

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.3-6.9 volts (relay compensated for temperature—closing voltage same Cold and Hot).

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.9 volts at 70°F., 7.4-7.6 volts at 150°F. Regulator over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set), adjust regulator by bending spring hanger at lower end of armature spring slightly to secure setting shown above.

**CAUTION**—Regulator cover must be in place when testing. Do not operate generator on open-circuit.

**Contact Gap**—.020". **Contact Spring Tension** 3.5 ozs. **Air Gap**—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

## REGULATOR

SERIES 75

**Delco-Remy Model 5867 (for Series 39-75). Vibrating Voltage & Current Regulator.**

Refer to 1938-39 Cadillac V16 article for all data on this Current-Voltage Regulator.

C NTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDIN PAGE

## LIGHTING

**LIGHTING:—Headlamps**—Guide Multi-beam, pre-focused type (lenses not interchangeable, marked 'Right' and 'left'). Asymmetrical passing beam (upper beam left lamp, lower beam right lamp) controlled by beam selector switch with lighting switch in Country Driving position. NOTE—With lighting switch in City (second) position, beam selector switch controls upper and lower driving beams.

**Headlamp Adjustment**—Adjust only with lenses in place. Aim left hand lamp so that top edge of high intensity spot is at horizontal line at lamp center height and entire high intensity spot to right of lamp vertical center-line. Aim right hand lamp for same height and center high intensity spot on lamp vertical center-line. Adjusting screw for vertical movement at bottom of lamp, screw for horizontal movement at engine side of lamp body under snap-in plug.

**Headlamp Indicator (1939)**—Above center of speedometer dial. Lighted whenever Driving (upper beam) in use.

## Switches

**Lighting**—D-R. No. 1994508, 480-R Export.

**Beam Selector**—D-R. No. 1997002, 471-T.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instr. Clock	1½	55
Glove & Trunk Comp.	1½	55
Indicator, Ign. Lock, Radio	1	51
Stop & Tail	21-3	1154
License, Fender	3	63
Dome, Quarter	15	87

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—No. 1865577. On lighting switch. Contacts remain closed with 25 amperes but open in 2 minutes with 38 amperes at 70°F. Not adjustable.

**HORNS:—Klaxon Model K-33-H**. No. 1999501 (low note), Type 1999502 (high note). New 'Seashell', vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999501 (low note)	10-12 amperes	.042-.046"
1999502 (high note)	9-11 amperes	.032-.036"

**Horn Relay**—D-R Models 271-A, 1116775.

**Contact Gap**—.020". Air Gap .015" (closed).

**Contacts Close**—2.3-3.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:—Own**. 8 cylinder, 90° Vee, 'L' head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3½". Stroke—4½". Displacement—346 cu. ins. Rated HP.—39.20. Developed Horsepower—135 (60S, 61), 140 (75) at 3400 R.P.M.

**Compression Ratio**—6.25-1 (Std. 60S, 61; Optl. 75), 6.70-1 (Std. 75; Optl. 60S, 61), 5.75-1 (Optl. all). See Cadillac Shop Notes for Cylinder Head Installation, Identification (on 75), and Lowering Compression Ratio.

**Compression Pressure**—155 lbs. (60S, 61), 170 lbs. (75) at 1000 R.P.M. or approximately 105-110 lbs. (60S, 61), 110-115 lbs. (75) at cranking speed.

**Vacuum Reading**—Steady 20-21" idling at 7-8 MPH.

**PISTONS:—Lynite or Bohn Lo-Ex aluminum alloy**, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). Length—4½". Weight—18.30 ozs. (stripped), 25.13 ozs. (complete). Removal—Pistons and rods removed from above. Clearance—Skirt .0020-.0025". See Fitting Pistons.

**Replacement Pistons:—See Cadillac Shop Notes.**

**Fitting New Pistons:—Check piston diameter** with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide, 7-10" long) used, insert feeler next to T-slot. Piston should fall through bore of own weight on .002" feeler, and hold on .0025" feeler. NOTE Cylinder bore out-of-round .0005" max., taper .0003".

**Installing Pistons:—Slot to left**, for all pistons.

**PISTON RINGS:—Two compression**, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (Top)	3/32"	.007-.012"	.0023-.0041"
Comp. (#2)	⅛"	.007-.012"	.0013-.0026"
Oil Control	5/32"	.007-.015"	.0013-.0026"

**Replacement Rings**—.003", .005", .010", .015", .030" oversize.

**PISTON PIN:—Diameter**—⅞". Length—3 1/16". Pin floats in piston and rod. Held by locking rings. See Cadillac Shop Notes for special pin removal and installation instructions.

**Pin Fit in Piston**—.0004" press fit (ribbed end), .0000" clearance or free fit at 70° F. (plain end).

**Pin Fit in Rod Bushing**—.0002-.0008" clearance (new), .0018" (worn limit).

**CONNECTING ROD:—Weight** 37.472 ozs. Length 8¾".

**Crankpin Journal Diameter**—2.4590-2.4595".

**Lower Bearing**—Steel-backed, babbitt-lined type.

**Clearance**—.0015-.0025" (new), .0045" Max. (worn). Sideplay—.008-.014".

**Bearing Adjustment:—None** (no shims). Replace bearings. Do not file rod or caps. See Cadillac Shop Notes for connecting rod and bearing installation data.

**Installing Rods:—Numbers on rods and bearing caps** on same side and installed in same numbered cylinders with marks down toward oil pan.

**CRANKSHAFT:—3 bearing**, 6 counterweights.

See Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal.

**Journal Diameters**—2½" all bearings.

**Bearings**—Steel or bronze backed, babbitt-lined.

**Clearance**—.0015-.0025" (new), .005" (worn).

**Bearing Adjustment:—None** (no shims). Replace bearings. Do not file bearing caps. Upper halves can be rotated out without removing crankshaft.

**End Thrust:—Taken by center (#2) bearing.**

**Endplay**—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT:—3 bearing**, non-adjustable chain drive.

See Cadillac Shop Notes for camshaft bushing data.

**Journal Diameters**—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type**—Steel-backed, babbitt-lined.

**Clearance**—.0015-.0033" (new), .0045" (worn).

**End Thrust:—Taken by thrust plate behind camshaft sprocket**. No endplay should be permitted.

**Timing Chain:—Morse Type C #3682-R Side Guide** type. Width 1¼". Pitch ⅝". Length 23¼" or 62 links. NOTE—Install chain 'endless' as an assembly with sprockets. Use Tool J-836 to pilot camshaft sprocket.

**Camshaft Setting:—Sprockets marked**. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	.3415-.3425"	5 33/64"
Exhaust	1.625-1.636"	.3405-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0012-.0032"
Exhaust	45°	.345"	.0022-.0042"

NOTE—Worn limit for stem clearance .005" (all valves). Valve heads not slotted.

See Cadillac Shop Notes for valve servicing.

**Valve Guides:—Press in block** (long step end down).

**Valve Lifters:—Wilcox-Rich 'Zero-lash' type** hydraulic lifters (mushroom type) in removable brackets. See Miscellaneous Section for complete data.

**Clearance**—.0010-.0024" (new), .0035" (worn).

**Valve Springs:—Free length** 2.210".

	Spring Pressure	Length
Valve Closed	66 lbs.	1.926"
Valve Open	145 lbs.	1.581"

## VALVE TIMING

**Tappet Clearance:—None in service** (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:—See Camshaft Setting above.**

**Intake Valves**—Open at TDC. Close 42° ALDC.

**Exhaust Valves**—Open 52° BLDC. Close 10° ATDC.

**To Check Timing**—#1 cylinder (front—left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer.

## LUBRICATION

**LUBRICATION:—Pressure** (gear type oil pump in crankcase). See Cadillac Shop Notes for oil pump data.

**Normal Oil Pressure:—15 lbs.** idling, 25 lbs. at 30 MPH.

**Oil Pressure Indicator:—Opens at 30 lbs.** On oil pump. Non-adjustable. Crankcase Capacity—7 quarts.

## COOLING

**Capacity**—24½ quarts.

**Pressure Valve**—In radiator cap. Opens 3½-4½ lbs. See Cadillac Shop Notes for radiator core removal and fan pulley replacement instructions.

**Water Pump:—Self-adjusting packing type.**

See Water Pump Section for complete data.

**Removal**—Drain water, remove pump belt, pump hose and pump mounting screws. Lift pump out.

**Thermostat:—Mounted in radiator top tank**. Linked to radiator shutters by rod on forward side.

**Setting**—(Std. Type) Starts to open 148-153° F., fully open at 170° F. (High Reading Type—use with Heaters) Starts to open 163-168° F. Fully open 185° F.

**Shutter Adjustment**—Adjust clevis on threaded end of rod to secure 1/16" tension (shutters closed).  
**Temperature Gauge**—AC. Electric. #1510773 (dash unit), #1510774 (engine unit).  
 See *Miscellaneous Section* for complete data.

### CLUTCH

**CLUTCH**—Long Model 11CF-CL Semi-centrifugal, single plate, dry disc type. Refer to *Mech. Equip. Index*. See *Clutch Section* for complete data.

**Facings**—Woven joined type, 2 required. Inside Diam. 6½". Outside Diam. 11". Thickness .123-.127".

**Adjustment**—Free movement of pedal should be ⅞-1⅞" (adjusting nut on connector link at fork).

**Removal**—Remove transmission (see below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel (re-install to these marks), remove 6 cover screws (release tension evenly).

See *Cadillac Shop Notes* for clutch locking pin removal (on replacement clutches) and clutch balancing data.

### TRANSMISSION

**TRANSMISSION**—Own Make. Constant-mesh, synchro-mesh, helical gear (sliding gear low & reverse). See *Transmission Section* for complete data.

**Transmission Control**—Remote steering col. shift. See *Transmission Section* for complete data.

**Removal**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove

### UNIVERSALS

**UNIVERSAL JOINTS**—Mechanics Model 3C. Needle bearing type.

See *Universals Section* for complete data.

### REAR AXLE

**REAR AXLE**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

**NOTE**—Manufacturer recommends Differential Carrier assembly be returned to factory for servicing.

**Ratio**—3.92-1 (60S, 61). 4.58-1 (75).

**Backlash**—.004-.010". Screw adjustment.

**Removal**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal**—Remove rear wheels, take off axle shaft nut, pull wheel hub and brake drum, disconnect brake line and remove backing plate. Pull shaft and bearing assembly out (use Tool J-838).

**Wheel Bearing Adjustment**—None.

See *Cadillac Shop Notes* for Rear Stabilizer Adjustment for Models 60S, 75.

### SHOCK ABSORBERS

Delco. Double Acting, hydraulic type. Models used on each car as follows:

	Front	Rear
60S ('39) .....	1946-E, F	1751-G, H
61 ('39) .....	1946-G, H	1751-V, W
75 ('39) .....	1951-C, D	2010-C, D

See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

**Front Suspension**—Independent linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5°44' (60S), 5°6' (61), 5°1' (75).

**Caster**—Pos. ¼° to Neg. 1¼° (60S), Neg. ¼° to Neg. 2¼° (61), 0° plus or minus ¼° (75).

**Camber**—Neg. ¼° to Pos. ½° (60S), Neg. ¼° to Pos. ¾° (61), 0° to Pos. ½° (75). Equal within ½°.

**Toe In**—1/32-3/32" (at rest), 0-1/16" (in motion).

**NOTE**—On Model 61, adjusting sleeve at wheel end of each tie rod provided for toe in adjustment.

**Steering Geometry**—Inner wheel turned 22¼-23¾° (61), 22¾-24¼° (60S, 75). Outer wheel turned 20°.

### STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Double Roller type.

**NOTE**—New type steering linkage with idler arm attached to right frame sidemember on 61.

See *Steering Gear Section* for complete data.

### BRAKES

**BRAKES**—Service. Bendix hydraulic, duo-servo, single anchor type (no eccentric on 60S, 61). Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Centrifuse. Diameter—11.995-12.005" (60S, 61), 13.995-14.005" (75).

**Lining**—Moulded. Length per shoe—Front 11 17/32" (60S, 61), 13 21/32" (75); Rear 12 31/32" (60S, 61), 15 1/32" (75). Width 2" (except 75 front wheel), 2¼" (75 front). Thickness 3/16" (60S, 61), ¼" (75).

**Clearance**—.015" both ends of secondary shoe (60S, 61), .010" (75).

**Braking Power**—45½% rear (60S, 61), 43-44% (75).

**Hand Brake**—See *Service Brakes*.

**HOOD & SIDE PANEL REMOVAL:**—See *Cadillac Special Shop Notes* for complete instructions.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Same as Engine Number.

**ENGINE NUMBER:** First number 5270001 (1938), 5290001 (1939). Stamped on upper rear of left hand cylinder block below head.

## TUNE-UP

**COMPRESSION:**—Ratio—6.75-1 Std., 6.08-1 Optl. Standard head requires use of Ethylized fuel.

Pressure—180 lbs. at 1000 R.P.M. for standard head or approximately 110-115 lbs. at cranking speed.

**VACUUM READING:** Steady 20-21" idling at 7-8 MPH.

**FIRING ORDER:** 1-4-9-12-3-16-11-8-15-14-7-6-13-2-5-10. See diagram for spark plug cable connections on distributor caps.

**SPARK PLUGS:** AC No. 45 (1938), No. 104 (1939), 14 mm. Metric (1938), 10 mm. Metric (1939).

Gaps—.032". Limits .030-.035".

**NOTE**—1939 spark plugs are new small type and must not be tightened excessively (7-10 ft. lbs.).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° (closed).

Synchronization—Movable contacts (in left hand distributor) open 22½° (distr.) after fixed set.

Automatic Advance—10° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC with vibration dampener mark "IG/A" at indicator on front of engine.

**NOTE**—Contacts open alternately at regular 22½-22½° (distr.) intervals.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws ¼-1 turn open. Idle speed 7-8 MPH. **NOTE**—Both carburetors must be equalized—refer to Carburetor data (following).

Float Level—13/64" top of float gasket to gasket seat on cover with needle valve seated.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1116256 (switch and cable). Connected to coil unit by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy 553-E. Two coil unit mounted on bracket at radiator top. Coil Cover No. 1854013.

Current—2.2 amperes idling, 4.4 stopped (each).

**CONDENSER:** Delco-Remy No. 1869707 (two used—both in left hand distributor). Capacity—.18-.25 mfd.

**DISTRIBUTOR:** Delco-Remy No. 1110601 (Left), 1110602 (Right). Two distributors are used, left hand distributor contains entire breaker mechanism and times ignition for the engine in addition to distributing high tension current to spark plugs of left hand cylinder bank. Right hand distributor does not have breaker mechanism and distributes high tension current to spark plugs of right hand cylinder bank.

**IMPORTANT**—Distributor Change. First left hand distributors had 'flat' advance curve causing knock

around 50 M.P.H. and should be replaced, whenever found on cars in service, by later type distributor marked 'X' or 'L' stamped on number plate.

**Type**—Double breaker, 8 lobe cam, full automatic advance with manual adjustment at distributor.

**Firing Interval**—Movable contacts open 22½° (distr.) after fixed set. Must be synchronized (see Timing).

**Breaker Gap**—.0125-.0175".

**Cam Angle or Dwell**—31° closed, 14° open (distr.). Each set operates independently.

**Breaker Arm Spring Tension**—22 ounces.

**Rotation**—Clockwise viewed from the top (L.H. No. 1110601), Counter-clockwise (R.H. No. 1110602).

### Automatic Advance

Distributor		Engine	
Degrees Start	R.P.M.	Degrees	R.P.M.
10	800	1½	1600
	2000	20	4000

1938 V16 SERIES 38-90

**Manual Adjustment**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

**Removal:**—Distributor for each bank mounted at right and left hand side at front of engine. To remove, take out hold-down screw in advance arm, lift up to disengage coupling (does not disturb drive gear).

**Distributor Installation Note**—Drive slot not offset and distributors must be installed as follows: With crankshaft turned to #1 firing position (IG/A mark on dampener at front of engine lined up with pointer), install both distributors with rotors pointing forward and to left (L.H.—33° to left from straight ahead position, R.H.—60° to left).

**Distributor Drive Shaft Installation**—Distributor cannot be timed unless shafts correctly installed as follows: With crankshaft and timing gear marks lined up, install special Distributor Shaft Setting Gauge #J-1212 in distributor support dowel holes,

note pointer positions. Remove gauge, install distributor drive shafts, check with gauge (slots must line up with pointer).

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting (for Ethylized fuel) given below. See Manual adjustment for correction dependent on fuel regularly used.

#### Flywheel Degrees

6° BTDC

#### Piston Position

.0112" BTDC

**Timing (Stationary Contacts)**—Loosen thumbscrew on pointer arm, center pointer on scale, tighten thumbscrew. With #1 piston on compression (front cylinder, left bank), turn engine over until mark 'IG/A' on vibration dampener (which is 6° before TDC mark 'C/1-15') lines up with pointer on chain case cover. Loosen advance arm clampscrew on left hand distributor, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clampscrew. Then synchronize.

**Synchronization (Timing Movable Contacts)**—Manufacturer recommends distributor removal and synchronization on test fixture (set movable contacts to open 22½° (distr.) after fixed set. To synchronize on engine, turn engine over 45° or ½ revolution to firing position for #4 cylinder with 'IG/A' mark on dampener lined up with pointer. Remove distributor cap and rotor, loosen two lock-screws on movable sub-plate (on which movable contacts mounted), turn eccentric adjusting screw until contacts begin to open, tighten lock-screws. Check Manual Adjustment setting.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen pointer thumbscrew, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation on scale at a time until satisfactory performance secured. **NOTE**—Before changing manual adjustment, accelerate engine up to at

least 60 MPH (critical point is 50 MPH.). If engine pings, check for fuel being used, faulty spark plugs, carbon deposits, lean carburetor setting which will cause pre-ignition.

### CARBURETOR

**CARBURETION:**—Carburetors—Carter WDO Type 407-S (Left hand), 408-S (Right hand). 1½" dual, downdraft type. One carburetor used for each cylinder bank with interconnected throttle controls.

*For complete data, refer to Carburetor Index.*

**NOTE**—Carburetors must be synchronized or equalized at both idle and part throttle position.

**Idle Adjustment**—With engine warmed up so that Automatic Chokes and Fast Idles inoperative, adjust each carburetor as follows: Set throttle lever stopscrew for 7-8 MPH. idling speed. Turn each idle adjusting screw (one for each barrel, two per carburetor) in until engine begin to lag or miss, then turn screw out slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed of 300 R.P.M. After adjusting both carburetors, equalize as follows:

**Equalizing Carburetors**—Use mercury column 'U' tube connected to ⅛" pipe plug openings in long leg of each intake manifold (do not connect gauge to vacuum balancing tube between carburetors). Disconnect throttle rods, idle engine, note mercury levels in tube. Adjust throttle stopscrew at each carburetor so that engine idles at 7-8 MPH. and mercury level is equal in each tube. Adjust right throttle rod length (trunnion with fine threads on rod near carburetor) so that rod can be connected without disturbing throttles or unbalancing mercury levels. Open throttle to 1000 RPM. engine speed (use foot throttle, not hand throttle), make any necessary re-adjustment to secure equal mercury column levels. If adjustment made recheck idle setting (idle speed equalization more important and should be favored).

**Accelerating Pump Setting**—Not adjustable.

**Fast Idle:**—Integral type. Built-in each carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Adjust fast idle screw for .028" throttle opening with choke valve fully closed.

**Automatic Choke:**—Integral. Built-in each carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Center index mark on notch on thermostatic coil housing to line up with mark on piston plate housing with carburetor cold (70°F).

### CARB. EQUIPMENT

**Air Cleaner:**—AC #1528718 heavy duty oil-bath type. (one cleaner used for each carburetor). **NOTE**—Crankcase ventilator air cleaner is AC #1528732.

**Fuel Pump:**—AC Type AU (2 used). #1523695 (R.H.), #1523696 (L.H.). Diaphragm type. One pump used for each carburetor. **NOTE**—Fuel lines interconnected, one pump only may operate at idling speed. *For complete data, refer to Carburetion Equip. Index.*

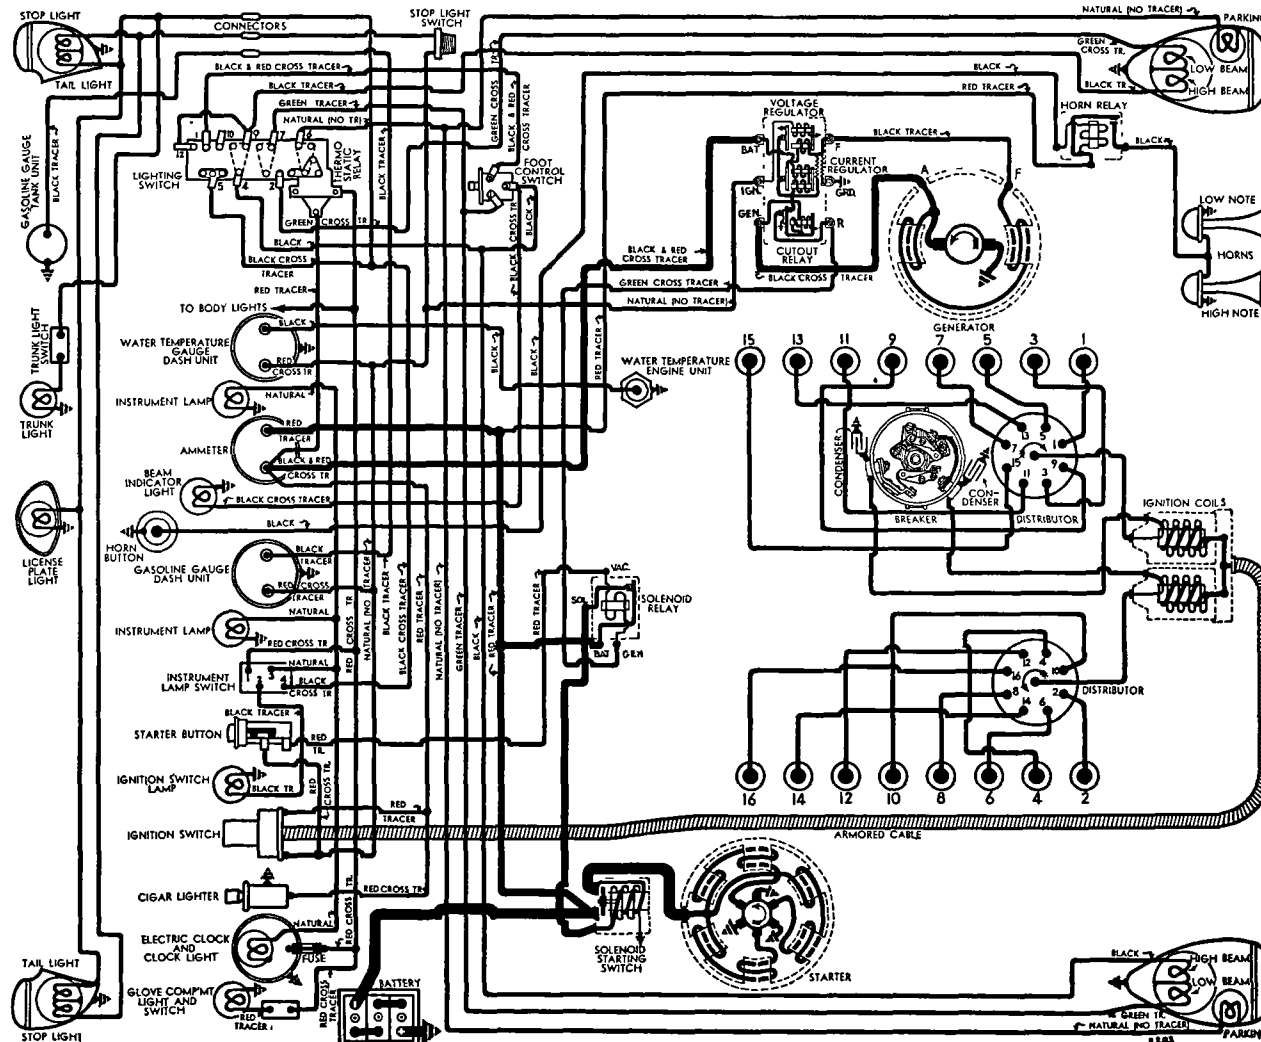

**Vacuum Pump:** AC Type K, No. 1523394 (1938), 1523906 (1939). Separate unit mounted between cylinder banks at rear of engine.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:** AC Electric type. Dash unit—No. 1515346 (1938), 1515361 (1939). Tank Unit—No. 1515461 (1938), 1515486 (1939).

*For complete data, refer to Carburetion Equip. Index.*

C NTINUED N NEXT PA E

## C NTINUED FR M PRECEDING PAGE

## BATTERY

**BATTERY:**—Delco Model 21-D (Replacement—21-C). 6 volt, 21 plate, 164 A.H. Capacity (20 hour rate). Starting Capacity—195 amperes for 20 minutes. Zero Capacity—300 amperes for 7.1 minutes. Five second voltage—4.7 volts.  
**Grounded Terminal**—Positive (+) grounded to frame (engine grounded to same point by strap from starter support bolt—second ground at left front of engine on some models).  
**Dimensions**—L'gth. 13 9/16". Width 7". Hgt. 9 5/32".  
**Location**—Under right hand front seat.

## STARTER

**Delco-Remy Model 714, Armature No. 1868165.**  
**Drive**—Solenoid shift and overrunning clutch.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—36-40 ounces each.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	5.0	70
19 ft. lbs.	Lock	3.0	500

**Removal:**—Flange mounted on right front face of fly-wheel housing. To remove, take off cover in right side pan, take out flange mounting screws, remove starter and switch assembly from below.

**Starting Switch:**—Solenoid No. 1555 (on starter). Solenoid Relay No. 268-M (mounted separately on dash). Solenoid switch controlled through relay by instrument switch D-R #1996001 ('38), 1996003 ('39).  
 For complete data, refer to Electrical Equipment Index.

## GENERATOR

**Delco-Remy Model 1102651 (1938), 1102655 (1939).**  
**NOTE (Model 75 Generator)**—All data below except Mounting and Belt Adjustment applies also to Model 1102652 and 1102654 generators used on Models 38-75 and 39-75.

**Armature**—1868601 (1102651 Gen.), 1874318 (1102655 Gen.), 1857866 (for 1102652), 1873866 (for 1102654).  
**Type**—Two-brush, shunt, peak-load type with external vibrating Voltage and Current regulation. Ventilated by scoop and fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. See Voltage and Current Regulator data.

**Maximum Charging Rate**—30 amperes, 8.0 volts, 1700 R.P.M., 17 M.P.H. and above with discharged battery (Current Regulator setting). Actual charging rate determined by Voltage Regulator and dependent on battery condition.

## Performance Data (Cold)

Amperes	Volts	R.P.M.
25 ①	8.0	1650

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—2.0-2.2 amperes at 6.0 volts.

**Removal (1938):** Generator flange mounted on rear of fan pulley bracket between cylinder banks and driven by friction wheel bearing on inner rim of drum on rear of fan pulley. To remove, take out two flange mounting screws.

**Drive Adjustment**—Check fan belts and adjust first. Loosen generator mounting screws, back off adjusting screw locknut, turn adjusting screw in until pull required to rotate generator is 9-12 lbs. as measured by spring scale hooked to outer rim of generator cooling fan tangent to rim. Adjust cold and check at several points on driving ring.

**Removal (1939):** Generator mounted on slide on fan bracket between cylinder banks at front of engine and driven by short belt from fan pulley. To remove, take out mounting bolt in slot on slide mounting.  
**Belt Adjustment**—Loosen mounting bolt on slide mounting under generator, lift generator up to remove slack from belt, tighten mounting bolt.

## REGULATOR

**Delco-Remy Model 5818 (1938), 5867 (1939). Double Core Type Voltage & Current Regulator (with "IGN" Terminal).** Consists of Cutout Relay, and vibrating type voltage and current regulators. Cutout Relay has special "ground" contacts for starter control.

For complete data, refer to Electrical Equipment Index.

**V8 Series 75 Note**—All data below applies to these same model regulators used on the 75 Series Cars.

## Cutout Relay

**Cuts In**—6.7-7.6 volts (5818), 6.9-7.6 volts (5867).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020". Air Gap—.020" (closed).

## Voltage Regulator

**Setting**—7.5-7.9 volts at 70°F., 7.4-7.6 volts at 150°F. Regulator over-compensated for temperature and must be checked at these temperatures.

**To Check (without breaking seals)**—Disconnect lead on regulator 'IGN' terminal, connect jumper between this terminal and 'BAT' terminal, connect test ammeter in charging line at 'BAT' terminal, voltmeter between 'IGN' terminal and ground. Operate generator at 2900-3400 RPM., adjust charging current to 8-10 amperes (use variable rheostat or AVR set), check voltmeter reading (see Setting).

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending hanger at lower end of spring slightly. Repeat check. **NOTE**—Cover must be in place when testing. Do not operate generator on open-circuit.

**Contact Gap**—.020". Contact Spring Tension 3.5 ozs. Air Gap—.063" between armature and core (armature down so fibre bumper just touches stop), .010" between fibre bumper and stop (armature up).

## Current Regulator

**Setting**—24-26 amperes (5818), 28-30 (5867).

**To Check (Without breaking seals)**—Disconnect lead on regulator 'IGN' terminal (to eliminate voltage regulator action), connect ammeter in charging line at 'BAT' terminal, operate generator, note reading.

**To Adjust**—Same as Voltage Regulator (above). **NOTE**—Do not allow generator voltage to exceed 8.5 volts with voltage regulator disconnected. Repolarize generator whenever disconnected by connecting jumper between 'GEN' and 'BAT' terminals momentarily (after all leads connected but before operating).

**Specifications**—Contact Gap, Spring Tension, Fibre Bumper Clearance same as for Voltage Regulator. Armature air gap should be .075".

## LIGHTING

**LIGHTING:**—Headlamp Beam System & Adjustment—Same as for corresponding V8 models. See 1938 or '39 V8 articles for data (including Beam Indicators).  
 Switches—1938

**Lighting**—D-R. No. 1994502, 1995005 Exp.

**Foot Selector**—D-R. No. 471-T, 471-U Exp.

**Dash Lamp**—D-R Model 1406.

## Switches—1939

**Lighting**—D-R. No. 1994506, 480-R Export.

**Beam Selector**—D-R. No. 1997002, 471-U RHD.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Instr., Clock	1½	55
Glove & Trunk Compt.	1½	55
Indicator, Ign. Lock, Radio	1	51
License, Fender	3	63
Stop & Tail	21-3	1154
Dome, Quarter	15	87

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—No. 1865577. On lighting switch. Contacts remain closed with 25 amperes but open in 2 minutes with 38 amps. at 70°. No adjustment.

**HORNS:**—Klaxon, D-R. Model K-33D Type 1967 (low note—left hand), 1968 (high note—right hand). Vibrator type, twin horns (behind grille) operated by relay (mounted on left front fender dust shield).

Horn Type	Current (at 6 volts)	Air Gap
1967 Low Note	12-14 amperes	.045-.050"
1968 High Note	11-13 amperes	.036-.040"

**Horn Relay:**—D-R. Models 271A, 1116775.

**Contact Gap**—.020". Air Gap—.015" (closed).

**Closing Voltage**—2.3-3.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—16 cylinder, 135° Vee, 'L' head. Cylinder banks and crankcase cast integral.

**NOTE**—Install shorter cylinder head capscrews along lower edge of head. Coat all screws with white lead to prevent leaks.

**Bore**—3¼". **Stroke**—3¼". **Displacement** 431 cu. ins.

**Rated Horsepower**—67.6.

**Developed Horsepower**—185 at 3600 R.P.M.

**Compression Ratio**—6.75-1 Std. 6.08-1 Optl.

**Compression Pressure**—180 lbs. at 1000 R.P.M. or approximately 110-115 lbs. at cranking speed.

**Vacuum Reading**—Steady 20-21" idling at 7-8 MPH.

**PISTONS:**—Lynite & Bohn, Lo-Ex aluminum alloy, 'T' slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). **Length**—3¾".

**Weight**—15.28 oz. (stripped). 21.136 oz. (complete).

**Removal**—Pistons and rods removed from above.

**Clearance**—.002-.0025". See Fitting New Pistons.

**Replacement Pistons:**—See Cadillac Shop Notes.

**Fitting New Pistons:**—If micrometer used, check piston skirt at largest diameter (adjacent to T slot) at two points, ½" from lower edge of skirt, and 1¼" down from head. If feeler gauge used, install ⅜-½" wide feeler next to T slot. Piston should fall through bore of own weight on .002" feeler and hold tightly on .0025" feeler.

**Installing Pistons:** Slot to left for all pistons.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (top)	3/32"	.007-.015"	.0030-.0043" ①
Comp. (#2)	1/8 "	.007-.015"	.0015-.0025"
Oil Cont.	3/16"	.007-.015"	.001-.002 "
①—.0015-.0025" (1938).			

**NOTE**—Worn limits—.025" gap, .004" side clearance.

**Replacement Rings:** .003" .005" .010" .015" .030" OverS.

**PISTON PIN:**—Diameter—13/16". Length—2 25/32".

Pin is locked in rod by locking screw. Oil grooves broached for full length of pin hole in piston.

**Pin Fit in Piston**—.0001-.0006" clearance (new), .0018" (worn limit).

**ENGINE****CONTINUED FROM PRECEDING PAGE**

See *Cadillac Shop Notes for special pin removal and installation instructions.*

**Replacement Pins:**—Undersizes not furnished.

**CONNECTING RODS:**—Weight 24.528 ozs. Length 6 $\frac{3}{8}$ ".

**Crankpin Journal Diameter:**—1.9988-1.9993".

**Lower Bearing:**—Steel-backed, babbitt-lined.

**Clearance:**—.001-.0025" (new), .006" (worn limit).

**Sideplay:**—.004-.008" (1938), .008-.014" (1939).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file connecting rods or caps.

**Installing Rods:**—Numbers on rods and caps must correspond and point down toward pan, all rods.

**CRANKSHAFT:**—9 bearing. Integral counterweights.

See *Cadillac Special Shop Notes for Rear Main Bearing Oil Seal renewal.*

**Journal Diameters:**—2 $\frac{1}{2}$ " all bearings.

**Bearing Type:**—Steel-backed, babbitt-lined.

**Clearance:**—.0015-.0025" (new), .005" (worn limit).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be rotated out without removing crankshaft. See *Cadillac Shop Notes for instructions.*

**End Thrust:**—Taken by #5 (center) bearing. Endplay .001-.005" (new), .010" (worn limit).

**CAMSHAFT:**—Five bearing. Non-adjustable chain drive. See *Cadillac Special Shop Notes for Camshaft removal and installation instructions.*

**Bearing Type:**—Steel-backed, babbitt bushings.

**Clearance:**—.0013-.0025" (new), .004" (worn limit).

**End Thrust:**—Taken by thrust plate flange at front bearing. Endplay .005-.015" (new), .020" (worn limit).

**Timing Chain:**—Morse Type C #3682-R. Width 1 $\frac{1}{4}$ ". Pitch  $\frac{3}{8}$ ". Length 23 $\frac{1}{4}$ " or 62 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with straightedge across shafts.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	1.495-1.505"	.3415-.3425"	5 19/32"
Exhaust	1.370-1.380"	.3405-.3415"	5 39/64"

	Seat Angle	Lift	Stem Clearance
Exhaust	45°	.302"	.0010-.0030"
Intake	45°	.290"	.0020-.0040"

NOTE—Worn limit for stem clearance .005".

**Valve Guides:** Pressed in block with tapered end up (1938), down (1939).

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters. Barrel type operating in reamed holes. See *Miscellaneous Section for complete data.*

NOTE—Two sizes of lifter used, must be re-installed in same guide hole from which removed. Larger size lifter used in holes marked by yellow paint 'X' or stamped 'B' below valve spring. First lifters not marked for size, later larger lifter stamped 'B' in oil groove. Valves must be removed first.

**Lifter Clearance:** .0015-.0025" (new), .0035" (worn).

**Valve Springs:** Free length 2.130" (1938), 2.210" (1939).

	Pressure	Length
1938 Springs		

Valve Closed	49 lbs.	1.812"
Valve Open	95.5 lbs.	1.510"

	Pressure	Length
1939 Springs		

Valve Closed	50 lbs.	1 25/32"
Valve Open	100 lbs.	1 15/32"

**Important—Valve Spring 'Howl' Correction:**—No dampener used on first cars and springs may develop howl similar to axle gear noise. Correct by installing new Spring and Dampener assemblies No. 1428284 and lower retainers No. 1428295 (32 of each required). These are latest type internal

dampener. First type dampener (external type) is satisfactory but interferes with rapid valve removal.

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter used). See Valve Lifter data above.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° BTDC. Close 28° ALDC.

**Exhaust Valves:**—Open 44° BLDC. Close 12° ATDC.

**To Check Timing:**—No. 1 intake valve should open with piston 6° or .0112" before top dead center with the ignition mark 'IG/A' for this cylinder in line with the pointer on the chain case cover.

**LUBRICATION**

**LUBRICATION:**—Pressure system. Main oil header in left crankcase wall (feed from pump) for main, connecting rod, and camshaft bearings. Pipe from this header through filter feeds oil header above each line of valve lifters.

**Oil Pump:**—Helical gear type. In rear of crankcase.

**Normal Oil Pressure:**—25 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Piston type built in oil pump.

Operates at 28 lbs. Not adjustable.

**Crankcase Capacity:**—11 quarts.

**COOLING**

**Capacity:**—30 quarts.

**Pressure Valve:**—In radiator filler cap. Opens at 6 $\frac{1}{2}$ -7 lbs. (1938), 7 lbs. (1939).

**Water Pump:** Centrifugal, packless type. Two pumps used (one pump for each bank, driven in tandem with fan pulley by double Vee belt).

See *Water Pump Section for complete data.*

**Pump Removal:**—Drain cooling system, back off belt adjustment, disconnect hose, take out mounting screws in pump flange.

**Belt Adjustment:**—Loosen two mounting bolts on fan bracket, lift fan pulley and bracket assembly up (right bolt hole slotted, pivots on left bolt), until all slack removed from belts, tighten bolts.

NOTE—Replace belts together as matched set.

**Thermostat:**—Mounted on rear of radiator top tank. Setting (Std. Type)—Starts to open at 148-153° F., fully open at 170° F. (High Reading Type) for use with heater: Starts 163-168°, Fully open 185° F.

**Shutter Adjustment:**—Disconnect shutter rod at lever on front of radiator top tank, loosen locknut, turn clevis so that rod extends 1/16" past lever (provides slight tension with shutters closed).

**Temperature Gauge (1939):** AC Electric Type. #1510773 (dash unit), #1510774 (engine unit).

See *Miscellaneous Section for complete data.*

**CLUTCH**

**CLUTCH:**—Long Model 12CB-11 $\frac{1}{2}$ C. Single plate, dry disc type. No adjustment required.

See *Clutch Section for complete data.*

**Facings:**—Spiral wound type, 2 required. I.D. 7", O.D. 11 $\frac{1}{2}$ ". Thickness .125".

**Adjustment:**—Clutch pedal free travel should be  $\frac{7}{8}$ -1 $\frac{1}{8}$ ". To adjust, turn nut at forward end of connecting rod at clutch fork.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch housing underpan, take out clutch mounting screws in cover flange, remove clutch through pan opening at bottom.

See *Cadillac Shop Notes for special clutch housing note clutch locking pin removal (on replacement clutches) and clutch balancing data.*

**TRANSMISSION**

**TRANSMISSION:**—Own make. All helical gear type. Constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse).

See *Transmission Section for complete data.*

**Transmission Control:** Remote steering col. shift.

See *Transmission Section for complete data.*

**Removal:** Remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers on transmission case, support transmission at rear and take out mounting screws, pull transmission straight back plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss, lower front end of transmission and remove from car.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics Model 3C. Two used.

See *Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own make. Hypoid gear, semi-floating type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

NOTE—Manufacturer recommends Differential Carrier assembly returned to factory for servicing Ratio—4.31-1 Std. Backlash—.004-.008".

**Removal:** See corresponding V8 article for data.

Wheel Bearing Adjustment—None (sealed type).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco Model 1951-C, D (front), 2052-A, B (Rear '38), 2010-C, D (Rear '39). Double acting, hydraulic. Inertia control on rear shocks.

See *Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data.*

**Kingpin Inclination:**—5°38' ('38), 5°1' ('39).

**Caster:**—Neg.  $\frac{1}{4}$ ° to Pos.  $\frac{1}{2}$ ° ('38), 0° ±  $\frac{1}{4}$ ° ('39).

**Camber:**—Neg.  $\frac{1}{4}$ ° to Pos.  $\frac{1}{2}$ ° ('38), 0° to Pos.  $\frac{1}{2}$ ° ('39). Adjustable.

**Toe In:**—1/32-3/32" (at rest), 0-1/16" (in motion).

**Steering Geometry (Toe-out on turns):**—Inner wheel turned 23 $\frac{1}{2}$ ° (1938), 22 $\frac{3}{4}$ -24 $\frac{1}{4}$ ° (1939), Outer wheel turned exactly 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Double Roller type with offset steering column and universal joint connection (Mechanics type).

See *Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, Duo-servo, single anchor type with rigid wheel cylinders. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data.*

**Brake Drums:**—Diameter 14". Centrifuge type.

**Lining:**—Moulded type. Width 2 $\frac{1}{4}$ ". Thickness  $\frac{1}{4}$ ".

	1938	Length	1939
Front Primary	12 $\frac{1}{4}$ "		13 21/32"
Rear Primary	15 "		13 21/32"
Secondary	15 "		15 1/32"

Clearance—.010" for heel and toe at each shoe.

**Hand Brake:**—See Service Brakes above.

**ENGINE HOOD, SIDE PANEL REMOVAL & FRONT SHEET METAL ASSEMBLY ALIGNMENT:—See Cadillac Shop Notes.**

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:—**First number (60S) 6320001, (62) 8320001, (72) 7320001, (75) 3320001. On crankcase at rear of left cylinder block and on left frame side member opposite steering gear.

## TUNE-UP

**COMPRESSION: Ratio 6.25-1 (60S, 62), 6.7-1 (72, 75).**

<b>Pressure:—</b>	<b>At 1000 RPM.</b>	<b>At Cranking Speed</b>
<b>3.25-1 .....</b>	<b>155 lbs.....</b>	<b>Approx. 105-110 lbs.</b>
<b>6.70-1 .....</b>	<b>170 lbs.....</b>	<b>Approx. 110-115 lbs.</b>

**VACUUM READING:—Steady 20-21" idling 7-8 MPH.**

**FIRING ORDER: 1-8-7-3-6-5-4-2. See diagram.**

**SPARK PLUGS:** AC No. 104, 10 mm. Metric type.  
Gaps—.025"-.030".

**NOTE**—These plugs are new small type. Do not tighten excessively (7-10 ft. lbs. tension).

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.015". Cam Angle 31° (closed).**

**Automatic Advance—12° max. at 2000 RPM (distr.).**

**Vacuum Advance—**9° (distr.) with 15-18" of vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting—5° BTDC, with crankshaft pulley mark "IG/A" at indicator on front of engine.**

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws set midway between “miss” and “roll” points. Idle speed 7-8 MPH.

**Float Level**—Fuel level  $\frac{5}{8}$ " below top of bowl.

**Accelerating Pump**—Inner hole (min. stroke)  
normal.

**Fuel Pump Pressure: 4¾ lbs. maximum.**

**VALVES:** See Valve Timing.

**Tappet Clearance**—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:—**Delco-Remy Model 1116282 (62, 72), 1116275 (60S, 75). Armored cable coil connection.

**Ignition Lock—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.**

**COIL: Delco-Remy No. 1115128. Mounted on dash.**

**Ignition Current**—2.2 amperes idling, 4.4 stopped.

**CONDENSER: Delco-Remy Part No. 1869704.**

**Capacity—.18-.25 microfarad.**

**DISTRIBUTOR: Delco-Remy Model 1110806. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and manual adjustment.**

**Breaker Gap—.0125-.0175".**

**Cam Angle or Dwell—**31° closed, 14° open (distr.).

**Breaker Arm Spring Tension—19-23 ounces.**

**Rotation**—Clockwise viewed from above.

### Automatic Advance

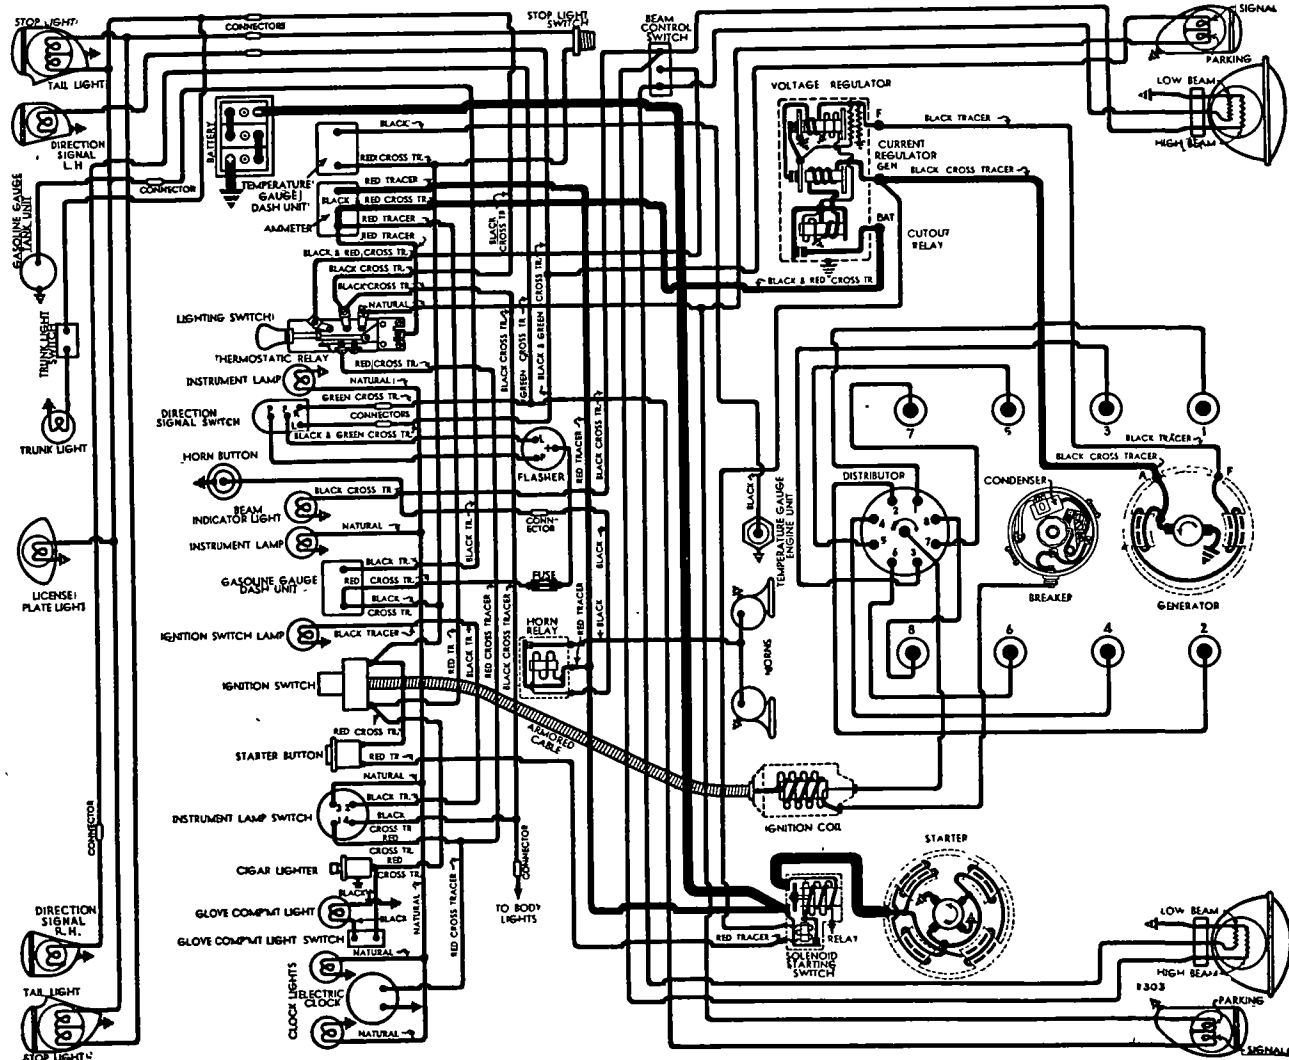

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	500	1.....	1000
12.....	2000	24.....	4000

**Vacuum Spark Control 1116020.** Integral type (on distributor, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger travel 13/64" maximum.

## Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	5.5-7.5"
9° .....	18° .....	15-18"

**Manual Adjustment**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

#1 spark plug, direct light on crankshaft pulley, idle engine. Loosen hold-down screw in advance arm, rotate distributor until 'IG/A' mark on pulley (5° before dead center Mark 'C.1/6') appears in line with pointer on chain case cover, tighten hold-down screw. Adjust for fuel (see Manual Adjustment).

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston (front piston, left bank) with crankshaft pulley mark 'IG/A' (5° before dead center mark 'C.1/6') lined up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, check Manual Adjustment.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time until correct performance secured.

**NOTE**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots, lean carburetor setting before changing adjustment to correct ping.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model AAV-26. 1¼" dual downdraft type.  
*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7-8 MPH idling speed. Adjust idle adjusting screw for each barrel until engine fires smoothly (turn screws in for leaner mixture.) Readjust idle speed.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Connect as follows: Inner Hole (Min. Stroke)—Normal setting. Outer Hole (Max. Stroke)—When richer charge required.

**Float Level**—Fuel level ⅝" below top edge of bowl.

**Fast Idle**—Integral (built-in carburetor). Non-adjustable. *See article in Carburetion Equipment Section.*

**Fast Idle Setting**—Not adjustable.

**Automatic Choke**—Integral type built-in carburetor. *For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—Center '0' mark on scale opposite mark on housing.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529298 (60S, 62, 72), #1528980 (75) heavy duty oil-bath type.

**Fuel Pump**—AC Type AX #1537088 Diaphragm type combination fuel-and-vacuum pump.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC Electric type. #1515368 (dash unit), #1516155 (tank unit—60S, 62), #1516190 (tank unit—72), #1516156 (tank unit—75).  
*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco 17K-2. 17 plate, 115 AH. capacity. **Starting Capacity**—137 amperes for 20 minutes. **Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage 4.4 volts. **Grounded Terminal**—Positive (+) terminal. **Engine Ground**—Strap connector at right front engine support. **Dimensions**—Length 10⅞". Width 7". Height 8⅝". **Location**—Under left front floor (62, 72), under right side of engine hood outside frame (60S, 75).

**Commercial Battery**—Delco Model 19Q-1. 6 volt, 19 plate, 125 A. H. Capacity (20 hour rate). **Starting Capacity**—145 amperes for 20 minutes. **Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.5 volts. **Dimensions**—Same as 17K-2 except Height 8 9/16". **Grounded Terminal, Location**—See 17K-2 above.

## STARTER

**Delco-Remy Model 1107912 (All LHD., 72, 75 RHD).** 1107911 (60S, 62 RHD). Armature No. 820158 (all models). **Drive**—Overrunning clutch (solenoid pinion shift). **Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—24-28 ounces.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal**—Flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch**—Solenoid Switch Type 1542 (all). Mounted on starter, controlled through relay (in switch) by Control Switch Type 1996005 on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

Contacts Close—1.9 volts max. Open—1.0-1.2 volts. Contact Gap—.035". Air Gap—.012".

## GENERATOR

**Delco-Remy Model 1102661.** Armature No. 1878211. Two brush with current-voltage control. **Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. *See Regulator data following.*

**Maximum Charging Rate**—32 amperes min. (hot), 8.0 volts, 2450 RPM, 27 MPH (60S, 62), 24.5 MPH (72, 75) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Performance Data			
	Amperes	Volts	R.P.M.
Cold	30*	8.0	1750
*—Not maximum output—See Current Regulator.			
<b>Rotation</b> —Counter-clockwise at commutator end.			
<b>Brush Spring Tension</b> —25 ounces each.			
<b>Field Current</b> —1.75-1.9 amperes at 6.0 volts.			

**Removal**—Flange mounted between cylinder banks at front of engine, belt driven in tandem with water pump (separate belt for fan). To remove, take out flange mounting bolts.

**IMPORTANT AIR SCOOP NOTE**—When installing air scoop on generator, make certain that raised portion provides clearance at terminals and that scoop does not cover drive end oil cup.

**Belt Adjustment**—Loosen generator mounting bolts, lift generator up until only slight slack evident in belt (belt engages bottom of pulley groove not sides), tighten bolts. Generator pivots on left hand bolt, right bolt hole slotted. **NOTE**—Fan belt adjustment provided at fan bracket.

## REGULATOR

**Delco-Remy Model 1118202. "Single Core" Type.** Vibrating Voltage & Current regulator on dash.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature.

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator at hot operating temperature, retard generator speed until cut-out relay points open, then increase generator speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for Heavy (or other spring) adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

### Current Regulator

**Setting**—34-36 amperes hot (at operating temp.).

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

**Air Gap**—.080" (check same as Voltage Regulator).

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**LIGHTING:**—Headlamps—Guide 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator:**—On speedometer face. Lighted whenever Country (upper) beam in use.

**Direction Signal:**—Refer to Electrical Equip. Index.

## Switches

**Lighting:**—Delco-Remy 1995010.

**Beam Selector:**—D-R 1997002, 471-U (60, 75 RHD).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Indic. & Park	21-3	1154
Instr., Clock, Radio	1.5	55
Glove & Trunk Comp't	1.5	55
Beam Indicator, Ign. Lock	1	51
Stop & Tail	21-3	1154
*Rear Indicator (Early)	21-3	1154
*Rear Indicator (Later)	32	1133
License Plate	3	63
Dome & Quarter	15	87

\*—When replacing Rear Indicator Bulb use same type bulb as formerly used (1154 double contact—1133 single contact) in order for circuit to function properly.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°. Not adj.

**FUSES:**—Direction Signal—9 ampere. In Flasher lead under instrument panel.

**Fog Lights:**—20 ampere. On switch.

**Radio & Under Seat Heater:**—14 amperes each.

**HORNS:**—Delco-Remy Model K-33-H. No. 1999501, 519 (low note), 1999502, 520 (high note). Vibrator type, blended tone, operated by horn relay. Horn set 1999501 & 502 used on early cars.

Type	Current (at 6 volts)	Air Gap
1999501 (Low)	16-18 amperes	.044-.049"
1999502 (High)	15-17 amperes	.034-.039"
1999519 (Low)	19-21 amperes	.044-.049"
1999520 (High)	18-20 amperes	.034-.039"

**Horn Relay:**—Delco-Remy Model 1116775.

**Contact Gap:**—.020". **Air Gap:**—.015" (closed).

**Contacts Close:**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own. 8 cylinder, 90° Vee, L head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3½". Stroke—4½".

**Displacement:**—346 cu. ins. **Rated HP:**—39.20.

**Developed Horsepower:**—135 (60S, 62), 140 (72, 75) at 3400 RPM.

**Compression Ratio:**—6.25-1 (Std. 60S, 62; Optl. 72, 75), 6.7-1 (Std., 72, 75; Optl. 60S, 62), 5.75-1 (Optl.). See Cadillac Shop Notes for Cylinder Head Installation, Identification (on 72, 75), and Lowering Compression Ratio.

**Compression Pressure:**—155 lbs. (60S, 62), 170 lbs. (72, 75) at 1000 RPM or approximately 105-110 lbs. (60S, 62), 110-115 lbs. (72, 75) at cranking speed.

**Vacuum Reading:**—Steady 20-21" idling at 7-8 MPH.

**PISTONS:**—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, Cam Ground type with Anodized finish (special hard oxide bearing surface). **Length:**—4½". **Weight:**—18.30 ozs. (stripped), 25.10 ozs. (complete). **Removal:**—Pistons and rods removed from above. **Clearance:**—Skirt .0020-.0025". See Fitting Pistons.

**Replacement Pistons:**—See Cadillac Shop Notes.

**Fitting New Pistons:**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide, 7-10" long) used, insert feeler next to T-slot. Piston should fall through bore of own weight on .002" feeler, and hold on .0025" feeler. NOTE—Cylinder bore out-of-round .0005" maximum, taper .0003".

**Installing Pistons:**—T-slot to left, for all pistons.

**PISTON RINGS:**—2 compression, 2 oil control rings per piston, all above pin. Oil ring grooves drilled.

Ring	Width	End Gap	Side Clearance
Compr. (Top)	3/32"	.007-.012"	.0023-.0041"
Compr. (#2)	⅛"	.007-.012"	.0013-.0026"
Oil Control	5/32"	.007-.015"	.0013-.0026"

**Replacem't Rings:**—.003", .005", .010", .015", .030" oversize.

**PISTON PIN:**—Diameter—⅞". Length—3 1/16". Pin floats in piston and rod. Held by locking rings. See Cadillac Shop Notes for pin servicing data.

**Pin Fit in Piston:**—.0004" press fit (ribbed end), .0000" clearance or free fit at 70° F. (plain end).

**Pin Fit in Rod Bushing:**—.0002-.0008" clearance (new), .0018" (worn limit).

**CONNECTING ROD:**—Weight 37.472 ozs. Length 8¾".

**Crankpin Journal Diameter:**—2.4590-2.4595".

**Lower Bearing:**—Steel-backed, babbitt-lined type.

**Clearance:**—.0015-.0025" (new), .0045" Max. (worn).

**Sideplay:**—.008-.014".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rod or caps. See Cadillac Shop Notes for connecting rod and bearing installation data.

**Installing Rods:**—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down toward oil pan.

**CRANKSHAFT:**—3 bearing with 6 counterweights.

See Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal.

**Journal Diameters:**—2½" all bearings.

**Bearings:**—Removable steel-backed, babbitt-lined.

**Clearance:**—.0015-.0025" (new), .005" Max. (worn).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust:**—Taken by center (#2) bearing.

**Endplay:**—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearing, non-adjustable chain drive.

See Cadillac Shop Notes for camshaft bushing data.

**Journal Diameters:**—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type:**—Steel-backed, babbitt bushings.

**Clearance:**—.0015-.0033" (new), .0045" Max. (worn).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Morse Type C #3682-R Side Guide type. Width 1¼". Pitch ⅝". Length 23¼" or 62 links. NOTE—Install chain 'endless' as an assembly with sprockets. Use Tool J-836 to pilot camshaft sprocket.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	3405-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0012-.0032"
Exhaust	45°	.345"	.0022-.0042"

NOTE—Stem clearance worn limit .005" (all valves). Valve heads not slotted.

See Cadillac Shop Notes for valve servicing.

**Valve Guides:**—Press in block (long step end down).

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters (Mushroom type) in removable brackets. See Miscellaneous Section for complete data.

**Clearance:**—.0010-.0024" (new), .0035" (worn).

**Valve Springs:**—Free length 2.210".

	Spring Pressure	Spring Length
Valve Closed	66 lbs.	1.926"
Valve Open	145 lbs.	1.581"

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 42° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.

**Valve Timing Check:**—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer (on right side).

## LUBRICATION

**LUBRICATION:**—Pressure type (gear type pump in crankcase). See Cadillac Shop Notes for oil pump data.

**Normal Oil Pressure:**—15 lbs. idling, 25 lbs. at 30 MPH.

**Oil Pressure Regulator:**—Opens at 30 lbs. On oil pump. Non-adjustable. **Crankcase Capacity:**—7 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—24½ quarts.

See Cadillac Shop Notes for radiator core removal.

**Water Pump:**—Self-adjusting packing type.

See Water Pump Section for complete data.

**Thermostat:**—Mounted in radiator top tank, linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 153-158° F., fully open at 175° F. (High Reading Type—use with Heaters) Starts to open 168-173° F. Fully open 190°.

**Shutter Adjustment:**—Adjust clevis on threaded end of rod to secure 1/16" tension (shutters closed).

**Temperature Gauge:**—AC Electric. #1510773 (dash unit), #1510774 (engine unit).

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Long Model 11CF-10½CI (60S, 62), 11CF-TI (72, 75). Semi-centrifugal, single plate, dry disc type. *See Clutch Section for complete data.*

**NOTE**—Borg & Beck Model 11A6 (marked #945) Single plate, dry disc type with 'Borglite' driven member used on early cars.

*See Clutch Section for complete data.*

**Facing (Long)**—Spiral or Chevron wound (spiral grooved) woven, 2 used. Inside Diam. 7". Outside Diam. 10½" (60S, 62), 11" (72, 75). Thickness .137".

**Pedal Adjustment:**—Pedal free travel ⅞-1⅛" (adjusting nut on connector link at clutch fork).

**Removal:** Remove transmission (see below), drop clutch housing pan, punch mark clutch cover, pressure plate and flywheel, remove 6 cover screws.

**NOTE**—Install driven disc with oil guard (cover over dampener springs) to rear.

*See Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and balancing data.*

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift.

*See Transmission Section for complete data.*

**Transmission Control:**—Remote steering col. shift. *See Transmission Section for complete data.*

**Removal:**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics 3C. Needle bearing.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive. **NOTE**—Manufacturer recommends Carrier Assembly serviced by factory.

*See Rear Axle Section for complete data.*

**Ratio**—3.92-1 (60S, 62), 4.31-1 (72), 4.58-1 (75).

**Backlash**—.004-.010". Screw adjustment.

**Removal:**—Disconnect rear universal, remove axle shafts (see below), and carrier flange capscrews.

**Axle Shaft Removal:**—Remove wheel, axle shaft nut, dust seal from rim of drum, pull off hub and drum, disconnect brake line and remove backing plate. Pull shaft and bearing assembly (use Tool J-838).

**Wheel Bearing Adjustment**—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Front—1946-G, H (except 75), 1951-C, D (75). Rear—1751-G, H (60S), V, W (62); 2007-N, P (72), 2010-C, D (75). Double acting, hydraulic.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5°6' (60S, 62), 5°1' (72, 75).

**Caster**—Neg. 1¾° to Neg. 2¾° (60S, 62, 72), Neg. ½° to Neg. 1° (75). Equal within ½°.

**Camber**—0 to Pos. ¾° (except 75), 0 to Pos. ½° (75). **Toe In**—1/32-3/32" (at rest). Adjusters at outer end of each rod (except 75), turn tie rods (75).

**Steering Geometry (Toe-out on turns)**—Inner wheel turned 22¼-23¾° (except 75), 22¾-24¼° (75). Outer 20°.

**STEERING GEAR**

**Steering Gear (Series 60S, 62, 75):** Saginaw Worm-and-Double Roller type.

*See Steering Gear Section for complete data.*

**Steering Gear (Series 72):** Saginaw Ball Bearing Worm-and-Nut (recirculating ball) type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type (eccentric on 75 only). Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums**—Centrifuse. Diameter—11.995-12.005" (60S, 62, 72), 13.995-14.005" (75).

**Lining**—Molded. Length—Primary 11 17/32" (60S, 62, 72), 13 21/32" (75); Secondary 12 31/32" (60S, 62, 72), 15 1/32" (75). Width—Front wheel 2¼". Rear 2" (60S, 62), 2½" (72), 2¼" (75). Thickness 3/16" (60S, 62, 72), ¼" (75).

**Clearance**—.015" both ends of secondary shoe—with primary shoe forced out against drum (60S, 62, 72). .010" both ends of secondary shoe with primary just free of drag (75).

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Vacuum Power type. *See Miscellaneous Equipment Section for complete data.*

**ENGINE HOOD, SIDE PANEL REMOVAL & FRONT SHEET METAL ASSEMBLY ALIGNMENT:—See Cadillac Shop Notes.**

## MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:**—First number 5320001.  
On upper rear corner of left hand cylinder block below head and on frame opposite steering gear.

## TUNE-UP

**COMPRESSION:—Ratio—6.75-1 (requires Ethyl fuel).  
6.08-1 optional.  
Pressure—180 lbs. at 1000 RPM for standard head  
or approximately 110-115 lbs. at cranking speed.**

**VACUUM READING:—**Steady 20-21" idling at 7-8 MPH.

**FIRING ORDER: 1-4-9-12-3-16-11-8-15-14-7-6-13-2-5-**  
10. See diagram for spark plug cable connections on each distributor cap.

**SPARK PLUGS:** AC No. 104. 10 mm. Metric type.  
Gaps—.032". Limits .030-.035".

NOTE—These small plugs must not be tightened excessively (7-10 ft. lbs. tension).

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.015". Cam Angle 31° (closed).  
**Synchronization**—Movable contacts (in left hand distributor) open 22½° (distr.) after fixed set.  
**Automatic Advance**—10° max. at 2000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.  
**Std. Setting**—6° BTDC. with vibration dampener mark "IG/A" at indicator on front of engine.  
**NOTE**—Contacts open alternately at regular 22½-22½° (distr.) intervals.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Both idle screws  $\frac{1}{4}$ -1 turn open. Idle speed 7-8 MPH. **NOTE**—Both carburetors must be equalized—see Carburetor data (following).  
**Float Level**—13/64" top of float to gasket seat on cover with needle valve seated.

**Accelerating Pump**—Not adjustable.  
**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—None in service (automatic hydraulic type tappet clearance take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1116283 (switch and cable). Connected to coil unit by armored cable.

**Ignition Lock—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.**

**COIL:** Delco-Remy 553-E. Two coil unit mounted on bracket at radiator top. Coil Cover No. 1854013.  
**Current**—2.2 amperes idling, 4.4 stopped (each).

**CONDENSER:** Delco-Remy No. 1869707 (two used—both in left hand distributor). Capacity—.18-.25 mfd.

**DISTRIBUTOR:** Delco-Remy 1110601 (Left), 1110602 (Right). Two used (left hand distributor times ignition) for entire engine, right hand distributor distributes high tension current to spark plugs of right hand cylinder bank only and has no breaker mechanism. Same design as used on 39-80.

**Type**—Double breaker, 8 lobe cam, full automatic

**Firing Interval**—Movable contacts open 22½° (distr.) after fixed set. Must be synchronized (see Timing).

**Breaker Gap—.0125-.0175".**

**Cam Angle or Dwell—**31° closed, 14° open (distr.).  
Each set operates independently.

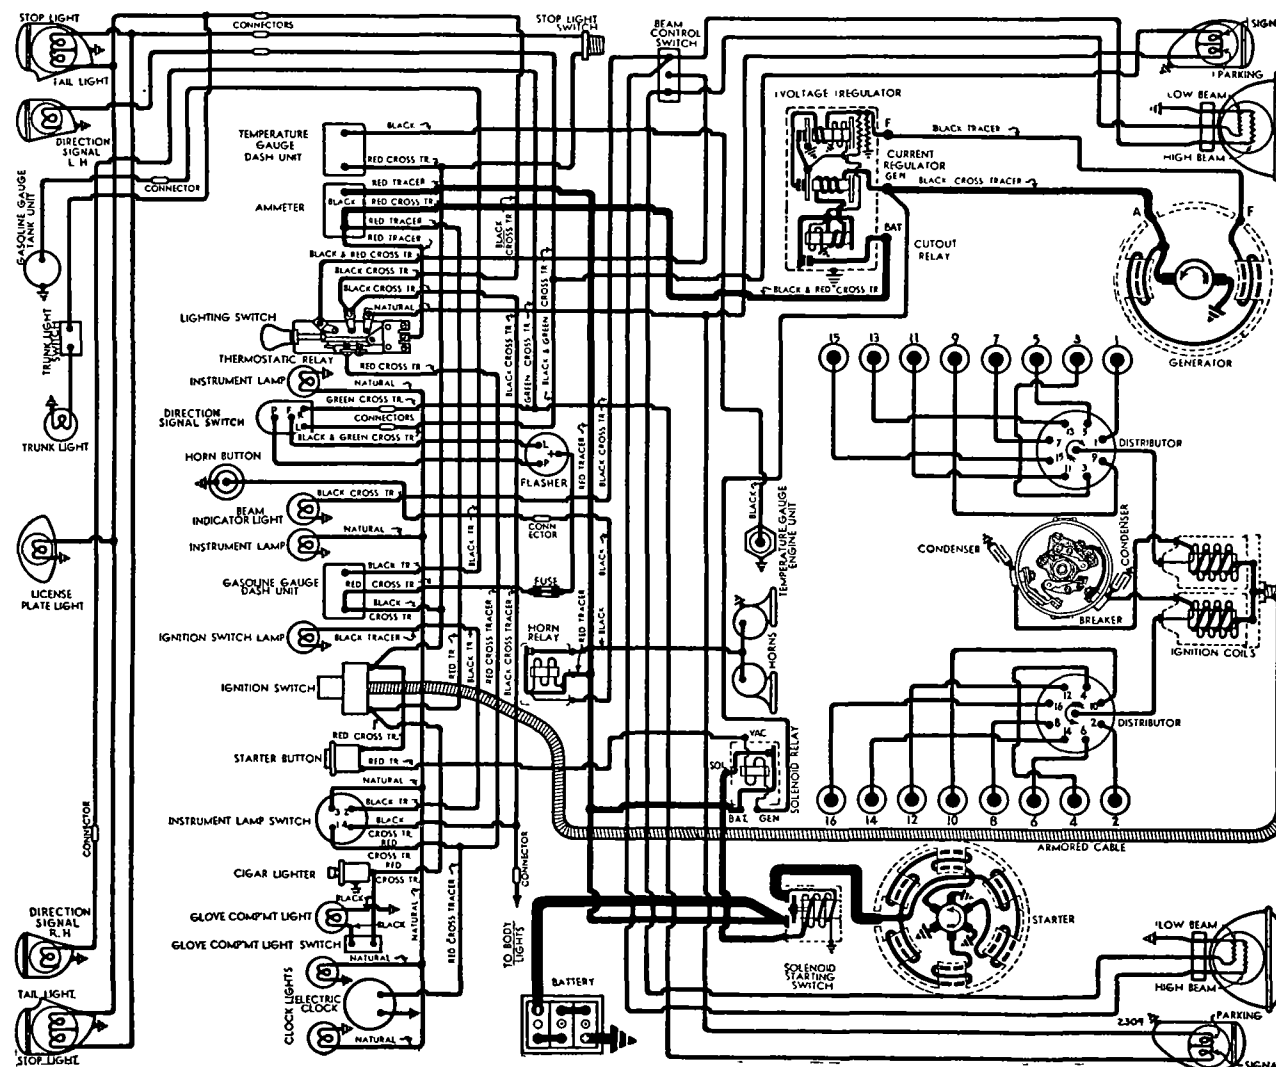

**Breaker Arm Spring Tension—19-23 ounces.**

**Rotation**—Clockwise viewed from top (L.H. No. 1110601), counter-clockwise (R.H. No. 1110602).

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	800	1½.....	1600
10 .....	2000	20 .....	4000

**Manual Adjustment**—Permits 10° advance or retard from center position. See Ignition Timing for adjustment.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting (Ethyl fuel): See Manual adjustment for correction dependent on fuel regularly used.

### Flywheel Degrees

6° BTDC.

### Piston Position

.0112" BTDC.

**Timing (Stationary Contacts)**—Loosen thumbscrew on pointer arm, center pointer on scale, tighten thumbscrew. With #1 piston on compression (front cylinder, left bank), turn engine over until mark 'IG/A' on vibration dampener (which is 6° before TDC mark 'C/1-15') lines up with pointer on chain case cover. Loosen advance arm clampscrew on left hand distributor, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clampscrew. Then synchronize.

**Synchronization (Timing Movable Contacts)**—Manufacturer recommends distributor removal and synchronization on test fixture (set movable contacts to open 22½° (distr.) after fixed set. To synchronize on engine, turn engine over 45° or ½ revolution to firing position for #4 cylinder with 'IG/A' mark on dampener lined up with pointer. Remove distributor cap and rotor, loosen two lock screws on movable sub-plate (on which movable contacts mounted), turn eccentric adjusting screw until contacts begin to open, tighten lock screws. Check Manual Adjustment setting.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 M.P.H. To adjust, loosen pointer thumbscrew, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation on scale at a time until satisfactory performance secured. NOTE—Before changing manual adjustment, accelerate engine up to at least 60 MPH (critical point is 50 MPH.). If engine pings, check for fuel being used, faulty spark plugs, carbon deposits, lean carburetor setting which will cause pre-ignition.

## CARBURETOR

**CARBURETION:**—Carburetors—Carter WDO Type 407-S (Left hand), 408-S (Right hand). 1½" dual, downdraft type. One carburetor used for each cylinder bank with interconnected throttle controls.

*For complete data, refer to Carburetor Index.*

**NOTE**—Carburetors must be synchronized or equalized at both idle and part throttle position.

**Idle Adjustment**—With engine warmed up so that Automatic Chokes and Fast Idles inoperative, adjust each carburetor as follows: Set throttle lever stopscrew for 7-8 MPH. idling speed. Turn each idle adjusting screw (one for each barrel, two per carburetor) in until engine begins to lag or miss, then turn screw out slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed of 300 R.P.M. After adjusting both carburetors, equalize as follows:

**Equalizing Carburetors**—Use mercury column 'U' tube connected to ⅛" pipe plug openings in long leg of each intake manifold (do not connect gauge to vacuum balancing tube between carburetors). Disconnect throttle rods, idle engine, note mercury levels in tube. Adjust throttle stopscrew at each carburetor so that engine idles at 7-8 MPH. and mercury level is equal in each tube. Adjust right

throttle rod length (trunnion with fine threads on rod near carburetor) so that rod can be connected without disturbing throttles or unbalancing mercury levels. Open throttle to 1000 RPM. engine speed (use foot throttle, not hand throttle), make any necessary re-adjustment to secure equal mercury column levels. If adjustment made recheck idle setting (idle speed equalization more important).

**Accelerating Pump Setting**—Not adjustable.

**Float Level**—13/64" from top of float to cover (gasket removed) with needle seated.

**Fast Idle**—Integral type. Built-in each carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust fast idle screw for .026" throttle opening with choke valve fully closed.

**Automatic Choke**—Integral. Built-in each carburetor. See article in Carburetion Equipment Section.

**Choke Setting**—Set center index mark to coincide with mark on carburetor flange.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528718 heavy duty oil-bath type (one cleaner used for each carburetor). NOTE—Crankcase ventilator air cleaner is AC #1528732.

**Fuel Pump:**—AC Type AU (2 used). #1523695 (R.H.), #1523696 (L.H.). Diaphragm type. One pump used for each carburetor. NOTE—Fuel lines interconnected, one pump only may operate at idling speed.

*For complete data, refer to Carburetion Equip. Index.*

**Vacuum Pump**—AC Type K #1523906 (separate unit) mounted between cylinder banks at rear.

**Gasoline Gauge:**—AC Electric type. #1515368 (dash unit), #1515461 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco 19Q1. 19 Plate, 125 AH. Cap. (20 hr.).

**Starting Capacity**—145 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage—4.5 volts.

**Dimensions**—10⅝" long, 7" wide, 8 9/16" high.

**Grounded Terminal**—Positive (+) terminal.

**Engine Ground**—Strap connector at right front engine support.

**Location**—Under hood on right side outside frame.

## STARTER

**STARTER:**—Delco-Remy 783. Armature No. 1868165.

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—36-40 ounces each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lb.	3000	5.0	70
19	Lock	3.0	500

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take off cover in right side pan, take out flange mounting screws, remove starter and switch assembly from below.

**Starting Switch:**—Solenoid No. 1555 (on starter). Solenoid Relay No. 268-M (mounted separately on dash). Solenoid switch controlled through relay by

pushbutton No. 1996005 on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch Specifications

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay Specifications

**Contacts Close**—3.2 volts max. **Open**—1.6-2.0 volts.

**Contact Gap**—.035". **Air Gap** .010" (contacts closed).

## GENERATOR

**GENERATOR:**—Delco-Remy 1102666. Armature 1878429. Two brush type with current-voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—32 amperes min. (hot), 8.0 volts, 2450 RPM, 25 MPH and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	30*	8.0	1825

\*—Not maximum output—see Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:**—Mounted on slide on fan bracket at front of engine between cylinder banks. To remove, take out mounting bolt in slot on slide mounting.

**Belt Adjustment:**—Loosen mounting bolt on slide mounting under generator, lift generator up to remove slack from belt, tighten mounting bolt.

## REGULATOR

**Delco-Remy Model 1118202.** "Single Core" Type. Vibrating type voltage and current regulators in case on dash.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature.

**To Check**—Connect ammeter in charging line at "BAT" regulator terminal, voltmeter between "BAT" terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator at hot operating temperature, retard generator speed until cutout relay points open, then increase generator speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further

C NTINUED ON NEXT PAGE

**C CONTINUED FROM PRECEDING PAGE**

adjustment required, see Single Core Regulator article in Electrical Equipment Section for heavy (or other) spring adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

**Current Regulator**

**Setting**—34-36 amperes hot (at operating temp.).  
**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING**—Headlamps—Guide 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam straight ahead with center of hot spot 3" below lamp center  
**Beam Indicator**—On speedometer face. Lighted whenever Country (upper) beam in use.  
**Direction Signal**—Refer to Electrical Equip. Index.

**Switches**

**Lighting**—Delco-Remy 1995010.

**Beam Selector**—Delco-Remy 1997002.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Front Indl. & Park	21-3	1154
Instr., Clock, Radio	1.5	55
Glove & Trunk Comp't.	1.5	55
Beam Indicator, Ign. Lock	1	51
Stop & Tail	21-3	1154
*Rear Indicator (Early)	21-3	1154
*Rear Indicator (Later)	32	1133
License Plate	3	63
Dome & Quarter	15	87

\*—When replacing Rear Indicator Bulb use same type bulb as formerly used (1154 double contact—1133 single contact) in order for circuit to function

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°. Not adj.

**FUSES**—Direction Signal—9 ampere. In Flasher lead under instrument panel.

Fog Lights—20 ampere. On switch.

Radio & Under Seat Heater—14 amperes each.

**HORNS**—Klaxon. D-R. Model K-33D Type 1967 (low note—left hand), 1968 (high note—right hand). Vibrator type, blended tone, twin horns operated by relay. NOTE—Horns mounted vertically behind radiator grille with horn relay on left front fender

dust shield. Remove grille for horn service.

Horn Type	Current (at 6 volts)	Air Gap
1967 Low Note	12-14 amperes	.045-.050"
1968 High Note	11-13 amperes	.036-.040"

**Horn Relay**—D-R. Model 1116775.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS**—16 cylinder, 135° Vee, 'L' head. Cylinder banks and crankcase cast integral. See Cadillac Shop Notes for head installation data.

**Bore**—3¼". **Stroke** 3¼".

**Displacement**—431 cu. ins. **Rated HP**—67.60.

**Developed Horsepower**—185 HP. at 3600 R.P.M.

**Compression Ratio**—6.75-1 Std. 6.08-1 Optl.

**Compression Pressure**—180 lbs. at 1000 R.P.M. or approximately 110-115 lbs. at cranking speed.

**Vacuum Reading**—Steady 20-21" idling at 7-8 MPH.

**PISTONS**—Lynite & Bohn Lo-Ex aluminum alloy, 'T' slot, cam ground type with anodized finish (special hard oxide bearing surface). **Length**—3¾".

**Weight**—15.28 ozs. (stripped), 21.136 ozs. (complete).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0020-.0025" skirt. See Fitting Pistons.

**Replacement Pistons**—See Cadillac Shop Notes.

**Fitting New Pistons**—Check piston diameter with micrometer gauge at right angles to pin hole just below lower ring groove and also ½" above lower edge. If feeler gauges (⅜-½" wide, 7-10" long) used, insert feeler next to T-slot. Piston should fall through bore of own weight on .002" feeler and hold on .0025" feeler. NOTE—Cylinder bore out-of-round .0005" Max., taper .0003".

**Installing Pistons**—Slot to left, for all pistons.

**PISTON RINGS**—Two compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (Top)	3/32"	.007-.015"	.0030-.0043"
Comp. (#2)	⅛"	.007-.015"	.0013-.0028"
Oil Control	3/16"	.007-.015"	.0013-.0026"

**Replacement Rings**—.003", .005", .010", .015", .030" oversize.

**PISTON PIN**—Diameter—13/16". Length—2 25/32".

Pin is locked in rod by locking screw. Oil grooves broached for full length of pin hole in piston.

See Cadillac Shop Notes for special pin removal and installation instructions.

**Pin Fit in Piston**—.0001-.0006" clearance (new), .0018" (worn).

**Replacement Pins**—Undersizes not furnished.

**CONNECTING ROD**—Weight 24.528 ozs. Length 6⅞".

**Crankpin Journal Diameter**—1.9988-1.9993".

**Lower Bearing**—Steel-backed, babbitt-lined.

**Clearance**—.0015-.0025" (new), .0045" (worn).

**Sideplay**—.008-.014".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file connecting rods or caps.

**Installing Rods**—Numbers on rods and bearing caps on same side and installed in same numbered cylinders with marks down toward oil pan.

**CRANKSHAFT**—9 bearing, integral counterweights.

See Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal.

**Journal Diameters**—2½ all bearings.

**Bearings**—Steel-backed, babbitt-lined type (except center bearing which is bronze-backed type).

**Clearance**—.0015-.0025" (new), .005" Max. (worn).

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file bearing caps. Upper halves can be rotated out without removing crankshaft.

**End Thrust**—Taken by #5 (center) bearing.

**Endplay**—.001-.005" (new), .010" (worn).

**CAMSHAFT**—5 bearing, non-adjustable chain drive. See Cadillac Shop Notes for camshaft removal and installation instructions.

**Bearing Type**—Steel-backed, babbitt bushings.

**Clearance**—.0013-.0025" (new), .004" (worn).

**End Thrust**—Taken by thrust plate flange at front bearing. **Endplay** .005-.015" (new), .020" (worn).

**Timing Chain**—Morse Type C #3682-R. Width 1¼". Pitch ⅜". Length 23¼" or 62 links.

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1.495-1.505"	3415-3425"	5 19/32"
Exhaust	1.370-1.380"	3405-3415"	5 39/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	290"	.0010-.0030"
Exhaust	45°	302"	.0020-.0040"

NOTE—Worn limit for stem clearance .005" (all valves). Valve heads not slotted.

**Valve Guides**—Pressed in block (taper end down).

**Valve Lifters**—Wilcox-Rich 'Zero-lash' type hydraulic lifters. Barrel type operating in reamed holes.

See Miscellaneous Section for complete data.

NOTE—Two sizes of lifter used, must be re-installed in same guide hole from which removed. Large lifter stamped 'B' in oil groove. Large guide hole stamped 'B' beside hole. Valves must be removed first.

**Lifter Clearance**—.0015-.0025" (new), .0035" (worn).

**Valve Springs**—Damper used at bottom. Free length 2.074".

	Spring Pressure	Length
Valve Closed	50 lbs.	1 25/32"
Valve Open	100 lbs.	1 15/32"

**VALVE TIMING**

**Tappet Clearance**—None (automatic take-up used).

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 6° BTDC. Close 28° ALDC.

**Exhaust Valves**—Open 44° BLDC. Close 12° ATDC.

**To Check Timing**—#1 cylinder (front—left bank) intake valve should open with piston 6° or .0112" before top dead center with ignition mark 'IG/A' aligned with pointer on chain case cover. NOTE—Intake opening and ignition timing same point.

**LUBRICATION**

**LUBRICATION**—Pressure system. Main oil header in left crankcase wall (feed from pump) for main, connecting rod, and camshaft bearings. Pipe from

this header through filter feeds oil header above each line of valve lifters (non-adjustable auxiliary relief valve at rear of left line).

**Oil Pump:**—Helical gear type. In rear of crankcase.

**Normal Oil Pressure:**—15 lbs. idling, 25 lbs. at 30 MPH.

**Oil Pressure Regulator:**—Piston type built in oil pump. Opens at 30 lbs.

**Crankcase Capacity:**—11 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—30 quarts.

*See Cadillac Shop Notes for radiator core removal.*

**Pressure Valve:**—In radiator filler cap. Opens at 7 lbs.

**Water Pump:**—Packless type, sealed ball-bearing shaft (2 used—one pump for each bank, driven in tandem with fan pulley by double Vee belt).

*See Water Pump Section for complete data.*

**Removal:**—Drain cooling system, back off belt adjustment, remove hose and pump mounting screws.

**Belt Adjustment:**—Loosen two mounting bolts on fan bracket, lift fan pulley and bracket assembly up (right bolt hole slotted, pivots on left bolt), until all slack removed from belt, tighten bolts.

**NOTE:**—Replace belts together as matched sets.

**Thermostat:**—Harrison. In radiator top tank. Linked to radiator shutters by rod on forward side.

**Setting:**—(Std. Type) Starts to open 153-158° F., fully open at 175° F. (High Reading Type—use with Heaters) Starts to open 168-173° F. Fully open at 190° F.

**Shutter Adjustment:**—Disconnect shutter rod at lever on front of radiator top tank, loosen locknut, turn clevis so that rod extends 1/16" past lever (provides slight tension with shutters closed).

**Temperature Gauge:**—AC Electric. #1510773 (dash unit), #1510774 (engine unit).

*See Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH:**—Long Model 12CB-11½. Single plate, dry disc type. No adjustment required.

*See Clutch Section for complete data.*

**Facings:**—Spiral or chevron wound woven (spirally grooved), 2 used. Inside Diam. 7". Outside Diam. 11½". Thickness .137".

**Adjustment:**—Free movement of pedal should be 7/8-1½" (adjusting nut on connector link at fork).

**Removal:**—Remove transmission (see below), drop clutch housing pan, punch mark clutch cover, pressure plate, and flywheel (re-install to these marks), remove 12 cover screws (release tension evenly). *See Cadillac Shop Notes for clutch housing note, locking pin removal (replacement clutches) & balancing data.*

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh, all helical gear type (sliding gear, low & reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Remote steering col. shift.

*See Transmission Section for complete data.*

**Removal:**—Remove propeller shaft, free transmission extension at engine rear support, remove cross-member (with engine rear support), disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove from car.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3C. Needle bearing type. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**NOTE:**—Manufacturer recommends Differential Carrier Assembly be returned to factory for servicing.

**Ratio:**—4.31-1. **Backlash:**—.004-.010". **Screw adj.**

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on

carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Remove rear wheels, take off axle shaft nut, pull wheel hub and brake drum, disconnect brake line and remove backing plate. Pull shaft and bearing assembly out (use Tool J-838).

**Wheel Bearing Adjustment:**—None.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1951-C, D (front), 2010-C, D (rear). Double acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5°1' crosswise.

**Caster:**—Neg. ½° to Neg. 1°. Adjustable.

**Camber:**—0° to Pos. ½°. Shim adjustment.

**Toe In:**—1/32-3/32" (at rest), 0-1/16" (in motion).

**Steering Geometry (Toe-out on turns):**—Inner wheel turned 22¾-24¼°, outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Double Roller type with offset steering column and universal joint connection (Mechanics type).

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment and rigid wheel cylinders. Hand lever applies rear service wheel brakes.

*See Brake Section for complete data.*

**Drums:**—Centrifuse. Diameter 13.995-14.005".

**Lining:**—Moulded. Length per shoe 13 21/32" (primary), 15 1/32" (secondary). Width 2¼". ¼" thick.

**Clearance:**—.010" at each end of secondary shoe.

**Braking Power:**—43% rear, 57% front wheels.

**Hand Brake:**—See Servic Brakes.

**HOOD REMOVAL & INSTALLATION DATA, GRILLE REMOVAL, FRONT SHEET METAL ASSEMBLY ALIGNMENT:**—See Cadillac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL & ENGINE NUMBER:** Stamped on left frame side member opposite steering gear and on left side of crankcase to rear of cylinder block. First numbers as follows:

	1941	1942
60S	6,340,001	6,380,001
61	5,340,001	5,380,001
62	8,340,001	8,380,001
63	7,340,001	7,380,001
67	9,340,001	9,380,001
75	3,340,001	3,380,001

### TUNE-UP

**COMPRESSION:**—Ratio—7.25-1 Std. Ratio may be lowered by installing special shims between head and block.

**Pressure**—182 lbs. at 1000 RPM. or 100-105 lbs. at cranking speed.

**VACUUM READING:** 20-21" steady idling at 7-8 MPH.

**FIRING ORDER:**—1-8-7-3-6-5-4-2 with cylinders numbered as shown on diagram.

**SPARK PLUGS:**—AC No. 104. 10 MM. Metric.

Gaps—.025-.030".

**NOTE**—Use special wrench J-1275 and tighten plugs just enough for good gasket seal (do not use torque wrench with these small plugs).

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". Cam Angle 31° (closed).

**Automatic Advance**—12° max. at 2000 RPM (distr.).

**Vacuum Advance**—9° (distr.) with 15-18" of vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—5° BTDC, with crankshaft timing disc mark "IG/A" at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws set midway between "miss" and "roll" points (Stromberg Carb.), ½-1½ turns open (Carter Carb. '41), ¾-1¾ turns open (Carter Carb. '42). Idle speed 7-8 MPH. (cars with Std. Trans.), exactly 375 Engine RPM. (cars with Hydra-Matic Drive).

**Float Level (Carter Carb.)**—⅛" (1941), 9/64" (1942) from top of float to gasket seat on cover.

**Float Level (Stromberg Carb.)**—Fuel level ⅝" below top edge of bowl.

**Accelerating Pump**—Inner hole (short stroke) normal setting. **NOTE**—1941 Carter Carburetor not adjustable.

**Fuel Pump Pressure:** 4¾ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—None in service (automatic hydraulic type take-up used).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy. No. 1116298 (60S, 61, 63, 67 '41), 1116299 (62, 75 '41), 1116327 (60S, 62 '42), 1116328 (61, 63, 67, 75 '42), 1116309 (All RHD. Cars '41), 1116329 (All RHD. Cars '42). Switch connected to ignition coil by armored cable.

**Ignition Lock**—Briggs & Stratton No. 85373.

**Key Series**—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy 1115128. Mounted on the dash.

**Ignition Current**—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity**—.18-.25 mfd.

**DISTRIBUTOR:** Delco-Remy 1110807. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment. **Breaker Gap**—.0125-.0175".

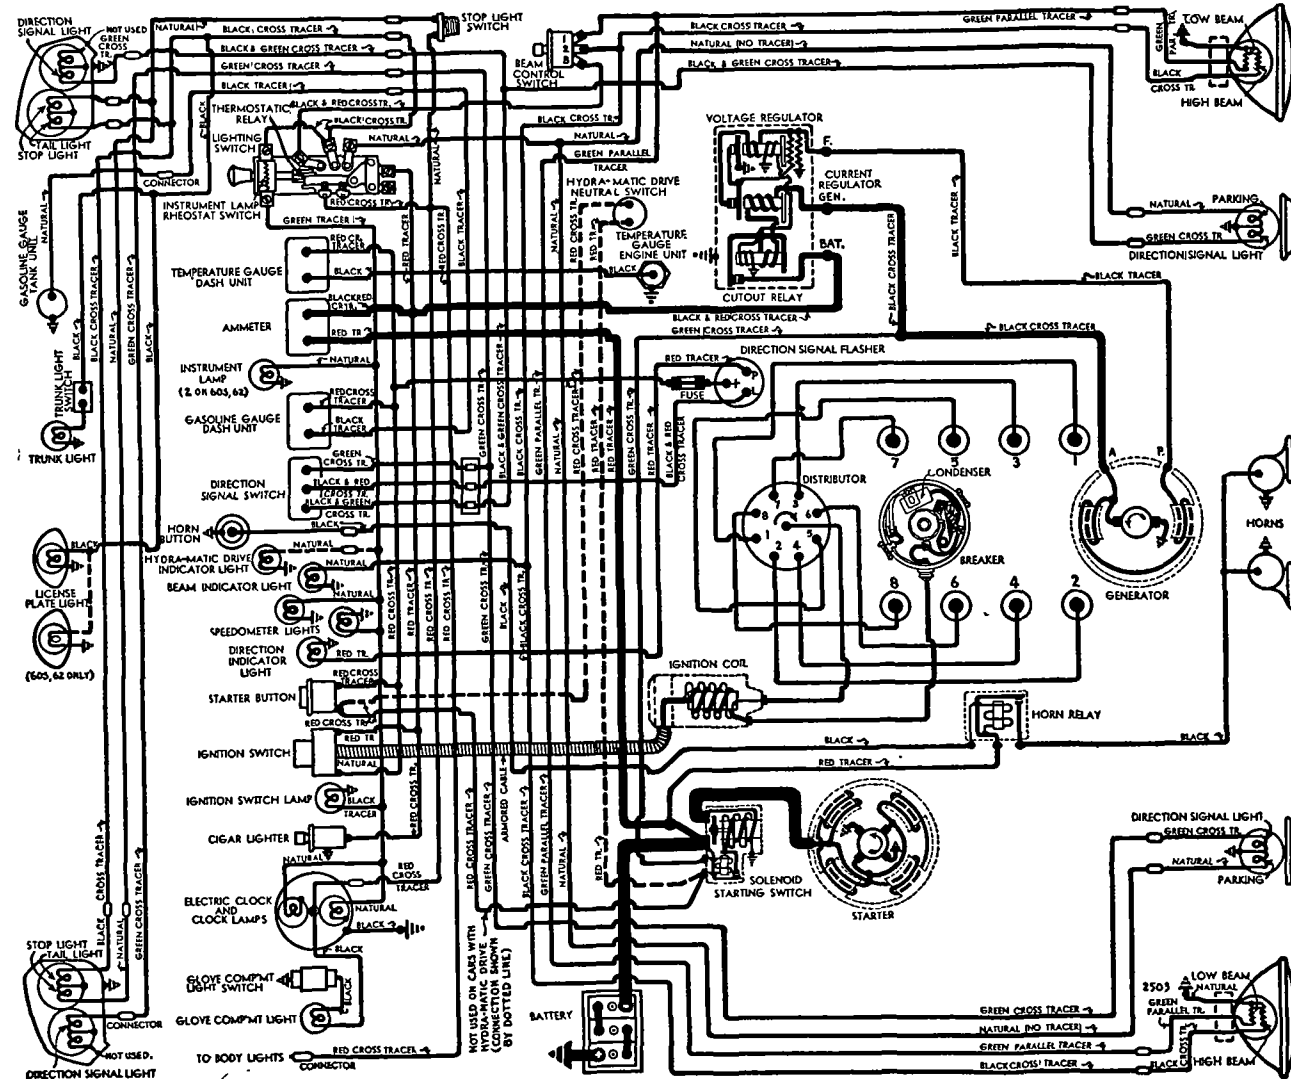

**Cam Angle or Dwell**—31° closed, 14° open (.015" gap).

**Breaker Arm Spring Tension**—19-23 ounces.

**Rotation**—Clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	500	1.....	1000
12 .....	2000	24.....	4000

end of drive shaft coupling is offset toward left or rear of engine (narrow part of coupling to left or rear). CAUTION—See that oil pump driveshaft properly lined up (pump may be damaged by pushing shaft down if not aligned).

## IGNITION TIMING

**IGNITION TIMING:**—Setting as given for Ethyl fuel. See Manual Adjustment (following) for correction for fuel of other Octane Rating.

**Flywheel Degrees Piston Position**  
All Engines .....5° BTDC.....0114° BTDC.

**Timing (With Synchroscope)**—Recommended method. Disconnect vacuum line at distributor (to avoid damage to unit), clip synchroscope lead to #1 spark plug, idle engine and direct synchroscope light on timing disc behind crankshaft pulley at front of engine. Loosen advance arm clamp bolt, rotate distributor until 'IG/A' mark on timing disc (5° before top dead center mark 'C.1/6') lines up with pointer on chain case cover, tighten clamp bolt, reconnect vacuum line (hold connection with wrench while tightening), check setting for fuel used (see Manual Adjustment below).

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston (front cylinder left bank) with 'IG/A' mark on timing disc behind crankshaft pulley in line with pointer on chain case cover and distributor rotor at #1 segment in distributor cap. Adjust distributor as directed above.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen holddown screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time. CAUTION—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots or lean carburetor setting before changing adjustment to correct ping.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model AAV-26 (1941-42), or Carter Model WDO Type 506-S (1941), Carter Model WCD Type 486-S (1942). 1¼" Dual, downdraft type with Fast Idle and Automatic Choke.

For complete data, refer to Carburetor Index.

**Idle Adjustment (All Carburetors)**—With engine warm so that choke valve wide open and fast idle inoperative, set throttle stopscrew for slow idle speed of 7-8 MPH. (Std.), exactly 375 Eng. RPM. (Hydra-matic Drive Cars). Adjust both idle screws (1 for each barrel) exactly alike so that engine idles smoothly (turn screws in for leaner mixture). Recheck idle speed. See Hydra-matic Drive article in Transmission Section for complete linkage adjustments on cars with Hydra-matic Drive.

**Accelerating Pump Setting**—On Stromberg carburetor, and 1942 Carter Carburetor, two holes provided for pump rod engagement as follows:

Inner Hole (short stroke)—Normal setting.

Outer Hole (long stroke)—for maximum discharge.

NOTE—1941 Carter Carburetor not adjustable.

**Float Level**—Check each model as follows:

**Carter**—½" (1941), 9/64" (1942) from top of float to machined surface (gasket seat) of bowl cover

with needle valve seated. Remove gasket and invert assembly to check level.

**Stromberg**—Fuel level ⅝" below top edge of bowl with engine idling (5 lbs. pressure) or even with bottom of inspection plug hole on side of bowl. Float level 1 13/32" from bottom of floats to gasket surface on bowl cover with valve seated (invert to check) or even with vertical guides of checking tool KMO-269-S-7 (Stromberg No. T-24971) with tool installed on gasket. Floats must be set alike.

**Metering Jets & Rods**—See Carter & Stromberg Jet Tables in Carburetor Section for complete data.

**Fast Idle:**—Integral (built-in each carburetor).

For complete data, refer to Carb. Equip. Index.

**Setting (Carter—1941)**—With stopscrew set for 7-8 MPH. hot or slow idle speed, close choke valve so that fast idle screw on high lobe of fast idle cam, adjust screw so that clearance between throttle stopscrew and stop on carburetor casting is .023"

**Setting (Carter—1942)**—Hold choke valve tightly closed, adjust fast idle screw (on opposite end of throttle shaft from regular throttle stopscrew) for .015" throttle opening (use Gauge T109-44).

**Setting (Stromberg)**—To check, hold throttle stopscrew against high lobe of fast idle cam, move choke valve toward closed position as far as possible, check remaining choke valve opening with #32 drill (.116"). To adjust, bend fast idle connector rod at point below choke valve for correct valve opening.

**Automatic Choke:**—Climatic Control (Carter), AAV-26 type (Stromberg). Built-in carburetor.

For complete data, refer to Carb. Equip. Index.

**Setting (Carter)**—Reference mark on thermostat cover centered on housing scale.

**Setting (Stromberg)**—'V' mark on thermostat cover in line with reference mark on housing (1941 and 1942 Code 205-10A carburetors marked "13" on cover), 2 Notches Rich (1942 Code 205-10 carburetors marked "19" on cover).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1529928 (60S '41), 1529929 (62, 67, 75 '41), 1529297 (61, 63 '41), 1542260 (All Models '42). Heavy duty oil-bath type. NOTE—Replacement Filter Element Assembly for 1942 air cleaner is No. 1542261.

**Fuel Pump:** AC Type AX. Exchange No. 521 (except 61, 63 '41), No. 522 (61, 63 '41). Combination fuel-and-vacuum type.

Pressure—4¾ lbs. max. (3½-5 lbs.).

For complete data, refer to Carb. Equip. Index.

**Gasoline Gauge:** AC Electric. Dash Unit No. 1515368 (All models '41, 61, 63, 67, 75 '42), 1516372 (60S, 62 '42). Tank Unit No. 1516269 ('41-42 Models except 75), 1516155 (75 '41-42).

For complete data, refer to Carb. Equip. Index.

## BATTERY

**BATTERY:**—Delco Model 17K3. 6 volt, 17 plate, 115 Ampere Hour Capacity (20 hour rate).

Starting Capacity—137 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes. Five second voltage, 4.4 volts.

Grounded Terminal—Positive (+) to frame bracket.

**Engine Ground**—Strap connector from right front engine mounting bracket to frame bracket. On cars with Radio, additional ground strap connected from rear of right hand cylinder head to dash.

**Location**—On outside of right frame siderail at rear of engine comp't. Accessible with hood raised.

**Dimensions**—Length 10⅞". Width 7". Height 8 11/16".

**Commercial Models**—Delco 19-Q3. 6 volt, 19 plate, 125 Ampere Hour Capacity (20 hour rate).

Starting Capacity—145 amperes for 20 minutes.

Zero Capacity—300 amperes for 5.0 minutes. Five second voltage 4.5 volts.

**Dimensions & Grounded Terminal**—Same as 17K3

## STARTER

**Delco-Remy Model 1107928** (1941 exc. 75 RHD), 1107931 (1942 ex. 75 RHD.), 1107925 (75 RHD. Cars).

**Armature**—No. 820158 (all models).

**Drive**—Overrunning clutch & solenoid pinion shift.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter forward and remove from below.

**Starting Switch:**—Delco-Remy Solenoid Switch No. 1542. Mounted on starter and controlled by Push-button Switch No. 1996021 on instrument panel and Neutral Safety Switch (cars with Hydra-Matic Drive).

For complete data, refer to Electrical Equipment Index.

**Neutral Safety Switch**—Delco-Remy No. 1997750 (1941), 1997766 (1942). Connected in starter solenoid circuit on Hydra-Matic Drive cars so that starter operative only with shift lever in Neutral.

Refer to Hydra-Matic Drive article in Transmission Section for Neutral Switch adjustment directions.

## GENERATOR

**Delco-Remy Model 1102661 or 1102693** (Std.), 1102686 or 1102694 (Hydra-Matic Drive Cars). Two brush, shunt type with current and voltage control.

NOTE—Generators are alike except for pulleys.

**Armature**—1878211 (1102661 & 1102686 Generators), 1879002 (1102693 and 1102694 generators).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and max. output by Current Regulator.

**Maximum Charging Rate**—32 amperes, 8.0 volts, 2450 RPM. or 27 MPH. (60S, 61, 62, 63), 25 MPH. (67, 75, & 62, 75 Comm.). Current Regulator Setting (with load or discharged battery). Actual charging rate controlled by Voltage Regulator (dependent on battery).

### Performance Data

Amperes	Volts	R.P.M.
Cold ..... 30①	8.0	1750

①Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Removal:**—Generator flange mounted between cylinder banks at front of engine and belt driven in tandem with water pump (separate drive belt for fan). To remove, take out flange mounting bolts.

**Belt Adjustment:**—Loosen generator mounting bolts, raise generator (pivots on left bolt, right bolt hole slotted) until belt deflection is  $\frac{3}{4}$ – $\frac{1}{2}$ " midway between generator and crankshaft pulleys.

**Fan Belt:**—Adjust to same tension by raising fan bracket.

## REGULATOR

**REGULATOR:**—Delco-Remy 1118202. Single Core Type. Vibrating Current & Voltage Regulator on dash. For complete data, refer to *Electrical Equipment Index*. CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In:**—6.2-6.7 volts hot, 800 generator RPM.  
**Cuts Out:**—0-4.0 ampere discharge current.  
**Contact Gap:**—.020" (same for both sets).  
**Air Gap:**—.020" (with contacts just closed).

## Voltage Regulator

**Setting:**—7.2-7.4 volts hot (operating temperature). Should be checked with cover in place and hot.

**To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in *Electrical Equipment Section* for other (2nd.) spring adjustment.

**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting:**—34-36 amperes hot (at operating temp.).

**To Check:**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F.), current reading should agree with setting (above).

**To Adjust:**—Same as for Voltage Regulator (above).

**Air Gap:**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING:**—Headlamps—Guide 'Sealed Beam' type. For complete data, refer to *Electrical Equipment Index*.

**Headlamp adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:**—In upper left face of speedometer dial. Lighted when Country (upper) beams in use.

**Direction Signal:**—Refer to *Electrical Equip. Index*. Pilot light in upper right face of speedometer dial flashes when Direction Signal operating.

## Switches

**Lighting:**—Delco-Remy No. 1995015 (1941), 1995023 (1942). Switch has instrument light rheostat on handle.

**Beam Selector:**—Delco-Remy No. 1997008 (1941 and 1942 RHD. cars), 1997010 (1942).

**Direction Signal:**—Delco-Remy No. 1995505 (Std. '41), 1995506 (RHD. '41), 1995509 (Std. '42 exc. Hydra-Matic Cars), 1995511 (Hydra-Matic Drive Cars '42), 1995512 (RHD. '42).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Park & Frt. Dir. Signal	21-3	1154
Rear Direction Signal	21-3	1154
Beam & Dir. Sig. Indicators	1	51
Instrument, Clock, Radio	1.5	55
Glove Comp't., Trunk	1.5	55
Ignition Lock	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome, Quarter	15	87

## MISC. ELECTRICAL

**FUSES:**—Direction Signal—9 ampere. In connector in feed wire on back of instrument panel near Flasher.  
Convertible Top Motor—9 ampere. In switch lead.  
Center Partition Division Glass Motor—30 ampere.

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70°. Not adj.

**HORNS:**—Delco-Remy Model K-33-H. No. 1999537 (Low Note '41), 1999538 (High Note '41), 1999577 (Low Note '42), 1999578 (High Note '42). Vibrator type, blended tone, twin horns operated by relay.

NOTE—Horns mounted in front of radiator below filler plate, Low Note horn—right, high note—left.

Type	Current (at 6 volts)	Air Gap
1999537 Low Note	19-21 amperes	.045-.050"
1999577 Low Note	19-21 amperes	.047-.052"
1999538 High Note	18-20 amperes	.036-.040"
1999578 High Note	18-20 amperes	.039-.044"

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap:**—.025". **Air Gap:**—.015" (closed).  
**Contacts Close:**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—Own, 8 cylinder, 90° Vee, L head type. Upper crankcase and cylinder blocks cast Enbloc. Bore— $3\frac{1}{2}$ ". Stroke— $4\frac{1}{2}$ ".

**Displacement:**—346 cu. ins. **Rated HP:**—39.20.

**Developed Horsepower:**—150 at 3400 RPM.

**Compression Ratio:**—7.25-1 Std. cast-iron head.

See *Cadillac Shop Notes for Cylinder Head Installation and Shims for Lowering Compression Ratio*.

**Compression Pressure:**—182 lbs. at 1000 RPM or 100-105 lbs. at cranking speed.

**Vacuum Reading:**—Steady 20-21" idling at 7-8 MPH.

**PISTONS:**—Lynite or Bohn Lo-Ex aluminum alloy, "T" slot, cam ground, anodized finish. Length— $4\frac{1}{8}$ ".

**Weight:**—Stripped 18.30 ozs. (1941), 18.32 ozs. (1942); Complete 25.10 ozs. (1941), 25.46 ozs. (1942).

**Removal:**—Pistons and rods removed from above. **Clearance:**—.0020-.0022" (1941), .0023-.0025" (1942) at top of skirt (at 70° F.).

**Original Bore & Piston Sizes, Replacement Pistons:**—See *Cadillac Shop Notes for sizes and markings*.

**Fitting New Pistons:**—See *Cadillac Shop Notes for micrometer and feeler gauge data*.

**Installing Pistons:**—T-slot to left, for all pistons.

**PISTON RINGS:**—4 rings, all above pin (heat-dam groove above top ring). #1 Compression (PC Type 200—upper inner edge notched), #2 Comp. (70—lower outer edge notched), #3 Oil (X-90) & #4 Oil (85) slotted types. Drain holes in oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compr. (Top)	$\frac{3}{32}$ "	.007-.023"	.0023-.0041"
Compr. (#2)	$\frac{1}{8}$ "	.007-.023"	.0013-.0026"
Oil Control	$\frac{5}{32}$ "	.007-.023"	.0013-.0026"

NOTE—End gap .007-.012" (Compr. Rings), .007-.015" (Oil Ring) for 1941 models.

**Replacem't Rings:**—.003" .005" .010" .015" .030" oversize.

**PISTON PIN:**—Diameter— $\frac{7}{8}$ ". Length— $3\frac{1}{16}$ ". Floating type. See *Cadillac Shop Notes for oversize pin data*.

**Pin Fit in Piston:**—.0001-.0003" (New 1941), .00005-.0001" (New 1942) or free hand press fit in each piston boss at 70°F. Worn limit .0006" (1941), .0007" (1942).

**Pin Fit in Rod Bushing:**—.0002-.0008" clearance (New), .0018" (Worn limit 1941), .0014" (Worn limit 1942).

**CONNECTING ROD:** Weight 37.472 ozs. (1941), 37.68 ozs. (1942). Length  $8\frac{3}{4}$ ".

**Crankpin Journal Diameter:**—2.4590-2.4595".

**Lower Bearing:**—Steel-backed, babbitt-lined type.

**Clearance:**—.0015-.0025" (new), .0045" Max. (worn).

**Sideplay:**—.008-.014".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. See *Cadillac Shop Notes for connecting rod bearing removal & installation*.

**Installing Rods:**—Numbers on rods and bearing caps on same side and toward bottom of engine.

**CRANKSHAFT:**—3 bearing with 6 counterweights.

See *Cadillac Shop Notes for main bearing servicing and rear main bearing oil seal renewal*.

**Journal Diameters:**— $2\frac{1}{2}$ " all bearings.

**Bearings:**—Removable steel-backed, babbitt-lined.

**Clearance:**—.0015-.0025" (new), .005" Max. (worn).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust:**—Taken by center (#2) bearing.

**Endplay:**—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT:**—3 bearing, non-adjustable chain drive.

See *Cadillac Special Shop Notes for Camshaft Removal and Camshaft Bushing data*.

**Journal Diameters:**—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type:**—Steel-backed, babbitt bushings.

**Clearance:**—.0015-.0033" (new), .0045" Max. (worn).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:** Link-Belt, Type 3766TWC-19 (1941), 3766TC-15 (1942). Width  $1\frac{11}{32}$ " (1941),  $1\frac{1}{8}$ " (1942), Pitch  $\frac{3}{8}$ ", Length  $23\frac{1}{4}$ " or 62 links.

NOTE—Install chain 'endless' as an assembly with sprockets. Use Pilot Tool J-836 on end of camshaft.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**ENGINE**

C NTINUED FROM PRECEDING PAGE

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	3405-.3415"	5 33/64"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0012-.0032"
Exhaust	45°	.345"	.0022-.0042"
NOTE—Stem clearance worn limit .005" (all valves). See Cadillac Shop Notes for valve servicing.			
Valve Guides:—Press in block (long step end down).			
Valve Lifters:—Wilcox-Rich 'Zero-lash' type hydraulic lifters (Mushroom type) in removable brackets. See Miscellaneous Section for complete data.			
Clearance—.0010-.0024" (new), .0035" (worn).			
Valve Springs:—Free length 2.210".			
	Spring Pressure	Spring Length	
Valve Closed	63½ lbs.	1.926"	
Valve Open	145 lbs.	1.581"	

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.  
**Valve Timing:**—See Camshaft Setting above.  
**Intake Valves:**—Open at TDC. Close 42° ALDC.  
**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.  
**Valve Timing Check:**—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer (on right side).

**LUBRICATION**

**LUBRICATION:**—Pressure type (gear type oil pump in crankcase). See Cadillac Shop Notes for oil pump data and oil pressure regulator specifications.  
**Normal Oil Pressure:**—15 lbs. idling, 25 lbs. at 30 MPH.  
**Oil Pressure Regulator:**—Opens at 30 lbs. On oil pump. Non-adjustable. Crankcase Capacity—7 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity—25 quarts.  
**Pressure Valve:**—In filler cap, opens at 9 lbs.  
**Water Pump:**—Self-adjusting packing type.  
 See Water Pump Section for complete data.  
**Thermostat (1941):** Mounted in radiator top tank, linked to radiator shutters by rod on forward side. Setting—(Std. Type) Starts to open 153-158° F., fully open 175° F. (High Reading Type—use with Heaters) Starts to open 168-173° F. Fully open 190°. See Cadillac Shop Notes for Thermostat Tests and Radiator Shutter servicing and Radiator Core removal.  
**Thermostat (1942):** New blocking type mounted in radiator inlet elbow (by-pass for re-circulation when thermostat closed). NOTE—Shutters not used on 1942 models.  
**Setting (Std.):**—Starts to open at 161° F.  
 See Cadillac Special Shop Notes for Radiator Core removal data.  
**Temperature Gauge:**—AC Electric. #1510773 (dash unit—except 60S, 62 '42), 1511175 (Dash Unit 60S, 62 '42). No. 1510774 (Engine Unit—all models).  
 See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Long Model 11CF-10½"TI (61, 62, 63, 60S), 11CF-TI (67, 75, 62 & 75 Comm'l.). Semi-centrifugal, single plate, dry disc type.  
 See Clutch Section for complete data.  
**Facings:**—Woven (spirally grooved) type, 2 required. Inside Diameter 7" (all). Outside Diameter 10½" (61, 62, 63, 60S), 11" (others). Thickness .135".  
**Pedal Adjustment:**—Pedal free travel ⅞-1⅛" (adjusting nut on connector link at clutch fork).  
**Removal:**—Remove transmission (see below), drop clutch housing pan, remove release yoke and sleeve, punch mark clutch cover, pressure plate and fly-wheel, remove 6 cover screws. NOTE—Install driven member with oil guard to rear.  
 See Cadillac Shop Notes for clutch locking pin removal (on replacement clutches) and balancing data.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift.  
 See Transmission Section for complete data.  
**Production Change:**—See Cadillac Shop Notes for Transmission Extension Housing change.  
**Transmission Control:**—Remote steering col. shift.  
 See Transmission Section for complete data.  
**Removal:**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), remove propeller shaft (disconnect front and rear universals), free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove.

**HYDRA-MATIC DRIVE**

**HYDRA-MATIC DRIVE (OPTL.):**—Own Make—Consists of fluid coupling & automatic transmission.  
 See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics 3C. Needle bearing. NOTE—One piece propeller shaft used. Slip joint at rear of transmission ahead of front universal.  
 See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. Hypoid gear, semi-floating type with Hotchkiss drive. NOTE—Manufacturer recommends Carrier Assembly be serviced by factory.  
 See Rear Axle Section for complete data.  
**Ratio:**—3.77-1 (Std. 61, 62, 63, 60S; Optl. 67, 75). 3.36-1 Economy (Optl. 61, 62, 63, 60S). 4.27-1 (Std. 67, 75, 62 & 75 Comm'l.). 4.58-1 (75 Special Bus).

NOTE—Ratio identified by number stamped on bottom of differential case beneath pinion shaft as follows: 3.77-1 (no mark), 3.36-1 ("6"), 4.27-1 ("4").  
**Backlash:**—.004-.010". Screw adjustment.

**Removal:**—Disconnect rear universal (do not disengage spline joint at transmission), remove axle shafts (see below) and carrier mounting bolt nuts.

**Axle Shaft Removal:**—Remove wheel, dust cap and axle shaft nut. Pull hub and drum, disconnect brake line, remove brake backing plate. Pull shaft and bearing assembly (use Tool J-838).

**Wheel Bearing Adjustment:**—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. FRONT 1946-G, H (all). REAR 1754-N, P (61, 62, 63, 60S), 2008-C, D (67), 2007-N, P (75), 1751-V, W (62 & 75 Comm'l.). Double acting, opposed-piston, hydraulic types.  
 See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.  
 See Front Suspension Section for complete data.  
**NOTE:**—Specifications below correct with car at curb weight (car unloaded with full gas tank).  
**Kingpin Inclination:**—5°51' crosswise (for 0° camber).  
**Caster:**—Neg. 1¾° to Neg. 2¾°. Equal within ½°.  
**Camber:**—Neg. ¾° to Pos. ¾°. Equal within ½°.  
**Toe In:**—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.  
**Steering Geometry (Toe-out on turns):**—Outer wheel turned 20°. Inner wheel as follows:  
 61, 62, 63, 60S 67, 75, 62 & 75 Comm'l.  
 Left turn.....25°25'.....24°7'  
 Right turn.....24°42'.....23°6'

**STEERING GEAR**

**STEERING:**—Steering Gear—Saginaw Ball Bearing Worm-and-Nut (Recirculating Ball) type.  
 See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.  
 See Brake Section for complete data.  
**Drums:**—Centrifuse. Diameter 11.995-12.005".  
**Lining:**—Molded. Length 11 17/32" (primary), 12 31/32" (secondary). Width 2¼" (front), 2" (rear 61, 62, 63, 60S), 2½" (rear Others), Thickness 3/16".  
**Clearance:**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top:** Vacuum Power (1941), Electric Type (1942).  
 See Miscellaneous Section for complete data.

►SEE 1946 WIRE HARNESS CHANGE NOTE (UNDER LIGHTING) FOR WIRE COLORS  
1946-47 CADILLAC V8

**DISTRIBUTOR: Delco-Remy No. 1110807.** Full automatic advance type with auxiliary vacuum spark control and manual adjustment ("octane selector").  
**Breaker Gap**—.015". Limits .0125-.0175".  
**Cam Angle**—31° closed (with .015" gap).  
**Breaker Arm Spring Tension**—19-23 ozs.  
**Rotation**—Clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	500	1	1000
12	2000	24	4000

**Manual Adjustment**—Permits 10° advance or retard from center position. See Ignition Timing (below).

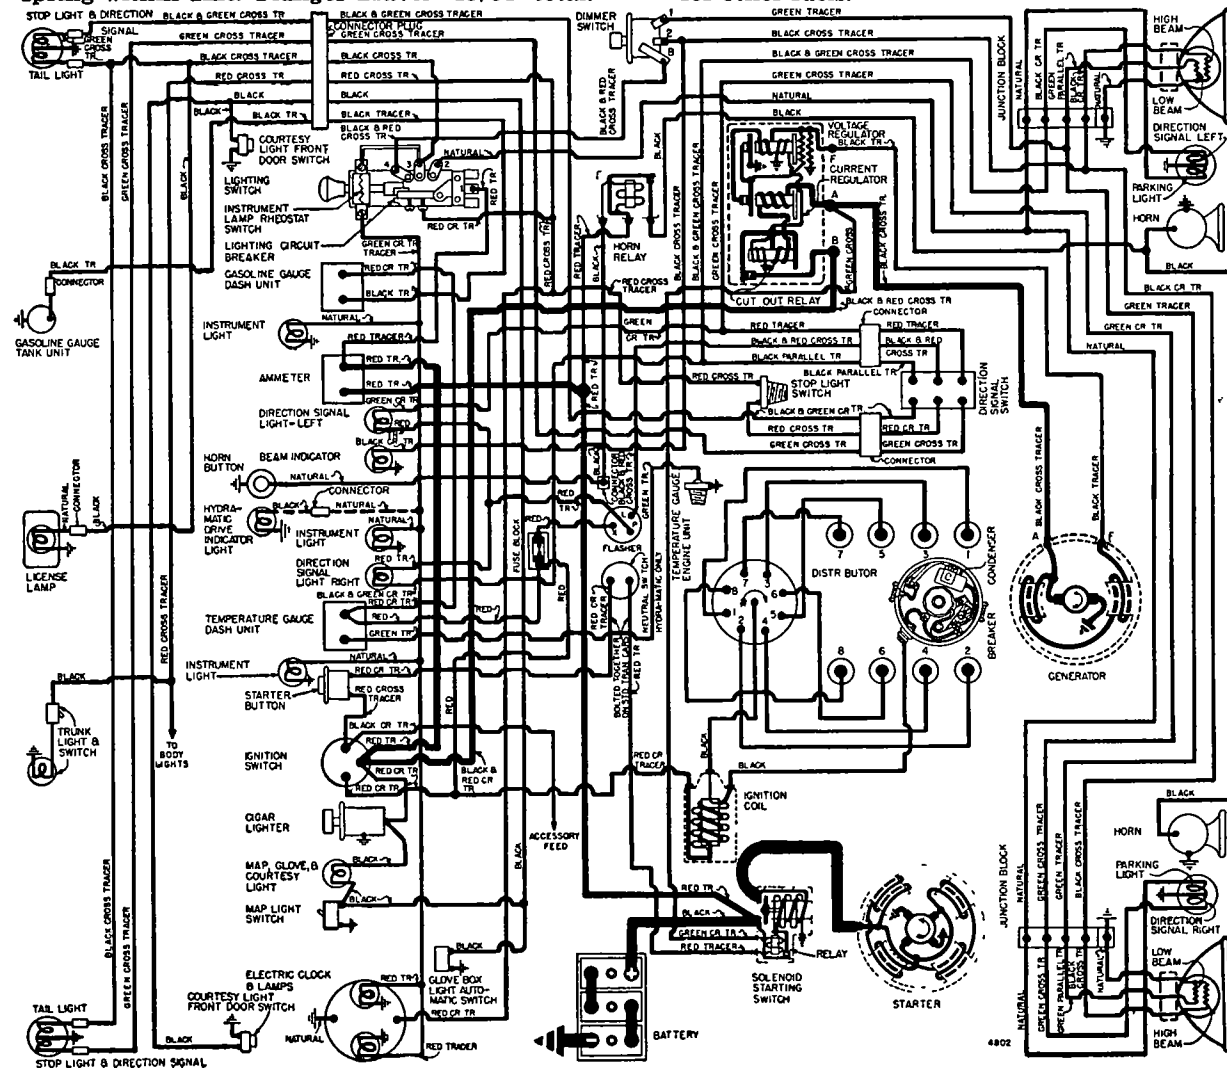

**Vacuum Spark Control: Delco-Remy No. 1116030.** Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—13/64" total.

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	5.5-7.5"	
9°	18°	15-18"	

**Removal:**—To remove distributor, disconnect vacuum line, remove 2 hold-down screws in advance arm. **Installation Note**—Turn crankshaft to top dead center position for No. 1 cylinder ("C. 1/6" timing disc mark in line with pointer on chain case cover). Set distributor loosely in support, mesh distributor driven gear with bronze idler gear so that distributor rotor is at No. 1 plug wire in cap. **CAUTION**—See that oil pump drive shaft properly lined up (to avoid damaging pump).

## IGNITION TIMING

**Flywheel Degrees** **Piston Position**  
**Std. Setting** ..... 5° BTDC ..... .0114" BTDC.  
For 80 octane fuel. See Manual Adjustment (below) for other fuels.

1948 CADILLAC V8

**Timing Mark**—"IG/A" on timing disc behind crankshaft pulley lined up with pointer on chain case.

**Timing (With Synchroscope)**—Recommended method. Disconnect vacuum line at distributor (to avoid damage to unit), clip synchroscope lead to #1 spark plug, idle engine and direct synchroscope light on timing disc behind crankshaft pulley at front of engine. Loosen advance arm hold-down screw, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until "IG/A" mark on timing disc (5° before top dead center mark "C.1/6" lines up with pointer on chain case cover, tighten clamp bolt, reconnect vacuum line (hold connection with wrench while tightening). See Manual Adjustment (below).

**Timing (Without Synchroscope)**—Disconnect vacuum line at distributor (to avoid damaging vacuum unit). Turn engine over to firing position for #1 piston (front cylinder, left bank) with "IG/A" mark (5° before top dead center mark "C.1/6" on timing disc behind crankshaft pulley lined up with pointer on chain case cover. Adjust distributor as directed above until contacts just open.

**Manual Adjustment**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time. **CAUTION**—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots or lean carburetor setting before changing adjustment to correct pinging.

## CARBURETOR

**Year** **Carter WCD** **Stromberg**  
1946-47 ..... 595S . AAV-26 Code 205-14, A, B  
1948 ..... 595S, SA AAV-26 Code 205-14B  
1 1/4" dual (double barrel) downdraft types with automatic choke.

**Casting No. (Carter)**—No. 456 on face of flange.

**Code No. (Stromberg)**—Stamped either on the body or on a metal tag attached to body.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Hydra-Matic Throttle Linkage Adjustment:** See Cadillac Hydra-Matic Drive article in Transmission Section.

**Metering Jets & Rods**—Refer to Carburetor Index for Carter & Stromberg Downdraft Carb. Jet Tables.

**Fast Idle:** Carter Dual (WCD) Carburetor type or Stromberg Type (for AAV-26 Carburetor).

See Carburetion Equipment Section for data.

**Setting (Carter)**—Hold choke valve tightly closed, adjust fast idle screw (on opposite end of throttle shaft from regular throttle stop screw) for .018" throttle opening (use Gauge T109-44).

**Setting (Stromberg)** Hold throttle stop screw against high lobe of fast idle cam, move choke valve toward closed position as far as possible, check choke valve opening. Adjust by bending fast idle connector rod so that choke valve opening is .098" (#40 drill rod).

**Automatic Choke:** Carter Climatic Control (Dual carburetor) or Stromberg Type (AAV-26 Carburetor).

See Carburetion Equipment Section for data.

## C NTINUED FROM PRECEDING PAGE

**Setting (Carter)**—Reference mark on thermostat coil housing centered on scale on choke housing.

**Setting (Stromberg)**—'V' mark on thermostat cover in line with reference mark on housing.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1542260 heavy duty oil-bath type. Use Replacement Filter Element Assembly #1542261.

**Servicing**—Drain, clean, and refill with 1 pint SAE No. 50 (Summer), No. 40 (Winter) engine oil at 2000 mile intervals. NOTE—Clean filter element in oil filler cap when crankcase drained.

**Fuel Pump**: AC Type AX. No. 1523575, 1537088, or 1539089. Fuel & Vacuum type.

**Replacement Pump**—AC No. 575.

**Pressure**—4¾ lbs. (3½-5) maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge**: AC, Electric type.

**Dash Unit** ('46-47 Series 60S, 62)—AC No. 1516372.

**Dash Unit** ('46-47 Series 61, 75)—AC No. 1515368.

**Dash Unit** (1948 All Series)—AC No. 1516971.

**Tank Unit**—AC 1516269 (60S, 61, 62), 1516155 (75, 76).

See Carburetion Equipment Section for data.

## BATTERY

## STANDARD

Delco 17K3 or 4. 6 volt, 17 plate, 115 Ampere Hour Capacity (20 hour rate).

► **CAUTION**—Battery is reversed in carrier from previous models and NEGATIVE TERMINAL is now grounded. **Starting Capacity**—137 amperes for 20 minutes. **Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage, 4.4 volts.

**Grounded Terminal**—Negative (—) to frame.

**Engine Ground**—Strap connector from right front engine mounting bracket to frame bracket.

**Location**—In engine compartment on right side.

**Dimensions** Length 10¾". Width 7". Height 8 11/16".

## COMMERCIAL MODELS

Delco 19Q3 or 4. 6 volt, 19 plate, 125 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—145 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.5 volts.

**Dimensions & Grounded Terminal**—Same as above.

## STARTER

Delco-Remy Model 1107931. Armature No. 820158.

► **NOTE**—On cars with Hydra-Matic Drive, starter operative only with Selector Lever in neutral (starter solenoid relay circuit controlled by Hydra-Matic Drive Neutral Safety Switch).

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.67	65
16 "	Lock	3.0	600

**Removal**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter out.

**Starting Switch**—Delco-Remy Solenoid Switch No. 1118102. Mounted on starter and controlled by Push-button Switch No. 1998009 on instrument panel and Neutral Safety Switch 1997766 (on Hydra-Matic). See Electrical Equipment Section for complete data.

## GENERATOR

Delco-Remy Model 1102693. Armature No. 1879002. Two brush type with voltage and current regulation.

► **NOTE**—Same generator as used on previous cars but polarity is reversed for Negative Ground.

► **Pulley Note to Increase Charging Rate**—Use No. 1882988 pulley (O. D. of front flange 3 1/16"—std. pulley No. 1878203 O. D. 3 17/32").

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—34-36 amperes at 8.0 volts, 27 MPH (current regulator setting—with load or discharged battery). Actual charging rate controlled by voltage regulator and dependent on battery condition.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal**—Generator flange mounted between cylinder banks at front of engine and belt driven in tandem with water pump (separate drive belt for fan). To remove, take out flange mounting bolts.

**Belt Adjustment**—Loosen generator mounting bolts, raise generator (pivots on left bolt, right bolt hole slotted) until belt deflection is ¾-7/8" when pushing belt inward midway between generator and crankshaft pulleys.

► **CAUTION**—Belts are new heat-and-oil resistant synthetic rubber type (must be set to exact specifications).

**Fan Belt**—Adjust to same specifications as Generator Belt by changing fan bracket position.

## REGULATOR

Delco-Remy Model No. 1118242. Single Core Type. Vibrating type voltage and current regulator.

► **CAUTION**—This regulator used with Negative Battery Ground and generators used with it must be Polarized for this same polarity.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot, 800 gen. RPM.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Checking & Adjustment**—See Electrical Equip. Section.

## Current Regulator

**Setting**—34-36 amperes hot (operating temp.).

**Air Gap**—.080" (check same as Voltage Regulator).

**Checking & Adjustment**—See Electrical Equip. Section.

## LIGHTING

► **1946 WIRE HARNESS PRODUCTION CHANGE**: Two types of harness with different wire colors used as follows:

**1. Braided Loom Assembly**—Individual wires in this type harness are marked with colored tracers as indicated on wiring diagram.

**2. Taped Assembly**—Individual wires in this type harness are any color and do not follow color code shown in wiring diagram. Ends of each wire are stained with individual colors to provide identification. These stained-end wires can be related to the color code shown in the wiring diagram as follows:

Stained End	Tracer Color
(Taped Wiring Harness)	(Braided Wiring Harness)
Black	Black or Natural, Black Tracer
Blue	Natural, Black Cross Tracer

**Headlamps**: Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—In upper left face of speedometer dial ('46-47), in center of instr. panel (1948).

Lighted when Country (upper) Beam in use.

**Direction Signal**: See Electrical Equipment Section.

**Dir. Signal Indicator** ('46-47)—In upper right face of speedometer dial. One indicator only.

**Dir. Signal Indicators** (1948)—Left and Right Turn Indicators located below each end of speedometer dial.

## Switches

**Lighting** ('46-47)—Delco-Remy No. 1995023.

**Lighting** (1948)—Delco-Remy No. 1995031.

**Instrument**—Part of Lighting Switch. Rheostat operated by turning Lighting Switch Knob.

**Beam Selector**—Delco-Remy No. 1997008.

**Direction Signal** ('46-47)—Delco-Remy No. 1995523 (1995524 for cars with Hydra-Matic Drive).

**Direction Signal** (1948)—Delco-Remy No. 1995531.

**Stop Light**—Cadillac No. 1328118.

## 1946-47—Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Park & Front Dir. Signal	21-3	1154
Rear Direction Signal①	21-3	1154

## MISC. ELECTRICAL

**FUSES:** Direction Signal—9 ampere behind panel.  
Automatic Heating System—6 ampere (60S, 61, 62), 9 ampere (75). On heater switch.  
Ventilating Defroster Heater—20 ampere. In blower lead.

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

**HORNS:** Delco-Remy No. 1999537 (Low Note, right horn), No. 1999538 (High Note, left horn). Vibrator type, blended tone, twin horns operated by relay.  
Type Current (at 6 volts) Air Gap  
1999537 (Low Note).....19-21 amperes.....044-.049"  
1999538 (High Note).....18-20 amperes.....034-.039"

**Horn Relay:**—Delco-Remy Model 1116775.  
Contact Gap—.025". Air Gap—.015" (closed).  
Contacts Close—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:** Own, 8 cylinder, 90° Vee L head type. Upper crankcase and cylinder blocks cast Enbloc. Bore—3½". Stroke—4½".  
Displacement—346 cu. ins. Rated HP—39.20.  
Developed Horsepower—150 at 3400 RPM.  
Compression Ratio—7.25-1 Std. cast-iron head.  
Compression & Vacuum Reading—See Tune-up data.

**ENGINE REMOVAL:** See Cadillac Shop Notes.

**TIGHTENING TORQUES:** See Cadillac Shop Notes.

**CYLINDER HEAD:** Tightening Torque—See Cadillac Shop Notes.

**PISTONS:** Aluminum alloy, three-ring, cam ground, T-slot type with Anodized finish.  
NOTE—Rings are mounted lower than on previous type pistons and piston has heat-dam groove above top ring.  
Weight—1.197 lbs. (stripped), 1.593 lbs. (complete).  
Length—4½".  
Removal—Pistons and rods remove from above.  
Clearance—.0023-.0025".

**Original Piston & Cylinder Bore Sizes:** See Cadillac Shop Notes.

**Replacement Pistons:** See Cadillac Shop Notes.

**Fitting New Pistons:** See Cadillac Shop Notes.

**Installing Pistons:** T-slot to left on all pistons.

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	5/64"	.007-.023"	.0022-.0035"
Oil Contr. (#3)	3/16"	.007-.023"	.0013-.0026"

**Installing Rings:** Notched inner edge of both compression rings must be upward.

**Replacement Rings:** Furnished Std. Size and .010", .020", .030" Oversize.

**PISTON PIN:** Diameter ⅞". Length 3 1/16".

Floating type with locking ring at each end. Pin hole in piston bosses have bearingized finish.

**Pin Fit in Piston:**—.00005-.0001" (new), .0007" (worn) or free hand-press fit at 70° F. in each boss.

**Pin Fit in Rod Bushing:**—.0002-.0008" clearance (new), .0014" (worn limit).

**Replacement Pins:** Std., .001", .003" Oversize. **Piston Pin Fitting,** see Cadillac Shop Notes.

**CONNECTING ROD:** Length 8¾". Weight 2.355 lbs. Crankpin Journal Diameters—2.460".

**Lower Bearing:**—Removable, steel-backed, Morraine Durex 100A (copper nickel matrix with babbitt overlay) lined type. No shims.

**Clearance:**—.0008-.0025" (new), .005" max. (worn).  
**Sideplay:**—.008-.014".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Refer to Cadillac Shop Notes for Rod Bearing Removal & Installation, and use of Plastigage for checking bearing clearance.

**Installing Rods:**—Numbers on rods and bearing caps on same side and toward bottom of engine.

**CRANKSHAFT:** 3 bearing with 6 counterweights. See Cadillac Shop Notes for servicing of main bearings and rear main bearing oil seal renewal.

**Journal Diameters:**—2.4990-2.4995" (all bearings).  
**Bearings:**—Removable, steel-backed, Morraine Durex "300" (copper nickel matrix with babbitt overlay) lined type. No shims.

**Clearance:**—.0008-.0025" (new), .005" max. (worn).  
**NOTE:**—Use Plastigage to check bearing clearance as described in Cadillac Shop Notes.

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust:**—Taken by center (#2) bearing.

**Endplay:**—.001-.005" (new), .010" Max. (worn).

**CAMSHAFT:** 3 bearing. Non-adjustable chain drive. **NOTE:**—Camshaft is cast iron. Use care to prevent misalignment when removing & installing shaft. Refer to Cadillac Shop Notes for Camshaft Removal and Camshaft Bushing servicing data.

**Journal Diameters:**—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".

**Bearing Type:**—Steel-backed, babbitt bushings.  
**Clearance:**—.0015-.0033" (new), .0045" Max. (worn).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

**Timing Chain:**—Link-Belt Type 3766-TC-15. Width 1½". Pitch ¾". Length 23¼" or 62 links. **NOTE:**—Install chain 'endless' as an assembly with sprockets. Use Pilot Tool J-836 on end of camshaft.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	3405-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0023"①
Exhaust	45°	.345"	.0025"②

①—.0005-.0025" (new), .005" (worn limit).

②—.0015-.0035" (new), .005" (worn limit).

See Cadillac Shop Notes for Valve & Lifter servicing.

**Valve Guides:**—Press in block (long step end down). Guides have "Ferrox" finish for longer service.

**NOTE:**—Counterbore at top of guides is 1/16" larger in diameter and 3/16" deeper than on 1942 cars.

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters (Mushroom type) in removable brackets.

►1948 Note—Two types of valve lifters are used:

**Body & Plunger Type.** Same as used on earlier models. Can be identified by exposed plunger spring at top.

**Unit Type.** Serviced as complete unit only. No spring used at upper end.

See Miscellaneous Section for complete data.

**Clearance:**—.0010-.0024" (new), .0035" (worn).

**Valve Springs:**—Free length 2.210".

	Spring Pressure	Spring Length
Valve Closed	60-67 lbs.	1 59/64"
Valve Open	139.5-150.5 lbs.	1 37/64"

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Cadillac Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 42° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 10° ATDC.

**Valve Timing Check:**—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer (on right side).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, timing chain, and hydraulic valve lifters. Oil pump located at rear of engine in oil pan.

►NOTE—An "Inertia type" fitting is located in the oil line to hydraulic valve lifters (oil forced to make 90° turn before entering lifter line, foreign particles in oil tend to be carried past this line).

**Crankcase Capacity:**—7 quarts.

**Normal Oil Pressure:**—25 lbs. at 30 MPH. (15 lbs. idling).

**Oil Pressure Regulator:**—Located on oil pump. Opens at 30 lbs. Not adjustable.

See Cadillac Shop Notes for Oil Regulator data.

**Oil Pump:** See Cadillac Shop Notes for Specifications.

**Crankcase Ventilation:** Filter in oil filler (inlet) cap. Exhausts through openings in valve cover into conduit leading to cored opening in rear of block and out through outlet pipe in right rear corner of oil pan.

**Servicing:**—Wash and re-oil filter in filler cap every 2000 miles (oil change period).

**Oil Gauge** ('46-47 Series 60S, 62): AC No. 1506290.

('46-47 Series 61, 75)—AC No. 1505912.

(1948 All Series)—AC No. 1507086.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap. Re-circulation (with thermostat closed) provided by by-pass from left cylinder bank outlet to water pump inlet.

**Capacity:**—25 quarts (without heater).  
27 quarts with Cadillac Automatic Heating System.

26 quarts with Cadillac Ventilating Defroster Heater.

**Pressure Cap:**—AC No. 850558 (Radiator Filler Cap). Opens at 8¼-9¼ lbs.

**NOTE:**—15 lb. cap available for extreme service.

**Water Pump:** Self-adjusting packing type.

See Water Pump Section for complete data.

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PAGE

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat** ('46-47): Cadillac No. 1444874. Dole.  
**1948 Type**—Cadillac No. 1453784 (std.), No. 1454715 (high opening). Fulton Sylphon. Blocking type in radiator inlet elbow (accessible by removing elbow).  
**Setting (standard)**—Starts to open 150-155°F. ①  
**Setting (High Opening)**—Starts to open 165-170°F. ①  
 ①—When testing at atmospheric pressure.

**Temperature Gauge**: AC. Electric Thermo-gauge.  
**Dash Unit** ('46-47 Series 60S, 62)—AC No. 1511732.  
**Dash Unit** ('46-47 Series 61, 75)—AC No. 1511737.  
**Dash Unit** (1948 All Series)—AC No. 1511896.  
**Engine Unit**—AC No. 1511734 ('46-47), 1512015 ('48).  
 See *Miscellaneous Section* for complete data.

**CLUTCH**

**Long 11CF-10½TI** (60S, 61, 62) **11CF-TI** (75, 76).  
 Semi-centrifugal, single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven type. I.D. 7" (all models). O.D. 10½" (60S, 61, 62), 11" (75, 76). Thickness .137" (all).

**Pedal Adjustment**—Pedal free travel ⅞-1½" (adjusting nut on connector link at clutch fork).

**Removal**—Remove transmission (see below), drop clutch housing pan, remove release yoke and sleeve, punch mark clutch cover, pressure plate and fly-wheel, remove 6 cover screws. NOTE—Install driven member with oil guard to rear.

Refer to *Cadillac Shop Notes* for clutch locking pin removal (on replacement clutches) and balancing data.

**TRANSMISSION****STANDARD**

**Own Make**. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote (steering column mounted) control.

See *Transmission Section* for complete data.

**Transmission Control**: Remote (steering column mounted) type.

See *Transmission Section* for complete data.

**Removal**—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), disconnect rear universal joint and remove propeller shaft, free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove.

**HYDRA-MATIC DRIVE****PTIONAL EQUIPMENT**

**Own Make**. Consists of Fluid Coupling and automatic self-shifting Four-Speed Transmission. Optional on all models.

See *Transmission Section* for complete data.

**Lubrication**—Check fluid level in transmission every

month or every 1000 miles. Drain and refill after first 6000 miles and every 12000 miles thereafter. Use only "Cadillac Hydra-Matic Fluid."

**Capacity**—Approximately 12½ qts. (refill).

**Checking Fluid Level**—Clean all sand, lint, and dirt away from sheet metal cover in floor under right front corner of front compt. rug. Run engine for approx. 1½ minutes at speed equivalent to 20 MPH, with selector lever in "Neutral". Remove sheet metal cover from floor for access to dip stick, reduce engine speed to slow idle, measure level with dip stick, add fluid until level is at "FULL" mark with engine idling.

► **CAUTION**—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.

**Linkage Adjustment**—See *Hydra-Matic Drive* article in *Transmission Section*.

**Removal**: See *Hydra-Matic Drive* article in *Transmission Section*.

**UNIVERSALS**

**Mechanics Model 3-C**. Needle bearing type. Two used (three used on Commercial Cars).  
 See *Universals Section* for complete data.

**Propeller Shaft** (Pass. Cars): One shaft used of one-piece design with slip joint formed on rear of transmission mainshaft in extension housing.

(Commercial Cars)—Two shafts used with center bearing support at rear of front shaft. For Removal and Installation of Commercial Car Propeller Shafts, see *Cadillac Shop Notes*.

**REAR AXLE**

**Own Make**. Hypoid Gear, Semi-floating type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**NOTE**—Manufacturer recommends that Carrier Assembly be serviced by the factory (see Carrier Assembly Removal below).

**Ratio**—Hydra-Matic Drive ratio is available as special "economy ratio" on cars with std. synchro-mesh transmission.

**Synchro-mesh Trans. Hydra-Matic Drive**  
 60S, 61, 62 ..... 3.77-1 (no mark) ..... 3.36-1 (6)  
 75 & Comm'l. .... 4.27-1 (4) ..... 3.77-1 (7)

**NOTE**—Ratio identification mark (following ratios in table above) stamped on bottom of differential case beneath center of pinion shaft.

**Backlash**—.003-.010". Screw adjustment.

**Removal**—Disconnect rear universal (do not disengage spline joint at transmission), remove axle shafts (see below) and carrier mounting bolt nuts.

**Axle Shaft Removal**—Remove hub cap, wheel, and axle shaft nut. Pull hub and drum, disconnect brake line, remove brake backing plate. Pull shaft and bearing assembly (Tool J-838). NOTE—Install new oil seal & bleed brake line which was disconnected  
**Wheel Bearing Adjustment**—None.

► **CAUTION**—Wheel bearings are sealed (permanently lubricated) and should be checked when axle shafts are out. Replace bearings that spin freely indicating lack of grease.

**SHOCK ABSORBERS**

**Delco**. Double acting, opposed piston, hydraulic types (front & rear). Model Nos. as follows:

	Front	Rear
60S, 61, 62	1946-G,H	1754-N,P
75	1946-G,H	2007-N,P
Commercial (75 & 76)	1946-G,H	1751-V,W

See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension**:—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**NOTE**—Specifications below correct with car at curb weight (car unloaded with full gas tank).

**Kingpin Inclination**—5°51' crosswise (0° Camber).

**Caster** ('46-47)—Neg. 1¾° to Neg. 2¾°.

**Caster** (1948)—Neg. ½° to Pos. ½°. Equal within ½°.

**Camber**—Neg. ⅜° to Pos. ⅜°. Equal within ½°.

**Toe In**—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

**Steering Geometry** (Toe-out on turns)—Outer wheel turned 20°. Inner wheel as follows:

	Left Turn	Right Turn
60S, 61, 62	25°25'	24°42'
75 & Comm'l. (75 & 76)	24°7'	23°6'

**STEERING GEAR**

**Saginaw**. Ball bearing Worm-and-Nut type (re-circulating ball type).

See *Steering Gear Section* for complete data.

**BRAKES**

**Service**: Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Centrifuse. Diameter 12" (11.995-12.005").

**NOTE**—Drum out-of-round limit is .007" and remachining limit (to true up drums) is .030" max.

**Lining**—Molded type (all models).

	60S, 61, 62	75	Commercial
Width (Front)	2¼"	2¼"	2¼"
Width (Rear)	2"	2½"	2½"
Thickness	3/16"	3/16"	3/16"
Length (Fwd. Shoe)	11 17/32"	11 17/32"	12 31/32"
Length (Rev. Shoe)	12 31/32"	12 31/32"	12 31/32"
Fwd.—Forward or Primary (front) shoe.			
Rev.—Reverse or Secondary (rear) shoe.			
Clearance—.007-.010" at each end of each shoe or .015" at both ends of secondary shoe with primary shoe forced out against drum.			

**Braking Power**—55.8% Front, 44.2% Rear (60S, 61, 62, 75); 50% Front & Rear (Commercial 75 & 76).

**Hand (Parking) Brake**: See *Service Brakes* above.

**MISC. MECHANICAL**

**Power Operated Convertible Tops, Windows, & Front Seat**: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**HOOD ASSEMBLY****1940 MODELS**

**HOOD LOCK & HOOD ADJUSTMENT:** Hood is Alligator type with hood control knob located under left side of instrument panel. To open hood, pull out on control knob (hood will raise slightly), reach under front of hood opening, press up on safety catch tab, lift hood up.

**Hood Alignment (At Cowl):**—Raise hood, remove side panels (see below), release hood hinge springs, close and lock hood. Loosen hood hinge to cowl bolts, shift hood to secure uniform spacing between cowl and rear edge of hood, tighten hinge bolts and assemble springs, raise hood and install side panels. To center hood, remove counterbalancing springs, loosen hinge mounting screws and shift hood sideways.

**(At Radiator Grille):**—If distance between hood and grille greater at center than at sides, raise hood and place two thin pieces of wood between side panels and hood to support hood, place two pieces of wood between two bottom louvres of grille (one on each side of center molding—pieces must fit snugly between louvres), place short jack between lower radiator splash guard and frame front cross-member (with short piece of wood between jack and splash guard). Pump jack slowly until hood distance at center slightly less than at sides (will even up when jack released), release jack and check alignment. To center hood at front, loosen radiator support bolts at front cross-member and adjust radiator brace rods.

**Hood Lock Adjustment:**—Raise hood, loosen lock-screws on control cable adjusting sleeve (in slot on baffle at top of grille), push dash control knob all the way in, see that latch plate in locked position, move adjusting sleeve until it contacts lever on latch, then tighten lock screw securely.

**Side Panel Removal:**—Raise hood, remove side panel attaching screws (on upper edge, screws located in bracket at rear end, at radiator shell, and in edge of grille—grille upper baffle can be removed, if necessary, for access to these screws), lift panel out.

**Radiator Grille Removal:**—Raise hood fully, remove bolts attaching hood latch lower plate to grille, remove baffle. Reach through opening between radiator and grille, remove screws attaching grille to fenders. Remove screws on each side attaching grille to hood front side panels, remove grille. **NOTE**—Lower baffle is riveted to grille. If baffle being replaced, bolts may be used instead of rivets.

**1941 MODELS**

**HOOD LOCK & HOOD ADJUSTMENT:** Alligator type hood with control knob under left side of instrument panel. To open hood, pull out on control knob (hood will raise slightly), reach under front of hood opening, press up on safety catch, lift hood.

**Hood Lock Adjustment:**—Hood latching lever located beneath grille plate. To adjust, raise hood, loosen lock screw on control cable adjusting sleeve (in hole in grille plate), push dash control knob all the way in, see that latch plate in locked position, move sleeve to contact latch lever, tighten lock screw.

**Hood Alignment (at Cowl):**—Cowl panel and hinge bracket holes slotted for hood adjustment. To adjust, raise hood, release hood springs, loosen front and rear hinge bracket-to-cowl attaching bolts at each side, close hood. Position hood for proper alignment

(while closed). Hold rear end of hood firmly on cowl and tighten rear hinge bracket bolt at each side (inside of cowl). Raise hood, tighten front hinge bracket-to-cowl bracket bolt at each side, connect hinge springs.

**(At Radiator Grille):**—Clearance between hood nose and top of radiator grille should be 1/16". To adjust, turn hood locking bolt in or out of retainer for correct clearance, tighten lock nut.

**1942-48 PASSENGER CARS**

**HOOD LOCK & HOOD ADJUSTMENT:** Alligator type hood with control knob under left side of instrument panel. To open hood, pull out on control knob (hood will raise slightly), reach under front end of hood, press up on safety catch, lift hood up.

**Hood Lock Adjustment:**—Correct hood locking action determined by positioning of lock plate on top baffle. Lock plate secured to baffle by four screws (screw holes in plate slotted and allow fore-and-aft movement). To adjust, loosen four screws in plate, lower hood (do not close hood) just enough to allow lock bolt on hood to position lock plate (lock bolt should be centered in latch opening), raise hood, and without disturbing position of plate, tighten plate screws. Adjust lock bolt under nose of hood for proper closing tension and hood fit with radiator grille. There should be 1/16" spacing between hood and grille. **CAUTION**—Lock plate adjustment must be made whenever plate removed or screws loosened. If screws tightened with plate in extreme forward position, lock bolt on hood will force latch back and catch under plate (hood will lock but will not release).

**Hood Alignment:**—Proper positioning of hood with cowl (hood panels should be seated firmly on cowl), front doors, and along fenders can be obtained by means of slotted holes at each hinge (upper and rear holes slotted in cowl, lower front hole slotted in hinge plate). Fit of hood nose with radiator grille can be secured by means of lock bolt under nose of hood. To adjust, raise hood, disconnect hood hinge spring at lower end on each side (**CAUTION**—Use care, springs under heavy tension), loosen bolts at each hinge plate, remove lock bolt, close hood, loosen 2 cowl-to-hinge plate bolts from inside car (in recess above cowl kick pads) on each side. Shift hood (with front doors closed) until proper fit obtained. Then tighten 2 bolts at each side inside car (hood should be held down snugly on cowl while these bolts are tightened), open hood, tighten front lower bolt at each hinge plate on cowl, connect lower end of each spring to cowl bracket. Install hood lock bolt and adjust as necessary.

**Hood Clearances**—Maintain following clearances when adjusting hood to eliminate noise and present good appearance:

5/32" minimum, 7/32" maximum, between rear edge of hood and cowl hood ledge and front edge of doors.

1/16" between underside of hood and top of grille across front.

1/8" between underside of hood and top of fender.

**Hood Hinge Spring Bracket Correction to prevent leaks in Front Comp.:** On early 1942 cars, drill a 1/4" hole at lowest point in bottom of each hood hinge bracket to prevent water accumulation which may run into front compartment. **NOTE**—This hole provided in production on later cars.

**FRONT END SHEET METAL****1939-40 MODELS**

**FRONT END REMOVAL:** Front Fenders, Radiator, & Grille may be removed as a unit for work on front of engine or for Independent Suspension Unit removal as follows: Remove hood ('39), raise hood, loosen lock screw at hood lock control cable adjusting sleeve and disconnect cable ('40). Drain radiator, disconnect upper and lower hose connections. Remove radiator brace rod bolts at top of radiator support. Disconnect headlamp wires at terminal block at each side, remove wiring harness from clip at the radiator. Take out the fender bolts at body and running boards. Remove 2 radiator support bolt nuts (at frame cross member). Attach chain hoist under outside flange of radiator and raise assembly to clear chassis. Align hood when assembly re-installed.

**1941 MODELS**

**FRONT END REMOVAL:** Front Fenders, Radiator, & Grille may be removed as a unit for work on front of engine or for Independent Suspension Unit removal as follows: Raise hood, loosen lock screw at hood lock control cable adjusting sleeve and disconnect cable. Drain radiator and disconnect upper and lower hose connections. Remove bolts attaching radiator brace rod to top of radiator support. Disconnect headlamp wires from junction block on each side, remove wiring harness from clip at radiator. Remove bolts attaching fenders to body, two fender skirt brace bolts at frame, nuts from 2 bolts attaching radiator support to front cross-member. From under fenders, remove sheet metal screws from lower grille panel reinforcing strips across openings in panel under bumper brackets. Remove front end sheet metal assembly from car.

**Radiator Grille Removal:**—Raise hood, disconnect hood latch control cable at latch and at clip to rear of latch, remove one grille-to-fender screw at each side on top, working through opening between grille and radiator core remove one bolt and three nuts at each side and center baffle-to-lower baffle bolt, remove grille molding bolt nuts along bottom and at each side (below fenders and lower grille panel). Pull grille assembly off car.

**Lower Baffle & Lower Grille Panel Removal:**—Remove Radiator Grille (see above). Working from beneath fenders (all bolts and screws under fenders), remove two lower panel-to-fender return flange bolts, two sheet metal screws attaching reinforcing strips across bottom of bumper bracket openings in panel, three lower baffle-to-side baffle sheet metal screws. Remove baffle. Lower baffle and grille panel riveted together and must be removed and installed as an assembly. Use 3/16" x 1/2" stove bolts when reassembling lower baffle and lower grille panel.

**1942-48 PASSENGER CARS**

**FRONT END REMOVAL:** Pass. Cars. Front Fenders, Radiator, and Grille may be removed as a unit for work on front of engine or for Independent Suspension Unit removal as follows: Remove front bumper, hood (disconnect 2 hinge arms from hood panel at each side). Disconnect light and horn wires from junction, hood latch cable and conduit at latch and left fender. Drain radiator and disconnect hoses. Then proceed as follows on each side of car: Remove frame bolt from rear lower flange of side baffle, 2 fender-to-hinge spring bracket bolts, 1 fender-to-

CONTINUED ON NEXT PAGE

## FRONT END SHEET METAL

CONTINUED FROM PRECEDIN PAGE

cowl bracket bolt, 1 fender skirt-to-frame brace bolt at fender, 3 fender rear baffle-to-fender bolts (under fender), 1 body sill moulding bolt at front (free front half of moulding from rocker panel), 1 fender-to-step plate bolt (at outer front end of step plate). Remove 2 radiator support-to-front cross-member bolts. Free wiring harness from clips on right fender, radiator core and support, and from left fender and pull harness back toward cowl on left side. Remove Front End Assembly (spring rear ends of fenders out to provide clearance of fender skirt brackets with fender rear baffles).

**Radiator Grille Removal (1942-46):** Raise hood and disconnect latch cable at swivel, loosen clamp on lock plate, pull cable back through grommet in top baffle, remove right front lock plate screw (holds upper end of grille baffle), remove top baffle (3 screws on each side, 4 across the front). Remove the following from in back of side baffle under each fender: nut from bolt staked in grille, lower stud nut from parking lamp, bolt attaching side baffle, fender return flange, and angle bracket. Remove the following from in back of grille: nut from bolt staked in grille on upper edge (one on each side), upper stud nut from parking lamp, 3 sheet metal bolts in lower flange of vertical grille reinforcements (1 at center, 1 at each side in line with edge of radiator), grille baffle-to-lower-baffle bolt (at center). Remove grille center molding bolt (under lower baffle). Remove 8 trim molding-to-gravel guard clips (4 on each side) under gravel guard. Pull out parking lamps. Remove grille assembly (pry loose if necessary). **NOTE**—When re-installing grille, be sure parking lamps in place.

**Radiator Grille Removal (1947):** Grille is new type one piece assembly (die cast upper moulding is only part serviced separately). To remove, open hood, remove 3 hexagonal-head sheet metal screws on each side (attaching upper radiator baffle to front fenders), and four clutch-head sheet metal screws across front (attaching upper baffle to grille moulding). Remove round slotted-head bolt on right side of hood latch, unsnap control cable from left front fender clip, move upper radiator baffle to one side. Remove two nuts and washers on each side (attaching upper grille moulding to inside corners of front fenders), remove nuts and washers on each side (attaching parking lamps to grille), remove four hexagonal-head sheet metal screws (attaching grille supports to lower radiator baffle). From beneath fender on each side, remove nuts and washers (attaching parking lamps to front fenders), lift parking lamps out (lamps can be placed on radiator filler panel where they will be out of the way without disconnecting wiring), remove sheet metal screws (attaching grille to front fenders). From beneath front of car, remove twelve sheet metal screws and washers (attaching lower grille moulding to radiator filler panel). Remove grille assembly from car. Remove four hexagonal-head sheet metal screws attaching outer ends of upper grille moulding to grille, remove eighteen sheet metal screw retainers and 4 from upper grille moulding.

## 1942-47 TRUCKS

**FRONT END REMOVAL:** Trucks. On conventional trucks Front End Sheet Metal Assembly can be re-

moved as follows: Remove hood, radiator brace rods, front bumper, fender bolts at cowl and running boards, and radiator support to front cross-member bolts at frame. Drain radiator and disconnect radiator hoses. Disconnect all wires from junction blocks at each side. On 1½ ton trucks, pull front end assembly to the front to clear fan shroud.

## 1947-48 TRUCKS

**FRONT END REMOVAL (TRUCKS):** On conventional trucks, front end sheet metal assembly can be removed as a unit as follows: Remove hood assembly, drain radiator, disconnect radiator hoses. Disconnect horn wires and all electrical wiring at junction blocks on both fender skirts, remove wiring harness from retainer clips on fender skirts and radiator core support. Relieve fender brace rod tension by backing off front hexagonal nut as necessary, disconnect brace rods by taking out capscrews attaching brace rods to dash at each side, remove rods. Take out capscrews, plate, and spacer attaching radiator core support to front frame cross-member. Remove screws on each side attaching rear of fender skirt to toeboard (accessible from inside cab by lifting floor mat). Remove bolts attaching rear of front fenders to cowl on each side (accessible from underneath). Raise front sheet metal assembly sufficiently to clear front bumper face bar and radiator grille filler panel, lift assembly out.

## FRONT FENDERS

## 1942-47 MODELS

**FENDER CAP:** Cap is attached to front door by means of three bolts on door along upper edge which engage slotted openings in flange of cap and two brackets on lower edge of door which are attached to flat tabs under lower edge of cap. To remove cap, remove step plate (free moulding for access to step plate screws), remove 2 bracket screws on lower edge of cap, loosen 3 bolts on upper inner edge of cap, lift cap off these bolts. Caps can be fitted to fenders by means of slotted holes in door brackets and in upper flange of cap.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

## ALL MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews .....	75-80	900-960
Main Bearing Bolts .....	100-110	1200-1320
Con. Rod Nuts .....	40-50	480-600
Rocker Arm Support Bolts .....	25-30	300-360
Crankcase Frt. End Plate .....	15-20	180-240
Timing Gear Cover Screws .....	6-7½	72-90
Manifold Clamp Bolts .....	15-20	180-240
Manifold Stud Nuts .....	25-30	300-360
Clutch Mounting Bolts .....	25-30	300-360
Clutch Housing Bolts .....	45-55	540-660
Flywheel Bolts .....	50-65	600-780
Oil Pan Flange Bolts .....	6-7½	72-90
Oil Pan Corner Bolts .....	12½-15	150-180
Oil Distr. Cover Screws .....	6-7½	72-90
Water Pump Mtg. Bolts .....	25-30	300-360
Fuel Pump Mtg. Bolts .....	15-20	180-240
Spark Plugs (see Note) .....	10-12	120-144
Pitman Arm Bushing Nuts .....	30-40	360-480
Prop. Shaft Flange Nut .....	160-280	1920-3360
Axle Flange Bolts (Trucks) .....	85-95	1020-1140

**NOTE**—New M-8 thin-shell plugs (marked by groove on shell above threads) must not be tightened more than 12 ft. lbs.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature. **Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## CHEVROLET

## REPLACEMENT CYLINDER BLOCKS

## 1942-47 MODELS

**REPLACEMENT CYLINDER BLOCKS (Installing 1948 Block on 1942-47 Models):** Both the 1948 type 216" Engine and 235" Engine Cylinder Blocks are furnished as service replacements for 1942-47 models.

► **CAUTION**—When installing these blocks on 1942-47 models, make the following changes:

**Oil Pump Screen Cover Support & Pipe Assembly:** New type, Part No. 3835365, must be installed to prevent interference between oil suction pipe and the new 1948 type main bearing cap bolt heads.

**Oil Suction Pipe and Oil Pan Clearance:** On 1942-46 216" Engines, oil pan must be reworked to provide clearance between oil suction pipe and upper edge of oil pan tray at point opposite #4 connecting rod. Peen tray and pan, as required, to provide 1/32" clearance at this point (**CAUTION**—do not bend oil suction pipe as it will interfere with connecting rod). On all engines, check alignment of oil suction and oil delivery pipes. Misalignment may cause seizure of distributor shaft.

**Oil Delivery Pipe:** New pipe must always be installed due to variation in length of pipe on these engines. Coupling sleeves are loose on new pipes and will be clamped (to establish pipe length between couplings) when couplings are tightened initially.

**1941 Model Note:** If 1948 type block installed on 1941 models, flywheel must also be replaced. Use following parts (depending on size of clutch used):

Flywheel	Part No.	Attaching Bolts
9" Clutch .....	839776	839756
10¾" Clutch .....	839753	①839756
①—Bolt Lock, Part No. 839690, also used.		

## ENGINE REMOVAL

## 1940 MODELS

**ENGINE REMOVAL:** Drain radiator and cylinder block, remove hood and side panels (see above). Remove Fenders, Radiator, and Grille as an assembly (see Front End Removal above). Disconnect generator leads and free wiring loom from support clip, remove battery and starting cables. Disconnect distributor low and high tension leads, take out ignition coil mounting screws, lay coil on cowl. Disconnect gas line at fuel pump, throttle and choke controls at carburetor, and accelerator rod at bell-crank. Disconnect exhaust pipe from manifold. Remove front floor mat and floor plate over trans-

mission, disconnect vacuum and air lines at shift cylinder, disconnect piston rod lever from transmission (See Chevrolet Transmission Control article in the Transmission Section for directions and adjustment instructions when shift cylinder re-installed). Disconnect clutch pedal link and pull-back spring. Remove bolts in universal joint ball retainer, slide retainer and ball back on shaft, take out 4 screws holding universal trunnion bearings on front yoke, remove trunnion bearings. Remove 4 bolts from transmission rear support, remove front and side engine mounting bolts, remove bolts in starter cross-shaft. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this bolt hole, attach hoist and lift engine until clear of mountings, pull engine forward and lift to clear front cross-member, then roll chassis back until engine is free. When engine re-installed, adjust mountings and align engine hood as directed above.

#### 1941-48 PASSENGER CARS

**ENGINE REMOVAL:** Drain radiator and cylinder block of all cooling liquid and remove the hood. Remove Fenders, Radiator, and Grille as an assembly (see Front End Removal above). Disconnect generator leads and free wiring loom from support clip, remove battery and starting cables. Disconnect distributor low and high tension leads, take out ignition coil mounting screws, lay coil on cowl. Disconnect gas line at fuel pump, throttle and choke controls at carburetor, and accelerator rod at bell-crank. Disconnect exhaust pipe from manifold. Remove front floor mat and floor plate over transmission, disconnect vacuum and air lines at transmission shift cylinder. Remove outer half of the reactionary metal boot (work under car) by taking out two bolts fastening halves together. On all cars except Cabriolet proceed as follows: Loosen reactionary lever assembly-to-transmission operating shaft clamp bolt, drive assembly from shaft carefully, disconnect selector rod from selector lever by taking out cotter pin in transmission end of rod, remove 3 vacuum cylinder bracket-to-transmission capscrews and move assembly clear of transmission. On Cabriolet only proceed as follows: Disconnect vacuum cylinder piston rod and valve link from reactionary lever system (to prevent upsetting vacuum valve adjustment, replace clevis pin thru piston rod yoke and valve link). Then for all cars continue as follows: Disconnect clutch pedal link and pull-back spring. Remove bolts in universal joint ball retainer, slide retainer and ball back on shaft, take out 4 screws holding universal trunnion bearings on front yoke, remove trunnion bearings. Remove 4 bolts from transmission rear support, remove front and side engine mounting bolts, remove bolts in starter cross-shaft. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this bolt hole, attach hoist and lift engine until clear of mountings, pull engine forward and lift to clear front cross-member, then roll chassis back until engine is free. When engine re-installed, adjust mountings, align hood (see above).

#### 1947-48 TRUCKS

**ENGINE REMOVAL (TRUCKS):** Drain radiator, cylinder block, and oil pan. Remove hood assembly. Remove front end sheet metal assembly (including radiator and fenders) as a unit (see Front End Removal above). Disconnect cables at starter switch

terminal (tape battery cable), disconnect coil lead at reversing switch, remove coil mounting screws and lay coil on top of dash, disconnect engine ground strap, generator leads at generator, and horn wires. Disconnect fuel line at fuel pump, choke and throttle control cables at carburetor, and remove air cleaner. Disconnect oil gauge line at engine, remove temperature gauge engine unit from cylinder head, disconnect vacuum lines (windshield wiper and Hydrovac) at manifold. Remove exhaust pipe-to-manifold bolts, remove starter pedal, disconnect accelerator pedal from rod. Remove transmission floor pan cover in cab, disconnect transmission control rods (models with steering column shift), or remove transmission cover and gearshift lever assembly and install temporary cardboard cover on case (models with floor-mounted gearshift). Remove hand brake lever, disconnect speedometer drive cable and clutch link to clutch pedal arm. Drain transmission case, disconnect propeller shaft (see Notes below for each model). Take out bolts in rear engine mounting, remove front engine mounting. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this position, attach hoist. Remove engine, clutch, and transmission from the chassis as a unit. When re-installing engine, see Engine Mounting Adjustment instructions (following).

### ENGINE MOUNTINGS

#### 1940-47 MODELS

**REPLACEMENT ENGINE MOUNTINGS (1940-47 Passenger Cars):** New 1948 type Side Support Cushion Assemblies (Side Mountings) and Transmission Support Assembly (Rear Mounting) as listed below can be installed on all cars except Cabriolet models. Side mountings must be installed in pairs (can be used on 1935-47 cars). Rear Mounting can be installed separately or with new side mountings on 1940-47 cars. Rear mounting is new one-piece type and requires installation of new type lock plate which also serves as a stop for transmission countershaft. Adjust mountings as directed for 1948 cars.

**NOTE**—These mountings used on late 1947 cars.

#### 1940-47 Replacement Mountings

Side Support Cushion Assy. (R. H.)	756056
Side Support Cushion Assy. (L. H.)	756057
Transmission Support Assy.	756100
Transmission Support Bolt Lockplate	3683693

#### 1940-47 PASSENGER CARS

**ENGINE MOUNTINGS:** See Replacement Mountings above.

**Adjustment (Original Equip. Type)**—Tighten front engine mounting bolts (replace mounting if oil-soaked), tighten rear mounting bolts at transmission and frame cross-member (studs tight in case). Clearance between cross-member and "U" section plate should be .005-.015" and equally spaced fore-and-aft (limits the fore-and-aft engine movement). If clearance excessive, remove mounting and bend plate to obtain correct clearance. Tighten side engine mounting bracket bolts. Take out engine side mounting bolts, check clearance between mounting and bracket at each side, clearance must be 1/32-1/16" (if clearance excessive, use a 3/8" plain washer

for proper clearance, if clearance less than 1/32", loosen bracket mounting bolts and push mounting up (if necessary, remove brackets and file mounting holes with round file to secure proper clearance). Tension on both side mountings must be equal.

#### 1948 PASSENGER CARS

**ENGINE MOUNTINGS (1948 Passenger Cars):** Mountings consist of one-piece vulcanized rubber type assemblies as follows:

**Front Mounting**—Same as used on previous cars.

**Side Mountings**—New right and left hand (not interchangeable) type with rubber in "shear". These mountings must be adjusted when installed on car.

**Rear Mounting**—New one-piece vulcanized assembly which does not require adjustment (replaces former "U" channel plate type).

**Adjustment of Pass. Car Engine Mountings:** Install side mountings with lug on mounting at edge of engine bracket. Shim between mounting and brackets so that clearance is zero plus or minus 1/16" before tightening mounting bolts. Bolt holes in frame bracket are offset. Rear engine mounting should be bolted to frame cross-member first and then bolted to transmission with engine and transmission weight on mounting (bolt holes slotted to provide alignment between transmission and mounting). Lock the mounting bolts in the transmission with the special lock plate. Replace engine mountings whenever they become oil-soaked.

#### 1940-47 TRUCKS

**ENGINE MOUNTINGS:** Adjustment. Tighten front engine mounting bolts and side engine mounting bracket bolts securely.

#### 1947-48 TRUCKS

**ENGINE MOUNTINGS (Trucks):** Consist of insulated type front and rear mountings as follows:

**Front Mounting**—Engine mounting bushings are imbedded in rubber insulator assembled between lower retainer and upper plate with a shield on top of the assembly. This mounting should be checked for clearance when installed and periodically in service.

**Rear Mounting**—Two insulated units. Bolted to bracket on clutch housing and bracket on frame. No adjustment required (keep mounting bolts tight).

**Adjustment of Truck Engine Mountings:** Check new front engine mounting, and remove and check mounting in service, as follows: With mounting removed from engine, fit insulator into lower retainer and place upper plate on top. Hold parts firmly together and make certain that rubber insulator fits tightly between retainer and plate and that engine mounting bushings project above upper plate (necessary to prevent oil shield contacting upper plate). Replace insulators which do not pass this test. Check clearance between upper edge of lower retainer and lower face of upper plate. If clearance more than 5/64", replace lower retainer. If clearance less than 3/64", grind off top edge of lower retainer. (CAUTION—do not attempt to shim the support). When installing mounting, tighten engine-to-mounting bolts tightly, mounting-to-frame bolts securely but not excessively tight (self-locking type nuts). Rear engine mountings do not require adjustment and mounting bolts should be kept tight.

CONTINUED N NEXT PAGE

## ENGINE MOUNTINGS

CONTINUED FR M PRECEDIN PAGE

## 1941-42 MODELS

**ENGINE ROUGHNESS CORRECTION:** 1941-42 Passenger Cars. If engine vibration not corrected by tune up and customary procedure, check transmission support assembly as follows: Loosen 4 bolts holding transmission to frame cross-member, jack up transmission until support just clears cross-member, tighten bolts holding support to cross-member. Check clearance at 'U' section plate which should be .005-.015" at front and rear (correct by removing plate and bending for correct clearance).

## PISTONS

## 1936-48 MODELS

**REPLACEMENT PISTONS:** Finished pistons with fitted pins and bushings furnished as follows:

## 1936—All Models

Part No.	Size
837601	Standard
601306	.003" Oversize
601305	.010" Oversize
601304	.020" Oversize
601303	.030" Oversize
601302	.040" Oversize

## 1937-40 Passenger Cars

602697	Standard
609008	.005" Oversize
602285	.010" Oversize
602286	.020" Oversize
602287	.030" Oversize
602288	.040" Oversize

## 1937-40 Trucks

602806	Standard
602807	.003" Oversize
602808	.010" Oversize
602809	.020" Oversize
602810	.030" Oversize
602811	.040" Oversize

## 1941-48 Passenger Cars

605260	Standard
605261	.003" Oversize
609014	.005" Oversize
605262	.010" Oversize
602263	.020" Oversize
602264	.030" Oversize
602265	.040" Oversize

## 1941-48 Trucks (216" Engine)

605276	Standard
609015	.005" Oversize
605278	.010" Oversize
605279	.020" Oversize
605280	.030" Oversize
605281	.040" Oversize

## 1941-48 Trucks (235" Engine)

605474	Standard
605489	.003" Oversize
605490	.010" Oversize
605491	.020" Oversize
605492	.030" Oversize
605493	.040" Oversize

**CAUTION—**Service Pistons carry markings stamped on head. S1, S2, etc. (size symbol), letter H, etc. (weight symbol). Marks on all pistons installed should be alike to give smooth engine operation.

## CRANKSHAFT &amp; MAIN BEARINGS

## 1936-48 MODELS

**REPLACEMENT MAIN BEARINGS:** New "precision" type bearings now furnished for all models as listed below. These bearings supersede previous type which require line-boring after installation.

► **NOTE—**Precision type bearings do not require line-boring or reaming after installation.

## 1936 Main Bearings

Sizes—Standard & .010", .030" Undersize (part number includes upper and lower bearing half).

► **INSTALLATION CAUTION—**Precision type bearings must be installed initially as COMPLETE SET.

## 1937-47 Main Bearings

Sizes—Standard & .002", .010", .020", .030" Undersize (part number includes upper and lower half)

**Identification Markings—**Front (#1) and Rear (#4) marked "V" on inner surface of dowel (1937-39 rear bearings have two oil grooves). Intermediate (#2 & #3) marked "I" on inner surface of dowel (#3 lower half does not have dowel).

► **INSTALLATION CAUTION—**Precision type bearings must be installed initially as COMPLETE SET.

## 1948 Main Bearings

Sizes—Standard & .002", .010", .020", .030" Undersize (part number includes upper and lower half).

► **NOTE—**Bearings can be installed singly (same type as used in original production).

## 1948 MODELS

**MAIN BEARING INSTALLATION (Without Removing Engine or Crankshaft from Chassis):** Upper bearing halves can be replaced by following procedure (bearings doweled in place and cannot be "rotated" out):

**Main Bearing Replacement (Pass. Cars):** Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Raise car and support securely on stands so car is level and approximately 8" off floor. Remove transmission floor pan cover. Remove clutch housing underpan. Remove transmission rear support-to-crossmember bolts. Disconnect gearshift selector rod from transmission selector lever. Raise rear end of engine and place bar (1" x 1" square and 26" long) behind flywheel and under clutch housing with ends resting on second cross-member brace (this will support engine weight). Release clutch fork from ball. Remove transmission mounting bolts, slide transmission back approximately ¾". Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure re-meshing gears in same relative position. Then install new bearings as follows:

**Bearing Installation—**Loosen but do not remove all main bearing cap bolts sufficiently to allow crankshaft to drop down approximately ¾". Remove front intermediate and rear main bearing caps (other bearing caps will support crankshaft), remove old bearings from bearing cap and crankcase (if old bearings do not drop down with crankshaft, tap bearings lightly to free dowel). Install new bearings, locating dowel on back of bearing shell in hole in crankcase, and pressing bearing up

in place (bearing should snap into place and hold if it has correct spread). Re-install bearing cap, using .006" shim thickness (three .002" shims) on each side of cap, tighten bearing caps just enough to support crankshaft. Repeat above procedure at front and rear intermediate bearings (NOTE—Rear intermediate bearing is close fit in crankcase and may not go up into place until crankshaft lifted up). After all bearings replaced, place a jack under rear intermediate bearing cap and carefully raise crankshaft into position. Keep crankshaft horizontal during this operation (CAUTION—Make certain that timing gears meshed in accordance with marks made before crankshaft dropped). Tighten all bearing caps snugly, then adjust main bearings as directed on car model page.

**Main Bearing Replacement (Trucks):** Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Take off transmission floor pan cover and clutch housing underpan and extension. Disconnect transmission control rods on side of transmission case (½ & ¾ Ton), remove hand brake lever from transmission mounting stud (Other Trucks). Remove transmission (see Transmission removal instructions for each model on car model page). Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure re-meshing of gears in same relative position. Then install new bearings as directed for Pass. Cars

## 1940-48 MODELS

**CRANKSHAFT OIL SEALS:** Rear Seal. Special rear main bearing cap (mounted on four bolts with two locating dowels) with wick type oil seal installed in groove in cap and crankcase used. Seal bears on outer rim of crankshaft flange (oil slinger and check valve in oil return hole in bearing cap have been discontinued). To install new seal in bearing cap, insert packing in groove and roll firmly in place with rounded tool (roll from both ends toward center). Use round block of wood (same diameter as crankshaft flange) to hold packing in place, cut both ends off evenly and flush with bearing cap face. Install upper half of seal in crankcase in same manner with engine out of car.

**Front (Timing Gear Cover) Oil Seal—**Spring-loaded leather type installed in pocket in timing gear cover. To install new seal, place seal on special Oil Seal Replacer J-995 with free end of leather toward end of tool, seat seal in cover with few light hammer blows on tool. NOTE—Timing gear cover must be centered on crankshaft when installed on engine to prevent balancer damaging oil seal. To install cover, coat seal with grease, install centering guide J-966 on crankshaft, install cover and tighten cover screws.

## 1936-48 MODELS

**FLYWHEEL INSTALLATION:** Sealing of Mounting Bolts. To prevent oil leaks through flywheel bolt holes into clutch, it is recommended that a small amount of Permatex Formagasket No. 2 be placed in each bolt hole in crankshaft flange before installing the flywheel. Wipe face of flange and flywheel mounting surface clean (any foreign material on mounting surface will cause loosening and failure of the mounting bolts).

**Installing Flywheel**—Use new lock plates each time flywheel bolts are disturbed. Tighten all bolts evenly to 50-65 ft.lbs. and lock each bolt by bending corner of lock plate up against flat on bolt. Check flywheel for runout after installation with a dial indicator. Runout at face and rim of flywheel must not exceed .008".

## VIBRATION DAMPENER

### 1936-48 MODELS

**HARMONIC BALANCER:** Service as complete assembly only (component parts not serviced separately). NOTE—Balancer used on 1941 and later cars cannot be used on 1940 and earlier models. Part Numbers of Balancer assembly as follows:

Models	Part No.	Hub Width	Diameter
1936	601359		
1937-40	603447	2 3/4"	6 5/32"
1941-48 216" Eng	605203	3"	6 5/32"
1941-48 235" Eng	605635		7 1/4"

**Removal**—Remove Front End Assembly as a unit first (see directions above). Use Chevrolet Harmonic Balancer Puller and Driver (consists of puller body, puller screw and pinned driver head), attach puller body to balancer by means of 2 cap-screws in two tapped holes in balancer, pull balancer by turning up puller screw.

**Installation**—Place driver in starting crank jaws of balancer, install puller body (as above), line up keyway in balancer and key in crankshaft, turn puller screw down to contact driver, then use puller screw as driver and drive balancer in place.

**IMPORTANT**—1936-38 type Replacement Balancer retained by two capscrews. These screws must be removed in order to install Chevrolet Tool when installing balancer on engine. If Chevrolet tool not used, remove screws after balancer installed.

## CAMSHAFT & BEARINGS

### 1936-48 MODELS

**CAMSHAFT BEARINGS:** Installation. Oil groove extends 70° around bearing from oil hole. To insure proper alignment with oil hole in block, mark front of bore opposite oil hole. Align oil hole in bearing with mark (with groove toward bottom of engine away from oil hole in block), press bearings in, stake in place, and line-ream (see below).

**Reaming**—Special reamer with four cutters on one bar recommended by car manufacturer (for proper alignment). Insert reamer through #1, #2, and #3 bearings. Start reamer cutters in all four bearings at the same time (wash metal cuttings away with liberal supply of kerosene while reaming), turn reamer slowly until cutters pass through bearings. Remove reamer by rotating in same direction as when reaming bearings and withdraw from engine. Bearing cuttings must be blown out with compressed air. Install camshaft and check bearing clearances with narrow feeler gauge. Clearance should be .002-.004". Install expansion plug to rear of rear bearing.

## TIMING GEARS

### 1936-39 MODELS

**REPLACEMENT TIMING GEARS:** Crankshaft gear (steel) and camshaft gear (fibre) furnished as follows:

	Crankshaft Gear	Camshaft Gear
1936 Engines	837677①	838436③
1937-39 Engines	839259②	838436③
①—Stamped "35-6". ②—Has 1 1/4" center hole.		
③—Part number stamped on gear.		

### 1940-48 MODELS

**REPLACEMENT TIMING GEARS:** Crankshaft Gear—Steel type Replacement gear now furnished (same as 1948 original equipment type) has relocated keyway which retards valve timing 4° from original valve timing on 1940-47 engines.

► **VALVE TIMING CHANGE (With Replacement Timing Gear)**—See "Valve System" below.

Camshaft Gear—Fibre type used on all 216" Engines and 235" Engine before 1948. New aluminum gear with steel hub used on 1948 235" Engine and furnished for replacement on 1947-48 235" Engines.

► **CAUTION**—Special crankshaft gear with "crowned" teeth must be used with aluminum camshaft gear.

	Crankshaft Gear	Camshaft Gear
All Engines	839259②	838436③
1947-48 235" Engine	3835371④	⑤
②—3 1/8" O. D. with 1 1/4" center hole		
③—Has part number stamped on gear.		
④—3 1/8" O. D. Stamped "71".		
⑤—Furnished as Unit with 3835371 Crankshaft gear under Part No. 3847620		

### 1936-48 MODELS

**TIMING GEAR ALIGNMENT:** Gear alignment controlled by gaskets installed between Camshaft Thrust Plate and Crankcase Front End Plate (Front End Plate now installed with one gasket between plate and block and this gasket thickness not varied for alignment adjustment). Check gear alignment as follows

**Gear Alignment**—With Front End Plate installed on block, place a new Camshaft Thrust Plate and two Thrust Plate Gaskets, No. 839100, in position over camshaft hole in end plate. Check alignment by placing straightedge on thrust plate and noting if gear shoulder on crankshaft is in alignment. If straightedge strikes shoulder, add additional gasket under thrust plate. When correct gasket thickness determined for correct alignment, note number of gaskets and install these gaskets under thrust plate when camshaft assembly installed.

### 1936-48 MODELS

**TIMING GEAR INSTALLATION:** Gears are press fit on crankshaft and camshaft and must be removed and installed as follows.

**Crankshaft Gear**—To remove gear, attach Puller T126-R by threading puller screws in tapped holes in gear, pull gear off. When installing gear, make certain that two woodruff keys installed in crankshaft keyways, drive gear on shaft until it seats against shoulder on shaft.

**Camshaft Gear**—To remove gear, install Gear Remover J-971 on shaft in back of gear (remover consists of support sleeve), place camshaft assembly in arbor press (CAUTION—Thrust plate must be positioned so that it will not be damaged by woodruff key in shaft as shaft pressed out), press shaft out of gear. To install gear, place shaft in arbor press (support shaft securely directly back of front bearing journal), install thrust plate, place woodruff key in shaft keyway, press gear on shaft until thrust plate just turns freely (clearance between back of thrust plate and front bearing journal must not exceed .003"). This clearance will give correct camshaft endplay of Free to .003" maximum. When installing camshaft in engine, make certain that correct gasket thickness installed in back of thrust plate (see Gear Alignment data above), tighten thrust plate capscrews through hole in camshaft gear. **CAUTION**—Press on steel hub only

when installing camshaft gear (pressure on composition or aluminum gears will cause damage).

## TAPPET CLEARANCE ADJUSTMENT

### 1936-48 MODELS

**ENGINE NORMALIZING PROCEDURE (For Valve Tappet Clearance Adjustment):** Clearance changes while engine is warming up. Adjust only after engine has been 'normalized' as follows: Run engine at 600 RPM and check oil temperature with thermometer at overflow pipe on valve rocker shaft connector until no change noted in oil temperature for period of five minutes (oil temperature will become stabilized at some point between 150-225° F.). This normalizing period will be from 5 to 30 minutes depending on engine temp. when started.

## VALVE SYSTEM

### 1940-47 MODELS

**VALVE TIMING CHANGE (1940-47 Cars & Trucks with Replacement Crankshaft Gear):** Valve Timing will be changed by installation of replacement Crankshaft Gear which is new type (as used on 1948 and late 1947 engines—see Note). This gear is furnished for all engines beginning with 1940 under same part number as former type gear (Part No. 839259) and has changed keyway location which retards valve timing 4° from original specifications given for these 1940-47 engines.

► **CAUTION**—On all 1940-47 Engines with the above Crankshaft Gear, disregard original Valve Timing data and use new Valve Timing given below.

NOTE—This new Crankshaft Gear, and new Valve Timing specifications, apply to 1947 Engines (Flint production only) beginning with Engine No. 572254, as well as to all 1948 Engines (Flint & Tonawanda production).

### Valve Timing

(With new No. 839259 Crankshaft Gear)

**Intake Valves**—Open 1° ATDC. Close 39° ALDC.

**Exhaust Valves**—Open 42° BLDC. Close 9° ATDC.

**Valve Timing Check**—Crank engine until #1 exhaust valve closed, tighten tappet adjusting screw until all tappet clearance is just removed. Crank engine until this exhaust valve opens and just starts to close, continue to crank engine until triangular mark on flywheel lines up with pointer in inspection hole in housing. Mount dial gauge on rocker shaft support so that indicator spindle contacts #1 exhaust valve adjusting screw. Set indicator dial at .044". Crank engine until indicator hand just stops moving. Indicator should read zero plus or minus .004". Reset tappet clearance.

### LATE 1947 & 1948 MODELS

**VALVE STEM OIL SEAL INSTALLATION:** Seal consists of a flat synthetic rubber ring installed in lower groove on valve stem (upper groove is for split type valve locks) and is retained by the valve cap (special longer type valve cap used—can be identified by 1/16" deep annular groove on top face). Install seals during valve assembly as follows: With valve in place in cylinder head, install lower spring seat, valve spring, valve cap. Compress spring and valve cap so that lower groove is exposed within cap, install seal ring in lower groove (CAUTION—seal must seat in groove and be flat), install split type locks, relieve spring tension and check to see that cap retains seal and locks properly. NOTE—Valve cap covers or "umbrellas" not used with these new type oil seals.

CONTINUED ON NEXT PAGE

## VALVE SYSTEM

CONTINUED FROM PRECEDING PAGE

## 1936-48 MODELS

**VALVE GUIDE INSTALLATION:** Use special valve guide drivers J-1089 (Intake), J-1090 (Exhaust) to install guides. Drivers have stop-collars which correctly position guides so that distance from cylinder head to top of guide is 1 1/16" (Intake), 61/64" (Exhaust). After guides installed, finish ream to inside diameter of .343".

**Replacement Precision Valve Guide Note—**Service guides furnished for replacement are precision type and require only finish reaming after installation for straightening of guide bore (formerly guides unfinished and required rough reaming also). Guides furnished under following Part Numbers:

	1940 & Earlier	1941 & Later
Intake Guide	3688758	3688760
Exhaust Guide	3688759	3688761

**NOTE—**These are new part numbers which supersede earlier precision type guide part numbers.

## 1937-40 MODELS

**ROCKER ARMS:** Two types of intake arms used. Install arms with slight angle toward front of engine for cylinders #1, 3, 5; angle toward rear for #2, 4, 6. All exhaust rocker arms straight. Replace worn rocker arms and worn shafts. Replacement arms furnished with finished bushings installed. **Assembly (1937-38-39)—**Assemble rocker arm shafts with open ends toward center of engine. Use special bolt and washer for rocker arm and shaft assembly (washer prevents oil leak around bolt). Assemble spring to brass coupling, place elbow pipe on coupling (press elbow back on spring), install coupling on rear shaft (elbow can then be assembled on front shaft), turn up coupling nut on oil pipe. **Assembly (1940)—**Open ends of shafts must be toward center of engine with baffle pressed in open end of rear rocker shaft vertical. Oil pipe connector is a brass sleeve which slips over end of each shaft and should be installed on shafts first and rocker assemblies then installed as a unit. **CAUTION—**Tighten rocker arm shaft support nuts to 25-30 ft. lb. tension only. Excessive tightening may distort shaft and cause rocker arms to bind.

## 1941-48 MODELS

**ROCKER ARMS:** Diamond bored and "granodized" (no bushings) and fit directly on rocker arm shafts. Four different types of rocker arms are used (offset at an angle) as follows:

	Part Number	Forge Number
Intake—Left Hand	839463	839465
Intake—Right Hand	839464	839466
Exhaust—Left Hand	839459	839461
Exhaust—Right Hand	839460	839462

**Identification—**Number cast on side of arm thus: **Left Hand Exhaust (marked 1 or 9), Right Hand Exhaust (0 or 2), Left Hand Intake (3 or 5), Right Hand Intake (4 or 6).** Number carried on side of each arm (also indicates manufacturing plant).

**Installation—**Install rocker arms in the following order (numbered from front to rear) on each shaft.

Front Shaft	Rear Shaft
1—L.H. Exhaust (1 or 9)	7—L.H. Intake (3 or 5)
2—R.H. Intake (4 or 6)	8—R.H. Exhaust (0 or 2)
3—L.H. Intake (3 or 5)	9—L.H. Exhaust (1 or 9)
4—R.H. Exhaust (0 or 2)	10—R.H. Intake (4 or 6)
5—L.H. Exhaust (1 or 9)	11—L.H. Intake (3 or 5)
6—R.H. Intake (4 or 6)	12—R.H. Exhaust (0 or 2)

Rocker arms installed on tubular shafts and held against side of shaft brackets by spring installed on shaft between adjacent rocker arms and locked in position by hairpin spring installed in groove in plugged end of each shaft. Rocker shafts must be removed and installed as an assembly. Shafts should be assembled as follows: Open end of each shaft must be toward the center, stamped steel baffle in open end of rear shaft must be in vertical position, connect shafts by slipping brass oil connector over open end of each shaft.

## OILING SYSTEM

## 1940-48 MODELS

**OIL DISTRIBUTOR:** Distributor is located in recess in left side of engine block (under cover plate). **CAUTION—**Inner and outer gaskets used with valve assembly plate must not be interchanged.

**Removal—**To dismantle oil distributor, take out three screws in cover plate, remove cover plate, outer gasket, valve assembly plate, inner gasket.

**Assembly—**Install cork gasket with two center holes between valve assembly plate and block, and use cork gasket with center cut out between valve assembly plate and cover, tighten cover screws.

## 1937-48 MODELS

**OIL LEAD TO VALVE ROCKER ARMS:** Installation. New assembly must be used whenever lead is removed from engine. To install proceed as follows: Insert pipe in block, coat threads of nipple with white lead and screw in block (on right side), install nipple and sleeve nut on lower end of pipe (left side of block) and secure in place, then bend pipe in upward loop and connect to oil distributor, bend pipe on right side of engine to clear push rod cover and bend upper end so that it passes through hole in cylinder head, connect pipe to valve rocker shaft coupling. Run engine and check for leaks.

## 1937-48 MODELS

**REPLACEMENT TIMING GEAR OIL NOZZLE:** On these models, regular production timing gear oil nozzle is pressed and flared in place in the engine front end plate. Nozzle cannot be serviced, and if replacement is necessary, new front end plate No. 607872 must be installed.

## 1937-48 MODELS

**CHECKING OILING SYSTEM:** Oil nozzle height, oil trough height, aiming of oil nozzles, and connecting rod dipper height should be checked whenever oil pan removed. This check requires use of special gauges. **CAUTION—**Beginning with 1947, all engines (216" & 235") have same oil pan and special checking gauge used for each type (see below).

**Oil Pan Trough Height—**Use combination Oil Trough Depth & Connecting Rod Dipper Height Gauge No. J-969-2A (Regular 216" Engine), J-1646-A (235" Engine 1941-46), J-1541 (235" Eng. 1947-48). With oil pan gasket removed, place gauge on pan flanges with center pin extending down toward troughs. Slide gauge along pan so that pin passes over edges of trough at center. Pin should clear edge of trough and clearance at this point should not exceed .015". If pin strikes trough, grind edge of trough down for clearance, if clearance greater than .015", weld any loose trough welds or replace oil pan. Check each trough in this manner.

**Connecting Rod Dipper Height—**Use same gauge as for Oil Pan Trough Height check (above). Turn crankshaft until connecting rod is at bottom of

stroke, place gauge over connecting rod with the two gauge side pins resting on the oil pan mounting face of the crankcase, slide gauge over dipper. Low "Go" step of gauge should pass over dipper and high "No Go" step should not. If low step does not pass over dipper, tap dipper down with light hammer, if high step of gauge clears dipper, install new higher dipper. Check all dippers in this manner.

**Oil Nozzle Height and Nozzle Aim—**To check, with Oil Pan Target Gauge J-696-1 (for regular and Heavy Duty Engines). Install gauge and position it with dowels engaging screw holes in oil pan. Install Water Nozzle J-793-3 in main oil line. Tilt oil pan 45° so that nozzles are not covered by water in troughs. Use enough water to just straighten water streams from nozzles. Nozzle streams must hit holes in gauge. Use Oil Nozzle Wrench J-793-5 to adjust nozzles so that each water stream passes through center of its target hole. Recheck oil nozzle height. **Oil Nozzle Height Note (1942 & Previous Cars).** Use Oil Nozzle Depth Gauge J-969-3 to check oil nozzle height for connecting rod dipper clearance. Hook end of gauge over pan rail, position gauge in trough with side marked "FRONT" toward front of oil pan. Open end of nozzle in trough should clear gauge. Check all nozzles in this manner.

## RADIATOR

## 1939-40 MODELS

**RADIATOR CORE REMOVAL:** To remove radiator, core proceed as follows: Drain radiator, disconnect upper hose and remove lower hose. Remove hood assembly and moulding ('39), raise hood and remove side panels ('40) as directed above. Disconnect radiator brace rod at front end. Loosen brace rod at dash (allowing brace to be turned up for core clearance). Remove wiring harness from top of core. Take out water pump and fan assembly ('39). Remove two bolts on each side which hold radiator core in support, tilt top of core to rear to clear support and lift out.

## 1941 MODELS

**RADIATOR CORE REMOVAL:** To remove radiator, core (without disturbing grille), drain radiator, remove lower hose connection, disconnect upper hose. Pull out control knob on dash and raise hood, disconnect front end of radiator brace rods, loosen both sides of brace rod at dash and turn rod up to allow clearance for radiator core. Remove headlamp wiring harness from clip at each top corner of radiator core. Remove 2 core-to-shell bolts at each side, tilt top of core to rear and lift out.

## 1942-48 PASSENGER CARS

**RADIATOR CORE REMOVAL:** Passenger Cars. To remove radiator core, prop up hood in wide open position, drain cooling system, then working from under front end of car remove radiator drain cock and drain hose (on lower right front side of radiator). Disconnect radiator hoses at radiator (loosen hose clamps at water pump and cylinder head outlet so that hoses can be turned to provide clearance when lifting out core). Free wiring harness from radiator support and top tank. Remove carburetor air cleaner. Remove 4 core band-to-radiator support bolts (one at top, one at bottom, on each side). Turn fan to place wide spacing between blades at side, lift core straight up until outlet strikes cross brace on support, lay core back toward engine so outlet clears brace, lift core out.

**1942-47 TRUCKS**

**RADIATOR CORE REMOVAL:** Open hood and prop hood in open position with the hood brace, drain cooling system and remove all hoses. Remove 2 radiator brace bolts at radiator support and loosen brace rod nuts at dash (brace rod should be raised when removing core). Remove fan (take out 4 bolts in water pump pulley). Free wiring harness from radiator. Remove radiator core-to-support bolts (at sides inside fender skirt). Move fan shroud to the side and maneuver shroud around radiator support brace attaching bolt, lift shroud out. lift core out.

**1947-48 TRUCKS**

**RADIATOR CORE REMOVAL:** Trucks. Raise hood and block in open position. Drain cooling system by removing drain plug. Disconnect and remove inlet and outlet hoses. Remove radiator mounting bolts from radiator support, lift radiator up and out. **NOTE**—On models with radiator shroud, push shroud back and down over fan blades for clearance.

### PROPELLER SHAFT

#### 1941-42 TRUCK MODELS

► **Replacement Support Bearing (For 1941-46 Trucks):** New 1947 type (with improved sealing and greater stability) furnished for replacement use on these trucks. Complete assembly furnished in special Propeller Shaft Bearing Support Kit, Part No. 609037 (same part number as first type support kit). See 1947 type Propeller Shaft Support Bearing for all data on this new type.

**Lubrication Note**—New type support bearing has grease fitting for lubrication of the double row ball-bearing. Use regular chassis lubricant.

**PROPELLER SHAFT SUPPORT BEARING (Orig. Type on  $\frac{3}{4}$  Long WB., 1, 1 $\frac{1}{2}$  Ton Trucks):** These models use two propeller shafts with 3 needle bearing universal joints and a support bearing ahead of intermediate universal (195" wheelbase School Bus chassis uses 4 universals, 3 shafts, and 2 support bearings). Support bearing Assembly consists of a single row sealed type ball-bearing mounted on rear end of front propeller shaft ahead of intermediate universal front yoke with an inner dust shield assembled on each side of bearing and an outer dust shield (in two halves) mounted over outer race of bearing. A rubber cushion seats around this outer dust shield and inside a sleeve on the support bracket. Support bracket is attached to frame cross-member by 2 bolts. An additional dust shield is assembled on shaft against shoulder on rear of shaft and extends over sleeve in support bracket (this shield need not be disturbed for support bearing servicing).

**Removal and Installation**—Remove front propeller shaft by disconnecting front and intermediate universals and removing 2 support bearing bracket-to-frame bolts. Remove front yoke of intermediate universal. Wet rubber cushion (to soften soap used to install cushion), clamp support bracket in vise and work shaft out of support. Remove the rubber cushion from bearing by hand. Use screw type puller J-1619 mounted in vise to withdraw bearing from shaft (jaws on tool engage outer race of bearing). Tap dust shield off outer race of bearing. Wash all parts of assembly (except bearing) in good cleaner. Check bearing and replace if rough or excessive endplay present. To reassemble, press outer dust shield (two halves) on outer race of bearing,

install one inner dust shield on shaft (with raised portion of inner circumference toward bearing), drive bearing on shaft with universal joint yoke, install the other inner dust shield, assemble rubber cushion over bearing, coat outer side of cushion with soft soap, slide support bracket in place on rubber cushion, install front yoke of intermediate universal (must be turned 90° from rear yoke of front universal). Make certain that rear yoke of intermediate universal is in same plane as front yoke of rear universal on rear propeller shaft (for correct alignment of all universals). Install assembly on truck.

**1941-47  $\frac{3}{4}$  TON TRUCK**

**PROPELLER SHAFT SUPPORT BEARING ( $\frac{3}{4}$  Ton Short Wheelbase and Special Models):** Equipped with three universal joints (the intermediate and rear joints are exposed needle bearing types, front universal is equipped with bushing type joint enclosed in ball housing), two propeller shafts (rear shaft exposed, front shaft enclosed type), and a support bearing ahead of intermediate universal mounted in rear end of front propeller shaft housing. Support bearing Assembly consists of a single row sealed type ball-bearing on rear end of front propeller shaft ahead of intermediate universal front yoke mounted in rear end of front propeller shaft housing. A ring is assembled on the shaft ahead of bearing, and a dust shield behind the bearing. A rubber cushion is assembled on end of housing and seats in sleeve in support bracket.

**Removal and Installation**—Remove Front Propeller Shaft by disconnecting intermediate universal, slide front universal ball retainer back on housing after removing 4 attaching bolt, and removing support bearing bracket-to-frame bolt nuts. Remove front yoke of intermediate universal, and bearing dust shield. Wet rubber cushion (to soften the soap used to install cushion), clamp the support bracket in vise and withdraw housing. Remove rubber cushion by hand. Slip ball retainer off over end of housing. Remove bearing retainer snap ring and drive shaft and bearing out of housing with a brass drift. Use arbor press to remove bearing from shaft. Wash all parts of assembly (except bearing) in good cleaner. Check bearing and replace if endplay excessive or bearing runs rough. Check leather oil seal in housing (do not remove unless a new seal to be installed—leather should be soaked in light engine oil and edge should curl towards the front when installed). Check bushing in front end of housing and replace if worn. To reassemble, press bearing on shaft with an arbor press, install shaft and bearing in housing (tap outer race of bearing with soft drift to seat bearing), insert snap ring, slip universal ball retainer over housing (a new cork packing should be shel-lacked to retainer), install rubber cushion on housing, coat cushion with soft soap, install support bracket over rubber cushion, install bearing dust shield and intermediate universal front yoke. When installing assembly on truck, lubricate universal ball before assembling ball retainer. Also fill front universal housing with 1 pint of S.A.E. 90 transmission lubricant (use also for intermediate joint).

**1946 TRUCK MODELS**

► **Replacement Support Bearing (For 1946 Trucks):** New 1947 type (with improved sealing and greater stability) furnished for replacement use on these

trucks. Complete assembly furnished in special Propeller Shaft Bearing Support Kit, Part No. 609037 (same part number as first type support kit). See 1947 data below.

**PROPELLER SHAFT SUPPORT BEARING (Orig. Type on 1, 1 $\frac{1}{2}$ , 2 Ton Trucks except C-O-E 109" WB. Model):** Same as 1941-42 type (above) except for redesigned support bearing mounting as follows:

**Support Bearing & Mounting**—Bearing is double row ball bearing (not sealed) fitted with grease fitting for lubrication in service. Bearing is installed in retainer with inner seal and snap ring at each end. Retainer and bearing assembly is mounted on rear end of front propeller shaft with dust seal at each end and spring lock wire and shield at rear end between retainer and universal joint yoke.

**Removal & Installation**—See 1947 type (below).

**1947 TRUCK MODELS**

**PROPELLER SHAFT SUPPORT BEARING: 1 Ton, 1 $\frac{1}{2}$  Ton, 2 Ton Trucks (except Cab-over-Engine 109" WB. Model):** Propeller shaft assemblies are same type as used on 1941-42 models (above). Support bearing is new type double row ball-bearing (not sealed) with grease fitting for lubrication in service. Bearing retainer is new type with wide neoprene insulator band and is used with new combination felt-and-neoprene dust shields.

**Removal & Installation**—Propeller shafts and support bearing assemblies are removed in same manner as 1941-42 type (above). To install new 1947 type support bearing, proceed as follows: Install double row ball bearing in bearing retainer (both sides of bearing are the same), install snap ring in retainer on each side of bearing making certain that rings are seated in grooves. Install dust shield spacer in rear end of retainer with prongs in toward bearing. Soak dust shields (combination felt and neoprene) in SAE No. 40 or 50 engine oil until thoroughly saturated (or until all bubbling stops), press one dust shield in each end of bearing retainer with neoprene side in toward bearing, stake dust shields in place securely at six points around retainer rim. Install retainer insulator in groove on outer surface of bearing retainer, install retainer assembly in propeller shaft bearing support (NOTE—Insulator is impregnated with paraffin to facilitate installation) making certain that lubricant fitting boss on bearing retainer engages slot in support, install lubricant fitting in this boss. Install bearing support assembly on rear end of front propeller shaft (see Propeller Shaft Note below) with lubricant fitting end of assembly toward splined end of shaft, so that bearing seats against shoulder on shaft (bearing should be snug on shaft and can be forced to seating position against shoulder with universal joint flange). Install propeller shaft flange and dust shield assembly (see Note) on shaft, inserting end of flange through bearing dust shield, until flange seats against bearing, screw flange retaining nut in threaded hole in end of shaft, tighten nut with torque of 160-280 ft.lbs., secure nut with cotter pin. Install assembly in truck. Lubricate bearing (see Lubrication data below).

**Propeller Shaft Note**—When installing new type bearing support assembly on trucks prior to 1944

C N T I N U E D O N N E X T P A G E

## CONTINUED FROM PRECEDING PAGE

production, make certain that there are no sharp edges on spline end of shaft that might cut or damage dust shields during assembly. Polish the end of the shaft with fine emery or crocus cloth.

**Propeller Shaft Flange & Dust Shield Assembly**—If dust shield not installed on propeller shaft flange, install shield as follows: Press dust shield on flange hub, with open (concave) side of shield away from yoke end of flange, until shield seats firmly against shoulder on flange. Polish hub of shaft flange with fine emery or crocus cloth to remove all rough spots which might damage support bearing dust shield when flange installed (end of flange hub passes through dust shield and bears against bearing).

**Lubrication of Support Bearing:** Lubricate bearing with chassis lubricant through special lubricant fitting until lubricant appears at pop-off valve in fitting. When new bearing assembly first placed in service, lubricant will leak past seals at both ends of bearing until proper clearance secured for operation of the bearing. No further leakage should occur after this initial period.

**Periodic Lubrication**—Lubricate this bearing at each regular chassis lubrication period.

## 1948 TRUCK MODELS

**PROPELLER SHAFT SUPPORT BEARING:** 1 Ton, 1½ Ton, 2 Ton Trucks (except Cab-over-Engine Short WB. Model): Support bearing is new single row permanently lubricated ball bearing in new type mounting with "grease traps" packed with water proof grease to prevent entrance of dirt and water. Propeller shaft design unchanged.

**Removal & Installation:** Propeller shafts are removed and installed in same manner as on previous models. Support bearing should be serviced as follows:

**Removal**—Split intermediate universal joint by removing two trunnion bearing "U" bolts (tape or wire bearings in place). Remove bolts attaching bearing support bracket to frame cross-member. Remove universal flange retaining nut, remove flange, pull support assembly off rear end of front propeller shaft. Place support assembly in arbor press using a piece of tubing to apply pressure on rubber cushion (tubing should clear slinger and be snug fit in bracket), press bearing and cushion assembly out of bracket. Remove cushion and grease retainers from bearing.

**Servicing**—Clean rubber cushion with pure denatured alcohol, replace cushion if cracked, hardened, or distorted. Check bearing by rotating inner race slowly by hand. CAUTION—Do not attempt to remove oil seal retainers from bearing and do not clean bearing with gasoline or solvent which will wash lubricant out (requiring new bearing).

**Assembly & Installation**—See that grease deflectors on propeller shaft and universal joint yoke are tight (staked on shaft by prick punching at two points). Assemble grease slinger on outer bearing race (one at each side), force bearing and slinger assembly into rubber cushion. Coat outer surface of rubber cushion with brake fluid, place support bracket on arbor press with flanged side up, position bearing and cushion squarely in flanged end of bracket bore, use piece of tubing to press on rubber

cushion only and press assembly in bracket until face of grease retainer is flush with flanged end of bracket (CAUTION—this position important to provide clearance between grease retainers and grease deflectors, if assembly pressed too far in bracket, turn bracket over and press assembly out to correct position). Pack grease retainers on both sides of bearing with waterproof grease (grease used to keep out dirt and water—does not lubricate bearing). Install support bearing and bracket assembly on end of front propeller shaft making certain that grease slingers lined up with bearing hole and that flanged end of bracket is forward. Install intermediate universal joint yoke on end of shaft, tighten yoke retaining nut to 160-280 ft. lbs. Then check clearance between rear edge of propeller shaft dust shield and front face of bearing support bracket. This clearance should be ½" plus or minus 1/32". Install bolts, lockwashers, and nuts attaching bearing support to frame cross-member, tighten nuts.

## TRANSMISSION NOTES

## 1937-47 TRUCK MODELS

**REPLACEMENT COVER PLATE INCORRECT ASSEMBLY (Causing Low Speed Disengagement):** If transmission jumps out of Low Gear (resulting from limited gear engagement), or overshifts in Reverse, after installation of Replacement Transmission Cover Plate Assembly, Part No. 590859, remove and check the cover plate for incorrect assembly as directed below. All cover plates which are found to have the guide plate incorrectly assembled should be replaced.

**Cover Plate Check for Incorrect Assembly**—The incorrect assembly is caused by Shifter Interlock Guide Plate having been welded in place in cover upside-down so that guide pin slot is incorrectly placed. To check cover, measure from inside edge of stop pad at front of cover (see Note) to edge of guide pin slot (half-round slot approximately midway between stop pads) and likewise measure from inner edge of stop pad at rear to edge of guide pin slot. These measurements should be 13/16" (front), ¾" (rear). If cover plate not correctly assembled, measurements will be reversed (¾" front, 13/16" rear) and cover plate should be replaced.

**Cover Plate Note**—Front of cover plate can be identified (when making measurements) by fact that two mounting bolt holes across front edge are closer together than holes along rear edge.

## REAR AXLE NOTES

## 1938-48 MODELS

**AXLE SHAFT (PASSENGER CARS): Installation.** Assemble new oil deflector, gasket (with shellac or paint on both sides), line up extra hole (center of three closest together) with notch in hub flange in axle shaft (also oil pocket in oil deflector with this notch), insert six new bolts andpeen into place in countersink around bolt holes in flange using special Peening Tool and Anvil so that these parts are riveted together. NOTE—Axle shafts are of unequal length, longer shaft used on right side.

**1940 Axle Shaft Production Change**—On later cars, brake drum retained by two 'zipon' type nuts instead of screws (zipon nuts used on all 1941 and later cars).

**Axle Shaft Note**—Shafts unequal in length (right shaft longer). Part numbers are as follows:

## 1938 Passenger Cars

	Part No.	Length	Marking
Left Axle Shaft	602969	28 5/8"	—
Right Axle Shaft	602970	29 5/8"	—

## 1939-40 Passenger Cars

Left Axle Shaft	603617	28 5/8"	—
Right Axle Shaft	603618	29 5/8"	—

## 1941-48 Passenger Cars

Left Axle Shaft	3657313	29 1/8"	"GM-13"
Right Axle Shaft	3657314	30 1/8"	"GM-14"

**Endplay Adjustment**—When installing shaft, select correct spacer block (see below) so that when installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free Fit to .014" maximum clearance.

**Axle Spacer (Pass. Cars)**—Three spacer blocks furnished which provided four sizes as follows:

Part No. 472547—Narrow (1.0105")  
Part No. 473603—Medium (1.0195" & 1.0295")  
Part No. 597254—Wide (1.0345")

Above dimensions are measured across the ground surfaces and spacers should be installed with ground surface toward the axle shaft end. Medium spacer ground on all four sides and may be installed either way to secure the two different sizes.

## 1940-48 ½ TON TRUCK

## 1940-42 ¾ &amp; 1 TON TRUCKS

**AXLE SHAFT (½, ¾, & 1 TON TRUCKS):** Shafts are heavier construction than Passenger Car type.

**Installation**—Assemble new oil deflector, gasket (coat both sides with heavy shellac or paint), line up extra hole (center hole of closely grouped three holes) with notch in hub flange on axle shaft (oil pocket in oil deflector should also be aligned with this notch), install six special bolts, forcing heads down to deflector, andpeen shoulder on bolts into countersink around bolt holes in flange using Special Peening Tool and Anvil so that these parts are riveted together. Check endplay (below).

**1940 Axle Production Change**—On later ½ & ¾ Ton models (not ¾ Ton Special), brake drum is attached to axle shaft flange by two 'Zipon' type nuts installed on diametrically opposite wheel bolts and special attaching screws are not used (axle shaft flange not drilled for these screws although screw holes provided in drums so that drums can be used on either type axle shaft). Both types of axle shafts (with and without drum attaching screw holes) furnished for service.

**Axle Shaft Note**—Shafts unequal in length (right shaft longer). Part numbers are as follows:

## 1940-Early 1941 ½ Ton Truck

	Part No.	Length	Marking
Left Axle Shaft	3656861	28 11/16"	"61"
Right Axle Shaft	3656862	29 11/16"	"62"

## Late 1941-1947 ½ Ton Truck

## 1940-42 ¾ &amp; 1 Ton Truck

Left Axle Shaft	3652341	28 11/16"	"41"
Right Axle Shaft	3652342	29 11/16"	"42"

## Late 1947-1948 ½ Ton Truck

Left Axle Shaft	3683161	29 1/2"	"GM-161"
Right Axle Shaft	3683162	30 1/2"	"GM-162"

**Endplay Adjustment**—When installing shaft, select correct spacer block (see below) so that with spacer installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free fit to .014" maximum clearance.

**Axle Spacer (Trucks)**—Two spacer blocks furnished which provide three sizes as follows:

Part No. 370217—Narrow (1.1485").

Part No. 372515—Wide (1.1575" & 1.1675").

These dimensions are taken across ground surfaces.

**NOTE**—Spacers should be installed with ground surface toward axle shaft end. Wide Spacers are ground on all four sides (giving two sizes listed).

#### 1940 MODELS

#### AXLE SHAFT VENT CHANGE (½ & ¾ Ton Trucks):

Location of axle vent changed in production from torque tube to axle housing (top left side 8" from vertical centerline). If lubricant pumps out of Torque Tube vent on early models, correct this condition by providing new vent as follows:

**Axle Vent Service Change**—Remove torque tube vent and plug this opening with pipe plug. Provide new vent by drilling ⅛" hole through first axle housing cover bolt to left of top bolt and inserting 1/16" cotter pin through this hole (bend cotter pin to prevent it falling out in service). **CAUTION**—If late type carrier & Torque Tube Assembly (without vent) is used with first type Axle Housing (without vent), a vent must be provided by drilling 11/32" hole in top of axle housing 8" to left of vertical centerline of axle. Thread hole with ⅛" tapered pipe tap, install #3652364 regular production vent. **NOTE**—If desired, vent may be provided by drilling housing cover bolt instead of installing this production vent (see directions above).

#### 1946-47 MODELS

**REVACYCLE DIFFERENTIAL PINION & SIDE GEARS:** New type "Revacycle" gears (superseding "Involute" gears used on previous models) are used on the following models:

##### Passenger Cars

All Models ..... 1946-47-48

##### Truck Models

¾ & 1 Ton Truck ..... 1946-47-48

Other Trucks with Two-Speed Axle ..... ①1946-47-48

①—Beginning with 1946 Axle Serial No. BV-1781.

Revacycle gears have new tooth shape and must be used together (not interchangeable with previous type Involute gears except in complete sets).

**CAUTION**—Any attempt to use Revacycle and Involute gears together will result in noisy operation and early failure (difference in tooth shape will result in very little tooth contact).

**Identification of Gears**—Revacycle and Involute gears can be distinguished by tooth shape as well as by markings placed on the gears for this purpose. Tooth characteristics are as follows:

**Side Gears**—Revacycle gear teeth are narrower at heel (larger diameter) end than Involute gears and top of tooth is same width from heel to toe (Involute gear teeth taper from heel to toe). See Parts List below for special gear markings.

**Pinion Gears**—Revacycle gears have top of tooth of same width from heel to toe as on side gears (Involute gear teeth taper from heel to toe) and inner end of Revacycle gear teeth are shorter than on Involute gears. Pinion gears for Passenger Car models can also be distinguished by over all dia-

meter of gear at inner (toe) end of teeth. Revacycle gears are 1 28/64" while Involute gears are 1 37/64" in diameter. See Parts list below for other markings.

#### Involute Gears

Car or Truck Model	Side Gear	Pinions
Passenger Cars (1937-42).....	3651053①	472515
½ Ton Comm'l (1937-48).....	3652344	370225
¾ & 1 Ton (1937-42).....	3652344	370225
Two-Speed Axle (1939-46)③	3651184②	②3651424
1½ Ton (1936-48).....	370445	370446
2 Ton (1942-48).....	3661874	370446
①—Stamped "GM39" on end of hub.		
②—Stamped "2234-K-63" on inner face of gear.		
③—1946 Axles before Serial No. BV-1781.		

#### Revacycle Gears

Car or Truck Model	Side Gear	Pinions
Passenger Cars (1946-48).....	3682122⑤	⑥3682121
¾ & 1 Ton (1946-48).....	3681056	3681055
Two-Speed Axle (1946)④	3682229⑦	⑧3682228
Two-Speed Axle (1947-48)⑨	3682526⑩	⑪3682492
④—Axle Serial No. BV-1781 Up with mechanical shift control.		
⑤—Stamped "GM-R" on end of hub.		
⑥—Marked by daub of yellow paint on inner face.		
⑦—Stamped 2234-V-204 on inner face of gear.		
⑧—Stamped 2233-Z-104 on chamfer on small end of teeth.		
⑨—Axles with Vacuum shift control.		
⑩—Stamped 2234-T-202.		
⑪—Stamped 2233-F-110.		

#### 1946-48 TRUCKS

**TWO-SPEED AXLE SHIFTING COMPLAINTS (With Vacuum Shift Control):** If vacuum shift is hard to operate or sticks in one position, this may be caused by vacuum shift control valve shaft being tight or frozen in valve body. Correct this trouble as follows: Disconnect pipe fittings at back of valve body and speedometer adapter operating rod at lever on end of valve shaft. Take off cap nut and washer and remove valve operating lever from valve shaft. Remove two screws mounting valve assembly on instrument panel, remove valve assembly. Remove cotter pin from valve shaft, drive valve shaft out of valve body by carefully tapping on threaded end of shaft with a soft hammer. Examine shaft for evidence of seizing (usually occurs near washer brazed on shaft). Remove excess metal from shaft with a file, then polish shaft with fine emery or crocus cloth. Lubricate shaft lightly with Gredag No. 213½ or other graphite grease (**CAUTION**—Do not use mineral oil—will cause failure of rubber disc in valve assembly). Re-install shaft, reassemble valve assembly and install on truck.

#### 1946-47 TRUCK MODELS

**INCORRECT SPEEDOMETER READING (1946-47 Trucks with Two-Speed Rear Axle):** If speedometer reads too high in Low Gear, and too low in High Gear, this may be caused by incorrect assembly of speedometer adapter shift lever. To correct this complaint, remove small shift lever on top of speedometer adapter case, turn lever ½ turn or 180°, re-install lever. This will reverse direction of shift and speedometer should read correctly.

**NOTE**—When lever correctly installed, small hole for attachment of operating rod will be toward front of truck. The other end of the operating rod should be connected in the outer hole of the lever on the vacuum shifter valve shaft.

## REAR SPRING SEAT & SHACKLE

### 1938-48 PASSENGER CARS

#### REAR SPRING SEATS (ALL PASSENGER CARS):

Bracket welded on front of housing at each spring. Spring seat attached to bracket by means of rubber bushed bolt (spacer sleeve through which bolt passes, used to prevent collapse of bracket when tightening bolts with great deal of pressure). Rubber washers used between bracket and each end of spring seat. Spring seat attached to springs through conventional U-bolts. **IMPORTANT**—When reassembling spring seat to bracket (when installing rear axle), eye bolt nut must not be tightened until all other connections made and car weight resting on all 4 wheels.

### 1938-42 TRUCKS

#### REAR SPRING SEATS (TRUCKS): Fitting Seats.

Whenever rear spring seats are adjusted, clearance between spring seat and rear axle housing must be checked as follows: Block up rear of car under frame side rails, drop rear of spring by disconnecting spring shackle, take out spring U-bolts, remove spring seats (lower spring cap secured by means of 2 screws). File face of each spring seat half evenly (place in bench vise) until spring seat gives slight drag when placed on housing and rotated. **CAUTION**—File both halves evenly.

**NOTE**—This type spring seat used on ½ Ton Model only for 1941-42.

**Rear Spring Noise (1941 ¾ & 1½ Ton Panel Trucks).** May be caused by excessive sideplay of rear springs which is accentuated by panels. Correct by installing special .010" thick shim, No. 3667063 on spring pins at front end, or upper and lower pins at rear (shackle end) of spring to correct excessive sideplay.

**Rear Spring shifting on Seat (Early 1941 ¾ Ton Trucks).** To correct this complaint on early 1941 models with ¼" thick spring center bolt, replace bolt with new ⅜" type, Part No. 1288224, which will assist in keeping spring centered on axle.

### 1940-42 MODELS

#### REAR SPRING REAR SHACKLE (PASS. CARS): Two type of shackles have been used as follows:

**Threaded Design**—Threaded bushing and tapered pin type. Used on all '40 cars, part '41-42 cars.

**Tight Shackle Pin Correction**—If shackle pins tight or seized, remove pin and bushing assembly from rear spring hanger, enlarge eye in hanger approximately .005-.010" with a drift, install new pin and bushing assembly.

**Rubber-Bushed Design**—New type used on some '41-'42 cars. Shackle assembly consists of outer shackle plate with two pins serrated through plate and swaged in place, two split-type synthetic rubber bushings (each bushing consists of two halves with a shoulder on the outer end of each half), an inner shackle plate, and two castellated lock nuts. Rubber bushings extend out ¼" beyond space between two shackle plates when tightened in place. When inner plate bottoms on pin shoulders (by tightening lock nuts) excess rubber (¼" extension) forced into eye and around pins forming a tightly locked joint.

**Servicing**—Rubber-bushed shackle may be removed by merely raising car to relieve load, removing two lock nuts and inner shackle plate (releasing

**CONTINUED FR M PRECEDIN PAGE**

pressure on bushings) and taking out outer shackle plate with pins, and removing bushings from spring and hanger eyes. Shackle can be installed as follows: Raise car to properly position spring hanger and spring eye for shackle installation, clean bushing holes, bushings (inside and outside), shackle plates and pins, install bushings in spring and hanger eyes with shoulder on each half on outside, install shackle plate with pins (insert pins through bushings with pins extending in toward center of car), install inner shackle plate, tighten lock nuts half way on pins, set car on wheels at curb weight (no load or passengers in car), bounce rear end of car to seat bushings, then without disturbing normal rest position of car, tighten lock nuts on inner shackle until plate bottoms on shoulders of pins. These shackles require no lubrication.

**STEERING NOTES****1946 TRUCK MODELS**

**STEERING ARM & TIE ROD CHANGES (1½ & 2 TON TRUCKS):** Steering arms on trucks with heavy-duty front axle changed in production to provide greater tire clearance when 20x6.0 wheels and tires used (axle changed to move tie rod ends of arms in toward center line 25/32"). Special Tie Rods are used with each type of Steering Arm and correct type must be installed (proper toe-in adjustment cannot be secured if wrong type tie rod is used). A total of three different types of Steering Arms and Tie Rods have been used on these models.

**Replacement of Steering Arms & Tie Rods:** All types not furnished for service (none of first type and limited number of second type available). If one steering arm of early types being replaced, it will be necessary to replace the other steering arm and tie rod also to maintain correct steering geometry and permit correct toe-in adjustment to be secured. Part Nos. are as follows:

	<b>Steering Arm &amp; Third Arm (RH)</b>		<b>Steering Arm (LH)</b>	
Type	Part No.	Forge No.	Part No.	Forge No.
1st.	3681151	3681145	3681147	3681147
2nd.	3682189	3682133	3682135	3682135
3rd.	3685153	3685157	3678185	3678185

Forge No. Note—This number is located between

the two bolt holes in the arm and can be used to identify the various types.

**Tie Rod (less Tie Rod Ends)**

Type	Part No.	Length
1st.	3681850	47 9/16"
2nd.	3682119	46 25/32"
3rd.	3685160	46 1/16"

**IGNITION REVERSING SWITCH****1941-48 MODELS**

**REMOVAL OF REVERSING SWITCH FROM CARS & TRUCKS:** If necessary to remove the reversing switch on models equipped with this unit, make all changes as noted below (CAUTION—Condenser must be changed to new lower capacity unit when ignition system operated without reversing switch):

1. **Remove Reversing Switch from Starter**—Disconnect wires at reversing switch, remove switch from starter. Grind off unthreaded portion of switch attaching screws and re-install these screws in starter frame to plug holes.
2. **Discard Reversing Switch Harness**—Disconnect reversing switch wires at distributor and ignition coil and discard this harness.
3. **Install New Coil-to-Distributor Lead**—Connect new low tension wire, Part No. 5288968, between ignition coil terminal and outer terminal (away from engine) on distributor.
4. **Install new lower-capacity Condenser**—Remove and discard original .3 mfd. condenser, No. 1882239, (can be identified by figure .3 stamped on terminal clip). Install new .2 mfd. condenser, No. 1869704, (can be identified by longer lead), using same mounting clamp bracket.

► **CAUTION**—This lower-capacity condenser must be used in all ignition systems without reversing switch.

5. **Ground Distributor Breaker Plate**—Disassemble inner (toward engine) distributor terminal and remove insulator washer from terminal post. Remove paint and thoroughly clean distributor housing around terminal post so that a good ground secured at this point, re-install flat washer and nut on terminal post (omission of insulator washer will ground terminal to housing when nut tightened).

**CAB-OVER-ENGINE NOTES****1939-47 MODELS**

**REMOTE CONTROL TYPE GEARSHIFT LEVER:** Removal. Disconnect gearshift lever at top of en-

gine cover, loosen wire on cloth boot, raise boot above transmission cover tower. Remove nut from stub gearshift lever and raise reverse latch Bowden cable support onto top of lever. Use gearshift lever removing tool K-353 to remove lever assembly from transmission cover. When installing lever, see that end of reverse latch shift rod seats in upper part of 'U' shaped bracket at end of reverse latch Bowden cable and that retaining nuts are tight so that rod anchored in bracket.

**1939-40 MODELS**

**ENGINE COVER REMOVAL:** To take off engine cover proceed as follows: Remove seat cushion and seat back, take out 4 bolts on cover at gear shift lever and raise assembly to rear, remove floor mats on each side, remove engine cover screws (at rear and at front on each side). Lift engine cover out by raising forward end and pulling out towards front. **NOTE**—Right floor pan has hand hole for access to engine oil stick, crankcase oil filler pipe, and for lubrication of distributor and starter.

**Left Floor Pan Note**—Whenever floor pan removed, disconnect accelerator linkage by passing wire through accelerator spring and pull it upward exposing cotter pin retainer, then pull cotter pin out.

**1939-40 MODELS**

**FRONT COWLING REMOVAL:** Take out 6 retaining screws on each side (2 top screws nuts accessible through side ventilators—not used on late models), remove 2 screws at top of cowl and take off radiator filler cap. Lift cowl up and forward. When replacing cowl, rubber insulators at upper screws must be installed between cowl and dash at each side. **NOTE**—With cowl removed, radiator may be taken out allowing access to water pump, fan belt, harmonic balancer, generator and front engine mountings.

**1941-48 MODELS**

**STEERING GEAR LUBRICATION FITTING:** Steering gear on these models is mounted at sharp angle and special extension oiler, Part No. 3661598, is installed in steering gear housing to maintain correct lubricant level (higher level necessary to insure lubrication of upper bearing). This oiler must not be replaced with conventional filler plug or fitting (will cause failure of upper bearing).

**NOTE:**—To remove oil pan for work on engine, drop right hand tie rod. On Master Model FD with conventional axle it may be necessary to bend lip of front cross member or hoist engine so that oil pan will clear.

### MODEL IDENTIFICATION

**FLEET 'ECONOMY' MODEL NOTE:**—All models available with special Economy Engine and rear axle ratios as follows:

Model	Axis Ratio	Top Speed (No Governor)
FB, FC	4.11-1	
FC	3.82-1	65 M.P.H.
FB	3.82-1	60 M.P.H.
R	6.16-1	
R	5.43-1	51 M.P.H.

These models identified by special name plate on instrument panel stating that performance curtailed in interest of economy and by plate on valve rocker arm cover listing special tune up specifications (see note) and by prefix 'V' on engine number.

**NOTE:**—Economy engine fitted with special carburetor (painted gray) which has throttle stop pin limiting throttle opening to half-throttle and requires special spark plug gap, tappet clearance, and engine oil. See data below. Throttle stop pin may be removed to permit top speed if necessary. See article on carburetor in Carburetion Section.

**SERIAL NUMBER:**—First number—1001. Prefixes 1-FA-03 indicate assembly plant (1 to 21), Model (FB, FC, RA, RB, RC, RD), and month (01 to 12). Located on right front sill (passenger cars), or on dash (trucks).

**ENGINE NUMBER:**—First number—5500179. Prefixed by letter indicating model as follows: M—FC passenger cars. K—FB commercial cars. T—R Trucks. No prefix used on Master FA, FD passenger cars. Economy engines indicated by 'V' (V, VM, VK, VT). Number is stamped on boss on right side of block back of fuel pump.

### TUNE-UP

**COMPRESSION:**—Ratio 6.0-1 Std. Pressure 102 lbs. actual pressure at cranking speed or 90 lbs. minimum with all cylinders alike within 5-10 lbs.

**VACUUM READING:**—Gauge should show steady reading of 20-22" of Hg. with engine idling at 400 RPM

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC Type K-11. 14 mm. Metric type. Gaps—.032-.035" (Std.), .040" (Econ. Engine).

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.018". Cam Angle 35° (closed).  
Breaker Arm Spring Tension—17-21 ounces.  
Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—5° BTDC. with flywheel mark (steel ball) at indicator in inspection hole in right front face of flywheel housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw 1-2 turns open. Idle speed 400 Engine RPM. or 7 MPH.

Float Level— $\frac{3}{8}$ " top of float at free end to gasket seat on cover with needle valve seated.

Accelerating Pump—Outer hole—Summer, Inner hole—Extremely cold weather.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

Valve Timing Check: See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy. Model 431-P (Pass. Cars), 431-Y (Comml. & Truck). Connected to coil by armored cable.

Ignition Lock—Briggs & Stratton.

**COIL:** Delco-Remy Model 536-D. Mounted on right side of engine block directly above distributor.  
Ignition Current—2.5 amperes idling, 4.8 stopped.

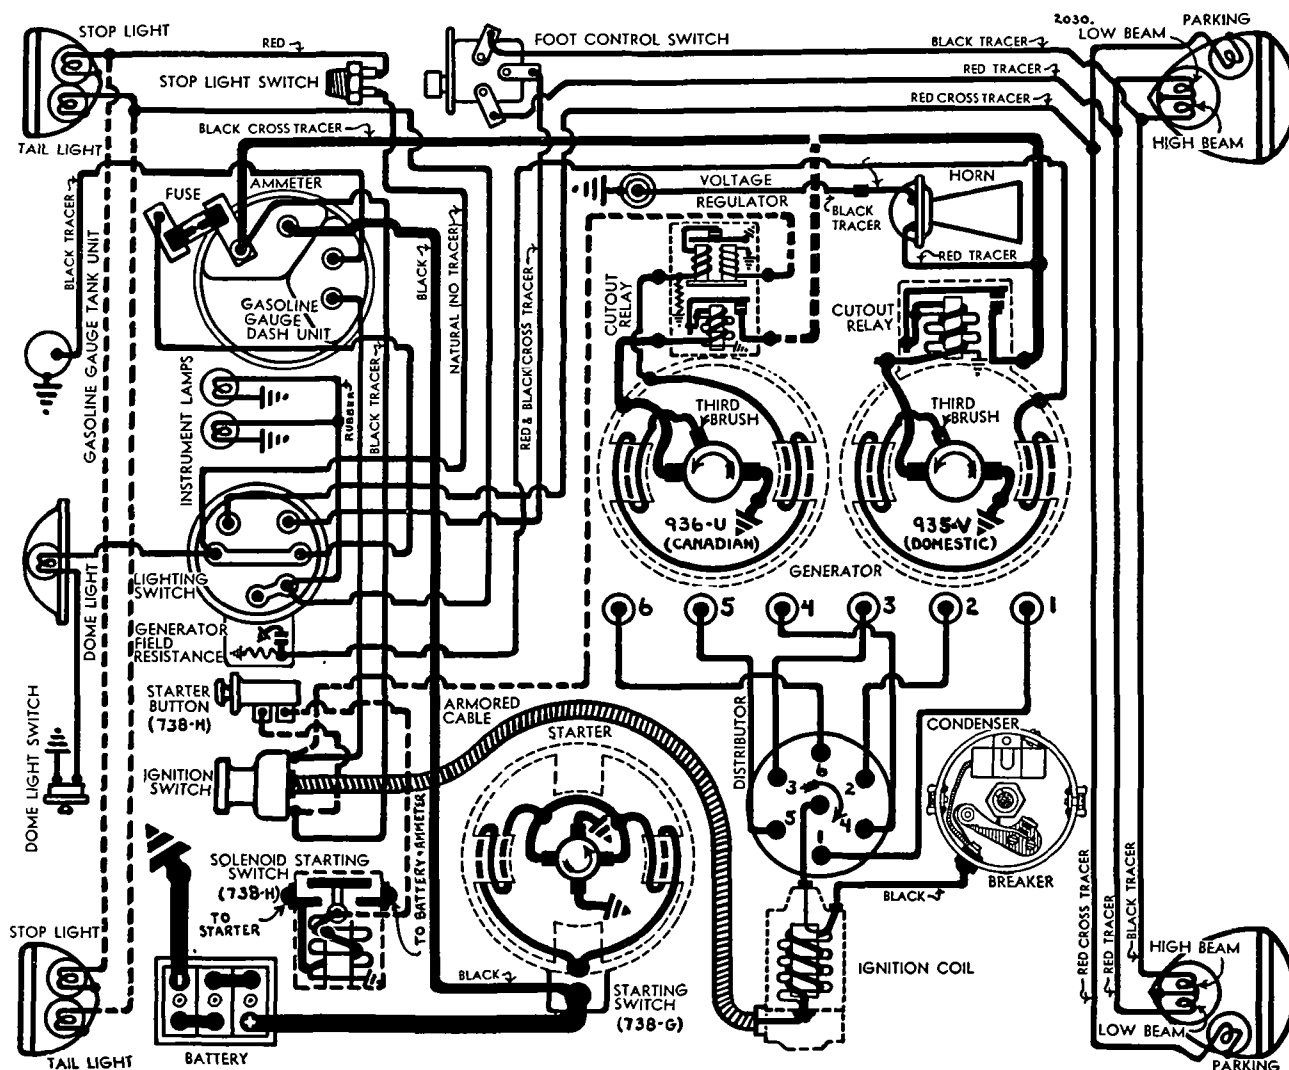

**CONDENSER:** Delco-Remy Part No. 1861709.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 645-T. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.  
Breaker Gap—.018". Limits .018-.024".  
Cam Angle or Dwell—Closed 35°. Open 25°. Breaker Arm Spring Tension—17-21 ozs.  
Rotation—Clockwise viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	2.25	600
14	1500	28	3000

CONTINUED ON NEXT PAGE

GENERATOR TO LIGHT SWITCH (& RESISTANCE) LEAD NOT USED ON STANDARD FC & TRUCK MODELS

## CONTINUED FROM PRECEDING PAGE

**Vacuum Spark Control Model 680-L**—Mounted on Octane Selector and linked to distributor advance arm. Provides additional advance except when engine is suddenly accelerated (retarded by return spring within unit) or at high speeds with wide open throttle (vacuum port in carburetor cut off by throttle valve shaft).

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	4.5"
8½°.....	17° .....	9-11"

**Octane Selector**—Consists of adjustment at distributor providing 10° advance or retard from standard ignition setting to compensate for fuel rating. See Ignition Timing below.

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen clamp bolt in advance arm (does not disturb Octane Selector mounting).

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting with Octane Selector set at 'O' as follows. See Octane Selector for final setting.

**Flywheel Degrees      Piston Position**

All engines ..... 5° BTDC ..... 0097" BTDC.

**To Set Timing (Neon Light)**—Recommended by manufacturer. Mount timing light so that it is directed on flywheel through inspection hole in right front face of housing. Clip one lead to #1 spark plug. Set Octane Selector at 'O' on scale by turning thumb nut. Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball timing mark on flywheel lines up with pointer on housing. Tighten clamp bolt.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0097" before top dead center, stop when steel ball timing mark on flywheel lines up with pointer in inspection hole in right front face of housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**Final Setting (Octane Selector)**—Provides 10° advance or retard from standard setting to compensate for fuel. For maximum performance and economy, road test car, advance Octane Selector setting until slight ping is noticeable when accelerating with wide open throttle.

**NOTE**—If ping is objectionable at 20-25 MPH speed, this can be eliminated by installing Vacuum Spark Control Stop or Spacer No. 602111. Provides 5° retard without same loss of economy resulting from retarding Octane Selector setting.

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Model 319-S superseded by Model 334-S (Std. Engines), Mod. 335-S (Economy Engine). 1¼" downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, adjust throttle stop screw so that speed is 400 R.P.M. Turn idle adjusting screw in until engine begins to miss, turn

screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop screw for correct speed.

**Accelerating Pump Setting**—Pump lever (under dust cover) has three holes for pump link engagement. Change setting for seasonal requirements as follows:

Outer Hole—Normal summer weather.  
Inner Hole—Extremely hot weather or high altitude  
Upper Hole—Extremely cold weather.

**Accelerator Linkage Adjustment:**—¼" clearance between top of accelerator slot and Starterator lever and ¾-½" free travel between end of Starterator link and starter switch spring seat must be maintained to provide proper accelerator lead for easy starting. See article on Starterator in Equipment Section.

For complete data, refer to Electrical Equipment Index.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1526603 (Pass. Cars), 1525978 (Comml. & Truck) oil-wetted type std., No. 1526764 (1525983 with governor) oil-bath type optional.

**Fuel Pump:**—AC. Type W #1521812. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC. Electric #1515207 dash unit; 1515405 tank unit (Pass. Cars), 1515427 tank unit (Comml.), 862723 tank unit (Comml. & Trucks).

For complete data, refer to Carburetion Equip. Index.

**BATTERY****STANDARD MODEL**

**BATTERY:**—(Std. Model FC) Delco, Type 13-AA. 6 volt, 13 plate, 86 ampere hour capacity (20 hour rate). Starting Capacity—102 amperes for 20 minutes. Zero Capacity—300 amperes for 3.0 minutes. Grounded Terminal—Negative (—) terminal. Location—On right side under front floor.

**BATTERY****MASTER & TRUCK MODELS**

**Master Models FA, FD; Comml. & Truck**—Delco Type 15-T or 15-X. 6 volt, 15 plate, 94 ampere hour capacity (20 hour rate). Starting Capacity—115 amperes for 20 minutes. Zero Capacity—300 amperes for 3.3 minutes. Grounded Terminal & Location—Same as above.

**STARTER**

**Delco-Remy Model 738-G, 738-H (RHD).** Armature No. 1847432.

**Drive**—Bendix Barrel Type No. A-1718.

**Cranking Engine**—65 R.P.M.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.0.....	65
12 ft. lbs.....	Lock.....	3.37.....	525

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch (Std., Comml. Trucks):** Delco-Remy No. 362941. On starter, operated by pedal.

**Master Models**—Starterator operated by accelerator pedal with Delco-Remy Type 1575 vacuum unit.

For complete data, refer to Electrical Equipment Index.

**RHD. Cars (738-H Starter)**—Delco-Remy Type 1503 magnetic switch controlled by Model 1378 switch.

For complete data, refer to Electrical Equipment Index.

**Ignition—Carburetion—Electrical****GENERATOR****STANDARD & TRUCK M DELS**

**Delco-Remy Model 946-C.** Armature No. 1841027. Third brush control type. Ventilated by drive pulley fan.

**Charging Rate Adjustment**—Loosen lock screw on commutator end plate, remove cover band, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate, tighten locking screw.

**Maximum Charging Rate**—15 amperes (cold), 1600 R.P.M. or 20-25 M.P.H.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold .....	15-17.....	7.9-8.2.....	1700
Hot .....	10-12.....	7.4-7.7.....	1800

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—16 ozs. (all brushes).

**Field Current**—3.5-4.5 amperes at 6.0 volts.

**Removal & Belt Adjustment:** See following page for data.

**GENERATOR****MASTER MODELS**

**Delco-Remy Model 935-V.** Armature No. 1854856. Third brush regulation, lighting switch control. Field resistance on switch is shorted out with lamps turned on, increasing generator output. Special switch position between 'Off' and 'Park' provides this high charging rate with lamps off. See 'Lamp Control Generators' in Equipment Section. Ventilated by fan on drive pulley.

For complete data, refer to Electrical Equipment Index. **Charging Rate Adjustment**—Third brush set for maximum safe output at factory. Manufacturer recommends that position of third brush not be changed. To check charging rate, ground field terminal on generator to frame, use test ammeter to check output, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate, remove field ground.

**Maximum Charging Rate**—20 amperes (cold), 15 amperes (hot), 2400 R.P.M., 26-27 M.P.H.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold .....	19-23.....	8.4-8.8.....	2800
Hot .....	16-20.....	8.1-8.5.....	3100

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Field Resistance**—Std. 1 ohm. Optional ¾ ohm and 1½ ohm. Should be changed only for unusual operating conditions, excessive night driving, etc.

**Removal & Belt Adjustment:** See following page for data.

**GENERATOR****CANADIAN MODELS**

**Delco-Remy Model 936-U.** Armature No. 1854856. Special fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is set for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data below and special article in Equipment Section. Do not operate generator on open circuit.

**Maximum Charging Rate**—As given in table below. To check charging rate, connect ammeter in charging line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

Performance Data			
	Amperes	Volts	R.P.M.
Cold .....	23-27	8.8-9.0	3000
Hot .....	18-23	8.2-8.7	3200
Rotation—Counter-clockwise at commutator end.			
Brush Spring Tension—22-26 ozs. (main), 16-20 ozs. (third brush).			
Field Current—2.3-2.6 amperes at 6.0 volts.			

**Removal (All models)**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment (All models)**—Belt adjusted in usual manner by loosening clamp bolt and swinging generator away from engine.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS**—Models 934-F, 961-N. Two brush types used with Double Core Type Voltage & Current Regulators 5599 (934-F), 5832 (961-N). Refer to 1938 Chevrolet article for complete data.

## CUTOUT RELAY

**Delco-Remy Model 265-G** (Used with 946-C & 935-V Generators). Mounted on generator.

For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.75-7.5 volts, 675 R.P.M., 8 M.P.H.

**Cuts Out**—0-2.5 amperes discharge current.

**Contact Gap**—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

## REGULATOR

**Delco-Remy Model 5588** (936-U Gen.). Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—3 ampere maximum discharge at 6.3 volts

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open circuit. **Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Guide Multi-beam, Pre-focused type. Headlamps aimed straight ahead. Upper and lower beams controlled by foot selector switch.

### Switches

**Lighting**—Delco-Remy Model 479-R (FC), 479-P (FB, R), 479-Y (FA, FD).

**Beam Selector**—Delco-Remy 471-P, 471-W (RHD).

**Stop Light**—Delco-Remy 476-U (FC, FA, FD), 474-Y (FB, R). Hydraulic type mounted at rear of brake master cylinder.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	32-21	2320
Parking .....	1½	55
Instrument .....	1	51
Stop, Tail .....	3	63
Dome .....	6	81

## MISC. ELECTRICAL

**FUSES**—Lighting—15 ampere on back of ammeter.

**Stop Light** (R-1½ ton model)—15 ampere in cartridge type holder in stop light lead (lead taken from ignition switch on this model).

**HORNS**—Klaxon Model K-31 Type 1359 (FC), K-26-L Type 1601 (FA, FD, FB, R). Vibrator type.

Type	Current at 6 volts	Air Gap
K-31-1359 .....	5.0-7.5	.020-.022"
K-26L-1601 .....	6.5-8.5	.025-.029"

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder, 'T' head.

**Bore**—3 5/16". **Stroke**—4".

**Displacement**—206.8 cu. ins. **Rated H.P.**—26.3.

**Developed Horsepower**—79 at 3200 R.P.M.

**Compression Ratio**—6.0-1 Std. cast-iron head.

**Compression & Vacuum Reading**—See Tune-Up.

**PISTONS**—Cast iron, tin-plated, cam ground type with greater clearance across pin bosses. Pistons are tin-plated to thickness of .0005-.001" after finishing and cannot be ground. Use finished replacement pistons.

**Weight**—28¾ ozs. (stripped). **Length**—3 11/16".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0145" Top. .0015-.003" Skirt.

**Replacement Pistons**—Finished pistons furnished .003", .010", .020", .030", .040" oversize.

**Fitting New Pistons**—Use feeler gauge at right angles to pin bosses to check clearance. Piston should pass through bore on .002" feeler and lock on .003" feeler.

**PISTON RINGS**—Two compression, one oil control ring per piston all above pin. Lower ring groove drilled radially with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. ....	¾"	.005-.015"	.0015-.003"
Oil Cont. ....	3/16"	.013-.021"	.0015-.0025"

**NOTE**—Compression ring face tapered and marked 'Top' on upper side. Install rings with this mark toward top of piston. Rings furnished .005", .010", .015", .020", .030", .040", oversize.

**PISTON PIN**—Diameter .990-.9895". Length 2 29/32".

Pin is locked in rod. Pin bosses in piston bronze-bushed. New pistons furnished with bushings and pins fitted. Pins furnished standard and .003", .005", .010" oversize.

**Pin Fit in Piston Bushing**—Light thumb push fit.

**CONNECTING ROD**—Weight 31½ ozs. Length 7½".

**Crankpin Journal Diameter**—2 1/8".

**Lower Bearing**—Spun-babbitt lined type.

**Clearance**—.0005-.002". Sideplay .004-.011".

**Bearing Adjustment**—Solid shims. Remove shims from each side equally to secure 'snap fit' (rod should snap from one side to the other with a light tap of 8 oz. ball pein hammer). Bearing loose if rod can be moved by hand.

**Installing Rods**—Install rods in same numbered cylinders as indicated by numbers stamped on rod and cap with these numbers together and toward camshaft side of engine. Oil hole in cap should be away from camshaft. Assemble oil dippers on rod caps with mouth of dipper toward camshaft.

**CRANKSHAFT**—3 bearing. Integral counterweights.

**Journal Diameters**—#1, 2 1/16"; #2, 2 1/8"; #3, 2 3/16".

**Bearing Type**—Steel-backed, babbitt-lined removable type. See Replacement Main Bearings.

**Clearance**—.001-.003".

**Replacement Main Bearings** New "Precision" type (do not require line-boring) furnished Std. size and .010" and .030" undersize.

**CAUTION**—Complete bearing set (3 bearings) must be installed initially on engines not previously equipped with "precision" bearings.

**Bearing Adjustment**—Shims. Remove shims until there is a heavy drag on the crankshaft, then replace one .002" shim.

**End Thrust**—Taken by center bearing. Endplay .004-.007". Adjusted by replacing bearing.

**NOTE**—Oil slinger clearance at rear end of crankshaft must be .002-.032".

**CAMSHAFT**—Three bearing. Gear driven.

**Journal Diameters**—#1, 1 13/16"; #2, 1 25/32"; #3, 1 5/8".

**Bearing Type**—#1 machined in crankcase. #2, 3 steel-backed, babbitt-lined type pressed in crankcase and staked to prevent movement.

**Clearance**—.002-.0035". Check at center bearing.

**NOTE**—When replacing center bearing manufacturer recommends use of special driver and alignment pin to align oil holes and distributor drive. Ream distributor hole and line-ream bearings. #1 bearing serviceable only by using special reamer to ream hole in crankcase and then installing bearing and new standard camshaft.

CONTINUED ON NEXT PAGE

## ENGINE

CONTINUED FR M PRECEDIN PA E

**End Thrust:**—Taken by thrust plate in back of camshaft gear. Endplay—Free to .003". Adjusted by changing gear position on shaft. See Timing Gear Note.

**Timing Gears:**—Steel (crankshaft), Bakelite-Fabric (camshaft). Backlash between gears .002-.005".

**NOTE**—Camshaft gear press fit on shaft. Remove and install gear in arbor press with camshaft out of engine using special sleeve to support hub. Use new thrust plate and press gear on shaft until no endplay (between gear and thrust plate) is perceptible but gear is free to turn.

**Camshaft Setting:**—Mesh marked tooth on crankshaft gear with marked space between teeth on camshaft gear. Marked tooth on crankshaft gear is third counter-clockwise from space in line with key way. Marked space on camshaft gear is thirteenth space clockwise from space in line with keyway. (12 teeth between these points.)

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 45/64"	11/32" (nom.)	5 7/32"
Exhaust	1 15/32"	11/32" (nom.)	4 1/32"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.316"	.001-.003"
Exhaust	30°	.319"	.002-.004"

**NOTE**—Stem sizes nominal. Check with special 'No-go' gauge.

**Valve Guides:** Straight type without sholder.

**Replacement Valve Guides:** New "precision" type (do not require rough reaming).

**Valve Guide Installation:**—See "Valve System" in Chevrolet Shop Notes.

**Valve Springs:**—Variable spaced coil type. Install with close-coil end toward cylinder head (down).

	Spring Pressure	Length
Valve Closed	45 lbs.	1 7/8"
Valve Open	98 lbs.	1 9/16"

**Valve Lifters:**—Single piece cast-iron with ground contact face. Oversize lifters not furnished.

**Pushrod Springs:**—Spring mounted on each pushrod above valve lifter. To remove pushrods, take out three bolts in spring retainer to release spring tension, remove 'C' washer under spring, withdraw pushrod. Install in same manner.

**Rocker Arms:**—Intake arms have left and right hand angles. Intake arm with left hand angle must be installed on #2, 4, 6 cylinders, right hand angle on #1, 3, 5 cylinders.

## VALVE TIMING

► **VALVE TAPPET CLEARANCE:** CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

**VALVE TIMING:** See Camshaft Setting.

**Intake Valves:**—Open 4° BTDC. Close 34° ALDC.

**Exhaust Valves:**—Open 47° BLDC. Close 4° ATDC.

**To Check Timing:**—No flywheel marks. With intake valve tappet clearance set at .006" (hot), #1 intake valve should begin to open with piston 4° or .0061" before top dead center when point on flywheel approximately 1½ teeth before dead center point lines up with pointer on inspection hole in right front face of flywheel housing.

## LUBRICATION

**LUBRICATION:**—Pressure and positive splash system used. Rifle-drilled passages in block to main bearings.

**Oil Pump:**—Vane type in crankcase driven through tongue-and-slot coupling from camshaft gear.

**Normal Oil Pressure:**—12 lbs. at 50 M.P.H.

**Oil Distributor:**—On left side of crankcase. Proportions oil between high pressure points (crankshaft, camshaft bearings, timing gears) and low pressure points (oil troughs, rocker arm shaft). Overflow pipe returns excess oil from rocker arm shaft.

**NOTE**—Oil pipe to rocker arm shaft passes through water jacket in center of block. When replacing check for water leaks at block connections.

**Checking Connecting Rod Oiling System:**—Check whenever oil pan taken off engine. Use special gauge to check dipper height (on connecting rod bearing cap) and oil trough height (same gauge). Use special target gauge to check oil nozzle jets (use water under pressure, bend nozzle with special tool until jet strikes hole in target gauge). Check nozzles with special height gauge after this adjustment to make certain that rods will clear.

**Crankcase Capacity:**—5 qts. refill.

**NOTE**—SAE #10-W oil recommended for Economy engine. Oil heavier than #20 must not be used at any time in this engine.

## CLUTCH

Own Make. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Molded-braided (FA, B, C, D), moulded (RA, B, C, D). Inside Diam. 6¼" (all), Outside Diam. 9" (FA, B, C, D), 10" (RA, B, C, D). Thickness 1/8".

**Adjustment:**—Clearance between pedal and underside of floor board must be 1/2". To adjust, loosen two nuts at side of pedal, move pedal stop forward or backward. Free movement of pedal must be 1". To adjust, loosen checknut (upper), and turn adjusting nut (lower) on clutch fork connecting link.

**Removal:**—Disconnect universal (see Note for Std. Model), remove transmission underpan and transmission rear cross member, lift propeller shaft and slide transmission out using pilot studs to hold transmission. Disconnect clutch linkage, take out cap screw holding throwout fork in flywheel housing, take out fork, force springs holding sleeve to throwout levers over ends of levers and remove sleeve. Take out nine cap screws mounting clutch cover on flywheel, turning out screws evenly until spring pressure is released.

**NOTE**—On Standard model, universal joint ring is riveted (On Master model universal joint is split

by taking bolts out of this ring) and rear end must be freed and pulled back to disengage drive shaft at splined joint back of universal.

## FRONT SUSPENSION

**Front Suspension Std. FC., Mstr. FD:**—Conventional 'I' beam front axle with semi-elliptic springs.

**Kingpin Inclination:**—7°10' plus or minus 1°. Angle on both wheels must be same within 1/2°.

**Caster:**—2¾° (Std.FC), 1¾° (FB), 2¾° (R), 3° (Mstr. FD) plus or minus 1/2°. Must be same within 1/4° on both wheels. Adjusted by inserting wedge shims between spring and spring pad.

**Camber:**—1° plus or minus 1/2°. Must be same within 1/4° on both wheels. No adjustment. Axle may be bent cold for minor corrections.

**Toe In:**—5/64-1/8". Adjusted in usual manner by turning tie rod to increase or decrease length.

**Steering Geometry:**—Inner wheel turned 23°, outer wheel 20°. Check tie rod ends and kingpin for looseness, replace steering arms.

**Front Suspension Master Model FA:**—Independent 'Knee Action' Type. See article in Steering Section for adjustments. Specifications below correct with car weight supported by horses at wheel spindle inner bearing cone (necessary for use of Chevrolet testing equipment).

See Front Suspension Section for complete data.

**Wheel Setting (Suspension Unit Height):**—Should be 5¾" (Spare at rear), 4¾" (With fender wells) from bottom of kingpin support to bottom of brake flange plate.

**Kingpin Inclination:**—7¾° crosswise.

**Camber:**—1/4°. No adjustment provided.

**Kingpin Caster:**—0°. Caster effect secured by trailing wheel behind suspension unit.

**Toe In:**—1/16-3/32" measured at hub height on center of tire tread.

**Steering Geometry:**—Inner wheel 23°, outer 20°

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Sector type (Standard, Comm., Trucks), Worm-and-Roller type (Master).

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Own design. Four-wheel hydraulic type. Hand brake lever applies rear wheel brakes. See article in Brake Section for complete adjustment instructions.

See Brake Section for complete data.

**Wheel Cylinders—Diameters, (Mstr. FA, FD & FB)** Front wheel 1¼", Rear wheel 1 3/16". (Std.FC) Front wheel 1½", Rear wheel 1 1/16". (R) Front wheel 1¼", Rear wheel 1½". Not interchangeable.

**Brake Drum Diameter:**—11".

**Lining:**—Semi-moulded (Std.FC), Moulded (Mstr. FA, FD), (FB). Width 1¾". Thickness 3/16". Length 22¾" per wheel.

**Brake Clearance:**—Adjusting cover backed off 4 notches from slight drag position.

**Hand Brake Adjustment:**—See Service Brake.

**NOTE:—Oil Pan Removal**—To remove oil pan for work on engine on Master Deluxe and Master models, the Engine-Side-Support Tie-Bar (cross-member under engine) should be dropped first. This cross-member is bolted to bottom of frame side rails.

### MODEL IDENTIFICATION

**FLEET 'ECONOMY' MODEL NOTE:**—Special economy engine available for all models. May be identified by prefix 'V' on engine number, and special Service Plate on Pushrod Cover listing special service specifications for this model. Carburetor used on this model has stop-pin which limits throttle opening to half-throttle.

**SERIAL NUMBER:**—First number 1001. Prefixes 1-GA-05, indicate assembly plant (1-21), Model (GA, GB, GC, SA, SB, SC, SD) and month (01-12). Located on right side of cowl under hood.

**ENGINE NUMBER:**—First number—1. Prefixed by a letter indicating model: 'K' Commercial Model GC, 'T' Model S trucks. Economy engines indicated by 'V' (VK, VT). Engine number stamped on boss on right side of cylinder block back of fuel pump.

### TUNE-UP

**COMPRESSION PRESSURE:** 112 lbs. at 65 RPM.

**VACUUM READING:** Steady 20-22" idling at 400 RPM.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC No. 47 (sup. K-11). 14 mm. Metric. Gaps—.040"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.018" Cam Angle 35° (closed). Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—5° BTDC. with flywheel mark (steel ball) at indicator in inspection hole in right front face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw 1-2 turns open, Idle speed 400 Engine RPM or 7 MPH. Float Level— $\frac{3}{8}$ " top of float to gasket seat on cover with needle valve seated. Accelerating Pump—Outer hole—Summer weather, Upper hole—extremely cold weather.

**Fuel Pump Pressure:** 3 lbs. maximum.

► **VALVE TAPPET CLEARANCE:** CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

Valve Timing Check: See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 435-F (pass.), 431-Y (commercial and truck). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792 (cylinder), #80203 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 536-D. Mounted on right side of engine directly above distributor.

Ignition Current—2.5 amperes idling, 4.8 stopped.

**CONDENSER:** Delco-Remy Part No. 1861709.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 649-G. Single breaker, 6 lobe cam, full automatic advance with vacuum spark control and Octane Selector.

Breaker Gap—Set at .018". Limits .018-.024".

Cam Angle or Dwell—Closed 35°. Open 25°.

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Clockwise viewed from above.

Distr. Automatic Advance Eng.

Degrees	R.P.M.	Degrees	R.P.M.
Start	300	1.75	600
25	1800	50	3600

**Octane Selector**—Consists of adjustment at distributor providing 10° advance or retard from standard ignition setting to compensate for fuel

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen clamp bolt in advance arm (Octane Selector mounting not disturbed).

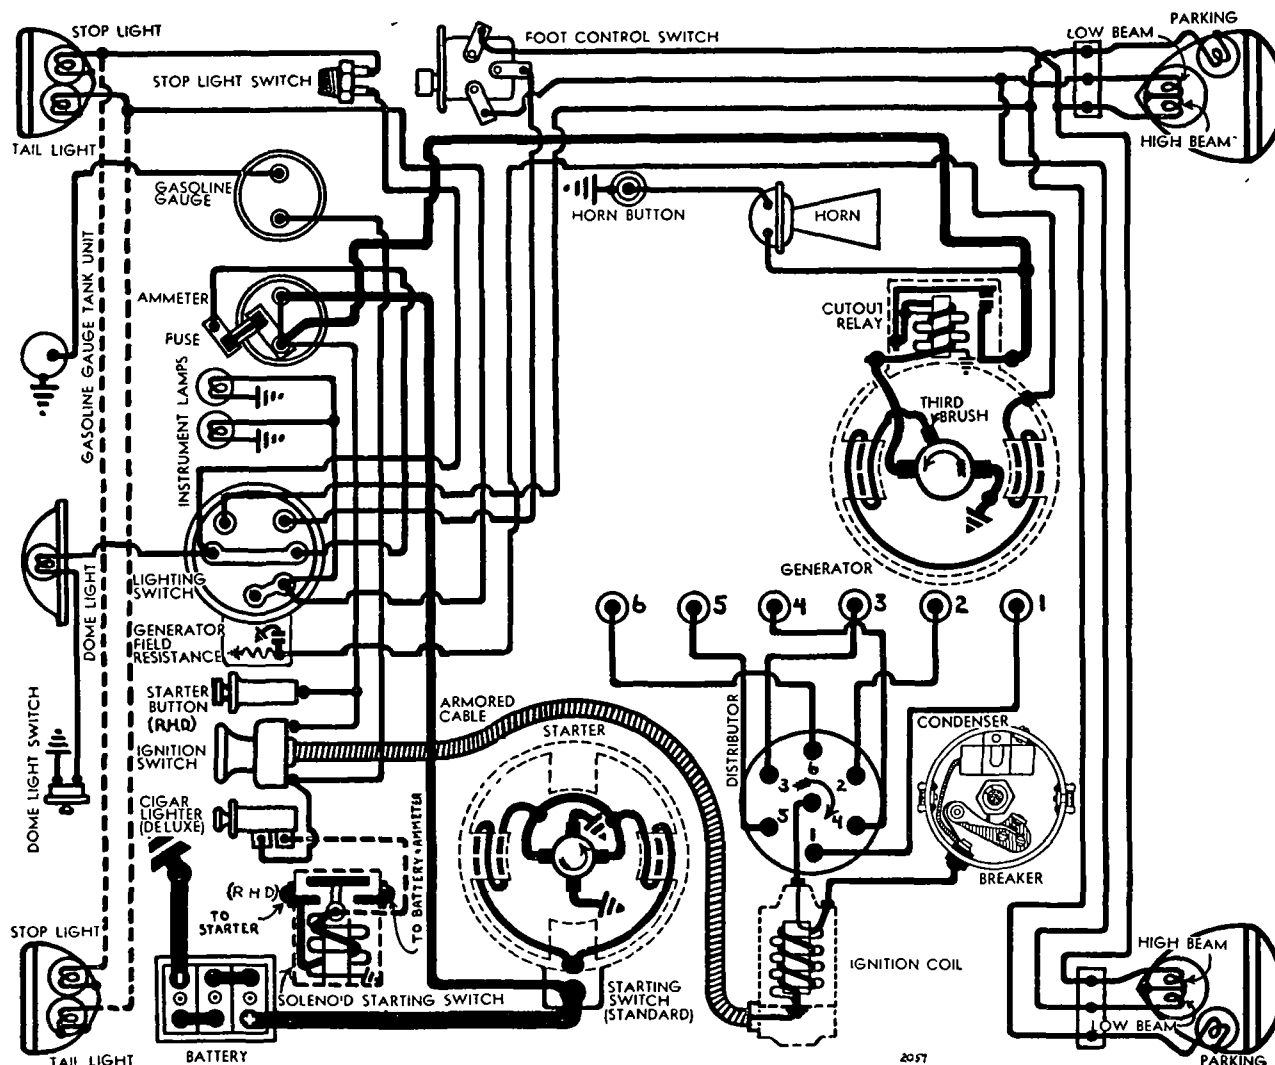

### IGNITION TIMING

Flywheel Degrees Piston Position

All Engines ..... 5° BTDC ..... .0091" BTDC.

**To Set Timing (Neon Light)**—Recommended by manufacturer. Mount timing light so that it is directed on flywheel through inspection hole in right front face of housing. Clip one lead to #1 spark plug. Set Octane Selector at '0' on scale by turning thumbnut. Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball timing mark on flywheel lines up with pointer on housing.

CONTINUED N NEXT PA E

## C NTINUED FR M PRECEDIN PA E

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center, stop when steel ball timing mark on flywheel lines up with pointer in inspection hole in right front face of housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.  
**Final Setting (Octane Selector)**—Advance setting until slight ping accelerating with full throttle.

## CARBURETOR

**Carter W1 (Chevrolet) Type 346-S (Std.), 358-S (Economy Engine).** 1¼" downdraft type.  
*For complete data, refer to Carburetor Index.*

► **Engine Running Backward Correction**—See *Field & Production changes in Carburetor article.*

**Settings (Idle Setting, Float Level, Accelerating Pump):** See *Tune-Up.*

**NOTE**—Lean and rich metering rods available to compensate for fuel or altitude requirements. See Jet Specification table in Carburetion Section.

**Throttle Cracking (GA):** Controlled by Starterator. Adjust linkage. *For instructions, refer to "Chevrolet Starterator" article in Electrical Equipment Section.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528013 (GA, GB), #1525978 (GC, SA, SB, SC, SD), oil-wetted type standard. #1526764 (GA, GB, GC, SA, SB, SC, SD, no governor), #1525983 (GC, SA, SB, SC, SD—with governor).

**Fuel Pump**—AC. Type AF #1523089. Diaphragm type.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric. Dash unit—#1515322 (GA), #1515536 (GB), #1510163 (GC, SA, SB, SC, SD). Tank unit—#1515405 (GA, GB—except 2 pass. coupe), #1515441 (GA, GB—2 pass. coupe only), #1515438 (GC). #1515427 (SA, SB, SC, SD).  
*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

## PASSENGER CARS

**BATTERY (GA, GB)**—Delco, Type 17-M. 6 volt, 17 plate, 100 AH. capacity (20 hour rate).  
**Starting Capacity**—115 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.5 minutes.  
**Grounded Terminal**—Negative (—) terminal.  
**Location**—Right side under front floor.

## C MMERCIAL &amp; TRUCKS

(GC, SA, SB, SC, SD) Delc , Type 15-X. 6 volt, 15 plate, 94 AH. capacity (20 hour rate).  
**Starting Capacity**—115 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.3 minutes.  
**Grounded Terminal & Location**—Same as above.

## STARTER

**Delco-Remy Model 739-A (Std.), 739-C (RHD).** Armature No. 1847432 (all models).  
**Drive**—Bendix Barrel Type A-1718.  
**Cranking Engine**—65 R.P.M.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ounces each.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal**—Flange mounted n right front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch (GA)**—Starterator perated by accelerator pedal with Type 1576 vacuum unit control (start—2" of HG.; full travel 5/16"—8.5" f HG.). See article in Electrical Equipment Section  
*For complete data, refer to Electrical Equipment Index.*

**Starting Switch (GB, GC, S)**—No. 1859020. Mounted on starter. Operated by starting pedal on toeboard.

**Starting Switch (739-C)**—Type 1528 Magnetic Switch controlled by Pull Switch 1378 on instrument panel.  
*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

## STANDARD

**Delco-Remy Model 948-R.** Armature No. 1853593. Third brush regulation, lighting switch control. Field resistance on switch is shorted out with lamps turned on, increasing generator output. Special switch position between 'Off' and 'Park' provides this high charging rate with lamps off. Ventilated  
**NOTE**—Lighting Switch Control Spacer (Part. No. 596831) may be installed on switch for cars requiring high charging rate (winter driving or high accessory load). Spacer holds switch button out in first position.

See article on Lamp Control Generators in Electrical Equipment Section.

**Charging Rate Adjustment**—Third brush set for maximum safe output at factory. Manufacturer recommends that position of third brush not be changed. To check charging rate, ground field terminal on generator to frame, use test ammeter to check output, shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate, remove ground.

**Maximum Charging Rate**—21 amperes (cold), 18 ampere (hot), 2400 R.P.M., 26-30 M.P.H.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	19-23	8.4-8.8	2800
Hot	16-20	8.1-8.5	3100

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 oz. (main), 16-20 (3rd).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment**—Belt adjusted in usual manner by loosening clamp bolt and swinging generator away from engine.

## GENERATOR

## CANADIAN MODELS

**Delco-Remy Model 960-G.** Fixed third brush control type with external vibrating voltage regulator.  
**NOTE**—Third brush is set for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data.

**Maximum Charging Rate**—As given in table below. To check charging rate, connect ammeter in charging line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

All other data as given above for 948-R Generator.

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATORS**—Models 934-F, 961-N. Two brush types used with Double Core Type Voltage & Current Regulators 5599 (934-F), 5832 (961-N). Refer to 1938 Chevrolet article for complete data.

**Other Types**—Model 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush types used with new Single Core Type Voltage & Current Regulators 1118229 (1106403), 1118237 (1105851,6). Refer to 1940 Chevrolet article for complete data.

## CUTOUT RELAY

## WITH 948-R GENERATOR

**Delco-Remy Model 265-G.** Mounted on generator.  
*For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.75-7.5 volts, 800 R.P.M., 8-9 MPH.  
**Cuts Out**—0-2.5 amperes discharge current.  
**Contact Gap**—.015-.025".  
**Air Gap**—.012-.017" with contacts closed.

## REGULATOR

## WITH 960-G GENERATOR

**Delco-Remy Model 5814 (960-G Gen.).** Double Core Type Voltage Regulator (With 'IGN' Terminal).  
*For complete data, refer to Electrical Equipment Index.*  
**Cutout Relay**

**Cuts In**—6.9-7.6 volts.  
**Cuts Out**—3 ampere max. discharge at 6.3 volts.  
**Contact Gap**—.018-.025".  
**Air Gap**—.018-.022" with contacts closed.

## Voltage Regulator

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be check at these points.  
**Checking & Adjustment**—See Elec. Equip. Section.  
**Contact Gap**—.015-.025".  
**Contact Spring Tension**—2.7-3.5 ounces.  
**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Guide, Multi-beam, pre-focused type. Upper and lower beams controlled by foot selector switch with lighting switch in full out position.

**Adjustment**—Aim headlamps straight ahead. Top of beam should be 36¼" (passenger cars), 39½" (GC trucks), 43½" (S trucks—or 42" if state law requires) above floor at 25 feet. Large adjusting nut located inside radiator shell in back of radiator

## Switches

**Lighting**—Delco-Remy Model 485-Z.  
**Foot Selector**—Delco-Remy Model 471-P.  
**Stop Light**—Delco-Remy Model 478-U. Hydraulic type mounted at rear of brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda N .
Headlamps	32-21	2320
Parking, Instrument	1½	55
Stop, Tail	3	63
Dome	6	81

## MISC. ELECTRICAL

**FUSES**—Lighting—20 ampere on back of ammeter.

**HORNS**—Klaxon Model K-16-2301 (GB), K-26-H-2251 (all others). Single horn, vibrator type.

Type	Current at 6 volts	Air Gap
K-16-2301	5-7.5 amperes	.020-.022"
K-26-H-2251	6.5-8.5 amperes	.025-.029"

**ENGINE****ENGINE SPECIFICATIONS:**—Own. 8 cyl., 'T' head type.  
**Bore**—3½". **Stroke**—3¾".**Displacement**—216.5 cu. ins. **Rated H.P.**—29.4.  
**Developed Horsepower**—85 at 3200 R.P.M. (GA, GB Master), 78 at 3200 R.P.M. (GC, SA, SB, SC, SD)  
**Compression Ratio**—6.25-1 Std. cast-iron head.  
**Compression & Vacuum Reading**—See Tune-Up.**PISTONS:**—New type Cast-iron, domed head, cam ground, tin-plated, with slipper type skirt. Recondition engines to take finished replacement pistons (hone for .003" oversize, bore and hone for other sizes). See Replacement Pistons.  
**Weight**—22.7 ozs. (without rings or pin). **NOTE**—Special pistons (1½ ozs. heavier than Pass. car type) used on Trucks after April 1, 1937.  
**Length**—3 59/64". Pistons balanced by grinding off bottom of skirt so that all pistons not equal (height above pin same for all pistons).  
**Removal**—Pistons and rods removed from above.  
**Clearance**—Top .006-.013". Skirt .0015-.003". See Fitting New Pistons.**Replacement Pistons:** See Chevrolet Shop Notes.**Fitting New Pistons:**—Use feeler gauges between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore on .002" feeler and lock on .003" feeler.**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Oil ring slotted or drilled type. Oil ring groove drilled with oil drain holes. Compression and slotted type oil ring furnished .005", .010", .015", .020", .030", .040" oversize; Drilled type oil ring .005", .010", .015", .020" oversize. Unit pkg. is 12 compression or 6 oil rings.**NOTE**—Compression rings have tapered face. Install with word 'Top' up.

Ring	Width	End Gap	Side Clearance
Comp.	⅛"	.004-.014"	.0015-.0035"
Oil Cont.	3/16"	.004-.014"	.0015-.0035"

**NOTE**—Use .002" feeler to check side clearance. Top ring should be very free, middle ring free, oil ring tight.**PISTON PIN:**—Diameter—.8645-.8650". **Length**—3 3/32". Pin is locked in rod and pin bosses in piston are bronze bushed. New pistons furnished with bushings and pins fitted. Pins furnished standard and .003", .005", .010" oversize.**Pin Fit in Piston Bushings**—Thumb push fit (not heated).**CONNECTING ROD:**—Length 6 13/16". **Weight** 28 ozs.  
**Crankpin Journal Diameter**—2.311-2.312".  
**Lower Bearing**—Spun-babbitt lined type.  
**Clearance**—.0005-.002". **Sideplay** .004-.011".**Bearing Adjustment:**—Solid shims. Remove shims to secure 'snap fit' (bearing tight to hand but rod should snap from one side to other with light tap of 8 oz. hammer), then replace .002" shim for clearance. With correct adjustment, rod should move from side to side with two-finger pressure.**Installing Rods:**—Install rods in same numbered cylinders indicated by numbers on rod and caps with these numbers together and toward camshaft side. Assemble oil dippers on rod caps with mouth of dipper toward camshaft.**CRANKSHAFT:**—4 bearing. Integral counterweights. Harmonic Balancer mounted on forward end.  
See Chevrolet Special Shop Notes for balancer data.**Journal Diameters**—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".  
**Bearing Type**—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap. **Clearance**—.002-.004".► **NOTE**—Replacement "precision" type bearings do not require line-boring or reaming.**Replacement Bearings:** New "precision" type furnished Std. size and .002", .010", .020", .030" Undersize. **NOTE**—Bearings marked on inner surface of dowel: "V" for #1 and #4, "I" for #2 and #3.► **CAUTION**—Complete bearing set (4 bearings) must be installed on engines not previously equipped with replacement "precision" bearings.**Bearing Adjustment:**—Solid shims. Remove shims until slight drag on crankshaft secured, then replace one .002" shim for clearance. If unequal number, install extra shim on camshaft side.**End Thrust:**—Taken by #3 main bearing. Adjusted by replacing bearing. Endplay .004-.007".  
**NOTE**—Oil slinger clearance at rear end of crankshaft must be .002-.032".**CAMSHAFT:**—Four bearing. Gear driven.**Journal Diameters**—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".**Bearing Type**—Steel-backed, babbitt-lined bushings. Pressed in crankcase and staked to prevent movement.**NOTE**—Line-ream new bushings  
**Clearance**—.002-.004".**End Thrust:**—Taken by thrust plate behind camshaft gear. Endplay Free to .003". Adjusted by changing gear position on shaft.**Timing Gears:**—Crankshaft gear Steel. Camshaft gear Bakelite & Fabric composition. Gear run-out (maximum) .003" crankshaft gear, .004" camshaft  
**Backlash**—.002-.005".

See Chevrolet Special Shop Notes for timing gear installation instructions.

**Camshaft Setting:**—Gears marked. Mesh marked tooth of crankshaft gear with marked space between teeth on camshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 41/64"	.3407-.3417"	6 5/64"
Exhaust	1 15/32"	.3397-.3407"	4 13/16"

	Seat Angle	Lift	Stem Clearance
Intake	30°	5/16"	.001-.003"
Exhaust	30°	5/16"	.002-.004"

**NOTE**—Exhaust valves marked 'GM37EXHAUST'**Valve Guides:** Straight type without shoulder.**Replacement Valve Guides:** New "precision" type (do not require rough reaming).**Valve Guide Installation**—See "Valve System" in Chevrolet Shop Notes.**Valve Springs:**—Check by compressing springs to 1½". Pressure should be 104-112 lbs.

	Spring Pressure	Spring Length
Valve Closed	42-48 lbs.	1 7/8"
Valve Open	94-102 lbs.	1 9/16"

**NOTE**—Install spring with close-coil end toward cylinder head. Use round springs caps on intake valves, hexagonal caps on exhaust valves.**Valve Lifters:**—Cast-iron type with ground contact face. Oversize lifters not furnished.**Pushrod Springs:**—Spring mounted on each pushrod above valve lifter. To remove pushrods, take out

three bolts in spring retainer, remove 'C' washer under spring, withdraw pushrod. Install in same manner.

**Rocker Arms:**—Two types of intake rocker arms used. Install arms with slight angle toward front of engine for cylinders #1, 3, 5; angle toward rear for #2, 4, 6. All exhaust rocker arms are straight. Assemble rocker arm shafts with open ends toward center of engine.**VALVE TIMING**► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.**Cars & Trucks**—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".**Trucks (for continuous full throttle operation)**—.010" Intake, .020" Exh., with engine "normalized".**Economy Engine**—.010" Intake, .016" Exhaust, with engine "normalized".**VALVE TIMING:** See Camshaft Setting.**Intake Valves**—Open 9° BTDC. Close 29° ALDC.**Exhaust Valves**—Open 52° BLDC. Close 1° BTDC.**To Check Timing**—No flywheel marks provided. With intake tappet clearance set at .006", #1 intake valve should open with piston 9° or .0294" BTDC. when point on flywheel approximately 3.475 teeth before top dead center lines up with indicator in inspection hole in right front face of flywheel housing.**LUBRICATION****LUBRICATION:**—Pressure and positive splash system similar to previous models except for oil pump.**Oil Pump:**—New gear type located in crankcase. Install pump gears with ground face toward cover.**Normal Oil Pressure:**—13.5 lbs. at 50 M.P.H.**Oil Pressure Regulator:**—Located in oil pump cover. Operates at 75 lbs. Not adjustable. Pressure normally controlled by Oil Distributor.**Oil Distributor:**—Mounted on left side of crankcase. Proportions oil between high pressure points (crankshaft bearings, camshaft bearings, timing gears) and low pressure points (connecting rod oil troughs and rocker arms). Overflow pipe returns excess oil See Chevrolet Special Shop Notes for installing oil lead (through block) to valve rocker arms.**Checking Oiling System:** Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height and Aim each time oil pan removed. See "Oiling System" in Chevrolet Shop Notes.**Crankcase Capacity:**—5 quarts.**CLUTCH****CLUTCH:**—Own make. Single plate, dry disc type. See Clutch Section for complete data.**Facings**—Asbestos composition. 2 required. Inside Diameter 6¼". Outside Diameter 9" (GA, B, C), 10" (SA, B, C, D). Thickness ⅛".**Adjustment (GA, GB)**—Pedal free travel must be 1". To adjust, loosen locknut and turn adjusting nut on connecting link stud at clutch throw-out fork.

CONTINUED N NEXT PAGE

## C NTINUED FR M PRECEDIN PA E

(GC, SA, SB, SC, SD)—Loosen locknut on lever at lower end of clutch pedal, back off locknut on adjusting screw on lower end of lever, turn adjusting screw for 1" free travel.

**Removal:**—Remove transmission (see Transmission Section). With flywheel underpan off, take out alternate clutch mounting screws, then turn remaining screws out evenly, remove clutch from below.

**NOTE**—On Model GC, block levers with 1/32" washers so levers will clear.

## TRANSMISSION

## PASS. CARS &amp; HALF-TON

**TRANSMISSION (GA, GB, GC):**—Own make. Constant mesh, helical gear (second only), Synchro-mesh (second and high). Low and reverse—sliding spur. See Transmission Section for complete data.

**Removal:**—Disconnect pull rods on brake cross-shaft, remove left hand cross-shaft bracket, remove shaft. Take out speedometer cable and gear assembly (screwed into universal joint retainer). Take out screws in ball collar flange, slide ball and collar back on propeller shaft, remove bolts in universal joint ring, split joint. Remove top mounting bolts in flywheel housing and install guide pins, remove flywheel underpan, take out lower mounting screws. Take out bolts holding transmission mounting and support to cross-member. Slide transmission straight back on guide pins and remove.

**NOTE**—On Model GC with 4 Spd. Transmission, remove transmission support cross-member and take out 2 screws on brake cylinder bracket on transmission case.

## TRANSMISSION

## THER TRUCKS

**TRANSMISSION (SA, SB, SC, SD):**—Own make. 4 speed, sliding spur gear type (all speeds). This transmission optional on Model GC. See Transmission Section for complete data.

**Removal:**—Same as for passenger cars (above) except that nuts holding front propeller shaft assembly to cross-member should be removed and front propeller shaft dropped down. Split universal joint by removing trunnion bearing lock springs and driving trunnion bearings out.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Own make. Plain bushing type. One used (except SA, SB, SC, SD with additional intermediate universal on frame cross-member). See Universals Section for complete data.

## REAR AXLE

## PASSENGER CARS

**REAR AXLE (GA, GB):**—Own make. Semi-floating, Hypoid gear type with Torque Tube drive. See Rear Axle Section for complete data. Ratio—4.22-1 (GA), 3.73-1 (GB). 3.73-1 axle marked by prefix 'C' on serial number on differential carrier. No prefix for 4.22-1 axle. Backlash—.004-.008". Screw adjustment.

**Removal:**—Jack up rear end of car (or use chain hoist), remove rear wheels, disconnect hydraulic brake line and brake cables, disconnect shock absorber links at spring seats, disconnect nuts on 'U' bolts holding rear springs to spring seats. Disconnect spring shackles and drop springs, pull axle assembly back to free shaft at splined joint in rear of transmission.

**Wheel Bearing Adjustment:**—None (sealed type).

**Axle Shaft Removal:**—Wheel bolted directly to flange on outer end of shaft. Axle shaft retained by 'C' washer at inner end in differential case. To remove shaft, remove wheel, take out two machine screws in brake drum, remove drum, install clamp on wheel brake cylinder. Take off axle housing cover, remove differential pinion shaft screw, pull out pinion shaft, remove axle shaft spacer. Push axle shaft in, remove 'C' washer at inner end, pull shafts out. When installing new shaft, use new bolts in axle flange (pressed in flange), new oil deflector, and new gasket. Shellac or paint both sides of gasket for good oil seal and line up extra hole (center of three closest together) with notch in hub flange in axle shaft. Oil pocket in oil deflector should also be in line with this notch.

**NOTE**—Axle shaft spacers furnished in three sizes: 1.0105", 1.0195", 1.0295" across ground faces. Select spacer so that clearance between ends of axle shafts and spacer is Free to .014".

## REAR AXLE

## HALF-TON TRUCK

**REAR AXLE (GC):**—Own make. Semi-floating, spiral bevel gear type with torque tube drive.

See Rear Axle Section for complete data.

Ratio—4.11-1 or 3.82-1 Std. 3.82-1 axle identified by prefix 'F' in front of serial number on differential carrier (no prefix for 4.11-1 axle).

Backlash—.004-.008". Screw adjustment.

**Removal:**—Same as for passenger car models above.

## REAR AXLE

## OTHER TRUCKS

**REAR AXLE (SA, SB, SC, SD):**—Own make. Full floating, Spiral bevel gear type with torque tube drive. See Rear Axle Section for complete data.

Ratio—5.428-1 or 6.166-1 Std. 6.166-1 axle identified by prefix 'H' in front of serial number on differential carrier (no prefix for 5.428-1 axle).

Backlash—.008-.010". Screw adjustment.

**Removal:**—Remove two nuts holding front propeller shaft to cross-member, drop unit, remove capscrews holding ball collar to housing, slide ball back on rear axle shaft housing, remove trunnion bearing lock rings, drive trunnion bearings from place, split universal joint and drop rear axle propeller shaft. Remove rear yoke from end of rear axle propeller shaft and ball and collar from housing. Remove axle shafts (see below), remove nuts holding differential carrier in housing, pull third member assembly (differential carrier and shaft assembly) from housing.

**Axle Shaft Removal:**—Remove capscrews which attach axle shaft flange to wheel hub. Install two screws in holes located between regular mounting screw holes, turn screws in to start axle shaft, remove shaft. Wheel bearing adjustment not disturbed by axle removal.

**Wheel Bearing Adjustment:**—With axle shaft removed, tighten adjusting nut (within wheel hub on outer end of axle housing) moderately tight while rotating hub, install star lock on adjusting nut, note alignment of lock tangs with notches in outer edge of adjusting nut, bend lock tang into notch on adjusting nut. Rotate wheel hub by hand to note that bearings seated and that wheel turns freely. Install locknut and draw up tight, bend lock tang into notch in locknut.

**NOTE**—Wheel bearings now lubricated from differential case (no oil seal used at differential side bearing). Soft stamped steel plate used under hub bolt heads, and wheel bearing oil seal is spring-backed to retain lubricant. When replacing axle shaft, see that new type .020" vellumoid gasket is in place between axle flange and wheel hub.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Hydraulic single-acting type std. on all models except GA (GA has double acting shock absorber built in the Knee Action). See Shock Absorber Section for complete data.

Model	Front	Rear
GA	1068386, 7	1431V, W
GB	1200F, N	1200M, L

## FRONT SUSPENSION

**Front Suspension (GA):**—Chevrolet Knee-Action type. See Front Suspension Section for complete data.

**NOTE**—Specifications below correct with car weight supported on horses at inner bearing cone (wheels removed for use of special test equipment).

Height (Suspension Unit Setting)—4 7/8" from bottom of kingpin support to bottom of brake flange. Kingpin Inclination—7° 45' crosswise.

Caster—0° (kingpin). Caster effect secured by trailing wheel center.

Camber—1/4° (1/4-3/4°). No adjustment.

Toe In—1/16-3/32". Adjustable.

Steering Geometry—Inner wheel 23°. Outer 20°.

**Front Suspension (GB, GC, SA, SB, SC, SD):**—Conventional 'I' beam section front axle with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° 10' crosswise.

Caster—2 1/4° (GB), 1 3/4° (GC), 2 3/4° (SA, B, C, D) plus or minus 1/2° and equal for both wheels within 1/4°.

Camber—1° plus or minus 1/2° and equal within 1/4° for both wheels. Axle may be bent cold for minor corrections.

Toe In—5/64-1/8". Adjusted in usual manner by turning tie rod to increase or decrease length.

Steering Geometry—Inner wheel 23°. Outer 20°.

## STEERING GEAR

**Steering Gear:** (GA) Saginaw Worm-and-Roller type. (Other Models) Saginaw Worm-and-Sector type.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Own design, hydraulic type. Hand brake lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinders—Diameters—1 1/4" (front—all), 1 3/16" (rear—GA, GB, GC), 1 1/2" (rear—SA, SB, SC, SD). Not interchangeable.

Drum Diameter—11" (GA, GB, GC), 12" (SA, B, C, D—front), 14" (SA, B, C, D—rear).

Lining—Moulded type. Special lining on SA, B, C, D.

Model	Width	Thickness	Length
GA, GB, GC	1 3/4"	3/16"	22 7/8"
SA, B, C, D Frt.	2"	.243-.250"	28 7/8"
" Rear	3"	.250"	35 13/16"

**NOTE**—Lengths as given are per wheel.

Clearance—Adjusting cover backed off 4 notches (GA, GB, GC all wheels), 5 notches (SA, SB, SC, SD front wheels), adjusting pinion shaft backed off 3/4 turn (SA, SB, SC, SD rear wheels) from slight drag position.

**Hand Brake:**—See Service Brakes above.

**NOTE:—Oil Pan Removal**—On passenger car models, the Engine-Side-Support Tie-Bar (cross-member under engine) should be dropped first. This cross-member bolted to bottom of frame side rails.

### MODEL IDENTIFICATION

**FLEET MODEL NOTE:**—Special Economy engine available for all models. Engine identified by code letter 'V' stamped ahead of engine number and special tune-up specification plate on Push Rod Cover listing special tune up data for this model. Engine standard except for these specifications and Carburetor which has stop-pin designed to limit throttle opening to half-throttle.

**SERIAL NUMBER:**—First number 1001. Prefixes 1-HA-03, indicate assembly plant (1-21), Model (HA, HB, HC, HD, HE, TA, TB, TC, TD) and month (01-12). Located on right side of body under hood (front of dash—Trucks).

**ENGINE NUMBER:**—First Engine number (Flint) 1,187,822, (Buffalo) 1. Prefixes as follows: Flint—Passenger car (none), ½ Ton Commercial (K). All others (T). Buffalo—Passenger cars (B), ½ Ton Commercial (BK). All others (BT). Economy engine indicated by 'V' thus VK, VKB, etc. Engine number stamped on boss on right side of block

### TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 cast-iron head.  
Pressure—112 lbs. at 65 R.P.M. (cranking speed), 159 lbs. max. (each cylinder within 5-10 lbs.).

**VACUUM READING:**—Steady 20-22" with engine idling.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC No. 46. 14 mm. Metric type.  
Gaps—.040".

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.018" Cam Angle 35° (closed).  
Automatic Advance—25° max. at 1800 RPM (distr.).  
Vacuum Advance—7½° distr. with 8-10" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—5° BTDC. with flywheel mark (steel ball) at inspection hole on right of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw 1-2 turns open. Idle speed 400 Engine RPM or 7 MPH.  
Float Level—¾" top of float to gasket seat on cover with needle valve seated.  
Accelerating Pump—Lower hole (med. stroke) normal.  
Fuel Pump Pressure. 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Wind up spring just enough to slip over pin on manifold (approximately ½ turn)—**IMPORTANT**—excessive tension may cause detonation, sticking of heat control valve and poor performance.

**Anti-rattle Spring Installation**—Part No. 602799. Should be installed to stop noise (do not increase thermostatic spring tension). To install, rotate valve to 'heat off' position, insert spring in valve shaft slot, hold counterweight 3/16" above 'heat on' position, bend anti-rattle spring until it just contacts stop pin on manifold.

**VALVE TAPPET CLEARANCE:** *CAUTION*—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

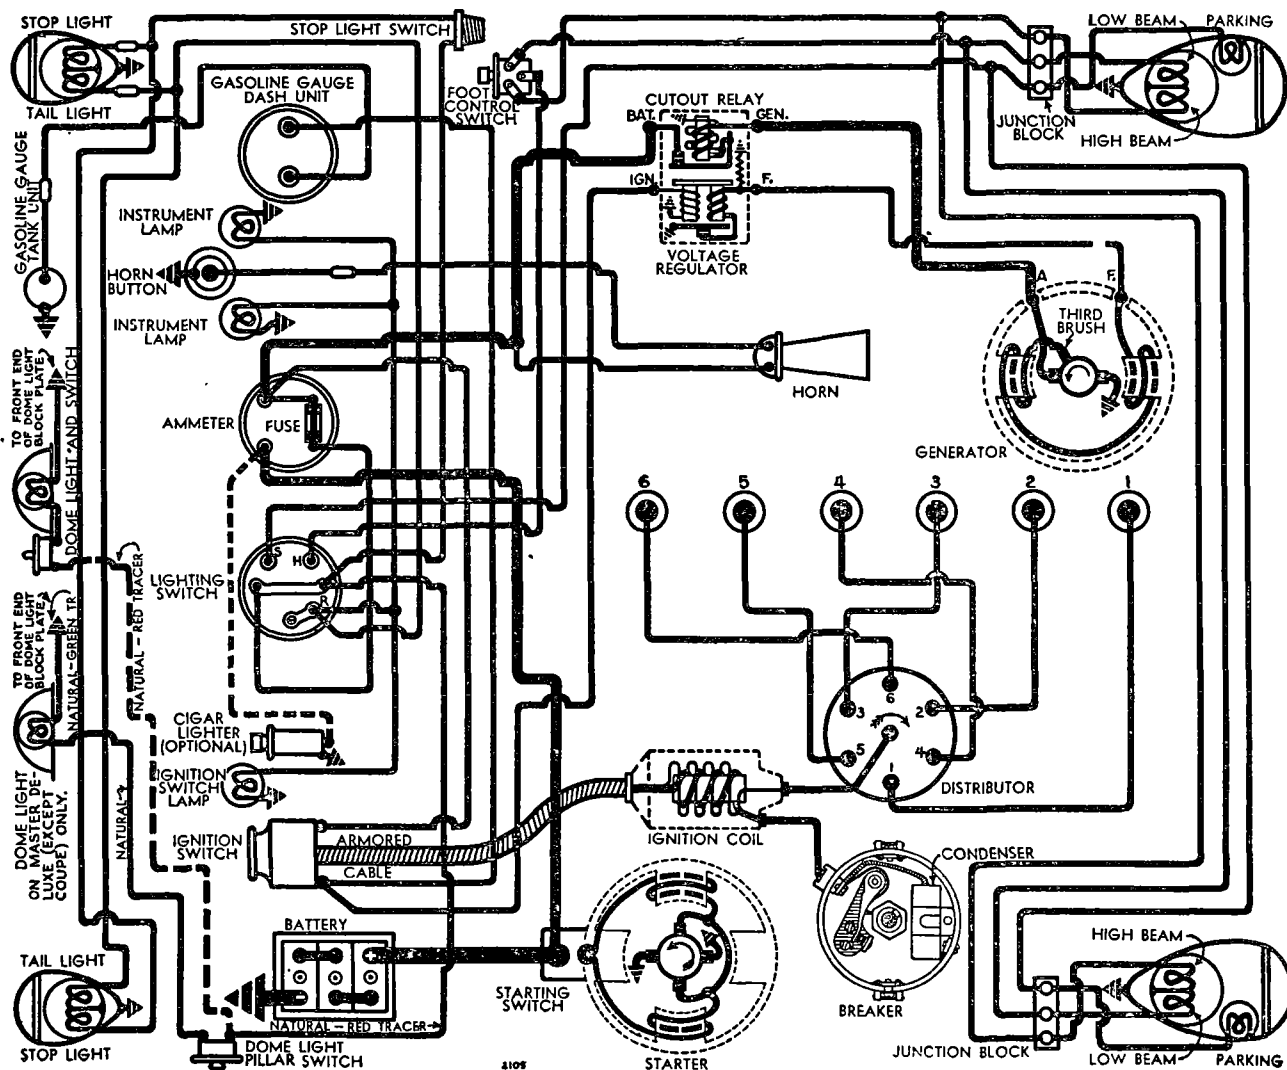

Valve Timing Check: See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy model 435-F (passenger cars), 431-Y (commercial and trucks). Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton No. 45792 (Lock cylinder). Key Series 8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 536-D. Mounted on right side of engine above distributor.

Ignition Current—2.5 amperes idling, 4.8 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110008. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

Breaker Gap—Set at .018". Limits .018-.024".

Cam Angle or Dwell—35° (closed), 25° (open).

Breaker Arm Spring Tension—20 ounces.

Rotation—Clockwise viewed from top.

Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.75.....	600
25.....	1800	50.....	3600

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Vacuum Spark Control Model 681-F** (early cars with 1/8" tubing), 1116009 (cars with 3/16" tubing). On Octane Selector and linked to distributor advance arm. Provides additional advance except when engine is suddenly accelerated (retarded by return spring within unit) or at high speeds with wide open throttle (vacuum port in carburetor cut off by throttle valve shaft).

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start . . . . .	0° . . . . .	45"
7 1/2° . . . . .	15° . . . . .	8-10"

**Octane Selector**—Consists of adjustment at distributor providing 10° advance or retard from standard ignition setting to compensate for fuel

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen clamp bolt in advance arm (Octane Selector mounting not disturbed).

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting with Octane Selector set at '0' as follows. See Octane Selector for final setting.

Flywheel Degrees	Piston Position
All Engines . . . . .	5° BTDC . . . . .
	.0091" BTDC.

► **Excessive Pinging Correction**—See *Field & Production changes in Carburetor article*.

**To Set Timing (Neon Light)**—Recommended by manufacturer. Mount timing light so that it is directed on flywheel through inspection hole in right front face of housing. Clip one lead to #1 spark plug. Set Octane Selector at '0' on scale by turning thumbnut. Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball timing mark on flywheel lines up with pointer on housing.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center, stop when steel ball timing mark on flywheel lines up with pointer in inspection hole in right front face of housing, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**Final Setting (Octane Selector)**—Advance setting until slight ping accelerating with full throttle

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Model 391-S, (Std. all models), 358-S (Econ. models). 1 1/4" down-draft type. For data, refer to *Carburetor Index*.

► **Engine Running Backward Correction**—See *Field & Production changes in Carburetor article*.

**Idle Adjustment**—With engine warm and choke valve wide open, adjust throttle stopscrew to idle engine at 400 R.P.M. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1-2 turns of screw from inner seated position. Recheck idle speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Settings as follows:

Lower Hole (med. stroke)—Std. gasoline.

Upper Hole (long stroke)—Cold climates.

Inner Hole (short stroke)—Hot climates, high test fuel or high altitudes.

**Metering Rods & Jets**—Refer to *Carter Carburetor Jet Specification Table in Carburetor Section for data*.

**Throttle Cracker:**—Consists of a lug on the starting pedal linkage which engages the accelerator linkage to open throttle 1/3 for starting. No adjustment

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1528524 (Pass cars), 1525978 (Trucks) oil-wetted type Std., #288 (all models) #1525983 (Comm.) heavy duty oil bath type Optl.

**Fuel Pump:**—AC. Type AF #1523089 diaphragm type. AM #1523271 fuel and vacuum pump Optl. For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge:**—AC. Electric. Dash Unit—(HA, HB) #1515345, (all others) #1515207. Tank Unit—(HA, HB—except coupe) #1515463, (HA, HB—coupe only) #1515464, (com'l & trucks) #1515465, (panel & OOH) #1515466, (com'l chassis) #1515467. For complete data, refer to *Carburetion Equip. Index*.

**BATTERY****PASSENGER CARS**

**Delco 17-M** (Chevrolet), 17-P (Delco Replacement). 6 volt, 17 plate, 100 amp. hr. capacity (20 hr. rate). Starting Capacity—115 amperes for 20 minutes. Zero Capacity—300 amperes for 3.3 minutes. Five second voltage—4.2 volts. Grounded Terminal—Negative (—) terminal. Grounded to rear of transmission case. Dimensions—Width 7". Lgth. 10 9/16". Hgt. 7 7/16". Location—Right side under front floor.

**BATTERY****COMMERCIAL & TRUCKS**

**Delco 15X** (Chevrolet), 15AA (Delco Replacement). 6 volt, 15 plate, 94 AH capacity (20 hour rate). Grounded Terminal—Negative (—) terminal. Dimensions—Width 7". Length 8 15/16". Height 8 11/16". All other data same as passenger car

**STARTER**

**Delco-Remy Model 1107001.** Armature No. 1867897. Drive—Overrunning clutch and manual pinion shift operated by starting pedal. Rotation—Counter-clockwise at commutator end. Cranking Engine—65 R.P.M. Approx. 150 amps., 5.5 volts. Brush Spring Tension—24-28 ounces each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs. . . . .	5000 . . . . .	5.0 . . . . .	.65
12 " " " " " " Lock . . . . .		3.37 . . . . .	525

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, disconnect cable and ammeter lead, take out flange mounting capscrews

**Starting Switch:**—Part No. 820052. Mounted on starter. Operated by starting pedal.

**GENERATOR****PASSENGER CARS**

**Delco-Remy Model 1100004.** Armature No. 1866789. Fixed third brush type with external vibrating voltage regulator.

**NOTE:**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment:**—Adjusted by changing setting of voltage regulator. See Regulator data.

**Ignition—Carburetion—Electrical**

**Maximum Charging Rate:**—As given in table below. Reached at car speed of 30-35 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE:**—Do not operate generator on open circuit.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold . . . . .	26-30 . . . . .	8.0 . . . . .	3400
Hot . . . . .	25-28 . . . . .	8.0 . . . . .	3600

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot, one clamp bolt.

**Belt Adjustment:**—Loosen clamp bolts and pivot bolt. Swing generator out until belt sideplay midway between fan and generator pulleys is 1 1/2".

**GENERATOR****COMMERCIAL & TRUCKS**

**Delco-Remy Model 948-R.** Third brush regulation, lighting switch control type. Field resistance on switch is shorted out with lamps 'on', increasing generator output. Special switch position between 'Off' and 'Park' provides this high charging rate with lights off. Ventilated by fan on drive pulley. Refer to preceding 1939 Chevrolet article for all data on this generator and 265-G Cutout Relay.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATORS:**—Model 1106403 (City Police), 1105851 or 1105856 (State Police.) Two brush types used with new Single Core Type Voltage & Current Regulator.

Refer to 1940 Chevrolet article for complete data.

**Other Types:**—Model 934-F, Armature 1861851 (City Police & Delivery); Model 961-N, Armature 1857866. Two brush types with vibrating voltage and current regulator control.

**Charging Rate Adjustment:**—None. See Regulator.

**Maximum Charging Rate:**—For each model as follows:

Performance Data (Cold)			
	Amperes	Volts	R.P.M.
934-F . . . . .	26 . . . . .	8.1-8.3 . . . . .	1325
961-N . . . . .	25 . . . . .	8.0 . . . . .	1650

**Rotation:**—Counter-clockwise at commutator end.

**Field Current:**—1.7-2.0 amperes (934-F), 2.0-2.2 amperes (961-N) at 6.0 volts.

**Brush Spring Tension:**—25 ounces each.

**Mounting & Belt Adjustment:**—Same as Std (above).

**REGULATOR****PASSENGER CARS**

**Delco-Remy Model 5814** (1100004 Gen.). Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator. For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay**

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—0-3.0 amps. maximum discharge.

**Contact Gap and Air Gap**—.020".

**Voltage Regulator**

**Setting**—7.5-7.9 volts at 70°F., 7.4-7.6 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 30-35 M.P.H. (or 2800-3000 R.P.M.), adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**Contact Gap**—.020". **Contact Sp. Tens.**—2.7-3.5 ozs.

**Air Gap**—.063" between armature and center of core with armature down and fibre bumper touching stop; .010" between fibre bumper and stop with armature up.

**REGULATOR****SPECIAL EQUIPMENT**

**Delco-Remy Model 5559** (Model 934-F Generators), 5832 (961-N Gen.). Double Core Type Voltage and Current Regulator. Same design as Pass. Car Model 5814 (above) with additional Current Regulator. For complete data, refer to *Electrical Equip. Index*.

**Cutout Relay & Voltage Regulator**

Specifications same as Model 5814 (above) except Voltage Setting for Model 5599 which is listed below (Voltage Setting for 5832 same as 5814 above).

**Voltage Setting** (5599)—7.0-7.4 volts Cold (70°F), 6.95-7.15 volts Hot (150°F).

**Current Regulator**

**Setting**—20-23 amperes (5599), 26-28 amperes (5832).

**To Check**—Disconnect lead at regulator 'IGN' terminal (to eliminate voltage regulator action), connect ammeter in charging line at 'BAT' terminal, operate generator, note ammeter reading which should equal setting given above.

**To Adjust**—Same as Voltage Regulator (above).

**Contact Gap, Contact Spring Tension, Fibre Bumper Air Gap**—Same as Voltage Regulator (above).

**Armature Air Gap**—.075" between armature and center of core (armature down and fibre bumper against stop).

**LIGHTING**

**LIGHTING**—Headlamps—Guide, Multi-beam, pre-focused type. Upper and lower beams controlled by switch on toeboard with lighting switch 'on'.

**Headlamp Adjustment**—Aim headlamps straight ahead. Top of beam should be 36½" (passenger cars), 39½" (½ ton), 40" (¾, 1 ton), 43½" (1½ ton or 42" if state law requires) above floor at 25 feet.

**Switches**

**Lighting**—D-R No. 1994001 (Pass. Cars), 485-Z (Comm'l & Truck), 479-E, 1995002 (Special Equip.).

**Dimmer**—Delco-Remy Model 471-P.

**Stop Light**—D-R Model 476-U. Hydraulic type.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrument	1½	55
Ignition lock lamp	1½	55
Stop (Pass. Cars)	3	63
Stop (Trucks)	15	87
Tail	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES**—Lighting—20 ampere on back of ammeter.

**HORNS**—Klaxon, Model K-16-2303 (HB), K-26-H-2251 (all others). Single horn, vibrator type.

Type	Current at 6 volts	Air Gap
K-16-2303	5.0-7.5 amperes	.020-.022"
K-26-H-2251	6.5-8.5 amperes	.025-.029"

**ENGINE**

**ENGINE SPECIFICATIONS**—Own. 6 cyl., 'T' head type.

**Bore**—3½". **Stroke**—3¾".

**Displacement**—216.5 cubic inches.

**Rated Horsepower**—29.4 (S.A.E.).

**Developed Horsepower**—85 at 3200 (passenger cars), 78 at 3200 (all others).

**Compression Ratio**—6.25-1 Std. cast-iron head.

**Compression & Vacuum Reading**—See *Tune-Up*.

**PISTONS**—Cast-iron, domed head, cam ground, tin-plated, with slipper type skirt. Recondition engines to take finished replacement pistons (hone for .003" oversize, bore and hone for larger sizes). See Replacement Pistons. Length—4 11/64".

**Weight**—30.72 ozs. (including bushing—passenger cars), 32.96 ozs. (including bushing—trucks).

**TRUCK PISTON NOTE**—Marked by two ¼"x3/16" bosses on bottom of pin bosses at piston side wall. Must not be interchanged with Pass. car type (heavier).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .006-.013". Skirt .0015-.003". See Fitting New Pistons (below).

**Replacement Pistons**—Finished pistons with bushings and pins fitted furnished standard and .003", .010", .020", .030", and .040" oversize.

**Fitting New Pistons**—Use feeler gauges between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore on .002" feeler (with light pressure) and lock on .003" feeler.

**PISTON RINGS**—Two compression, one oil control ring per piston, all above pin. Oil ring slotted or drilled type. Oil ring groove drilled with oil drain holes. Rings furnished standard and .005", .010", .015", .020", .030" and .040" oversize.

**NOTE**—Compression rings have tapered face. Install with word "TOP" toward top of piston.

Ring	Width	End Gap	Side Clearance
Comp.	⅜"	.004-.014"	.0015-.003"
Oil Cont.	3/16"	.004-.014"	.002-.0035"

**NOTE**—Use .002" feeler to check side clearance. #1 ring very free, #2 just free, #3 light drag.

**PISTON PIN**—Diameter—.865". Length—3 9/64". Pin locked in rod, pin bosses in piston bronze bushed.

New pistons have bushings and pins fitted. Pins furnished std. and .003", .005", .010" oversize.

**Pin Fit in Piston**—Thumb push fit (room temp.).

**CONNECTING ROD**—Length 6 13/16". Weight 28.3 oz.

**Crankpin Journal Diameter**—2.311-2.312".

**Lower Bearing**—Spun-babbitt lined type.

**Clearance**—.0005-.002". **Sideplay**—.004-.011".

**Bearing Adjustment**—Solid shims. Remove shims (equally from both sides) to secure 'snap fit' (bearing tight to hand but rod should snap from one side to other with light tap of 8 oz. hammer), then replace .002" shim for clearance. If unequal number, install extra shim on camshaft side. With correct adjustment, rod should move from side to side with two finger pressure.

**Installing Rods**—Install rods in same numbered cylinders indicated by numbers on rod and caps with these numbers together and toward camshaft side. Assemble oil dippers on rod caps with mouth of dipper toward camshaft.

**NOTE**—Check dipper heights with J-969-2 gauge.

**CRANKSHAFT**—4 bearing. Integral counter weights with harmonic balancer mounted on forward end.

See *Chevrolet Shop Notes* for balancer data.

**Journal Diameters**—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

**Bearing Type**—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap. Clearance—.002-.004".

► **NOTE**—Replacement "precision" type bearings do not require line-boring or reaming.

**Replacement Bearings**: New "precision" type furnished Std. size and .002", .010", .020", .030" Undersize.

**NOTE**—Bearings marked on inner surface of dowel: "V" for #1 and #4, "I" for #2 and #3.

► **CAUTION**—Complete bearing set (4 bearings) must be installed on engines not previously equipped with replacement "precision" bearings.

**Bearing Adjustment**—Solid shims. Remove shims until slight drag on crankshaft secured, then replace one .002" shim for clearance. If unequal in number, install extra shim on same side for all bearings.

**End Thrust**—Taken by #3 main bearing. Adjusted by replacing bearing. Endplay—.004-.007".

**NOTE**—Oil slinger clearance at rear end of crankshaft must be .002-.032".

**CAMSHAFT**—Four bearing. Gear driven.

**Journal Diameters**—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

**Bearing Type**—New type steel-backed, babbitt-lined with oil grooves.

See *Chevrolet Special Shop Notes* for camshaft bushing installation instructions.

**Clearance**—.002-.0035".

**End Thrust**—Taken by thrust plate behind camshaft gear. Endplay—Free fit to .003" max. Adjusted by changing gear position on shaft.

**Timing Gears**—Crankshaft gear Steel. Camshaft gear Bakelite & fabric composition. Gear run-out (maximum) .003" crankshaft, .004" camshaft.

CONTINUED N NEXT PAGE

## ENGINE

CONTINUED FR M PRECEDING PAGE

Backlash—.002-.005".

See Chevrolet Special Shop Notes for timing gear installation instructions.

Camshaft Setting:—Gears marked. Mesh marked tooth of crankshaft gear with marked space between teeth on camshaft gear.

VALVES:—Marked 38 on head. 1938 exhaust valve new design (more metal under head).

	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3407-.3417"	6 1/16"
Exhaust	1 15/32"	.3397-.3407"	4 13/16"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.305"	.001-.003"
Exhaust	30°	.3195"	.002-.004"

Valve Guides:—Straight type (no shoulder).

Replacement Valve Guides: New "precision" type (do not require rough reaming).

Valve Guide Installation—See "Valve System" in Chevrolet Shop Notes.

Valve Springs:—New 9 coil springs used. Cannot be used on previous models. Free length 2 7/32". Check spring compressed to 1 1/2". Pressure should be 125-133 lbs.

	Spring Pressure	Spring Length
Valve Closed	42-48 lbs.	1.821"
Valve Open	111-119 lbs.	1.505"

NOTE—Install spring with close-coiled end toward cylinder head. Use round spring caps on intake valves, hexagonal caps on exhaust valves.

Valve Lifters:—Cast-iron type with ground contact face. Oversize lifters not furnished.

Rocker Arms:—See Chevrolet Shop Notes for data.

## VALVE TIMING

►VALVE TAPPET CLEARANCE: CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars &amp; Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

VALVE TIMING: See Camshaft Setting.

Intake Valves—Open 9° BTDC, Close 29° ALDC.

Exhaust Valves—Open 52° BLDC, Close 1° BTDC.

To Check Timing—No flywheel marks provided. With intake tappet clearance set at .006", #1 intake valve should open with piston 9° or .0294" BTDC, when a point on the flywheel approximately 3.475 teeth before top dead center lines up with indicator in inspection hole in right front face of housing.

## LUBRICATION

LUBRICATION:—Pressure and positive splash system. Gear type oil pump in crankcase.

Oil Pump Installation—Assemble ground side of driven gear toward cover. Oil Pump assembly mounted to crankcase by tapered set screw and lock nut. Screw must be firmly seated in tapered hole in pump body and set with lock nut.

Normal Oil Pressure:—13.5 lbs. at 50 M.P.H.

Oil Pressure Regulator:—Located in oil pump cover. Operates at 75 lbs. Not adjustable. Pressure normally controlled by Oil Distributor.

Oil Distributor:—Mounted on left side of crankcase. Proportions oil between high pressure points (crankshaft bearings, camshaft bearings, timing gears) and low pressure points (connecting rod oil troughs and rocker arms). Overflow pipe returns excess oil from rocker arm shafts.

See Chevrolet Shop Notes for installing oil lead (through block) to valve rocker arms.

Checking Oiling System:—See Chevrolet Shop Notes.

Crankcase Capacity:—5 quarts.

## COOLING

COOLING SYSTEM:—Water Pump. Centrifugal, belt-driven, with self-adjusting type packing.

See Water Pump Section for complete data.

Thermostat:—Mounted in cylinder head water outlet.

Setting:—Start to open 142°F (#3108572—Standard), 150°F (#985127—non-permanent anti-freeze used with overflow return tank #985319), 162°F (#985128 permanent anti-freeze), 170° F. (Econ. Engines).

Water Capacity:—14 quarts (Standard). 15 1/2 quarts (Trucks with heavy duty radiators).

## CLUTCH

CLUTCH:—Own Make. Entirely new design, single plate, dry disc type with diaphragm spring serving as clutch spring and release levers, and ball throwout bearing. Two sizes, with larger pressure plate and cover used on HD, HE and T models. Diaphragm spring interchangeable on either clutch.

See Clutch Section for complete data.

►Clutch Rattle Correction—See Service Notes in Chevrolet Clutch article in Clutch Section.

Facings—Woven and formed asbestos. 2 used. Inside Diameter 6 1/4" (HA,B,C), 7" (HD,HE,T). Outside Diam. 9" (HA,B,C), 10 3/4" (HD,HE,T). Thickness 1/8" (HA,B,C), .122-.138" (HD,HE,T).

Adjustment (HA, HB)—Pedal free travel must be 3/4-1". To adjust loosen locknut and turn adjusting nut on connecting link stud at clutch throwout fork.

All others—Loosen locknut on lever at lower end of clutch pedal, back off locknut on adjusting screw on lower end of lever, turn adjusting screw for 3/4-1" free travel.

Removal:—Remove transmission (see Transmission Section). With flywheel underpan off, take out throwout bearing from fork, fork mounting (using 7/8" and 3/4" wrench) and fork. Support clutch with Clutch Pilot Tool K-411, loosen cover mounting bolts (one turn at a time) until spring pressure released and remove assembly from below. NOTE—When reassembling turn flywheel to place 'X' mark at bottom, install cover assembly with 'X' mark on cover in line with 'X' mark on flywheel.

## TRANSMISSION

ALL MODELS EXCEPT 1 1/2 TON TRUCK

TRANSMISSION (HA, HB, HC, HD, HE):—Own Make. Constant mesh, helical gear (second only), Synchromesh (second and high). Low and reverse—sliding spur gear. NOTE—HC transmission same as HA, HB except that case longer permitting interchangeability with 4 spd. transmission. HD, HE transmission same as HC except that carburized gears used (identified by prefixes 'Y' or 'Z' before assembly number on boss at rear of transmission case cover).

See Transmission Section for complete data.

Removal (HA, HB, HC):—Disconnect pull rods on brake cross-shaft, remove left hand cross-shaft bracket, remove shaft. On HC remove hand brake lever from transmission case. Take out speedometer cable and gear assembly (screwed in universal joint ball retainer). Use jack under front end of torque tube. Take out screws in ball collar flange, slide ball and collar back on propeller shaft, remove bolts in universal joint ring, split joint. Lower jack until propeller shaft clears transmission. Remove top mounting bolts in flywheel housing and install guide pins, remove flywheel underpan, take out lower mounting screws. Take out bolts holding transmission mounting and support to cross-member. Slide transmission straight back on guide pins and remove. NOTE—On Model HC with 4 Spd. Transmission, remove transmission support cross-member and take out two screws on brake cylinder bracket on transmission case.

Removal (HD, HE):—Remove hand brake lever from transmission case. Take out speedometer cable and gear assembly (screwed in front universal joint ball retainer). Remove capscrews on front universal joint, remove bolts on frame cross-member freeing propeller shaft, slide ball back, split front joint by removing trunnion bearing lock rings and driving trunnion bearings out. Disconnect cross-member at frame ends and lower assembly to floor. Remove transmission using guide pins as directed for HA, HB, HC.

## TRANSMISSION

1 1/2 TON TRUCKS

TRANSMISSION (TA, TB, TC, TD):—Own Make. 4 speed, sliding spur gear type (all speeds). This transmission optional on Models HC, HD, HE.

See Transmission Section for complete data.

Removal:—Same as for HD, HE (above) except that two nuts holding front propeller shaft assembly should be removed and front propeller shaft dropped down.

## UNIVERSALS

UNIVERSAL JOINTS:—Own Make. Plain bushing type. One used (except HD, HE, TA, TB, TC, TD with intermediate universal on frame cross-member).

See Universals Section for complete data.

## REAR AXLE

PASSENGER CARS

REAR AXLE (HA, HB):—Own Make. Semi-floating, Hypoid gear type with Torque tube drive.

See Rear Axle Section for complete data.

Ratio—4.22-1 (HA), 3.73-1 (HB). 3.73-1 axle marked by prefix 'C' or 'CB' on serial number on differential carrier. Straight number or prefix 'B' on 4.22-1 axle.

Backlash—.004-.008". Screw adjustment.

See Chevrolet Shop Notes for data on new type spring seats on 1938 models.

Removal:—Jack up rear end of car (use chain hoist), remove rear wheels, disconnect hydraulic brake line and brake cables, disconnect shock absorber links at axle, remove 'T' bolt nut and withdraw bolt freeing spring seat from housing bracket (not necessary to disturb 'U' bolts). Disconnect spring shackles and drop springs (with spring seats attached), pull axle

assembly back to free shaft at splined joint in rear of transmission.

**Wheel Bearing Adjustment**—None.

**Axle Shaft Removal**—Wheel bolted directly to flange on outer end of shaft. Axle shaft retained by 'C' washer at inner end of differential case (shafts unequal length—use long shaft on right side). To remove shaft, remove wheel, take out two machine screws in brake drum, remove drum, install clamp on wheel brake cylinder. Take off axle housing cover, remove differential pinion shaft screw, pull out pinion shaft, remove axle shaft spacer. Push axle shaft in, remove 'C' washer at inner end, pull shafts out.

See Chevrolet Shop Notes for axle shaft installation instructions and axle shaft spacer sizes.

## REAR AXLE

1/2, 3/4, 1 TON TRUCKS

**REAR AXLE (HC, HD, HE)**—Own Make. Semi-floating, spiral bevel gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio**—4.11-1 (standard). 3.82-1 (optional HC only). Axles identified by prefixes stamped on carrier as follows: 4.11-1—straight number or 'B' on HC, HD; 'T' or 'TB' on HE. 3.82-1—'F' or 'FB'.

**Backlash**—.004-.006". Screw adjustment.

**Removal**—Same as for passenger cars except that new type spring seat not used and spring 'U' bolts must be disconnected instead.

**NOTE**—Axle shaft spacers furnished in three sizes: 1.1485", 1.1575", 1.1675". Fit as directed for passenger car models above.

## REAR AXLE

1 1/2 TON TRUCKS

**REAR AXLE (TA, TB, TC, TD)**—Own Make. Full floating, spiral bevel gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio**—5.43-1 or 6.16-1 standard. Identified by first letter in serial number on top right hand side of differential housing as follows: 5.43-1—'T'; 6.16-1—'H'.

**Backlash**—.008-.010". Screw adjustment.

**Removal**—Remove two nuts holding front propeller shaft to cross-member, drop unit, remove capscrews holding ball collar to housing, slide ball back on rear axle shaft housing, remove trunnion bearing lock rings, drive trunnion bearings from place, split

universal joint and drop rear propeller shaft. Remove rear yoke from end of rear propeller shaft and ball and collar from housing. Remove axle shafts (see below), remove nuts holding differential carrier in housing, pull third member assembly (differential carrier and shaft assembly) from housing.

**Axle Shaft Removal**—Remove 8 capscrews which attach axle shaft flange to wheel hub and capscrew lock. Install two screw in holes located between regular mounting screw holes, turn screws in to start axle shaft, remove shaft. Use new steel lock when replacing capscrews. Wheel bearing adjustment not disturbed by axle shaft removal.

**Wheel Bearing Adjustment**—With axle shaft removed, tighten adjusting nut (within wheel hub on outer end of axle housing) moderately tight while rotating hub, install star lock on adjusting nut, note alignment of lock tangs with notches in outer edge of adjusting nut, bend back tang into notch on adjusting nut. Rotate wheel hub by hand to note that bearings seated and that wheel turns freely. Install locknut and draw up tight, bend lock tang into notch in locknut.

See Chevrolet Shop Notes for wheel bearing oil seal and gasket data.

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Delco—Hydraulic single-acting type standard on all models except HA (HA has double acting shock absorber built in Knee Action unit). Double acting type optional.

See Shock Absorber Section for complete data.

Model	Front	Rear
HA	10688388, 9	1431-V, W
HB, HC, HD	1201-A, B	1201-C, D
HE	1201-A, B	None

## FRONT SUSPENSION

**Front Suspension (HA)**—Chevrolet Knee-Action type independent suspension with kingpins mounted on floating type plain bushings.

See Front Suspension Section for complete data.

**NOTE**—Specifications below correct with car weight supported on horses at inner bearing cone (wheels removed for use of special test equipment).

**Height (Suspension Unit Setting)**—4 7/8" (plus or minus 1/8") from bottom of kingpin support to bottom of brake flange plate.

**Kingpin Inclination**—7 3/4° crosswise.

**Caster**—0° (kingpin). Caster effect secured by trailing wheel center.

**Camber**—1/4°. No adjustment.

**Toe In**—1/16-3/32". Adjustable.

**Steering Geometry**—Inner wheel 23°, outer 20°.

**Front Suspension (All models except HA)**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**NOTE**—'Floating' type kingpin bushings on HB.

**Kingpin Inclination**—7°10' plus or minus 1° crosswise.

**Caster**—2 1/4° (HB), 1 3/4° (HC, HD, HE), 2 3/4° (TA, B, C, D), plus or minus 1/2°. Controlled by a caster shim ('I' beam spacer) inserted between spring and spring pad on axle.

**Camber**—1° plus or minus 1/2°. Axle may be bent cold for minor corrections.

**Toe In**—5/64-1/8". Adjusted in usual manner by turning tie rod to increase or decrease length.

**Steering Geometry**—Inner wheel 23°. Outer 20°.

## STEERING GEAR

**Steering Gear**—(Passenger Cars) Saginaw Worm-and-Roller type. (Trucks) Saginaw Worm-and-Sector.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES**—Service—Own design, hydraulic type. Hand brake lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinders**—Diameters—1 1/4" (front—all), 1 3/16" (rear—HA, HB, HC, HD), 1 3/8" (rear—HE), 1 1/2" (rear—TA, B, C, D). Not interchangeable.

**Drum Diameter**—11" (all—HA, HB, HC, HD; front—HE). 14" (front—TA, B, C, D; rear—HE). 16" (rear—TA, B, C, D).

**Lining**—Moulded type. Semi-moulded (TA, B, C, D).

Model	Width	Thickness
HA, B, C, D (HE—front)	1 3/4"	187-194"
HE (rear)	2"	265-272"
TA, B, C, D (front)	2"	243-250"
TA, B, C, D (rear)	3"	243-250"

**Clearance**—Adjusting cover backed off 4 notches (HA, B, C, D, E all wheels), 5 notches (TA, B, C, D front wheels), adjusting pinion shaft backed off 3/4 turn (TA, B, C, D rear wheels) from slight drag position.

**Hand Brake**—See Service Brakes above.

**FRONT END ASSEMBLY REMOVAL:**—Should be removed as a unit for work on front of engine. See Chevrolet Shop Notes for directions.

**NOTE:**—Oil Pan Removal—On passenger car models, the Engine-Side-Support Tie-Bar (frame cross-member for engine side mountings) must be unbolted from frame for oil pan removal. See Chevrolet Shop Notes for Engine Mounting adjustment.

### MODEL IDENTIFICATION

**FLEET MODEL NOTE:**—Special Economy Engine available for all models. Identified by code letter "V" stamped ahead of engine number and special tune-up specification plate on push rod cover listing special settings for this model. Engine standard except for these settings and special carburetor which has stop-pin to limit throttle opening to half-throttle.

**SERIAL NUMBER:**—First number 1001 with model prefix as follows: JA (Master Deluxe), JB (Master), JC (Half ton), JD (¾ ton), JE (¾ ton special), VA, VB, VC, VD (1½ ton), VE, VF, VG, VH (1½ ton Cab-over Engine). On plate on right side of cowl under engine hood.

**ENGINE NUMBER:**—First No. 1915447 (Flint), B10503 (Buffalo) with special prefix for each model as follows: Pass. Cars (Buffalo)—B (no prefix for Flint); Comm'l. ½ Ton—K (Flint), KB (Buffalo); All Other Trucks—T (Flint), TB (Buffalo).

### TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 Std. Cast-iron head.

Pressure—112 lbs. at 65 RPM. cranking speed. Minimum pressure 90 lbs., cylinders even within 5-10 lbs.

**VACUUM READING:**—Steady 20-22" with engine idling.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC No. 44. 14 mm. Metric type. Gaps—.040"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018" Cam Angle 35° (closed).

Automatic Advance—25° max. at 1800 RPM (distr.).

Vacuum Advance—8° distr. with 12-15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC with flywheel mark (steel ball) at inspection hole on right of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw 1-2 turns open (downdraft types), ½-1½ turns open (updraft types). Idle speed 400 Eng. RPM or 7 MPH.

Float Level—½" top of float to gasket seat on cover (downdraft types), 1/32-1/16" top of float to top edge of bowl (updraft types).

Accelerating Pump—Lower hole (medium stroke) normal.

Fuel Pump Pressure: 3¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic type. When installing, wind up spring just enough to slip end over manifold pin (½ turn approx.). NOTE—Excessive tension may cause sticking of valve, detonation and poor performance.

Anti-Rattle Spring—Install anti-rattle spring No. 602799 to correct noise. See 1938 Chevrolet data for instructions. Do not increase thermostatic coil spring tension.

► **VALVE TAPPET CLEARANCE:** CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

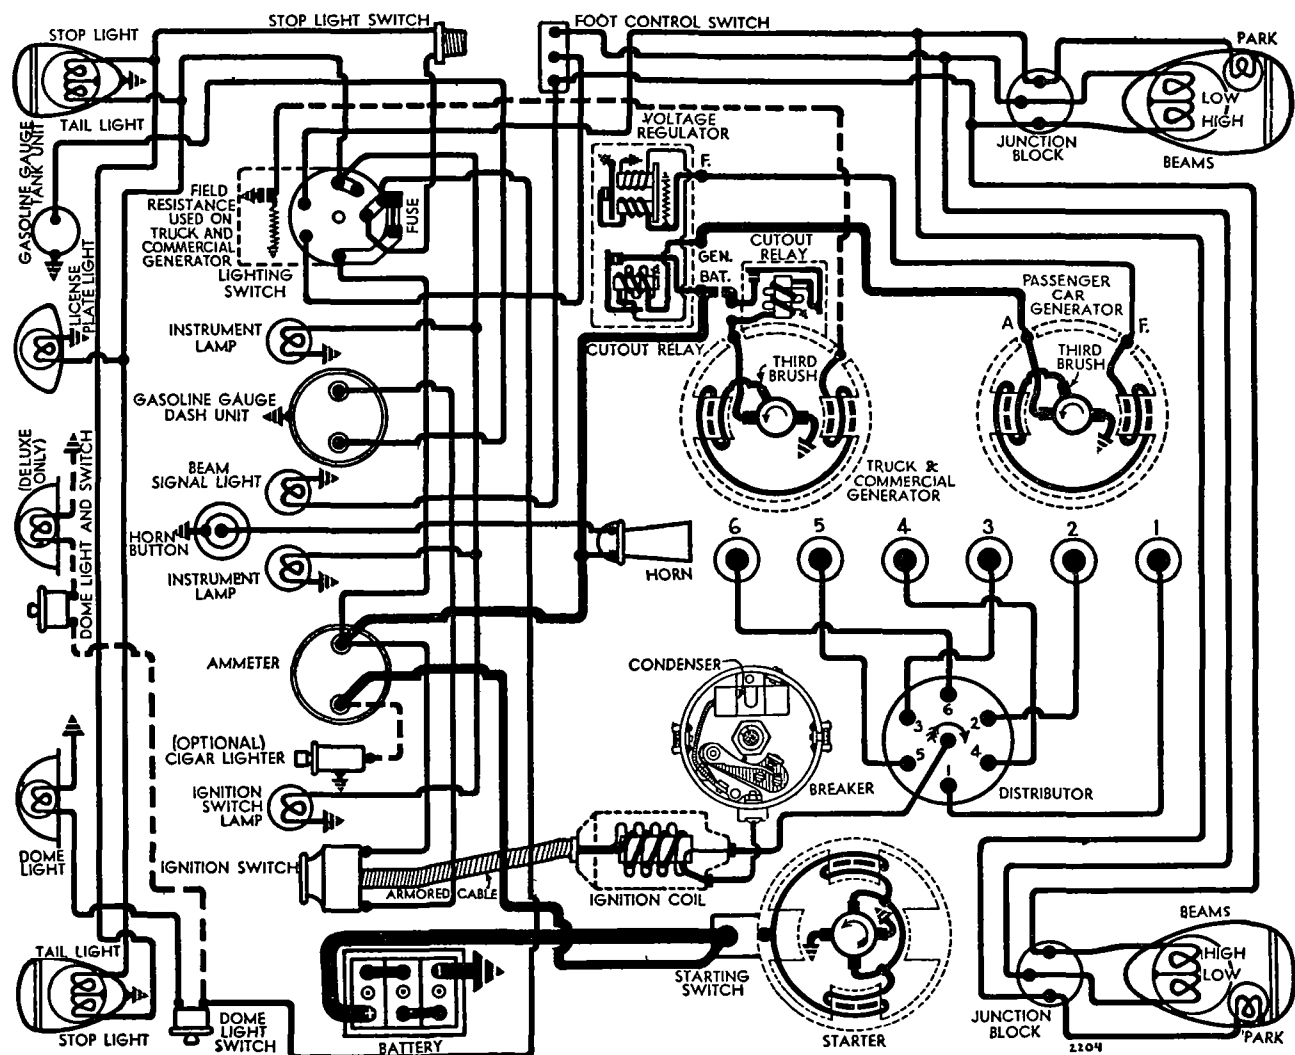

Valve Timing Check: See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—D-R. Model 435-F (Pass. Cars), 1116263 (Comm'l & Trucks). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 536-D. On right side of engine near distributor.

Ignition Current—2.5 amperes idling, 4.8 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110008. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

Breaker Gap—.018". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open (distr.).

Breaker Arm Spring Tension—20 ounces.

Rotation—Clockwise viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.75.....	600
25.....	1800	50.....	3600

**Vacuum Spark Control No. 1116011**—Mounted on Octane Selector, linked to advance arm. Provides additional advance except when engine accelerated (spark retarded by return spring in unit) or at high speed with wide open throttle (vacuum port cut off by throttle valve shaft). Plunger travel 7/32".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start .....	0 .....	6" Min.
8 .....	16 .....	12-15"

**Octane Selector**—Adjustment at distributor provides 10° advance or retard from center 'O' position. See Ignition Timing for adjustment instructions.

**Removal:**—On right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb Octane Selector).

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting as follows (see Octane Selector for final setting dependent on fuel used):

Flywheel Degrees	Piston Position
All Engines .....	5° BTDC.....0091" BTDC

**Timing (Neon Light)**—This method recommended. Attach Neon Timing Light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at 'O' on scale. Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball timing mark on flywheel appears in line with pointer. Tighten clamp bolt and check Octane Selector setting.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" BTDC. when steel ball timing mark on flywheel lines up with pointer in inspection hole in right front face of housing. Set Octane Selector pointer at 'O' on scale, loosen advance arm clamp bolt, rotate distributor until contacts are just opening, tighten bolt, check Octane Selector setting.

**Octane Selector Setting**—Road test car and set Octane Selector for slight ping when accelerating engine with wide open throttle to secure maximum performance and economy with fuel regularly used. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark, clockwise to retard spark, tighten hold-down screw.

## CARBURETOR

**Carter W1 (Chevrolet) Model 420S (Cars & Trucks), 434S (Economy Engine).** 1 1/4" single barrel, down-draft type.

See Carburetor Section for complete data.

► **Metering Rod Production Changes and Engine Running Backward Correction**—See Field and Production Changes in Carburetor article in Carburetor Section.

**Cab-Over-Engine Truck**—Carter BB Updraft Models 412S & 447S. 1 1/4" single barrel, updraft types.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm and choke valve wide open, set throttle lever stopscrew so that engine idles at 400 R.P.M., turn idle adjusting screw in until engine begins to miss, out until engine rolls, finally turn screw in slowly until engine fires smoothly. Final setting should be 1-2 turns open of the screw from inner seated position. Readjust throttle stopscrew for correct idling speed.

**NOTE**—Special metering rods available for Altitude and special service. See Carter Jet Table in Carburetor Section.

**Accelerating Pump Setting**—Pump lever (under dust cover on float bowl on 420-S, 434-S) has three holes for pump link connection (2 holes only on 412-S). Adjust as follows:

**Lower Hole (Med. stroke)**—Normal temperatures.  
**Inner (Min.)**—Hot weather, high test fuel.  
**Upper (Max.)**—Extreme cold weather.

**Throttle Cracker:**—Consists of a lug welded on accelerator rod which opens throttle when starter pedal depressed for starting. No adjustment.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528524 (Pass. cars) #1525978 (Comm'l & Trucks) oil-wetted type Std.; #1528964 (all), #1525983 (Can. Trucks with Governor), heavy duty, oil-bath type Optl. **NOTE**—#1529053 crankcase vent air-cleaner used on cars and trucks with vacuum gear shift.

**Fuel Pump:**—AC Type AF #1523089. Diaphragm type. Type AM #1523271 fuel-and-vacuum pump Optl. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric. Dash Units—#1515355 (Pass. cars), 1515207 (Comm'l. & Trucks). Tank units—#1515483 (Pass. cars), 1515484 (2 Pass. Coupe & Sedan Delvry.), 1515482 (Comm'l. & Trucks), 1515466 (Comm'l with cowl), 1515467 (Comm'l with cowl—long chassis).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY (PASS. CARS):**—Delco Model 17-M. 6 volt, 17 plate, 100 A.H. Capacity (20 hr. rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes. Five second voltage—4.25 volts.

**Dimensions**—Length 10 9/16". Width 7". Hgt. 7 7/16" Grounded Terminal—Negative (—) grounded to rear of transmission.

**Location**—On right side under front floor.

**Comm'l. & Trucks**—Delco Model 15-X. 6 volt, 15 plate, 94 A.H. Capacity (20 hour rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes. Five second voltage—4.2 volts.

**Dimensions**—L'gth 8 15/16". Width 7". Hgt. 8 11/16"

**Special Equipment**—Delco Model 17-J. 6 volt, 17 plate, 125 A.H. Capacity (20 hour rate).

**Starting Capacity**—149 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.5 minutes. Five second voltage—4.8 volts.

**Dimensions**—Length 10 9/32". Width 7". Hgt. 9 1/8".

## STARTER

**Delco-Remy Model 1107009.** Armature No. 1867897. Drive—Manual pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

**Cranking Engine**—65 RPM., 150 amperes, 5.5 volts.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.0.....	65
12 " .....	Lock.....	3.37.....	525

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, disconnect cable (tape end), take out capscrews, remove starter and switch.

**Starting Switch:**—No. 820052. Mounted on starter and operated by starting pedal.

## GENERATOR

PASS. CARS AND C-O-E TRUCKS

**Delco-Remy Model 1100004.** Armature No. 1866789. Fixed third brush control with vibrating voltage regulator. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—By changing Regulator setting. See Regulator data. **NOTE**—Third brush clamped in place for maximum rated output. Do not disturb.

**Maximum Charging Rate**—As shown in table below. Reached at 38.1 (JA), 43.2 (JB), 35.4 (VE-H) MPH. To check, connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action. **NOTE**—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
Cold .....	26-30.....	8.0.....	3400
Hot .....	25-28.....	8.0.....	3600

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—25 ozs. (main), 17 ozs. (third brush).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator away from engine until sideplay at point midway between generator and fan pulleys is 1 1/2" with light pressure.

## GENERATOR

TRUCKS (EXCEPT C-O-E)

**Delco-Remy Model 948-R.** Armature 1853593. Third brush control with lighting switch controlled field resistance. Ventilated.

See 'Delco-Remy Lamp Load Type Generator—Light Switch Controlled Field Resistance' article in Electrical Equipment Section for data.

**Charging Rate Adjustment**—Third brush set for maximum rated output (2 commutator bars from nearest main brush) and should not be disturbed. See Electrical Equipment Section for recommended resistance unit changes if battery under- or over-charged.

**Maximum Charging Rate**—21 amperes (cold), 18 amperes (hot), 2800 RPM. or 27.8 (JC), 28.9 (JD), 32.3 (JE), 27.5 (VA-D) MPH. To check, connect ammeter in charging line at cutout relay, ground field terminal to eliminate field resistance.

### Performance Data

	Amperes	Volts	R.P.M.
Cold .....	19-23.....	8.4-8.8.....	2800
Hot .....	16-20.....	8.1-8.5.....	3100

**Rotation, Brush Spring Tension, Field Current, Removal & Belt Adjustment**—Same as 1100004 generator above.

## GENERATOR

SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Model 1106403 (City Police), 1105851 or 1105856 (State Police.) Two brush types used with new Single Core Type Voltage & Current Regulator.

Refer to 1940 Chevrolet article for complete data.

C NTINUED N NEXT PAGE

CONTINUED FROM PRECEDIN PAGE

**REGULATOR****PASS. CARS AND C-O-E TRUCKS**

Delco-Remy Model 5858 (1100004 Gen.). Double Core Type Voltage Regulator (No 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator. For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—6.3-6.9 volts, 800 RPM., 8-9 MPH.

Cuts Out—0-4.0 ampere discharge current.

Contact Gap—.020". Air Gap—.020" (closed).

NOTE—Relay compensated for temperature. Closing voltage same cold and hot.

**Voltage Regulator**

Setting—7.5-7.9 volts (70° F), 7.4-7.6 volts (150° F). Regulator over-compensated for temperature and must be checked at these points.

Adjustment—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'GEN' terminal and ground. Operate generator at speed of 2800-3000 RPM. adjust charging rate to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature spring slightly to secure setting shown above. CAUTION—Regulator cover must be in place when tests made. Do not operate generator on open-circuit.

Contact Gap—.020". Contact Spring Tension—3.5 oz.

Air Gap—.063" between armature and center of core (armature down so fibre bumper touches stop), .010" between fibre bumper and stop (armature up).

**CUTOUT RELAY****TRUCKS (EXCEPT C-O-E)**

Delco-Remy Model 265-G (used with 948-R Gen.). For complete data, refer to Electrical Equipment Index.

Cuts In—7.0-7.5 volts, 800 RPM., 8-9 MPH.

Cuts Out—0-3.0 ampere discharge current.

Contact Gap—.020". Contact Spring Tension—3.5 oz.

Air Gap—.015" (contacts closed).

**LIGHTING**

**LIGHTING:**—Headlamps—Guide, pre-focused type with upper and lower beams controlled by beam selector switch on toeboard.

**Headlamp Adjustment:**—Aim each headlamp so that hot spot centered on vertical line drawn 16 1/4" (Pass. cars), 16" (Trucks) to right or left of car center-line with upper edge of hot spot 35 7/32" (JA), 36 5/32" (JB), 39 1/2" (JC), 40" (JD, JE), 43 1/2" (VA-H) or 42" (VA-H)—if required by state laws). To adjust, turn screw on bottom of lamp back of lens rim for vertical movement, screw under plug on engine side of lamp for horizontal movement.

**Beam Indicator (Pass. Cars)**—In speedometer dial. Lighted when upper (driving) beams in use.

**Switches**

**Lighting**—D-R No. 1994004 (Pass. Cars), 1994005 (Comm'l. & Truck). 479-E, 1995002 (Heavy Duty).

**Beam Selector**—D-R No. 471-P, 1997003.

**Stop Light**—D-R No. 476-U.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1 1/2	55
Beam Ind., Ign. Lock	1	51
Instrument (Pass. Cars)	1 1/2	55
Tail, Stop (Pass. Cars)	3	63
Stop & Tail (Coupes)	21-3	1154
License Plate (With Trunk)	3	63
Dome	15	87

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 ampere. On lighting switch. Clock—2 amperes. On clock.

**HORNS:**—Klaxon, Delco-Remy Model K-16 No. 1999901 (JB), Model K-26H Type 1999801 (all others). Vibrator type. Current—5-7.5 amperes (K-16), 6.5-8.5 (K-26H).

**ENGINE**

**ENGINE SPECIFICATIONS:**—Own, 6 cyl., 'I' head type.

Bore—3 1/2". Stroke—3 3/4".

Displacement—216.5 cu. ins. Rated HP.—29.4.

Developed Horsepower—85 HP. at 3200 R.P.M. (passenger cars). 78 HP. at 3200 R.P.M. (all others).

Compression Ratio—6.25-1 Std. cast-iron head. Compression & Vacuum Reading—See Tune-Up.

**ENGINE MOUNTING:**—See Chevrolet Shop Notes for Adjustment directions.

**PISTONS:**—Passenger Cars. Cast-iron, domed head, cam ground, tin-plated, with slipper type skirt. If oversize pistons to be installed, hone for .003" oversize, rebore and hone for larger oversizes.

Trucks—Same as for Passenger Cars except 1 1/2 ozs. heavier and two 1/4"x3/16" bosses on bottom of pin bosses at piston side wall. Length—4 11/16".

Weight—25 1/2 oz. stripped (Pass.), 27 (Trucks).

Removal—Pistons and rods removed from above.

Clearance—Top .0145-.019". Skirt .0015-.003".

Replacement Pistons: See Chevrolet Shop Notes.

Fitting New Pistons:—Use feeler gauges between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore on .002" feeler (with light push only) and lock on .003" feeler. NOTE—Bore taper or out-of-round not to exceed .001".

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Oil ring slotted or drilled type. Oil ring groove drilled with oil drain holes. NOTE—Compression ring face tapered for 'break-in'. Install side marked 'TOP' toward top.

Ring	Width	End Gap	Side Clearance
Comp.	.1235-.1240"	.004-.014"	.0015-.0035"
Oil Contr.	.1860-.1865"	.004-.014"	.0015-.0035"

NOTE—Use .002" feeler to check side clearance. #1 ring very free, #2 ring just free, #3 light drag.

Replacement Rings—.005", .010", .015", .020", .030", .040" OS.

**PISTON PIN:**—Diameter .8645-.8650". Length 3.135-3.165". Pin locked in rod, pin bosses in piston bronze bushed. New pistons fitted with bushings and pins. Pin Fit in Piston—Thumb push fit (room temp.). Replacement Pins:—Std. & .003", .005", .010" oversize.

**CONNECTING ROD:**—Length 6 13/16". Weight 28.3 oz. Crankpin Journal Diameters—2.311-2.312". Lower Bearing—Spun-babbitt lined type.

Clearance—.001-.0025". Sideplay—.004-.011" (side clearance between rod and pin bosses .025").

**Bearing Adjustment:**—Solid shims used. Remove shims (equally from both sides) to secure 'snap fit' (bearing tight to hand but should snap from one side to other with light tap of 8 oz. hammer), then replace .002" shim for clearance. If unequal number of shims, install extra shim on camshaft side. With correct adjustment, rod should move from side to side with two finger pressure.

**Installing Rods:**—Install rods in same numbered cylinders indicated by numbers on rods and caps with these numbers together and toward camshaft side. Assemble oil dippers on rod caps with mouth to camshaft. NOTE—Check dipper heights, Gauge J969-2.

**CRANKSHAFT:**—4 bearing, integral counterweights with new rubber type balancer on front end.

See Chevrolet Shop Notes for Balancer data.

Journal Diameters—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

Bearing Type—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap. Clearance—.002-.004".

►NOTE—Replacement "precision" type bearings do not require line-boring or reaming.

Replacement Bearings: New "precision" type furnished Std. size and .002", .010", .020", .030" Undersize. NOTE—Bearings marked on inner surface of dowel: "V" for #1 and #4, "I" for #2 and #3.

►CAUTION—Complete bearing set (4 bearings) must be installed on engines not previously equipped with replacement "precision" bearings.

**Bearing Adjustment:**—Solid shims. Remove shims until slight drag on crankshaft secured when turned by hand, then replace one .002" shim for clearance. If unequal in number, install extra shim on same side for all bearings.

**End Thrust:**—Taken by #3 main bearing. Replace if clearance exceeds .011". Endplay—.004-.007" (new).

**CAMSHAFT:**—Four bearing. Gear driven.

Journal Diameters—#1, 2.082-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

Bearing Type—New type steel-backed, babbitt-lined bearings with oil grooves (same as 1938).

See Chevrolet Shop Notes for Camshaft Bearing data.

Clearance—.002-.004".

**End Thrust:**—Taken by thrust plate behind camshaft gear. Endplay—Free fit to .003" max. Adjusted by changing gear position on shaft.

**Timing Gears:**—Crankshaft gear Steel. Camshaft gear Bakelite & fabric composition. Maximum gear run-out .003" crankshaft, .004" camshaft. Backlash—.002-.005". See Chevrolet Shop Notes for Timing Gear installation instructions.

**Camshaft Setting:**—Gears marked. Mesh marked tooth of crankshaft gear with marked space between teeth on camshaft gear.

**VALVES:**—New type (no slot in head).

	Head Diameter	Stem Diameter	Length
Intake	1 41/64"	3/407-.3417"	6 5/64"
Exhaust	1 15/32"	3397-.3407"	4 13/16"
	Seat Angle	Lift	Stem Clearance
Intake	30°	305"	.001-.003"
Exhaust	30°	3195"	.002-.004"

**ENGINE****CONTINUED FR M PRECEDIN PA E**

**Valve Guides:**—Straight cut type on cylinder head.  
**Replacement Valve Guides:** New "precision" type (do not require rough reaming).

**Valve Guide Installation:**—See "Valve System" in *Chevrolet Shop Notes*.

**Valve Springs:**—9 coil type spring used. Free length 2 7/32". Using Valve Spring Tester Tool U15 spring tension should be 125-133 lbs. compressed to 1 1/2".

	Spring Pressure	Spring Length
Valve Closed	49-56 lbs.	1 13/16"
Valve Open	121-133 lbs.	1 1/2"

**NOTE:**—Install spring with closed-coil end toward cylinder head. Use round spring caps on intake valves, hexagonal caps on exhaust valves.

**Valve Lifters:**—Cast-iron type with ground contact face. Oversize lifters not furnished.  
**Clearance:**—.001". Free fit in guide holes.

**Rocker Arms:**—See *Chevrolet Shop Notes* for data.

**VALVE TIMING**

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in *Chevrolet Shop Notes*.

**Cars & Trucks:**—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

**Trucks (for continuous full throttle operation):**—.010" Intake, .020" Exh., with engine "normalized".

**Economy Engine:**—.010" Intake, .016" Exhaust, with engine "normalized".

**VALVE TIMING:** See Camshaft Setting.

**Intake Valves:**—Open 9° BTDC. Close 29° ALDC.

**Exhaust Valves:**—Open 52° BLDC. Close 1° BTDC.

**To Check Timing:**—With #1 intake valve tappet clearance set at .006", valve should open with piston 9° or .0294" BTDC. with point on flywheel 3.475 teeth before 'U/C' mark in line with indicator in hole in right front face of flywheel housing.

**LUBRICATION**

**LUBRICATION:**—Pressure and positive splash system.

**Oil Pump Installation:**—Assemble ground side of driven gear toward cover. Oil pump assembly mounted on crankcase by tapered set screw and lock nut (must seat firmly in tapered hole in pump).

**Normal Oil Pressure:**—13.5 lbs. at 50 M.P.H.

**Oil Pressure Regulator:**—Located on oil pump cover. Opens at 75 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor.

**Oil Distributor:**—Same design as used on previous models except that by-pass channel and metering restriction added on high pressure side of valve so that rocker arms and other low pressure points oiled immediately when engine started.

See *Chevrolet Shop Notes* for instructions on installing oil lead (through block) to Valve Rocker Arms.

**Checking Oiling System:**—See *Chevrolet Shop Notes*.

**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Capacity, 14 qts. (all except Cab-Over-Engine). 16 1/2 qts. (Cab-Over-Engine Trucks). See *Chevrolet Shop Notes* for Radiator Core Removal.

**Water Pump:**—Packless, ball-bearing shaft type.

See *Water Pump Section* for complete data.

**Thermostat:**—Harrison. In cyl. head water outlet.  
**Setting:**—Starts to open 140°F (Std. #3108572), 148° (#985127 for non-permanent anti-freeze), 160° (#985128 Fleet Economy models and others with perm. anti-freeze or overflow tank #985319).

**Temperature Gauge:**—AC. #1510759 (Master Deluxe), #1510163 (Commercial and Truck models).

See *Miscellaneous Section* for complete data.

**CLUTCH**

**CLUTCH:**—Own Make. Diaphragm spring type. Single plate, dry disc type. 9" disc used on pass. cars and 1 1/2 ton trucks, 11" disc on all others.

See *Clutch Section* for complete data.

► **Clutch Rattle Correction:**—See *Service Notes* in *Chevrolet Clutch article* in *Clutch Section*.

**Facings:**—Moulded, 2 required. Inside Diam. 6 1/4" (pass. cars, 1/2 ton), 7" (others). Outside Diam. 9" (pass. cars, 1/2 ton), 10 3/4" (others). Thick. 1/8".

**Adjustment:**—Pedal free travel must be 3/4-1". To adjust, loosen check nut and turn adjusting nut on connecting link stud at clutch throwout fork.

**Removal:**—Remove transmission (see below) and flywheel underpan. Take out throwout bearing from fork, pry fork loose from ball, remove fork mounting (use a 7/8" and 3/4" wrench). Support clutch with Clutch Pilot Tool K-411, loosen 6 cover bolts (one turn at a time) until spring pressure released and remove assembly from below. **NOTE:**—When assembling plate on cover, line up 'O' marks on pressure plate lug and cover. Line up 'X' marks on cover and flywheel when installing clutch assembly.

**TRANSMISSION****PASS. CARS & 1/2, 3/4, 1 TON TRUCKS**

**TRANSMISSION (JA, JB, JC, JD, JE):**—Own Make. Constant mesh, synchro-mesh with helical gears (second), sliding spur gear (low & reverse).

**JC Transmission:**—Same as JA, JB except that case longer (to interchange with 4 spd. transmission).

**JE, JD Transmission:**—Same as JC transmission except that carburized gears used (identified by prefixes 'Y' or 'Z' before assembly number).

See *Transmission Section* for complete data.

**Transmission Control (Pass. Cars):**—Remote control steering column shift, vacuum assistor type. Optl. See *Transmission Section* for complete data.

**Removal (JA, JB, JC):**—Remove floor-and-toeboard plate, disconnect 3 pull rods at brake cross shaft bracket, remove shaft. On JC take off hand brake lever at transmission case. Take out speedometer cable and gear assembly (screwed in universal joint ball retainer). Use jack under front end of torque tube. Take out screws in ball collar flange, slide ball and collar back on propeller shaft, remove bolts in universal joint ring, split joint. Lower jack until propeller shaft clears transmission. Take out rear transmission mounting bolts. Remove 2 top mounting cap screws and install guide pins, take out lower flywheel mounting cap screws and flywheel underpan. Slide transmission to rear on guide pins until free of clutch disc and remove assembly.

**NOTE:**—On passenger car models with remote control shift, disconnect air and vacuum lines, selector rod at bell crank, and control rod at protective boot (replace clevis pin). On Model JC with 4 sp. trans-

mission, remove frame cross member (to lower propeller shaft housing) and take out 2 brake cylinder mounting bracket screws from case.

**Removal (JD, JE):**—Remove hand brake lever from transmission case. Take out speedometer cable and gear assembly (in front universal joint ball retainer). Remove front propeller shaft (remove mounting screws at rear universal, unbolt frame cross member at frame and lower shaft assembly, take out rear universal ball collar cap screws, slide ball and collar to rear, split rear joint by removing trunion bearing lock rings and driving bearings out, pull front propeller shaft with ball-bearing and housing out to rear as an assembly, then remove front universal joint ball housing by removing ball collar cap screws and sliding housing out to rear exposing rear yoke of front joint). Remove transmission using guide pins as directed for JA, JB, JC.

**TRANSMISSION****1 1/2 TON & C-E TRUCKS**

**TRANSMISSION (VA, B, C, D, E, F, G, H):**—Own Make. 4 speed sliding spur gear type (all speeds). Optional equipment on Models JC, JD, JE.

See *Transmission Section* for complete data.

**Transmission Control (Cab-Over-Engine):**—Remote control type. See *Chevrolet Shop Notes* for data.

**Removal:**—Same as for JD, JE (above) except that rear universal joint support mounted on underside of frame cross member.

**NOTE:**—Models VE and VF (Cab-Over-Engine) use only one propeller shaft (with Hotchkiss drive). To free propeller shaft, remove 4 flange mounting bolts at front universal flange and lower propeller shaft to floor. Then proceed as outlined for JA, JB, JC.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Own Make. Plain bushing type. One used (Pass. cars and 1/2 ton truck), two used (all others). Models VE and VF used sealed type joints with Hotchkiss drive.

See *Universals Section* for complete data.

**REAR AXLE****PASSENGER CARS**

**REAR AXLE (Pass. Cars):**—Own Make. Semi-floating, hypoid gear type with Torque tube drive.

See *Rear Axle Section* for complete data.

**Ratio:**—4.222-1 (JA), 3.727-1 (JB), 3.727-1 axle marked by prefix 'C' or 'CB' on serial number in carrier. Straight number or prefix 'B' on 4.222-1.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Raise rear end of car. Remove rear wheels and brake drums, clamp brake wheel cylinders, free hand brake cables at pull rods and clamps on frame, disconnect brake line at axle housing, and shock absorber 'T' bolts at spring seats. Remove spring 'U' bolts and disconnect spring shackles to drop springs, pull axle back to free front end of shaft.

See *Chevrolet Shop Notes* for rear spring seat data.

**Wheel Bearing Adjustment:**—None.

**Axle Shaft Removal:**—Wheel bolted directly to flange on outer end of shaft. Axle shaft retained by 'C' washer at inner end in differential case (shafts unequal in length—use long shaft on right side). To

C NTINUED ON NEXT PA E

**C NTINUED FR M PRECEDING PAGE**

remove shaft, remove wheel, two machine screws in drum, remove drum, clamp wheel cylinder. Take off axle housing cover, remove differential pinion shaft screw, pull out pinion shaft, remove axle shaft spacer. Push axle shaft in, remove 'C' washer (on inner end of shaft), pull axle shaft out. See *Chevrolet Shop Notes for axle shaft installation data and spacer sizes.*

**REAR AXLE****1/2, 3/4, 1 TON TRUCKS**

**REAR AXLE (1/2 & 3/4 Ton):**—Own Make. Semi-floating, spiral bevel gear type with Torque tube drive. See *Rear Axle Section for complete data.*

**Ratio**—4.11-1 (standard). 3.82-1 (optional JC only). Axles identified by prefixes stamped on carrier as follows: 4.11-1—straight number or 'B' on JC, JD; 'T' or 'TB' on JE. 3.82-1—prefix 'F' or 'FB'.

**Backlash**—.006-.010". Screw adjustment.

**Removal:**—Same as for passenger cars (above).

**REAR AXLE****1 1/2 T N & C-O-E TRUCKS**

**REAR AXLE (1 1/2 Ton Trucks):**—Own Make. Full floating, spiral bevel gear type with Torque tube drive (except VE, VF), Hotchkiss drive (VE, VF). See *Rear Axle Section for complete data.*

**Ratio**—5.43-1 or 6.17-1 standard. Identified by first letter in serial number on top right side of differential housing as follows: 5.43-1—'T', 6.17-1—'H'.

**Backlash**—.006-.010". Screw adjustment.

**Removal:**—On Models VE, VF with Hotchkiss drive, propeller shaft can be lowered by taking out bolts in driving flange at rear universal (bolted directly to rear axle pinion shaft). On all other models rear universal joint must be split as follows: remove 2 mounting nuts at frame cross member, lower propeller shafts, take out rear universal ball collar cap screws, slide ball back on housing, take out trunnion bearing lock rings and drive bearings out, split universal joint and lower rear propeller shaft, remove rear yoke from rear propeller shaft and ball and collar from housing. Then take out axle shafts (see below) and carrier mounting screws. Pull carrier assembly out (on all Models except VE, VF, propeller shaft assembly withdrawn with carrier). See *Chevrolet Shop Notes for rear spring seat data.*

**Axle Shaft Removal:**—Take out 8 cap screws in axle shaft flange at outer end and cap screw lock, install 2 screws in tapped holes in flange (between regular screw holes) and turn these screws up evenly to loosen shaft, remove shaft. NOTE—Replace Vellumoid axle shaft flange gasket every fourth time, new steel cap screw lock under cap screw every time and turn up tangs on lock plate at screws. Wheel bearing adjustment not disturbed for shaft removal.

**Wheel Bearing Adjustment:**—With axle shaft removed, tighten adjusting nut (within wheel hub on outer end of axle housing) moderately tight while rotating hub, install star lock on adjusting nut, note alignment of lock tangs with notches in outer edge of adjusting nut, bend back tang into notch on adjusting nut. Rotate wheel hub by hand to note that bearings seated and that wheel turns freely. Install locknut and draw up tight, bend lock tang into notch in locknut. See *Chevrolet Shop Notes for wheel bearing oil seal and gasket data.*

**REAR AXLE****SPECIAL TRUCK EQUIPMENT**

**REAR AXLE (TWO-SPEED TYPE):**—Optl. on trucks. See *Rear Axle Section for complete data.*

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Hydraulic single acting type standard except JA (new parallel cylinder double acting type), JB (direct acting type on front only). Double acting optl. on trucks.

See *Shock Absorber Section for complete data.*

Model	Front	Rear
JA (Mstr. Deluxe) .....	2200-A, B	2100
JB (Master) .....	1116-M	1201-C, D
JC (1/2 Ton Truck) .....	1430-CA, DA	1430-LA, MA
JD (3/4 Ton), JE (Spec.) .....	1430-CA, DA	1431-X, Y

**FRONT SUSPENSION**

**Front Suspension (JA):**—New design 'S.L.A.' (short & long arm) or parallelogram type with coil springs. NOTE—Entire suspension unit assembly may be removed from the car as a unit.

See *Front Suspension Section for complete data.*

NOTE—Make all checks with car weight on wheels (curb weight—car ready for road but no load).

**Frame Height:**—Install special gauges at front and rear ends of car to level frame when checking. Clearance between top of rear axle housing and lower face of frame side rail is 7 7/32". This adjustment must be made first to check specifications.

**Kingpin Inclination**—4 3/4° plus or minus 1/2°.

**Caster**—0° plus or minus 1/2°. Adjustable.

**Camber**—Neg. 1/4° (wheel tilts in at top), + or — 1/2°.

**Toe In**—0-1/16". Adjust left tie rod (right non-adj.).

**Steering Geometry (Toe out on turns)**—Outer wheel turned 20°. Inner wheel 24° + or — 2°. Non-adj.

**Front Suspension (All models except JA):**—Conventional 'T' beam section front axle with Reverse Elliott ends and semi-elliptic springs.

NOTE—Floating type kingpin bushings used on JB.

**Kingpin Inclination**—7°10' + or — 1° crosswise.

**Caster**—2 1/4° (JB), 1 3/4° (JC, JD, JE), 2 3/4° (VA, B, C, D), 3° (VE, F, G, H), plus or minus 1/2°. Adjust by use of caster shims between spring and spring pad on axle for 2° variation. Over 2° use tools.

**Camber**—1° plus or minus 1/2°. Axle may be bent cold for minor corrections.

**Toe In**—5/64-1/8". Adjust by turning tie rod.

**Steering Geometry (Toe out on turns)**—Outer wheel turned 20°. Inner wheel turned 23° + or — 2°.

**STEERING GEAR**

**Steering Gear:** (Passenger Cars) Saginaw Worm-and-Roller Type. (Trucks) Worm-and-Sector type. See *Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Own design, hydraulic type. Hand brake lever applies rear service brakes. See *Brake Section for complete data.*

**Wheel Cylinders**—Diameters 1 1/4" (front wheel), 1 3/16" (rear—JA, B, C, D), 1 3/8" (rear—JE), 1 1/2" (rear—1 1/2 Ton).

**Drums**—Cast-iron, steel web. Pressed steel (1 1/2 Ton). Diameters—11" (all—JA, B, C, D; front—JE), 14" (rear—JE, front—1 1/2 Ton), 16" (rear—1 1/2 Ton).

**Lining**—Moulded type used.

Model	Width	Thickness	Length
JA, B, C, D; JE (front) .....	1 3/4"	3/16"	22 5/8"
JE (rear only) .....	2"	3/16"	38 1/2"
1 1/2 Ton (front) .....	2"	1/4"	28 5/8"
1 1/2 Ton (rear only) .....	3"	1/4"	35 13/16"

**Clearance**—Adjusting cover backed off 4 notches (JA, B, C, D, E all wheels), 5 notches (1 1/2 Ton, front wheels), adjusting pinion shaft backed off 3/4 turn (1 1/2 Ton, rear wheels) from slight drag position.

**Braking Power**—47 1/2% rear (JA, B, C, D) 54 3/4% (JE), 59% (V).

**Hand Brake:**—See Service Brakes above.

**HOOD SIDE PANEL, RADIATOR GRILLE AND FRONT SHEET METAL UNIT REMOVAL:** See *Chevrolet Shop Notes*.

**CAB-OVER-ENGINE & DUBL DUTI PANEL NOTE:—**  
See Chevrolet Shop Notes for Engine Cover Removal & Front Cowling Removal (for access to engine).

## MODEL IDENTIFICATION

**FLEET MODEL NOTE:**—Special Economy Engine available on all models. Identify by Tune Up Specification Plate on push rod cover listing special settings for this model. Special carburetor (434-S) has stoppin limiting throttle opening to half-throttle.

**SERIAL NUMBER:**—First number 1001 with model prefix as follows: KA (Special Deluxe), KH (Master Deluxe), KB (Master), KC ( $\frac{1}{2}$  Ton), KD ( $\frac{3}{4}$  Ton), KE ( $\frac{3}{4}$  Ton Special), WA, WB ( $1\frac{1}{2}$  Ton), WC (School Bus), WD, WE, WF ( $1\frac{1}{2}$  Ton Cab-over-Engine). On plate on right front floor (pass. cars), on right side of cowl under hood (Trucks except Cab-over-Engine), on plate on rear side of dash (Cab-over-Engine Trucks).

**ENGINE NUMBER:**—First No. 2697268 (Flint), B-105462 (Buffalo) with special prefix for each model as follows: Pass. Cars—None (Flint), B (Buffalo); Half Ton—K (Flint), KB (Buffalo);  $\frac{3}{4}$  &  $\frac{3}{4}$  Ton Special—AT (Flint), ATB (Buffalo);  $1\frac{1}{2}$  Ton—T (Flint), TB (Buffalo);  $1\frac{1}{2}$  Ton Cab-over-engine—H (Flint only), Dubl Duti Panel—E (Flint only). Stamped on right side of block to rear of distributor.

## TUNE-UP

**COMPRESSION:—Ratio—6.25-1 Std. cast-iron head.**  
**Pressure—112 lbs. at 65 RPM cranking speed. Minimum pressure 90 lbs. (cylinders even with 5-10 lbs.).**

**VACUUM READING:**—Steady 18-21" with engine idling.

**FIRING ORDER: 1-5-3-6-2-4.** See diagram.

**SPARK PLUGS:** AC No. 44. 14 mm. Metric type.  
Gaps—.040"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.018" Cam Angle 35° (closed).**

**Automatic & Vacuum Advance—See Distributor.**

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—5° BTDC with flywheel mark (steel ball) at inspection hole on right of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw 1-2 turns open (downdraft types), ½-1½ turns open (updraft types). Idle speed 400 Eng. RPM or 7 MPH.

**Float Level**— $\frac{1}{2}$ " top of float to gasket seat on cover (downdraft types),  $\frac{1}{32}$ – $\frac{1}{16}$ " top of float to top edge of bowl (updraft types).

**Accelerating Pump**—Lower hole (medium stroke) normal.

**Fuel Pump Pressure: 3¾ lbs. maximum.**

**MANIFOLD HEAT CONTROL:**—Thermostatic type. Check coil wind-up when tuning engine. Spring should be wound up just enough to slip end over manifold pin (approximately  $\frac{1}{2}$  turn). **NOTE**—Excessive tension may cause sticking of valve, detonation and poor performance.

**Anti-rattle Spring**—To correct rattles, install No. 602799 anti-rattle spring (do not increase thermostatic coil tension). With valve rotated to heat off position, insert spring in slot in valve shaft, hold shaft counterbalance weight 3/16" above Heat On position, bend spring until it just touches stop pin

**►VALVE TAPPET CLEARANCE:** *CAUTION—Engine temperature must be “normalized” before adjusting. See “Tappet Clearance Adjustment” in Chevrolet Shop Notes.*

**Cars & Trucks—.006-.008" Intake,.013-.015" Exhaust,**  
with engine "normalized".

**Trucks (for continuous full throttle operation)—**  
.010" Intake, .020" Exh., with engine "normalized".

**Economy Engine**—.010" Intake, .016" Exhaust, with engine "normalized".

**Valve Timing Check:** See *Valve Timing*.

► **CAUTION**—Valve Timing changed when new Replacement Crankshaft Gear installed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:—**Delco-Remy No. 1116272 (Pass. Cars, 1116287 (Pass. Cars—Canada), 1116278 (Trucks), 1116263 (Trucks with flat cowl), 1116279 (Cab-over-engine). 1116291, 1116292 (Trucks, Can.).

**Ignition Lock—Briggs & Stratton No. 45792.**

**Key Series—8000 to 9499. Groove—No. 15.**

**COIL:** Delco-Remy Model 536-D. On right side of engine near distributor.

**Ignition Current**—2.5 amperes idling, 4.8 stopped.

**CONDENSER:** Delco-Remy Part 1  
Capacity—18.85 in. x 1.0 in.

**DISTRIBUTOR:** Delco-Remy No. 1110052. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

**Breaker Gap**—.018". Limits .018-.024".

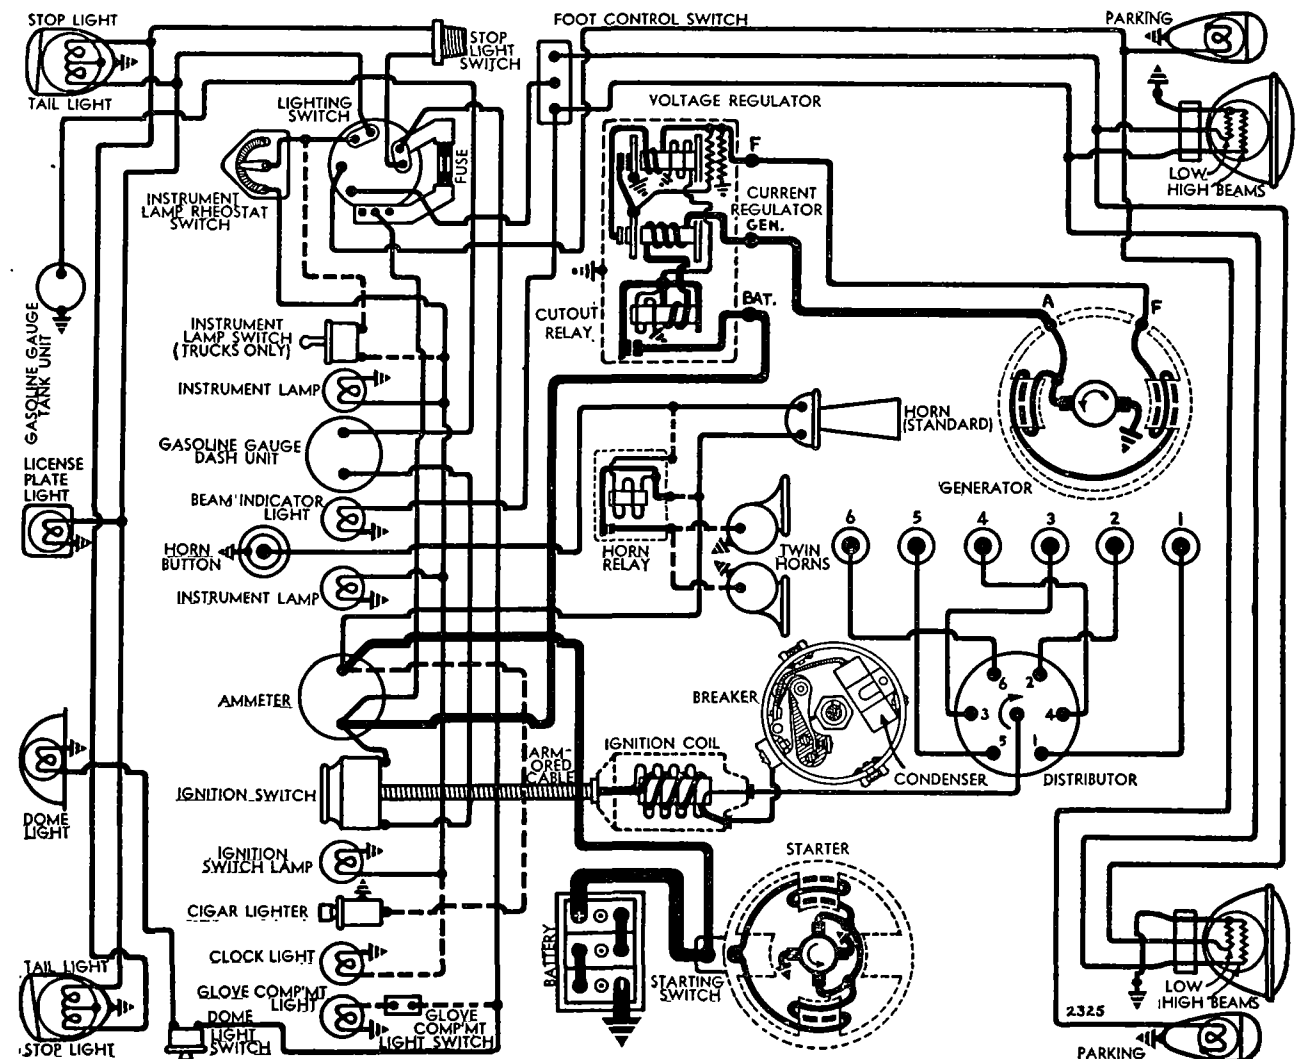

**Cam Angle or Dwell—**35° closed, 25° open (distr.).

**Breaker Arm Spring Tension—17-21 ounces.**  
**Rotation—Clockwise viewed from above.**

**Rotation**—Clockwise viewed from above.  
**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	400	4.....	800
5½ .....	600	11.....	1200
18½ .....	1550	37.....	3100

**CONTINUED ON NEXT PAGE**

## CONTINUED FROM PRECEDING PAGE

**Vacuum Spark Control No. 1116011**—Mounted on Octane Selector, linked to advance arm. Provides additional advance except when engine accelerated (spark retarded by return spring in unit) or at high speed with wide open throttle (vacuum port cut off by throttle valve shaft). Plunger travel 7/32".

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0 .....	6" Min.
8 .....	16 .....	12-15"

**Octane Selector**—Adjustment at distributor provides 10° advance or retard from center 'O' position. See Ignition Timing for adjustment instructions.

**Removal:**—On right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb Octane Selector).

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting as follows (see Octane Selector for final setting dependent on fuel used):

	Flywheel Degrees	Piston Position
All Engines .....	5° BTDC.....	.0091" BTDC.

**Timing (Neon Light)**—This method recommended. Attach Neon Timing Light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at 'O' on scale. Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball timing mark on flywheel appears in line with pointer. Tighten clamp bolt and check Octane Selector.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" BTDC. when steel ball mark on flywheel lines up with pointer in inspection hole in right front face of housing. Adjust distributor as above.

**Octane Selector Setting**—Road test car and set Octane Selector for slight ping when accelerating engine with wide open throttle to secure maximum performance and economy with fuel regularly used. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark, clockwise to retard spark, tighten hold-down screw.

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Model W1, No. 420-S (Std.), 434-S (Econ. Engines). 1¼" single barrel downdraft type. 420-S carburetor painted Black and marked '365' on flange, 434-S painted Brown and marked '373'. NOTE—These carburetors same models as used on 1939 but have new specifications.

See article in Carburetor Section for complete data

► Carburetor "Popping Back" Correction—See Field & Production Changes in Carburetor article in Carburetor Section.

**Cab-over-Engine & Dual Duty Panel**—Carter BB1, Model 447-S, 1¼" single barrel, updraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open, set throttle stop screw so engine idles at 450-500 RPM. (except Cab-over-Engine), 300-375 RPM. (Cab-over-Engine Truck). Turn idle adjusting screw in (leaner mixture), out (richer mixture) until engine fires smoothly. Final setting should be 1-2 turns (420-S, 434-S), ½-1¼ turns (447-S) out from inner seated position. Readjust throttle stop screw for correct idling speed.

NOTE—Special metering rods (420-S, 434-S), me-

tering jets (447-S) available for special service. See Carter and Carter (B&B) Jet Specification Tables

**Accelerating Pump Setting**—Pump lever under dust cover on bowl has 3 holes for pump link connection (420-S, 434-S), throttle lever has 2 holes for pump link, no Med. Stroke (447-S). Connect link as follows:

Lower (Med. stroke)—Normal temp. Std. fuel.  
Inner (Min. stroke)—Hot weather or high-test fuel.  
Upper (Max. stroke)—Extremely cold weather.

**Float Level** (420-S, 434-S)—½" from top of float at free end to gasket seat on cover with valve closed

**Float Level** (447-S)—Top of float 1/32-1/16" below top edge of bowl (gasket removed) with valve closed.

**Throttle Cracker:**—New adjustable type. Opens throttle 1/3 when starter pedal depressed.

**Adjustment**—Set carburetor idle speed at 450-500 RPM. Loosen locknut, turn adjusting screw on accelerator rod bellcrank (left side of engine) until clearance between end of screw and throttle control bellcrank is .030" (use feeler gauge), tighten locknut. Loosen locknut and adjust bolt in accelerator rod for 1/16" clearance between head of bolt and lug on starter cross-shaft.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1528524 (Pass. Cars without Governor), #1529264 (Pass. Cars with Governor), #1525978 (Trucks) oil-wetted type Std. Heavy duty oil-bath type Air Cleaner Optl. on all models.

**Fuel Pump:**—AC Type AF. #1523089 Diaphragm type Std. Type AM #1523271 fuel & Vacuum type Optl. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC Electric. Dash Unit No. 1515369 (first—medium brown dial), 1516221 (later—light brown dial) Tank Unit No. 1516182 (Pass. Cars except—#1516183 Coupe & Sedan Delivery only).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY (STD):**—Delco Model 15X1. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.6 minutes. Five second voltage 4.2 volts.

**Dimensions**—Lgth. 8 15/16". Width 7". Hgt. 8 11/16".

**Grounded Terminal**—Negative (—) grounded to clutch housing below starter pedal pull-back spring (Pass. Cars), to rear of transmission (Trucks).

**Location**—In engine compartment on right side (Pass. Cars), under right front floor (Trucks), under right cab seat (Cab-over-Engine Trucks).

**Special Battery**—Delco Model 19Q1. 6 volt, 19 plate, 125 ampere hour capacity (20 hour rate).

**Grounded Terminal & Location**—See above.

**STARTER**

**STARTER:**—Delco-Remy Model 1107009, Armature 1867897 (Std.); 1107023, Arm. 810601 (RHD Cars).

See Electrical Equipment Section for recommended correction for burning of starter commutators.

**Drive**—Manual pinion shift (1107009), Solenoid pinion shift (1107023) with overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—65 RPM., 150 amperes, 5.5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.0 .....	65
12 " " .....	Lock.....	3.37.....	525

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, disconnect cable take out capscrews, remove starter and switch.

**Starting Switch (1107009):**—No. 820052. Mounted on starter and operated by starting pedal.

(1107023)—Solenoid No. 1546 mounted on starter controlled by Pushbutton Switch D-R 1996006.

For complete data, refer to Electrical Equipment Index.

**GENERATOR**

**GENERATOR:**—Delco-Remy Model 1102667. Armature 1879002 (Std.), Model 1102677 (Door-to-door Divry), 1106403 (State Police & U.S. Govt.), 1105851 & 6 (State Police), 934-F (Optl.). Two brush types with voltage & current regulation. Ventilated.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator.

**Maximum Charging Rate**—38-40 amperes, 7.55-7.85 volts, 1900 RPM. Cold; 34-36 amperes, 7.45-7.55 volts, 2300 RPM. Hot. Reached at 25 MPH (KA, KH, KC), 27 MPH. (KB, KE), 23 MPH. (KD), 22 MPH. (WA, B, D, E, F), 19 MPH. (WC Bus). Actual charging rate controlled by Regulator and dependent on battery

**Performance Data Cold.**

	Amperes①	Volts	R.P.M.
1102667 .....	30.....	8.0 .....	1750
1102677 .....	26.....	8.0 .....	1450
1106403 .....	35.....	8.0 .....	1040
1105851, 6 .....	40.....	8.0 .....	1850
934-F .....	26.....	8.0 .....	1325

①—Not maximum output. See Current Regulator.

**Brush Spring Tension**—25 ounces each.

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—1.75-1.9 amps. (1102667 & 1102677), 1.62-1.82 amps. (1105851, 6), 1.77-2.0 amps. (1106403), 1.7-2.0 amps. (934-F), all at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator away from engine until belt sideplay at point midway between generator & fan pulleys is 1½" (light pressure).

**REGULATOR**

**REGULATOR:**—Delco-Remy 1118201 (1102667 Gen.), 1118233 (1102677 Gen.), 1118229 or 1118232 (1106403 Gen.), 1118221 (934-F Gen.), 1118237 (1105851, 6 Gens.), Single Core Type. Vibrating voltage and current regulators in single case on dash.

NOTE—1118229 Regulator used for Negative Battery Grd., 1118232 with Positive Battery Grd.

For complete data, refer to Electrical Equipment Index.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts (hot), 800 RPM., 8.7 MPH. (KA, KH), 9.5 MPH. (KB), 8.5 MPH. (KC), 8 MPH. (KD, KE), 7.5 MPH. (WA, B, D, E, F), 7 MPH. (WC).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts (1118201), 7.0-7.2 volts (All Others) hot (at operating temperature).

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator hot (150° F.), slow generator speed until cutout relay points open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section.

**Air Gap**—.070" between center of core and armature with contacts just closed.

**Current Regulator**

**Setting**—34-36 amperes (1118201), 24-26 amperes (1118233) 34-36 amperes (1118229 & 1118232), 38-40 amperes (1118237), 26-28 amperes (1118221) hot.

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (to short out Voltage Regulator). Connect ammeter in charging line at regulator 'BAT' terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Same as for Voltage Regulator (above) except that both springs are alike.

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING**—Headlamps—Guide 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam straight ahead with center of hot spot 3" below lamp center.

**Beam Indicator**—On face of speedometer dial.

**Switches**

**Lighting**—Delco-Remy No. 1994014 (Pass. Cars—

Instr. lamp rheostat in handle), 1994015 (Trucks).

**Instrument**—Delco-Remy 1404 (Trucks only).

**Beam Selector**—Delco-Remy 1997003, 1997002 (Can.).

**Glove Compt. Light**—D-R, 1997721 (Spec. Del.).

**Stop Light**—Delco-Remy 476-U (hydraulic type).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, License Plate	3	63
Instr., Glove Compt., Ign. (1½ Ton)	1½	55
Beam Ind. (all), Ign. (exc. 1½ Ton)	1	51
Stop & Tail (exc. 1½ Ton)	21-3	1154
Stop, Tail (1½ Ton)	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES**—Lighting—30 ampere. On switch.

Clock—2 ampere. On clock.

**HORNS**—Pass. Cars—Delco-Remy No. 1999509 (Low

Canada), 1999520 (High Note—Canada). Twin horns

Trucks—No. 1999801 Vibrator type single horn.

**Current (at 6 volts)** **Air Gap**

1999509, 1999519 ..... 19-21 amperes ..... .044-.049"

1999510, 1999520 ..... 18-20 amperes ..... .034-.039"

1999801 ..... 7-9 amperes ..... .027-.033"

**Horn Relay**—Delco-Remy 1116775. Used with twin horns on Pass. Car. Contacts Close—2.75-4.0 volts. Contact Gap—.020". Air Gap—.015" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**—Own, 6 cyl., 'T' head type.

Bore—3½". Stroke—3¾".

Displacement—216.5 cu. ins. Rated HP.—29.4.

Developed Horsepower—85 at 3400 RPM (Pass.

Cars), 78 at 3200 RPM (Trucks except Cab-over-Engine), 80 at 3100 RPM (Cab-over-Engine Trucks).

Compression Ratio—6.25-1 Std. cast-iron head.

Compression Pressure—112 lbs. at 65 RPM (cranking speed), 90 lbs. min. Max. variation 5-10 lbs.

Vacuum Reading—Steady 18-21" with engine idling.

**Engine Removal & Mounting Adjustment**—See Chevrolet Shop Notes for instructions.

**Cylinder Head Installation**—Use new gasket and install with mark 'This Side Up' upward. Use guide pins to align head.

**PISTONS**—Pass. Cars—Cast gray iron, dome head, cam ground, tin-plated with slipper type skirt.

Trucks—Same as Pass. Cars except 1½ ozs. heavier and may be identified by small forged boss on lower center of each piston pin boss.

Weight—25.3 ozs. (Pass. Car), 26.9 ozs. (Trucks) with bushings installed. Length—4 11/64".

Removal—Pistons & rods removed from above.

Clearance—.0147-.0183" Top, .0017-.0023" Skirt.

**Replacement Pistons**—Finished pistons with bushings and pins fitted furnished Standard and .003", .010", .020", .030", .040" oversize. NOTE—Hone cylinder for .003" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance below). Bore taper and out-of-round must not exceed .001".

**Fitting Pistons**—Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .002" feeler and lock on .003" feeler.

**PISTON RINGS**—Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled for oil drainage. NOTE—Compression rings have tapered face. Install with mark 'TOP' upward.

**Ring** **Width** **End Gap** **Side Clearance**

Compr. .... 1235-1240" ..... .005-.015" ..... .0015-.0035"

Oil Cont. .... 1860-1865" ..... .005-.015" ..... .0015-.0035"

Check side clearance with .002" feeler. #1 ring very free, #2 ring just free, #3 ring light drag.

**Replacement Rings**—Furnished Standard and .005", .010", .015", .020", .030", .040" oversize.

**PISTON PIN**—Diameter .8645-.8650". Length 3.135-3.165". Pin locked in rod, piston bronze bushed.

NOTE—New pistons fitted with bushings and pins.

Pin Fit in Piston—Thumb push fit (room temp.).

**Replacement Pins**—Std. & .003", .005", .010" oversize.

**CONNECTING ROD**—Length 6 13/16". Weight 28.3 ozs.

Crankpin Journal Diameters—2.311-2.312".

Lower Bearing—Spun babbitt-lined type.

Clearance—.001-.0025". Sideplay—.004-.012" (side clearance between rod and pin bosses .025").

**Bearing Adjustment**—Solid shims. Remove shims equally at both sides to secure 'snap fit' (bearing tight to hand but should snap from one side to other with light tap of 8 oz. hammer), then replace one .002" shim for clearance (if unequal number,

place extra shim on camshaft side). Rod should snap from side to side with one hand pressure with proper fit. NOTE—Palmuts used on rod bolts. Use new palmnut, install with open side toward end of bolt, turn finger tight against rod nut, then tighten ¼-½ turn additional.

**Installing Rods**—Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper heights. See Chevrolet Shop Notes for instructions.

**CRANKSHAFT**—4 bearing, integral counterweights.

NOTE—New type rear bearing oil seal (no slinger). See Chevrolet Shop Notes for Oil Seal and Crankshaft Balancer servicing data.

**Journal Diameters**—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

NOTE—Journal taper or out-of-round limits .001", Run-out limits for #2 & #3 bearings .002".

**Bearing Type**—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap. Clearance—.002-.004".

►NOTE—Replacement "precision" type bearings do not require line-boring or reaming.

**Replacement Bearings**: New "precision" type furnished Std. size and .002", .010", .020", .030" Undersize. NOTE—Bearings marked on inner surface of dowel: "V" for #1 and #4, "I" for #2 and #3.

►CAUTION—Complete bearing set (4 bearings) must be installed on engines not previously equipped with replacement "precision" bearings.

**Bearing Adjustment**—Solid shims. Remove shims until slight drag secured when shaft turned by hand, then replace one .002" shim for clearance (if unequal number of shims used, place extra shim on same side for all bearings).

**End Thrust**—Taken by #3 bearing (adjusted by facing new bearings). Endplay—.004-.007".

**CAMSHAFT**—Four bearing. Helical gear drive.

**Journal Diameters**—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.0932-1.0942"; #4, 1.8407-1.8417".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if excessive).

**Bearing Type**—Steel-backed, babbitt-lined bushings. See Chevrolet Shop Notes for bearing installation and line-reaming instructions. Clearance—.002-.004".

**End Thrust**—Taken by thrust plate behind camshaft gear (adjusted by changing gear position on shaft). Endplay—Free to .003" maximum.

**Timing Gears**—Crankshaft gear Steel. Camshaft gear Bakelite & Fabric. Maximum gear run-out .003" crankshaft, .004" camshaft.

**Replacement Timing Gears**—See Chevrolet Shop Notes.

►CAUTION—Replacement Crankshaft Gear has relocated keyway and will change Valve Timing on these engines when replacing original type crankshaft gear. See Valve Timing.

**Timing Gear Installation & Alignment**—See "Timing Gears" in Chevrolet Shop Notes.

**Timing Gear Backlash**—.002-.005".

**Camshaft Setting**—Gears punchmarked. Mesh marked tooth of crankshaft gear with marked space between teeth of camshaft gear.

CONTINUED ON NEXT PAGE

## ENGINE

## C NTINUED FR M PRECEDIN PAGE

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 41/64"	.3407-.3417"	6 5/64"
Exhaust	1 15/32"	.3397-.3407"	4 13/16"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.2947"	.001-.003"
Exhaust	30°	.3118"	.002-.004"

Valve Guides: Straight cut type on cylinder head.

Replacement Valve Guides: New "precision" type (do not require rough reaming).

Valve Guide Installation—See "Valve System" in Chevrolet Shop Notes.

Valve Springs:—Free length 2 7/32". When checked with U15 Tester, spring pressure should be 125-133 lbs. at 1 1/2".

	Pressure	Length
Valve Closed	49-56 lbs.	1 13/16"
Valve Open	121-133 lbs.	1 1/2"

NOTE—Install springs with close-coil end toward cylinder head. Use round valve caps on Intake Valves, hexagonal caps on Exhaust Valves.

Valve Lifters:—New type with pushrod seat brazed on top. Clearance—.001" (free fit in guide holes).

Rocker Arm Assembly:—See Chevrolet Shop Notes.

## VALVE TIMING

►VALVE TAPPET CLEARANCE: CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

VALVE TIMING: See Camshaft Setting.

►VALVE TIMING CHANGE: Valve Timing is retarded 4° on engines equipped with new Replacement Crankshaft Gear.

## ORIGINAL VALVE TIMING SPECIFICATIONS

►for Engines with Original Crankshaft Gear

Intake Valves—Open 3° BTDC. Close 35° ALDC.

Exhaust Valves—Open 46° BLDC. Close 5° ATDC.

## NEW VALVE TIMING SPECIFICATIONS

►for Engines with new Replacement Crankshaft Gear

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

Valve Timing Check (All Engines)—With #1 intake valve tappet clearance set at .006", valve should open with piston 3° BTDC. (1.158 flywheel teeth before "U/C" flywheel mark) for engines with original type crankshaft gear, or piston 1° ATDC. (.386 flywheel teeth after "U/C" flywheel mark) for engines with new replacement crankshaft gear.

## LUBRICATION

LUBRICATION:—Pressure and positive splash system. Same as 1939 except for redesigned oil pan, new Oil Distributor (in block), and new type Overflow Pipe Connector at rocker arm shafts. See Chevrolet Shop Notes for Oil Distributor, and Rocker Arm Oil Lead and Overflow Pipe servicing.

Oil Pump Installation—Assemble ground side of idler gear toward cover. Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Normal Oil Pressure:—15 lbs. at 40 MPH. (KA, KH, KC), 15 lbs. at 43 MPH. (KB), 25 lbs. at 36 MPH. (KD), 25 lbs. at 40 MPH. (KE), 15 lbs. at 30 MPH. (WC Bus), 15 lbs. at 32 MPH. (Other Trucks).

Oil Pressure Regulator:—Located on oil pump cover. Opens at 75 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor.

Oil Distributor:—See Chevrolet Shop Notes for data.

Checking Oiling System:—Should be checked whenever pan removed. See Chevrolet Shop Notes for data.

Crankcase Capacity:—5 1/2 qts. dry, 5 qts. refill (all).

## COOLING

COOLING SYSTEM:—Capacity—14 qts. (except Cab-over-Engine), 16 1/2 qts. (Cab-over-Engine).

See Chevrolet Shop Notes for Radiator Core Removal.

Water Pump:—Packless, ball-bearing type. NOTE—Pumps interchangeable on all models (except fan). See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet. Setting—Starts to open at 142° F. (Std.), 150° (for Alcohol Anti-freeze), 160° F. (for Permanent Anti-freeze & Economy Engines).

## CLUTCH

CLUTCH:—Own Make. Diaphragm spring, single plate, dry disc type. NOTE—Clutch with 9" disc used on Pass. Cars & 1/2 Ton, 11" disc on all others.

See Clutch Section for complete data.

►Clutch Rattle Correction—See Service Notes in Chevrolet Clutch article in Clutch Section.

Facings—Moulded type, 2 used. Inside Diam. 6 1/8" (Pass. Cars & 1/2 Ton), 7" (Others). Outside Diam. 9 1/8" (Pass. Cars & 1/2 Ton), 10 3/4" (Others). Thickness .135" (Pass. Cars & 1/2 Ton), .140" (Others).

Adjustment:—Pedal free travel must be 3/4-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork.

Removal:—Remove Transmission and flywheel underpan (see Transmission Removal below), remove throwout bearing from fork, remove fork by prying fork off ball, remove fork mounting (use 7/8 & 3/4" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs.

## TRANSMISSION

## PASS. CARS &amp; 1/2, 3/4 TON TRUCKS

TRANSMISSION (KA, KB, KC, KD, KE, KH):—Own Make. Constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type. NOTE—All transmissions similar except Pass. Car type has remote control shift mechanism in side cover, Truck type has carburized type gears. See Transmission Section for complete data.

►High Gear Disengagement Correction—See Service Notes in 1940 Chevrolet 3-Speed Transmission article in Transmission Section.

Transmission Control (Pass. Cars):—Remote control steering column shift, vacuum-power type Std. See Transmission Section for complete data.

►Gearshift Lever Flutter (Idle or High Speed) Correction—See Service Notes in 1940 Chevrolet Transmission Control article in Transmission Section.

Removal (KA, KB, KC, KH):—On Pass. Cars, remove floor mat and transmission cover in floor, disconnect and remove vacuum-power cylinder (see Chevrolet Transmission Control article in Transmission Section for complete data and adjust. procedure instructions when re-installed). On Half Ton, remove hand brake lever on transmission case (see Note for 4 Spd. Trans. below). Disconnect cables on brake cross-shaft at rear of transmission, remove cross-shaft. Disconnect and remove speedometer cable and driven gear assembly. Take out capscrews in universal joint ball collar, slide ball and collar back on shaft housing. Take out four capscrews holding universal joint needle bearing trunnions on front yoke, remove trunnions (use care not to lose needle bearings), push front end of propeller shaft down for clearance. Remove 4 bolts holding transmission rear mounting on frame cross-member, remove 2 top transmission mounting screws, install guide pins in these holes, remove flywheel underpan and lower mounting screws, slide transmission out.

Half Ton Note—When 4 Spd. Transmission used, take out 2 capscrews in master cylinder mounting bracket and remove frame cross-member so that propeller shaft can be dropped down for clearance.

Removal (KD, KE):—Same as other truck models

## TRANSMISSION

## 1 1/2 TON &amp; C-O-E TRUCKS

TRANSMISSION (WA, B, C, D, E, F):—Own Make. Four speed, sliding spur gear type. Optl. on KC, KD, KE. See Transmission Section for complete data.

Transmission Control (Cab-over-Engine):—Remote control type. See Chevrolet Shop Notes for data.

Removal:—Remove floor boards, hand brake lever from transmission case, speedometer cable. Take out bolts in front universal ball retainer (on rear of transmission), slide retainer and ball back on shaft housing, remove universal joint trunnion lock rings, drive trunnions out of rear yoke to 'split' universal, slide yoke back on shaft. Remove two bolts mounting front shaft assembly on cross-member (at rear universal), lower assembly and pull front propeller shaft and rear universal assembly off drive shaft. Take out 2 top transmission mounting screws, install guide pins in these holes. Remove flywheel underpan, take out lower transmission mounting screws, slide transmission back

## UNIVERSALS

UNIVERSAL JOINTS:—Own Make. Needle bearing 'cross' type.

See Universals Section for complete data.

## REAR AXLE

## PASS. CARS &amp; 1/2, 3/4 T N TRUCKS

REAR AXLE (KA, KB, KC, KD, KE, KH):—Own Make. Semi-floating, hypoid gear type with Torque Tube drive. All axles similar in design except that KC, KD, KE Truck axles are heavier construction.

See Rear Axle Section for complete data.

► **Correction to prevent axle lubricant pumping out on ½ & ¾ Ton**—See "Rear Axle Notes" in Chevrolet Shop Notes for Axle Vent Change.

► **Axle Vent Change on ½ & ¾ Ton**—See "Rear Axle Notes" in Chevrolet Shop Notes.

**Ratio**—4.11-1 (KA, KH), 3.73-1 (KB), 4.11-1 (½ Ton KC), 4.55-1 (¾ Ton KD, ¾ Ton Spec. KE). **NOTE**—Passenger car axles may be identified by prefix letter of part number stamped on top right side of differential housing as follows: 4.11-1—'B' or no letter, 3.73-1—'C' or 'CB' (Optl. on KA, KH).

**Backlash**—.005-.008" (all). Screw Adjustment.

**Removal**—Raise rear end of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber 'I' bolts at spring seats. Remove spring 'U' bolts, disconnect spring shackles and drop springs. Pull axle back to free front end of drive shaft, remove assembly from under car. See Chevrolet Shop Notes for Rear Spring Seat data & Correction for Binding Shackles.

**Axle Shaft Removal**—Wheel bolted directly on flange on outer end of shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two machine screws in brake drum (or two 'Zipon' nuts on wheel studs on later ½ & ¾ Ton only), remove drum, install clamp on brake cylinder. Remove housing cover, differential pinion shaft screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end of shaft, pull shaft out. **NOTE**—Axle shafts unequal in length, use longer shaft on right side. Truck axle shafts are heavier construction. See Chevrolet Shop Notes for Axle Shaft Installation, Spacer data, and Endplay adjustment.

## REAR AXLE

### 1½ TON & C-O-E TRUCKS

**REAR AXLE (WA, B, C, D, E, F)**—Own Make. Full-floating, Hypoid gear type with Torque Tube drive. **NOTE**—WD model (107½"WB.) has Hotchkiss drive. See Rear Axle Section for complete data.

**Ratio**—5.43-1 Std. (except WC Bus—6.17-1), 6.17-1 Optl. **NOTE**—Axles identified by prefix letter on part number stamped on top right side of differential housing as follows: 5.43-1—'B' or no letter, 6.17-1 'H' or 'HB'. **Backlash**—.005-.008".

**Removal**—See Model WD Note below. On all other models, take out bolts in front universal joint ball retainer (back of transmission), slide retainer and ball back on shaft housing, remove universal trunnion bearing lock rings, drive trunnion bearings out of rear yoke to 'split' universal, slide yoke back on shaft. Remove two bolts mounting front propeller

shaft on frame cross-member (at rear universal), lower assembly and pull front propeller shaft and rear universal assembly off rear drive shaft. Remove axle shafts (see below), take out differential carrier mounting bolts in axle housing, pull differential carrier & drive shaft forward to clear.

**Model WD Note**—Disconnect drive shaft by taking out four bolts in rear universal yoke.

See Chevrolet Shop Notes for Rear Spring Seat data.

**Axle Shaft Removal**—Bend lock plate lugs away from capscrew heads, take out 8 capscrews in axle shaft flange, install two ½"x13 capscrews in tapped holes in flange (between regular screw holes), turn these screws up evenly to loosen shaft, withdraw shaft and aluminum gasket. **NOTE**—Use new aluminum gasket and lock when axle shaft installed.

**Wheel Bearing Adjustment**—Remove axle shaft (above), locknut and adjusting nut lock (within wheel hub), use J-870 wrench and tighten adjusting nut tight, then back off 45°, see that wheel hub turns freely by hand, install lock and locknut, bending lock tangs in notches on both nuts.

## REAR AXLE

### TRUCKS (SPECIAL EQUIPMENT)

**REAR AXLE (TWO SPEED)**—Optl. on all Trucks.

See Rear Axle Section for complete data.

**Ratio**—5.64-1 & 8.22-1. **Backlash**—.006-.012".

**Removal**—Same as regular truck axle (above) except that front propeller shaft should be disconnected from cross-member & rear universal should be 'split'.

**Axle Shaft Removal & Wheel Bearing Adjustment**—Same as regular truck axle (above) except that axle shaft retained by studs with locking sleeves under nuts. Use 2 7/16" x 14 screws to loosen shaft.

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Delco Hydraulic type. Parallel cylinder type front & rear (KA, KH), Direct acting type front, single acting rear (KB), Single acting front & rear (KC, KD, KE). Double acting type Optl. on all other Truck Models.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension (KA, KH)**—Independent, parallelgram type with coil springs.

See Front Suspension Section for complete data.

**NOTE**—Make checks with car weight on wheels and special gauges installed front & rear to level frame.

**Kingpin Inclination**—4¾° ± ½°.

**Caster**—0° ± ½°. Adjustable.

**Camber**—Negative ¼° ± ½°. Adjustable.

**Toe-In**—0-1/16". Adjust left tie rod only.

**Steering Geometry**—Outer wheel 20°, Inner 24° ± 2°.

**Front Suspension (Others)**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs. **NOTE**—Kingpin bushings 'floating' type on KB, KC, KD, KE models.

**Kingpin Inclination**—7°10' (except Cab-over-Engine), 8° (Cab-over-Engine) ± 1° crosswise.

**Caster**—2¼° (KB), 1¾° (KC, KD, KE), 2¾° (WA, WB, WC), 3° (WD, WE, WF) ± ½°. Adjust by installing wedge shims between spring and axle (up to 2°), use tools for greater corrections.

**Camber**—1° ± ½°. Bend cold for minor corrections.

**Toe-In**—5/64-1/8". Adjust by turning tie rod.

**Steering Geometry**—Outer wheel 20°, Inner 23° ± 2°.

## STEERING GEAR

**Steering Gear: (Passenger Cars)** Saginaw Worm-and-Roller Type. (Trucks) Worm-and-Sector type.

See Steering Gear Section for complete data.

► **Truck Steering Gear 'Squawk' Correction**—See Saginaw (1940 Chevrolet Truck) Worm-&-Sector type article in Steering Gear Section for data.

## BRAKES

**BRAKES**—Service—Own Make. Hydraulic type. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Wheel Cylinders**—Diameter 1¼" (front wheels—all), 1 3/16" (rear—KA, B, C, D, H), 1½" (rear—KE), 1½" (rear—others). Size stamped on housing.

**Drums**—Cast iron, steel web (except WA, B, C), Pressed steel (WA, B, C). Diameters 11" (all KA, B, C, D, front KE), 14" (rear KE, front WA, B, C, D, E, F), 16" (rear WA, B, C, D, E, F).

**Lining**—Moulded type on all models.

Model	Width	Thickness	Length
KA, B, C, D, H, KE (front)	1¾"	3/16"	22½"
KE (rear)	2"	17/64"	38½"
WA, B, C, D, E, F (front)	2"	17/64"	28⅞"
WA, B, C, D, E, F (rear)	3"	17/64"	35 13/16"

**Clearance**—Adjusting Cover backed off 4 Notches (KA, B, C, D, E, H all wheels), 5 Notches (WA, B, C, D, E, F front wheels), adjusting pinion shaft backed off ¾ turn (WA, B, C, D, E, F rear wheels) from slight drag position.

**Braking Power**—47½% Rear (KA, B, C, D, H), 54¾% Rear (KE), 59% Rear (WA, B, C, D, E, F).

**Hand Brake**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top: Vacuum Power type.** See Miscellaneous Section for complete data.

**HOOD LOCK ADJUSTMENT, RADIATOR GRILLE & FRONT END SHEET METAL UNIT REMOVAL:** See Chevrolet Shop Notes.

## MODEL IDENTIFICATION

**FLEET MODEL NOTE:**—Special Economy Engine available for all models. May be identified by special Tune Up Specification Plate on Push Rod Cover listing special settings and Fleet Car Identification Plate on instrument panel to right of the glove compartment. Special carburetor used has stop-pin to limit throttle opening to  $\frac{1}{2}$  throttle.

**TRUCK MODELS:** Model designation for 1941 and 1942 Trucks are as follows:

1941	1942	Nominal Rating	Wheelbase
AK	BK	$\frac{1}{2}$ Ton	115"
AJ①	BJ①	$\frac{1}{2}$ Ton	115"
AL	BL	$\frac{3}{4}$ Ton	125 $\frac{1}{4}$ "
AN	BN	$\frac{3}{4}$ Ton Long WB.	134 $\frac{1}{2}$ "
YR	MR	1 & $\frac{1}{2}$ Ton	134 $\frac{1}{2}$ "
YS	MS	$\frac{1}{2}$ Ton	160"
YU②	MU②	$\frac{1}{2}$ Ton	109" ③
YV②	MV②	$\frac{1}{2}$ Ton	132 $\frac{1}{2}$ " ③
YW②	MW②	$\frac{1}{2}$ Ton	158" ③
YT	MY	School Bus	160"
YT	MT	School Bus	195" ③

- ① Dubl-Duti Model. ② Cab-over-Engine Model.  
③  $\frac{1}{8}$ " longer for 1941 model.

**SERIAL NUMBER:** Stamped on plate on right front floor (1941 Pass. Cars), on plate on front side of body under hood (1942 Pass. Cars), on right side of cowl under hood (Trucks exc. C-O-E), rear side of dash (C-O-E Trucks). First number 1001 (all models) with model prefix as follows:

Car Model	1941	1942
Master Deluxe (Stylemaster)	AG	BG
Special Deluxe (Fleetmaster) Fleetline	AH	BH

Trucks..... As given in Truck Model Note (above).

**ENGINE NUMBER:**—Stamped on right side of crankcase to rear of distributor. First No. 1001 (each plant) with model prefix code letters as follows:

Model	1941 — Prefix	1942
Passenger Cars	AA①	BA
Half-Ton	AD②	BD
Dubl-Duti	AM	BM
$\frac{3}{4}$ Ton & $\frac{3}{4}$ Ton Spec.	AAF③	BBF
$\frac{1}{2}$ Ton (Std. Eng.)	AF④	BF
$\frac{1}{2}$ Ton (H. D. Eng.)	AG	BG
$\frac{1}{2}$ Ton C-O-E (Std. Eng.)	AJ	BJ
$\frac{1}{2}$ Ton C-O-E (H. D. Eng.)	AL	BL

- ① Flint only. AC—Buffalo (Tonawanda).  
② Flint only. AE—Buffalo (Tonawanda).  
③ Flint only. AAN—Buffalo (Tonawanda).  
④ Flint only. AN—Buffalo (Tonawanda).

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. min. at cranking speed (all cylinders equal within 5-10 lbs).

**VACUUM READING:**—20-22" steady at idling speed.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—AC No. 104- (Pass. Car), 104 (Truck), 10 mm. Metric. NOTE—Use only 104— on Pass. Cars. Gaps—.040".

**CAUTION:**—Do not tighten these small plugs excessively (15 ft. lbs. or finger tight plus  $\frac{1}{2}$ - $\frac{3}{4}$  turn).

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating). Cam Angle or Dwell—39° closed, 21° open.

Breaker Arm Spring Tension—17-21 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC. with flywheel mark (steel ball) at inspection hole on right of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw  $1\frac{1}{4}$ - $2\frac{1}{4}$  turns open (down-draft types),  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open (updraft type). Idle speed 450-500 Engine RPM.

Float Level— $\frac{1}{2}$ " top of float to gasket seat on cover (downdraft types exc. 515-S, 570-S),  $\frac{3}{8}$ " (515-S, 570-S),  $1/32$ - $1/16$ " top of float to top edge of float bowl (updraft type).

Accelerating Pump—Downdraft types not adjustable. Inner hole—Summer, Outer hole—winter (up-draft type).

Fuel Pump Pressure:  $3\frac{3}{4}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic type. Check when tuning engine. Spring should be wound up just enough to slip end over manifold pin (ap-

prox.  $\frac{1}{2}$  turn). **CAUTION**—Excessive tension may cause valve to stick, detonation, poor performance. **Anti-Rattle Spring Note**—See the 1940 Chevrolet article for spring installation to correct rattles.

▶ **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

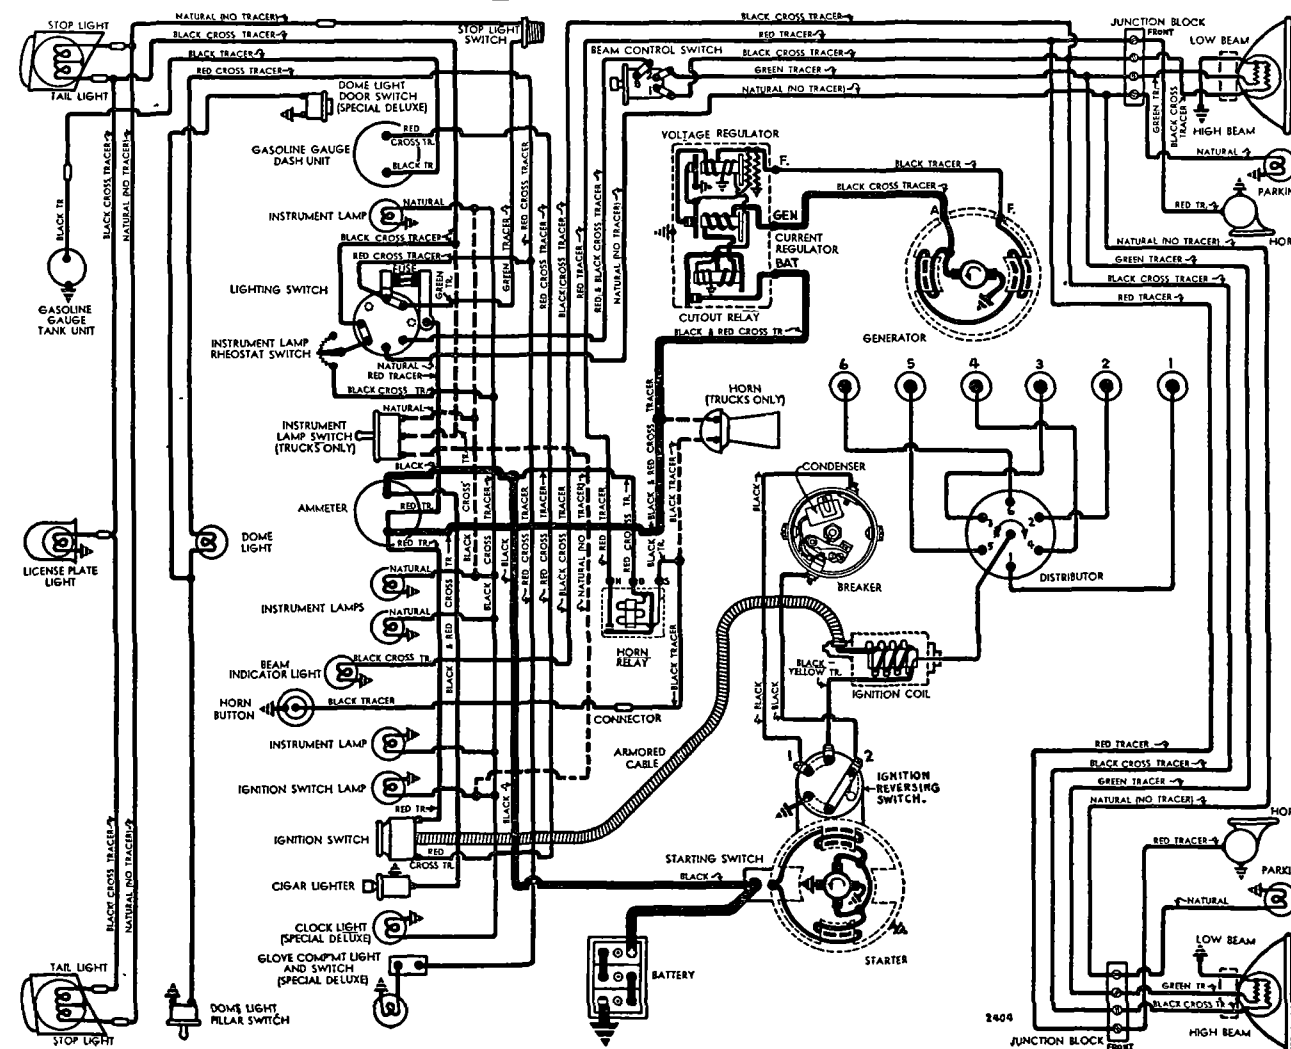

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

Valve Timing Check: See Valve Timing.

▶ **CAUTION**—Valve Timing changed when new Replacement Crankshaft Gear installed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Reversing Switch:** Delco-Remy No. 1997738 (1941—1107033 Starter), No. 1997752 (1941—1107047 Starter), No. 1997765 (1942—1107054 Starter), No. 1997768 (1942—1107053 Starter). Mounted on starter. See wiring diagram for connections.

For complete data, refer to *Electrical Equipment Index*.

► **Removing Reversing Switch from Ignition Circuit**—If switch removal necessary, see "Ignition Reversing Switch" in *Chevrolet Shop Notes for re-working procedure*.

**Ignition Switch:** Delco-Remy type. Connected to coil by armored cable. Type used on each model as follows: No. 1116304 (U. S. Pass. Cars), 1116315 (Can. Pass. Cars), 1116341 (Comml. & Truck 1941), 1116291 (Comml. & Truck 1942), 1116302 (Comml. & Truck less W. S. 1941), 1116342 (Comml. & Truck less W. S. 1942), 1116349 (Comml. & Truck Canada), 1116278 (Comml. & Truck less W. S. Canada), 1116343 (C-O-E Truck), 1116348 (C-O-E Truck Canada). NOTE—No. 1997754 used on 1942 Sport Sedan.

**Ignition Lock**—Briggs & Stratton No. 45792.

**Key Series**—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy No. 1115141 (exc. Sport Sedan), 1115142 (1942 Sport Sedan). Mounted on right side of engine near distributor.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1882239.

► **CAUTION**—This condenser used only on cars with REVERSING SWITCH. Must not be used without switch. Capacity—.28-.34 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110090. Single breaker, 6 lobe cam, full automatic advance type with separate vacuum spark control and Octane Selector adjustment. NOTE—New type with insulated breaker plate and ground terminal for Reversing Switch Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating). Cam Angle—39° closed, 21° open. Breaker Arm Spring Tension—17-21 ozs. Rotation—Clockwise viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	3.....	700
6.5 .....	600	13.....	1200
10.25 .....	1000	20.5 .....	2000
19 .....	1700	38 .....	3400

**Vacuum Spark Control**—Delco-Remy 1116026 (1941), 1116033 (1942), 1116043 (Inv. flare coupling), 1116011 (1942—Canadian). Mounted on the Octane Selector and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring Plunger Travel—17/64" (1116026,33), 7/32" (1116011)

### Vacuum Advance—1116026, 33

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-8.5"
10° .....	20°	16.5-18.5"

### Vacuum Advance—1116011

Start.....	0°	6-8"
8° .....	16°	12.5-14.5"

**Octane Selector**—Adjustment on distributor provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment instructions.

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

## IGNITION TIMING

**IGNITION TIMING:**—See Octane Selector (below) for final setting

All Engines	Flywheel Degrees	Piston Position
.....	5° BTDC	.....0091" BTDC

**Timing (Neon Light)**—Recommended method. Connect neon light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at '0'. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector setting.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark (if no ping), clockwise to retard spark (if too severe).

► **CAUTION**—See that noise (like a ping) not caused by accelerator rod striking intake or exhaust manifold (at point where rod passes between manifolds).

## CARBURETOR

**Carter W1 (Chevrolet) Model 483-S or 574-S** (Std. Pass. Cars & Trucks), Model 492-S (Fleet Economy Model), 515-S or 570-S (Special Govt. Truck). 1 1/4" downdraft type.

See *Carburetor article in Carburetor Section*.

► **1942 Accelerator Rod and Starter Linkage Binding Correction**—See *Field & Production Changes in Carburetor article in Carburetor Section*.

**Cab-over-Engine & Dual Duty Panel**—Carter BB, 489-S (Early 1941), 517-S used with new manifold (Late 1941, and 1942). 1 1/4" updraft types. See *Carburetor Section for complete data*.

► **1941 Updraft Carburetor and Manifold Production Change**—See *Field & Production Changes in Carburetor article in Carburetor Section*.

**Idle Adjustment**—With engine warm and choke valve wide open, set throttle stop screw so engine idles at 450-500 RPM. Adjust idle adjusting screw so that engine fires smoothly (turn screw in for leaner mixture). Final setting should be 1 1/4-2 1/4 turns open (downdraft models), 1/2-1 1/2 turns open (updraft models). Recheck idle speed.

**Accelerating Pump Setting (489-S, 517-S)**—Connect pump link in hole in throttle lever as follows: Inner Hole (Short Stroke)—Summer temperatures. Outer Hole (Long Stroke)—Winter temperatures.

**Accelerating Pump Setting (other models)**—Not adjustable.

**Float Level (483-S, 492-S, 515-S, 570-S, 574-S)**—1/2" (except 3/8" on 515S, 570S) from top of float at free end to gasket seat on cover with valve closed.

**Float Level (489-S, 517-S)**—Top of float 1/32-1/16" below top edge of bowl (gasket off), valve seated.

**Metering Rods & Jets**—See *Carter and Carter (B&B) Jet Tables in Carburetor Section for complete data*.

**Throttle Cracker**—Opens throttle 1/2 for starting.

**Adjustment**—With carburetor correctly set for 450-500 RPM. idle speed, loosen locknut and adjust bolt so that clearance between head of bolt and lug on starter pedal cross-shaft is 1/8", tighten locknut.

► **1942 Accelerator Rod and Starter Linkage Binding Correction**—See *Field & Production Changes in Carburetor article in Carburetor Section*.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1529667 (Pass. Cars), No. 1529264 (Pass. Cars with Governor). Oil-wetted type. Use Replacement Filter Element Assembly #1 (1529667), #2 (1529264). Heavy duty oil-bath type cleaner Optl. NOTE—Oil-bath type cleaner std. on C-O-E Trucks.

**Fuel Pump:** AC Model AF, No. 1523089. Diaphragm type. Exchange Pump No. 429.

**Pressure**—3 3/4 lbs. maximum.

For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge:** AC Electric type. No. 1516293 (Dash Unit 1941), 1516405 (Dash Unit 1942), 1516280 (Tank Unit 1941-42 Pass. Cars).

For complete data, refer to *Carburetion Equip. Index*.

## BATTERY

**BATTERY:**—Delco Model 15X-3. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.8 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Negative (—) terminal.

**Location**—In engine compartment on right side (Pass. cars), under front floor on right side (Trucks).

**Special Batteries**—Delco Models 17K-3, 17Q-3, 19Q-3. 6 volt, 17 plate (17K-3, 17Q-3), 19 plate, 19Q-3).

**Grounded Terminal & Location**—Same as above.

## STARTER

**Delco-Remy Model 1107033 or 1107047** (LHD. 1941), 1107054 (LHD. 1942), 1107038 (RHD. 1941), 1107053 (RHD. 1942).

► **1942 Accelerator Rod and Starter Linkage Binding Correction**—See *Field & Production Changes in Carburetor article in Carburetor Section*.

**Armature**—No. 1867897 (1107033 and 1107054).

**Drive**—Overrunning clutch and manual pinion shift (LHD. models), solenoid pinion shift (RHD. models).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—65 RPM., 150 amperes, 5.5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 " "	Lock	3.37	525

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect starting pedal linkage and Reversing Switch wires. Take out flange mounting screws, remove starter & switch.

**Starting Switch (LHD. Cars):** Delco-Remy No. 820052 mounted on starter. Operated by starting pedal. (RHD. Cars)—Delco-Remy Solenoid Switch No. 1546 (1941), 1118102 (1942) controlled through relay by pushbutton switch No. 1996018 on instrument panel. For complete data, refer to *Electrical Equipment Index*.

CONTINUED N NEXT PA E

C NTINUED FROM PRECEDING PA E

**GENERATOR**

**Delco-Remy Model 1102667 (Standard), Armature 1879002.** Two brush type (Current & Voltage control).

**Special Generators—**For special service as follows: 1102677 (Door-to-door), 1106403 (City Police), 1105851, 1105856 (State Police); 1106406 (Boston Police), 934-F and 1102674 (Special).

**Charging Rate Adjustment—**None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate (Std. Gen.)—**38-40 amperes (cold), 7.3-7.7 volts, 2400 RPM., 25.5 MPH. (Pass. Cars). Actual charging rate controlled by Voltage Regulator.

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102667, 74	30	8.0	1750
1102677	26	8.0	1450
1105851, 6	40	8.0	1850
1106403, 6	35	8.0	1040
934-F	26	8.0	1325

①—Not maximum output—See Current Regulator

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**25 ozs. each.

**Field Current—**1.75-1.9 amps. (1102667, 674, 677), 1.62-1.82 amps. (1105851, 6), 1.77-2.0 amps. (1106403, 406), 1.7-2.0 amps. (934-F) at 6.0 volts.

**Removal—**Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment—**Swing generator away from engine until belt side play at point midway between generator and fan pulleys is 1½" (light pressure).

**REGULATOR**

**Delco-Remy Model 1118201 (1102667 & 1102674 Gen.). 1118233 (1102677 Gen.), 1118237 (1105851, 6 Gen.), 1118229 (1106403, 6 Gens. with Neg. Grd.), 1118232 (1106403, 6 Gens. with Pos. Grd.), 1118221 (934-F).**

**Single Core Type. Voltage & Current Regulators.**

*For complete data, refer to Electrical Equipment Index.*

**CAUTION—**Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In—**6.2-6.7 volts hot.

**Cuts Out—**0-4.0 ampere discharge current.

**Contact Gap—**.020" (same for both sets).

**Air Gap—**.020" (with contacts just closed).

**Voltage Regulator**

**Setting—**7.2-7.4 volts (1118201), 7.0-7.2 volts (all others) at operating temperature (hot).

**Checking & Adjustment—**See *Electrical Equipment Section*.

**Air Gap—**.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting—**34-36 amperes (1118201, 1118229, 1118232), 24-26 amperes (1118233), 26-28 amperes (1118221), 38-40 amperes (1118237) hot (at operating temp.).

**Checking & Adjustment—**See *Electrical Equipment Section*.

**Air Gap—**.020" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING—**Headlamps—Guide 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment—**Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator—**Dot on upper edge of speedometer dial (above '50'). Lighted when upper beams in use.

**Direction Signal—**Refer to *Electrical Equip. Index*.

**Switches**

**Lighting—**Delco-Remy 1994022 (Pass. Cars), 1994017 (Comm'l. & Truck), 1997718 (State Police), 1995013 (Army). NOTE—1994022 switch (Pass. Cars) has instrument light rheostat in switch handle.

**Beam Selector—**Delco-Remy No. 1997008.

**Instrument (Comm'l. & Truck)—**Delco-Remy 1404.

**Glove Comp. Light—**Delco-Remy No. 1997787.

**Stop Light—**Delco-Remy 1997725 (1941 & 1942 Early Comm'l. & Truck), 1997901 (1942—All Pass. Cars & later Comm'l. & Truck). NOTE—No. 1997901 is a mechanically operated switch (linked to brake pedal).

**Bulb Specifications**

SEE 1946-47-48 CHEVROLET PASS. CAR PAGES

**MISC. ELECTRICAL**

**FUSES—**Lighting—30 ampere. On back of light switch. Convertible Top Motor—9 ampere. In switch lead.

**HORNS: Delco.** Vibrator type twin horns operated by relay (Pass. Cars), No. 1999801 vibrator type single horn (Comm'l. & Truck). Passenger car horn numbers as follows:

	High Note	Low Note
1941 Std. Type	1999534	1999533
1941 Optl. Penetone	1999840	1999839
1942 Model BG	1999840	1999839
1942 Model BH	1999546	1999545

**Horn Specifications**

Type	Current (at 6 volts)	Air Gap
1999801	7-9 amperes	.027-.033"
1999533, 45	19-21 amperes	.044-.049"
1999534, 46	18-20 amperes	.034-.039"
1999839	7-11 amperes	.032-.038"
1999840	6-10 amperes	.021-.025"

**Horn Relay (Pass. Cars):**—Delco-Remy No. 1116775.

**Contact Gap—**.025". Air Gap—.015" (closed).

**Contacts Close—**2.75-4.0 volts.

**ENGINE****STANDARD**

**ENGINE SPECIFICATIONS:—**6 cylinder, valve-in-head Bore—3½". Stroke 3¾".

**Displacement—**216.5 cu. ins. Rated HP—29.4.

**Developed Horsepower—**90 HP at 3300 RPM (Passenger Cars and Trucks except Cab-Over-Engine), 87 HP. at 3300 RPM (Cab-Over-Engine Trucks).

►NOTE—New larger updraft carburetor and intake manifold used on late 1941 Cab-Over-Engine models for increased power. May be installed on early models. Refer to *Carburetor Index* for 'Carter (B&B) Updraft Carburetor' article for complete data.

**Compression Ratio—**6.50-1 Std. cast-iron head.

**Compression & Vacuum Reading—**See *Tune-Up*.

**Engine Removal & Engine Mounting Adjustments,** See *Chevrolet Shop Notes* for data.

►Engine Roughness Correction—See "Engine Mountings" in *Chevrolet Shop Notes*.

**Cylinder Head Installation:—**Use new gasket and install with mark 'This Side Up' upward. Use cylinder head guide pins to align head.

**PISTONS:—**Passenger Cars—Cast-iron, flat head, cam ground, tin plated with slipper type skirt.

**Trucks—**Same as Pass. Cars except 1½ ozs. heavier and may be identified by a small forged boss on the lower center of each piston pin boss.

**Weight—**26.9 ozs. (Pass. Cars), 29.1 ozs. (Trucks) with piston pin bushings. Length—3¾".

**Removal—**Pistons and rods removed from above.

**Clearance—**Top .0147-.0183". Skirt .0017-.0023".

**Replacement Pistons: See Chevrolet Shop Notes.**

**Fitting Pistons:—**Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .002" feeler and lock on .003" feeler.

**PISTON RINGS:—**Two compression, one oil control ring per piston, all above pin. Oil ring groove drilled for oil drainage. NOTE—Taper faced compression ring used. Install with side mark 'TOP' upward.

**Ring Width End Gap① Side Clearance**

Compr. ....1235-.1240".....005-.015".....0015-.003"

Oil Cont. ....1860-.1865".....005-.015".....002-.0035"

①—Worn end gap limit 1/32" maximum.

**Replacement Rings:—**Furnished standard size and .005", .010", .020", .030", .040" oversize.

**PISTON PIN:—**Diameter—.8645-.8650". Length—3.135-3.165". Pin locked in rod, piston bronze bushed.

**Pin Fit in Piston—**Thumb push fit (room temp.).

**Replacement Pins:—**Std. & .003", .005", .010" oversize. NOTE—New pistons fitted with bushings and pins.

**CONNECTING ROD:—**Length 6 13/16". Weight 28.3 ozs. (1941), 30.7 ozs. (1942).

**Crankpin Journal Diameters—**2.311-2.312".

**Lower Bearing—**Spun babbitt-lined type.

**Clearance—**.001-.0025". Sideplay—.004-.012" (side clearance between rod and pin bosses .025" min.).

**Bearing Adjustment:—**Solid shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from one side to other with light tap of 8 oz. hammer), then replace one .002" shim for clearance (if unequal number, place extra shim on camshaft side). Rod should snap from side to side with one hand pressure with proper bearing fit.

**Palnut Note—**Palnuts used to lock rod bolts. Use new palnut, install with open side toward end of bolt, turn finger tight against rod nut, then tighten ½ turn additional.

**Installing Rods:—**Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper heights. See *Chevrolet Shop Notes for Oil Dipper Height data*.

**CRANKSHAFT:—**4 bearing, 7 integral counterweights. NOTE—Wick-type rear bearing oil seal (no slinger).

See *Chevrolet Shop Notes for Crankshaft Front and Rear Oil Seals and Harmonic Balancer servicing data*. **Journal Diameters—**#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

NOTE—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 bearings .002".

**Bearing Type—**Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap. Clearance—.002-.004".

## ENGINE

## CONTINUED FROM PRECEDING PAGE

►NOTE—Replacement "precision" type bearings do not require line-boring or reaming.

Replacement Bearings: New "precision" type furnished Std. size and .002", .010", .020", .030" Undersize.

NOTE—Bearings marked on inner surface of dowel: "V" for #1 and #4, "I" for #2 and #3.

►CAUTION—Complete bearing set (4 bearings) must be installed on engines not previously equipped with replacement "precision" bearings.

Bearing Adjustment:—Solid shims. Remove shims until slight drag secured when shaft turned by hand, then replace one .002" shim for clearance (if unequal number of shims used, place extra shim on same side for all bearings).

End Thrust: Taken by #3 bearing (adjusted only by replacing bearing). Endplay—.004-.007".

CAMSHAFT:—Four bearing. Helical gear drive.

Journal Diameters—#1, 2.0282-2.0292; #2, 1.9657-1.9667; #3, 1.9032-1.9042; #4, 1.8407-1.8417".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if excessive).

Bearing Type—Steel-backed, babbitt-lined bushings. See Chevrolet Shop Notes for Camshaft Bearing installation and line-reaming instructions.

Clearance—.002-.004".

End Thrust:—Taken by thrust plate behind camshaft gear (gear position controls endplay). See Timing Gear installation in Chevrolet Shop Notes for data.

Endplay—Free fit to .003" maximum.

Timing Gears:—Crankshaft gear Steel. Camshaft gear Bakelite & Fabric. Maximum gear run-out .003" crankshaft, .004" camshaft.

Replacement Timing Gears—See Chevrolet Shop Notes.

►CAUTION—Replacement Crankshaft Gear has relocated keyway and will change Valve Timing on these engines when replacing original type crankshaft gear. See Valve Timing.

Timing Gear Installation & Alignment—See "Timing Gears" in Chevrolet Shop Notes.

Timing Gear Backlash—.002-.005".

Camshaft Setting:—Gearspunchmarked. Meshmarked tooth of crankshaft gear with marked space between teeth of camshaft gear.

VALVES: Head Diameter Stem Diameter Length  
Intake .....1 41/64"..... 3407-.3417".....6.205-6.235"  
Exhaust .....1 15/32"..... 3400-.3407".....4.839-4.869"

Seat Angle Lift Stem Clearance

Intake .....30°.....2947"......001-.003"

Exhaust .....30°.....3118"......002-.004"

NOTE—1941-42 valves not interchangeable with earlier models.

Valve Guides:—Pressed in head (new types—longer exhaust guide used—guides not interchangeable)

Replacement Valve Guides: New "precision" type (do not require rough reaming).

Valve Guide Installation—See "Valve System" in Chevrolet Shop Notes.

Valve Springs:—Free length 2 1/8". When checked with U15 Tester, spring pressure should be 125-133 lbs. at 1 1/2".

Spring Pressure Length

Valve Closed ..... 49-56 lbs. ....1 13/16"

Valve Open .....121-133 lbs. ....1 1/2"

NOTE—New umbrella type valve spring cap covers used on Intake Valves only (diverts oil from valve end of rocker arm out over spring, reducing oil on valve stem thereby diminishing oil consumption and exhaust smoke when idling). Install springs with close-coil end toward cylinder head. Use round (umbrella type) valve caps on intake valves, octagonal caps on exhaust valves.

Valve Lifters:—Same as 1940 (pushrod seat brazed on top). Clearance—.001" (free fit in guide holes).

Rocker Arm Assembly:—New Armasteel type (no bushing used). 4 different types of arms. See Chevrolet Shop Notes for Rocker Arm data.

## ENGINE

## SPECIAL HEAVY DUTY TRUCK TYPE

SPECIAL 235 CUBIC INCH OPTIONAL TRUCK ENGINE:—Available as a regular production option on all 1 1/2 Ton Heavy Duty & C-O-E Trucks.

Servicing:—All service operations and clearances same as for Regular Engine except for connecting rod oiling system adjustment Refer to Std. Engine (preceding) for complete data.

Non-interchangeable Parts:—Parts are interchangeable between the Regular Engine and the Special 235 Cubic Inch Engine except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Motor), Push Rods (approximately 3/4" longer on large engine and identified by shoulder just below cup at top end), Valve Tappets, Camshaft, Piston and Pin Assembly, Piston Rings (Compression and Oil Control), Crankshaft, Connecting Rod, Harmonic Balancer, Oil Pan, Oil Pan Pipe Assembly, Oil Distributor to Valve Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support Assembly.

ENGINE SPECIFICATIONS (235 CUBIC INCH OPTIONAL TRUCK ENGINE):—6 cylinder, valve-in-head Bore—3 9/16". Stroke—3 15/16".

Displacement—235.5 cu. ins. Rated HP—30.4.

Developed Horsepower—93 HP. (except C-O-E), 90 HP. (C-O-E Trucks) at 3100 RPM.

►NOTE—Increased power obtained on late Cab-Over-Engine Trucks by use of larger carburetor and intake manifold (may be installed on early models). Refer to Carburetor Index for "Carter (B&B) Updraft Carburetor" article for data.

Compression Ratio—6.62-1 std. cast-iron head.

See Special 235 Cubic Inch Optional Truck Engine Note above for Servicing and Non-interchangeable Parts.

## VALVE TIMING

►VALVE TAPPET CLEARANCE: CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Cars & Trucks—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".

Trucks (for continuous full throttle operation)—.010" Intake, .020" Exh., with engine "normalized".

Economy Engine—.010" Intake, .016" Exhaust, with engine "normalized".

VALVE TIMING: See Camshaft Setting.

►VALVE TIMING CHANGE: Valve Timing is retarded 4° on engines equipped with new Replacement Crankshaft Gear.

## ORIGINAL VALVE TIMING SPECIFICATIONS

►for Engines with Original Crankshaft Gear

Intake Valves—Open 3° BTDC. Close 35° ALDC.

Exhaust Valves—Open 46° BLDC. Close 5° ATDC.

## NEW VALVE TIMING SPECIFICATIONS

►for Engines with new Replacement Crankshaft Gear

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

Valve Timing Check—First remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close with triangular mark on flywheel in line with pointer in inspection hole in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set dial to exactly .036" (engines with original type crankshaft gear), .044" (engines with new replacement crankshaft gear). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

## LUBRICATION

LUBRICATION:—Pressure and positive splash system. See Chevrolet Shop Notes for Oil Distributor, and Rocker Arm Lead & Overflow Pipe servicing.

Oil Pump Installation—Assemble ground side of idler gear toward cover. Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

CAUTION—Use only proper Chevrolet gasket when assembling pump cover. Gasket controls pump gear clearance.

Normal Oil Pressure:—14 lbs. at 21 MPH (Pass. Cars), 14 lbs. at 2000 RPM (Trucks).

Oil Pressure Regulator:—Located on oil pump cover. Opens at 75 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Oil Distributor:—See Chevrolet Shop Notes for data.

Checking Oiling System:—Should be checked whenever pan removed. See Chevrolet Shop Notes for data.

Crankcase Capacity:—5 1/2 qts. dry, 5 qts. refill (All).

## COOLING

Capacity: 14 qts. (1941 Pass. Cars), 15 qts. (1942 Pass. Cars), 14 qts. (1941-42 Trucks exc. C-O-E), 16 1/2 qts. (1941-42 C-O-E Trucks). NOTE—Special Optl. Truck radiator capacity is 16 qts.).

See Chevrolet Shop Notes for Radiator Core Removal.

Water Pump:—New two outlet packless type with sealed ball-bearing shaft. NOTE—Pumps not interchangeable with earlier models (same on all 1941-42 models except for fan).

See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet. Setting—Starts to open at temperature indicated below (this figure marked on valve).

Part No. Opening Temp. Fully Open  
3113995 (Std.) .....140-147° F.....170° F.  
985128 (Econ. Engine) ..... 160° F.  
985127 (Alcohol Anti-Freeze) 148-155° F.....173° F.  
985787 (Perm. Anti-Freeze).....166-174° F.....194° F.

C NTINUED N NEXT PA E

CONTINUED FR M PRECEDING PAGE

**CLUTCH****PASS. CARS & HALF-TON**

**CLUTCH:**—Own Make. Diaphragm spring, single plate, dry disc type. NOTE—New clutch driven member (with revised spring cushions), clutch linkage (for proper release of new driven member) and flywheel oil groove (just inside clutch plate driving surface to prevent any excess grease thrown out by clutch pilot bearing from reaching facings) used.

See Clutch Section for complete data.

► **Clutch Rattle Correction:**—See Service Notes in Chevrolet Clutch article in Clutch Section.

**Facings:**—Woven asbestos, 2 used. Inside Diam. 6 $\frac{1}{8}$ ". Outside Diam. 9 $\frac{1}{8}$ ". Thickness .132-.138".

**Adjustment:**—Pedal free travel  $\frac{3}{4}$ -1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure (not foot) when checking free travel.

**Removal:**—Remove transmission and flywheel underpan (see Transmission Removal below). Remove throwout bearing from fork, remove fork by prying fork off ball, remove fork mounting (use  $\frac{3}{4}$ " wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

**CLUTCH****TRUCKS (EXCEPT HALF-TON)**

Own Make. Single Plate, diaphragm spring, dry disc type. Truck clutch larger than Pass. car type.

NOTE—Driven member vibration dampener now equipped with 6 (coil) springs instead of 8.

See Clutch Section for complete data.

► **New Heavier Replacement Clutch Pedal Pull-back Spring for 1941 Trucks:**—See 1941 Chevrolet Clutch article in Clutch Section.

**Facings:**—Woven asbestos, 2 used. Inside Diam. 7". Outside Diam. 10 $\frac{3}{4}$ ". Thickness .137-.143".

**Adjustment & Removal:**—Same as passenger car. See Passenger Car Clutch data above.

**TRANSMISSION****PASSENGER CARS**

**TRANSMISSION:**—Own Make. All helical gear type. Constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse).

See Transmission Section for complete data.

**Transmission Control:**—Remote control type, steering column shift with vacuum power.

See Transmission Section for complete data.

► **Gearshift Lever Rattle Correction (for all cars) & Cementing of Vacuum Shift Cylinder Tubing (on Cabriolet):**—See 1941-42 Chevrolet Transmission Control article in Transmission Section.

**Removal (except Cabriolet):**—Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot (work under car) by taking out two bolts fastening halves together. Loosen 3 vacuum cylinder bracket-to-transmission cap screws and reactionary lever assembly-to-transmission operating shaft clamp bolt. Drive assembly from end of shaft with care. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Remove 3 vacuum cylinder bracket-to-transmission cap screws and move assembly (bracket, vacuum cy-

linder and reactionary levers) away from transmission. Disconnect pull rod and brake cables from brake cross shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer cap screws and slide ball back on propeller shaft housing. Remove 4 cap screws which secure front trunnion bearings to the front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing cap screws and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing cap screws. Slide transmission back and lift out through opening in floor.

**Removal (Cabriolet):**—Transmission removal on this model differs from regular passenger car removal (above) due to use of special 'VK' frame. Removal procedure for Cabriolet as follows: Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot by taking out two bolts fastening halves together. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Disconnect gearshift control rod by removing cotter pin, washer and anti-rattle spring from transmission end of rod. Disconnect vacuum cylinder piston rod and valve link from reactionary levers. To prevent upsetting vacuum valve adjustment, replace clevis pin through piston rod yoke and valve link. Remove vacuum cylinder from mounting bracket. Disconnect pull rod and brake cables from brake cross-shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer cap screws and slide ball back on propeller shaft housing. Remove 4 cap screws which secure front trunnion bearings to front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing cap screws and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing cap screws. Slide transmission back until clutch shaft just free of driven member, raise rear end sufficient to remove transmission rear mounting (free mounting from transmission and move it forward enabling removal of mounting through opening in frame). Pull transmission back and turn it toward the left as required for sufficient clearance to lift it out through opening in floor.

**TRANSMISSION****3-SPEED TRUCK TYPE**

Own Make (Std. on  $\frac{1}{2}$ ,  $\frac{3}{4}$  Ton Trucks)—3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second and High), sliding gear (Low and Reverse).

See Transmission Section for complete data.

**Removal:**—See 4 Spd. Transmission Removal (below).

**TRANSMISSION****4-SPEED TRUCK TYPE**

Own Make (Optl.  $\frac{1}{2}$ ,  $\frac{3}{4}$  Ton. Std. Other Trucks). 4-speed, sliding spur gear type.

See Transmission Section for complete data.

► **1941 Truck Low & Reverse Gear Ratio Production Change:**—See 1941 Chevrolet Truck 4-Speed Transmission article in Transmission Section.

**Transmission Control (Cab-Over-Engine):**—Remote control type. See Chevrolet Shop Notes for data.

**Removal ( $\frac{1}{2}$  Ton):** Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Remove 4 universal joint ball collar-to-retainer cap screws and slide ball back on propeller shaft housing. Remove 4 cap screws which secure trunnion bearings to front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance (NOTE—On 4 spd. transmission, frame cross member must be removed to drop shaft). Remove 2 upper transmission-to-clutch housing cap screws and insert guide pins, remove clutch underpan and take out 2 lower mounting cap screws and slide transmission out and remove. NOTE—On 4 spd. type, remove 2 brake master cylinder bracket screws.

**Removal ( $\frac{3}{4}$  Ton):** Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split center universal joint by removing two trunnion bearing 'U' clamps (tape or wire trunnions together to prevent losing bearings). Remove 4 universal ball retainer-to-transmission bolts and slide retainer back on tube. Remove center bearing support bracket-to-frame cross member bolt nuts. Pull front propeller shaft assembly to rear, remove transmission using guide pins.

**Removal (C-O-E 109" WB.):** Same as for  $\frac{3}{4}$  Ton except that one propeller shaft only used. Split front universal and remove transmission (as above).

**Removal (All Others):**—Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split front universal joint by removing two trunnion bearing 'U' clamps (tape or wire trunnions together to prevent losing bearings). Remove center bearing support bracket-to-frame cross member bolts. Pull front propeller shaft assembly to front to free from rear shaft. Then remove transmission as directed for  $\frac{1}{2}$  &  $\frac{3}{4}$  Ton Truck models above.

**UNIVERSALS**

**UNIVERSAL JOINT:**—Own Make—Needle bearing "cross" type (1941 Pass. Cars &  $\frac{1}{2}$  Ton), bushing type ( $\frac{3}{4}$  Ton front joint only 1941), new type with special treated trunnion pins and trunnion bearings (1942 Pass. Cars,  $\frac{1}{2}$  Ton, and  $\frac{3}{4}$  Ton front joint only).

See Universals Section for complete data.

**Spicer Type:** Needle bearing type (used on other Truck models).

See Universals Section for complete data.

**SERVICE NOTE:**—Floating bushings available for replacement of needle bearings used in first type 1941 Chevrolet universal joint.

Refer to 'Chevrolet Universal Joint' article in the Universals Section for complete service data.

**Propeller Shaft Support Bearing (Trucks):** See Chevrolet Special Shop Notes for servicing instructions.

**REAR AXLE****PASSENGER CARS**

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gear type with Torque Tube drive.

See Rear Axle Section for complete data.

**Ratio:**—4.11-1 Standard. 3.73-1 Optional.

NOTE—Axles may be identified by prefix on serial number (located on top of the differential carrier casting on the right side of the center rib) as follows: 4.11-1—AG or AJ (1941), 2AG, 2AJ or BG (1942), 3.73-1—AH or AP (1941), 2AH, 2AP or BH (1942).

Backlash—.005-.007". Screw adjustment.

**Removal:**—Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber 'I' bolts at spring seats. Remove spring 'U' bolts, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of drive shaft. Withdraw axle assembly.

**Rear Spring Rear Shackle Note**—2 types used in production. First type same as 1940. Second type rubber bushed and requires no lubrication. See *Chevrolet Shop Notes for Rear Spring Rear Shackle (two types) and Rear Spring Seat servicing data.*

**Axle Shaft Removal:**—Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' brake drum retaining nuts (on second wheel stud at either side of drain hole in drum), remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, withdraw shaft.

**Installation:**—Assemble new oil deflector, gasket (coat both sides with heavy shellac or paint), line up extra hole (center hole of closely grouped three holes) with notch in hub flange on axle shaft (oil pocket in oil deflector should also be aligned with this notch), install six special bolts, forcing heads down to deflector, andpeen shoulder on bolts into countersink around bolt holes in flange using Special Peening Tool and Anvil so that these parts are riveted together. Check endplay adjustment (below). NOTE—Right shaft longer than left.

**Endplay Adjustment:**—When installing shaft, select correct spacer block (see below) so that with spacer installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free fit to .014"

**Axle Spacer (Passenger Car)**—Three spacer blocks furnished which give four sizes as follows: Narrow—1.0105". Medium—1.0195" and 1.0295". Wide—1.0345".

**(Trucks)**—Two spacer blocks furnished which give three sizes as follows: Narrow—1.1485". Wide—1.1575" and 1.1675". These dimensions are taken across ground surfaces.

**NOTE:**—Spacers should be installed with ground surface toward axle shaft end. Medium (Passenger Car), Wide (Truck) Spacers are ground on all four sides (giving two different sizes as listed above).

## REAR AXLE

### 1/2 & 3/4 TON TRUCKS

**Own Make.** Semi-floating, hypoid gear type with Torque Tube Drive (1/2 Ton), Hotchkiss Drive (3/4 Ton).

See *Rear Axle Section for complete data.*

**Ratio**—4.11-1 (1/2 Ton), 4.55-1 (Dubl Duti & 3/4 Ton).

**Backlash**—.005-.008". Screw adjustment.

► **Early 1941 3/4 Ton Truck Rear Spring Shifting & 1941 3/4 Ton Panel Rear Spring Noise Corrections**—See "Rear Spring Seat & Shackle" in *Chevrolet Shop Notes.*

**Removal, Axle Shaft Removal, Endplay Adjustment:** Same as for Passenger Car (above) except that on 3/4 Ton model, propeller shaft can be disconnected at rear universal for Rear Axle Removal.

See *Passenger Car Rear Axle (above) for data.*

## REAR AXLE

### 1 1/2 TON TRUCKS

**Own Make.** Full-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data.*

**Ratio**—6.17-1 Std., 5.43-1 Optl. NOTE—Axles identified by prefix letters on part number stamped on top right side of differential housing as follows: 6.17-1—AR or AS (1941), 2AR, 2AS, BR, or BS (1942), 5.43-1—AT or AW (1941), 2AT, 2AW, or BT (1942).

**Backlash**—.005-.008". Screw adjustment.

► **1941 1 1/2 Ton Panel Rear Spring Noise Correction**—See "Rear Spring Seat & Shackle" in *Chevrolet Shop Notes.*

**Removal:**—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

**Axle Shaft Removal:**—Bend lock plate lugs away from capscrew heads, take out 8 capscrews in axle shaft flange, install two 1/2" x 13 capscrews in tapped holes in flange (between regular screw holes), turn screws up evenly to loosen shaft, withdraw shaft and aluminum gasket. NOTE—Use new aluminum gasket and lock plate when shaft installed.

**Wheel Bearing Adjustment:**—Remove axle shaft (see above), locknut and adjusting nut lock (within wheel hub), use J-870 wrench and tighten adjusting nut tight, then back off 45°, see that wheel hub turns freely by hand, install lock and locknut, bending lock tangs in notches on both nuts.

### TRUCKS SPECIAL EQUIPMENT

**REAR AXLE (TWO SPEED):**—Optl. on all Trucks.

See *Rear Axle Section for complete data.*

**Ratio**—5.64-1 & 8.22-1 Std. 6.17-1 & 8.22-1 Optl.

**Backlash**—.006-.012". Screw adjustment.

All other data same as for regular axle above.

## SHOCK ABSORBERS

**Passenger Cars—Delco Model 2200-A, B (Front), 2100-A, B (rear).** Double acting, hydraulic, parallel cylinder type. Same as 1940 types except for valve changes due to increased car weight. NOTE—New type rear shock absorber links used on 1942 cars. See *Shock Absorber Section for complete data.*

► **Shock Absorber Valve Change to correct 'Crunching' Noise in Front Shock Absorber**—New valve (part #1069124) released during production. Valve marking same as first type. For complete data, refer to the "Delco Parallel Cylinder Type" Shock Absorber article in the *Shock Absorber Section.*

**Truck Models—Delco.** Single acting Front and Rear (1/2 Ton & 3/4 Ton). Double acting type Optl.

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

### PASSENGER CARS

**Front Suspension (Passenger Cars):** Independent, linked parallelogram type with coil springs.

**NOTE**—1941 type has larger wheel spindles, new front wheel inner bearings, and longer springs than 1940 design; 1942 type has longer springs than 1941

See *Front Suspension Section for complete data.*

► **'Crunching' Noise Correction**—See Shock Absorber Valve Change Note above.

**NOTE**—Make checks with car weight on wheels and special gauge installed at front to level frame.

**Kingpin Inclination**—4 3/4° ± 1/2°.

**Caster**—0° ± 1/2°. Adjustable.

**Camber**—Negative 1/4° ± 1/2°. Adjustable.

**Toe In**—0-1/16". To adjust, loosen clamp bolts at each end of left tie rod and turn rod. When tightening clamp bolts, tie rod ends must be in alignment with ball studs (to prevent binding).

**Steering Geometry**—Outer wheel 20°, Inner 24° ± 2°.

### TRUCKS

**Front Suspension (Trucks):** Conventional "I" beam section front axle with Reverse Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7°10' (All models except C-O-E and 1942 School Bus), 8° (C-O-E & 1942 School Bus) plus or minus 1° crosswise.

**Caster**—1 3/4° (1/2 & 3/4 Ton), 2 3/4° (1 and 1 1/2 Ton except C-O-E), 3° (C-O-E) plus or minus 1/2°. Use wedge shims for corrections up to 2°, use bending tools if greater correction required.

**Camber**—1° ± 1/2°. Bend cold for minor corrections.

**Toe-In**—5/64-1/8". Adjust by turning tie rod.

**Steering Geometry**—Outer wheel 20°, Inner 23° ± 2°.

## STEERING GEAR

**Steering Gear:** Saginaw (Chevrolet Pass. Car Type) Worm-and-Roller type (Pass. Cars), Saginaw ball Bearing Worm-and-Nut type (Trucks).

**NOTE**—Truck Steering Gear changed during 1942

See *Steering Gear Section for complete data.*

## BRAKES

### PASSENGER CARS

**BRAKES:**—Service—Own Make. Hydraulic type. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data.*

**Wheel Cylinders**—Diameter: 1 1/4" (front), 1 3/16" (rear). Sizes stamped under adjusting cup lock spring on wheel cylinder housing.

**Drums**—Cast iron rim, steel web. Diameter 11".

**Lining**—Moulded type. Width 1 3/4". Thickness 3/16".

**Clearance**—Adjusting Cover (on wheel cylinder) backed off 4 Notches from slight drag position.

**Hand Brake:**—See Service brakes above.

### TRUCKS

**BRAKES:** Service—Own Make. Hydraulic type. Hand lever applies rear service brakes.

See *Brake Section for complete data.*

**Wheel Cylinders**—Diameter 1 1/4" (front wheels—all models), 1 3/16" (rear wheels—1/2, 3/4 Ton), 1 3/8" (rear wheels—3/4 Ton Special), 1 1/2" (rear wheels—other models). Size stamped on housing under adjusting cup lock spring.

**Drums**—Diameter 11" (1/2, 3/4 Ton & front wheel 3/4 Ton Special, 14" (rear wheel 3/4 Ton Special, front wheels other models), 16" (rear wheel others).

**Lining**—Moulded type.

Model	Width	Thickness	Length
1/2, 3/4 Ton	1 3/4"	3/16"	22 5/8"
3/4 Ton Spec. (Front)	1 3/4"	3/16"	22 5/8"
3/4 Ton Spec. (Rear)	2 "	17/64"	38 1/2"
All Others (Front)	2 "	17/64" ①	28 7/8"
All Others (Rear)	3 "	17/64"	35 13/16"
①—1/4" on 1941 Models exc. C-O-E which was 17/64".			
<b>Clearance</b> —Adjusting cover backed off 4 Notches (1/2, 3/4, 3/4 Ton Special), 5 Notches (All Other Models—Front Wheels), adjusting pinion backed off 3/4 turn (All Others—Rear Wheels) from slight drag.			

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power (1941), Electric Type (1942).

See *Miscellaneous Section for complete data.*

**HOOD LOCK:** Hood is Alligator type. To raise hood, pull out lock button on instrument panel, pull forward on safety catch under front edge of hood.

**Hood Lock Adjustment—**See Chevrolet Shop Notes.

**FRONT END SHEET METAL, RADIATOR GRILLE, & FENDER CAP REMOVAL & INSTALLATION:** See Chevrolet Shop Notes.

## MODEL IDENTIFICATION

Series	Model
1946	1948
DJ	EJ
DK	EK
	FK
	Fleet Master & Fleetline

**FLEET MODEL NOTE:** Special Economy Engine available for all models. May be identified by special Tune Up Specification Plate on Push Rod Cover listing special settings and Fleet Car Identification Plate on instrument panel to right of the glove compartment. Special carburetor used (has stop-pin which limits throttle opening to ½ throttle).

**SERIAL NUMBER:** First No. 1001 with model prefix as indicated in model designation above. Stamped on plate on right front body hinge pillar (Pass. Cars).

**ENGINE NUMBER:** Stamped on right side of crankcase to rear of distributor with prefix to indicate engine type and plant as follows:

Engine Type	Flint	Tonawanda
1946 Pass. Cars	DAA	DAM
1947 Pass. Cars	EAA	EAM
1948 Pass. Cars	FAA	FAM

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. minimum (cylinders equal within 5-10 lbs.) at cranking speed of 210-220 RPM.

**VACUUM READING:** Steady 17-21" at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .040".

Plug Type—AC No. M-8 (see Note). 10 mm.

► **No. 104 can be used for sustained high speeds.**

**M-8 Spark Plug Note—**Improved type plug with increased clearance between insulator and shell (to prevent carbon and lead deposits forming in this area and causing short or misfiring at 45-60 MPH car speed) now available and can be identified by groove at base of shell directly above threads. All M-8 plugs are new aluminum oxide insulator type with skirt at lower end around electrode designed to retain heat and burn off carbon deposits.

► **M-8 Installation Caution—**Use steel gasket with these plugs. Install plugs finger tight, then tighten with wrench (11/16" deep socket) an additional ½-¾ turn (with new gasket), ¼-½ turn (old gasket) or with torque of 15 ft. lbs. (except new type M-8 plugs with identifying groove—10-12 ft. lbs.). **CAUTION—**Do not overtighten new type M-8 plugs (with identifying groove). These plugs have thin shell and must not be tightened more than 10-12 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—**.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle or Dwell—**39° closed, 21° open.

**Breaker Arm Spring Tension—**17-21 ozs.

**Automatic & Vacuum Advance—**See Distributor.

**IGNITION TIMING:** 5° BTDC.

**Timing Procedure—**See Ignition Timing.

**Timing Mark—**Steel ball insert in flywheel lined up

with pointer in inspection hole in right front face of housing with Octane Selector set at "0". Then adjust Octane Selector as follows:

**Octane Selector Setting—**Set for slight ping when accelerating engine with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**1¼-2¼ turns open (screw set for smooth idle with warm engine—turn out for richer mixture).

**Idle Speed—**450-500 RPM. with warm engine.

**Float Level—**½" top of float to gasket seat (machined surface) on cover with valve seated (invert to check).

**Accelerating Pump—**No seasonal adjustment.

**Fuel Pump Pressure—**4 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic type. Check for free operation when tuning engine.

Spring should be wound up just enough to slip end over manifold pin (approx. ½ turn). **CAUTION—**Excessive tension may cause valve to stick with detonation and poor performance.

► **VALVE TAPPET CLEARANCE:** **CAUTION—**Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

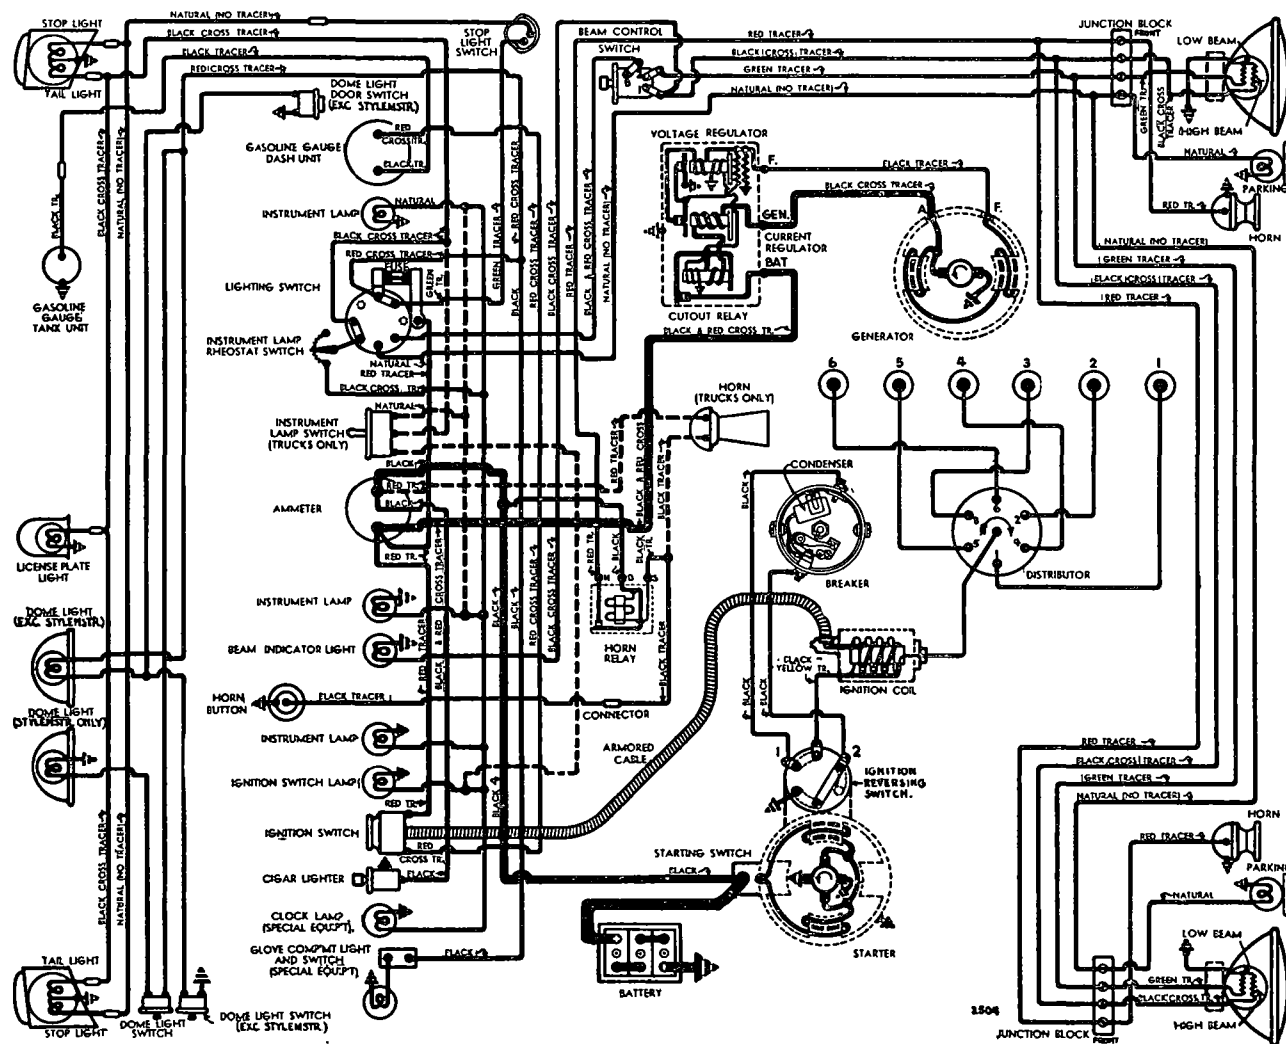

**Std. Engine—.006"** (.006-.008") Intake, .013" (.013-.015") Exhaust with engine normalized.

**Economy Engine—.010"** Intake, .016" Exhaust with engine normalized.

**Valve Timing Check:** See Valve Timing.

► **CAUTION—**1948 Engines have new Valve Timing (applies also to 1946-47 Engines with new Replacement Timing Gear).

**STARTING:** See Battery, Starter, Generator, Regulator.

1946-47 CARS (SEE 1948 DIAGRAM F R IGNITION WIRING WITHOUT REVERSING SWITCH)

► **NOTE—**ARM RED CABLE (IGNITION SWITCH TO CUT OFF) NOT USED ON 1947 CARS

**IGNITION**

1946-47-48 (WITH REVERSING SWITCH)

**IGNITION SWITCH:** Delco-Remy. (1946) No. 1116304, (1947) No. 1116454, (1948) No. 1116452. Armored cable (switch to coil) used on 1946 type only.

**1948 Switch Note**—Has special "Off-Unlocked" position (to right of "On" position).

**Ignition Lock**—Briggs & Stratton Lock Cylinder. (1946-47)—No. 45792 (Coded), 45791 (Uncoded). (1948)—No. 600114 (Coded), 600088 (Uncoded).

**Key Series**—No. 8000 to 9499. **Groove**—No. 15.

**Ignition Reversing Switch:** Delco-Remy No. 1907122. Mounted on starter and operated by starting pedal. See *Electrical Equipment Section* for complete data.

► **Removing Reversing Switch from Ignition Circuit**—If switch removal necessary, see "Ignition Reversing Switch" in *Chevrolet Shop Notes* for re-working data.

**IGNITION COIL:** Delco-Remy (1946) No. 1115141,

('47-48) No. 1115380. On engine above distributor.

**1946 Note**—Armored cable from coil to switch.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1882239.

► **CAUTION**—This condenser used only on cars with REVERSING SWITCH. Must not be used without switch. Capacity—.28-.34 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110090. Single breaker, 6 lobe cam full automatic advance type with vacuum spark control and Octane Selector. **NOTE**—Distributor has insulated breaker plate and ground terminal for use with Reversing Switch.

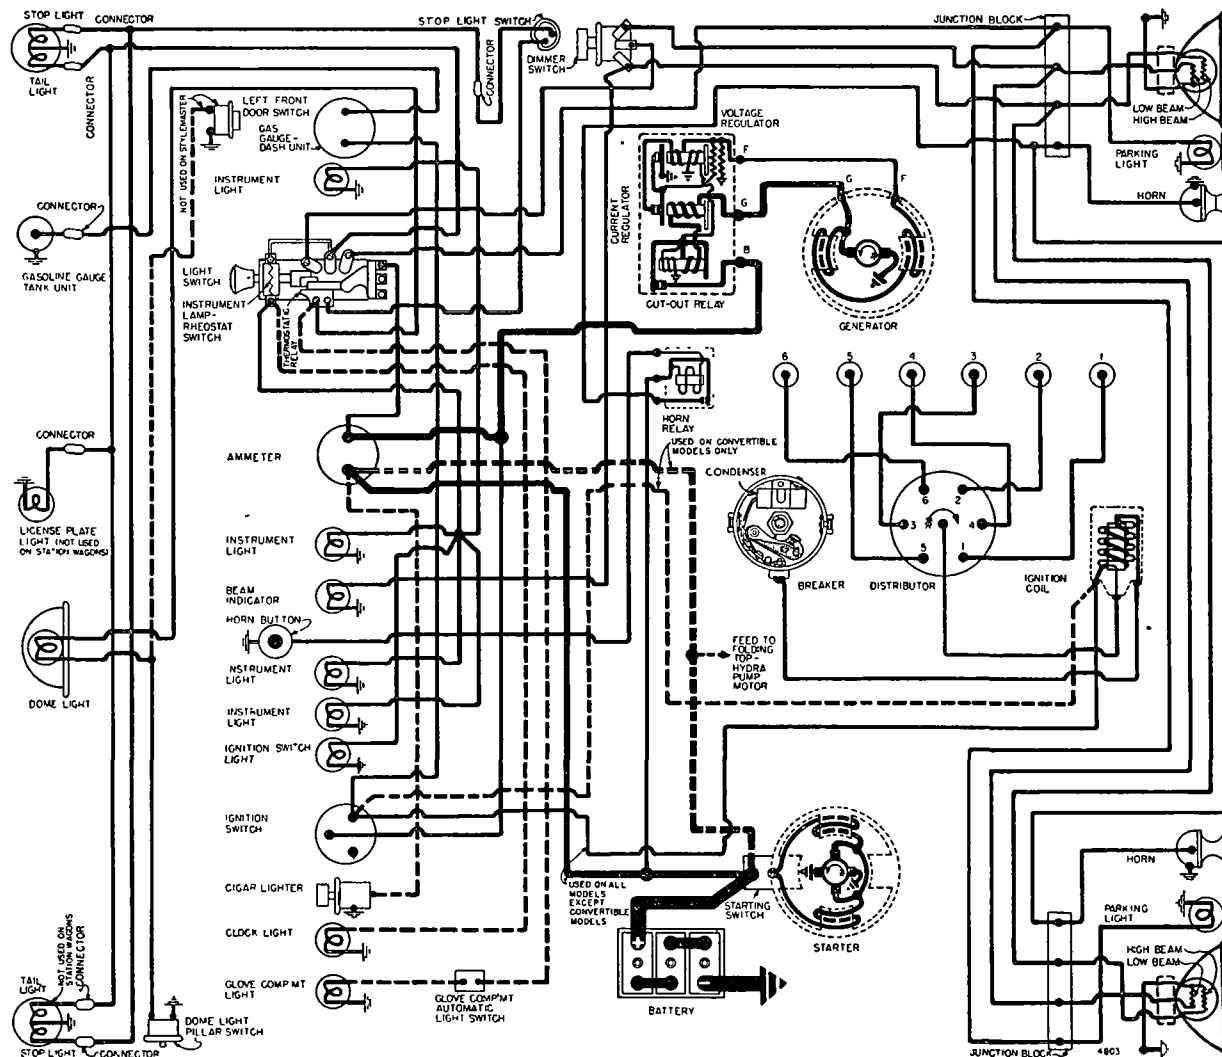

► **Distributor Change for use Without Reversing Switch**—See "Ignition Notes" in *Chevrolet Shop Notes*. **Breaker Point Set**—Delco-Remy No. 1882391.

**Breaker Gap**—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle**—39° closed, 21° open.

**Breaker Arm Spring Tension**—17-21 ozs.

**Rotation**—Clockwise viewed from above.

1948 CARS (SEE 1946-47 DIAGRAM FOR REVERSING SWITCH USED ON FIRST CARS)

Distr. Degrees	Automatic RPM	Advance Degrees	Eng. RPM
Start.....	350	3.....	700
6.5.....	600	13.....	1200
12.25.....	1000	20.5.....	2000
19.....	1700	38.....	3400

**Octane Selector**—Adjustment on distributor provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment instructions.

**Vacuum Spark Control:** Delco-Remy No. 1116043. On Octane Selector, linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. **Plunger Travel**—17/64".

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0.....	7-8.5"
10°.....	20°.....	16-19"

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

**IGNITION**

LATE 1948 (WITHOUT REVERSING SWITCH)

**IGNITION SWITCH:** Same as listed above.

**COIL:** Delco-Remy No. 1115380. Above distributor.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

► **CAUTION**—This condenser must be used for ignition systems without reversing switch. Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1112353. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

► **NOTE**—This distributor has larger breaker plate grounded directly to housing and special breaker point set.

**Breaker Point Set**—Delco-Remy No. 1855720.

**Breaker Gap**—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle**—39° closed, 21° open.

**Breaker Arm Spring Tension**—17-21 ozs.

**Rotation**—Clockwise viewed from above.

**Automatic & Vacuum Spark Advance**—See first type No. 1100090 Distributor above.

**IGNITION TIMING**

**Std. Setting** Flywheel Degrees Piston Position  
All Engines ..... 5° BTDC ..... .0091" BTDC

**NOTE**—See Octane Selector Setting (below) for final setting dependent on operating conditions. **Timing (Neon Light)**—Recommended method. Connect neon light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at '0'. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector setting.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark (if no ping), clockwise to retard spark (if too severe).

**CARBURETOR**

**Carter (Chevrolet) Type 574S (Std.), 616S (Econ. Models).** 1½", single barrel, downdraft types with manual choke control. **NOTE**—Carburetors marked by Casting No. 421 (574S), 432 (616S) on flange. See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rod & Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Throttle Cracker (1946):** Opens throttle 1/3 for starting. To adjust, with idle speed correctly set at 450-500 RPM., loosen locknut and adjust bolt on accelerator pedal rod lug for ¼" clearance between head of bolt and lug on starter pedal cross-shaft.

**CARB. EQUIPMENT**

**Air Cleaner (Pass. Cars):** AC No. 1529667 oil-wetted type Std. No. 1528964 heavy duty oil-bath type Optl. Filter Element AC No. 1528152.

**Servicing (Oil-wetted Type)**—Remove and wash filter element in gasoline, re-oil by dipping in engine oil at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Remove and wash filter element in gasoline, clean oil reservoir and fill to level of indicator line (approx. 1 pint) with SAE No. 50 engine oil (summer temperatures) at 2000 mile intervals or more often if required.

**Fuel Pump:** AC Type AF, No. 1523089. Diaphragm type. Replacement Pump—AC No. 429.

Pressure—4 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** AC electric type. AC Nos.: Dash Unit—(1946) No. 1516405, (1947-48) 1516991. Tank Unit—No. 1516280 (All Models).

See Carburetion Equipment Section for data.

**BATTERY**

**Delco Type 15X-3 (First), 15AA-4 (Later).** 6 volt, 15 Plate, 100 Ampere Hour (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.6 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Negative (—) terminal.

**Dimensions**—Length 9". Width 7". Height 8½".

**Location**—In engine compartment on right side

**STARTER**

**Delco-Remy**—Various models used as follows:

1107061 (With Rev. Switch)—First LHD. cars.

1107055 (No Rev. Switch)—Later LHD. cars.

1107063 (With Rev. Switch)—First RHD. cars.

1107076 (No Rev. Switch)—Later RHD. cars.

**Armature**—Delco-Remy No. 1867897.

**Drive**—Overrunning clutch and manual pinion shift (LHD. Starters), solenoid pinion shift (RHD. Starters).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—85 RPM., 150 amperes, 5.5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect starting pedal linkage and Reversing Switch wires. Take out flange mounting screws, remove starter and switch.

**Starting Switch (1107055 & 1107061 Starters):** Delco-Remy No. 820052. Mounted on starter. Pedal operated.

(1107063 & 1107076 Starters)—Delco-Remy solenoid switch on starter, controlled by pushbutton switch No. 1996031 on instrument panel.

See Electrical Equipment Section for complete data.

**GENERATOR**

**Delco-Remy Model 1102667 (Std.), 1102677 (Spec. Equip.), 1106403 (City Police).** Two brush (shunt) types with voltage and current regulation. Ventilated by fan on drive pulley.

**Armature No.**—1879002 (1102667), 1881389 (1102677).

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate (Std. Gen.)**—36 amperes, 7.4 volts, 2400 RPM. or 25.7 MPH. (Pass. Cars).

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102667	30	8.0	1750
1102677	28	8.0	1450
1106403	35	8.0	1040

①—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes (1102667 & 1102677), 1.77-2.0 amperes (1106403) at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

**REGULATOR**

**Delco-Remy Model 1118201 (1102667 Gen.), 1118233 (1102677 Gen.), 1118229 (1106403 Gen.).** Vibrating type Voltage and Current Regulators in case with Cutout Relay.

See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings

**Cutout Relay**

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts Hot (1118201), 7.0-7.2 volts Hot (All Others) at operating temperature.

**Checking & Adjustment**—See Electrical Equipment Section.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes (1118201, 1118229), 24-26 amperes (1118233) Hot or at operating temperatures.

**Checking & Adjustment**—See Electrical Equipment Section.

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**Headlamps:** Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red dot on speedometer dial. Lighted when upper beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicator**—Pilot light in switch case. Lighted when Right or Left Dir. Signal "on".

**Switches**

**Lighting**—Delco-Remy. (1946-47) No. 1994022 (1948) 1995031. Switch has instrument light rheostat (controlled by rotating switch knob).

**Beam Selector**—Delco-Remy No. 1997008.

**Glove Box**—Delco-Remy 1997742 or 1997834.

**Stop Light**—Delco-Remy No. 1997901 (mechanical type operated by brake pedal arm).

**Stop Light (Panel & Suburban)**—Delco-Remy No. 594504 or 594505.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking (Without Dir. Sig.)	3	63
Parking & Direc. Signal	21-3	1154
Instrument, Spdmtr.	1½	55
Clock, Glove Compt.	1½	55
Beam Indicator	1	51
Tail & Stop (See Note)	21-3	1154
Rear License Plate	3	63
Dome	6	82

**MISC. ELECTRICAL**

**LIGHTING FUSE (1946-47):** 30 ampere. On back of lighting switch (protects lighting circuits).

**LIGHTING CIRCUIT BREAKER (1948):** 30-ampere thermostatic type. On back of lighting switch (protects lighting circuits).

**HORNS (Passenger Cars):** Delco-Remy No. 1999533 (Low Note), 1999534 (High Note). Vibrator type twin horns operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999533 (low note)	19-21 amperes	.044-.049"
1999534 (high note)	18-20 amperes	.034-.039"

**Horn Relay (Pass. Cars):**—Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS: Own 216".** Six Cylinder, Valve-in-Head type.

**Bore**—3½" (3.4995-3.5015"). **Stroke**—3¾".

**Displacement**—216.5 cubic inches. **Rated HP**—29.4.

**Developed Horsepower**—90 at 3300 RPM.

**Compression Ratio**—6.5-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See Tune-up data.

**ENGINE REMOVAL:** See Chevrolet Shop Notes.

**ENGINE MOUNTINGS (Installation & Adjustment):** See Chevrolet Shop Notes.

**TIGHTENING TORQUES:** See Chevrolet Shop Notes.

**CYLINDER HEAD INSTALLATION:** See Chevrolet Shop Notes.

**Cylinder Head Gasket Note**—Use new gasket and install with side marked "THIS SIDE UP" as indicated. Use two cylinder head guide pins (installed in front and rear holes on manifold side) to align head with block and maintain head gasket position.

## ENGINE

C NTINUED FR M PRECEDING PAGE

**PISTONS:** Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.

Trucks—Same as Passenger Car type except heavier. Truck pistons marked with small boss on underside of each piston pin boss. **CAUTION**—Do not interchange pistons (must be alike in one engine).

Weight—1.56 lbs. (Pass. Cars). Length—3.75" min.

Removal—Pistons and rods removed from above.

Clearance—Top .0155-.0235". Skirt selective fit. See Fitting Pistons.

**Replacement Pistons:** See *Chevrolet Shop Notes*.

**NOTE**—To install new pistons, hone cylinder for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance below). Bore taper and out-of-round must not exceed .001".

**Fitting New Pistons:**—Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .0015" feeler and lock on .003" feeler.

**PISTON RINGS:** Two taper face compression rings (with greatest diameter at bottom), one oil control ring per piston, all above pin. Oil ring groove drilled for oil drainage. **NOTE**—New wide-slot, quick-seating oil rings used on 1947-48 engines.

Ring	Width	End Gap①	Side Clearance
Compr.	.1235-.1240"	.005-.015"	.0015-.003"
Oil Contr.	.1860-.1865"	.005-.015"	.002-.0035"

①—End Gap limit 1/32" max. (worn).

②—Side clearance check—smaller feeler should be free, larger feeler should produce a heavy drag.

**Installing Rings**—Mark "TOP" on side of compression rings must be upward.

**Replacement Rings:**—Furnished Standard size and .005", .020", .030", .040" Oversize.

**Expander Type Rings**—Furnished for use in cylinder bores of indicated oversizes as follows: Standard (Bore Std. to .009" Oversize), .020" Oversize (Bore .010" to .029" Oversize—ring gaps must be filed for bores less than .020" Oversize), .030" Oversize (Bore .030" to .039" Oversize), .040" Oversize (Bore .040" to .049" Oversize).

**PISTON PIN:** Diameter—.8645-.8650". Length 3.135-3.165". Pin locked in rod (piston bronze bushed). Pin Fit in Piston—Thumb push fit (at room temp.).

**Replacement Pins:**—Std. & .003", .005", .010" oversize. **NOTE**—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

**CONNECTING ROD:** Length 6 13/16". Weight 30.7 ozs. Crankpin Journal Diameter—2.311-2.312". Lower Bearing—Spun high-lead babbitt lined.

► **NOTE**—1948 bearings are new thin-wall babbitt type and rods are 1/16" narrower to fit new crankshaft. Clearance—.0003-.0013" selective fit (see Bearing Adjustment following). Sideplay—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).

**Bearing Adjustment:**—Solid shims. Remove shims equally at both sides to secure "snap fit" (rod tight to hand but should snap from one side to the other with light tap of 8 oz. hammer), then replace one .002" shim on one side for clearance (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test).

**Palnut Note**—Palnuts used to lock rod bolt nuts. Use new palnut (install with open side toward end of bolt), turn palnut up finger tight against rod bolt nut, then tighten palnut 1/2 turn additional.

**Installing Rods:**—Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper height.

**Dipper Height Adjustment**—See "Oiling System" in *Chevrolet Shop Notes*.

**CRANKSHAFT:** 1948 crankshaft new heavier four-bearing type with integral counterweights and vibration dampener (harmonic balancer).

**Vibration Dampener Data**—See *Chevrolet Shop Notes*.

**Journal Diameters**—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

**NOTE**—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 journals .002".

**Bearing Type**—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap.

► **NOTE**—1948 bearings are new "Precision" type thin-wall babbitt (can be replaced singly).

► **Precision type bearings do not require line-boring or reaming (all replacement bearings precision type).**

► **CAUTION**—#1 (front) and #2 (front intermediate) bearings similar in appearance but must not be interchanged. #2 bearing marked by letter "I" in oil groove. Clearance—(1946-47) .002-.004", (1948) .0007-.0024" selective fit. See bearing Adjustment (below).

► **NOTE**—Precision type bearings can be replaced singly. Entire set must be installed initially on 1946-47 engines not previously equipped with "precision" bearings.

**Bearing Adjustment:**—Solid shims. Remove shims until slight drag secured when shaft turned by hand, then replace one .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side for all bearings).

**Replacement Bearings:** New "Precision" type bearings furnished for all engines Std. size and .002", .010", .020", .030" Undersize. **NOTE**—Bearings for 1947 & previous engines stamped "V" on inner surface of dowel.

► **CAUTION**—Complete bearing set (4 bearings) must be installed initially on 1946-47 engines not previously equipped with these precision bearings.

► **Bearing Installation**—Not necessary to remove crankshaft or engine from car. See "Crankshaft & Main Bearings" in *Chevrolet Shop Notes*.

**Bearing Cap Installation**—Intermediate (#2 & 3) bearing caps marked for identification. Install #2

cap with mark "FRONT" toward front of engine, #3 cap with mark "REAR" toward rear of engine.

► **CAUTION**—Rear intermediate (#3) bearing is special flanged type (takes end thrust).

**Crankshaft Oil Seal Servicing:** See *Chevrolet Shop Notes for Front (Timing Gear Cover) and Rear Oil Seals*.

**End Thrust:** Taken by #3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of #3 bearing. Adjust by replacing bearing.

**Endplay**—.004-.007".

**CAMSHAFT:** Four bearing type. Helical gear drive.

**Journal Diameters**—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

**NOTE**—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

**Bearing Type**—Steel-backed, babbitt-lined bushings (staked in place). **NOTE**—New bearings must be line-reamed. Clearance—.002-.004".

**Bearing Installation**—See *Chevrolet Shop Notes*.

**End Thrust:**—Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

**Endplay Adjustment**—See *Chevrolet Shop Notes*.

**Endplay**—Free fit to .003" maximum.

**Timing Gears:** Crankshaft gear steel. Camshaft gear Bakelite and Fabric composition.

**Max. Gear Runout**—.003" crankshaft, .004" camshaft.

► **1948 235" Truck Engine Timing Gear Set**—New aluminum camshaft gear with bonded steel hub used with crankshaft gear having crowned teeth.

**Replacement Timing Gears**—See *Chevrolet Shop Notes*.

► **CAUTION**—Replacement crankshaft gear (with relocated keyway) will change Valve Timing on 1946-47 engines equipped with previous type gear. See Valve Timing.

**Timing Gear Installation & Alignment**—See "Timing Gears" in *Chevrolet Shop Notes*.

**Timing Gear Backlash**—.003-.004".

**Camshaft Setting:**—Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

► **CAUTION**—Above timing marks correct for all engines but valve timing different on Late 1947 & 1948 engines with new crankshaft gear (and earlier engines with this gear as replacement). See Valve Timing.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3410-.3417"	6.205-6.235"
Exhaust	1 15/32"	.3400-.3407"	4.839-4.869"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.003"
Exhaust	30°	.3118"	.002-.004"

► **Valve Identification Note**—1946-47 Valves (without valve stem oil seals) marked "41" and have 1 stem groove. 1947-48 Valves (with valve stem oil seal) marked "GM" and have 2 stem grooves.

**Valve Installation (1946-47 Type without Valve Stem Oil Seals):** Use special valve spring cap for each valve (INTAKE—.080" thick, round, double flanged

C NTINUED ON NEXT PAGE

## ENGINE

## CONTINUED FROM PRECEDING PAGE

or stamped "IN", EXHAUST—Octagonal or round and stamped "X") and umbrella type cap cover (INTAKE— $\frac{5}{8}$ " overall height, EXHAUST— $\frac{1}{4}$ " overall height). NOTE—Cap covers reduce amount of oil on valve stems, controlling oil consumption and smoking when idling.

**Valve Installation (1947-48 Type with Valve Stem Oil Seals):** Special synthetic rubber oil seal ring installed in groove in valve stem directly below seat locks (retained by valve cap). NOTE—New type longer valve spring cap is used (interchangeable for intake & exhaust valves—may be identified by 1/16" annular groove on top surface). No cap covers used with this type assembly.

**Valve Stem Oil Seal Installation—See "Valve System" in Chevrolet Shop Notes.**

**Valve Guides:** New precision type. Pressed in head.

**Valve Guide Installation—See "Valve System" in Chevrolet Shop Notes.**

**Valve Springs:** Install springs with closed-coil end toward cylinder head. Check springs with KMO-607 Tester, replace if outside limits of 124-140 lbs. at 1½". Spring free length 2½".

	Spring Pressure	Length
Valve Closed .....	53-63 lbs.	1.821"
Valve Open .....	124-140 lbs.	1.505"

**Valve Lifters:** Barrel type with pushrod seat brazed on upper end. Lifter diameter .989-.990".

Clearance—.001" (selective free fit).

**Rocker Arm Assembly:** Armasteel type (no bushings).

Four types of rocker arms used as follows:

Intake—No. 839463 (Left), 839464 (Right).

Exhaust—No. 839459 (Left), 839460 (Right).

**Rocker Shaft Diameter—**.7910-.7917" (bore diameter in rocker arm .7925-.7935").

**Rocker Arm Assembly & Installation—See "Valve System" in Chevrolet Shop Notes.**

## VALVE TIMING

► **VALVE TAPPET CLEARANCE:** CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

Std. Engine—.006" (.006-.008") Intake, .013" (.013-.015") Exhaust with engine normalized.

Economy Engine—.010" Intake, .016" Exhaust with engine normalized.

**VALVE TIMING:** See Camshaft Setting above.

► **VALVE TIMING CHANGE—New Valve Timing used on Late 1947 Engines (Beginning Flint No. 572254) & All 1948 Engines.**

## 1946-47 VALVE TIMING

► **Before 1947 Flint Engine No. 572254**

► **(with Original Crankshaft Gear)**

Intake Valves—Open 3° BTDC. Close 35° ALDC.

Exhaust Valves—Open 46° BLDC. Close 5° ATDC.

## 1947-48 VALVE TIMING

► **Beginning 1947 Flint Engine No. 572254**

► **CAUTION—This new Valve Timing applies also to 1946-1947 Engines with new Replacement Crankshaft Gear.**

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

**Valve Timing Check—**Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .036" (1946 and 1947 Engines before Flint No. 572254 with original crankshaft gear only), .044" (1947 Engines beginning Flint No. 572254, All 1948 Engines, and 1946-47 engines with replacement crankshaft gear). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

## LUBRICATION

**Engine Oiling System:** Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.

**CAUTION—**Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).

**Checking Oiling System—See "Oiling System" in Chevrolet Shop Notes.**

**Crankcase Capacity—**5½ qts. (dry), 5 qts. (refill).

**Normal Oil Pressure—**14 lbs. at 39 MPH.

**Oil Pressure Regulator—**Located oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

**Rocker Arm Oil Lead & Overflow Pipe Servicing:** See "Oiling System" in Chevrolet Shop Notes.

**Oil Pump:** Located in crankcase. Driven independently through short shaft by gear on camshaft.

**Oil Pump Installation—**Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

**Oil Distributor:** See "Oiling System" in Chevrolet Shop Notes.

**Checking Oiling System:** Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.

See "Oiling System" in Chevrolet Shop Notes.

**CAUTION—**Special checking gauges required for each type engine (Oil pan changed beginning 1947, same pan now used on all engines).

**Crankcase Ventilation:** Air intake through valve rocker cover (air cleaner on some models), outlet

through pipe on right side of engine (combination oil filler and crankcase ventilator outlet).

**Servicing—**On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System:** Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on 1948 cars.

**Pressure Valve—**AC No. 850501 (Radiator Filler Cap). Opens at 4 lbs.

**Capacity—**15 quarts.

**Radiator Core Removal:** See Chevrolet Shop Notes.

**Water Pump:** Double-outlet, packless type with sealed ball bearing shaft.

See Water Pump Section for complete data.

**Belt Adjustment—**See Generator Belt Adjustment.

**Thermostat:** Harrison. In cylinder head outlet.

Std.—No. 3113995 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.

**Optl. (For Anti-freeze)—**As follows:

3121254—stamped 151 (for Alcohol Anti-freeze), 3121251—stamped 160 (for permanent anti-freeze only), 3121280—stamped 180 (for permanent anti-freeze only).

**Temperature Gauge:** AC No. (1946) 1511201, (1947) 1511895, (1948) 1512078. Not electric.

## CLUTCH

**Own Make.** Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars.

See Clutch Section for complete data.

**Facings—**Moulded Asbestos, 2 required as follows: 6½" I.D., 9½" O.D., .132-.138" thick.

NOTE—Borg & Beck Driven Member used on some cars.

**Adjustment:**—Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

**Removal:**—Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

## TRANSMISSION

**Own Make.** Three-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

**Transmission Control (Passenger Cars):** Remote control, vacuum power type with gearshift lever mounted on steering column.

See Transmission Section for complete data.

**Removal (except Cabriolet):**—Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot (work under car) by taking out two bolts fastening halves together. Loosen 3 vacuum cylinder bracket-to-transmission cap screws and reactionary lever assembly-to-transmission operating shaft clamp bolt. Drive assembly from end of shaft with care. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Remove 3 vacuum cylinder bracket-to-transmission cap screws and move assembly (bracket, vacuum cylinder and reactionary levers) away from transmission. Disconnect pull rod and brake cables from brake cross shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer cap screws and slide ball back on propeller shaft housing. Remove 4 cap screws which secure front trunnion bearings to the front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing cap screws and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing cap screws. Slide transmission back and lift out through opening in floor.

**Removal (Cabriolet):**—Transmission removal on this model differs from regular passenger car removal (above) due to use of special 'VK' frame. Removal procedure for Cabriolet as follows: Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot by taking out two bolts fastening halves together. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Disconnect gearshift control rod by removing cotter pin, washer and anti-rattle spring from transmission end of rod. Disconnect vacuum cylinder piston rod and valve link from reactionary levers. To prevent upsetting vacuum valve adjustment, replace clevis pin through piston rod yoke and valve link. Remove vacuum cylinder from mounting bracket. Disconnect pull rod and brake cables from brake cross-shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer cap screws and slide ball back on propeller shaft housing. Remove 4 cap screws which secure front trunnion bearings to front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing cap screws and in-

sert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing cap screws. Slide transmission back until clutch shaft just free of driven member, raise rear end sufficient to remove transmission rear mounting (free mounting from transmission and move it forward enabling removal of mounting through opening in frame). Pull transmission back and turn it toward the left for clearance and lift out through opening in floor.

### UNIVERSALS

Passenger Cars: Own Make. No. 606779. Cross type with surface treated trunnions and bearings. One used (in torque ball behind transmission). See *Universal Section* for complete data.

### REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. NOTE—Passenger car axles have new "Revacycle" differential pinion and side gears. See *Chevrolet Shop Notes* for markings and identification of these gears. CAUTION—"Revacycle" and previous type "Involute" gears must not be used together (noise & premature gear failure will result). Interchangeable in complete sets only. See *Rear Axle Section* for complete data.

Ratio—4.11-1 Std., 3.73-1 Optl. on Pass. Cars. NOTE—Axle ratios may be identified by prefix letters of serial number stamped on front face of carrier mounting flange on right side as follows:

►4.11-1 Axle Identification Mark

Detroit Production—('46) DA, ('47) EA, ('48) FA.

Tonawanda—('46) DB, ('47) EB, ('48) FB.

►3.73-1 Axle Identification Mark

Detroit Production—('46) DC, ('47) EC, ('48) FC.

Tonawanda—('46) DD, ('47) ED, ('48) FD.

Backlash—.005-.007". Screw adjustment.

**Removal:**—Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber links from anchor plate. Remove spring 'U' bolts, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

**Axle Shaft Removal:**—Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum (on second wheel stud at either side of drain hole in drum), remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

Axle Shaft Endplay—Free fit to .014" maximum. Axle Shaft Installation & Endplay Adjustment: See "Rear Axle Notes" in *Chevrolet Shop Notes*.

### SHOCK ABSORBERS

Passenger Cars—Delco Models 2200-A, B (Front), 2100-A, B (rear). Double acting, Hydraulic, Parallel Cylinder type. NOTE—Front shock absorbers are part of front suspension (upper control arms). See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

Passenger Cars—Front Suspension: Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

NOTE—Make checks with car weight on wheels and special gauge installed at front to provide proper frame height.

Kingpin Inclination— $4\frac{3}{4}^{\circ} \pm \frac{1}{2}^{\circ}$ .

Caster— $0^{\circ} \pm \frac{1}{2}^{\circ}$ . Adjustable.

Camber—Negative  $\frac{1}{4}^{\circ} \pm \frac{1}{2}^{\circ}$ . Adjustable.

Toe In— $0-\frac{1}{8}"$ . To adjust, loosen clamp bolts at each end of left tie rod and turn rod. When tightening clamp bolts, tie rod ends must be in alignment with ball studs (to prevent binding).

Steering Geometry (toe-out on turns)—Outer wheel turned  $20^{\circ}$ . Inner wheel turned  $24^{\circ} \pm 2^{\circ}$ .

### STEERING GEAR

Passenger Cars—Saginaw Model. Special Chevrolet Passenger Car) Worm-and-Roller type, Chevrolet Part No. 267164 (marked by casting No. 265759).

See *Steering Gear Section* for complete data.

### BRAKES

Service Brakes: Own Make, Hydraulic type. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

Wheel Cylinders—Diameter:  $1\frac{1}{4}"$  (front),  $1\frac{3}{16}"$  (rear). Sizes stamped under adjusting cup lock spring on wheel cylinder housing.

Drums—Cast iron rim, steel web. Diameter 11".

Lining—Moulded type. Width  $1\frac{3}{4}"$ . Thickness  $\frac{3}{16}"$ . Length per wheel  $22\frac{3}{8}"$ .

Clearance—Adjusting Cover (on wheel cylinder) backed off 4 Notches from slight drag position.

Braking Power— $47\frac{1}{2}\%$  rear wheels,  $52\frac{1}{2}\%$  front.

Hand Brake:—See *Service brakes* above.

### MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Hydro-Lectric type (top mechanism operated by two hydraulic cylinders actuated by oil under pressure supplied by motor driven pump).

See *Miscellaneous Section* for complete data.

**FRONT END SHEET METAL REMOVAL:** See Chevrolet Shop Notes.

## MODEL IDENTIFICATION

FIRST 1946 SERIES		
Serial Prefix	Wheelbase	Type
CK	115"	Half-Ton
OR	134½"	1½ Ton
OS	160"	1½ Ton
OW	160"	School Bus
OY	195"	School Bus
OE	134½"	2 Ton
OF	160"	2 Ton
OG	195"	School Bus
OH	109"	Cab-over-Engine
OJ	132" & 158"	Cab-over-Engine

LATER 1946 & FIRST 1947 SERIES		
Serial Prefix	Wheelbase	Type
DP	115"	Half-Ton
DR	125¼"	¾ Ton
DS	134½"	1 Ton
PJ	134½"	1½ Ton
PK	160"	1½ Ton
PL	160"①	School Bus
PP	109"	Cab-over-Engine
PR	132½"	Cab-over-Engine
PS	158"	Cab-over-Engine
PV, PVS	134½"	2 Ton
PW, PWS	160"	2 Ton
PX	195"	School Bus

①—Also 195" Wheelbase (1946 only).

LATER 1947 & 1948 SERIES			
Series	Serial Prefix	Wheelbase	Type
3100	EP①	FP②	116" Half-Ton
3600	ER	FR	125¼" ¾-Ton
3742			125¼" Dubl-Duti
3800	ES	FS	137" 1-Ton
3942			137" Dubl-Duti
4100	QJ	RJ	137" 1½-Ton
4400	QK	RK	161" 1½-Ton
4502	QL	RL	161" School Bus
5100	QP	RP	110" C.O.E. 2-Ton
5400	QR	RR	134" C.O.E. 2-Ton
5700	QS	RS	158" C.O.E. 2-Ton
5100S	QPS	RPS	110" C.O.E. 1½-Ton
5400S	QRS	RRS	134" C.O.E. 1½-Ton
5700S	QSS	RSS	158" C.O.E. 1½-Ton
6100	QV	RV	137" 2-Ton
6400	QW	RW	161" 2-Ton
6702	QX	RX	199" School Bus
6100S	QVS	RVS	137" 1½-Ton
6400S	QWS	RWS	161" 1½-Ton

①—Late 1947 Series. ②—1948 Series.

**SERIAL NUMBER:** First No. 1001 with series prefix for each series as indicated in table above. Stamped on plate located as follows:

1946 & Early 1947 Series—(Regular Trucks) on right hand side of cowl under engine hood, (Cab-over-Engine) on rear of cowl inside cab.

Later 1947 & 1948 Series—On cab left front hinge pillar.

**ENGINE NUMBER:** Stamped on right side of crankcase to rear of distributor with prefix to indicate year and engine type and plant as follows:

1946 & First 1947 Series		
Engine Type	Flint	Tonawanda
All Trucks (216" Eng.)	DBA	DBM
All Trucks (235" Eng.)	DEA	DEM
Cab-over-Engine Mdls.	DDA	DDM

Later 1947 & 1948 Series		
Engine Type	Flint	Tonawanda
Half-Ton Truck	FBA	FBM
¾ & 1 Ton (216" Eng.)	AFCA	AFCM
1½ Ton (216" Engine)	FCA	FCM
1½ & 2 Ton (235" Eng.)	FEA	FEM
Cab-over-Engine Mdls.	FDA	FDM

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. minimum (cylinders equal within 5-10 lbs.) at cranking speed.

**VACUUM READING:** Steady 17-21" at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .040".

Plug Type—AC No. 104, 10 mm. type.

►No. M-8 plugs can be used for sustained low speeds.

Spark Plug Installation Caution—Tighten plugs to 10-12 ft. lbs. or install as follows: Tighten plugs

finger tight, then tighten with wrench (11/16" deep socket) additional ¼-¾ turn (old gasket), ½-¾ turn (new gasket).

►CAUTION—Do not overtighten these 10 mm. plugs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle or Dwell**—39° closed, 21° open.

**Breaker Arm Spring Tension**—17-21 ozs.

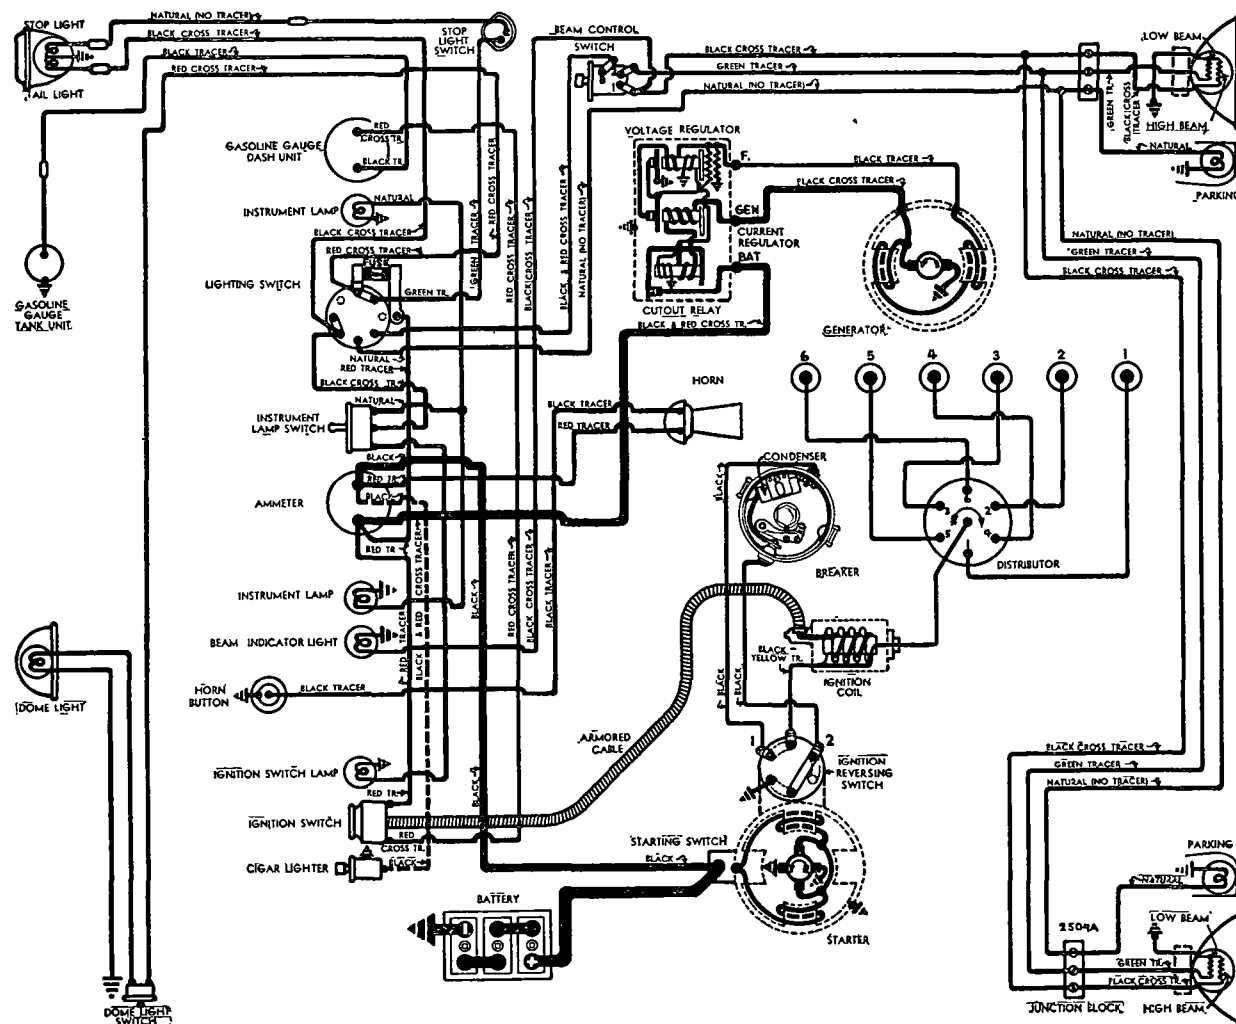

**Automatic & Vacuum Advance**—See Distributor.

**IGNITION TIMING:** 5° BTDC.

**Timing Procedure**—See Ignition Timing.

**Timing Mark**—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "0". Then adjust Octane Selector as follows:

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle.

1946 & FIRST 1947 SERIES TRUCKS

►SEE 1948 PASS. CAR DIAGRAM F R IGNITI N WIRIN WITHOUT REVERSIN SWITCH

**CARBURETION:** See *Carburetor & Carb. Equipment.*

**Idle Setting**—Adjust idle adjusting screw for smooth idling with warm engine (screw  $1\frac{1}{4}$ - $2\frac{1}{4}$  turns open except on C-O-E & Dubl-Duti models),  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open on C-O-E & Dubl-Duti with updraft carburetor. Turn screws out for richer mixture.

**Idle Speed**—450-500 RPM. with engine warm.

**Float Level (exc. C-O-E)**— $\frac{1}{2}$ " from top of float at free end to machined surface (gasket seat) on bowl cover with valve seated (invert to check).

**Float Level (C-O-E & Dubl-Duti)**—Top of float  $1/32$ - $1/16$ " below top edge of bowl with valve seated.

**Accelerating Pump (except C-O-E)**—Not adjustable.

**Accelerating Pump (C-O-E & Dubl-Duti)**—Inner Hole—Summer, Outer Hole—Winter.

**Fuel Pump Pressure**—4 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic type. Check for free operation when tuning engine. Spring

should be wound up just enough to slip end over manifold pin (approximately  $\frac{1}{2}$  turn).

► **CAUTION**—Excessive spring tension may cause valve to stick with resulting detonation and poor performance.

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

**Normal Operation**—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."

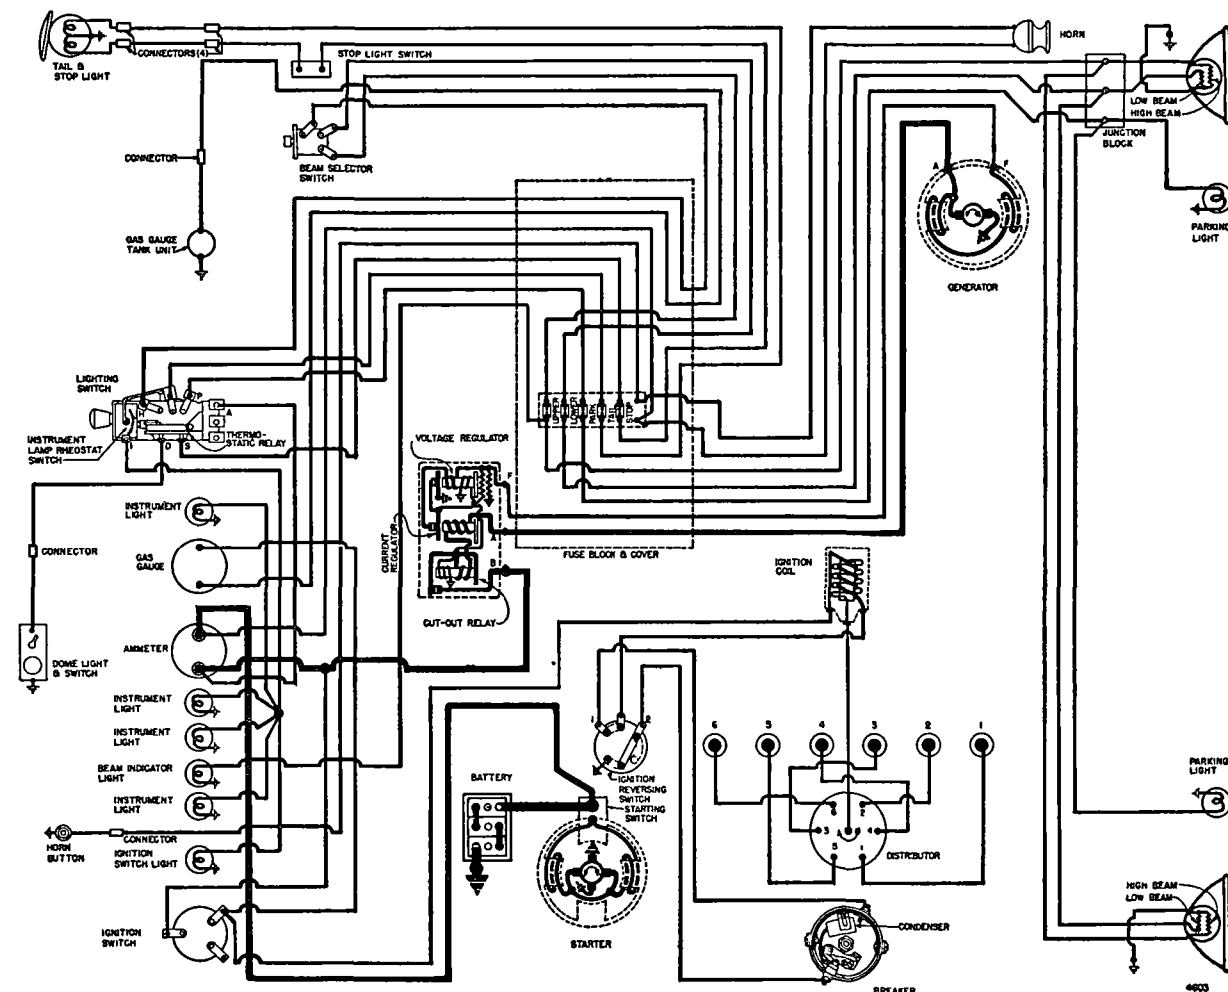

**NOTE**—Use higher figure for severe truck service.

**Heavy Duty (Full Throttle) Operation**—.010" Intake, .020" Exhaust, with engine "normalized."

**Valve Timing Check:** See *Valve Timing.*

► **CAUTION**—1948 Engines have new Valve Timing (applies also to 1946-47 Engines with new Replacement Timing Gear).

**STARTING:** See *Battery, Starter, Generator, Regulator.*

LATE 1947 & 1948 SERIES TRUCKS

► SEE 1948 PASS. CAR DIAGRAM FOR IGNITION WIRING WITHOUT REVERSING SWITCH

**IGNITION**

1946-47-48 (WITH REVERSING SWITCH)

**IGNITION SWITCH:** Delco-Remy. As listed below. Armored cable used only on first 1946-47 type.

(1946 & First 1947 Trucks)—No. 1116301 (except C-O-E), No. 1116303 (Cab-over-Engine Trucks).

(1947-48 Trucks)—No. 1116452, NOTE—This switch has special "Off-Unlocked" position (to right).

**Ignition Lock**—Briggs & Stratton Lock Cylinder.

(1946)—No. 45792 (Coded), 45791 (Uncoded).

(1947-48)—No. 600114 (Coded), 600088 (Uncoded).

**Key Series**—No. 8000 to 9499, Groove—No. 15.

**Ignition Reversing Switch:** Delco-Remy No. 1907122. Mounted on starter and operated by starting pedal linkage (reverses ignition circuit each time starter operated—see wiring diagram for connections). See *Electrical Equipment Section* for complete data.

► **Removing Reversing Switch from Ignition Circuit**—If switch removal necessary, see "Ignition Reversing Switch" in *Chevrolet Shop Notes* for re-working data.

**COIL:** Delco-Remy (1946) No. 1115141, (1947-48) No. 1115380. On right side of engine above distributor.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1882239.

► **CAUTION**—This condenser used only on cars with REVERSING SWITCH. Must not be used without switch.

**Capacity**—.28-.34 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110090. Single breaker, 6 lobe cam full automatic advance type with vacuum spark control and Octane Selector. NOTE—Distributor has insulated breaker plate and ground terminal for use with Reversing Switch.

► **Distributor Change for use Without Reversing Switch**—See "Ignition Notes" in *Chevrolet Shop Notes*.

**Breaker Point Set**—Delco-Remy No. 1882391.

**Breaker Gap**—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle**—39° closed, 21° open.

**Breaker Arm Spring Tension**—17-21 ozs.

**Rotation**—Clockwise viewed from above.

Degrees	RPM.	Degrees	RPM.
Start.....	350	3.....	700
6.5 .....	600	13.....	1200
12.25.....	1000	20.5 .....	2000
19 .....	1700	38.....	3400

**Octane Selector**—Adjustment on distributor provides 10° advance or retard from center '0' position. See *Ignition Timing* for adjustment instructions.

**Vacuum Spark Control:** Delco-Remy No. 1116043. On Octane Selector, linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. *Plunger Travel*—17/64".

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-8.5"
10° .....	20°	16-19"

**Removal:**—Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## IGNITION

## LATE 1948 (WITHOUT REVERSING SWITCH)

**IGNITION SWITCH:** Same as listed for early trucks.

**COIL:** Delco-Remy No. 1115380. Above distributor.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

► **CAUTION**—This condenser must be used for ignition systems without reversing switch.

**Capacity**—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1112353. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

► **NOTE**—This distributor has larger breaker plate grounded directly to housing and special breaker point set.

**Breaker Point Set**—Delco-Remy No. 1855720.

**Breaker Gap**—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

**Cam Angle**—39° closed, 21° open.

**Breaker Arm Spring Tension**—17-21 ozs.

**Rotation**—Clockwise viewed from above.

**Automatic & Vacuum Spark Advance**—See first type No. 1100090 Distributor above.

## IGNITION TIMING

**Std. Setting** Flywheel Degrees Piston Position  
All Engines .....5° BTDC .....0091" BTDC

**NOTE**—See Octane Selector Setting (below) for final setting dependent on operating conditions.

**Timing (Neon Light)**—Recommended method. Connect neon light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at '0'. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt.

**Timing (Without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark (if no ping), clockwise to retard spark (if too severe).

## CARBURETOR

## ALL TRUCKS (EXCEPT DUBL-DUTI &amp; CAB-OVER-ENGINE MODELS)

**Carter (Chevrolet) Type 574S (Std.), 616S (Econ. Models).** 1¼", single barrel, downdraft types with manual choke control. **NOTE**—Carburetors marked by Casting No. 421 (574S), 432 (616S) on flange.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rod & Jets**—See Carter Jet Table in Carburetor Section for complete data.

## CARBURETOR

## ¾ &amp; 1 TON DUBL-DUTI &amp; CAB-OVER-ENGINE TRUCKS

**Carter (B&B) Model 517S,** 1¼" single barrel, up-draft type with manual choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jets**—See Carter (BB) Updraft Jet Table in Carburetor Section for data.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1529264 Oil-wetted type Std. (except on 2 Ton & C-O-E), No. 1542078 Oil-bath type Optl. (on above models, Std. on 1947-48 2 Ton), No. 1529192 Oil-bath type (1946 C-O-E & 2 Ton), No. 1543889 Oil-bath type (1947-48 C-O-E).

**Servicing (Oil-wetted Type)**—Remove and wash filter element in gasoline, re-oil by dipping in engine oil at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Remove and wash filter element in gasoline, clean oil reservoir and fill to level of indicator line (approx. 1 pint) with SAE No. 50 engine oil (summer temperatures) at 2000 mile intervals or more often if required.

**Fuel Pump:** AC Type AF, No. 1523089. Diaphragm type.

**Replacement Pump**—AC No. 429.

**Pressure**—4 lbs. maximum.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC electric type. AC Nos.:

**Dash Unit**—(1946 with Flat Faced Cowl) No. 1515207, (1946 Other Models) No. 1516451, (1947-48) 1516973.

**Tank Unit**—(1946-48 Half-Ton), No. 1515466, (1946-47 Half-Ton & 1946 ¾ Ton with Cab) No. 1516287, (1946 ¾ Ton Panel) No. 1515467, (1947-48 ¾ Ton)

No. 1516280, (1947 1, 1½, 2 Ton & 1946-48 C-O-E) No. 1515467, (1947-48 1, 1½, 2 Ton) No. 1516983,

(1947-48 School Bus) No. 1516334.

See Carburetion Equipment Section for complete data.

## BATTERY

**Trucks (Std.)**—Delco Type 15X-3 or 15AA-4. 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.6 minutes.

**Five-second Voltage**—4.2 volts.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Under front floor on right side.

**Trucks (Special Equip.)**—Delco Type 17K-3. 6 volt, 17 Plate, 115 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes.

**Five-second Voltage**—4.4 volts.

**Grounded Terminal & Location**—See Std. Battery.

**School Bus**—Delco Type 19Q-3 or 19Q-4. 6 volt, 19 Plate, 125 Ampere Hour Capacity (20 hr. rate).

**Starting Capacity**—145 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes.

**Five-second Voltage**—4.5 volts.

**Grounded Terminal & Location**—See Std. Battery.

## STARTER

**Delco-Remy**—Various models used as follows:

1107061 (with Rev. Switch)—First LHD. models.

1107063 (with Rev. Switch)—First RHD. models.

1107055 (without Rev. Switch)—Later 1948 LHD. models (except ¾ & 1 Ton DUBL-DUTI).

1107076 (without Rev. Switch)—Later 1948 RHD. models & All ¾ & 1 Ton DUBL-DUTI).

**Armature No.**—Delco-Remy No. 1867897.

**Drive**—Overrunning clutch with manual pinion shift (LHD starters), solenoid pinion shift (RHD).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—65 RPM., 150 amperes, 5.5 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 " Lock		3.37	525

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, disconnect starting pedal linkage and Reversing Switch wires. Take out flange mounting screws, remove starter and switch.

**Starting Switch (1107055 & 1107061 Starters):** Delco-Remy No. 820052. On starter. Pedal operated.

(1107063 & 1107076 Starters)—Delco-Remy solenoid switch on starter, controlled by pushbutton switch No. 1996031 or No. 1385.

See Electrical Equipment Section for complete data.

## GENERATOR

**Delco-Remy Model 1102667 (Std.), 1102677 (Spec. Equip.).** Two brush (shunt) types with voltage and current regulation. Ventilated by fan on drive pulley.

**Armature No.**—1879002 (1102667), 1881389 (1102677).

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate (Std. Gen.)**—36 amperes, 7.4 volts, 2400 RPM.

## Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102667	30	8.0	1750
1102677	26	8.0	1450

①—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

## REGULATOR

**Delco-Remy Model 1118201 (1102667 Gen.), 1118233 (1102677 Gen.).** Vibrating type Voltage and Current Regulators in case with Cutout Relay.

See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts Hot (1118201), 7.0-7.2 volts Hot (1118233) at operating temperature.

**Checking & Adjustment**—See Electrical Equipment Section.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting**—34-36 amperes (1118201), 24-26 amperes (1118233) Hot or at operating temperatures.

**Checking & Adjustment**—See Electrical Equipment Section.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beams straight ahead (hot spot center 4½" below lamp center height at 25 ft. **Beam Indicator**—Red dot on speedometer dial. Lighted whenever upper beams in use.

### Switches

**Lighting**—Delco-Remy. (1946-47 with Fuse) No. 1994017, (1947-48) No. 1995031. NOTE—1947-48 switch has instrument light rheostat controlled by switch knob.

**Beam Selector**—Delco-Remy No. 1997008.

**Instrument** (1946-47)—Delco-Remy No. 1404.

**Stop Light**—Delco-Remy No. 1997901 (mechanical type operated by brake pedal arm).

**Stop Light** (Panel & Suburban)—Delco-Remy No. 594504 or 594505.

## MISC. ELECTRICAL

**FUSES** (1946-47): Lighting. 30 ampere single fuse on back of lighting switch.

**FUSES** (1947-48): Lighting. Fuse box on engine side of dash with five 20-ampere fuses protecting individual light circuits as follows: Top Fuse Upper Beams, 2nd. Fuse Lower Beams, 3rd. Fuse Parking, 4th. Fuse Tail Light, 5th. Fuse Stop Light. NOTE—These fuses used with circuit breaker.

**LIGHTING CIRCUITBREAKER** (1947-48): 30-ampere thermostatic type. On back of lighting switch. Protects lighting circuits (in conjunction with fuses above).

**HORNS** (Std.): Delco-Remy 1999801. Vibrator type.

**Horn Current**—7-9 amperes at 6.0 volts.

**Air Gap**—.027-.033".

(Spec. Equip.)—Delco-Remy No. 1999509 (Low Note), No. 1999510 (High Note). Vibrator type "sea shell" twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999509 (lo note)	19-21 amperes	.044-.049"
1999510 (hi note)	18-20 amperes	.034-.039"

**Horn Relay:** Delco-Remy No. 1116775 (twin horns).

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

### 216 CUBIC INCH ENGINE

(STD. ON ½, ¾, 1, 1½ TON TRUCKS)

**ENGINE SPECIFICATIONS:** Own 216". Six cylinder, Valve-in-Head type.

**Bore**—3½" (3.4995-3.5015"). **Stroke**—3¾".

**Displacement**—216.5 cu. ins. **Rated H.P.**—29.4.

**Developed Horsepower**—90 at 3300 RPM.

**Compression Ratio**—6.5-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See Tune-Up data.

► *See Chevrolet 1946-47-48 Pass. Car article for all engine data (Pistons, Rings, Pins, Connecting Rods, Crankshaft & Bearings, Camshaft, and Valves).*

## ENGINE

### 235 CUBIC INCH ENGINE TRUCKS (INCL. CAB-OVER-ENGINE)

**TRUCK TYPE 235 CUBIC INCH ENGINE:** This engine is same design as smaller 216" engine and all service operations and clearances are the same except as noted in 216" engine section data.

**Non-interchangeable Parts:**—Parts are interchangeable between the Regular Engine and the Special

235 Cubic Inch Engine except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Motor), Push Rods (approximately ¾" longer on large engine and identified by shoulder just below cup at top end), Valve Lifters, Camshaft, Piston and Pin Assembly, Piston Rings (Compression and Oil Control), Crankshaft, Oil Pan Pipe Assembly, Oil Distributor to Valve Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support Assembly. NOTE—Same oil pan used on all engines (1947 on).

**ENGINE SPECIFICATIONS:** Own 235". Six cylinder, Valve-in-Head type.

**Bore**—3 9/16" (3.5620-3.5640"). **Stroke**—3 15/16".

**Displacement**—235.5 cubic inches. **Rated HP**—30.4.

**Developed Horsepower**—93 HP (Conventional Trk), 90 HP (Cab-Over-Engine Truck) at 3100 RPM.

NOTE—Cab-Over-Engine use Updraft carburetor.

**Compression Ratio**—6.62-1 std. cast-iron head.

NOTE—Same head as used on regular engine (gives 6.50-1 ratio when used on regular engine).

**Compression & Vacuum Reading**—See Tune-Up data.

► *See Chevrolet 1946-47-48 Pass. Car article for all engine data (Pistons, Rings, Pins, Connecting Rods, Crankshaft & Bearings, Camshaft, and Valves).*

## VALVE TIMING

► **VALVE TAPPET CLEARANCE:** CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.

**Normal Operation**—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."

NOTE—Use higher figure for severe truck service.

**Heavy Duty (Full Throttle) Operation**—.010" Intake, .020" Exhaust, with engine "normalized."

**VALVE TIMING:** See Camshaft Setting on 1946-47-48 Chevrolet Passenger Car pages.

► **VALVE TIMING CHANGE**—New Valve Timing used on Late 1947 Engines (Beginning Flint No. 572254) & All 1948 Engines.

### 1946-47 VALVE TIMING

► Before 1947 Flint Engine No. 572254

► (with Original Crankshaft Gear)

**Intake Valves**—Open 3° BTDC. Close 35° ALDC.

**Exhaust Valves**—Open 46° BLDC. Close 5° ATDC.

### 1947-48 VALVE TIMING

► Beginning 1947 Flint Engine No. 572254

► **CAUTION**—This new Valve Timing applies also to 1946-1947 Engines with new Replacement Crankshaft Gear.

**Intake Valves**—Open 1° ATDC. Close 39° ALDC.

**Exhaust Valves**—Open 42° BLDC. Close 9° ATDC.

**Valve Timing Check (All Engines)**—Remove all tappet clearance from #1 exhaust valve, turn crankshaft until this valve just starts to close and until triangular mark on flywheel lines up with pointer in right front face of housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .036" (1946 and 1947 Engines before Flint No. 572254 with original crankshaft gear only), .044" (1947 Engines beginning Flint No. 572254, All 1948 Engines, and 1946-47 engines with replacement crankshaft gear). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

## LUBRICATION

**Engine Oiling System:** Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.

► **CAUTION**—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).

**Checking Oiling System**—See "Oiling System" in Chevrolet Shop Notes.

**Crankcase Capacity**—5½ qts. (dry), 5 qts. (refill). **1948 Oil Filler Note**—All truck engines (except Half-Ton & C-O-E) are filled through opening on valve rocker cover (filler cap combined with crankcase ventilator air cleaner on 235" engine). Pass. Cars, Half-Ton, & C-O-E models have filler pipe on right side of engine (same as previous models).

**Normal Oil Pressure**—14 lbs. at 2000 RPM.

**Oil Pressure Regulator**—Located oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

**Rocker Arm Oil Lead & Overflow Pipe Servicing:** See "Oiling System" in Chevrolet Shop Notes.

**Oil Pump:** Located in crankcase. Driven independently through short shaft by gear on camshaft.

**Oil Pump Installation**—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

**Oil Distributor:** See "Oiling System" in Chevrolet Shop Notes.

**Checking Oiling System:** Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.

See "Oiling System" in Chevrolet Shop Notes.

**CAUTION**—Special checking gauges required for each type engine (Oil pan changed beginning 1947, same pan now used on all engines).

**Crankcase Ventilation:** Air intake through valve rocker cover (air cleaner on some models), outlet through pipe on right side of engine (combination oil filler and ventilator except on 1948 trucks with filler on valve rocker cover).

**Servicing**—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System:** Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on 1947-48 C-O-E Trucks.

**Pressure Valve**—AC No. 850501 (Radiator Filler Cap). Opens at 4 lbs.

**Capacity (with Std. Radiator)**—(1946-47 ½, ¾, 1, 1½ Ton) 14 qts., (1946-47 2 Ton & School Bus) 16 qts., (1946-47 C-O-E) 16½ qts. (1947-48 except 2 Ton) 15 qts., (1947-48 2 Ton models) 17½ qts.

**Capacity (Optl. Heavy Duty Radiator)**—(1946-47) 16 qts. (1947-48) 17½ qts.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Radiator Core Removal:** See Chevrolet Shop Notes.

**Water Pump:** Doubleoutlet packless type with sealed ball-bearing shaft.

See Water Pump Section for complete data.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:** Harrison. In cylinder head outlet.

Std.—No. 3113995 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.

**Optl. (For Anti-freeze):**—As follows:

**Temperature Gauge:** AC. (Not Electric). AC Nos.: (1946-47)—No. 1510163 (Trucks with Flat Face Cowl except C-O-E), 1511264 (trucks except C-O-E), 1510995 (C-O-E Trucks).

(1947-48)—No. 1511898 (except C-O-E), 1512011 (C-O-E Trucks).

## CLUTCH

**Own Make:**—Diaphragm spring, single plate, dry disc type. NOTE—Half-Ton Trucks have 9" clutch, all other models 10 $\frac{3}{4}$ " type.

See Clutch Section for complete data.

**Facings:**—Moulded asbestos, 2 required as follows:

	I.D.	O.D.	Thickness
9" Type	6 $\frac{1}{8}$ "	9 $\frac{1}{8}$ "	132-138"
10 $\frac{3}{4}$ " Type	7"	10 $\frac{3}{4}$ "	137-143"

**Adjustment:**—Pedal free travel  $\frac{3}{4}$ -1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

**Removal:**—Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use  $\frac{3}{4}$ " wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

## TRANSMISSION

## 1946-47 3-SPEED TRUCK TYPE

**Own Make.** Three-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with floor-mtd. gearshift.

NOTE—4-speed Transmission Optl. equipment.

See Transmission Section for complete data.

► **Low Speed Disengagement Complaints (with Replacement Cover Plate Assembly):**—See Chevrolet Shop Notes for identification of incorrectly assembled cover plates.

**Removal ( $\frac{1}{2}$  Ton):** Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Remove 4 universal joint ball collar-to-retainer capscrews, slide ball back on propeller shaft housing. Remove 4 capscrews from trunnion bearings on front yoke, remove these bearings and split the universal joint. Push front end of propeller shaft down for clearance (NOTE—On 4 spd. transmission, frame cross member must be removed to drop shaft). Remove 2 upper transmission-to-clutch housing capscrews and insert guide pins, remove clutch underpan and take out 2 lower mounting capscrews and slide transmission out and remove. NOTE—On 4 spd. type transmission 2 brake master cylinder bracket capscrews must be removed.

**Removal ( $\frac{3}{4}$  Ton):** Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split center universal joint by remov-

ing two trunnion bearing 'U' clamps (tape or wire trunnions together to prevent losing bearings). Remove 4 universal ball retainer-to-transmission bolts and slide retainer back on tube. Remove center bearing support bracket-to-frame cross member bolt nuts. Pull front propeller shaft assembly to rear free of front universal. Remove transmission in same manner as on  $\frac{1}{2}$  Ton model (above).

## TRANSMISSION

## 1948 3-SPEED TRUCK TYPE

**Own Make.** Three-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). NOTE—Similar to Pass. Car transmission with new shifter mechanism on side cover for remote control.

See Transmission Section for complete data.

**Transmission Control ( $\frac{1}{2}$  &  $\frac{3}{4}$  Ton):** Remote control type with gearshift lever on steering column.

NOTE—This control not same as Pass. Car type.

See Transmission Section for complete data.

**Removal (Half-Ton):** Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven member, lift transmission up and remove through floor opening.

**Removal ( $\frac{3}{4}$  Ton):** Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split intermediate universal by removing trunnion bearing "U" bolts, lower rear propeller shaft to floor. Remove four capscrews holding universal joint collar on rear bearing retainer, slide ball collar and retainer back on housing. Remove two bolts and nuts mounting intermediate universal support bracket on frame cross-member, pull front propeller shaft assembly to rear and free of front universal joint. Remove transmission in same manner as on Half-Ton (above).

## TRANSMISSION

## 1946-47 4-SPEED TRUCK TYPE

**Own Make.** Four-speed, sliding spur gear type with floor-mounted gearshift lever.

See Transmission Section for complete data.

► **Lubricant Leakage (at Main Drive Gear Shaft) causing Clutch slipping, grabbing, or vibration:**—See Transmission article for new type Main Drive Gear to correct this trouble.

**Removal (C-O-E 109" WB.):** Split front universal, remove transmission as given for  $\frac{3}{4}$  Ton (above).

**Removal (All Others):**—Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split front universal joint by removing two trunnion bearing 'U' clamps (tape or

wire trunnions together to prevent losing bearings). Remove center bearing support bracket-to-frame cross member bolts. Unscrew oil seal retainer from rear yoke of center universal. Pull front propeller shaft assembly to front to free from rear shaft. Remove transmission as given for 3-Spd. (above). NOTE—New type unit (with neoprene insulating band and synthetic rubber-and-felt dust seals) used on 1947 models. See Chevrolet Shop Notes for data on Replacement Parts Kit including these new parts.

## TRANSMISSION

## 1948 4-SPEED TRUCK TYPE

**Own Make.** New design 4-speed, synchro-mesh, helical gear type. Constant-mesh, synchro-mesh (2nd, 3rd, 4th), sliding spur gear (Low & Reverse). Gearshift lever mounted on floor.

See Transmission Section for complete data.

**Transmission Control (Cab-over-Engine):** See Chevrolet Shop Notes for Removal & Installation instructions. NOTE—Floor-mtd. gearshift used on Other Trucks.

**Removal ( $\frac{1}{2}$  &  $\frac{3}{4}$  Ton):** See 3-speed Transmission data.

**Removal (Other Trucks):** Free steering gear grommet from floor, remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split front universal joint by removing trunnion bearing "U" bolts (tape or wire trunnions together to prevent losing bearings), slide shaft down to one side to clear transmission. Remove two top transmission mounting capscrews, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove 2 lower transmission mounting capscrews, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven-member, remove transmission.

## UNIVERSALS

**Half-Ton:** Own Make. No. 591642 (3-Spd. Trans.), 605118 (4-Spd. Trans.). Same type as Pass. Car (above). One used (in torque ball back of transmission).

See Universal Section for complete data.

**$\frac{3}{4}$  Ton Truck: Front Universal—Own Make.** Chevrolet No. 591642 (3 Spd. Transmission), 605118 (4 Spd. Transmis'n). Same type as used on  $\frac{1}{2}$  Ton (above).

**Intermediate & Rear Universal—Spicer Model No.** 1351-5107X (Intermediate—slip joint), 1358-5104X (rear—permanent joint). Needle bearing type.

See Universals Section for complete data.

**1, 1 $\frac{1}{2}$ , 2 Ton Trucks (Regular & C-O-E):** Spicer Needle bearing type. Slip-joint used at intermediate position, permanent type at transmission and rear axle. Spicer Model Nos. Front Intermediate Rear C-O-E 110" WB 1351-5107X.....①.....1358-5105X Bus 199" WB.....1358-5104X.....②.....1358-5104X All Others .....1358-5104X. 1351-5107X. 1358-5104X ①—No intermediate joint used (1 propeller shaft). ②—Two intermediate universals as follows: First—1358-5104X, Second 1351-5107X (3 section shaft). See Universal Section for complete data.

**Propeller Shaft Intermediate Bearing & Support Assembly.** See "Propeller Shaft" in Chevrolet Shop Notes. NOTE—1948 Support Bearing is new type sealed single-row ball bearing with "grease traps" packed with waterproof grease to prevent entrance of dirt and water.

## REAR AXLE

### SEMI-FLOATING TRUCK TYPE (HALF-TON)

**Own Make.** Semi-floating, hypoid gear type with Torque Tube Drive. NOTE—This axle same design as passenger car type.

See *Rear Axle Section* for complete data.

Ratio—4.11-1 Std.

► **Axle Identification Note**—Can be identified by prefix letter of serial number stamped on front face of carrier flange on right side as follows:

**Detroit Production**—('46) DE, ('47) EE, ('48) FE.

**Tonawanda**—('46) DF, ('47) EF, ('48) FF.

**Backlash**—.005-.007". Screw adjustment.

**Removal:**—Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber links from anchor plate. Remove spring 'U' bolts, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

**Axle Shaft Removal:**—Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum (on second wheel stud at either side of drain hole in drum), remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

**Axle Shaft Installation & Endplay Adjustment:** See "Rear Axle Notes" in *Chevrolet Shop Notes*.

## REAR AXLE

### FULL-FLOATING TRUCK TYPE (ALL EXCEPT HALF-TON)

**Own Make.** Full-floating, hypoid gear (straddle mounted pinion) with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

► **¾ & 1 Ton Note**—"Revacycle" differential side gears and pinions used.

► **1½ & 2 Ton Axle Production Change**—Axle shafts changed from "flanged" to "splined" type in late 1947. Special removal procedure required for each type (see below).

Ratio—See Axle Identification Table (below).

► **Axle Identification Note**—Axles can be identified by prefix letters of serial number stamped on top of carrier housing between reinforcing ribs as follows:

#### 1946 Axle Markings

	Ratio	Marking①
¾ Ton	4.57-1	DG or DH
1 Ton (Single Tires)	5.14-1	PA or PB
1 Ton (Dual Tires)	5.14-1	PC or PD
1½ Ton	5.43-1	PE or PF
1½ Ton	6.17-1	PL or PM
2 Ton & C-O-E	6.17-1	PG or PH

#### 1947 Axle Markings

¾ Ton	4.57-1	EG or EH
1 Ton (Single Tires)	5.14-1	QA or QB
1 Ton (Dual Tires)	5.14-1	QC or QD
1½ Ton	5.43-1	"Q"②
1½ Ton	6.17-1	"Q"③
2 Ton & C-O-E	6.17-1	QG or QH

#### 1948 Axle Markings

	Ratio	Marking①
¾ Ton (exc. Dubl-Duti)	4.57-1	FG or FH
1 Ton (Single Tires)	5.14-1	RAB or RB
1 Ton (Dual Tires)	5.14-1	RC or RD
1½ Ton	6.17-1	RE or RF
1½ Ton	5.43-1	RL or RM
2 Ton & C-O-E	6.17-1	RG or RH
①—First—Detroit, second—Tonawanda.		
②—Std. axle ratio changed from 5.43-1 to 6.17-1 in August, 1947 (axle markings changed—see 1948).		
<b>Backlash</b> —.005-.008". Screw adjustment.		

**Removal:**—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

**Axle Shaft Removal (¾ & 1 Ton):** Remove 8 capscrews and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. NOTE—Use new gasket when re-installing shaft.

**CAUTION**—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. Grease at this point will cause loosening of axle shaft flange capscrews.

**Axle Shaft Removal (1946-47 1½ & 2 Ton—Bolted Shaft Flange):** Bend the lock plate lugs away from capscrew heads, take out 8 capscrews in axle shaft flange, install two ½" x 13 capscrews in tapped holes in flange (between regular screw holes), turn screws up evenly to loosen shaft, withdraw shaft and aluminum gasket. NOTE—Use new aluminum gasket and lock plate when installing shaft.

**Axle Shaft Removal (1947-48 1½ & 2 Ton—Splined Shaft Flange):** Flange is tight fit in hub and requires special puller. Remove 5 capscrews & lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. NOTE—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub cap gasket.

**Axle Shaft Note**—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft or lengths as follows:

#### ¾ & 1 Ton Truck

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

#### 1½ Ton Truck (Bolted Shaft)①

Left Shaft	3652293	33"
Right Shaft	3652294	39 3/8"

①—Also Series OW, OY, PL School Bus.

#### 1½ Ton Truck (Splined Shaft)

Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

#### 2 Ton & C-O-E (Bolted Shaft)②

Left Shaft	3682461	35½"
Right Shaft	3682462	39 11/16"

②—Also Series OJ, PX School Bus.

#### 2 Ton & C-O-E (Splined Shaft)

Left Shaft	3685193	36 7/16"
Right Shaft	3685194	40 5/8"

**Wheel Bearing Adjustment:**—Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

## REAR AXLE

### TWO-SPEED TRUCK TYPE

**1946 Type:** Own Make, Full-floating, Two-speed, Double reduction type with Spiral Bevel Gears (First reduction), Helical Gears (second reduction) and manual shift control. NOTE—"Revacycle" type differential side gears and pinions are used in this axle. See *Rear Axle article* for identification markings and features of these gears.

► **Incorrect Speedometer Readings (Too High in Low Gear, Too Low in High Gear) Correction**—May be caused by incorrect assembly of speedometer adapter shifter lever. See "Rear Axle Notes" in *Chevrolet Shop Notes*.

NOTE—This axle may be identified by serial number prefix "PJ" or "PK" (serial number stamped on flat top of carrier housing on right side).

See *Rear Axle Section* for complete data.

Ratio—6.03-1 (High), 8.00-1 (Low).

**1947-48 Type:** Own Make, Full-floating, two-speed Double reduction type with Hypoid Gears (First reduction), Helical Gears (Second reduction) and new vacuum shift control.

**Identification Note**—Serial number prefix (on flat top of carrier on right side) is "RN" (Detroit), "RP" (Tonawanda).

See *Rear Axle Section* for complete data.

Ratio—6.13-1 (High), 8.10-1 (Low).

See *Rear Axle data* in *Rear Axle Section* for data.

**Two-Speed Shift Control:** (1946) Manual type with control lever mounted on cab floor ahead of seat, (1947-48) Vacuum Power Type with control valve on instrument panel. See *Rear Axle articles* for adjustment instructions.

► **Sticking or Binding of Vacuum Shift Control Valve Correction**—See "Rear Axle Notes" in *Chevrolet Shop Notes*.

**Removal:** Carrier Assembly can be removed (without disturbing axle housing) as follows: Remove axle shaft flange mounting bolts, pull both axle shafts out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearing, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier by means of long punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath truck.

**Axle Shaft Removal & Wheel Bearing Adjustment:** Same as for regular rear axle (see above).

C N T I N U E D O N N E X T P A G E

## CONTINUED FROM PRECEDING PAGE

**SHOCK ABSORBERS**

**Delco.** Single or double acting, hydraulic types (Std. or Optl.) as follows:

**Single Acting Types**

**Front**—1430-CA, DA (½ & ¾ Ton).

**Rear**—1430-MA, LA (½ Ton), 1431-Y, X (¾ Ton).

**Double Acting Types**

**Front**—(1946 exc. C-O-E) 1731-D, C. (1947-48 exc. C-O-E) 1730-B, A. (1946-48 C-O-E) 1730-D, C.

**Rear**—1731-U, T (½ Ton), 1722-D, C (¾ Ton), 1722-F, E (1 & 1½ Ton), 2000-W, V (1½ Ton & School Bus).

**NOTE**—Model numbers indicate Left and Right Shock Absorbers thus: 1430-CA, DA is 1430-CA (Left), 1430-DA (Right).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Trucks—Front Suspension:** Conventional "I" beam section front axle with Reverse Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7°10'±1° crosswise (All).

**Caster**—1¾° (½ & ¾ Ton exc. Dubl-Duti), 2¾° (1 Ton exc. Dubl-Duti, 1½ & 2 Ton exc. C-O-E), 3° (C-O-E), 3¼° (¾ Ton Dubl-Duti), 2¼° (1 Ton Dubl-Duti). All specifications plus or minus ½°. Use wedge shims for minor corrections (up to 2°), bending tools for greater corrections.

**Camber**—1°±½° (All). Bend axle for corrections (when king pin inclination is likewise off).

**Toe-In**—1/16-3/16" (½ & ¾ Ton), 1/16-1/4" (All Others including ¾ Ton Dubl-Duti). Adjust by turning tie rod. CAUTION—Tie rod ends must be aligned with studs.

**Steering Geometry**—Outer wheel turned 20°, inner wheel 23°±2° (All Models).

**STEERING GEAR**

**Saginaw Model.** Ball bearing (re-circulating ball) Worm-and-Nut type. Chevrolet Part Nos. as follows: ('46-47 ½ & ¾ Ton) No. 267793, ('48 ½ & ¾

Ton) 270927, ('46-47 1, 1½, 2 Ton) 267795, ('47-48 ½, ¾, 1, 1½ Ton with 4-speed Trans.) 270221, ('47-48 2 Ton & School Bus) 270224, ('46 C-O-E) 267135, ('47-48 C-O-E) 270635.

See Steering Gear Section for complete data.

► **1946 1½ & 2 Ton Steering Arm Production Change**—Three different types of steering arms and tie rods used. For replacement, same type steering arms and tie rods must be used to maintain correct toe-in and steering geometry. See "Steering Notes" in Chevrolet Shop Notes.

**BRAKES****TRUCKS**

**Service Brakes: Own Make.** Hydraulic type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinders**—Size stamped on housing under adjusting cup lock spring as follows:

	Front Wheels	Rear Wheels
Half-Ton	1¼"	1 3/16"
¾ Ton	1¼"	1 3/8"
1 Ton	1½"	1 3/8"
All Others	1½"	1 1/2"

**Drums**—Cast iron rim with steel web. Drum Diameters as follows:

	Front—Drum Diam.	Rear
Half-Ton	11"	11"
¾ Ton	11"	12"
1 Ton	12"	14"
Other Trucks	14"	16"

**Lining**—Moulded type (see ¾ & 1 Ton Note below).

**Width:** 1¾" (11" brakes), 2" (12", 14"), 3" (16").

**Thickness:** .187-.194" (11"), .265-.272" (others).

► **¾ & 1 Ton Bonded Brake Lining**—Brake lining on these models "bonded" type (cemented to shoes with thermoplastic bonding) and cannot be replaced in the field. Install exchange shoes on these models.

**Clearance (½ & ¾ Ton)**—Adjusting cover on wheel cylinder backed off 4 Notches from slight drag position (All shoes—front and rear).

**Clearance (Other Trucks)**—Adjusting cover on wheel cylinder backed off 4 notches from a slight

drag position (Front Wheels), adjusting pinion shaft backed off ¾ turn from a slight drag position (Rear Wheels).

**Hand Brake (Pedal Type used on 1947-48 ½ & ¾ Ton):** Pedal applies rear wheel service brakes. Brake release lever located under lower edge of instrument panel.

**Adjustment (1947-48 ½ & ¾ Ton—Pedal Type)**—This foot operated type adjusted in same manner as other trucks (following). Also check release rod handle (under instrument panel) for ½" minimum clearance at support bracket. Adjustment provided at lower end of rod. CAUTION—This clearance necessary for correct locking action of pedal lock bar.

**Hand Brake (Lever type used on Other 1946-47-48 Trucks):** Hand lever applies rear wheel service brakes.

► **CAUTION**—Service brakes must be properly adjusted before making parking brake adjustment.

**Adjustment (1946-47 Trucks)**—Place hand lever in fully released position. Pull wheel cable end fitting (at front of rear frame cross-member) forward until a definite stop is felt, hold cable in this position, turn nut on forward rod down until it contacts (turn by hand only, do not use wrench), lock cable by turning rear nut up securely. Check equalization and make any necessary re-adjustment by loosening wheel cable to tight wheel slightly.

**'47-48 Trucks.** Put hand lever in fully released position. Disconnect each hand brake cable at cross-shaft levers on frame by removing clevis pin. Loosen locknut and adjust clevis on end of cable until clevis pin can just be inserted when cable is pulled forward out of the cable conduit to the point where a positive stop is felt. Tighten locknut and install clevis pin. Check for drag and equalization. Correct by readjusting cables.

**Hydrovac Brake System:** Std. on 2 Ton & C-O-E Trucks, Optl. on 1½ Ton models. Consists of special power unit (vacuum power used to augment regular hydraulic brake actuation) in hydraulic line between master cylinder and wheel cylinders.

See Brake Section for complete data.

**HOOD ASSEMBLY****1941-48 MODELS**

**HOOD LOCK:** Chrysler 1941, Dodge 1941-48. Conventional center hinge hood. Each side locked by button under each end of instrument panel. To raise hood side, pull button out on side to be raised which unlatches hood, lift up on edge of hood. NOTE—'41 Dodge hood side panels are removable. **Control Cable Adjustment**—Cable for each hood side must be adjusted separately as follows: Pull out on control button on instrument panel on side to be adjusted, press down on hood to lock it in place. Open opposite side for access to control cable on locked side. Loosen screw on clamp at forward end of cable on front fender panel, adjust clamp for less than  $\frac{1}{8}$ " free play in cable (excessive free play allows wire stop to contact cable sheathing before latch is released), tighten screw. Repeat operation for opposite hood side.

**Chrysler 1942-48, De Soto 1941-48, Plymouth 1941-48:** These cars equipped with an alligator type hood with control button under left side of instrument panel. A safety catch is located under nose of hood. To raise hood, pull out on control button (hood will raise slightly), push up on safety catch under front end of hood, raise hood. NOTE—On Chrysler, hood prop on right side can be released by pushing center of prop back to lower hood. On '41 Plymouth, removable hood side panels are used.

**Control Cable Adjustment**—Raise hood, loosen set screw in clamp on front end of cable, adjust clamp position for  $\frac{1}{8}$ " minimum free play between clamp and latch arm in locked position, tighten set screw. Check safety catch for proper locking action.

**1941 MODELS**

**HOOD ALIGNMENT:** Chrysler C28, C30, C33; Dodge D19. Hood fit to side panels adjustable by loosening screws at front and rear pivot plates, adjust hood for proper clearance at side panels, tighten pivot plate screws. No adjustment required at spring latches. Check Hood Lock for proper locking action (see Control Cable Adjustment above).

**De Soto S8, Plymouth P11, P12:**—Hood alignment may be adjusted as follows: (1) Hood lock latch stud at front end. To adjust, loosen locknut on top of stud, turn stud in or out for proper hood fit, tighten lock nut. (2) Hood hinge position. Open hood just beyond normal open position, unhook hood hinge spring and remove spring. Loosen lower hood hinge bracket screw (on inner side on cowl extension) and upper screw (on outer side at upper rear corner of hinge). Do not disturb front upper cap screw (this must be tight to hold hinge in position). Align hood hinge by closing hood. Open hood carefully without disturbing hood hinge position and tighten screws. (3) Hood fore-and-aft position. Open hood, loosen three hood-to-hinge screws (on under side of hood ledge at rear), shift hood position backward or forward until correct fit obtained, tighten screws. Check Hood Lock for proper locking action (see Control Cable Adjustment instructions above).

**1942-48 MODELS**

**HOOD ALIGNMENT:** Dodge '42-48. Hood adjustable by loosening screws at front and rear pivot plates and shifting hood until proper fit obtained, then tighten pivot plate screws.

**De Soto & Plymouth '42-48:** Hood alignment can be adjusted in the following manner: (1) For shifting

hood fore-and-aft at cowl or nose of hood sideways, remove upper half of hood lock (with safety catch), loosen three hood-to-hinge capscrews (on under side of each hood flange at rear), close hood and shift as necessary until properly aligned, raise hood carefully without disturbing alignment and tighten screws. Hood flanges may be forced in or out for alignment with fender flanges by means of hood strainer (slotted holes provided in hinge bracket). Adjust hood lock as described below. (2) Hood can be adjusted at hinges for fit at cowl as follows: remove upper half of hood lock (as above), remove hinge spring on each side of cowl, loosen rear hinge-to-cowl screw in each hinge (permits horizontal movement), and back off front hinge-to-cowl screw (permits vertical movement). "Rock" hood as required until proper fit obtained between rear of hood and cowl. Then tighten these screws, install hinge springs and adjust hood lock. (3) Hood lock can be fitted for proper locking action as follows: Loosen capscrews attaching hood lock upper and lower halves to hood and radiator grille, lower hood which will permit upper and lower halves to come into alignment (bolt holes are slotted, enlarge holes if necessary until correct engagement obtained), tighten capscrews. Hood lock latch stud can be adjusted by loosening lock nut on upper end of stud and turning stud in or out so that hood will be under slight tension when closed to prevent rattles, tighten lock nut. Check hood lock control cable adjustment (see above).

**1942-48 MODELS**

**HOOD ALIGNMENT:** Chrysler 1942-48. Alignment adjustments are provided at the following points:

- 1)—4 capscrews under edge of hood at each hinge.
- 2)—4 capscrews in each hinge plate.
- 3)—2 capscrews under hood cross-member at center.
- 4)—Slotted bracket at center of hood cross-member.
- 5)—Fender bracket opposite each horn.

Adjustments should be made as follows:

**Panel Width**—If wide at rear, adjust at No. 3. If wide at front, loosen fender-to-grille support bolts, jack fenders apart.

**Cowl Wrap**—If high in center, bring down at No. 4. If high at one side, bring down at No. 2. If high on one side and low on opposite side, bend hinge back lever with monkey wrench (use length of pipe over handle for leverage) on high side.

**Cowl Gap**—If hood rubs at rear corner, adjust at No. 1 and push hinge back (rear screw must be tightened with hood closed (from beneath car)).

**Fender Gap**—If bottom rear corner rubs, flex sheet metal for clearance. If open at rear, bend hinge lever out (bend in if tight at rear). If open at catwalk, use 2 x 4 under hood cross-member, pry hood out. If tight at catwalk, block hood open about 10", pry hood inward with 2 x 4 against inside of fender. If open at front, adjust at No. 5 (bend bracket in, or if tight, bend bracket out).

**Flush to Fender**—If higher than fender at catwalk, raise rear of fender after loosening fender panel-to-fender shield bolts. If lower than fender at catwalk, bend hood up with 2 x 4 under hood cross-member (if gap is changed, pry hood in as described above). If higher than fender at front, raise fender by inserting flat washers at grille support. If lower than fenders at front, remove bumpers under front end of hood, insert flat washers over tongue.

**FRONT END SHEET METAL****1939 MODELS**

**FRONT END ASSEMBLY (UNIT) REMOVAL:** For work on front of engine, remove radiator and fender assembly as a unit as follows: remove hood and side panel assembly, front bumper assembly, and radiator lower splash pan. Disconnect headlamp wiring at junction block on left fender lower shield. Remove front wheels and drain cooling system. Disconnect radiator support studs and radiator hoses. Disconnect fenders at running board and body. Lift radiator shell, core and fenders off in an assembly.

**1940 MODELS**

**FRONT END ASSEMBLY (UNIT) REMOVAL:** For work on front of engine, remove radiator shell, radiator core, hood lower side panels and both fenders as a unit as follows: Remove hood, drain radiator, disconnect headlight wires at junction block on left fender upper shield, remove engine water inlet and outlet hoses, free fenders from body and running board and lift assembly off.

**1941 MODELS**

**FRONT END ASSEMBLY (UNIT) REMOVAL:** Radiator shell, radiator core, and both front fenders (including hood side panels on Dodge and Plymouth) can be removed as an assembly as follows: Raise hood and drain radiator. Remove hood on Chrysler and Dodge only. Disconnect battery cables at battery. Remove battery on Plymouth only. Disconnect horn wires at relay and remove horn and mounting plate assembly on Plymouth only. Disconnect headlight wires at junction block on left fender. Disconnect hood latch release cables (at each side on Chrysler and Dodge, at lock plate on radiator shell on De Soto and Plymouth). Remove hood lock and plate assembly on Plymouth only (mark plate and radiator shell and reassemble to these marks when installing assembly). Remove front bumper assembly on all models except De Soto. Remove engine inlet and outlet water hoses. Remove fender-to-body stud nuts and studs, and nuts from fender braces and running boards. With a man at each side lifting on fender skirt, radiator shell, radiator core, hood lower side panels and both front fenders can be removed as an assembly. When installing assembly, attaching bolts should be installed loosely, hood aligned (see Hood Alignment above), and then tighten to secure assembly on car.

**1942-48 MODELS**

**FRONT END ASSEMBLY (UNIT) REMOVAL:** Front end assembly (radiator shell and core, and both front fenders) can be removed as a unit as follows: Drain cooling system (drain cocks at center of radiator lower tank at front, and on engine on left side below distributor). Remove hood. Disconnect battery cables at battery, hood latch cable (one on each side on Dodge models), headlight shutter control rod on 1942 De Soto models, disconnect wires at junction blocks on left fender, and radiator hoses. Remove front bumper assembly. Take off radiator support nuts and washers. Remove fender-to-body stud nuts. Remove lower bolt and nut on inspection shield at each fender (bend skirt of shields as necessary to prevent interference when lifting assembly off). Attach hoist ahead of radiator core and lift assembly off car.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CYLINDER HEAD**

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car. Procedure for tightening Cast Iron and Aluminum Heads is as follows:

**Cast Iron Heads**—With engine cold, tighten screws or nuts to correct tension as shown in table below. Run engine until thoroughly warm, then check and retighten nuts (additional tightening necessary to bring them back to correct tension).

**Aluminum Heads**—With engine cold, tighten screws or nuts to correct tension as shown in table below. Run engine until thoroughly warm, then allow engine to cool off, check and retighten nuts after engine has become cool—do not tighten aluminum heads hot.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

**ENGINE REMOVAL****1937-38 MODELS**

**ENGINE ASSEMBLY REMOVAL:** Drain radiator, remove hood and side panels (if used), disconnect tie rods at radiator (if used). Remove fan blades and radiator core (disconnect radiator hoses, remove water pump—C14, 15 only, fan pulley—except C14, 15, 17, remove core-to-shell bolts and lift core out, on Chrysler Airflow C17, radiator shell and grille assembly and fan shield must also be removed). Remove bolts at each side of front engine support. Disconnect starter cable, generator and distributor wires, fuel pump lines, throttle controls, oil gauge line at engine, heat indicator tube and bulb at cylinder head. Remove front floor boards and disconnect hand brake cable, overdrive control cable (if used), propeller shaft (see removal instructions below for cars equipped with two shafts and center bearing), clutch release fork, intermediate clutch linkage shaft at engine (on 1938 cars). Remove transmission (see car model article for directions). Disconnect exhaust pipe and remove rear engine mounting bolts. Lift engine assembly out.

**Installation:**—Reverse procedure listed above.

**IMPORTANT**—In order to secure proper engine alignment when installing engine assembly, loosen exhaust pipe support brackets and run engine a few seconds with engine mounting bolts loose. Then tighten mounting bolts and exhaust pipe brackets.

**1939 MODELS**

**ENGINE ASSEMBLY REMOVAL:** Remove Front End Assembly (see above). Remove front floor boards and propeller shaft (see removal instructions below for cars equipped with two shafts and center bearing). Disconnect: hand brake cable, starter cable, battery ground cable, speedometer cable and gear-shifter rod and cable at transmission (on cars with overdrive remove solenoid coil and control cable), feed line at fuel pump, oil gauge line at engine, coil wires, heat indicator tube and bulb at head, exhaust pipe at manifold, throttle controls and clutch linkage. Attach hoist to engine (remove air cleaner and horns if necessary). Remove front and rear engine support bolts. Loosen engine side splash aprons and lift engine assembly out of car. **NOTE**—On Plymouth P7, remove transmission cover.

**Installation:**—Reverse procedure listed above. **IMPORTANT**—In order to secure proper engine alignment when installing engine assembly, loosen exhaust pipe support brackets and run engine a few seconds with engine mounting bolts loose. Then tighten mounting bolts and exhaust pipe brackets.

**1940 MODELS**

**ENGINE ASSEMBLY REMOVAL:** Remove Front End Assembly as a unit (see above). Remove front floor boards and propeller shaft (for cars equipped with

two shafts, see removal directions under propeller shaft center bearing following). Disconnect: hand brake cable, starter cable, battery ground cable, speedometer cable and gear shifter rod and cable at transmission (on cars with overdrive, remove solenoid coil and disconnect wires and overdrive control cable), fuel pump flexible line at pump, exhaust pipe at manifold, throttle and choke controls, heat indicator tube and bulb at head, oil gauge line at flexible tube, starter cable at starter, coil wires and clutch pedal linkage. Remove front and rear engine support bolts, loosen engine side splash pans, attach hoist and lift engine out.

**1940 MODELS**

**REAR ENGINE SUPPORTS (8 CYL.):** Insulators on rear support may be replaced without removing floor boards as follows: Support engine at rear, remove rear engine support bolts and remove cross member bolts at frame. Then remove insulators.

**1941-48 MODELS (EXCEPT 1942-48 PLYMOUTH)**

**ENGINE ASSEMBLY REMOVAL:** Engine, clutch, and transmission assembly can be removed from car as an assembly as follows: Remove the hood. Remove Front End Assembly on '41 cars, Radiator Core only on '42-48 cars. Remove propeller shaft (cars with 2 shafts see Propeller Shaft Center Bearing Removal following). On cars with Power Shift remove the vacuum control unit. Disconnect the following: Fuel pump flexible line at pump, exhaust pipe at manifold, throttle controls, choke control (on Plymouth only), heat indicator tube and bulb at head, oil gauge line at flexible tube, generator wires, speedometer cable, hand brake, gear shift and selector rods at transmission, clutch pedal linkage and torque tube, windshield wiper vacuum hose (on cars with vacuum type wiper). Remove crankcase ventilator breather pipe and front and rear engine support bolts. Connect hoist to engine (remove air cleaner and horns) lift the assembly out of chassis. When re-installing assembly reverse procedure listed above, check Hood Alignment and Hood Lock operation (see instructions above).

**1942-48 PLYMOUTH**

**ENGINE ASSEMBLY REMOVAL:** Engine and clutch assembly can be removed from car as follows: Remove hood, battery, radiator core (see Radiator Core Removal), fan blades, floor boards and transmission (see car model article for Transmission Removal). Disconnect the following from the engine: fuel line at pump, exhaust pipe at manifold, throttle controls, choke control (on Plymouth), heat indicator tube and bulb from head, oil gauge line at flexible tube, generator wires, ignition coil wires, clutch pedal linkage and torque tube, windshield wiper vacuum hose (on cars with vacuum type wiper). Remove crankcase ventilator outlet pipe and front and rear engine support bolts. Attach hoist to engine (remove air cleaner if necessary), raise engine just enough to allow removal of front engine support, lift engine out of car. When reinstalling assembly reverse procedure listed above and align hood (see Hood Alignment).

**ORIGINAL BORE & PISTONS****1939-48 MODELS**

**ORIGINAL PISTON & CYLINDER BORE SIZES:** Original production (new engine) piston and bore sizes indicated by letter located as follows:  
**Piston Size**—Letter stamped on piston head (num-

ber following letter on Dodge pistons is weight). **Bore Size**—Letter stamped on pad on distributor side of engine at top of block. Do not confuse this letter with "Special Standard" size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" larger standard cylinder bore.

'Special Standard' Pistons and Bores (.020" oversize)—Original production (new engine) piston and bore sizes which are .020" oversize (see Engine Bore Size data above) are graded in same steps as for standard sizes but these pistons and bores are marked "P", "Q", "R", "S", "T".

E	3.2515"	3.25175-3.25225"

Dodge Steel Strut Piston Weight—All 6 pistons in one block must be alike (same number on head).

①—Pistons marked AA are .0005" smaller than A pistons, EE pistons are .0005" larger than E pistons. Pistons marked P, Q, R, S, T are .020" oversize (see Note above).

### PISTONS

#### 1937-48 MODELS

**REPLACEMENT PISTONS:** Finished (Aluminum Alloy) Pistons—Furnished in standard size and .005", .020", .030", .040", .060" oversize.

Semi-Finished (Aluminum Alloy) Pistons—These pistons furnished in two sizes: (1) for cylinder bores from standard to .023" oversize. (2) For bores .025-.050" oversize. Pistons are finished (head and ring grooves) except for skirt. Pistons must be finished on cam grinding equipment. Do not finish pistons circular. Skirt is elliptical (.010-.012" Plymouth, .010-.014" All Others—smaller diameter across pin bosses than across thrust faces) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom). **IMPORTANT**—Second group pistons (.025-.050") must not be used for oversizes under .025" due to different size of piston head and ring grooves.

► **IMPORTANT**—Use same type pistons when replacing only a partial set. All pistons in engine must be of the same type.

### PISTON RINGS

#### 1936-48 MODELS

**REPLACEMENT PISTON RINGS:** Three types of replacement rings furnished by car manufacturer, Original Equipment Rings (furnished singly), Mopar Oil Master & Mopar Oil Saver (sets).

**Original Equipment Rings**—These rings are same design as installed by car manufacturer. Rings are available in following sizes: Standard (for standard to .004" oversize cylinders), .005" oversize (for .005-.014" bores), .020" (for .015-.024"), .030" (for .025-.034"), .040" (for .035-.044"), .050" (for .045-.054"), and .060" oversize (for .055-.064" cylinders).

**Mopar Oil Saver Ring Sets**—These ring sets are designed to be installed in cylinder walls with .005" taper or less where cylinder walls are not to be reconditioned. This set consists of same rings as used in Oil Master set except that #3 & #4 rings are alike (slotted oil ring with slotted expander).

**Mopar Oil Master Ring Sets**—These rings are designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls are not to be reconditioned. #4 oil ring is special 4-piece type (upper & lower rail with stepped segment between rails and slotted expander).

**Oil Ring Set Sizes**—Oil Saver and Oil Master Sets are available in following sizes. Standard (for standard to .009" oversize cylinders), .010" oversize (for .010-.019" bores), .020" (for .020-.029"), .030" (for .030-.039"), .040" (for .040-.049"), and .050" oversize (for .050-.060" oversize cylinder bores).

### ORIGINAL BEARING SIZES

#### 1936-48 MODELS

**ENGINE NUMBER LETTERS ('SPECIAL STANDARD' BORE & BEARING SIZES):**—Letters used with engine number (not in circular pads) denote following 'special standard' sizes: 'A'—.020" larger standard cylinder bore. 'B'—.010" smaller standard main and connecting rod bearings. 'AB'—Cylinder bore, main and connecting bearings 'special standard'.

#### 1947-48 PLYMOUTH

► **.001" THICKER WALL MAIN & CONNECTING ROD BEARINGS:** When these bearings installed on production engines, machined surface of crankshaft center counterbalance marked as follows: Connecting Rods—Shaft marked R1, R2, R3, R4, R5, or R6 depending on which connecting rod is fitted with a .001" thicker wall bearing. Main Bearings—Shaft marked M1, M2, M3, or M4 depending on which journal fitted with a .001" thicker wall bearing.

► **CAUTION:** These bearings used only in positions indicated by marks (not necessarily in complete sets).

### CONNECTING ROD & BEARINGS

► **CAUTION**—See **ORIGINAL BEARING SIZES** for markings indicating production engines equipped with bearings other than standard size.

#### 1940-48 MODELS

**CONNECTING ROD BEARINGS: Removal & Installation.** Bearing shells can be removed after taking off bearing caps. When installing bearing shells, oil hole in rod and bearing must be aligned and ear on bearing halves fitted in notch in rod and cap.

**Fitting Bearings**—To check bearing clearance, place an oiled piece of feeler stock, .0015" thick place an oiled piece of feeler stock, .002" thick (.0015" thick on Dodge & Plymouth), 1/2" wide, 1" long between bearing and crankshaft. Tighten bearing cap bolt nuts. Bearings clearance is correct when slight drag felt when turning crankshaft by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper under-size bearing listed below.

**Undersize Bearings**—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting above).

### CRANKSHAFT & MAIN BEARINGS

► **CAUTION**—See **ORIGINAL BEARING SIZES** for markings indicating production engines equipped with bearings other than standard size.

#### 1936-48 MODELS

**REPLACEMENT MAIN BEARING CAPS:** Furnished for service where original cap damaged or broken. These replacement caps same as original caps except for stud holes being 1/64" larger and bearing cap length which is 1/16" shorter.

**Fitting**—Replacement caps must be fitted to engine by filing or shimming to obtain proper bearing clearance. This is only necessary when replacement cap originally fitted to engine (caps should not be shimmed or filed to compensate for wear).

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## 1936-39 MODELS

**MAIN BEARINGS: Removal**—Car manufacturer recommends that Engine Assembly be removed on Chrysler and De Soto 1937-38-39 models for removing and installing main bearings. See separate Engine Assembly Removal paragraphs (above).

**Front Main Bearing Cap Removal for Six Cylinder Engines (Chrysler & De Soto 1937-38, Dodge 1936 to 1938, Plymouth 1936 to 1938):**—Remove oil pan, oil suction pipe and fan drive pulley (using Puller Tool No. CM-57). Take off timing chain cover. Remove flat head screw from timing case cover plate to oil pan front gasket oil seal plate (located on front face of cover plate just below and to the left of chain). Remove oil pan front gasket oil seal plate which will permit access to front main bearing cap.

**Front Main Bearing Cap Removal for Six Cylinder Engines (All 1939):**—See 1940 data following.

**Adjustment:**—Replace bearings. Do not shim or file bearing caps (see Replacement Main Bearing Caps above). With caps removed, the bearing upper halves may be rotated out without removing crankshaft by using pin installed in oil hole in shaft.

**Fitting Main Bearings and Undersize Bearings:** Same as given for 1941 models following.

## 1940 MODELS

**MAIN BEARINGS: Removal (with engine in car)**—Remove oil pan (see Oil Pan Removal following), oil suction pipe and screen assembly, crankshaft pulley shield (De Soto, Dodge & Plymouth) which is secured by 2 screws, main bearing cap-to-cylinder head oil lines, and main bearing caps (see Front Main Bearing Cap Removal below). Use puller No. C-305 to remove #1 and #5 caps on Chrysler 8. Upper bearing shells can then be removed without removing crankshaft by using an old bearing shell or Tool No. C-584 (inserted in oil hole in crankshaft). Turn crankshaft to rotate bearing out.

**Front Main Bearing Cap Removal:**—With oil pan removed, oil pan front gasket oil seal plate (not used on Chrysler 8) can be removed by taking out 2 screws on lower edge of timing chain cover (not necessary to remove cover) permitting access to front main bearing cap.

**Fitting Bearings:**—To check bearing clearance, place an oiled piece of feeler stock, .002" thick, ½" wide, and 1" long between bearing and crankshaft. Tighten bearing cap nuts or cap screws. Bearing clearance is correct when slight drag felt when turning crankshaft by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper undersize bearing listed below.

## 1941-48 MODELS

**MAIN BEARINGS: Removal & Installation (with engine in car).** Bearing shells can be removed and installed without removing crankshaft as follows: Remove oil pan (see Oil Pan Removal), oil suction pipe and screen assembly, and crankshaft impulse neutralizer shield. Remove two lower screws on chain case cover (screw directly below crankshaft and first screw to right as viewed facing engine for Sixes) to free oil pan front end oil seal plate on Sixes, to free front main bearing cap on Eights. Punch mark bearing caps and crankcase and re-install caps to these marks when assembling. Loosen all bearing caps (for Eights, use Special Puller Tool C-305 to free front and rear caps—caps are sealed, see Crankshaft Oil Seals). Remove caps in pairs

(2 front or 2 rear). Upper bearing halves can be removed by using Special Tool C-584 inserted in oil hole in crankshaft and rotating crankshaft to turn bearing out (an old bearing shell can be used to free bearing in place of tool). After checking bearing clearance (see Fitting Bearings), upper bearing halves can be installed by reversing removal procedure above (tongue in shell must seat in groove in crankcase and cap, and bearing shell with oil hole must be installed on top side of crankshaft). **CAUTION**—When new bearings installed, always use complete bearing (do not use new bearing half with an old half). Upper and lower bearing halves for all bearings except rear are alike and interchangeable on Chrysler Six and De Soto. Rear bearing upper and lower halves are interchangeable. Upper and lower bearing halves on Chrysler 8, Dodge, and Plymouth are not interchangeable and bearing half with oil hole must be installed on top. Center bearing caps are offset slightly on Plymouth and must be installed properly to avoid damage (install to punch marks as described above). **NOTE**—When assembling oil suction pipe and screen on Plymouth engines, pipe should be positioned so that lower end points toward right capscrew on rear main bearing cap. With pipe in this position, proper clearance of screen assembly with baffles in oil pan will be obtained.

**Fitting Bearings:**—To check bearing clearance, place an oiled piece of feeler stock, .0015" thick (for Plymouth models), .002" thick (for all others) by ½" wide, and 1" long between bearing and crankshaft. Tighten bearing cap nuts or cap screws. Bearing clearance is correct when slight drag felt when turning crankshaft by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper undersize bearing listed below.

**Undersize Bearings:**—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

## 1938-40 MODELS

**CRANKSHAFT OIL SEALS: Servicing**—Car manufacturer recommends that new oil seals be installed if chain cover or rear bearing cap removed.

**Front Oil Seal:**—Leather oil seal mounted in timing chain cover. When installing seal, leather should be soft and pliable, soaked in thin oil for approximately thirty minutes, then rolled with smooth bar. Use Chain Case Cover Oil Seal Centering Tool C-522 installed behind crankshaft starting jaw (tighten jaw finger tight) while tightening chain cover.

**Rear Oil Seal:**—Located at rear bearing. Consists of three separate seals as follows: 1—Bearing oil seal formed in two halves. Lower half mounted on rear of bearing cap and held by retainer screwed (3 screws with lockwashers) to rear face of cap. Upper half retained in same manner with retainer screwed in place on rear face of crankcase. 2—Bearing cap seal. Groove on each side of cap (immediately to rear of stud holes) fitted with seal. Seal assembled in groove with doubled-over end in toward bearing. 3—Bearing cap gaskets. L-shaped cap gaskets assembled around oil slinger groove (at rear of cap). Install gaskets (one on each side).

## 1941-48 MODELS

**CRANKSHAFT OIL SEALS: Servicing**—Car manufacturer recommends that new oil seals be installed if chain cover or rear bearing cap removed.

**Front Oil Seal:**—Oil seal located in timing chain cover. Consists of spring-backed composition seal in a stamped steel housing pressed in chain case cover with composition gasket installed between seal and cover. To install seal proceed as follows: Insert new composition gasket in chain case cover, drive new seal in place with drift or similar tool slightly larger than seal (seal is press fit in cover), seal must have a tight, even fit in seat in cover. Center seal on crankshaft when installing chain case cover as follows: Install chain case cover on engine with cover screws tightened just enough to hold cover in place, install Special Centering Tool C-522 on end of crankshaft and hold it in place by tightening crankshaft starting jaw finger tight, tighten chain case cover screws and as cover gasket is being compressed, tighten crankshaft starting jaw nut so as to maintain slight tension between centering tool and seal. Remove tool after chain case cover screws secured. Tighten starter jaw to 108 ft. lbs. min.

**Rear Oil Seal (2-Piece Type—6 Cyl.)**—Located at rear main bearing. Consists of oil seal packing assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer assembled on rear face of bearing cap). Gaskets used on top face of bearing cap at each side, around oil slinger grooves and along shoulder across cap. Install new packing in retainer on crankcase and cap, place new gaskets on cap and install on engine without disturbing position of gaskets.

**NOTE**—Some models equipped with additional two-piece oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

**Rear Oil Seal (2-Piece Type—8 Cyl.)**—Located at rear main bearing. Consists of seal assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer assembled on rear face of bearing cap), and by rubber seals assembled in vertical grooves on each side of bearing cap. When installing rubber seals, upset grooves on each side of cap with prick punch to anchor seals in grooves and prevents seals sliding out when cap installed. These rubber seals also used on front bearing cap.

**NOTE**—Some models equipped with additional two-piece oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

**Rear Oil Seal (1-Piece Type)**—New one-piece type with lip on forward edge engaging shoulder in crankcase and bearing cap to rear of crankshaft oil slinger. This seal is split at the top.

**Installation**—Remove oil pan (see Oil Pan Removal following). Back off all main bearing capscrews three turns. Remove rear main bearing cap (use Puller C-305 for 8 cylinder). Pull out old seal with pliers. Coat one end of new seal with tire soap or cup grease (avoid getting any grease between ends of seal). Insert one end of seal over shoulder in crankcase, work up until end approximately at top, then work other end in same manner on other side until ends come together at top. Coat lower lip of

seal so that bearing cap will seat on seal easily. Check rear bearing cap for holes (either sand holes or tapped holes for 2-piece type seal retainer). If holes extend through oil slinger groove shoulder, sand holes should be plugged by welding or tapped holes plugged by installing screws which have been coated with sealing compound. Re-assemble main bearing caps and oil pan.

**REPLACEMENT NOTE**—If one-piece seal to be installed on engine where two-piece type seal used, removal of transmission, clutch, and fluid drive may be required to remove both halves of old seal.

## TIMING CHAIN

### 1938 MODELS

**TIMING CHAIN REMOVAL:** With hood and side panels removed, take off radiator shell and radiator as a unit, support engine under front end and remove front engine support. Remove fan drive pulley and balancer (if used) with Puller Tool No. CM-57. Take off chain cover and chain.

## CAMSHAFT & BEARINGS

### 1940-48 MODELS

**CAMSHAFT REMOVAL:** Remove Front End Assembly as a unit (see removal data on preceding pages). Remove cylinder head, fuel pump, oil pump, valve tappet cover plates, crankshaft pulley, front motor support (with front of engine jacked up), timing chain cover, camshaft sprocket and timing chain. If valves and valve springs are not to be removed, prop valves up by inserting wooden wedges at opposite sides under valve head. Raise tappets and hold in this position (use spring type clothes pins or similar tool to hold tappets up). Withdraw camshaft (rotate shaft to clear any obstructions).

**Chrysler 8 Note**—In addition to instructions listed above, two oil feeder lines in valve chamber must be removed and #4 piston must be on top dead center in order to remove camshaft.

## VALVE SYSTEM

### 1936-48 MODELS

**EXHAUST VALVE SEAT INSERTS:** Refacing—Exhaust valve seat inserts must be reground (cannot be recut due to hardness) with high speed grinding stones (Tool C-372) used dry. Roughing stone—to obtain full contact; Finishing stone—to obtain proper finish. Stones must first be dressed for concentricity. Grinding tool centers on expanding pilot inserted in clean valve guide (upper end must be cleaned and chamfered with reamer to provide 60° seat 1/16" wide for this pilot). Lubricate pilot with few drops of oil. All carbon or grease must be removed from valve seat before grinding. Finished seat allowable runout .0005". Check with indicator.

**Replacement Inserts**—Furnished .010" oversize. Use special tool set MH-N-1 (includes grinding and replacement tools). Inserts removed with special puller to avoid damage to engine block. Special cutters (allowing press fit for new insert) and peening tools (securing insert in place) used with pilot in valve guide (as above) for proper alignment. After installing, finish guide (see Refacing).

## OIL PUMP

### 1938 MODELS

**OIL PUMP REMOVAL AND INSTALLATION:** Chrysler & DeSoto only). Disconnect oil gauge and fuel pump lines, exhaust pipe, starter pedal (DeSoto only), drain radiator and disconnect hoses. Remove floor boards, loosen engine mountings and tilt engine by placing jack under oil pan. Remove pump body capscrews, remove pump. To install, reverse procedure.

### 1940-42 MODELS

**OIL PUMP REMOVAL:** Take off engine splash pan on right side of engine. Remove distributor cap, turn engine over until #1 cylinder in firing position (distributor rotor opposite #1 terminal position in cap). Allow engine to remain in this position while pump is off the engine (if engine position disturbed while pump is off the engine, re-install pump as described below). Remove cap screws in pump body, take the pump off the engine.

**Installation**—When installing pump where crankshaft has been moved while pump off engine, turn crankshaft until #1 cylinder is at firing position (both valves closed, piston on compression), remove distributor, insert screwdriver in distributor mounting hole, install pump on engine with screwdriver engaging slot in pump shaft, turn screwdriver so that slot in pump shaft is parallel with crankshaft (to mesh pump and camshaft gear, turn pump shaft slightly while installing pump). Pump position is correct when slot in upper end is approximately parallel with crankshaft (slot should slant down toward the front just a bit). Then install distributor with rotor at #1 firing position and reset ignition timing (see car model page for data).

### 1946-47-48 MODELS

**ROTOR TYPE OIL PUMP:** Removal—Take off distributor cap, turn engine over until #1 cylinder is at firing position (allow engine to remain in this position while pump off engine). Remove two oil pump Allen-head screws. Take pump off engine.

**Pump Servicing**—Disassemble pump by taking off cover and drive gear (drive out pin and press gear off shaft). Thoroughly clean parts and dry with compressed air. Check pump parts as follows: 1)—With rotors in pump body, turn shaft so that one lobe on inner rotor pushed into notch in outer rotor, check clearance between opposite lobe of inner rotor and inner face of outer rotor. If clearance greater than .010" replace both rotors. 2)—Height (or thickness) of both rotors should be at least .748". Diameter of outer rotor should be at least 2.245". Replace if measurements are less. 3)—With rotors in pump body, turn body up, place straightedge across face of body between screw holes. Clearance between straightedge and rotors should be .004" max. If greater, replace pump body. 4)—With outer rotor pressed to one side of body, clearance at opposite side should be .008" maximum. If greater, replace pump body. 5)—Check cover by placing straightedge across inner face and if .001" feeler can be inserted between cover and straightedge, or if face is scratched or marred, replace cover.

**Pump Assembly**—If new rotor installed on shaft, it must be installed with rotor square to shaft and pressed on until flush with end of shaft. Pin rotor to shaft after drilling 5/32" pin hole. Drive gear should be pressed on shaft to give .003-.010" clear-

ance between underside of gear and pump body with rotor (on opposite end of shaft) seated in pump body. Install pin. If necessary, drill new 5/32" hole at right angles to old hole. With rotors in place, install new cover gasket on body and install cover.

**Pump Installation**—Oil pump must be installed on engine with #1 piston in firing position with rotor on distributor opposite #1 terminal in cap.

## OIL PAN REMOVAL

### 1940 MODELS

**OIL PAN REMOVAL:** Drain oil, replace drain plug. Remove clutch housing underpan (on six cylinder cars this prevents damage to oil pan gaskets on housing underpan dust seal. Remove oil level indicator and drop oil pan.

**Installation:**—With oil pan clean, install new oil pan gaskets. **IMPORTANT**—On six cylinder engines, oil pan end gaskets (front and rear) must protrude 1/4" to 1/8" above oil pan. Side gaskets installed with ends resting on top of protruding end gaskets. With gaskets in this position, they will be properly compressed when oil pan screws are tightened.

### 1941-48 MODELS

**OIL PAN REMOVAL:** Drain oil, replace drain plug. Remove clutch housing underpan to avoid damaging oil pan gaskets on underpan dust shield (NOTE—On Eight cylinder cars, raise rear of engine slightly so that pan clears frame cross-member). Remove oil level indicator, drop oil pan on tie rod. Pan can then be removed by reaching in under crankcase and raising oil strainer to clear baffle while sliding pan out to rear.

**Installation (6 cylinder Engines)**—When installing new gaskets, end gaskets should extend 1/4" to 1/8" above level of oil pan (these ends must not be cut off). Side gasket installed with ends resting on top of protruding end gaskets. Gaskets will be compressed into place when pan screws tightened.

## RADIATOR

### 1939 MODELS

**RADIATOR CORE REMOVAL:** Chrysler C22, De Soto S6, Dodge D11, Plymouth P7, P8. Remove hood and side panels. Drain cooling system. Remove water pump (Chrysler and Dodge only). Disconnect radiator hoses and take fan blades off pulley (De Soto and Plymouth only). Disconnect headlamp wires at junction block on left fender lower shield and push forward through radiator core side flange. Remove three radiator core-to-support capscrews at each side. Lift core out. **NOTE**—Loosen lower front screws of fender shield if necessary.

**Installation**—Reverse procedure listed above. Headlamp wires should be tied together at terminals with a long piece of string, pass string through core flange hole (toward the rear), assemble core and pull wires through hole.

**Chrysler C23, C24:**—Remove complete hood assembly and side panels. Drain cooling system. Remove screws and bolts securing lower splash pan (at front of car) to shell cross member (below grille) and to side shields, front wheels and front bumper from frame. Free front end of fenders by removing 5 capscrews (fender-to-grille shell) and 2 capscrews in fender bracket-to-radiator support. Remove radiator hoses. Take out fan shroud bolts and lift shroud out. Free radiator shell from support by removing

## RADIATOR

CONTINUED FROM PRECEDING PAGE

two capscrews at each side (just above top end of outside grille bars). Pull radiator shell forward off car with fenders moved apart. Remove radiator core support capscrews and lift core out. **NOTE**—When reassembling, secure bolts and screws which hold shell and fenders in a half tight position, tighten only after hood alignment obtained.

### 1940 MODELS

**RADIATOR CORE REMOVAL:** Chrysler C25, De Soto S7, Dodge D14, D17. Drain cooling system. Remove hood, radiator inlet hose (at top tank), outlet hose (at pump), fan blade assembly (by removing screws at pump flange and lifting blades off), and radiator core-to-support capscrews (three on each side). With core tilted to rear, lift up and remove.

**Chrysler C26, C27:**—Remove hood and carburetor air cleaner. Remove water pump (see 1940 Chrysler C26, C27 pages for instructions). Remove water pump back plate and headlight wires from clips along top of radiator core, radiator outlet hose and elbow at bottom of core, and core-to-support capscrews and nuts. Tilt radiator core toward engine as far as possible and lift core out (car manufacturer recommends that two men lift core out of car so as to prevent core damage).

**Plymouth P9, P10:**—Remove hood and take off water pump (see 1940 Plymouth P9 & P10 pages for instructions). Disconnect hose at radiator top tank. Unclip headlight wires along top of core and move wires so as to clear core. Remove radiator core-to-support capscrews at each side. Tilt radiator core back and lift out of car.

### 1941 MODELS

**RADIATOR CORE REMOVAL:** 6 cylinder Cars—Remove hood and radiator ornament (on Chrysler and Dodge only). Drain cooling system. Remove inlet and outlet hoses. On Chrysler, remove water outlet elbow and thermostat, fan belt, water pump cap screws, and lift water pump out. On Dodge, remove fan blade cap screws in flange on pump shaft and take off fan blades. Free headlight wires from clips so that wires clear radiator. Remove nuts and cap screws from radiator support on each side. On De Soto and Plymouth, remove brackets at upper left and right corners of radiator support. Lift radiator core up and out of chassis (on Chrysler and De Soto, tilt upper end of core back).

**8 cylinder Cars:**—Remove hood and radiator ornament, drain cooling system. Remove front end assembly (see Front End Assembly (Unit) Removal above). Remove radiator support-to-core cap screws and nuts. Lift radiator core out.

### 1942-48 MODELS

**RADIATOR CORE REMOVAL:** Raise hood (remove hood and radiator ornament on Dodge), drain cooling system, disconnect hoses, free headlight wires from radiator, remove fan shroud (if used), take out nuts and capscrews in support at each side, lift core out tilting top toward rear. **NOTE**—Fan blades on some models should be removed if additional clearance required.

## COOLING SYSTEM

### 1941-48 MODELS

**WATER DISTRIBUTOR TUBE:** Removable one-piece tube installed between cylinders and valve ports (on six cylinder engines), on right side of engine just above valve spring chamber (on 8 cyl engines) and distributes water from pump to exhaust valve ports through holes in tube.

**Servicing**—A new tube should be installed whenever engine overhauled or when rusted or corroded in order to provide correct water circulation in engine block. To replace tube proceed as follows: Remove front end assembly (see Front End Assembly (Unit) Removal above). On six cylinder engines remove water pump which will expose front end of tube. On eight cylinder engines, remove welch plug to right of water pump to expose front end of tube. Remove tube by using rod with hook formed on end and engage it in slot on upper edge of tube just inside block, pull tube out. **NOTE**—On 8 cylinder engines, see that front end of tube flared in same manner as tube which was removed from engine.

## CLUTCH NOTES

### 1937 MODELS

**CLUTCH CHANGE TO CORRECT HARD SHIFTING:** Shifting trouble caused by driven member not releasing properly can be corrected by installing new type driven disc or by cutting twenty-seven spiral grooves 3/32" wide and 1/32" deep spaced equally around facing. Grooves must not exceed these dimensions or facing will be weakened and wear will be excessive.

### 1946-47 MODELS

**CLUTCH OVER-CENTER SPRING:** Serviced only if linkage disturbed or spring bracket on frame bent. Original setting can be obtained by using Miller Gauge C-705 as follows: Check spring bracket on frame and straighten if necessary, install gauge over linkage pivot pins with lower end engaging coil spring bracket on frame (turn pedal rod turnbuckle until gauge fits properly). Then re-set pedal position and free travel as directed on car page.

## PROPELLER SHAFT

### 1936-40 MODELS

**PROPELLER SHAFT CENTER BEARING REMOVAL AND INSTALLATION:**—Used on all passenger car models with two propeller shafts. To remove, take out rear propeller shaft, disconnect front universal (at rear of transmission), remove center bearing-to-frame mounting screws, slide front propeller shaft (with bearing) out through frame opening in X-member. To install, reverse procedure taking care to replace bearing-to-frame spacer (if used).

### 1941-47 MODELS

**PROPELLER SHAFT CENTER BEARING:** Used on all passenger car models with two propeller shafts. Consists of ball-bearing mounted on rear end of front propeller shaft with an oil seal assembled to front and to rear of bearing, and this assembly (bearing and oil seals) enclosed in a housing which is flange mounted on rear side of frame cross-member. An insulator is assembled on front end of

housing. To remove assembly, remove nuts and lockwashers from differential and transmission companion flanges to free propeller shafts at front and rear, take out 4 center bearing housing-to-frame cross-member mounting bolts, remove propeller shaft and center bearing as an assembly.

## REAR AXLE NOTES

### 1946-47-48 MODELS

**REAR WHEEL BRAKE AXLE SHAFT SEAL:** New type leather seal mounted on brake support and bears on axle shaft (former design secured by brake support bolts and contacted hub).

**Installation**—With brake support removed and old seal driven out of support, new seal can be installed as follows: Soak new seal in thin oil for 30 minutes. Roll leather with smooth bar until pliable. Check seal bearing surface on axle shaft making sure surface is smooth. Install seal on front side of support and stake to support at three points on outer edge. Install sleeve (Tool C-745) in seal (protects seal from damage while installing support). Assemble brake support on housing. **CAUTION**—Lip of seal must not be folded when installing in support.

## BRAKE NOTES

### 1938-39 MODELS

**HAND BRAKE ADJUSTMENT:** Fully release hand lever (cable length adjusted by means of clevis at lower end). Remove lock wire on anchor screw (on right lower side), adjust for .015-.020" band to drum clearance for lower portion of band, lock in place. Back off large adjusting bolt nut at top until free. Loosen guide bolt lock nut (on mounting bracket), turn adjusting nut (under locknut) for .015-.020" band to drum clearance, tighten locknut. Tighten large nut at top until tension on either side of guide bolt is just relieved (groove in nut must align with ridge in lockwasher).

**NOTE**—Clearance between side of anchor & bracket must not exceed .005". To correct, clamp anchor bracket in vise and tap lightly with hammer.

### 1940-48 MODELS

**HAND BRAKE ADJUSTMENT:** The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

**NOTE**—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise & place on block and tap lightly with a hammer.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—8,823,301 (Detroit), 9,704,601 (Canada). Located on right front door hinge post.

**ENGINE NUMBER:** First number C-7-1001. Stamped on left side of block between #1 and #2 cylinders. For Engine Number Lettering data (Special Standard Bore & Bearing Sizes), refer to Chrysler Shop Notes.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. cast-iron head, 6.5-1 (optional aluminum head).

**Pressure:**—(6.0-1 Std. head) 120-130 lbs. at 1000 RPM or approx. 103 lbs. at cranking speed, (6.5-1 Optl. head) 125-135 lbs. at 1000 R.P.M. or approx. 110 lbs. at cranking speed.

**VACUUM READING:** Steady 16-18" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (6.0-1 Cast Iron Hd.) Type H-10 (6.5-1 Aluminum Hd.). 14 mm. Metric. Gaps—.025".

**NOTE:** Spark plugs used in aluminum head engines have longer thread length. Not interchangeable.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.020". Cam Angle 38° (closed).

**Automatic Advance:**—12° max. (distr.) at 1530 RPM. (IGS-4006-1 Distr.), 1750 RPM. (IGS-4006A-1 Distr.).

**Vacuum Advance:**—8° distr. with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC (6.0-1 Head), 5° ATDC (6.5-1 Head) with DC mark "O" or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting:**—Idle screw ¼-1 turn open. Idle speed 300 RPM. or 6 MPH.

**Float Level:**—5/64" top of float below top of bowl. **Accelerating Pump:**—Center hole normal, outer hole (max. stroke) extreme winter temperatures.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .008" Exh. with engine hot. .010" Exh. recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 6519. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne Mod. DP-108, Mitchell No. 6286.

**COIL:** Auto-Lite Model IG-4638 (Conv. Sedan & Coupe), IG-4631 (all others). Service Winding (coil less switch and cable) IG-3224JS. Mounted on dash. **Ignition Current:**—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

**Capacity:**—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4006-1, IGS-4006A-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. See Electrical Equipment Section for special servicing directions on these distributors.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—38° closed, 22° open.

**Breaker Arm Spring Tension:**—16-20 ounces.

Automatic Advance—IGS-4006-1			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	775	12	1550
9	1150	18	2300
12	1530	24	3060

Automatic Advance—IGS-4006A-1			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

## Vacuum Advance

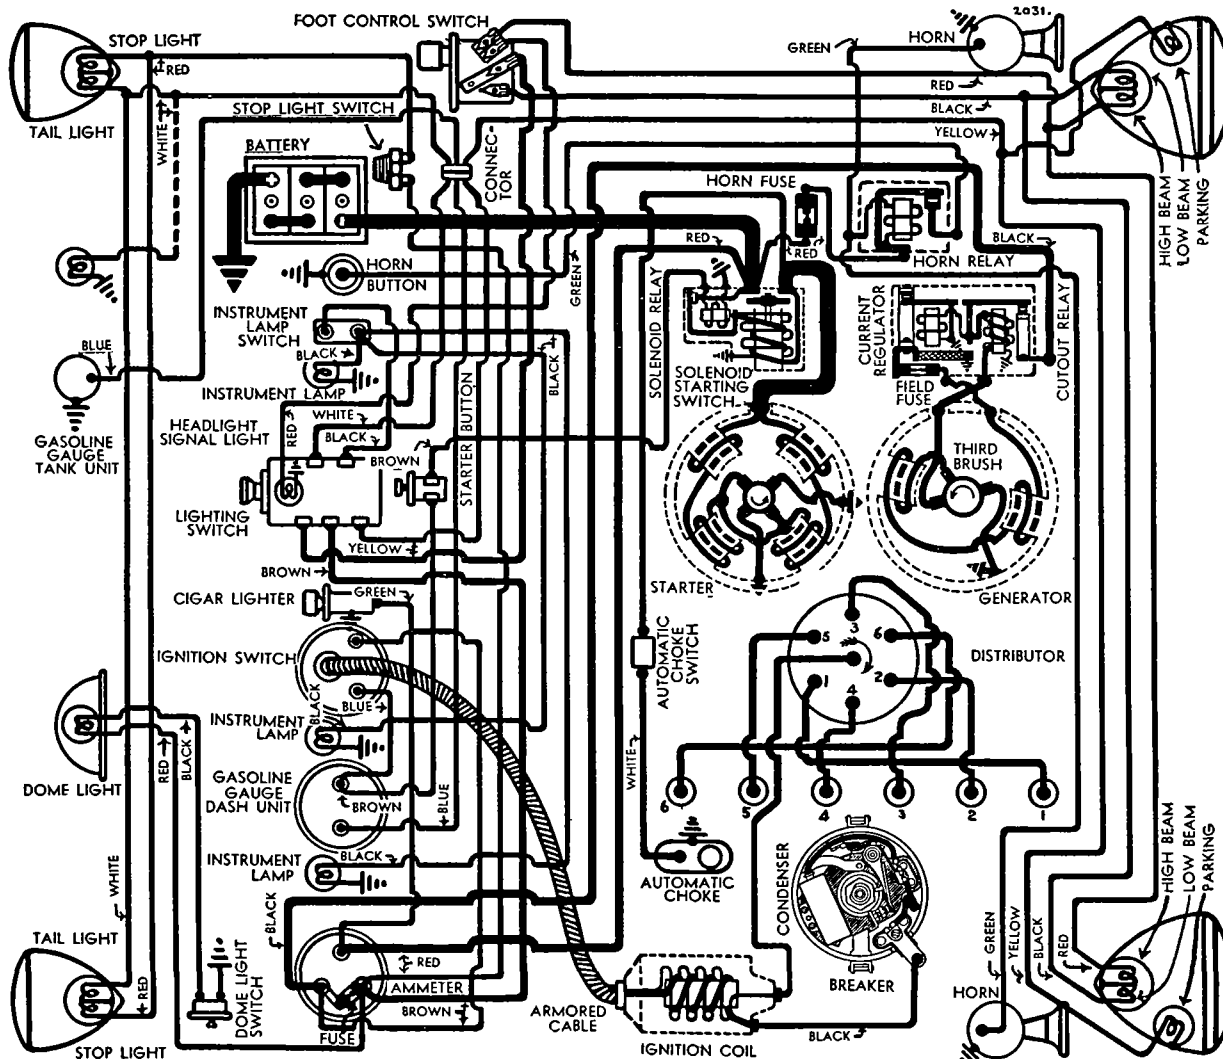

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5.1"
4°	8°	10-11"
8°	16°	15"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

## IGNITION TIMING

**IGNITION TIMING:** Flywheel Deg. Piston Position  
 6.0-1 Std. Head ..... At TDC ..... 0000" TDC.  
 6.5-1 Optl. Al. Head ..... 5° ATDC ..... 0118" ATDC.  
 See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.  
**NOTE:**—Impulse neutralizer at front of engine marked 'O' at top dead center with 15 one degree graduations before and after this point.

CONTINUED ON NEXT PAGE

## C CONTINUED FROM PRECEDING PAGE

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. **Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk. Idle engine.

**Manual Adjustment**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) Model E6G1, 1½" downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—Adjust throttle stopscrew so that idle speed is 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be ¼-1 turn of screw from inner closed or seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

**Inner Hole (Min. stroke)**—Extremely warm weather.

**Center Hole**—Normal summer temperatures.

**Outer Hole (Max. stroke)**—Winter temperatures.

**NOTE**—5% and 10% lean main metering screws (high altitude calibration) may be used at lower altitudes for maximum fuel economy although with considerably reduced speed and power. See Carter (B & B) Jet Specifications in Carburetion Section.

**Fast Idle**—Integral with carburetor. No adjustment.

**Automatic Choke**: Sisson Type AC-751.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—Burgess oil-wetted type standard, AC.

#1526838 heavy duty oil-bath type optional.

**Fuel Pump**—AC, Type B #1522237. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Motometer Electric No. NG-7781-D or NG-7879-D (dash unit), NG-7687-T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Willard, Type WH-2-15, RH-2-15 (Export).

6 volt, 15 plate, 119 ampere hour (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under drivers seat.

## STARTER

**Auto-Lite Model MAX-4016**. Armature MAW-2030.

**Drive**—Magnetic shift outboard pinion.

**Cranking Engine**—Approx. 200 amperes at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange screws.

**Starting Switch**—Solenoid Switch Type SS-4104.

Controlled through relay by pushbutton on dash.

Operative with ignition turned 'on'.

*For complete data, refer to Electrical Equipment Index.*

## Solenoid Switch

Closes against 105 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

## Solenoid Relay

Contacts Close—3.5-4.5 volts. Open—1.5-2.5 volts.

Contact Gap—.025-.030". Air Gap—.005-.007" (closed)

## GENERATOR

**Auto-Lite Model GAR-4608A-5**. Armature No. GAR-2116F. Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Commutator Bar Method**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate**—As given above. Do not exceed.

## Performance Data

Cold			Regulator Contacts Closed			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	825	0	6.4	825
4	6.8	950	4	6.8	1000	4	6.8	1000
8	7.25	1100	8	7.25	1200	8	7.25	1200
12	7.7	1275	12	7.7	1440	12	7.7	1440
16	8.1	1525	16	8.1	1825	16	8.1	1825
21	8.6	2400	21	8.6	2500	21	8.6	2500

**Rotation**—Counterclockwise at commutator end.

**Brush Spring Tension**—24 ozs. min. (old brushes), 36 ozs. max. (new brushes).

**Field Current**—3.89-3.51 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Field Fuse**—5 ampere in plug on regulator case.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Swing generator away from engine until 45-50 lb. reading indicated on scale attached to generator frame.

## REGULATOR

**Auto-Lite Model TC-4301A**. "Two-Charge" Type. On generator. Consists of Cutout Relay & Current

Regulator two-rate charging control). See article in Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 ampere discharge current.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

## Current Regulator

Contacts Open—8.25-8.75 volts at 70° F.

Contacts Close—1.2-1.4 volts below opening point.

Contact Gap—.005" minimum.

Air Gap—.045" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Hall. Pre-focused type. Head lamps aimed straight ahead (upper beam, with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch.

**Headlamp Beam Indicator**—In light switch knob. Lighted when headlamp upper beams in use.

## Switches

**Lighting**—Chrysler Part No. 655559. Douglas Switch which is available only through Chrysler Parts Dept.

**Foot Selector**—Clum Model 9657.

**Stop Light**—R.B.M. No. 910. Hydraulic type mounted on brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instrmt., Ign. Sw.	1½	55
Stop and Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

**FUSES**—Lighting—20 amperes on back of ammeter.

Generator Field—5 ampere in plug on regulator.

Twin Horns—30 ampere in connector near starter.

**HORNS**—Std. Motometer. Optl. Klaxon Model K-33-C Type 2151 (low note), 2152 (high note). Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2151	11-13	.042-.046"
2152	10-12	.032-.036"

**Horn Relay**—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amps.

Contact Gap—.015-.025".

Air Gap—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder 'L' head.

Bore—3¾". Stroke—4½".

Displacement—241.5 cubic inches.

Rated Horsepower—27.34 (AMA).

Developed Horsepower—93 HP. (Std. 6.0-1 Head),

100 HP. (Optl. 6.5-1 head) at 3400 R.P.M.

Compression Ratio—6.0-1 Std. Cast-iron head, 6.5-1

Optl. Aluminum head.

Compression Pressure—6.0-1 Std. Head 120-130 lbs.

at 1000 R.P.M. or approx. 103 lbs. at cranking speed.

6.5-1 Optl. Head 125-135 lbs. at 1000 R.P.M. or approx.

110 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of 16-18" with engine idling at 6 M.P.H.

**NOTE**—Aluminum heads should be tightened cold.

## ENGINE

CONTINUED FR M PRECEDING PAGE

**PISTONS:**—Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface). Length— $3\frac{3}{8}$ ". Weight—Held to two gram max. variation.

**Removal:**—Pistons and rods removed from above.  
**Clearance:**—Top .022". Skirt .002". See Fitting New Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished: (1) standard to .023" oversize, (2) .025-.050" oversize, not interchangeable. Pistons should be slotted and then finished on cam grinding equipment.

**Fitting New Pistons:**—Micrometer gauge recommended. Using feeler gauge (.002") inserted between piston and cylinder wall on side opposite slot, pull required to withdraw feeler must be 3-4 lbs.

**Installing Pistons:**—Slot should be toward left.

**PISTON RINGS:**—Two compression, one undercut oil wiper ring (#3), one oil control ring per piston, all above pin. Lower ring grooves drilled radially with twelve  $\frac{1}{8}$ " oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. all	$\frac{1}{8}$ "	.007-.015"	.002-.003"
Oil (both)	$\frac{5}{32}$ "	.007-.015"	.002-.003"

**Replacement Rings:**—Furnished in standard and .003", .010", .020", .030", .040", .050", .060" oversizes. NOTE—Install undercut compression and oil wiper ring with step down.

**PISTON PIN:**—Diameter  $55/64$ ". Length  $2\frac{7}{8}$ ".

Pin floats in piston and rod. Held by locking rings at each end. Pin hole in rod is bronze bushed.

NOTE—Heat piston in boiling water to remove or install pins.

**Pin Fit in Piston:**—Tight thumb push fit at 120°F.

**Pin Fit in Rod Bushing:**—Tight thumb push fit 70°.

**Replacement Pins:**—Pins furnished in standard and .003", .005", .008" oversizes. Ream rod bushing and pin holes in piston bosses for correct fit.

**CONNECTING ROD:**—Weight—Held within limits.

Length— $8\frac{3}{4}$ " (center-to-center).

**Crankpin Journal Diameter:**— $2\frac{1}{2}$ ".

**Lower Bearing:**—Removable steel-backed, copper-lead lined. Furnished standard and .010" undersize. Clearance—.0005-.0025". Sideplay .0055-.0115".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings so small bosses engage grooves in rod and cap.

**Installing Rods:**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5) or toward front (#2, 4, 6). Oil hole in lower bearing upper half must be toward camshaft on all rods.

**CRANKSHAFT:**—4 bearing. Integral counterweights.

**Journal Diameters:**— $2\frac{1}{2}$ " all bearings.

**Bearing Type:**—Removable steel-backed, babbit-lined. Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) bearing. Endplay .003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

**Journal Diameters:**—#1, 2"; #2, 1  $31/32$ "; #3, 1  $15/16$ "; #4, 1  $1/8$ "

**Bearing Type:**—Removable steel-backed, babbit-lined (except #4, machined in crankcase).

**Clearance:**—.001-.003" (#1), .0015-.0035" (all others). NOTE—New bearings require no line-reaming.

**End Thrust:**—Taken by thrust plate at rear of sprocket hub. Endplay .003-.005".

**Timing Chain:**—Morse. Width 1". Pitch  $\frac{1}{2}$ ". Length 24" or 48 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

NOTE—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

VALVES—	Head Diameter	Stem Diameter	Length
Intake	$1\frac{17}{32}$ "	.340-.341"	.5 $\frac{5}{8}$ "
Exhaust	$1\frac{15}{32}$ "	.340-.341"	.5 $\frac{5}{8}$ "
	Seat Angle	Lift	Stem Clearance
Intake	45°	$11/32$ "	.001-.003"
Exhaust	45°	$11/32$ "	.003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

**Valve Guides:**—Use special tool to remove and install guides. Insert guides with taper end up (intake) and down (exhaust). Top of guide must be  $13/16$ " below top of block. After installing finish ream new guides to inside diam. of .342-.343" (Int.), .344-.345" (Exh.).

**Valve Springs:**—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than  $1\frac{1}{2}$ ".

	Spring Pressure	Length
Valve Closed	46-50 lbs.	$2\frac{1}{32}$ "
Valve Open	104-110 lbs.	$1\frac{11}{16}$ "

**Valve Lifters:**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:** .006" Intake, .008" Exhaust, Hot. .010" Exhaust clearance recommended for sustained high speed driving.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open TDC. Close 50° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 2° ATDC.

**To Check Valve Timing:**—Set tappet clearance #6 intake valve at .010". Intake valve should open at top dead center when 'O' mark on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .006".

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump located at right of crankcase.

NOTE—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure:**—30-40 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left hand side of crankcase. Operates at 40 lbs. Adjustable by changing spring. Standard spring unpainted. Heavy spring (to increase pressure) painted green. Lighter spring (to decrease pressure) painted red.

**Crankcase Capacity:**—6 qts. (refill).

## CLUTCH

**Borg & Beck Model 10A6.** Single plate, dry disc type. See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam.  $6\frac{1}{8}$ ". Outside Diam.  $9\frac{7}{8}$ ". Thickness  $\frac{1}{8}$ ".

**Adjustment:**—Clutch pedal should just clear underside of toe board with clutch engaged. To adjust, turn stopscrew located just above clutch pedal shaft. Free movement of pedal should be  $1\frac{1}{16}$ ". To adjust, loosen locknut and turn adjusting nut (clevis) on clutch fork adjusting rod.

**Removal:**—Disconnect clutch pedal linkage, remove fork pivot screw, take out clutch fork. Remove transmission (release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Automatic Clutch:**—See article in Clutch Section.

See Clutch Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

NOTE—Specifications below apply with car weight on wheels (check suspension unit height first).

**Wheel Setting (Front Suspension Height):**—Distance from center line of lower control arm yoke pin to top of frame cross member should be  $7\frac{1}{4}$ - $7\frac{3}{8}$ " with car weight on wheels but no load in car.

**Kingpin Inclination:**—10° plus or minus  $\frac{1}{2}$ " (including camber angle),  $8\frac{3}{4}$ - $10\frac{1}{4}$ " (without camber).

**Camber:**— $\frac{1}{4}$ ". Limits minus  $\frac{1}{4}$ "-plus  $\frac{1}{2}$ ".

**Caster:**— $1\frac{1}{2}$ ". Toe In— $0-\frac{1}{8}$ ".

## STEERING GEAR

**Steering Gear:** Gemmer Model Worm-and-Roller type. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Lockheed Hydraulic, double anchor type. Hand lever applies brake at rear of transmission or rear wheel brakes (cars with Overdrive). See Brake Section for complete data.

**Wheel Cylinders:**—Diameters, Front Wheel (Front end  $1\frac{1}{4}$ ", Rear  $1\frac{3}{8}$ "), Rear Wheel (Front end  $1\frac{1}{8}$ ", Rear  $1\frac{1}{4}$ ").

NOTE—Wheel cylinders marked 'R'—right side of car, 'L'—left side of car and not interchangeable.

**Drum Diameter:**—11".

**Lining:**—Moulded type. Width 2". Thickness  $3/16$ ". Length per wheel  $22\frac{5}{32}$ ".

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—External type on drum at rear of transmission (cars without overdrive). See Service Brake for hand brake adjustment on cars with overdrive. **Adjustment:**—With lever in released position, remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is  $1/16$ ", lock anchor screw with wire. Adjust brake band guide bolt nut to give  $1/16$ " clearance (as above) for lower portion of band, secure with locknut. Finally, adjust brake adjusting bolt nut to give  $1/16$ " clearance (as above).

**Drum Diameter:**—8".

**Lining:**—Width 2". Thickness  $5/32$ ". Length  $18\frac{13}{32}$ ".

**NOTE:**—When relining, cut out lining adjacent to anchor and chamfer ends. Clearance between anchor and sides of anchor saddle .005" maximum.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—8,710,501 (Detroit), 9,755,816 (Canada). Located on right front door hinge post.

**ENGINE NUMBER:**—First number—C8-1001. Stamped on left side of block between #1 and 2 cylinders. See Chrysler Special Shop Notes for engine number lettering data.

## TUNE-UP

**COMPRESSION:**—Ratio—8.2-1 Std. cast-iron hd, 7.0-1 (optional aluminum head).

**Pressure:**—(8.2-1 Std. head) 125-135 lbs. at 1000 RPM or approx. 106 lbs. at cranking speed., (7.0-1 Optl. head) 130-140 lbs. at 1000 R.P.M. or approx. 117 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 16-18" with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (Cast Iron Head), Type H-10 (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**NOTE:**—Spark plugs used in aluminum head engines have longer thread length. Not interchangeable with standard plugs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.017". Cam Angle 27° (closed).

**Automatic Advance:**—13° max. at 1650 RPM (IGT-4006-1 Distr.), 1900 RPM (IGT-4006D-1 Distr.). Distr. degrees and RPM.

**Vacuum Advance:**—6° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC (Std. & Optl. Heads), 4° BTDC (Optl. 7.0-1 Hd with Ethyl Fuel) with "O" dead center mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb Equipment.

**Idle Setting:**—Idle screw midway between "miss" and "roll" points. Idle speed 7-8 MPH.

**Float Level:**—Fuel level  $\frac{5}{8}$ " below top of bowl.

**Accelerating Pump:**—Center hole (med. stroke) normal

Inner hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:**  $\frac{4}{4}$  lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Int., .008" Exh. with engine hot. .010" Exh. recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 6519. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne Mod. DP-108, Mitchell No. 6286.

**COIL:** Auto-Lite Model CE-4621 (Conv. Sedan & Coupe) CE-4616 (all others). Service Winding (coil less switch and cable) CE-3224JS. Coil mounted on dash. Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

**Capacity:**—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4001-1, IGT-4001D-1. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control. **NOTE:**—Model IGT-4001D-1 used on cars after serial number 6,715,875.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap:**—Set at .017".

**Cam Angle or Dwell:**—27° closed, 18° open.

**Breaker Arm Spring Tension:**—18-20 ounces.

### Automatic Advance—IGT-4001-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
7	900	14	1800
11	1400	22	2800
13	1650	26	3300

### Automatic Advance—IGT-4001D-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
13	1900	26	3800

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5.1"
3°	6°	8.5"
6°	12°	12"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

**IGNITION TIMING**

**IGNITION TIMING:** Flywheel Deg. Piston Position  
 6.2-1 Std. Head ..... At TDC ..... 0000" TDC.  
 7.0-1 Opt. hd., std. fuel At TDC ..... 0000" TDC.  
 7.0-1 Opt. hd., Ethyl fuel 4° BTDC ..... 0062 BTDC.  
 See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.  
**NOTE**—Impulse neutralizer at front of engine marked 'O' at top dead center with 15 one degree graduations before and after this point.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint. See Equipment Section.

**Manual Adjustment:**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Mod. EXV-3, 1½" downdraft type. See Carburetion Section for adjustment, overhaul and Jet Specifications.  
*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that engine will idle at hot or slow idling speed with choke valve wide open.

**Idle Adjustment**—With engine hot, set throttle stop screw to idle engine at 7-8 M.P.H. Turn idle adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop screw for correct idling speed if necessary.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows:  
 Inner Hole (Min. stroke)—Summer temperatures.  
 Center Hole (Med. stroke)—Standard setting.  
 Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—No adjustment required Throttle stop-screw should rest on high point of cam with choke valve closed.

**Automatic Choke:**—Sisson Type AC-751. See article in Carburetion Section for data and linkage adjustment.  
*For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1526374 oil-wetted type standard. #1526837 heavy duty oil bath type optional.

**Fuel Pump:**—AC. Type D #1521803 diaphragm type. Type I #1523023 combination fuel & vacuum pump (cars with overdrive). See separate articles in Carburetion Section for each type.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer Electric. Dash unit No. NG-7790-D. Tank unit No. NG-7687-T. See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—Willard, Type WH-2-15, RH-2-15 (Export). 6 volt, 15 plate, 119 ampere hour capacity (20 hour rate).  
**Starting Capacity**—140 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 4.3 minutes.  
**Grounded Terminal**—Positive (+) terminal.  
**Location**—On left side under drivers seat.

**STARTER**

**Auto-Lite Model MAX-4020, Armature MAW-2030.**  
**Drive**—Magnetic shift outboard pinion.  
**Cranking Engine**—Approx. 200 amperes at 5 volts.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange screws.  
**Starting Switch:**—Solenoid Switch Type SS-4106. Controlled through relay by pushbutton on dash. Operative with ignition turned 'on'.

*For complete data, refer to Electrical Equipment Index.*

**Solenoid Switch**

Closes against 105 lb. pull with ⅜" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

**Solenoid Relay**

**Contacts Close**—3.5-4.5 volts. **Open**—1.5-2.5 volts.  
**Contact Gap**—.025-.030". **Air Gap**—.005-.007" (closed)

**GENERATOR**

**Auto-Lite Model GAR-4608A-5, Armature GAR-2116F.** Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Commutator Bar Method**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate**—As given above. Do not exceed.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	825
4	6.8	950	4	6.8	1000
8	7.25	1100	8	7.25	1200
12	7.7	1275	12	7.7	1440
16	8.1	1525	16	8.1	1825
21	8.6	2400	18.5	8.35	2500

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24 ozs. min. (old brushes), 36 ozs. max. (new brushes).  
**Field Current**—3.89-3.51 amperes at 6.0 volts.  
**Motoring Current**—5.03-5.57 amperes at 6.0 volts.  
**Field Fuse**—5 ampere in plug on regulator case.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until 45-50 lb. reading indicated on scale attached to generator frame.

**REGULATOR**

**Auto-Lite Model TC-4301A, "Two-Charge" Type.** On generator. Consists of Cutout Relay & Current Regulator (two-rate charging control). See article in Equipment Section for complete data.  
*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In**—6.5-7.25 volts.  
**Cuts Out**—5-2.5 ampere discharge current.  
**Contact Gap**—.015-.045".  
**Air Gap**—.010-.030" with contacts closed.

**Current Regulator**

**Contacts Open**—8.25-8.75 volts at 70° F.  
**Contacts Close**—1.2-1.4 volts below opening point.  
**Contact Gap**—.005" minimum.  
**Air Gap**—.045" with contacts closed.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall. Pre-focused type. Head lamps aimed straight ahead (upper beam, with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch.

**Headlamp Beam Indicator**—In light switch knob. Lighted when headlamp upper beams in use.

**Switches**

**Lighting**—Chrysler Part No. 655559. Douglas Switch which is available only through Chrysler Parts Dept.  
**Foot Selector**—Clum Model 9657.

**Stop Light**—R.M.B. No. 910. Hydraulic type mounted on brake master cylinder.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instrmt., Ign. Sw.	1½	55
Stop and Tail	21-3	1158
Dome	15	87

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 amperes on back of ammeter.

**Generator Field**—5 ampere in plug on regulator.

**Twin Horns**—30 ampere in connector near starter.

**HORNS:**—Std. Motometer. Optl. Klaxon Model K-33-C Type 2151 (low note), 2152 (high note). Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2151	11-13	.042-.046"
2152	10-12	.032-.036"

**Horn Relay:**—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amps.

**Contact Gap**—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE ENGINE

### ENGINE SPECIFICATIONS:—8 cylinder, 'L' head.

Bore—3 1/4". Stroke 4 1/2".

Displacement—273.8 cu. inches. Rated HP—33.80.

Developed Horsepower—105 at 3400 RPM (Std. hd.).

Compression Ratio—6.2-1 Std. Cast-iron head, 7.0-1 Optl. aluminum head.

Compression Pressure—6.2-1 Std. Head 125-135 lbs.

at 1000 R.P.M. or approx. 106 lbs. at cranking speed.

7.0-1 Optl. Head 130-140 lbs. at 1000 R.P.M. or approx.

117 lbs. at cranking speed.

Vacuum Reading—16-18" steady idling at 7-8 MPH.

NOTE—Aluminum heads should be tightened cold.

**PISTONS:**—Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface. Length—3 3/8".

Weight—Held to two gram maximum variation.

Removal—Pistons and rods removed from above.

Clearance—Top .022". Skirt .002". See Fitting New Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize. Semi-finished pistons furnished in two sizes: (1) standard to .023" oversize; (2) .025-.050" oversize (not interchangeable). Pistons should be slotted and then finished on cam grinding equipment.

**Fitting New Pistons:**—Micrometer gauge recommended. Using feeler gauge (.002") inserted between piston and cylinder wall on side opposite slot, pull required to withdraw feeler must be 3-4 lbs.

**Installing Pistons:** Slot to left, away from camshaft.

**PISTON RINGS:**—Two compression, one undercut oil wiper (#3), one oil control ring per piston, all above pin. Lower ring grooves drilled radially with twelve 1/8" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp.	1/8"	.007-.015"	.002-.003"
Oil (both)	.5/32"	.007-.015"	.002-.003"

**Replacement Rings:**—Rings furnished standard and .003", .010", .020", .030", .040", .050", .060" oversize.

NOTE—Install undercut compression and oil wiper ring with step down.

**PISTON PIN:**—Diameter—55/64". Length—2 3/4".

Pin floats in piston and rod. Held by locking rings at each end. Pin hole in rod is bronze bushed.

NOTE—Heat piston in boiling water to remove or install pins.

**Pin Fit in Piston:**—Tight thumb push fit at 120°F.

**Pin Fit in Rod Bushing:**—Tight thumb push fit 70°.

**Replacement Pins:**—Pins furnished in standard and .003", .005" and .008" oversizes. Ream rod bushing and pin holes in piston bosses for correct fit.

**CONNECTING ROD:**—Weight—All rods held within limits.

Length—9 3/16" (center-to-center).

Crankpin Journal Diameter—2 3/16".

Lower Bearing—Removable steel-backed, copper-lead lined. Furnished standard and .010" undersize.

Clearance—.001-.003". Sideplay—.006-.011".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings so small bosses engage grooves in rod and cap.

**Installing Rods:**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7) or toward front (#2, 4, 6, 8). Oil hole in lower bearing must be toward camshaft on all rods.

**CRANKSHAFT:**—5 bearing. Integral counterweights.

Journal Diameters—2 45/64" all bearings.

**Bearing Type:**—Removable steel-backed, babbitt-lined. Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#5) bearing. Endplay .003-.007".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 3/8".

**Bearing Type:**—Removable steel-backed, babbitt-lined (except #6 which is machined in crankcase). Clearance—.0015-.0025" all bearings.

**End Thrust:**—Taken between the face of the removable cast-iron sleeve which carries the front bearing and the face of the camshaft sprocket. Adjusted by replacing sleeve. Endplay .003-.005".

**Timing Chain:**—Morse. Width 1 1/4". Pitch 1/2". Length 24" or 48 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

NOTE—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

**VALVES:**—Head Diameter Stem Diameter Length

Intake	1 15/32"	340-341"	5 1/2"
Exhaust	1 13/32"	340-341"	5 1/2"

Seat Angle	Lift	Stem Clearance
Intake 45°	11/32"	.001-.003"
Exhaust 45°	11/32"	.003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

**Valve Guides:**—Use special tool to remove and install guides. Insert guides with taper end up (intake) and down (exhaust). Top of guide must be 13/16" below top of block. Finish ream guides after installation to inside diameter of .342-.343" Int., .344-.345" Exh.

**Valve Springs:**—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than 1 1/2".

Spring Pressure	Spring Length
Valve Closed 46-50 lbs.	2 1/32"
Valve Open 104-110 lbs.	1 11/16"

**Valve Lifters:**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:** .006" Intake, .008" Exhaust Hot. .010" Exh. recommended for sustained high speeds.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 2° BTDC. Close 44° ALDC.

**Exhaust Valves:**—Open 46° BLDC. Close 4° ATDC.

**To Check Valve Timing:**—Install timing gauge in timing plug hole over #8 piston. Set tappet clearance #8 intake valve at .011" (cold). This valve should open with piston 2° or .0015" BTDC. when 2° line BTDC. on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .006" with engine hot.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump on right side of crankcase.

NOTE—Ignition timing should be checked whenever oil pump is installed in engine.

Normal Oil Pressure:—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Located under cap at left side of crankcase. Operates at 40-45 lbs. To adjust, remove cap, withdraw locking wire, turn slotted plug clockwise to increase pressure, counter-clockwise to decrease, replace locking wire and cap.

Crankcase Capacity:—6 qts. (refill).

## CLUTCH

**Borg & Beck Model 10A6.** Single plate, dry disc type. See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam. 6 1/8". Outside Diam. 9 7/8". Thickness 1/8".

**Adjustment:**—Clutch pedal should just clear underside of toe board with clutch engaged. To adjust, turn stop screw located just above clutch pedal shaft. Free movement of pedal should be 1/16". To adjust, loosen locknut and turn adjusting nut (clevis) on clutch fork adjusting rod.

**Removal:**—Disconnect clutch pedal linkage, remove fork pivot screw, take out clutch fork. Remove transmission (release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Automatic Clutch:**—See article in Clutch Section.

See Clutch Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

NOTE—Specifications below apply with car weight on wheels (check suspension unit height first).

**Wheel Setting (Front Suspension Height):**—Distance from center line of lower control arm yoke pin to top of frame cross member should be 7 1/4-7 3/8" with car weight on wheels but no load in car. Heights must be equal on both sides within 1/8".

**Kingpin Inclination:**—4 3/4-6° (incl. camber angle).

**Camber:**—Minus 1/4°. Limits minus 1/4 to plus 1/2°.

**Caster:**—1 1/2°. Toe In—0-1/8".

## STEERING GEAR

**Steering Gear:** Gemmer Model Worm-and-Roller

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies brake at rear of transmission or rear wheel brakes (cars with Overdrive)

See Brake Section for complete data.

**Wheel Cylinders:**—Diameters, Front Wheel (Front end 1 1/4", Rear 1 3/8"), Rear Wheel (Front end 1 1/8", Rear 1 1/4").

NOTE—Wheel cylinders marked 'R'—right side of car, 'L'—left side of car and not interchangeable.

**Drum Diameter:**—11".

**Lining:**—Moulded type. Width 2". Thickness 3/16".

Length per wheel 22 5/32".

Clearance—.012" toe, .006" heel, for each shoe.

**Hand Brakes:**—External type on drum at rear of transmission. See Service Brake for Hand Brake on cars with overdrive.

**Adjustment & Hand Brake Specifications:**—Same as for Chrysler Six C7. Refer to preceding article for data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On right front door hinge pillar post. First number each model as follows:

	Detroit	Canada
Model C-9	6,606,201	9,821,216
Model C-10	7,014,901	9,850,436
Model C-11	7,803,851	none

**ENGINE NUMBER:**—First number—C9, C10, or C11-1001. Stamped on boss back of water pump.  
See Chrysler Special Shop Notes for engine number lettering data.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.2-1 Cast-iron hd. (Std. C9), 6.5-1 Aluminum head (Optl. C9, Std. C10, 11), 7.45-1 Aluminum head (Optl. C10, 11).  
**Pressure:**—6.2-1 Cast-iron head 120-130 lbs. at 1000 R.P.M. or approx. 106 lbs. at cranking speed. 6.5-1 Al. head 145-155 lbs. at 1000 R.P.M. or approx. 117 lbs. at cranking speed. 7.45-1 Al. head 160-170 lbs. at 1000 R.P.M. or approx. 124 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 16-18" with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUGS:** Champion Type J-8 (C9 with Cast Iron Head), Type H-10 (All Aluminum Heads). 14 mm. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.017". **Cam Angle:** 27° (closed).

**Automatic Advance:**—11° max. at 1600 RPM (IGT-4001C-1 Distr.), 1850 RPM (IGT-4001E-1 Distr.).

**Distr. degrees and RPM.**  
**Vacuum Advance:**—5° distr. with 14" vacuum (IGT-4001C-1 Distr.), 6° distr. with 12" vacuum (IGT-4001E-1 Distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC (6.2-1 Hd.), 5° ATDC (6.5-1 Head), 9° ATDC (7.45-1 Head) with "0" dead center mark or correct degree mark on impulse neutralizer in line with indicator on front of engine.

**NOTE:**—If Ethyl fuel used with 6.5-1 Head on Model C9, set ignition at 2° BTDC.

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting:**—One screw (C9), two screws (C10, C11) midway between "miss" and "roll" points. Idle speed 7-8 MPH.

**Float Level:**—Fuel level  $\frac{5}{8}$ " below top edge of bowl.

**Accelerating Pump:**—Inner hole (min. stroke)—

Summer, Outer hole (max. stroke)—Winter.

**NOTE:**—Center hole standard setting for C9.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .008" Exh. with engine hot. .010" Exh., recommended for sustained high speed.

**NOTE:**—Right front wheel and cover plate under fender should be removed for work on valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Model 24-B, Type 6744. Connected to coil by armored cable.  
**Ignition Lock:**—Yale & Towne Mod. DP-108 Mitchell No. 6286.

**COIL:** Auto-Lite Model CE-4618. Servic Coil (less Switch & Cable) CE-3224JS. Mounted on hood ledge.  
**Ignition Current:**—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

**Capacity:**—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4001C-1, IGT-4001E-1. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control. See Electrical Equipment Section for special servicing directions on these distributors.

**For complete data, refer to Electrical Equipment Index.**

**Breaker Gap:**—Set at .017".

**Cam Angle or Dwell:**—27° closed, 18° open (distrib.).

**Breaker Arm Spring Tension:**—18-20 ounces.

**Automatic Advance—IGT-4001C-1**

Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
11	1600	22	3200

**Automatic Advance—IGT-4001E-1**

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, lift out. Distributor accessible by taking off cover plate under left front fender.

## IGNITION TIMING

**IGNITION TIMING:**—Settings for all engines as follows  
Flywheel Degr. Piston Position

6.2-1 Std C9 hd.	At TDC.	0000" TDC.
6.5-1 Optl. C9 hd. std. fuel 5° ATDC.		0118" ATDC.
6.5-1 Optl. C9 hd. Ethyl " 2° BTDC.		0019" BTDC.
6.5-1 Std. C10, 11 hd.	5° ATDC.	0118" ATDC.
7.45-1 Optl. " Ethyl fuel 9° ATDC.		0381" ATDC.

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.  
NOTE—Impulse neutralizer at front of engine marked with 15 one degree graduations before and after 'O' mark at top dead center.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct mark on impulse neutralizer at front of engine is directly in line with pointer on chain case cover. Loosen advance arm hold-down screw, center pointer on scale (opposite 'O' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until test lamp goes out indicating that contacts are just opening, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint. See Equipment Section.

**Manual Adjustment:**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—C9—Stromberg Model EXV-3, 1½" downdraft type. C10, 11—Stromberg Model EE-22, 1¼" dual downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—One idle adjusting screw on C9 carburetor, two on C10, 11 carburetor. Adjust C10, 11 screws simultaneously. With engine hot set throttle stop screw to idle engine at 7-8 M.P.H. Turn one (C9) or both (C10, 11) idle adjusting screws in until engine begins to lag or miss, then turn screws out until engine begins to roll, finally turn screws in slowly until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting:**—Pump lever has three (C9), two (C10, 11) holes for pump link engagement. Inner Hole (Min. stroke)—Summer temperatures. Center Hole (C9 only)—Standard setting.

Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—No adjustment required. Throttle stop screw rests on high point of cam with choke closed. Automatic Choke: Sisson AC-751 (C9), AC-600 (C10, 11).

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525933 (C9), #1526747 (C10, 11) oil-wetted type standard, #1526588 (C9), #1526589 oil-bath heavy duty type optional.

**Fuel Pump:**—AC. Type D #1521790 diaphragm type (C9 only). Type I #1523023 (C9 with overdrive), #1521549 (C10, 11 std.) comb. fuel & vacuum pump.

For complete data, refer to Carburetion Equip. Index.  
**Gasoline Gauge:**—Motometer Electric. Dash unit—NG-7808-D. Tank Unit—NG-6876-T.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Willard, Type WH-4-17, RH-4-17 (Export). 6 volt, 17 plate, 136 amp. hr. capacity (20 hr. rate). Starting Capacity—160 amperes for 20 minutes. Zero Capacity—300 amperes for 5.4 minutes. Grounded Terminal—Positive (+) terminal. Location—Under left hand front seat.

## STARTER

Auto-Lite Model MAX-4003. Armature MAW-2030. Drive—Magnetic shift outboard pinion. Cranking Engine—Approx. 200 amperes at 5.0 volts. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—31-42 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal:**—Flange mounted on left front face on flywheel housing. Accessible by removing left front wheel and housing cover under fender. To remove, take out two flange mounting screws.

**Starting Switch:**—Solenoid Switch Type SS-4101. Controlled through relay by pushbutton on dash. Operative with ignition turned 'on'.

For complete data, refer to Electrical Equipment Index.

## GENERATOR

Auto-Lite Model GAR-4608B-5. Armature GAR-2116-F. Third brush control in conjunction with Current Regulator (two-rate charging control). Charging Rate Adjustment—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Commutator Bar Method:**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	825
4	6.8	950	4	6.8	1000
8	7.25	1100	8	7.25	1200
12	7.7	1275	12	7.7	1440
16	8.1	1525	16	8.1	1825
21	8.6	2400	18.5	8.35	2500

**Rotation:**—Counter-clockwise at commutator end. Brush Spring Tension—24 ozs. min. (old brushes), 36 ozs. max. (new brushes).

**Field Current:**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current:**—5.03-5.57 amperes at 6.0 volts.

**Field Fuse:**—5 amperes in plug on regulator case.

**Removal:**—Pivot mounted at front of engine. Accessible by removing left front wheel and housing cover under fender. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen mounting bolts, pull generator out or away from engine until tension as measured on spring scale is 45-50 lbs.

## REGULATOR

Auto-Lite Model TC-4301A. "Two-Charge" Type. On generator. Consists of Cutout Relay & Current Regulator (two rate charging control).

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge current.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

## Current Regulator

Contacts Open—8.25-8.75 volts at 70° F.

Contacts Close—1.2-1.4 volts below opening point.

Contact Gap—.005" minimum.

Air Gap—.045" with contacts closed.

## LIGHTING

**LIGHTING:**—Headlamps—Hall, Pre-focused type. Head lamps aimed straight ahead (upper beam, with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch.

**Headlamp Beam Indicator:**—In light switch knob. Lighted when headlamp upper beams in use.

## Switches

**Lighting:**—Chrysler Part No. 655559. Douglas Switch Foot Selector—Clum Model 9661.

**Stop Light:**—R.B.M. No. 910. Hydraulic type mounted on brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No
Headlamps	32-32	2331
Parking, Ign.Sw.	1½	55
Stop and Tail	21-3	1158
Instrument	3	63
Reading	15	87

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 ampere on back of ammeter.

Generator Field—5 ampere in plug on regulator.

Twin Horns—30 ampere in connector near starter.

**HORNS:**—Klaxon Model K-33-D Type 1955 (low note), 1956 (high note). Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
1955 (low note)	12-14	.045-.050"
1956 (high note)	11-13	.036-.040"

**Horn Relay:**—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amps. Contact Gap—.015-.025".

Air Gap—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3¼". Stroke—4⅞".

Displacement—323.5 cubic ins. Rated H.P.—33.80. Developed Horsepower—For each model as follows:

Model	Comp. Ratio	HP. and R.P.M.
C9 Std.	6.2-1	105 at 3400
C9 Optl.	6.5-1	110 at 3400
C10, 11 Std.	6.5-1	130 at 3400
C10, 11 Optl.	7.45-1	138 at 3400

Compression & Vacuum Reading—See Tune-up data.

## ENGINE

C CONTINUED FROM PRECEDING PAGE

**PISTONS:**—Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface). Length—3 $\frac{7}{8}$ ".

**Weight:**—Held to two grams maximum variation.

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .022". Skirt .002". See Fitting New Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished in two sizes: (1) Standard to .023" oversize, (2) .025"-.050" oversize, not interchangeable. Pistons should be slotted and finished on cam grinding equipment.

**Fitting New Pistons:**—Micrometer gauge recommended. Using feeler gauge (.002") inserted between piston and cylinder wall on side opposite slot, pull required to withdraw feeler must be 3-4 lbs.

**Installing Pistons:**—Slot should be toward left

**PISTON RINGS:**—Two compression, one undercut oil wiper (#3), one oil control ring per piston, all above pin. Lower ring groove drilled radially with twelve  $\frac{1}{8}$ " oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. all	$\frac{1}{8}$ "	.007-.015"	.002-.003"
Oil cont. all	$\frac{5}{32}$ "	.007-.015"	.002-.003"

**NOTE:**—Install undercut compression and oil wiper ring with step down.

**Replacement Rings:**—See Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2 $\frac{3}{4}$ ".

Pin floats in piston and rod. Held by locking rings at each end. Pin hole in rod is bronze bushed.

**NOTE:**—Heat piston in boiling water to remove or install pins.

**Pin Fit in Piston:**—Tight thumb push fit with piston heated to 120° F.

**Pin Fit in Rod Bushing:**—Tight thumb push fit with pin and rod at 70° F.

**Replacement Pins:** Std., .003", .005", .008" oversize.

**CONNECTING RODS:**—Weight—Held within limits.

Length—9". (center-to-center).

Crankpin Journal Diameter—2 3/16".

**Lower Bearing:**—Removable steel-backed, copper-lead lined. Furnished standard and .010" undersize. Clearance—.001-.003". Sideplay .006-.011".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings so small bosses engage grooves in rod and cap.

**Installing Rods:**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), or toward front (#2, 4, 6, 8). Oil hole in lower bearing must be toward camshaft on all rods.

**CRANKSHAFT:**—5 bearing. Integral counterweights.

Journal Diameters—2 45/64" all bearings.

**Bearing Type:**—Removable steel-backed, babbitt-lined. Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#5) bearing. Endplay .003-.007".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive. Journal Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 1/8".

**Bearing Type:**—Removable steel-backed, babbitt-lined (except #6 which is machined in crankcase). Clearance—.0015-.0025" all bearings.

**End Thrust:**—Taken between the face of the removable cast-iron sleeve which carries the front bearing and the face of the camshaft sprocket. Adjusted by replacing sleeve. Endplay .003-.005".

**Timing Chain:**—Morse. Width 1 $\frac{1}{4}$ ". Pitch  $\frac{1}{2}$ ". Length 24" or 48 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**NOTE:**—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.340-.341"	5 $\frac{1}{2}$ "
Exhaust	1 13/32"	.340-.341"	5 $\frac{1}{2}$ "

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.001-.003"
Exhaust	45°	11/32"	.003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

**Valve Guides:**—Use special tool to remove and install guides. Insert guides with taper end up (intake) or down (exhaust). Top of guide must be 13/16" below top of block. Finish ream guides after installing to inside diameter of .342-.343" Int., .344-.345" Exh.

**Valve Springs:**—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than 1 $\frac{1}{2}$ ".

	Spring Pressure	Spring Length
Valve Closed	46-50 lbs.	2 1/32"
Valve Open	104-110 lbs.	1 11/16"

**Valve Lifters:**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060"

## VALVE TIMING

**Tappet Clearance:** .006" Intake, .008" Exhaust Hot. .010" exhaust clearance recommended for sustained high speed driving.

**NOTE:**—Right front wheel and cover plate under fender should be removed for work on valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 2° BTDC. Close 44° ALDC.

**Exhaust Valves:**—Open 46° BLDC. Close 4° ATDC.

**To Check Valve Timing:**—Install timing gauge in timing plug hole over #1 piston. Set tappet clearance #1 intake valve at .011" (cold). This valve should open with piston 2° or .0019" before top dead center when 2° line BTDC on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .006" hot.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump on right side of crankcase.

**NOTE:**—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure:**—30-40 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Located under cap at left side of crankcase. Operates at 40-45 lbs. To adjust, remove cap, withdraw locking wire, turn slotted plug clockwise to increase pressure, counter-clockwise to decrease, replace locking wire and cap.

**Crankcase Capacity:**—6 qts. (refill).

## CLUTCH

**Borg & Beck Model 11A6.** Single plate, dry disc type. See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam. 6 $\frac{1}{8}$ ". Outside Diam. 11". Thickness  $\frac{1}{8}$ ".

**Adjustment:**—Clutch pedal should just clear underside of toeboard with clutch engaged. To adjust, turn pedal stop screw located above clutch pedal shaft. Free movement of clutch pedal must be 1 1/16". To adjust, turn clutch shaft collar adjusting screw at right hand end of clutch pedal shaft.

**Removal:**—Disconnect clutch linkage, remove transmission (rotating clutch release fork shaft so that release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly. Remove clutch from below.

**Automatic Clutch:**—See article in Clutch Section. See Clutch Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Conventional tubular section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—4 $\frac{1}{2}$ -5 $\frac{1}{2}$ ° crosswise.

**Caster:**—2° plus or minus 1°. Adjust by inserting wedge shims between spring and axle pad on axle. Shims or angle plates furnished  $\frac{1}{2}$ , 1, 2°.

**Camber:**— $\frac{1}{2}$ ° plus or minus  $\frac{1}{4}$ °. No adjustment. Manufacturer recommends that no attempt be made to correct camber by bending tubular axle. Toe In—0-5/16" measured at hub height on center of tire tread. Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

**Steering Gear:** Gemmer Model Worm-and-Roller. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Bendix Vacuum Power unit optional on Model C9 and standard on Models C10, C11. See Brake Section for complete data.

**Wheel Cylinder:**—Diameters—Front Wheel (Front end 1 $\frac{1}{4}$ ", Rear end 1 $\frac{3}{8}$ "), Rear wheel (Front end 1", Rear end 1 $\frac{1}{8}$ ").

**Drum Diameter:**—13".

**Lining:**—Moulded type. Width 2". Thickness  $\frac{1}{4}$ ". Length 24 27/32" per wheel.

**Clearance:**—.012" toe, .006" heel for each shoe.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—With lever in released position remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is 1/32", lock anchor screw with wire. Back off adjusting bolt nut until free. Adjust bracket bolt nuts for each end of brake band to 1/32" clearance (as above), secure with locknuts. Finally tighten adjusting bolt nut until tension on bracket bolt nuts is just relieved at either end.

**Drum Diameter:**—7".

**Lining:**—Woven type. Width 2 $\frac{1}{2}$ ". Thickness 3/16". Length 21 5/8".

**NOTE:**—Clearance at anchor and saddle .005" max.

**Power Brake Unit:**—Bendix Internal Valve type.

See Brake Section for complete data.

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Turn radiator ornament counter-clockwise, raise hood about 1", push safety catch at front under lower edge of hood releasing catch and raise hood. Side panels removed by freeing latches on inside lower edge of panels.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 6,865,101 (Detroit), 9,706,386 (Canada). On right front door hinge post.

**ENGINE NUMBER:**—First number C-16-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Special Shop Notes for engine number lettering data.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 R.P.M.	At 100 R.P.M.
6.5-1 Std. Head	150-160 lbs.	Approx. 110 lbs.
7.0-1 Optl. Head	160-170 lbs.	Approx. 117 lbs.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (Cast Iron Heads), Type H-10 (Aluminum Heads). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap: .020". Cam Angle 38° (closed). Automatic Advance—12" max. at 1750 RPM (distr.). Vacuum Advance—10" distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—2° ATDC (6.5-1 Head), At TDC. (Optl. 7.0-1 Head) with "0" dead center mark or correct degree mark on crankshaft pulley at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ¼-1 turn (E611 Carb.), ½-1¼ turn (Other Carbs.) open. Idle speed 300 RPM or 6 MPH.

**Float Level:**—5/64" top of float below top edge of bowl.

**Accelerating Pump:**—Center hole normal setting. Inner hole (Summer), Outer hole (Winter) for extreme temperatures.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:** .006" Int., .010" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 7055. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 7075.

**COIL:** Auto-Lite Models IG-4642, CL-4602. Service winding (coil less switch and cable) IG-3224JS or CL-3224S. Mounted on dash.

**Ignition Current:**—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927-A.

**Capacity:**—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4010-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

See Electrical Equipment Section for special servicing directions on these distributors.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—38° (closed), 22° (open).

**Breaker Arm Spring Tension:**—18-20 ounces.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
7.....	1000	14.....	2000
9.....	1300	18.....	2600
12.....	1750	24.....	3500

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4.75"
5°	10°	8.35"
10°	20°	12"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

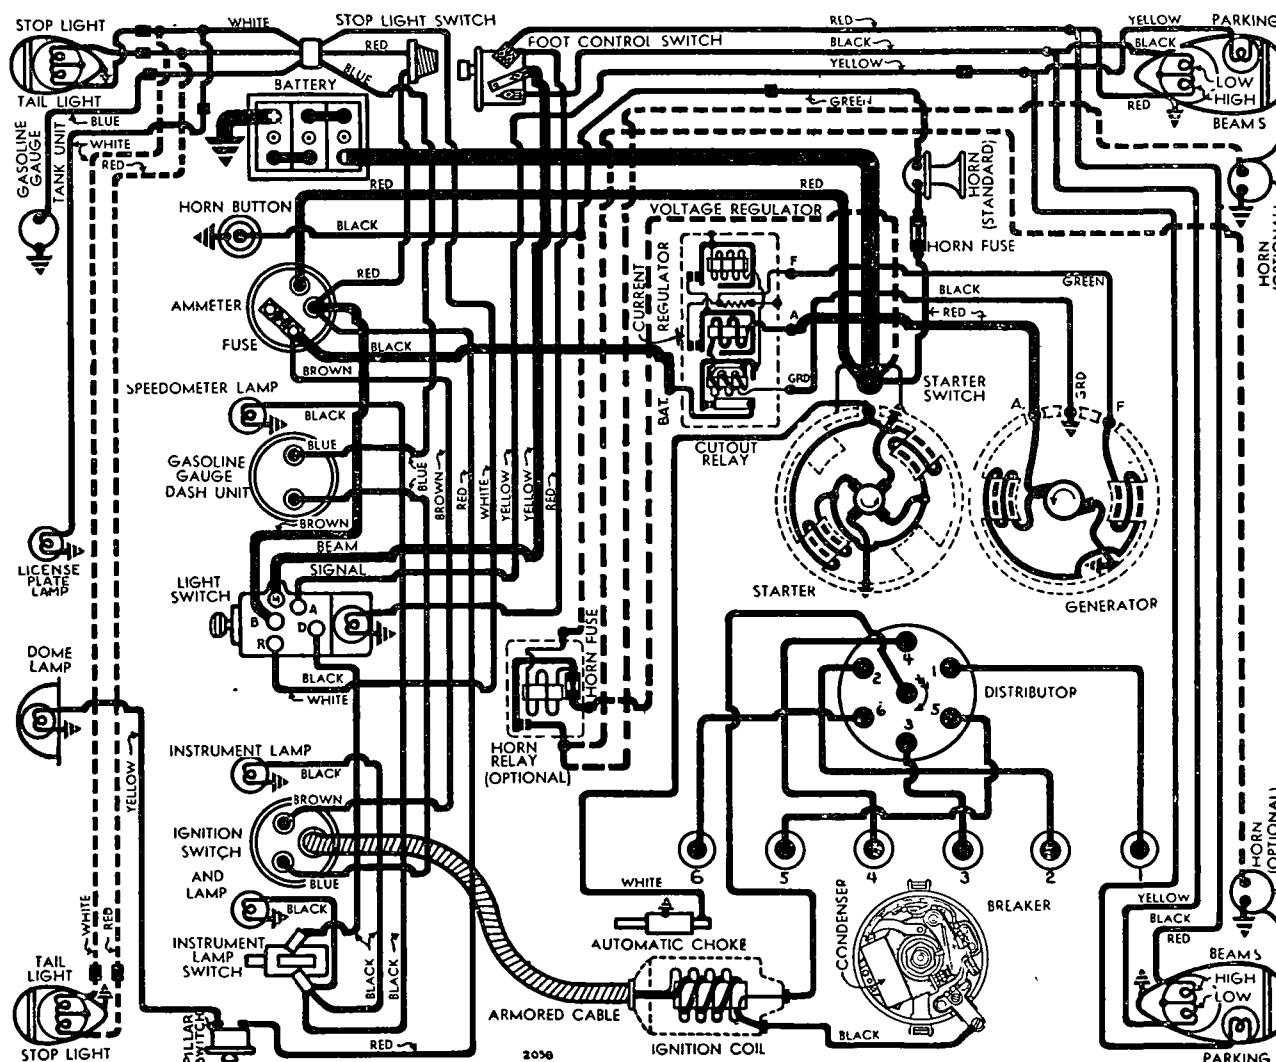

### IGNITION TIMING

**IGNITION TIMING:**— Flywheel Deg. Piston Position  
6.5-1 Std. hd. ....2° ATDC.....002" ATDC.  
7.0-1 Optl. Al. hd. .... TDC. ....000" TDC.

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.

**NOTE:**—Crankshaft pulley at frt. of engine marked 'O' at top dead center with 15 one degree graduations before and after this point.

**Timing (Using Timing Light):**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on

impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. **Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint.

**Manual Adjustment:**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (Ball & Ball) Models E6I1, E6K1, E6K2, E6K3, E6K4, 1½" down-draft types.

*For complete data, refer to Carburetor Index.*

**NOTE:**—See article in Carburetion Sec. for recommended changes on first three models.

**Idle Adjustment:**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stop screw so that idle speed is 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1¼ turns of screw from inner closed or seated position. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting:**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

**Inner Hole (Min. stroke)**—Extremely warm weather.

**Center Hole**—Normal summer temperatures.

**Outer Hole (Max. stroke)**—Winter temperatures.

**Throttle Cracking:** Throttle opened approx. one-third when starter pedal depressed. This setting should be checked and adjusted when checking automatic choke.

**Fast Idle:**—Integral with carburetor. No adjustment.

**Automatic Choke:** Sisson Type AC-751B.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—Burgess oil-wetted type standard. AC. #1526838 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type B #1522995. Diaphragm type. AC. Type AL #1523137 comb. fuel & vacuum pump used on cars with overdrive.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer (Auto-Lite) Electric. No. NG-8330-D (dash unit), NG-8257-T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard, Type WHT-2-105, RHT-2-105 (Exp.). 6 volt, 15 plate, 105 AH. capacity (20 hr. rate). **Starting Capacity**—133 amperes for 20 minutes. **Zero Capacity**—300 amperes for 3.9 minutes. **Grounded Terminal**—Positive (+) terminal. **Location**—Left side under drivers seat.

## STARTER

**Auto-Lite Model MAW-4010 (Std), MAW-4011 (Exp.).** Armature No. MAW-2030.

**Drive:**—Positive shift outboard pinion.

**Cranking Engine:**—Approx. 175 amps. at 5 volts.

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18 "	Lock	4.0	670

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange screws.

**Starting Switch:**—(MAW-4010)—SW-2813. Mounted on starter field frame and operated by pinion shaft (starting pedal). See article in Electrical Equipment Section for pedal adjustment.

(MAW-4011)—Solenoid Switch Type SS-4104. Controlled through relay by pushbutton on dash. Operative with ignition turned 'on'.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

### STANDARD

**Auto-Lite Model GBW-4803-A, C (Exp. Bolivia).** Armature No. GBW-2006F. 2 brush, straight shunt type with external voltage and current regulation. **Maximum Charging Rate**—22 amperes, 8.0 volts, 1780 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Charging Rate Adjustment:**—None. See Regulator.

Cold			Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	775	0	6.4	870	0	6.4	870
4	6.7	940	4	6.7	1065	4	6.7	1065
10	7.1	1200	10	7.1	1385	10	7.1	1385
16	7.6	1480	16	7.6	1780	16	7.6	1780
20	7.85	1675	20	7.85	2125	20	7.85	2125
22	8.0	1780	22	8.0	2400	22	8.0	2400

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current:**—3.04-3.36 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Model GCB-4802-A (City Police), GCB-4802-B (State Police). Used with Model VRB-4004C Regulator. See 1939 De Soto Model S6 article for Generator and Regulator data.

## REGULATOR

**Auto-Lite Model VRB-4005-A. Voltage & Current Type.** Consists of Cutout Relay, Vibrating Voltage Regulator and Vibrating Current Regulator in case. *For complete data, refer to Electrical Equipment Index.* **NOTE:**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

### Cutout Relay

**Cuts In:**—6.4-7.0 volts cold.

**Cuts Out:**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap:**—.015" minimum.

**Air Gap:**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting:**—7.5-7.8 volts at 70°F. (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F. (After 8R-000001).

See Electrical Equipment Section for complete settings and changes.

**To Check:**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.3-7.6 volts (Cold—70°), 7.1-7.4 volts (hot—140°) after 8R-000001. See Setting above.

**To Adjust:**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap:**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap:**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting:**—21-23 amperes (marked '22' on cover).

**To Check:**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 22 amperes. If more than slight excess noted, Current Regulator is defective.

**Adjustment, Contact Gap, Air Gap:**—Same as given for Voltage Regulator above.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Aim headlamps straight ahead (lenses in place, upper beams lighted and car unloaded) with center of hot spot 3" (5 pass.), 2" (7 pass.) below center horizontal line of headlamps at 25 ft. **Headlamp Beam Indicator:**—In light switch knob. Lighted when headlamp upper beams in use.

### Switches

**Lighting:**—Chrysler Part No. 667044.

**Instrument Light:**—Chrysler Part No. 667043.

**Foot Selector:**—Chrysler Part No. 659512.

**Stop Light:**—Chrysler Part No. 661721.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Tail and Stop light	3-21	1158
Beam Indicator, Ign. Sw.	1	51
Parking, Instrument	1½	55
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 amperes on back of ammeter.

**Horn:**—20 amp. (single) in connector near starter. 30 amp. (dual) in horn relay.

**HORNS:**—Single—Auto-Lite Model HB-4002.

**Dual:**—Auto-Lite Model HC-5103B horn set operated by horn relay.

**Horn Relay:**—Auto-Lite Model HR-4002. A 30 ampere fuse mounted on base.

**Contacts Close:**—3.0-4.0 volts. Open 1.5-2.5 volts.

**Contact Gap:**—.026". Air Gap—.012-.017" (closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**ENGINE****ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{1}{4}$ ".

Displacement—228.1 cubic ins. Rated H.P.—27.34.

Developed Horsepower—93 HP. (std. 6.5-1 head), 100 HP. (optl. 7.0-1 head) at 3600 R.P.M.

Compression Ratio—Al. hds. (6.5-1 std., 7.0-1 optl.).

Compression &amp; Vacuum Reading—See Tune-up data.

**PISTONS:**—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3 $\frac{3}{8}$ ".

Weight—17.46 ounces (plus or minus 2 grams).

Removal—Pistons and rods removed from above.

Clearance—Top .022". Skirt .002".

Replacement Pistons:—See Chrysler Shop Notes.

Fitting New Pistons:—Check pistons at right angles to pin bosses at bottom of skirt and cylinder bore with micrometer gauge. With feeler (.002") inserted between cylinder wall and piston (side opposite slot), pull to withdraw feeler 5 to 7 lbs.

Installing Pistons:—Slot away from valves.

**PISTON RINGS:**—Two undercut compression, two oil control rings per piston, all above pin. Lower ring grooves have  $\frac{1}{8}$ " drain holes, 10 (#3), 5 (for #4).

Ring	Width	End Gap	Side Clearance
Compression	$\frac{1}{8}$ "	.007-.015"	.0015-.003"
Oil Control	5/32"	.007-.015"	.0015-.003"

Replacement Rings:—See Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2 $\frac{7}{8}$ ".

Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit at 130° F.

Pin Fit in Rod Bushing—Thumb push fit at 70° F.

Replacement Pins: Std., .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight 31.91 ozs. Length 8".Crankpin Journal Diameter—2 $\frac{1}{8}$ ".

Lower Bearing—Removable steel-backed, babbitt-lined. Furnished standard &amp; .0015", .010" undersize.

Clearance—.0005-.0025". Sideplay—.0055-.0115".

Bearing Adjustment:—None. Install new bearings

with bosses engaging grooves in rod and cap.

Installing Rods:—Oil hole in lower bearing upper half

must be toward camshaft, all rods.

**CRANKSHAFT:**—4 bearing. Integral counterweights.Journal Diameters—2 $\frac{1}{2}$ " all bearings.

Bearing Type—Removable steel-backed, babbitt-lined. Furnished standard &amp; .0015", .010" undersize.

Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for

Engine Removal (recommended), Front Main Bearing

Cap Removal and Bearing Adjustment directions.

Replacement Bearings &amp; Bearing Caps: Refer to

Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4)

bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2", #2, 1 31/32"; #3

1 15/16"; #4, 1 $\frac{1}{4}$ ".

Bearing Type—Removable steel-backed, babbitt-lined (except #4 machined in crankcase).

Clearance—.0015-.003".

End Thrust:—Taken by thrust plate at rear of cam-

shaft sprocket. Endplay—.002-.006".

Timing Chain:—Morse. Width 1". Pitch .500". Length

24" or 48 links.

Camshaft Setting:—Mesh chain with sprockets

turned so that '0' marks are adjacent and in line

with a straightedge across the shaft centers.

**VALVES—Head Diameter Stem Diameter Length**

Intake ..... 1 21/32" ..... 340-.341" ..... 4 25/32"

Exhaust ..... 1 17/32" ..... 340-.341" ..... 4 25/32"

	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

Valve Guides:—Must be  $\frac{7}{8}$ " below top of block. Ream guides after installing .342-.343" (all).Valve Springs:—1 $\frac{1}{2}$ " limit of compression.

	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1 $\frac{3}{4}$ "
Valve Open	101-109 lbs.	1 13/32"

Valve Lifters:—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

Tappet Clearance: .006" Int., .010" Exh., Hot.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open TDC. Close 50° ALDC.

Exhaust Valves—Open 48° BLDC. Close 2° ATDC.

To Check Timing:—Set tappet clearance #1 intake valve at .014". Intake valve should open at top dead center when '0' mark on crankshaft pulley at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .008" (hot).

**LUBRICATION****LUBRICATION:**—Gear type oil pump on right of engine.

NOTE—Check ignition timing whenever oil pump installed on engine. Tilt engine (with jack under pan) for pump removal.

Normal Oil Pressure:—30-45 lbs. at 30 M.P.H.

Oil Pressure Relief Valve:—Under plug on left side of engine. Operates at 40 lbs. Adjustable. Heavy (green) spring to increase pressure, lighter (red) spring to decrease pressure.

Crankcase Capacity:—5 quarts (refill).

**CLUTCH****CLUTCH:**—Borg & Beck Mod. 10A7. Mod. #899 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven, 2 required. I.D. 6". O.D. 10". Thickness  $\frac{1}{8}$ ". See Chrysler Special Shop Notes.

Adjustment—Adjust stop screw (just above clutch pedal shaft) so that pedal arm just clears floor board. Free movement of pedal should be 1 1/16" (adjust by turning release fork rod adjusting nut).

Removal:—Remove floor board, remove transmission (see Transmission Removal below), remove housing underpan, mark cover and flywheel, remove cover bolts evenly, remove assembly from below.

**TRANSMISSION****TRANSMISSION:**—Own—All helical gear type with synchronizing shift on second and high gears.

See Transmission Section for complete data.

Removal:—Disconnect front and rear U-joints, disconnect hand brake, remove nuts from studs at clutch housing, disconnect release fork pull-back spring and rod, pull release fork out of clutch housing, remove transmission cover assembly, remove unit with two pilot studs in upper stud holes.

**OVERDRIVE****Overdrive Transmission:** Warner Model AS25-T86 See Transmission Section for complete data.

Removal—Same as for standard transmission above after overdrive control has been disconnected.

**UNIVERSALS****UNIVERSAL JOINTS:**—Detroit—Universal. Series 4200.

Ball and trunion type with roller bearings. 2 used.

NOTE—Three U-joints used on 7 pass. sedan.

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on 7 Pass. models. See Chrysler Shop Notes for data.**REAR AXLE****REAR AXLE:**—Own—Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.1-1 (std.), 4.3-1 (with overdrive and 7 pass.

Backlash—.006-.010". Shim adjustment.

Removal:—Remove axle shaft nut, hub and drum assembly (use hub puller, do not hammer out or bearing damage may result), disconnect brake line at wheel cylinder, remove backing plate (with oil seal). Use shaft puller to remove axle shaft and bearing. With axle shafts removed, differential carrier may be removed by disconnecting rear U-joint at flange and removing housing cap screws.

Wheel Bearing Adjustment—Controlled by shims between brake backing plates and flanged ends of housing. Remove brake backing plates (see above) and add or remove shims (equally on both sides) to give proper clearance. Endplay—.003-.008".

NOTE—Shims supplied .010", .0125", .030" thick.

**SHOCK ABSORBERS****SHOCK ABSORBERS:**—Monroe—Direct acting type.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION****Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

Kingpin Inclination—4 $\frac{3}{4}$ -6°.Camber— $\frac{1}{4}$ ". Limits minus  $\frac{1}{4}$ " to plus  $\frac{1}{2}$ ".Caster—1 $\frac{1}{2}$ ". Adjustable.Toe In—0- $\frac{1}{8}$ ". 1/16" preferred. Set long tie rod to 31 7/32" (between ball centers). Adjust short rod for proper toe-in.

Steering Geometry—Outer wheel turned 20°. Inner wheel turned 22°40', 22°50' (7 pass.).

**STEERING GEAR****Steering Gear:** Gemmer Model 300. Worm-and-Roller

See Steering Gear Section for complete data.

**BRAKES****BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

See Brake Section for complete data.

Wheel Cylinders—Stepped or two-stage bore type:

Front Wheel—Front cyl. 1 $\frac{1}{4}$ ". Rear 1 $\frac{3}{8}$ ".Rear Wheel—Front cyl. 1 $\frac{1}{8}$ ". Rear 1 $\frac{1}{4}$ ".

Drum Diameter—10".

Lining—Moulded. Width 2". Thickness .200". Length (rear wh.-rear shoe) 7 25/64", (all others) 9 29/32".

Clearance—.012 toe, .006" heel for each shoe.

Braking Power—55% front wheels, 45% rear.

Hand Brake:—On drum at rear of transmission.

Adjustment—Fully release hand brake lever. Remove anchor screw locking wire (left side), adjust anchor screw for .025" clearance between band and drum, set anchor screw with lock wire. Free large adjusting bolt nut (upper end of band), loosen locknut, adjust guide bolt nut to .025" clearance between band and drum, set with locknut. Tighten adjusting bolt nut until tension on either side of guide bolt is just relieved (groove in nut must align with ridge in lockwasher).

Drum Diameter—6".

Lining—Width 2". Thickness 5/32". Length 16 15/16"

NOTE—Clearance at anchor and saddle .005" max.

**NOTE:—C-15 Oil Pan Removal.** With steering wheel in extreme left position and #1 piston half way down on stroke, pan may be removed or installed.

**C14, C15 Engine Hood & Side Panel Removal.** See Chrysler Model C-16 article for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On right front door hinge pillar post. First numbers as follows:

	Detroit	Canada
C14 Imperial	6,719,601	9,756,331
C-15 Custom Imperial	7,804,001	

**ENGINE NUMBER:** First number 1001 with individual model prefix (C14-, C15-). Stamped on the left side of cylinder block between #1 and #2 cylinders. See Chrysler Special Shop Notes for Engine Numbering letter data.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	1000 RPM—Pressure—100 RPM
C14 Std. 6.7-1	150-160 lbs. Approx. 118 lbs.
C15 Std. 6.5-1	145-155 lbs. Approx. 117 lbs.
All Optl. 7.45-1	165-175 lbs. Approx. 125 lbs.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—**Set at .018".

**Cam Angle—**27° (closed) with .017" gap.

**Automatic Advance—**For each distributor:

IGT-4001D-1—13° max. at 1900 RPM (distr.).

IGT-4001F-1—11° max. at 1850 RPM (distr.).

IGT-4001G-1—10° max. at 1450 RPM. (distr.).

IGT-4001J-1—11° max. at 1600 RPM. (distr.).

**Vacuum Advance—**For each distributor:

IGT-4001D-1, F-1—6° distr. with 12" vacuum.

IGT-4001G-1—6° distr. with 14" vacuum.

IGT-4001J-1—7° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting—**3° ATDC (C14 Std. 6.7-1 Head), 5° ATDC (C15 Std. 6.5-1 Head), or 9° ATDC (All Optl. 7.45-1 Head) with correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**Both idle screws midway between "miss" and "roll" points (Stromberg Carbs.). ¾-1¼ turn open (Carter Carb.). Idle speed 7 MPH.

**Float Level (Stromberg Carb.)—**Fuel level ⅝" below top edge of float bowl.

**Float Level (Carter Carb.)—**13/64" top of float to gasket seat on bowl cover with needle valve seated.

**Accelerating Pump—**Inner hole (min. stroke)—Summer, Outer hole (max. stroke)—Winter.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance—**.006" Int., .010" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 7055 (C-14), 7057 (C-15). Coil connection armored.

**Ignition Lock—**Yale & Towne, Mitchell No. 7075.

**COIL:** Auto-Lite Model CE-4624 (C14), CE-4626 (C15), Service Coil (less switch & cable) CE-3224JS for both models. Coil mounted on hood ledge.

**Ignition Current—**2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

**Capacity—**.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4001D-1, G-1, J-1 (C14 LHD), IGT-4001D-1 or G-1 (for C14 RHD cars), IGT-4001F-1 (C15 Custom Imperial). Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control.

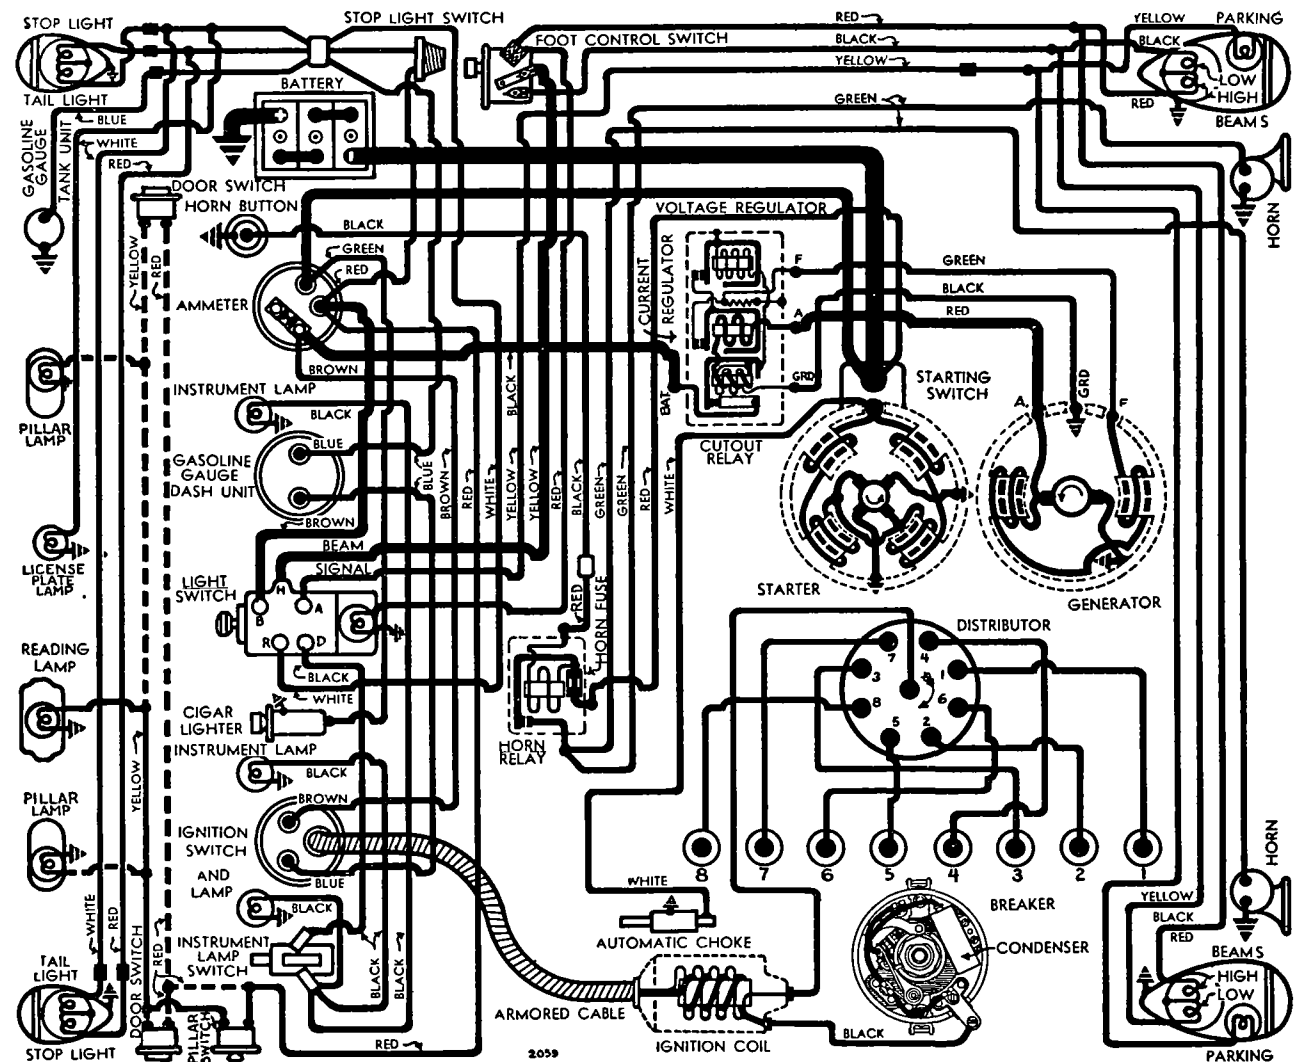

**C-14 Note—**Distributors used as follows: D-1—Up to Engine No. 1337 (U.S.), Serial No. 9,756,338 (Canada). G-1—Engine Nos. 1337 to 1825 (U.S.), Serial Nos. 9,756,338 to 9,756,383 (Canada). J-1—After Engine No. 1825 (U.S.), Serial No. 9,756,383 (Canada).

**Breaker Gap—**Set at .018".

**Cam Angle or Dwell—**27° closed, 18° open (.017" gap).

**Breaker Arm Spring Tension—**18-20 ounces.

CONTINUED ON NEXT PAGE

See Electrical Equipment Section for Regulator wiring with 2 resistors (after Regulator Serial No. 8R-000001).

6	850	12	1700
9	1310	18	2620
11	1600	22	3200

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

## Vacuum Spark Advance—IGT-4001-D-1, F-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5.1"
3°	6°	8.5"
6°	12°	12"

## Vacuum Spark Advance—IGT-4001-G-1

Start	0°	5.1"
3°	6°	9.5"
6°	12°	14"

## Vacuum Spark Advance—IGT-4001-J-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
3½°	7°	8.5"
7°	14°	12"

**Distributor Removal**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

## IGNITION TIMING

**IGNITION TIMING**— Flywheel Deg. Piston Position  
 C-14, Std. 6.7-1 hd. 3° ATDC .004" ATDC  
 C-15, Std. 6.5-1 hd. 5° ATDC .012" ATDC  
 C-15, Optl. 7.45-1 hd. 9° ATDC .038" ATDC

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.

**NOTE**—Impulse neutralizer at front of engine marked with 15 one degree graduations before and after '0' mark at top dead center.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see above table), stop when correct mark on impulse neutralizer at front of engine is directly in line with pointer on chain case cover. Loosen advance arm hold-down screw, center pointer on scale (opposite '0' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until test lamp goes out indicating that contacts are just opening, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint. See article in Electrical Equipment Section.

**Manual Adjustment**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model AAOV-1, aircraft type (C-15 all, C-14 first cars), Carter Model 373-S (C-14 later cars). Duplex or double barrel downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment (All models)**—With engine warm (Automatic choke & Fast Idle inoperative), set throttle stop screw so that idle speed is 7 M.P.H. Turn one idling adjusting screw (for one barrel) in until engine begins to hesitate or miss, then turn out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with second idling adjusting screw (for other barrel). Adjust throttle lever stop screw if necessary.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (Min. stroke)—Summer temperatures. Outer Hole (Max. stroke)—Winter temperatures.

**NOTE**—Carter model requires partial dismantling of carburetor to change setting (see article in Carburetor Section for complete directions).

**Fast Idle**—Carter or Stromberg adjustable types.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke**—Sisson Type AC-600.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528199 standard oil-wetted type, #1528198 optional oil bath type.

**Fuel Pump**—AC. Type D #1521803 diaphragm type. Type I #1523023 combination fuel & vacuum pump (optl. C-14). Type AN #1523188 vacuum pump only (C-15 with overdrive) used with D pump (above) mounted separately on right side of engine at rear.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Motometer (Auto-Lite) Electric. No. NG-8347-D (dash unit—all), NG-8257-T (tank unit—C14), NG 8300-T (tank unit—C15).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

## M DEL C14

**BATTERY**: Willard, Type WH-2-15 (Std.), RH-2-15 (Exp.). 6 volt, 15 plate, 119 ampere hour capacity (20 hour rate).

Starting Capacity—140 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes.

Grounded Terminal—Positive (+) terminal.

Location—Left side under drivers seat.

## BATTERY

## MODEL C15

**BATTERY**—Willard, Type WH-4-17, RH-4-17 (Export) 6 volt, 17 plate, 136 ampere hour (20 hour rate).

Starting Capacity—160 amperes for 20 minutes.

Zero Capacity—300 amperes for 5.4 minutes.

Grounded Terminal—Positive (+) terminal.

Location—Under left hand front seat.

## STARTER

C14—Auto-Lite Model MAX-4015, MAX-4016 (Exp.).

C15—Auto-Lite Model MAX-4003 or MAX-4003A.

Armature Number—MAW-2030 (for all models).

Drive—Positive shift outboard pinion.

Cranking Engine—Approx. 200 amperes at 5 volts.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange screws.

**Starting Switch C14**—(MAX-4015) Auto-Lite No. SW-2813. Manual pinion shift operated by pedal. (MAX-4016)—Auto-Lite Solenoid SS-4104. Controlled thru relay by starter button on instrument panel.

For complete data, refer to Electrical Equipment Index.

**Starting Switch C15**—Auto-Lite Solenoid SS-4101 (for MAX-4003), SS-4201 (for MAX-4003A). Controlled through relay by starter button on instrument panel.

For complete data, refer to Electrical Equipment Index.

## GENERATOR

## Generator Regulator

C-14 & C15.....GCO-4801-C.....VRB-4004-B

C-14 Export.....GCE-4804-A.....VRB-4004-A

C-14 Bolivia.....GCO-4801-D.....VRB-4004-A

Armature Number—GCO-2006F (for GCO gen'tors).

Type—Two brush, straight shunt type with external current-voltage regulation.

Maximum Charging Rate—28 amps., 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent upon battery condition.

Charging Rate Adjustment—No adjustment on Generator. See Regulator section below for Voltage and Current Regulator settings.

### Performance Data GCO-4801-C & D

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0.....	6.4.....	825	0.....	6.4.....	900
4.....	6.6.....	940	4.....	6.6.....	1025
8.....	6.85.....	1050	8.....	6.85.....	1160
12.....	7.1.....	1175	12.....	7.1.....	1310
16.....	7.3.....	1300	16.....	7.3.....	1475
20.....	7.55.....	1450	20.....	7.55.....	1660
24.....	7.8.....	1610	24.....	7.8.....	1880
28.....	8.0.....	1850	28.....	8.0.....	2200

NOTE—Cur. regulator limits output to 28 amps. max.

### GCE-4804-A

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0.....	6.4.....	740	0.....	6.4.....	785
4.....	6.6.....	830	4.....	6.6.....	880
8.....	6.8.....	920	8.....	6.8.....	975
12.....	7.05.....	1015	12.....	7.05.....	1070
16.....	7.25.....	1100	16.....	7.25.....	1165
20.....	7.5.....	1190	20.....	7.5.....	1275
24.....	7.7.....	1280	24.....	7.7.....	1385
30.....	8.0.....	1400	30.....	8.0.....	1580

NOTE—Cur. regulator limits output to 30 amps. max.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—53 ozs. max. (GCO Gen.), 64-68 ozs. max. (GCE Gen.) with new brushes.

Field Current—1.47-1.63 amperes (GCO Gen.), 1.66-1.84 amperes (GCE Gen.) at 6.0 volts.

Motoring Current—3.94-4.36 amperes (GCO Gen.), 5.03-5.57 amperes (GCE Gen.) at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

Belt Adjustment:—Loosen clamp bolts & pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs.

## GENERATOR

### SPECIAL EQUIPMENT

SPECIAL GENERATORS:—Model GCB-4802-A (City Police), GCB-4802-B (State Police). Used with Model VRB-4004C Regulator. See 1939 De Soto Model S6 article for Generator and Regulator data.

## REGULATOR

Auto-Lite Models VRB-4004-A (GCE generator & GCO Exp. Bolivia), VRB-4004-B (all others), Voltage-Current Type. Consists of Cutout Relay, Vibrating Voltage Regulator and Vibrating Current Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

### Cutout Relay

Cuts In—6.4-7.0 volts Cold.

Cuts Out—5 ampere Min., 3.0 amperes Max. Cold.

Contact Gap—.015" minimum.

Air Gap—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

Setting—7.5-7.8 volts at 70°F (Before Serial #8R-000001), 7.3-7.6 volts at 70°F (After #8R-000001). See Electrical Equipment Section for complete settings and changes.

To Check—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.3-7.6 volts (cold 70°), 7.1-7.4 volts (hot—140°) after 8R-000001. See Setting above.

To Adjust—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

Contact Gap—.010" minimum, .020" maximum with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

### Current Regulator

Setting—29-31 amperes (VRB-4004A), 27-29 amperes (VRB-4004B).

To Check—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 30 amperes (4004A), 28 (4004B). If more than slight excess noted, regulator is defective.

To Adjust—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

Contact Gap & Air Gap—Same as Voltage Regulator.

## LIGHTING

LIGHTING:—Headlamps—Corcoran—Brown, pre-focused type. Aim headlamps straight ahead (lenses in place, car unloaded, upper beams lighted) with center of hot spot 3" (C-14), 2" (C-15) below center horizontal line of headlamps at 25 feet. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in full out position.

Headlamp Beam Indicator—In light switch knob. Lighted whenever headlamp upper beams in use.

### Switches

Lighting—Chrysler Part No. 667044.

Instrument Light—Chrysler Part No. 667043.

Foot Selector—Chrysler Part No. 659512.

Stop Light—Chrysler Part No. 661721.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	32-32.....	2331
Tail and Stop .....	3-21.....	1158
Beam Indic., Ign. Switch .....	1 .....	51
Parking, Instrument .....	1½ .....	55
Dome .....	15 .....	87
Rear License .....	3 .....	63

## MISC. ELECTRICAL

FUSES:—Lighting—20 amperes, on back of ammeter. Horn—20 amp. (single) in connector near starter or 30 amp. (dual horns) in horn relay.

HORNS:—Auto-Lite Mod. HC-5103. Twin horns, blended tone with horn relay.

Horn Relay:—Auto-Lite Model HR-4002. Points close 3.0-4.0 volts, open 1.5-2.0 volts.

Contact Gap—.026". Air Gap—.012-.017".

## ENGINE

ENGINE SPECIFICATIONS: 8 cylinder 'L' head type.

Bore—3¼". Stroke—4½" (C14), 4¾" (C15).

Displacement 273.8 cu.ins. (C14), 323.5 cu.ins. (C15).

Rated Horsepower—33.80 AMA.

Developed Horsepower—110 at 3600 RPM. (C14), 130 at 3400 RPM. (C15, C17).

Compression Ratio & Pressure: As follows:

Ratio	1000 RPM—Pressure—100 RPM
C14 Std. 6.7-1 .....	150-160 lbs.....Approx. 118 lbs.
C15 Std. 6.5-1 .....	145-155 lbs.....Approx. 117 lbs.
All Optl. 7.45-1 .....	165-175 lbs.....Approx. 125 lbs.

Vacuum Reading—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

PISTONS:—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3⅞". Weight—16.33 ounces (plus or minus 2 grams). Removal—Pistons and rods removed from above. Clearance—Top .022". Skirt .002".

Replacement Pistons:—See Chrysler Shop Notes.

Fitting New Pistons:—Check pistons (at right angles to pin bosses at bottom of skirt) and cylinder bore with micrometer gauge. With feeler (.002") inserted between cylinder wall and piston (side opposite slot), pull required to withdraw feeler must be 5-7 pounds.

Installing Pistons:—Slot away from valves.

PISTON RINGS:—Two undercut compression, two oil control rings per piston, all above pin. Lower ring grooves drilled with ten ⅛" oil drain holes (#3), five (#4 groove).

Ring	Width	End Gap	Side Clearance
Compression .....	⅛"	.007-.015"	.0015-.003"
Oil Control .....	.5/32"	.007-.015"	.0015-.003"

Replacement Rings:—Furnished standard and .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

PISTON PIN:—Diameter—55/64. Length—2¾".

Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit at 130° F.

Pin Fit in Rod Bushing—Thumb push fit at 70° F.

Replacement Pins:—Furnished standard and .003", .005", .008" oversize. Ream bushing and pin hole to size.

CONNECTING ROD: Length—9 3/16" (C14), 9" (C15).

Weight—36.8 ozs. (C14), 36.1 ozs. (C15).

Crankpin Journal Diameter—2 3/16".

Lower Bearing—Removable steel-backed, babbitt-lined. Furnished standard and .0015", .010" under-size.

Clearance—.001-.003". Sideplay—.006-.011".

Bearing Adjustment:—None. Install new bearings with bosses engaging grooves in rods and caps.

Installing Rods:—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7) or toward front (#2, 4, 6, 8). Oil hole in lower bearing must be toward camshaft on all rods.

CRANKSHAFT:—5 bearing. Integral counterweights.

Journal Diameters—2 45/64" all bearings.

Bearing Type—Removable steel-backed, babbitt-lined. Furnished standard and .0015", .010" under-size. Clearance—.001-.002".

CONTINUED ON NEXT PAGE

**ENGINE****C ONTINUED FROM PRECEDING PAGE**

**Bearing Adjustment:**—See *Chrysler Shop Notes for Engine Removal (recommended) & Adjustment data*.  
**Replacement Bearings & Bearing Caps:** Refer to *Chrysler Shop Notes for complete data*.

**End Thrust:**—Taken by flange faces on rear (#5) bearing. Endplay—.003-.007".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive. **Journal Diameters:**—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 3/8".

**Bearing Type:**—Removable steel-backed, babbitt-lined (except #6 machined in crankcase).  
**Clearance:**—.0015-.0035".

**End Thrust:**—Taken between face of removable cast-iron sleeve (carries front bearing) and face of camshaft sprocket. Replace if worn. Endplay—.001-.008".

**Timing Chain:**—Morse. Width 1 1/4". Pitch .500". Length 24" or 48 links.

**Camshaft Setting:**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES:**— 

	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	3/40-.341"	5 5/16"
Exhaust	1 13/32"	3/40-.341"	5 5/16"

	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

See *Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions*.

**Valve Guides:**—Must be 13/16" below top of block. Ream guides after installing .342-.343" (all).

**Valve Springs:**—1 1/2" limit of compression.

	Spring Pressure	Spring Length
Valve Closed	46-50 lbs.	2 1/32"
Valve Open	104-110 lbs.	1 11/16"

**Valve Lifters:**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

**Tappet Clearance:**—.006" Int., .010" Exh. (hot). Remove right front wheel and housing to adjust.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves:**—Open 2° BTDC. Close 44° ALDC.

**Exhaust Valves:**—Open 46° BLDC. Close 4° ATDC.

**To Check Timing:**—Set tappet clearance #1 intake valve at .011". This valve should open with #1 piston 2° or .0015" BTDC. when 2° line BTDC. on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .006" with engine hot.

**NOTE:**—2° piston position is .002" for C15.

**LUBRICATION**

**LUBRICATION:**—Gear type oil pump on rt. of engine. **NOTE:**—To remove oil pump, take out floor boards, loosen engine mountings and tilt engine (jack under oil pan). Check ignition timing whenever oil pump installed on engine.

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under cap on left side of crankcase. Adjust by turning slotted plug (with cap and locking wire removed) clockwise to increase counter-clockwise to decrease.

**Crankcase Capacity:**—6 quarts (refill)

**CLUTCH**

**Borg & Beck Models 10A6 (C14), 11A6 (C15).** Single plate dry disc type. **NOTE:**—Clutch cover stamped #874 (10A6), #871 (11A6).

See *Clutch Section for complete data*.

**Facings:**—Woven type. Inside Diameter 6 1/8". Outside Diameter 9 7/8" (10A6), 11" (11A6). Thickness 1/8". See *Chrysler Special Shop Notes for Hard Shifting correction*.

**Adjustment:**—Adjust stopscrew (just above clutch pedal shaft) so that pedal arm just clears floor board. Free movement of pedal should be 1 1/16" (adjust by turning release fork rod adjusting rod).

**Removal:**—Remove floor board, remove transmission (see *Transmission Removal* below), remove housing underpan, mark cover and flywheel, remove cover bolts evenly, remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own—All helical gear type with synchronizing shift on second and high gears. See *Transmission Section for complete data*.

**Removal:**—Disconnect front and rear U-joints, disconnect hand brake, remove nuts from studs at clutch housing, disconnect release fork pull-back spring and rod, pull release fork out of clutch housing, remove trans. cover assembly, remove unit with two pilot studs in upper stud holes.

**NOTE:**—Run-out of clutch housing .003" maximum.

**OVERDRIVE**

**Overdrive Transmission:** Warner Model AS25-T86 Optl. on C14, C15. Overdrive unit used with this transmission is same as Warner Model AS15-T85 Overdrive unit which is Std. on C17.

See *Transmission Section for complete data*.

**Removal:**—Same as for standard transmission above after overdrive control has been disconnected.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit Universal. Series 5150. for C14, Series 5350 for C15. Cross type with roller bearings.

See *Universals Section for complete data*.

**REAR AXLE**

**REAR AXLE (C-14, C-15):**—Own—Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio (C-14):**—4.1-1 (sedans), 3.91-1 (coupes), 4.3-1 (with overdrive).

**Ratio (C-15):**—4.55-1.

**Backlash:**—.006-.010". Shim adjustment.

**Removal:**—Remove axle shaft nut, hub and drum assembly (use hub puller, do not hammer out or bearing damage may result), disconnect brake line at wheel cylinder, remove backing plates with oil seal). Use shaft puller to remove axle shaft and bearing. With axle shafts removed, differential carrier may be removed by disconnecting rear U-joint at flange and removing housing capscrews.

**Wheel Bearing Adjustment:**—Controlled by shims between brake backing plates and flanged ends of housing. Remove brake backing plates (see above) and add or remove shims (equally on both sides) to give proper clearance. Endplay—.003-.008".  
**NOTE:**—Shims supplied .010", .0125", .030" thick.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Monroe—Direct acting type.

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension (C-14, C-15):**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

Specifications below apply with no passenger load.

**Kingpin Inclination:**—4 3/4-6°.

**Camber:**—1/4°. Limits minus 1/4° to plus 1/2°.

**Caster:**—1 1/2° (C-14), 2° (C-15). Adjustable.

**Toe In:**—0-1/8". 1/16" preferred. C-14—Adjust short tie rod (long rod 30 15/16" non-adjustable). C-15—Adjust tie rods equally in usual manner.

**Steering Geometry:**—Outer wheel turned 20°. Inner wheel turned 22°0' (C-14), 22°15' (C-15).

**STEERING GEAR**

**Steering Gear:** Gemmer Model 330 (C14), Model 370 (C15). Worm-and-Roller types.

See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES (C-14, C-15):**—Service—Lockheed hydraulic, double anchor type. Hand lever applies brake at rear of transmission.

See *Brake Section for complete data*.

**Wheel Cylinders:**—Stepped or two-stage bore type: Front Wheel—Front cyl. 1 1/4", Rear 1 3/8".

Rear Wheel—Front cyl. 1 1/8", Rear 1 1/4".

**Drum Diameter:**—11" (C-14), 13" (C-15).

**Lining:**—Moulded. Width 2". Thickness .200" (C-14), .262" (C-15). Length 22 5/32" (C-14), 24 27/32" (C-15).

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Braking Power:**—55% front wheels, 45% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—Fully release hand brake lever. Remove anchor screw locking wire (left side), adjust anchor screw for .025" clearance between band and drum, set anchor screw with lock wire. Free large adjusting bolt nut (upper end of band), loosen locknut, adjust guide bolt nut to .025" clearance between band and drum, set with locknut. Tighten adjusting bolt nut until tension on either side of guide bolt is just relieved (groove in nut must align with ridge in lockwasher).

**Drum Diameter:**—6" (C-14), 7" (C-15).

**Lining:**—Width 2". Thickness 5/32" (C-14), 3/16" (C-15). Length 16 15/16" (C-14), 21 1/2" (C-15).

**NOTE:**—Clearance at anchor and saddle .005" max.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 7,019,401. Located on right front door hinge post.

**ENGINE NUMBER:** First number C17-1001. Stamped on left side of block between #1 and #2 cylinders. For Engine Number Lettering Data (Special Standard Bore and Bearing Sizes), refer to Chrysler Shop Notes.

**TUNE-UP**

**COMPRESSION:**—Ratio and Pressure as follows:

Ratio	Press. at 1000 R.P.M.	At 100 R.P.M.
6.50-1 std. head	145-155 lbs.	Approx. 117 lbs.
7.45-1 optl. head	160-170 lbs.	Approx. 124 lbs.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type H-10. 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Cam Angle—27° Closed.

Automatic Advance—11° max. at 1850 RPM (distr.).

Vacuum Advance—6° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° ATDC (Std. 6.5-1 head), 9° ATDC (Optl. 7.45-1 head) with correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 7-8 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top edge of bowl.

Accelerating Pump—Inner hole (short stroke)—Summer, Outer hole (max. stroke)—Winter.

Fuel Pump Pressure:  $4\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Int., .010" Exh. (hot). Remove right front wheel & housing to adjust.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B, Type 6744. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne Mod. DP-108 Mitchell No. 6286.

**COIL:** Auto-Lite No. CE-4618. Service Winding (coil less switch and cable) CE-3224JS. Mounted on hood ledge.

Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4001-E-1. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and manual adjustm't. See Electrical Equipment Section for special servicing directions in these distributors.

For complete data, refer to Electrical Equipment Index.

Breaker Gap—Set at .017".

Cam Angle or Dwell—27° closed, 18° open (distrib.).

Breaker Arm Spring Tension—18-20 ounces.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	950	12.....	1900
9.....	1500	18.....	3000
11.....	1850	22.....	3700

**Vacuum Spark Control:**—Provides additional advance for intermediate speed range above idling except when engine is accelerated or operated with wide open throttle.

**Vacuum Spark Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5.1"
3°	6°	8.5"
6°	12°	12"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, lift out. Distributor accessible by taking off cover plate under left front fender.

**IGNITION TIMING**

**IGNITION TIMING:**—Settings for all engs. as follows:

Flywheel Degrees	Piston Position
6.50-1 std. head .....5° ATDC.....	0118" ATDC
7.45-1 optl. head .....9° ATDC.....	0381" ATDC

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.

**NOTE:**—Impulse neutralizer at front of engine marked with 15 one-degree graduations before and after "0" mark at top dead center.

**Timing (Using Timing Light):**—Connect timing light between distributor terminal and battery terminal

CONTINUED ON NEXT PAGE

See Electrical Equipment Section for Regulator wiring with 2 Resistors (After Regulator Serial No. 8R-000001).

## CONTINUED FROM PRECEDING PAGE

on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct mark on impulse neutralizer at front of engine is directly in line with pointer on chain case cover. Loosen advance arm hold-down screw, center pointer on scale (opposite '0' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until test lamp goes out indicating that contacts are just opening, tighten clamp bolt, check spark plug connections.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint.

**Manual Adjustment**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10-30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Mod. EE-22, 1¼" dual downdraft type.

*For complete data, refer to Carburetor Index.*

**Settings (Idle Setting, Float Level, and Accelerating Pump Setting)**: See Tune-Up.

**Fast Idle**—No adjustment required. Throttle should rest on high point of cam with choke valve closed.

**Automatic Choke**—Sisson Type AC-600. See article in Carburetion Equipment Section for adjustments.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1526747 oil-wetted type standard #1526589 oil bath type optional.

**Fuel Pump**—AC. Type I #1521549 combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Motometer Electric. Dash unit—NG-7808-D. Tank Unit—NG-6876-T.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type WH-4-17, RH-4-17 (Export)**. 6 volt, 17 plate, 136 ampere hour capacity (20 hour rate).

**Starting Capacity**—160 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.4 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under front seat on left hand side.

## STARTER

**Auto-Lite Model MAX-4003 or MAX-4003-A**.

**Armature Number**—MAW-2030 for both models.

**Drive**—Magnetic shift outward pinion.

**Cranking Engine**—Approx. 200 amperes at 5.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—31-42 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of fly-wheel housing. Accessible by removing left front wheel and housing cover under fender. To remove, take out two flange mounting screws.

**Starting Switch**—Solenoid Switch Type SS-4101 (MAX-4003), SS-4201 (MAX-4003-A). Controlled through relay by pushbutton on dash. Operative with ignition turned on.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GCO-4801-B (up to Engine No. 1051), GCO-4801-C (after engine no. 1051)**. Armature No. GCO-2006-F. Two brush, straight shunt type with external voltage and current regulation. **Maximum Charging Rate**—28 amps., 8.0 volts, 1850 R.P.M. and above with load or discharged battery. **Charging Rate Adjustment**—No adjustment on Generator. See Regulator section below for Voltage and Current Regulator settings.

Cold Performance Data				Hot			
Amps.	Volts	R.P.M.		Amps.	Volts	R.P.M.	
0	6.4	825		0	6.4	900	
4	6.6	940		4	6.6	1025	
8	6.85	1050		8	6.85	1160	
12	7.1	1175		12	7.1	1310	
16	7.3	1300		16	7.3	1475	
20	7.55	1450		20	7.55	1660	
24	7.8	1610		24	7.8	1880	
28	8.0	1850		28	8.0	2200	

**NOTE**—Cur. regulator limits output to 28 amps. max.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—23-27 ozs. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.85-4.25 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs.

## REGULATOR

**Auto-Lite Model No. VRB-4004-B**. Voltage-Current Type. Consists of Cutout Relay, Vibrating Voltage Regulator and Vibrating Current Regulator in case. *For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

## Cutout Relay

**Cuts In**—6.4-7.0 volts cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open.

Measure at hinge end of core.

## Voltage Regulator

**Setting**—7.5-7.8 volts at 70°F. (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F. (After 8R-000001). See Electrical Equipment Section for complete settings and changes.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.3-7.6 volts (Cold—70°), 7.1-7.4 volts (hot—140°) after 8R-000001. See Setting above.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

## Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).

**To Check**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Current Regulator is defective.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap & Air Gap**—Same as for Voltage Regulator.

## LIGHTING

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in full out position.

**Headlamp Adjustment**—Aim headlamps straight ahead (lenses in place, upper beams lighted and car unloaded) with center of hot spot 2" below center horizontal line of headlamps at 25 feet. With lamp door removed, headlamps may be aimed by means of screw at top (for up and down movement) and one screw (with square shank) at each side for side movement.

**Headlamp Beam Indicator**—In light switch knob. Lighted whenever headlamp upper beams in use.

## Switches

**Lighting**—Chrysler Part No. 655559.

**Instrument Lights**—Chrysler Part No. 652151.

**Foot Selector**—Chrysler Part No. 659512.

**Stop Light**—Chrysler Part No. 661721.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop-Tail	21-3	1158
Beam Indicator, Ign. Sw.	1	51
Parking, Instrument	1½	55
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

**FUSES**—Lighting—20 ampere on back of ammeter.

**HORNS**—Twin horns, blended tone with horn relay.

## ENGINE

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

**Bore**—3¼". **Stroke**—4⅞".

**Piston Displacement**—323.5 cubic inches.

**Rated Horsepower**—33.80 (AMA).

**Developed Horsepower**—130 at 3400 R.P.M.

**Compression Ratio & Pressure**—As follows:

**Ratio** Pressure at 1000 R.P.M. At 100 R.P.M.

6.50-1 std. head.....145-155 lbs.....Approx. 117 lbs.

7.45-1 optl. head.....160-170 lbs.....Approx. 124 lbs.

**Vacuum Reading**—18-21" steady at 6 M.P.H.

**PISTONS**—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3⅞".

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Weight**—16.33 ounces (plus or minus 2 grams).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .022". Skirt .002".

**Replacement Pistons**—See *Chrysler Special Shop Notes*.

**Fitting New Pistons**—Check pistons (at right angles to pin bosses at bottom of skirt) and cylinder bore with micrometer gauge. With feeler (.002") inserted between cylinder wall and piston (side opposite slot), pull to withdraw feeler 5-7 lbs.

**Installing Pistons**—Slot away from valves.

**PISTON RINGS**—Two undercut compression, two oil control rings per piston, all above pin. Lower ring grooves drilled with ten 1/8" oil drain holes (#3), five (#4 groove).

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.007-.015"	.0015-.003"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings**—Furnished standard and .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

**PISTON PIN**—Diameter—55/64". Length—2 3/4".

Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit at 130° F.

**Pin Fit in Rod Bushing**—Thumb push fit at 70° F.

**Replacement Pins**—Furnished standard and .003", .005", .008" oversize. Ream bushing and pin hole.

**CONNECTING ROD**—Weight 36.1 ozs. Length 9".

**Crankpin Journal Diameter**—2 3/16".

**Lower Bearing**—Removable steel-backed, babbitt-lined. Furnished standard and .0015", .010 undersize.

**Clearance**—.001-.003". Sideplay—.006-.011".

**Bearing Adjustment**—None. Install new bearings with bosses engaging grooves in rods and caps.

**Installing Rods**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7) or toward front (#2, 4, 6, 8). Oil hole in lower bearing must be toward camshaft on all rods.

**CRANKSHAFT**—5 bearing. Integral counterweights.

**Journal Diameters**—2 45/64" all bearings.

**Bearing Type**—Removable steel-backed, babbitt-lined. Clearance—.001-.002".

**Bearing Adjustment**—See *Chrysler Shop Notes for Engine Removal (recommended) & Adjustment data*.

**Replacement Bearings & Bearing Caps**—Refer to *Chrysler Shop Notes for complete data*.

**End Thrust**—Taken by flange faces on rear (#5) bearing. Endplay—.003-.007".

**CAMSHAFT**—6 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 13/32"; #5, 1 15/16"; #6, 1 1/8".

**Bearing Type**—Removable steel-backed, babbitt-lined (except #6 machined in crankcase). Clearance—.0015-.0035".

**End Thrust**—Taken between face of removable cast-iron sleeve (carries front bearing) and face of camshaft sprocket. Replace if worn. Endplay—.001-.008".

**Timing Chain**—Morse. Width 1 1/4". Pitch .500". Length 24" or 48 links.

**Camshaft Setting**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES**—Head Diameter Stem Diameter Length  
Intake ..... 1 15/32" ..... 3/40-3/41" ..... 5 5/16"  
Exhaust ..... 1 13/32" ..... 3/40-3/41" ..... 5 5/16"

Seat Angle Lift Stem Clearance

All valves ..... 45° ..... 11/32" ..... .001-.003"

See *Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions*.

**Valve Guides**—Must be 13/16" below top of block. Ream guides after installing .342-.343" (all).

**Valve Springs**—1 1/2" limit of compression.

	Spring Pressure	Spring Length
Valve Closed	46-50 lbs	2 1/32"
Valve Open	104-110 lbs	1 11/16"

**Valve Lifters**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

**Tappet Clearance**—.006" Int., .010" Exh., Hot. Remove right front wheel and housing for access.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 2° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 46° BLDC. Close 4° ATDC.

**To Check Timing**—Set tappet clearance #1 intake valve at .011". This valve should open with #1 piston 2° or .002" BTDC. when 2° line BTDC. on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet cl. .006" (hot).

**LUBRICATION**

**LUBRICATION**—Gear type oil pump on right of engine.

**NOTE**—Check ignition timing whenever oil pump being re-installed on engine.

**Normal Oil Pressure**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve**—Under cap on left side of crankcase. Adjust by turning slotted plug (with cap and locking wire removed) clockwise to increase pressure, counter-clockwise to decrease.

**Crankcase Capacity**—6 quarts (refill).

**CLUTCH**

**CLUTCH**—Borg & Beck Model 11A6. Model #871 stamped on cover. Single plate, dry disc type.

See *Clutch Section for complete data*.

**Facings**—Woven, 2 required. I.D. 6 1/8", O.D. 11". Thickness 1/8". See *Chrysler Special Shop Notes*.

**Adjustment**—Adjust pedal stopscrew so that pedal arm just clears floor board. Free movement of pedal should be 1 11/16". Adjust by turning pedal shaft collar adjusting nut at right of brake pedal stopscrew.

**Removal**—Remove floor board, transmission, see *Transmission Removal* below), remove housing underpan, mark cover and flywheel, remove cover bolts evenly, remove assembly from below.

**TRANSMISSION**

**TRANSMISSION**—Own—All helical gear type with synchronizing shift on second and high gears. See *Transmission Section for complete data*.

**Removal**—Disconnect front and rear U-joints, disconnect hand brake, remove nuts from studs at clutch housing, disconnect release fork pull-back spring and release rod, remove transmission cover assembly, remove unit with two pilot studs in upper stud holes.

**OVERDRIVE**

**Overdrive Transmission**—Warner Model AS15-T85. See *Transmission Section for complete data*.

**Removal**—Same as for standard transmission above after overdrive control has been disconnected.

**UNIVERSALS**

**UNIVERSAL JOINTS**—Detroit Universal—Series 5350. Cross type with roller bearings.

See *Universals Section for complete data*.

**REAR AXLE**

**REAR AXLE (C-17)**—Own—Semi-floating, spiral bevel gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio 4.3-1. Backlash .006-.010". Shim adjustment.**

**Removal**—Remove axle shaft nut, hub and assembly (use hub puller, do not hammer out or bearing damage may result), disconnect brake line at wheel cylinder, remove backing plate (with oil seal). Use shaft puller to remove axle shaft and bearing. With axle shafts removed, differential carrier may be removed by disconnecting rear U-joint at flange and removing housing capscrews.

**Wheel Bearing Adjustment**—Controlled by shims between inner bearing outer race and flanged end of housing. Remove axle shafts and bearings. Add or remove shims (equally on both sides).

**Endplay**—.0025-.005".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS**—Delco—Double acting types.

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension (C-17)**—Conventional tubular section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—4 1/2°-5 1/2° crosswise.

**Caster**—2° plus or minus 1°. Adjust by inserting wedge shims between spring and axle pad on axle.

**Camber**—1/2° plus or minus 1/4°. No adjustment. Manufacturer recommends that no attempt be made to correct camber by bending tubular axle.

**Toe In**—0-1/8". 1/16" preferred. Adjust by changing length of tie rod.

**Steering Geometry**—Outer wheel turned 20°. Inner wheel turned 22°10'.

**STEERING GEAR**

**Steering Gear**—Gemmer Model 370 Worm-&-Roller

See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES (C-17)**—Service—Lockheed hydraulic, double anchor type with Bendix Vacuum Power unit. Hand lever applies brake at rear of transmission.

See *Brake Section for complete data*.

**Wheel Cylinders**—Stepped or two-stage bore type: Front wheel: Front cyl. 1 1/4", Rear 1 3/8".

Rear wheel: Front cyl. 1", Rear 1 1/8".

**Drum Diameter**—13".

**Lining**—Moulded type. Width 2". Thickness 1/4". Length 24 27/32" per wheel.

**Clearance**—.012" toe, .006" heel for each shoe.

**Braking Power**—60% front wheels, 40% rear.

**Hand Brake**—External at rear of transmission.

**Adjustment**—With lever in released position remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is .025", lock anchor screw with wire. Back off adjusting bolt nut until free. Adjust bracket bolt nuts for each end of brake band to .025" clearance (as above), secure with locknuts. Finally tighten adjusting bolt nut until tension on bracket bolt nuts is just relieved at either end.

**Drum Diameter**—7".

**Lining**—Woven type. Width 2 1/2". Thickness 3/16". Length 21 5/8".

**Power Brake Unit**—Bendix Internal Valve type.

See *Brake Section for complete data*.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 7,532,801 (Detroit), 9,709,266 (Canada). On right front door hinge post.

**ENGINE NUMBER:**—First number C-18-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Shop Notes for engine number lettering ('Special Standard' bore and bearing sizes).

## TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 R.P.M.	At 100 R.P.M.
6.2-1 Std. hd.	140-150 lbs.	Approx. 115 lbs.
7.0-1 Optl. hd.	155-165 lbs.	Approx. 120 lbs.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A-7 (Cast Iron Head), Champion H-10 or Auto-Lite AL-7 (Aluminum Head). 14 mm. Metric type. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle 38° (closed). Automatic Advance—12° max. at 1750 RPM (distr.). Vacuum Advance—7° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC (Std. 6.2-1 Head), 3° ATDC (Optl. 7.0-1 Head) with "O" dead center mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb Equipment.

Idle Setting—Idle screw ½-1¼ turn open. Idle speed 300 RPM or 6MPH.

Float Level—5/64" top of float below top edge of bowl.

Accelerating Pump—Center hole normal, Inner hole (Summer) & Outer hole (Winter) for extreme temperatures.

Fuel Pump Pressure: 3½ lbs. max. (Type B & AL), 4¼ lbs. maximum (Type AS & AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end ½ turn counter-clockwise and hook end over stop pin.

**VALVES:** See Valve Timing.

Tappet Clearance:—.008" Intake, .010" Exhaust (hot).

NOTE—.002" additional Exhaust tappet clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, Type 7055.

Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 7075.

**COIL:** Auto-Lite Model CL-4602 or CL-4607, Service Coil (less Switch & Cable) CL-3224S. Mounted on dash. Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927-A.

Capacity—.25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4010C-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

See Electrical Equipment Section for Distributor servicing data.

For complete data, refer to Electrical Equipment Index.

Breaker Gap—Set at .020".

Cam Angle or Dwell—38° (closed), 22° (open).

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Clockwise viewed from top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for

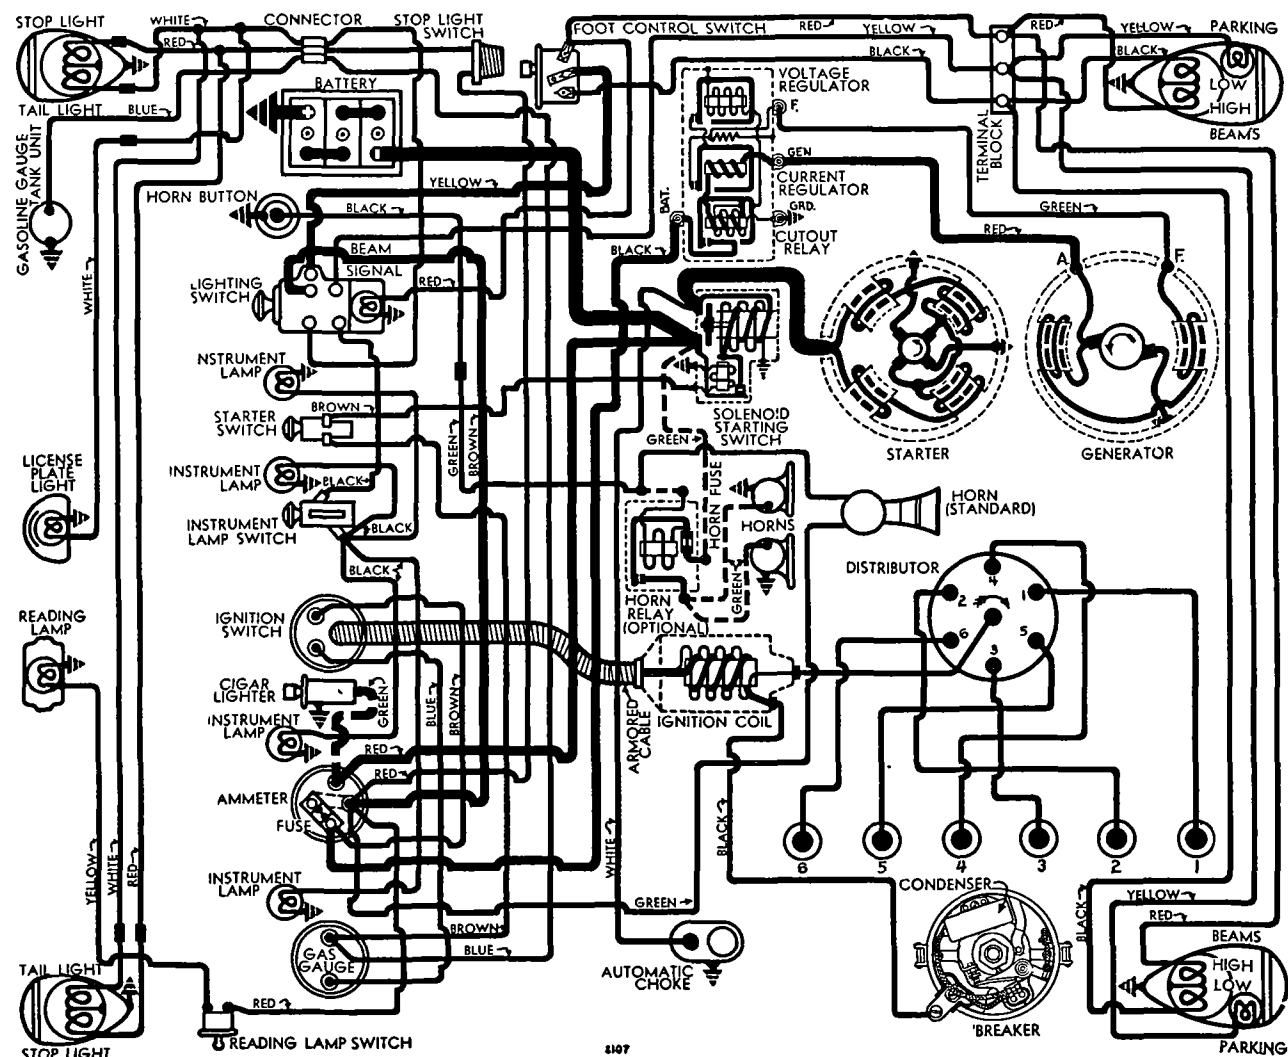

speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Distributor Deg.	Engine Deg.	Vacuum (" of HG.)
Start	0	5"
1	2	6"
3	6	8"
5	10	10"
7	14	12"

**Manual Adjustment**—Provided to compensate for fuel and altitude conditions. See Manual Adjustment Setting.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

See Electrical Equipment Section for Regulator wiring with 2 Resistors (After Regulator Serial N . 8R-000001).

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting (for gasoline of approximately 70 octane rating). See Manual Adjustment Setting (following).

	Flywheel Degrees	Piston Position
6.2-1 Std. hd.	0° TDC.	0000° TDC.
7.0-1 Optl. Al. hd.	3° ATDC.	0040° ATDC.

**NOTE**—Impulse neutralizer at front of engine marked '0' at top dead center with 15 one degree graduations before and after this point.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #8 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with white chalk.

**Manual Adjustment Setting:**—After ignition set as above, road test car and adjust to give slight ping with wide open throttle at speeds of 10-30 MPH. To adjust, loosen hold-down screw and advance (counter-clockwise) retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (Ball & Ball) Model E6M1. 1½" downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stop screw so that idle speed is approximately 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1¼ turns of screw from inner closed or seated position. Readjust throttle stop screw for correct idling speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Idle screw should be set to give highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (Short stroke)—Extremely warm weather or altitudes above 3000 feet.

Center Hole—Normal summer temperatures.

Outer Hole (Long stroke)—Winter temperatures.

**NOTE**—Lean main metering jets (high altitude calibration) may be used at lower altitudes for maximum fuel economy although with considerable reduced speed and power. See Carter (B & B) Jet Specifications in Carburetor Section.

**Fast Idle:**—Integral with carburetor. No adjustment.

**Automatic Choke**—Sission Type AC-758B. See article in Carburetion Equipment Section for data.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528700 oil-wetted type standard. #1528197 oil-bath type optional used in conjunction with oil vent cleaner #1525313.

**Fuel Pump:**—AC. Type B #1522995 or AT #1523647 diaphragm type standard. Type AL #1523137 r AS #1523648 combination fuel-and-vacuum pumps optional. Types AT and AS are 'inverted' design. **NOTE**—Types AT and AS are 'inverted' design.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite (Motometer) Electric. No. NG8733D (dash unit), NG8697T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard, Type WH 2-15, RH 2-15 (Export). 6 volt, 15 plate, 119 A.H. capacity (20 hr. rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.23 volts.

**Grounded Terminal**—Positive (+) terminal. Grounded to transmission.

**Dimensions**—Lgth. 10 5/16". W. 7 1/16". Hgt. 9 5/16".

**Location**—Left side under drivers seat.

## STARTER

**Auto-Lite Model MAX-4020A.** Armature MAW-2030. Drive—Solenoid operated pinion shift type. Drive through overrunning clutch.

**Cranking Engine**—Approx. 160 amperes, 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 " "	3300	5.5	100
2.75 " "	1630	5.0	200
5.5 " "	970	4.5	300
8.7 " "	600	4.0	400
12.0 " "	300	3.5	500
18.5 " "	Lock	3.	640
25.0 " "	Lock	4.	880

**Removal:**—Flange mounted on left front face of fly-wheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch:**—Solenoid Switch Type SS-4206. Controlled through relay by pushbutton on instrument panel. Operative with ignition 'on'.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 170 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—3.5-4.5 volts. Open—1.5-2.5 volts.

**Contact Gap**—.025-.030". **Air Gap**—.005-.007" (closed).

## GENERATOR

### STANDARD

**Auto-Lite Model GDA-4801A, B (Export).** Armature No. GDA-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. See Regulator section for Voltage and Current settings.

**Maximum Charging Rate**—28 amperes, 8.00 volts, 2025 R.P.M. and above with load or discharged battery. (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

### Performance Data

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
4	6.6	4	6.6
8	6.85	8	6.85
12	7.1	12	7.1
16	7.3	16	7.3
20	7.5	20	7.5
24	7.75	24	7.75
28	8.0	28	8.0

**NOTE**—Current reg. limits output to 28 amps.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motor Current**—3.50-4.15 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolts.

**Belt Adjustment:**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATOR:**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

## REGULATOR

**Auto-Lite Model VRB-4004-B.** Voltage & Current Type. Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—.5 ampere min., 3.0 amperes max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" min., .038" max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no.

**To Check (Without breaking seals)**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.3-7.6 volts (cold—70°), 7.1-7.4 volts (hot—140°F.). See Regulator Setting above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger.

**Contact Gap**—.010" min., .020" max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

C N TINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PAGE

## Current Regulator

Setting—27-29 amperes (marked '28' on cover).

To Check (without breaking seals)—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Current Regulator is defective.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower hanger.

Contact Gap & Air Gap—See Voltage Regulator.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by foot control switch with lighting switch in full out position.

Headlamp Adjustment—Aim headlamps straight ahead (upper beam lighted, lenses in place, car unloaded) with center of hot spot 3" below center horizontal line of headlamps at 25 feet.

Headlamp Beam Indicator—In light switch knob. Lighted when headlamp upper beam in use.

## Switches

Lighting—Chrysler Part No. 684038.

Instrument Panel—Chrysler Part No. 685888.

Foot Selector—Chrysler Part No. 659512.

Stop Light—Chrysler Part No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Tail and Stop	3-21	1158
Parking, Beam Indicator	1½	55
Instrument	1½	55
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

**FUSES:**—Lighting (used on early cars)—20 amperes on back of ammeter. Later cars equipped with Circuit Breaker (see below).

Single Horn—Early cars as shown on diagram. On later cars horn feed taken from BAT terminal on regulator with 20 ampere fuse in connector on dash.

Dual Horns—30 amperes on horn relay.

NOTE—New long type (SFE-30) fuse used. Replaces 3AG type.

**CIRCUIT BREAKER:**—Used on later cars. Thermostatic, vibrating type. Mounted on back of ammeter and protects lighting circuits. Limits current to 30 amperes. Not adjustable.

**HORNS:**—Klaxon Model K-26-J Type 2351 Std., Model K-33-S Type 2079 (Low Note), 2080 (High Note) blended tone twin horns operated by horn relay Optl. Auto-Lite Horn Set HC-5105 Deluxe Equipment.

Horn Model Current at 6 volts Air Gap  
2079 (low note) .....11-13 amperes......042-.046"  
2080 (high note) .....10-12 amperes......032-.036"

Horn Relay:—Auto-Lite Model HR-4101. Has 30 ampere fuse mounted on base.

Contacts Close—2.5-3.5 volts.

Contact Gap—.026". Air Gap—.012-.017" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

Bore—3⅜". Stroke—4½".

Displacement—241.5 cubic inches.

Rated Horsepower—27.34 (A.M.A.).

Developed Horsepower—95 HP. (Std. 6.2-1 head), 102 HP. (Optl. 7.0-1 head) at 3600 R.P.M.

Compression Ratio and Pressure—As follows:

Ratio	Pressure at 1000 RPM.	At 1000 RPM.
6.2-1 Std. C.I. hd.	140-150 lbs.	Approx. 115 lbs.
7.0-1 Optl. Al. hd.	155-165 lbs.	Approx. 120 lbs.

Vacuum Reading—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**PISTONS:**—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3⅞".

Weight—17.45 ozs. (plus or minus 2 grams).

Removal—Pistons and rods removed from above.

Clearance—Top .022". See Fitting New Pistons.

Replacement Pistons:—See Chrysler Shop Notes.

Fitting New Pistons:—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" feeler between cylinder wall and piston (pin removed) on side opposite slot. With piston and block at 70°F. pull to withdraw feeler must be 5-7 lbs.

Installing Pistons:—Slot away from camshaft.

**PISTON RINGS:**—2 undercut compression, 2 slotted oil rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compression	⅛"	.007-.015"	.002-.0035"
Oil	5/32"	.007-.015"	.0015-.003"

Replacement Rings:—Furnished std. and .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2⅞".

Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit with piston heated to 130°F.

Pin Fit in Rod Bushing—Thumb push fit at 70°F.

Replacement Pins:—Furnished std., and .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD:**—Weight 31.70 ozs. Length 7⅞".

Crankpin Journal Diameter—2⅞".

Lower Bearing—Removable steel-backed, babbitt-lined. Furnished std. and .002", .010", .012" undersize.

Clearance—.0005-.0025". Sideplay—.0055-.0115".

Bearing Adjustment:—None. Install new bearings with bosses engaging grooves in rod and cap.

Installing Rods:—Oil split hole toward camshaft.

**CRANKSHAFT:**—4 bearing, 9 counterweights (center bolted). Impulse neutralizer mounted on front end.

Journal Diameters—2½" all bearings.

Bearing Type—Steel-backed, babbitt-lined type.

Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for Engine Removal (recommended), Front Main Bearing Cap Removal, Adjustment data, & Crankshaft Oil Seals.

Replacement Bearings & Bearing Caps: Refer to Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

NOTE—Replacement bushings finish reamed.

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain:—Morse #1866 (restricted bend). Width 1". Pitch .500". Length 24" or 48 links.

See Chrysler Special Shop Notes for front end removal for work on timing chain.

Camshaft Setting:—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.340-.341"	4 25/32"
Exhaust	1 17/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

See Chrysler Special Shop Notes for Exhaust Valve seat insert removal and installation.

Valve Guides:—Install with taper end up to ⅞" below top of block, then ream to .342-.343".

Valve Springs:—Free length approx. 2". Limit of compression 1⅞". Spring Pressure Spring Length  
Valve Closed 40-45 lbs. 1¼"  
Valve Open 101-109 lbs. 1 13/32"

Valve Lifters:—Mushroom type. Ream guides from above for following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exhaust (hot). .012" Exh. setting recommended for sustained high speed driving. Valves exccessible by removing right front wheel and fender panel.

NOTE—Self-locking tappet screws used.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 8° BTDC. Close 42° ALDC.

Exhaust Valves—Open 48° BLDC. Close 2° ATDC.

To Check Timing—Set tappet clearance #1 intake valve at .014". This valve should open with piston 8° (.0281") before top dead center with 8° BTDC. mark on impulse neutralizer at front of engine lined up with pointer on chain case cover. Reset tappet clearance at .008" (hot).

## LUBRICATION

**LUBRICATION:**—Gear type oil pump, right of engine. See Chrysler Special Shop Notes for oil pump removal and installation instructions.

Normal Oil Pressure:—30-45 lbs. at 30 M.P.H.

Oil Pressure Relief Valve:—Under plug on left side of engine. Operates at 40 lbs. Adjustable. Change to heavy (green) spring to increase pressure, light (red) spring to decrease.

Crankcase Capacity:—6 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal:**—With water drained and fan belt removed, remove fan blades and pulley (attached by 4 capscrews), disconnect pump hoses, remove nuts from pump mounting studs and lift assembly out.

**Thermostat:**—Fulton. In water outlet on head.

**NOTE:**—Install thermostat with bellows down.

**Setting:**—Start to open 150-155°F. Fully open 176°F.

**Water Capacity:**—20 quarts.

**Drain Valves:**—At lower left corner of radiator and on left side of block in front of distributor.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi). Model #913, 917 (Taxi) stamped on cover. Single plate, dry disc type with new spiral groove type facings and clutch pressure plate oil baffle.

*See Clutch Section for complete data.*

**Facings:**—Molded-woven (spiral grooved), 2 required. Thickness  $\frac{1}{8}$ ". Inside diameter 8",  $6\frac{1}{2}$ " (Taxi). Outside diameter 10", 11" (Taxi).

**Adjustment:**—Adjust stopscrew (to rear of pedal) so that pedal arm just clears floor board. Pedal free movement must be 1". Adjusting nut on fork rod next to release fork.

**Removal:**—Remove floor board, release fork pull-back spring, free clevis pin on release fork rod. Remove transmission (see Transmission Removal below), remove housing underpan, mark cover and flywheel, remove cover bolts, take out assembly from below.

## TRANSMISSION

**TRANSMISSION:**—Own make. All helical gear type with synchro-mesh for second and high speeds.

*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, propeller shaft (see Propeller Shaft Center Bearing below for 7 pass. models), disconnect hand brake cable (remove brake band on cars with overdrive). Remove two

front cover screws, take off nuts on mounting studs (remove two upper mounting studs by installing 2 nuts on outer end of stud and turning studs out), install two pilot studs and withdraw transmission.

## OVERDRIVE

**Overdrive Transmission:** Warner Model AS1-T86A Optl.

*See Transmission Section for complete data.*

**Removal:**—Same as for standard transmission above after overdrive control has been disconnected.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal. Series 4200. Ball and trunnion type with roller bearings. 2 used.

**NOTE:**—Three universals used on 7-pass. sedan.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. *See Chrysler Shop Notes for data.*

## REAR AXLE

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—Standard 4.1-1 (Sedans), 3.9-1 (Coupes), 4.3-1 (7 pass. sedan—all cars with overdrive).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Remove wheel, hub, and drum assembly (using screw type hub puller). Place block under brake pedal, disconnect brake line, remove backing plate and oil seal, pull axle shaft and bearing (Tool C-158). With shafts removed, carrier may be removed by disconnecting rear universal at flange, and removing housing capscrews.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged ends of axle housing. With wheel and hub removed measure endplay with dial indicator. To adjust remove backing plate (see above) and add or remove shims (equally at both sides) to proper clearance. Endplay—.003-.008".

**NOTE:**—Shims supplied .010", .015", .030" thick.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Monroe—Front #676739, Rear #682604. Direct acting, hydraulic type.

**NOTE:**—Delco Direct acting used for export.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

Specifications below apply with no passenger load.

**Kingpin Inclination:**— $4\frac{3}{4}$ -6°.

**Camber:**—Plus  $\frac{1}{4}$ °. Limits minus  $\frac{1}{4}$ ° to plus  $\frac{1}{2}$ °.

**Caster:**— $1\frac{1}{2}$ °. Adjustable.

**Toe In:**— $1/16$ " (0- $\frac{1}{8}$ "). Set long tie rod to  $31\frac{5}{8}$ " (between ball centers). Adjust short rod.

**Steering Geometry:**—Outer wheel 20°. Inner wheel 22°40', 22°50' (7 passenger sedans).

## STEERING GEAR

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "Push-Pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front Wheel—Front cylinder  $1\frac{1}{4}$ ". Rear  $1\frac{3}{8}$ ".

Rear Wheel—Front cylinder  $1\frac{1}{8}$ ", Rear  $1\frac{1}{4}$ ".

**Drum:**—Centrifuse. Diameter—11".

**Lining:**—Moulded. Width 2". Thickness  $13/64$ ". Length (front shoe) 11  $15/32$ ", (rear shoe) 7  $31/32$ ".

**Clearance:**—.012" toe, .006" heel for each shoe.

**Braking Power:**—55% front, 45% rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—*See Chrysler Special Shop Notes.*

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thick.  $5/32$ ". Length 17  $1/16$ ".

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 6,734,001 (C-19), 7,805,501 (C-20). On right front door hinge post.

**ENGINE NUMBER:**—First number C-19—1001 (C-19), C-20—1001 (C-20). Stamped on left side of block between #2 and #3 cylinders.  
See Chrysler Special Shop Notes for engine number lettering data.

**TUNE-UP**

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 R.P.M.	At 100 R.P.M.
6.2-1 std. (C-19)	140-150 lbs.	App. 115 lbs.
6.5-1 std. (C-20), opt. (C19)	150-160 lbs.	App. 117 lbs.
7.45-1 opt. (C-19, C-20)	160-170 lbs.	App. 124 lbs.

**VACUUM READING:**—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A-7 (Cast Iron Head), Champion H-10 or Auto-Lite AL-9 (Aluminum Head). 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018". Cam Angle 27° (Closed).

Automatic Advance—11° max. at 1850 RPM (IGT-4001F-1 Distr.), 12° max. at 2000 RPM (IGT-4001K-1 Distr.). Distr. degrees and RPM.

Vacuum Advance—6° distr. with 12" vacuum (IGT-4001F-1 Distr.), 8° distr. with 16" vacuum (IGT-4001K-1 Distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC (6.5-1 Head—C19 Optl., C20 Std.), 3° BTDC (6.2-1 Head—C19 Std.), 3° ATDC (7.45-1 Head—C19 Optl.). At TDC (7.45-1 Head—C20 Optl.) with dead center "O" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 6 MPH.

Float Level—Fuel level  $\frac{3}{8}$ " below top of bowl.  
Accelerating Pump—Inner hole (min. stroke)—Summer, Outer hole (max. stroke)—Winter.

Fuel Pump Pressure:  $4\frac{1}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Coil is assembled on end of manifold heat valve shaft beside silencer and counterweight assembly.

Setting—With center end of thermostatic coil engaged in heat valve shaft, wind up coil 1 turn counter-clockwise and hook outer end on stop pin.  
**CAUTION:**—Do not wind up coil more than one turn. See that valve and shaft turn freely.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Int., .010" Exh. (hot).

NOTE—.002" additional Exh. clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B. Type 7055 (C-19), 7057 (C-20). Switch connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 7075.

**COIL:** Auto-Lite Model CE-4624, CE-4631 (C19), CE-4626 (C20). Service Coil (less Switch & Cable) CE-3224JS.  
Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-8927.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4001K-1 (C19), IGT-4001F-1 (C20). Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control.

See Electrical Equipment Section for Distributor servicing data.

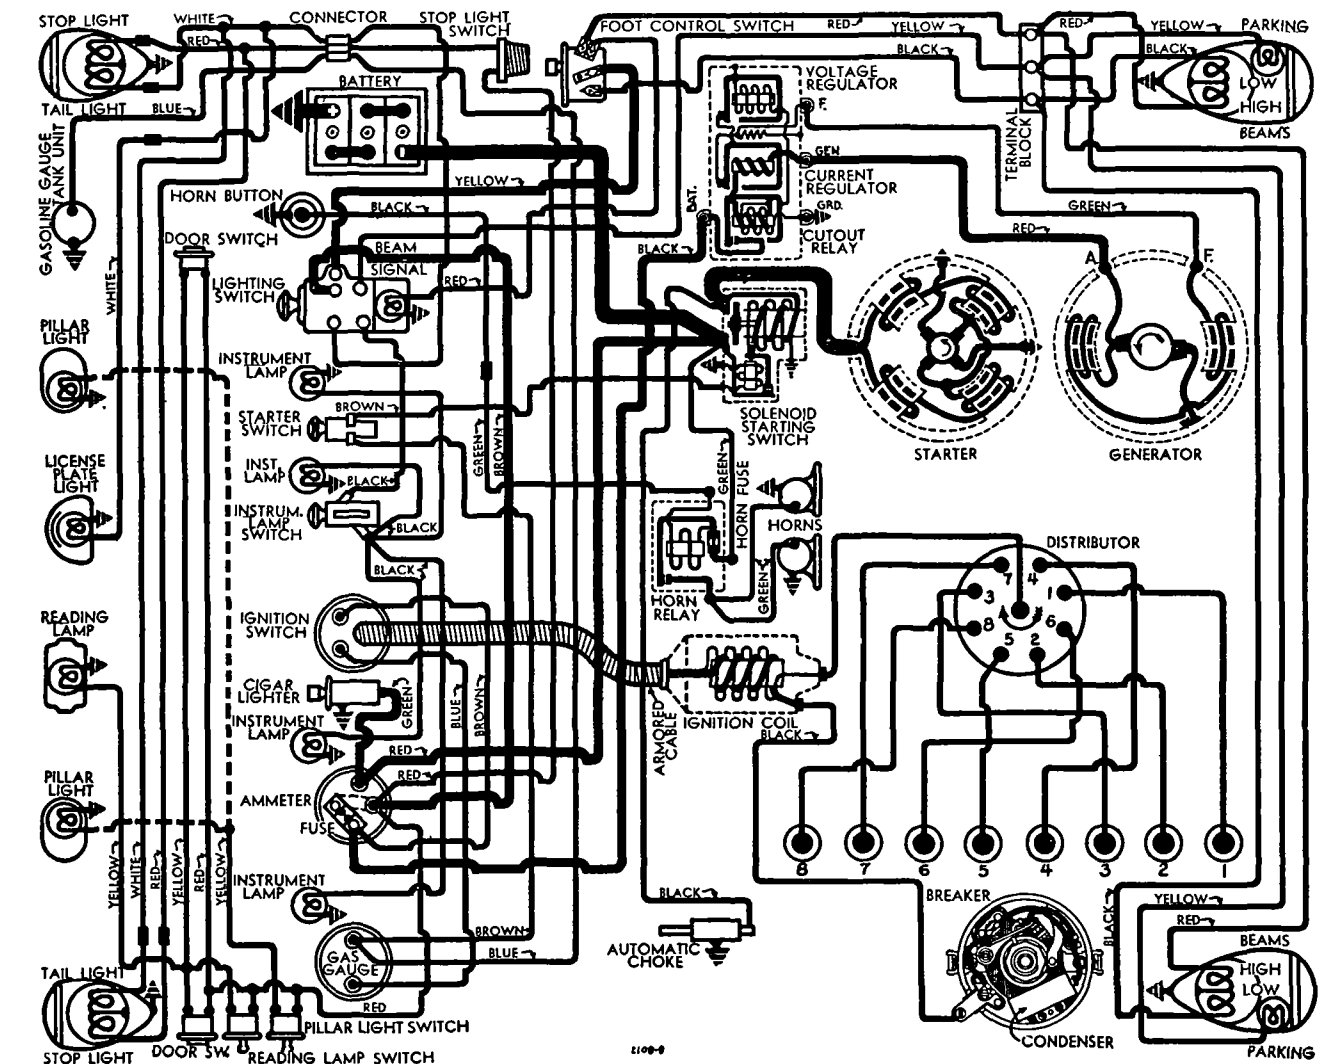

For complete data, refer to Electrical Equipment Index.

Breaker Gap—Set at .018".

Cam Angle or Dwell—27° (closed), 18° (open) with .017" point setting.

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Clockwise viewed from above.

See Electrical Equipment Section for Regulator wiring with 2 Resistors (After Regulator Serial No. 8R-000001).

**Automatic Advance—IGT-4001F-1 Distributor**

Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
4	600	8	1200
6	960	12	1920
9	1500	18	3000
11	1850	22	3700

**Automatic Advance—IGT-4001K-1**

Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	760	10	1420
8	1300	16	2600
10	1650	20	3300
12	2000	24	4000

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for

speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

#### Vacuum Spark Advance—IGT-4001F-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5.1"
.6°	1.2°	6"
4°	8°	9-10"
6°	12°	12"

#### Vacuum Spark Advance—IGT-4001K-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5"
.7°	1.4°	6"
4°	8°	10-11"
6°	12°	13-14"
8°	16°	16"

**Manual Adjustment**—Provided to compensate for fuel and altitude conditions. See Manual Adjustment Setting.

**Distributor Removal**—Mounted on left side of engine. To remove, take out hold-down screw in advance arm, and disconnect vacuum line.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (for gasoline of approximately 70 octane rating). See Manual Adjustment Setting (following).

	Flywheel Deg.	Piston Position
C-19, std. 6.2-1 CI. hd.	3° BTDC	0038° BTDC.
C-19, optl. 6.5-1 AL. hd.	0° TDC.	0000° TDC.
**C-19, optl. 7.45-1 AL. hd.	3° ATDC	0038° ATDC.
C-20, std. 6.5-1 AL. hd.	0° TDC.	0000° TDC.
**C-20, optl. 7.45-1 AL. hd.	0° TDC	0000° TDC.
**Ethyl gasoline setting.		

**NOTE**—Impulse neutralizer at front of engine marked with 15 one degree graduations before and after '0' mark at top dead center..

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator regulator. With #8 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct mark on impulse neutralizer at front of engine lines up with pointer on chain case cover. Loosen advance arm hold-down screw and center pointer on scale (opposite '0' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until test lamp goes out indicating that points are just opening, tighten clamp bolt.

**Timing (Using Sychroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with white chalk.

**Manual Adjustment Setting**—After ignition set as above, road test car to give slight ping with wide open throttle at speeds of 10-30 M.P.H. To adjust, loosen hold-down screw and advance (counter-clockwise) or retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model AAV-2 aircraft type, duplex downdraft carburetor.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative) set throttle stopscrew so that idle speed is 6 M.P.H. Turn one idle adjusting screw (for one barrel) in until engine begins to hesitate or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with second idle adjusting screw (for other barrel). Adjust throttle stopscrew for correct idling speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Adjust idle screws for highest gauge reading.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extremely warm temperatures or above 3000 ft. elevation. Outer Hole (long stroke)—Cold temperatures.

**Fast Idle**—Rotary cam, adjustable type.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust choke connector link length so that choke valve opening is 1/8" with fast idle screw (throttle stopscrew) against first step of fast idle cam.

**Automatic Choke**—Sisson Type AC-600. See article in Carburetion Equipment Section for data.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528334 oil-wetted type standard. #1528706 oil-bath type optional used in conjunction with oil vent cleaner #1525313.

**Fuel Pump**—AC. Type D #1521803 diaphragm pump std. C-19 & C-20. Type I #1523023 combination fuel-and-vacuum pump optional C-19 only. Type AN #1523188 vacuum pump used on C-20 with D pump (above)—mounted separately on right of engine.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Auto-Lite (Motometer) Electric. No. NG8733D (dash unit), NG8897T (tank unit C19), NG8698T (tank unit C20).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

### MODEL C19

**BATTERY (C-19)**—Willard, Type WHT-2-120, RHT-2-120 (Export). 6 volt, 17 plate, 120 AH. capacity (20 hr. rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.9 minutes. Five second voltage—4.46 volts.

**Grounded Terminal**—Positive (+) to transmission.

**Dimensions**—Lgth. 10 5/16". W. 7 1/16". Hgt. 8 13/16".

**Location**—Left side under driver's seat.

## BATTERY

### MODEL C20

**BATTERY (C-20)**—Willard, Type WH-4-17, RH-4-17 (Exp.). 6 volt, 17 plate, 136 A.H. Cap. (20 hr. rate).

**Starting Capacity**—160 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.4 minutes. Five second voltage—4.41 volts.

**Dimensions**—Lgth 11 11/16". W. 7 1/16". Hgt. 9 5/16".

**Grounded Terminal & Location**—As above.

## STARTER

**Auto-Lite Model MAX-4037 (C19), MAX-4038 (C20).** Armature No. MAW-2030.

**Drive**—Solenoid operated pinion shift type. Drive through overrunning clutch.

**Cranking Engine**—Approx. 160-170 amps., 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 " "	3300	5.5	100
2.75 " "	1630	5.0	200
5.5 " "	970	4.5	300
8.7 " "	800	4.0	400
12.0 " "	300	3.5	500
16.5 " "	Lock	3.	640
25.0 " "	Lock	4.	880

**Removal**—Flange mounted on left front face of fly-wheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch**—Solenoid Switch Type SS-4206 (C-19), SS-4208 (C-20). Controlled through relay by pushbutton on instrument panel. Operative with ignition 'on'.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

### STANDARD

**Auto-Lite Model GCO-4801-C, GCO-4801-D Exp.** Two brush, straight shunt type with external voltage and current regulation. Air cooled.

**Maximum Charging Rate**—28 amps., 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator.

**Charging Rate Adjustment**—No adjustment on Generator. See Regulator section below for Voltage and Current Regulator settings.

Cold Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	825	0	6.4	900
4	6.6	940	4	6.6	1025
8	6.85	1050	8	6.85	1160
12	7.1	1175	12	7.1	1310
16	7.3	1300	16	7.3	1475
20	7.55	1450	20	7.55	1660
24	7.8	1610	24	7.8	1880
28	8.0	1850	28	8.0	2200

**NOTE**—Cur. regulator limits output to 28 amps. max.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—23-27 ozs. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.85-4.25 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATOR**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

CONTINUED N NEXT PAGE

C NTINUED FR M PRECEDING PAGE

**REGULATOR**

**Auto-Lite Model VRB-4004-B. Voltage & Current Type.** Consists of Cutout Relay, Vibrating Voltage and Current Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.* NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

**Voltage Regulator**

**Setting**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no. **To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.3-7.6 volts (cold 70°F.), 7.1-7.4 volts (hot—140°F.). See Regulator Setting above.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap**—.010-.020" (armature against stop pin). **Air Gap**—.0595-.0625" with contacts just opening.

**Current Regulator**

**Setting**—27-29 amperes (Marked '28' on cover).

**To Check**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Current Regulator is defective.

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by foot switch (lighting switch in full out position).

**Headlamp Adjustment**—Aim headlamps straight ahead (upper beam lighted, lenses in place, car unloaded) with center of hot spot 2" below center horizontal line of headlamps at 25 feet.

**Headlamp Beam Indicator**—In light switch knob. Lighted when headlamp upper beam in use.

**Switches**

**Lighting**—Chrysler No. 684038.

**Foot Selector**—Chrysler No. 659512.

**Instrument**—Chrysler No. 685888.

**Stop Light**—Chrysler No. 677112.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Tail and Stop	3-21	1158
Parking, Beam Indicator	1½	55
Instrument	1½	55
Dome	15	87
Rear License	3	63

**MISC. ELECTRICAL**

**FUSES**—Lighting (used on early cars)—20 amperes on back of ammeter. Later cars equipped with Circuit Breaker (see below).

**Dual Horns**—30 ampere (Long Type SFE-30) on horn relay. Do not use old type 3AG.

**CIRCUIT BREAKER**—Used on later cars. Thermostatic, non-adjustable, vibrating type. Mounted on back of ammeter and protects lighting circuits. Limits current to 30 amperes.

**HORNS**—Klaxon Model K-33-S. Type 2079 (low note), 2080 (high note). Blended tone twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2079 Low Note	11-13 amperes	.042-.046"
2080 High Note	10-12 amperes	.032-.036"

**Horn Relay**—Auto-Lite Model HR-4101.

**Contacts Close**—2.5-3.5 volts.

**Contact Gap**—.026". **Air Gap**—.012-.017" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**: 8 Cylinder, "L" head type.

**Bore**—3¼". **Stroke**—4½" (C19), 4⅞" (C20).

**Displacement**—298.6 cu. ins. (C19), 323.5 cu. ins. (C20).

**Rated HP**—33.80.

**Developed Horsepower**—For each head as follows:

Model	Compression Ratio	Horsepower
C19 Std.	6.2-1 Cast Iron	110 at 3400 RPM
C19 Optl.	6.5-1 Aluminum	115 at 3400 RPM
C19 Optl.	7.4-1 Aluminum	122 at 3400 RPM
C20 Std.	6.5-1 Aluminum	130 at 3400 RPM
C20 Optl.	7.45-1 Aluminum	138 at 3400 RPM

**Compression Ratio**—As listed above.

**Compression Pressure**—For each head as follows:

	1000 RPM	Pressure	100 RPM
C19 6.2 Head	140-150 lbs.	Approx.	115 lbs.
C19, C20 6.5 Head	150-160 lbs.	Approx.	117 lbs.
C19, C20 7.4 Head	160-170 lbs.	Approx.	124 lbs.

**Vacuum Reading**—18-21" steady at 6 M.P.H.

**PISTONS**—Aluminum alloy, U-slot, cam ground type with anodized finish. **Length**—3⅞".

**Weight**—16.33 ozs. (plus or minus 2 grams).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .021". See Fitting New Pistons.

**Replacement Pistons**—See Chrysler Special Shop Notes.

**Fitting New Pistons**—Check piston size with micrometer at right angles to pin bosses at bottom of skirt. Insert .002" feeler between cylinder wall and piston on side opposite slot. With piston and block at 70°F. pull to withdraw feeler 5-7 lbs.

**Installing Pistons**—Slot away from camshaft.

**PISTON RINGS**—2 undercut compression, 2 slotted oil rings per piston, above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	⅞"	.007-.015"	.002-.0035"
Comp. (#2)	⅞"	.007-.015"	.0015-.003"
Oil	5/32"	.007-.015"	.0015-.003"

**Replacement Rings**—Furnished .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

**PISTON PIN**—Diameter—55/64". **Length**—2¾".

Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit with piston heated to 130°F.

**Pin Fit in Rod Bushing**—Thumb push fit at 70°F.

**Replacement Pins**—Furnished std. and .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD**: **Weight**—35.38 ozs. (C19), 34.37 ozs. (C20). **Length**—9 3/16" (C19), 9" (C20).

**Crankpin Journal Diameter**—2 3/16".

**Lower Bearing**—Removable steel-backed, babbitt-lined. **Furnished** .002", .010", .012" undersize.

**Clearance**—.0005-.0025". **Sideplay**—.005-.0115".

**Bearing Adjustment**—None. Install new bearings with bosses engaging grooves in rods and caps.

**Installing Rods**—Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil spit hole toward camshaft.

**CRANKSHAFT**—5 bearing, 8 counterweights, with impulse neutralizer mounted on forward end.

**Journal Diameters**—2 45/64" all bearings.

**Bearing Type**—Steel-backed, babbitt-lined type.

**Clearance**—.001-.002".

**Bearing Adjustment**—See Chrysler Shop Notes for Engine Removal (recommended), Adjustment directions, and Crankshaft Oil Seals.

**Replacement Bearings & Bearing Caps**: Refer to Chrysler Shop Notes for complete data.

**End Thrust**—Taken by flange faces on rear (#5) bearing. **Endplay**—.003-.007".

**CAMSHAFT**—6 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1⅞".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #6 machined in crankcase).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others). NOTE—Replacement bushings finish reamed.

**End Thrust**—Taken between face of removable cast-iron sleeve (carries front bearing) and face of camshaft sprocket. Replace if worn. **Endplay**—.001-.008".

**Timing Chain**—Morse #1866 (restricted bend). Width 1¼". Pitch .500". Length 47 links or 23½". NOTE—Whitney #CLG-205 optional (same specifications). See Chrysler Special Shop Notes for front end removal for work on timing chain.

**Camshaft Setting**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	340-.341"	5½"
Exhaust	1 13/32"	340-.341"	5½"

**Seat Angle** **Lift** **Stem Clearance**

All valves 45° 11/32" .001-.003"

See Chrysler Special Shop Notes for Exhaust Valve seat insert removal and installation.

**Valve Guides**—Install with taper end up 13/16" below top of block, then ream to .342-.343".

**Valve Springs**—Constant pitch type. Free length approx. 2 19/64". Limit of compression 1 29/64".

	Spring Pressure	Spring Length
Valve Closed	52-58 lbs.	2 1/32"
Valve Open	122-130 lbs.	1 11/16"

**Valve Lifters**—Mushroom type. Ream guides from above for following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:** .006" Intake, .010" Exhaust (hot). .012" Exh. setting recommended for sustained high speed driving. Valves accessible by removing right front wheel and fender panel.  
**NOTE**—Self-locking tappet screws used.

**Valve Timing:**—See Camshaft Setting above.  
**Intake Valves**—Open 2° BTDC. Close 44° ALDC.  
**Exhaust Valves**—Open 46° BLDC. Close 4° ATDC.  
**To Check Valve Timing**—Set tappet clearance #1 intake valve at .011". This valve should open with #1 piston 2° (.002") BTDC. when 2° BTDC. line on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance .006" (hot).

## LUBRICATION

**LUBRICATION:**—Gear type oil pump, right of engine.  
*See Chrysler Special Shop Notes for oil pump removal and installation instructions.*

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under cap on left side of engine. Adjust by turning slotted plug (with cap and lock wire removed) clockwise to increase pressure, counter-clockwise to decrease pressure.

**Crankcase Capacity:**—6 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Water Pump—Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal**—With water drained and fan belt removed, remove fan blades and pulley (attached by 4 capscrews), disconnect pump hoses, remove nuts from pump mounting studs and lift assembly out.

**Thermostat:**—Fulton. In water outlet on cyl. head.  
**NOTE**—Install thermostat with bellows down.

**Setting**—Start to open 150-155°F. Fully open 176°F.

**Temperature Gauge**—Motometer (Auto-Lite) Vapor tension type, Part No. H-9063.

*See Miscellaneous Section for complete data.*

**Water Capacity:**—20 quarts.

**Drain Valves:**—At lower left corner of radiator and on left side of block in front of distributor.

## CLUTCH

**Borg & Beck Model 11A6.** Single plate, dry disc type with new spiral grooved type facings and pressure plate oil baffle.

**NOTE**—Clutch has assembly number stamped on cover: #916 (C19), #915 (C20).

*See Clutch Section for complete data.*

**Facings**—Molded-woven (spiral grooved type). 2 required. I.D. 6½". O.D. 11". Thickness ⅛".

**Adjustment**—Adjust pedal stop screw so that pedal just clears floor board. Free movement of pedal should be 1". To adjust, turn adjusting nut on upper end of throw-out shaft connecting rod (C19), on connecting rod at clutch release fork (C20).

**Removal:**—Remove floor board, release fork pull-back spring, free clevis pin on release fork rod. Remove transmission (see Transmission Removal below), remove housing underpan, mark cover and flywheel, remove cover bolts, lower assembly out.

## TRANSMISSION

### M DEL C19

**TRANSMISSION:**—Own make—All helical gear type with synchro-mesh for second and high speeds. Warner Mod. AS2-T85A overdrive transmission optl.  
*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, propeller shaft, disconnect hand brake cable (remove brake band and drum on cars with overdrive). Place jack under engine, remove engine rear supports. Remove two front cover screws, nuts on mounting studs, install two pilot studs and withdraw transmission.

## TRANSMISSION

### MODEL C20

**TRANSMISSION:**—Warner Model AS18-T85. Helical gear type with synchro-mesh on second and high speeds, overdrive transmission.

*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, disconnect hand brake cable, remove propeller shaft. Disconnect clutch release fork pull rod (at clevis pin) and spring (release bearing assembly attached to transmission and withdraw with it). Place jack under rear of engine, remove rear engine supports. Remove two front cover screws, take off nuts on mounting studs, install two pilot studs in upper holes and withdraw transmission. **NOTE**—When installing, release fork fingers must align with groove in release bearing sleeve.

## OVERDRIVE

**Overdrive Transmission:** Warner Model AS2-T85A Optl. on Model C19. Overdrive unit used with this transmission is same as used with Warner Model AS18-T85 Transmission which is Std. on Model C20.  
*See Transmission Section for complete data.*

**Removal**—Same as for standard transmission above after overdrive control has been disconnected.

## UNIVERSALS

**Detroit Universal.** Series 4400 Ball-and-Trunion type (C19), Series 5350 Cross Type (C20). Two used. Universals are roller bearing types.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—3.91-1 (C19 Std.), 4.3-1 (C19 with Overdrive), 4.55-1 (C20 Std.).

**Backlash**—.006-.010". Screw adjustment.

**Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller). Place block under brake pedal, disconnect brake line, remove backing plate and oil seal, pull axle shaft and bearing (Tool C-158). With shafts removed, carrier may be removed by disconnecting rear universal at flange and removing housing capscrews.

**Wheel Bearing Adjustment**—Controlled by shims at flanged ends of axle housing. With wheel and hub removed measure endplay with dial indicator. To adjust, remove backing plate (see above) and add or remove shims (equally at both sides) to proper clearance. **Endplay**—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Monroe—Front #683091. Rear #682604. Direct acting hydraulic type.  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

Specifications below apply with no passenger load.

**Kingpin Inclination**—4¾-6°.

**Camber**—¼° preferred. Minus ¼° to plus ½°.

**Toe-In**—1/16" (0-⅛"). On C19, set long tie rod to 30 25/32" between ball centers, adjust short rod for correct toe-in. On C20, adjust both tie rods equally.

**Caster**—Limits ½-2½°. (C19), 1-3° (C20).

**Steering Geometry**—Outer wheel turned 20°. Inner wheel turned 22°0' (C19), 22°15' (C20).

## STEERING GEAR

**Steering Gear:** Gemmer Model 335 (C19), 375 (C20), Worm-and-Roller type with "Push-Pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

### MODEL C19

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders**—Stepped or two-stage bore type: Front wheel—Front cylinder 1¼". Rear 1¾". Rear Wheel—Front cylinder 1⅝". Rear 1¾".

**Drum**—Centrifuge. Diameter—12".

**Lining**—Moulded. Width 2". Thickness 13/64". Length per shoe 12 9/16".

**Clearance**—.012" toe, .006" heel, for each shoe.

**Braking Power**—55% front, 45% rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes.*

**Drum**—Cast-iron. Diameter—6".

**Lining**—Width 2". Thick. 5/32". Length 17 1/16".

## BRAKES

### MODEL C20

**BRAKES:**—Service—Lockheed hydraulic, double anchor type with Bendix Vacuum Power unit. Hand lever applies brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders**—Stepped or two-stage bore type. **Drum**—14". Centrifuge.

**Lining**—Molded. Width 2½". Thickness ¼". Length per shoe 14 21/32".

**Clearance**—Toe .012", Heel .006", for each shoe.

**Braking Power**—55% Front wheels, 45% Rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes.*

**Drum**—7". Cast-iron.

**Lining**—Width 2½". Thick. 3/16". Length 21½".

**Power Brake Unit:**—Bendix Internal Valve type.

*See Brake Section for complete data.*

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post.  
 Detroit Canada  
 Royal .....7,574,001 & up.....9,712,121 & up  
 Royal Windsor .....6,948,301 & up.....9,712,121 & up  
**ENGINE NUMBER:**—First number C-22-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Special Shop Notes for engine number lettering data.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:  
 Ratio Pressure at 1000 RPM. At 100 RPM.  
 6.5-1 cast-iron hd. 140-150 lbs. Approx. 115 lbs.  
 7.0-1 aluminum hd. 150-160 lbs. Approx. 120 lbs.  
**NOTE**—7.0-1 al. head standard on 7 pass. sedan.  
**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.  
**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 (Cast Iron Head), Type AL-6 (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.  
 Breaker Gap—.020". Cam Angle 38° (closed).  
 Automatic Advance—12° max. at 1750 RPM (distr.).  
 Vacuum Advance—7° distr. with 12" vacuum (IGS-4102-1), 11° distr. with 17" vacuum (IGS-4102D-1).

**IGNITION TIMING:** See Ignition Timing.  
 Std. Setting—At TDC. with "DC" dead center mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.  
 Idle Setting—Idle screw ½-1¼ turns open. Idle speed 300 Engine RPM or 6 MPH.  
 Float Level—5/64" top of float below top edge of bowl.  
 Accelerating Pump—Center hole normal. Inner hole (Summer), outer hole (Winter) for extreme temperatures.

**Fuel Pump Pressure:** 3½ lbs. max. (Type B & AL), 4¼ lbs. max. (Type AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end ½ turn counter-clockwise and hook end over stop pin.  
**CAUTION**—Do not wind coil up more than ½ turn.

**VALVES:** See Valve Timing.  
 Tappet Clearance:—.008" Intake, .010" Exhaust (hot). Remove right front wheel and housing panel for adjustment. **NOTE**—Tappet screws are self-locking (no locknuts). .002" additional exhaust tappet clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R. Model 8054 Connected to coil by armored cable.  
**Ignition Lock:**—Yale & Towne.

**COIL** Auto-Lite Model IG-4657. Service Coil (less Switch & Cable) IG-3224JS. Mounted on dash.  
 Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.  
 Capacity—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4102-1, IGS-4102D-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Note**—IGS-4102-1 distributor used up to Engine No. 6247 (U.S.), 1540 (Canada). D-1 after these numbers.  
**Breaker Plate Identification**—Maximum vacuum advance limited by slot and marked (#7—IGS-4102-1, #11—IGS-4102D-1) stamped on plate.

**Breaker Gap**—Set at .020".

**Cam Angle or Dwell**—38° (closed), 22° (open).

**Breaker Arm Spring Tension**—18-20 ounces.

**Rotation**—Clockwise viewed from the top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	700	10	1400
7	1000	14	2000
9	1300	18	2600
11	1600	22	3200
12	1750	24	3500

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit)

### Vacuum Advance—IGS-4102-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5"
3°	6°	8"
5°	10°	10"
7°	14°	12"

### Vacuum Advance—IGS-4102D-1

Start	0°	5"
3°	6°	8-9"
7°	14°	12-13"
11°	22°	17"

**Manual Adjustment**—Provides 10° advance or retard from center '0' position. See Ignition Timing  
**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting (correct for fuel of 70 octane rating at low altitudes for cast-iron head, premium fuel for aluminum head) shown below. See Manual Adjustment (following) for recommended correction (not to exceed 4° either way) dependent on fuel regularly used and operating conditions. **NOTE**—Use Ethyl fuel with 7.0-1 hd.

### Flywheel Degrees Piston Position

All Engines ..... 0° TDC. .... .0000° TDC.

**NOTE**—Impulse neutralizer marked 'DC' at TDC point with 15 - 1° graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain case cover. Loosen lock plate hold-down screw, center pointer on scale, tighten screw. Loosen lock plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check manual adjustment setting as directed below.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (correct mark filled in with paint or chalk), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Standard ignition setting should be varied not more than 4° (piston 4° or .007" before or after top dead center for standard cast-iron head) so that slight ping noticeable between 10 and 30 M.P.H. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**CARBURETION:**—Carburetor. Carter (Ball & Ball) Model E6N1 (first cars), E6N2 (later cars), 1½" downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm (fast idle and automatic choke inoperative), adjust throttle stop-screw so that idle speed is approximately 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1¼ turns of screw from inner closed or seated position. Readjust throttle stop-screw for correct idle speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Idle screw should be set to give highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (Short stroke)—Extreme hot temp. Center Hole—Normal summer temperatures. Outer Hole (Long stroke)—Winter temperatures.

**NOTE**—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See Carter (B&B) Jet Table in Carburetor Section for complete jet data.

**Fast Idle:**—Integral type. No adjustment.

**Automatic Choke:**—Sisson Type AC-758B.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1529041 oil-wetted type standard. #1529042 oil-bath type optional.

**NOTE**—#1525313 crankcase vent cleaner used.

**Fuel Pump:**—AC Type AT #1523912, Type B #1523914 (RHD) diaphragm type standard. Type AL #1523915 comb. fuel-and-vacuum pump optl. (RHD).

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite electric type gauge. No. NG-9064D (dash unit), NG-8989T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard Type SW-2-119. 6 volt, 15 plate, 119 Ampere Hour capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.3 volts.

**Grounded Terminal**—Positive (+) grounded to transmission case.

**Dimensions**—Lgth. 10 5/16". W. 7 1/16". Hgt. 9 5/16".

**Location**—Left side under front seat.

## STARTER

**Auto-Lite Model MAX-4020A. Armature MAW-2030.**

**Drive**—Overrunning clutch (solenoid pinion shift).

**Cranking Engine**—Approx. 160 amperes, 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Torque		Performance Data		
		R.P.M.	Volts	Amperes
0	ft. lbs.	5300	5.5	65
.65	" "	3300	5.5	100
2.75	" "	1630	5.0	200
5.5	" "	970	4.5	300
8.7	" "	600	4.0	400
12.0	" "	300	3.5	500
16.5	" "	Lock	3.0	640
25.0	" "	Lock	4.0	880

**Removal:**—Flange mounted on left front face of fly-wheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch:**—Solenoid Switch Type SS-4206. Controlled through relay by pushbutton on instrument panel. Operative with ignition 'on'.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 170 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—3.5-4.5 volts. **Open**—1.5-2.5 volts. **Contact Gap**—.025-.030". **Air Gap**—.005-.007" (closed).

## GENERATOR

### STANDARD

**Auto-Lite Model GDA-4801A. Armature No. GDF-2006F.** Two brush, shunt wound type with vibrating voltage and current regulation. Air cooled.

**Charging Rate Adjustment**—Adjusted by changing Voltage & Current Regulator settings (no adjustment at generator). See Regulator data below.

**Maximum Charging Rate**—28 amperes, 8.0 volts, 2025 R.P.M., 20 M.P.H. with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Cold		Performance Data		Hot	
		Amperes	R.P.M.	Amperes	R.P.M.
0	Volts	6.4	930	0	6.4
4	Volts	6.6	1060	4	6.6
8	Volts	6.85	1210	8	6.85
12	Volts	7.1	1350	12	7.1
16	Volts	7.3	1500	16	7.3
20	Volts	7.5	1660	20	7.5
24	Volts	7.75	1830	24	7.75
28	Volts	8.0	2025	28	8.0

**NOTE**—28 amperes is current regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—3.50-4.15 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATOR:**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

## REGULATOR

**Auto-Lite Model VRB-4004B. Voltage & Current Type.** Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case n dash. *For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 amperes min., 3.0 amperes max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" min., .038" max. with contacts pen. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage is steady. Voltage reading should be 7.3-7.7 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section **Contact Gap**—.010-.020" (armature against stop pin). **Air Gap**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH., charging battery, add load (use bank of headlamp bulbs, r turn on car lights and

## C NTINUED FR M PRECEDING PA E

discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 28 amperes. If more than slight excess noted, regulator is defective.

Adjustment, Contact Gap, Air Gap—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused type. Upper and lower beams controlled by beam control switch on toeboard (lower beam deflected slightly to right—2331 bulb).

**Headlamp Adjustment:**—Place unloaded car 25' from wall with upper beams lighted and lenses in place. Aim headlamps straight ahead with center of hot spot 3" below center horizontal line of headlamps. Adjusting screws at top of lamp under lens ring. Center screw controls up and down movement. Screw to right controls horizontal movement.

**Beam Indicator:**—In light switch knob. Lighted whenever headlamp upper beam in use.

## Switches

**Lighting:**—Chrysler No. 694069 or 852031.

**Beam Selector:**—Chrysler No. 853323 or 659512.

**Instrument:**—Chrysler No. 695949.

**Stop Light:**—Chrysler No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	1½	55
Beam Indicator	1½	55
Overdrive Indicator	1	51
Dome (reading)	15	87
Pillar (7 passenger)	6	81
Rear License	3	63

## MISC. ELECTRICAL

**FUSES:**—Single Horn—20 ampere. In horn feed lead.  
Dual Horns—30 ampere. On horn relay.  
Windshield Wiper—14 amp. On switch or lead.  
Transmission Overdrive Control—20 amp. On relay.

**CIRCUIT BREAKER:**—Chrysler No. 694571 (A-L, #9062-A). Thermostatic type. Mounted on ammeter and protects lighting circuits. Limits current to 35 amperes at 5 minutes. Not adjustable.

**HORNS:**—Single—Auto-Lite Model HH-4001 Air Note.  
Dual—Auto-Lite HH or HL-4001 (low pitch), HH or HL-4002 (high pitch). Horns operated by horn relay.

**Horn Relay:**—Auto-Lite Model HR-4101. 30 ampere fuse mounted on base. Contacts Close—2.5-3.5 volts  
Contact Gap—.026". Air Gap—.012-.017" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

Bore—3½". Stroke—4½".

Displacement—241.5 cu. ins. Rated HP.—27.34.

Developed Horsepower—100 (Std. 6.5-1 hd.), 107 HP. (Optl. 7.0-1 hd.—Std. 7 pass) at 3600 RPM.

Compression Ratio and Pressure—As follows:

Ratio	Pressure at 1000 RPM.	At 100 RPM.
6.5-1 cast-iron hd.	140-150 lbs.	Approx. 115 lbs.
7.0-1 aluminum hd.	150-160 lbs.	Approx. 120 lbs.

**Vacuum Reading:**—Steady 18-21" idling at 6 MPH.

See Chrysler Shop Notes for engine removal instructions.

**PISTONS:**—Aluminum alloy, U-slot, Cam-ground, with Anodic finish. Length—3½". Weight—17.45 ozs.

Removal—Pistons and rods removed from above.  
Clearance—Top .022". Skirt .0005-.0010".

**Original Bore & Piston Sizes, Replacement Pistons:**—See Chrysler Shop Notes for sizes and markings.

**Fitting New Pistons:**—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" feeler between cylinder wall and piston (pin removed) on side opposite slot. With piston and block at 70° F. pull to withdraw feeler 5-7 lbs.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	⅞"	.007-.015"	.002-.004"
Comp. (#2)	⅞"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings:**—Std. & .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2⅞".

Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston:**—Thumb push fit (piston@130°).

**Pin Fit in Rod Bushing:**—Thumb push fit at 70° F.

**Replacement Pins:**—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight 31.70 ozs. Length 7⅞".

Crankpin Journal Diameter—2⅞".

**Lower Bearing:**—Removable, steel-backed, babbitt-lined. Furnished std. & .002", .010", .012" undersize.  
Clearance—.0005-.0025". Sideplay—.0055-.0115".

**Bearing Adjustment:**—None (no shims). Install bearings with boss engaging groove in rod and cap.

**Installing Rods:**—Oil spit hole toward camshaft.

**CRANKSHAFT:**—4 bearing type with 9 counterweights.

Journal Diameters—2½" all bearings.

**Bearing Type:**—Removable, precision type steel-backed, babbitt-lined. Clearance—.001-.002".

**Bearing Adjustment:**—See Chrysler Shop Notes for Engine Removal (recommended), front main bearing cap removal, adjustment data, & crankshaft oil seals.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type:**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).  
Clearance—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:**—Morse Type 1866-N, No. 2661. Width 1". Pitch .500". Length 24" or 48 links.

**Camshaft Setting:**—Mesh chain with sprockets turned to that '0' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake	1 21/32"	340-.341"	4 25/32"
Exhaust	1 17/32"	340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.001-.003"

See Chrysler Shop Notes for Exh. Valve Seat Insert data.

**Valve Guides:**—Remove from above. Press new guides in (tapered end up) so upper end ⅞" below top of block, then finish ream to .342-.343".

**Valve Springs:**—Free length approx. 2". Limit of compression 1⅞".

Valve Closed	Spring Pressure	Length
40-45 lbs.	1¼"	
101-109 lbs.	1 13/32"	

**Valve Lifters:**—Mushroom type. Stem diam. ⅝". Ream holes from above (pilot in valve stem guide) for lifters furnished .001", .008", .030", .060" oversize.

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .010" Exh. (hot). .002" additional exhaust clearance recommended for sustained high speed driving. NOTE—Tappet screws self-locking type (no locknuts). Remove right front wheel and housing panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 8° BTDC. Close 42° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 2° ATDC.

**Valve Timing Check:**—Set tappet clearance #6 intake valve at .014". This valve should open with piston 8° (.0281") before top dead center with 8° BTDC. mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet cl. at .008" hot.

## LUBRICATION

**LUBRICATION:**—Gear type pump, right of engine.

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Under cap below starter. Opens at 40-45 lbs. To increase pressure use heavy (green) spring, to decrease use light (red) spring.

**Crankcase Capacity:**—5 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

**Radiator Core Removal:**—See Chrysler Shop Notes.

**Water Pump:**—Packless type, belt-driven.

See Water Pump Section for complete data.

**Removal:**—Drain water, remove hood side panels, fan blade assembly, pulley, radiator outlet hose at pump, by-pass (with small hose), pump mounting stud nuts, fan belt adjusting strap at generator.

**Thermostat:**—Fulton. In water outlet on cyl. head.

**Setting:**—Start to open 157-162° F. Fully open 183° F.

**Temperature Gauge:**—Motometer (Auto-Lite) Vapor tension type. Part No. H-9063.

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi). #930 (10A7), #931 (11A6) stamped on cover. Single plate, dry disc type with spiral groove facings, pressure plate oil baffle and new Over-center return spring. See Clutch Section for complete data.

**Facings:**—Woven & compressed, 2 required. Inside Diam. 7" (10A7), 6½" (11A6). Outside Diam. 10" (10A7), 11" (11A6). Thickness .125" (all).

**Adjustment:**—Pedal should just clear toeboard (adjust stop screw on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal:**—Remove floorboard, unhook clutch fork pull-back spring and take out clevis pin in connecting link. Remove transmission (see below) and housing underpan, mark cover and flywheel, remove clutch cover screws evenly, lower assembly out.

## TRANSMISSION

**TRANSMISSION:**—Warner. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear low and reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Remote control type.

*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, battery ground cable, disconnect front and rear U-joints (see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.), hand brake cable at clevis, speedometer cable, and gearshifter rod and cable at lever on case. Remove mounting stud nuts, cover assembly and 2 upper mounting studs (insert pilot studs).

## OVERDRIVE

**Overdrive Transmission:** Warner Model AS3-T86A with electrical "kick-down" control Optl.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Auto-Lite SSB-4001.

**Overdrive Solenoid Indicator:**—Jewel light on instrument panel above speedometer. Lights whenever car shifted from overdrive to direct drive through accelerator pedal switch.

**Throttle Switch Setting:**—3/32" gap between switch plunger & contact screw (throttle just wide open).

**Control Relay:**—Auto-Lite HR-4201. NOTE—Use only 20 ampere fuse on relay.

**Overdrive Transmission Removal:**—Same as above, plus the following: Remove hand brake assembly (U-joint flange, brake drum, band, and support). Disconnect solenoid wires (remove coil) and overdrive cable at case. To remove, turn assembly over on left side while withdrawing until shaft free at release bearing, then push up at forward end (shaft just above bearing), then forward (shaft between clutch fingers). Lower assembly at rear, pull out.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200. Ball and trunnion type with roller bearings.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—On 7 pass. sedans.

*See Chrysler Shop Notes for service data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—3.9-1 (Coupe), 4.1-1 (5 pass. sedan), 4.3-1 (7 pass.—others with OD.), 4.56-1 (7 pass. with OD.).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims equally (both wheels). Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Direct acting type.

Domestic—Front 1110-C. Rear 1111-T. Exp.—1114-C & 1115-T, or 1134-E & 1130-W.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4¾-6°.

**Camber:**—Plus ¼°. Limits minus ¼° to plus ¾°.

**Caster:**—Limits ½-2½°.

**Toe In:**—1/16" (0-⅛"). Set long tie rod to 31½" (between ball centers). Adjust short tie rod.

**Steering Geometry:**—Inner wheel 22°40'. Outer 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "Push-Pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drums:**—Cast-iron. Diameter 11".

**Lining:**—Molded. Width 2". Thickness 13/64".

**Length (front shoe)** 11 15/32"; **rear shoe** (7 31/32").

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes for data.*

**Drum:**—Cast-iron. Diameter 6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite EW-5001, EW-5101.

Electric type. 14 ampere fuse in switch lead (first cars), on windshield wiper switch (later cars).

*For complete data, and recommended changes on early cars, refer to Auto-Lite 'EW' Windshield Wiper article in Miscellaneous Section.*

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post. First number 6,742,201 (C-23), 6,672,701 (Saratoga), 6,609,901 (New Yorker), 7,806,201 (Crown Imperial).

**ENGINE NUMBER:** First number 1001 with prefix indicating model (C23- or C24-). Stamped on left side of cylinder block between #2 and #3 cylinders. See Chrysler Shop Notes for Engine Number Lettering ("Special Standard" bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM.	At 100 RPM.
6.8-1 cast-iron hd.	150-160 lbs.	Approx. 118 lbs.
7.45-1 aluminum hd.	160-170 lbs.	Approx. 124 lbs.

NOTE—6.8-1 Head on Model C24 is Aluminum.

**VACUUM READING:** Steady 18-21" idling at 7 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 (Cast Iron Head), Type AL-6 (Aluminum Head). 14 mm. Metric type. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018". Cam Angle 27° (.017" gap). Automatic Advance—12° max. at 1750 RPM (distr.). Vacuum Advance (IGT-4101-1) 8° distr., 14" vacuum, (IGT-4101A-1) 8° distr. with 17" vacuum, (IGT-4101B-1) 6° distr. with 17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. (C23 Std. 6.8-1 Head), 3° BTDC. (C24 Std. 6.8 Head), At TDC. (C23, C24 with Optl. 7.45-1 Head—using Ethyl), with dead center "DC" mark or correct degree mark on impulse neutralizer in line with indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 7 MPH. Float Level—Fuel level  $\frac{5}{8}$ " below top of bowl. Accelerating Pump—Inner Hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:**  $3\frac{3}{4}$  lbs. max. (Type AW),  $4\frac{1}{4}$  lbs. max. (Type D).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end 1 turn counter-clockwise and hook end over stop pin.

CAUTION—Do not wind up coil more than 1 turn.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .010" Exhaust (hot). .002" additional exhaust clearance recommended for sustained high speed driving. NOTE—Tappet screws are self-locking (no locknuts). Remove right front wheel and housing panel for adjustment.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock Model 24-R. Type 8055 (C23), 8113 (C24). Connected to coil by armored cable.

Ignition Lock—Yale & Towne.

**COIL:** Auto-Lite Model CE-4634. Service Coil (less Switch & Cable) CE-3224JS. Mounted on dash. Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4101-1 (C23, C24 First Cars), IGT-4101A-1 (C23 after Eng. No. 2926), IGT-4101B-1 (C24 Later Cars). Single breaker, 8 lobe cam, semi-automatic advance type with new manual spark control (on instrument panel), auxiliary vacuum spark control and manual adjustment (at distributor).

**Breaker Plate Identification—Maximum vacuum advance limited by slot and marked by number (#8—IGT-4101-1 & 4101A-1, #6—IGT-4101B-1) stamped on plate.**

**Breaker Gap—Set at .018".**

**Cam Angle or Dwell—27° closed, 18° open (.017" gap).**

**Breaker Arm Spring Tension—18-20 ounces.**

**Rotation—Clockwise viewed from above.**

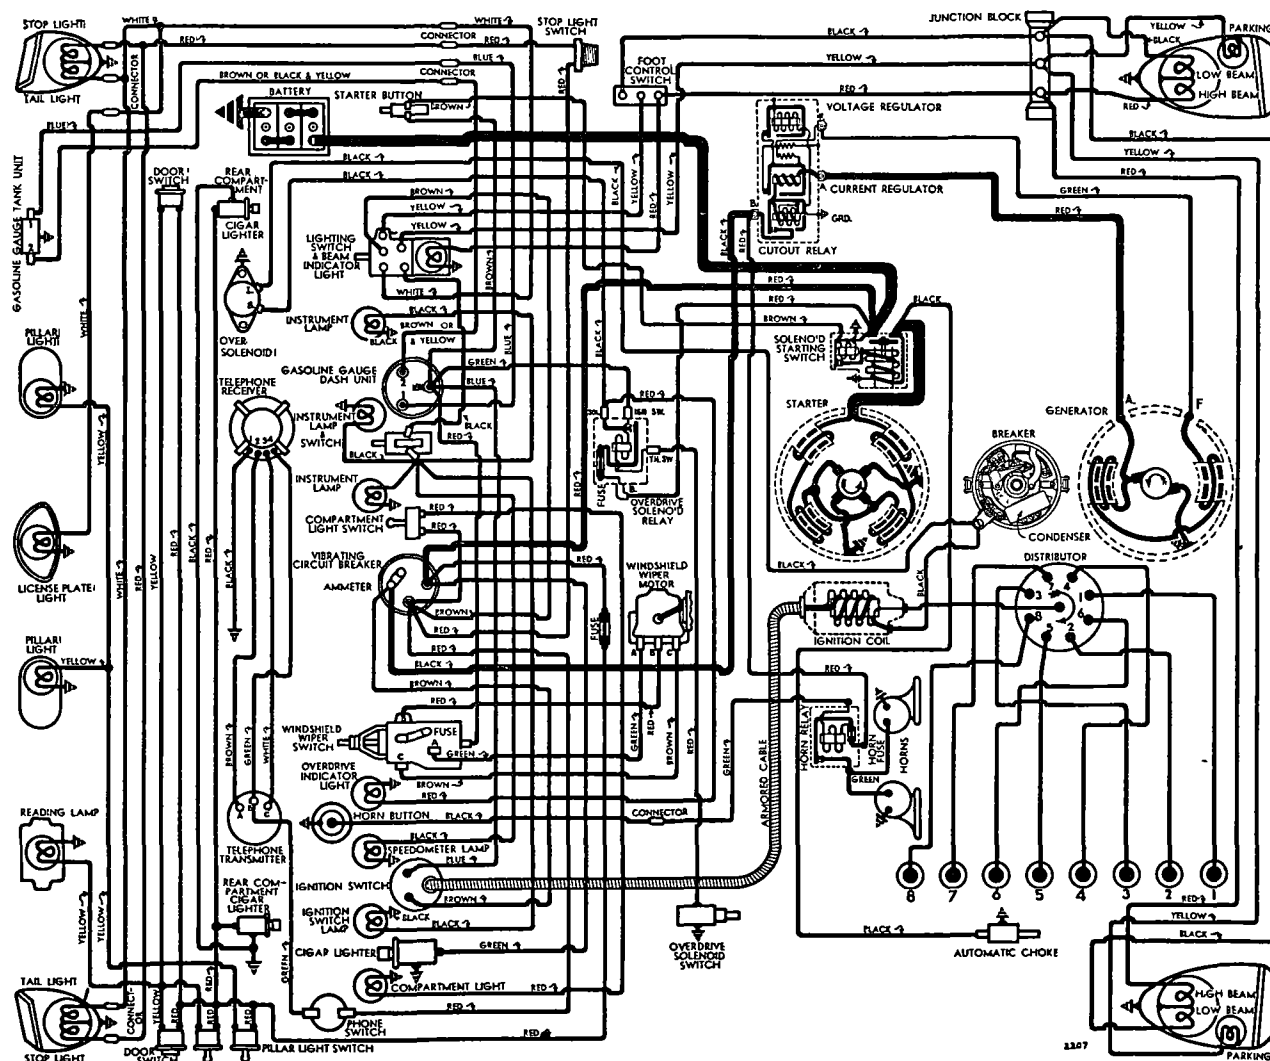

**Manual Spark Control—Consists of control knob on**

instrument panel linked to advance arm. Provides 6° advance or retard from Initial Setting. Adjustment instructions included under Ignition Timing

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	700	10	1400
7	1000	14	2000
9	1300	18	2600
11	1600	22	3200
12	1750	24	3500

**Vacuum Spark Control—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).**

Vacuum Advance—IGT-4101-1		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2°	1.8°	6"
4°	4°	7-8"
6°	8°	9-10"
8°	12°	11-12"
10°	16°	14"
Vacuum Advance—IGT-4101A-1		
Start.....	0°	5"
2°	1.4°	6"
4°	4°	8"
6°	8°	11"
8°	12°	14"
10°	16°	17"
Vacuum Advance—IGT-4101B-1		
Start.....	0°	5"
2°	1°	6"
4°	4°	9"
6°	8°	13"
8°	12°	17"

**Manual Adjustment**—Provides 10° advance or retard from center '0' position on scale (at Distributor). See Ignition Timing for adjustment.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line and take out advance arm clamp bolt.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes for cast-iron head) shown below. See Manual Adjustment (following) for recommended corrections dependent on fuel regularly used and operating conditions.

**NOTE**—Different settings required for Cast Iron & Aluminum 6.8-1 Heads. Ethyl fuel required for 7.45-1 Flywheel Degrees Piston Pos.

C23 Std. (6.8-1)	At TDC	.....0000" TDC.
C24 Std. (6.8-1)	3° BTDC	.....0038" BTDC.
C23, 24 Optl. (7.45-1)	At TDC	.....0000" TDC.

**NOTE**—Impulse neutralizer marked 'DC' at TDC with 15 - 1° graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #8 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain case cover. Loosen advance arm control wire lock screw, center control knob on instrument panel (turn to full retard—left position, then turn to advance—right position counting number of turns, finally turn knob back ½ number of turns), loosen advance arm hold-down screw, center pointer on scale, tighten hold-down screw and control wire lock screw. Loosen advance arm clamp bolt (press rotor back to remove backlash), rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment setting (below).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer, idle engine, adjust distributor as directed above. **Manual Adjustment**—Ignition should be set so that slight ping noticeable between 10 and 30 MPH. when accelerating with wide open throttle for best performance. Advance ignition (if premium fuel used or car operated at high altitudes), retard (if spark knock excessive due to low grade fuel or perating conditions). To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if no ping noted), clockwise to retard spark (if too severe).

## CARBURETOR

**CARBURETION**—Carburetor, Stromberg Model AAV-2, No. A-18792, aircraft, duplex downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm, set throttle stop screw so that idle speed is 7 M.P.H. Turn one idle adjusting screw (for one barrel) in until engine begins to hesitate or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with second idle adjusting screw (for other barrel). Adjust throttle stop screw for correct idling speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. **Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extreme hot temp. Outer Hole (long stroke)—Cold temperatures.

**Fast Idle**—Rotary cam, adjustable type.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust choke connector link length so that choke valve opening is ⅛" with fast idle screw (throttle stop screw) on first step of cam.

**Automatic Choke**—Sisson Type AC-600.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528334 oil-wetted type standard.

#1529043 oil bath Optl. Oil venter cleaner #1525313.

**Fuel Pump**—AC Type AW #1523869 (LHD), Type D #1521803 (RHD), diaphragm type std. #1523817 comb. fuel-and-vacuum pump (RHD with hinged windshield) or Type AN #1523188 separate vacuum pump (used with D pump above) optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Auto-Lite Electric type. Dash Unit—No. NG-9084D. Tank Unit—No. NG-9015T.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Willard Type MW-2-135. 6 volt, 17 plate, 135 ampere hour capacity (20 hour rate).

**Starting Capacity**—171 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.9 minutes. Five second voltage—4.5 volts.

**Grounded Terminal**—Positive (+) to transmission.

**Dimensions**—Lgth. 10 5/16". W. 6 13/16". Hgt. 9".

**Location**—On left side under front seat.

## STARTER

**Auto-Lite Model MAX-4020A or MAX-4037.** Armature No. MAW-2030.

**Drive**—Overrunning clutch (solenoid pinion shift).

**Cranking Engine**—Approx. 160-170 amps., 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data				
Torque	R.P.M.	Volts	Amperes	
0	5300	5.5	65	
.65	3300	5.5	100	
2.75	1630	5.0	200	
5.5	970	4.5	300	
8.7	600	4.0	400	
12.0	300	3.5	500	
16.5	Lock	3.	640	
25.0	Lock	4.	880	

**Removal**—Flange mounted on left front face of flywheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch**—Solenoid Pinion Shift type SS-4206. Controlled through relay by pushbutton on instrument panel. See article in Electrical Equip. Section.

## GENERATOR

### STANDARD

**Auto-Lite Model GDA-4801A.** Armature No. GDF-2006F. Two brush, shunt wound type with vibrating voltage and current regulation. Air cooled.

**Early Car Note**—GCO-4801C generator used up to engine no. 1663. See 1938 Chrysler Model C19, C20 article for data on this generator model.

**Charging Rate Adjustment**—Adjusted by changing Voltage & Current Regulator settings (no adjustment at generator). See Regulator data below.

**Maximum Charging Rate**—28 amperes, 8.0 volts, 2025 R.P.M., 20 M.P.H., with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	930	0	6.4	1010
4	6.6	1060	4	6.6	1180
8	6.85	1210	8	6.85	1350
12	7.1	1350	12	7.1	1530
16	7.3	1500	16	7.3	1730
20	7.5	1660	20	7.5	1950
24	7.75	1830	24	7.75	2220
28	8.0	2025	28	8.0	2520

**NOTE**—28 amperes is current regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.68-1.84 amperes at 6.0 volts.

**Motor Current**—3.50-4.15 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolts.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATOR**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

## REGULATOR

**Auto-Lite Model VRB-4004B.** Voltage & Current Type. Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.* **NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay.

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere min., 3.0 amperes max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" min., .038" max. with contacts open.

Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts Cold.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage is steady. Voltage reading should be 7.3-7.7 volts (Cold—70°F.), 7.1-7.4 volts (Hot—140°F.).

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap**—.010-.020" (armature against stop pin). **Air Gap**—.0595-.0625" with contacts just opening.

C NTINUED ON NEXT PAGE

## C CONTINUED FROM PRECEDIN PA E

## Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).  
**To Check** (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at 30 MPH., charging battery, add load (use bank of headlamp bulbs, or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 28 amperes. If more than slight excess noted, regulator is defective.  
**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING**—**Headlamps**—Corcoran-Brown pre-focused type. Upper and lower beams controlled by beam control switch on toeboard (lower beam deflected slightly to right—2331 bulb).  
**Headlamp Adjustment**—Place unloaded car 25' from wall with upper beams lighted and lenses in place. Aim headlamps straight ahead with center of hot spot 2" below horizontal lamp center-line.  
**Beam Indicator**—Red dot in lighting switch knob. Lighted with upper beams in use.

## Switches

**Lighting**—Chrysler No. 694069 or 852031.  
**Beam Selector**—Chrysler No. 853323 or 659512.  
**Instrument**—Chrysler No. 695949.  
**Stop Light**—Chrysler No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	1½	55
Beam Indicator, Ign. Switch	1½	55
Overdrive Indicator	1	51
Reading, Front Compartment	15	87
Pillar (panel)	6	81
Rear License	3	63

## MISC. ELECTRICAL

**CIRCUIT BREAKER**—Chrysler No. 694571 (A-L #9062-A). Thermostatic type. Mounted on ammeter and protects lighting circuits. Limits current to 35 amperes at 5 minutes. Not adjustable.

**FUSES**—**Dual Horns**—30 ampere. On horn relay.

**Transmission Overdrive Control**—20 amp. On relay.  
**Windshield Wiper**—14 amp. On switch or lead.

**HORNS**—**Auto-Lite**. HC-5107 horn set. HH or HL-4001 (low pitch), HH or HL-4002 (high pitch). Dual horns, blended tone, operated by horn relay.

**Horn Relay**—Auto-Lite Model HR-4101. 30 ampere fuse on base. Contacts Close—2.5-3.5 volts.

**Contact Gap**—.026". Air Gap—.012-.017" (closed).

## ENGINE

**ENGINE SPECIFICATIONS**: 8 cylinder, 'L' head type.

**Bore**—3¼". **Stroke**—4⅞".

**Displacement**—323.5 cubic ins. **Rated HP**—33.80.  
**Developed Horsepower**—130 HP. (C23—6.8-1 Hd.), 132 HP. (C24—6.8-1 Hd.), 138 HP. (All—7.45-1 AL Hd.) at 3400 R.P.M.

**Compression Ratio and Pressure**—As follows:

Ratio	Pressure at 1000 RPM.	At 100 RPM.
6.8-1 hd. (see Note)	150-160 lbs.	Approx. 118 lbs.
7.45-1 aluminum hd.	160-170 lbs.	Approx. 124 lbs.

**NOTE**—Cast-iron head (C23), Aluminum (C24).

**Vacuum Reading**—Steady 18-21" idling at 7 MPH.

See Chrysler Shop Notes for Engine Removal data.

**PISTONS**—Aluminum alloy, U-slot, cam ground type with anodic finish. **Length**—3⅞".

**Weight**—16.33 ounces (plus or minus 2 grams).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .021". Skirt .0005-.0010". See Fitting Original Bore & Piston Sizes, Replacement Pistons:—See Chrysler Shop Notes for sizes and markings.

**Fitting New Pistons**—Check piston size with micrometer at bottom of skirt with gauge at right angles to pin bosses. Insert .002" feeler between cylinder wall and piston (with pin removed) opposite piston slot. Pull to withdraw feeler should be 5 to 7 lbs.  
**Installing Pistons**—U-slot away from camshaft.

**PISTON RINGS**—Four rings, all above pin. #1 Compression ring (upper inner edge beveled), #2 Compression (lower outer edge stepped), #3 and #4 oil rings (slotted type).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	⅞"	.007-.015"	.002-.004"
Comp. (#2)	⅞"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings**: Refer to Chrysler Shop Notes.

**PISTON PIN**—Diameter—55/64". Length—2¾".

Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit (piston at 130°).

**Pin Fit in Rod Bushing**—Thumb push fit at 70° F.

**Replacement Pins**: Std. & .003", .005", .008" oversize.

**CONNECTING ROD**—Weight—34.37 oz. Length—9".

**Crankpin Journal Diameter**—2 3/16".

**Lower Bearing**—Removable, precision type, steel-backed, babbitt-lined. Furnished in standard and .002", .010", and .012" undersizes.

**Clearance**—.001-.003". **Sideplay**—.006-.011".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings with boss engaging groove in rod and cap.

**Installing Rods**:—Lower bearings are offset. Install rods with widest portion of bearing toward the rear on #1, #3, #5, and #7, toward the front on #2, #4, #6, #8. Oil hole in upper half toward camshaft.

**CRANKSHAFT**:—Five bearing type with eight integral counterweights. Impulse neutralizer on front end. See Chrysler Shop Notes for Replacement Main Bearing Caps and Crankshaft Front and Rear Oil Seals.

**Journal Diameters**—2 45/64" all bearings.

**Bearing Type**—Interchangeable precision type, steel-backed, babbitt-lined. **Clearance**—.001-.002".

**Bearing Adjustment**: Refer to Chrysler Shop Notes (and recommended Engine Removal for work on crankshaft).

**Replacement Bearings**: Refer to Chrysler Shop Notes.

**End Thrust**:—Taken by flange faces on rear (#5) main bearing. **Endplay**—.003-.007".

**CAMSHAFT**: 6 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 3/8".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #6 machined in crankcase). **Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**NOTE**—Replacement bearings are finish reamed.

**End Thrust**:—Taken by thrust plate assembled behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain**:—Whitney #668983 Center link guide type. Width 1¼". Pitch ½". Length 23½", 47 links.

**Camshaft Setting**:—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with straightedge across the shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	340-.341"	5⅞"
Exhaust	1 11/32"	340-.341"	5⅞"

**Seat Angle** **Lift** **Stem Clearance**

All Valves ..... 45° ..... ⅜" ..... .001-.003"

For Exh. Valve Seat Insert data see Chrysler Shop Notes.

**Valve Guides**:—Remove from above. Press new guides in place so upper end 13/16" below top of cylinder block. Install exhaust guide with counterbored end up, intake guide with tapered end up. Ream guides to inside diameter of .342-.343" (intake and exhaust) and counterbore exhaust guides at top to diameter of .365-.375" and depth of ⅜" after installing.

**Valve Springs**:—Free length approximately 2 19/64". Limit of compression 1 29/64".

**Spring Pressure** **Spring Length**

Valve Closed ..... 52-58 lbs. .... 2 1/32"

Valve Open ..... 129-137 lbs. .... 1 21/32"

**NOTE**—Spring #685616 used on first C23 cars same as above except: Pressure (valve open) 122-130 lbs. at 1 11/16". Spring #699190 (C23 later cars, all C24 Valve Lifters: Mushroom type. Stem diam. ⅜". Ream holes from above (pilot in valve stem guide) for lifters furnished .001", .008", .030", .060" oversize.

## VALVE TIMING

**Tappet Clearance**:—.008" Intake, .010" Exhaust (with engine hot). .002" additional exhaust tappet clearance recommended by car manufacturer for cars driven at sustained high speeds. **NOTE**—Tappet screws are self-locking type (no lock nuts used). Remove right front wheel and housing panel for access to valves.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open 6° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 44° BLDC. Close 12° ATDC.

**Valve Timing Check**—Set tappet clearance for #8 intake valve at .011" (remove right front wheel and wheel housing for access to valves). This valve should open with piston 6° (.0170") before top dead center with 6° BTDC. mark (sixth graduation to left of '0' mark) on impulse neutralizer opposite pointer on chain case cover at front of engine. Reset tappet clearance at .008" (engine hot).

## LUBRICATION

**LUBRICATION**:—Pressure system with gear type oil pump mounted on right side of crankcase.

**Normal Oil Pressure**: 30-45 lbs. at 30 MPH, 15 idling.

**Oil Pressure Regulator**:—Located under plug on left hand side of crankcase. Adjustable type. To adjust, remove cap, withdraw locking wire, turn slotted plug clockwise to increase pressure, or counter-clockwise to decrease pressure.

**Crankcase Capacity**:—6 quarts (refill).

## COOLING

**COOLING SYSTEM**:—Capacity—24 quarts.

**Radiator Core Removal**—See Chrysler Shop Notes.

**Water Pump**:—Packless type with factory-lubricated and sealed ball-bearing shaft.

See Water Pump Section for complete data.

**Removal**—Drain cooling system, remove hood side panels and fan shroud-to-radiator core bolts. Rotate fan shroud around radiator inlet hose (to free shroud) and lift out. Take out fan blade-to-pulley screws and remove blades. Remove pulley and free fan belt by pushing pulley and belt off pump shaft. Take out by-pass elbow-to-pump body cap screws. Free large water pump inlet hose and remove pump body cap screws and nut (on lower edge of pump body) pushing pump off stud and block.

**Thermostat**:—Fulton. In cylinder head water outlet elbow. Install thermostat with bellows down.

**Setting**—Start to open 157-162°F. Fully open 183°F.

**Temperature Gauge:**—Motometer (Auto-Lite) Vapor tension type. Part No. H-9063.

*See Miscellaneous Section for complete data.*

**Drain Valves:** At lower left rear corner of radiator and on lower left side of block near distributor.

## CLUTCH

**C23—Borg & Beck 11A6.** #929 stamped on cover. **C24—Borg & Beck 10A6.** #933 stamped on cover.

**Type:**—Both are single plate, dry disc types with spiral grooved facings, pressure plate oil baffle and new Over-center return spring (hooked to pedal). *See Clutch Section for complete data.*

**Facings:**—Woven and compressed (spiral grooved type), 2 used. Inside Diam.  $6\frac{1}{2}$ " (10A6), 6" (11A6). Outside Diam. 11" (11A6), 10" (10A6).  $\frac{1}{8}$ " Thick.

**Adjustment:**—Clutch pedal should just clear under side of toeboard. To adjust, loosen locknut and turn stop screw located at rear of pedal above shaft. Free movement of pedal should be 1". To adjust, turn clutch release fork adjusting nut on connector link.

**Removal:**—Remove floorboard. Take out clutch release fork pull-back spring, and cotter pin and clevis pin in clutch release fork rod. Pull clutch release fork out. Remove transmission (see Transmission Removal following for instructions) and clutch housing underpan. Mark cover and flywheel with punch mark (assemble to these marks when re-installing assembly). Remove clutch cover screws and washers (release spring tension evenly by turning each screw a few turns at a time). Assembly can then be lowered out through pan opening.

**C24 Note:**—Cross-member under clutch housing pan must be removed (was riveted on early cars).

## FLUID DRIVE

### MODEL C24

**FLUID DRIVE (USED ON MODEL C-24 ONLY):**—Consists of fluid coupling assembled to rear of engine in place of conventional flywheel.

*See Miscellaneous Section for complete data.*

**Removal:**—Remove clutch (See Removal Instructions for C24 above). Turn fluid drive unit to place one filler plug at bottom, remove plug with Allen type wrench and allow unit to drain. Remove engine oil pan and rear main bearing cap. Remove crankshaft-to-fluid drive bolt nuts (secures fluid drive unit to crankshaft flange), pull drive unit to rear until free from crankshaft flange. Then entire assembly (with clutch driving plate attached) may be lowered out through pan opening.

## TRANSMISSION

**Model C23—Warner Model.** All helical gear type, with constant-mesh, synchro-mesh (second and high), sliding gears (low and reverse).

*See Transmission Section for complete data.*

**Model C24—Warner Model AS5-T85A.** Same as C23 above plus electric 'kick-down' Overdrive.

*See Transmission Section for complete data.*

**Transmission Control:** Steering column shift.

*See Transmission Section for complete data.*

**Removal (C23):** Remove floorbd., disconnect battery ground cable at transmission. Disconnect front and rear universal joints. Remove hand brake cable clevis pin at rear of transmission. Take off speedometer cable. Disconnect gearshifter rod and cable at lever on transmission case. Remove transmission cover cap screws and lift cover assembly out. Block up rear of engine until load on transmission supports just relieved (CAUTION—Car must be level

so that engine alignment maintained. If front of car raised, engine will set toward rear due to rocking on front rubber support, this in turn may prevent transmission from being withdrawn). Then loosen transmission side supports at frame, place jack under transmission to support weight, and remove support bracket frame bolts. Remove transmission-to-clutch housing stud nuts and two upper studs (install two nuts on end of stud and turn stud out), install two pilot studs. Take off transmission supports from frame and transmission case. Pull transmission out.

**Removal (C24):** Same as for C23 (above) plus the following after removing rear propeller shaft, take off four front companion flange nuts, four frame-to-center bearing mounting screws, slide bearing and front shaft back through frame X-member opening (If spacer used between frame and bearing mounting, replace spacer when re-installing). Remove universal joint flange and brake drum from shaft, and clevis pin from brake cable. Take off brake assembly from overdrive case. Disconnect overdrive control cable, solenoid wire, remove coil. To remove, turn assembly over on left side while withdrawing until shaft free of release bearing, then push up on forward end until shaft above bearing, then push assembly forward with shaft extending between two clutch fingers. Assembly can then be lowered at rear and withdrawn.

## OVERDRIVE

**Overdrive Transmission:**—Warner Model AS5-T85A overdrive transmission with electrical kick-down control Optl. on Model C23, Std. on Model C24.

*See Transmission Section for complete data.*

**Removal:** Overdrive transmission removed as directed above for standard C24 transmission except that on Model C23 only one propeller shaft used. Remove this shaft in usual manner by disconnecting front and rear universal joints.

**Overdrive Solenoid:**—Auto-Lite SSB-4001.

**Overdrive Solenoid Indicator:**—Jewel light on instrument panel above speedometer. Lights whenever car shifted from overdrive to direct drive through accelerator pedal switch.

**Throttle Switch Setting:**— $3/32$ " gap between switch plunger & contact screw (throttle just wide open).

**Control Relay:**—Auto-lite HR-4201. Use 20 amp. fuse.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4400 (C-23), Series 5350 (C-24). Ball and trunnion type with roller bearings (C-23). Cross type with roller bearings (C-24). Three joints used on C-24.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing (C-24):**—*See Chrysler Shop Notes for removal and installation data.*

## REAR AXLE

**REAR AXLE:**—Own. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio (C-23)**—3.91-1 (standard). 4.1-1 (special). 4.3-1 (cars with overdrive).

**Ratio (C-24)**—4.9-1.

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and cap screws on carrier flange. Lift carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel

cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims equally (at both wheels). Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco or Monroe. Direct acting, hydraulic types. Delco types are adjustable except on Model C-23 (Domestic).

Model	Make	Front	Rear
C-23 (Domestic)	Delco	1110-C	1111-T
" (Domestic)	Monroe	696240	696242
" (Export)	Delco	1114-C	1115-T
" (Export)	Delco	1134-E	1130-W
C-24 (Dom. & Exp.)	Delco	1134-E	1130-W
" (Domestic)	Monroe	696241	696242

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

Specifications below apply with no passenger load.

**Kingpin Inclination:**— $5\frac{3}{4}$ -7° (C-23),  $4\frac{3}{4}$ -6° (C-24).

**Camber:**—0° preferred (C-23),  $\frac{1}{4}$ ° preferred (C-24).

**Limits:** minus  $\frac{1}{4}$ ° to plus  $\frac{1}{2}$ °.

**Caster:**—Minus  $\frac{1}{2}$ ° to plus  $1\frac{1}{2}$ ° (C-23). 1-3° (C-24).

**Toe In (C-23)**— $1/16$ " preferred, limits 0- $\frac{1}{8}$ ". Set long tie rod to 30 25/32" (between ball centers) and adjust short rod only for toe-in adjustment.

**Toe In (C-24)**— $1/16$ " preferred, limits 0- $\frac{1}{8}$ ". Adjust both tie rods equally.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 22°0' (C-23), 22°15' (C-24). Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 335 (C23), Model 375 (C24) Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Bendix vacuum power unit used on Model C-24. Hand lever applies independent shaft brake. *See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Front Wheel:**—Front cylinder  $1\frac{1}{4}$ ". Rear  $1\frac{3}{8}$ ".

**Rear Wheel:**—Front cylinder  $1\frac{1}{8}$ ". Rear  $1\frac{1}{4}$ ".

**Drums:**—Centrifuse. Diameter 12" (C23), 14" (C24).

**Lining (C-23)**—Molded. Width 2". Thickness 13/64".

**Length per shoe** 12 9/16".

**Lining (C-24)**—Molded. Width  $2\frac{1}{4}$ ". Thickness  $\frac{1}{4}$ ".

**Length per shoe** 14 21/32".

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Braking Power:**—55% front, 45% rear.

**Hand Brake:**—On drum at rear of transmission.

*Adjustment—See Chrysler Shop Notes.*

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thickness 5/32". Length 17 1/16".

**Power Brake Unit:**—Bendix Internal Valve type.

*See Brake Section for complete data.*

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite EW-5001, 5101. Electric type. 14 ampere fuse in feed lead (first cars), on switch (later cars). *For complete data, and Recommended Changes on First Cars, refer to Auto-Lite 'EW' Windshield Wiper article in Miscellaneous Section.*

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post. First number: Detroit—7,625,001 (Royal), 6,955,201 (Windsor). Canada—9,714,601 (Royal).

**ENGINE NUMBER:**—First number C25-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Shop Notes for engine number lettering ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.5-1 cast-iron hd.	140-150 lbs.	Approx. 115 lbs.
*7.0-1 aluminum hd.	150-160 lbs.	Approx. 120 lbs.

\*—This head standard equip. on 7 passenger sedan.

**VACUUM READING:**—Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7B (Cast Iron Head), AL-7A (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 38° (closed).

Automatic Advance—12° max. at 1750 RPM (distr.).

Vacuum Advance—11° distr. with 17" vacuum (IGS-4108A-1), 7° distr. with 15" vacuum (IGS-4108-1).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. (6.5-1 Head), 2° ATDC. (7.0-1 Head) with dead center "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw ½-1½ turns open. Idle speed 6 MPH.

Float Level—5/64" top of float below top edge of bowl.

Accelerating Pump—Center hole normal. Inner hole (Summer), Outer hole (Winter) for extreme temp.

Fuel Pump Pressure: 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind free end approximately 1 turn counter-clockwise and hook end over stop stud.

**VALVES:** See Valve Timing.

Tapet Clearance:—.008" Int., .010" Exh. (hot & idling), .002" add'l exh. clearance desirable for sustained high speeds. NOTE—Tapet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and fuel pump shield for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

Ignition Switch:—Mitchellock Model 24-R, No. 8197.

Ignition Lock—Yale & Towne or Briggs & Stratton. B&S No. 80651. Key Series 1BP to 1000BP. Groove #24.

**COIL:** Auto-Lite Model IG-4661. Service winding (less switch and cable) IG-3224JS. Mounted on dash.

Ignition Current—2.25 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4108A-1, IGS-4108-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual (Octane Selector) adjustment at distributor.

NOTE—IGS-4108A-1 used up to Eng. No. C25-7046 (U.S.), C-25-1376 (Can.). IGS-4108-1 after this No. Breaker Plate Identification—Maximum vacuum advance limited by slot and marked with number #11 (IGS-4108A-1), #7 (IGS-4108-1) stamped on plate.

Breaker Gap—Set at .020". Limits .018-.022".

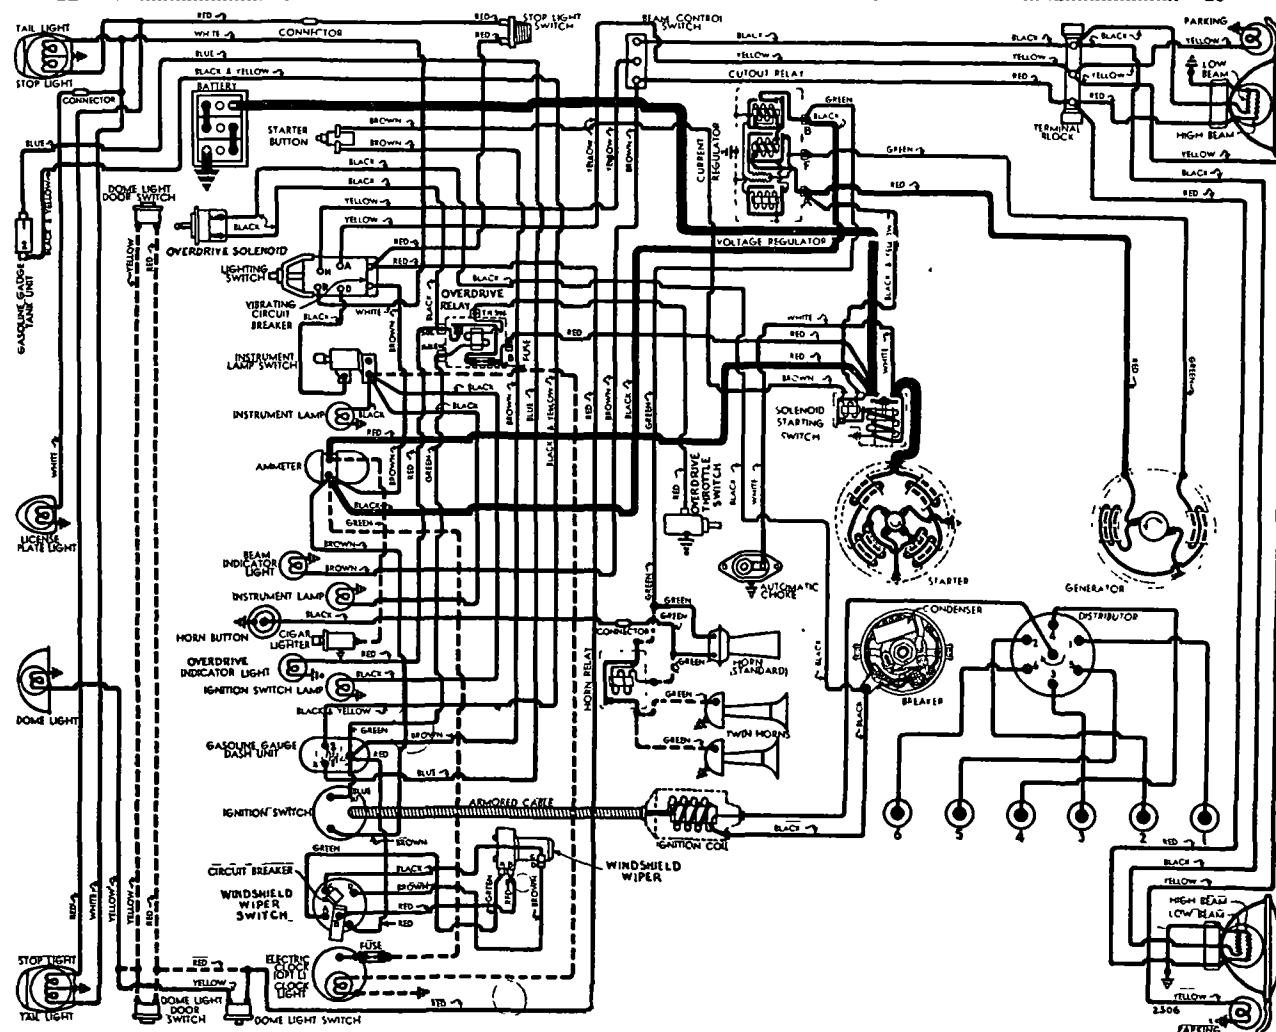

Cam Angle or Dwell—38° closed, 22° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from the top.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	350	0 .....	700
3 .....	400	6 .....	800
6 .....	850	12 .....	1700
9 .....	1300	18 .....	2600
12 .....	1750	24 .....	

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance—IGS-4108A-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7¼"
5°	10°	10½"
8°	16°	13¾"
11°	22°	17"

#### Vacuum Advance—IGS-4108-1

Start	0°	5"
1°	2°	6½"
3°	6°	9¼"
5°	10°	12½"
7°	14°	15"

**Manual Adjustment**—At distributor. Provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes for both cast-iron and aluminum heads) shown below. See Manual adjustment (following) for correction (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

**Flywheel Degrees Piston Position**  
6.5-1 cast-iron hd. ....0° at TDC..... .0000° at TDC  
7.0-1 aluminum hd..... 2° ATDC ..... .002° ATDC

**NOTE**—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on the generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment as directed below.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (fill in correct mark on impulse neutralizer with chalk or paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Initial ignition setting (listed above) should be varied not more than 4° (Cast-iron head from 4° or .007° BTDC to 4° or .007° ATDC. Aluminum head from 2° or .002° BTDC to 6° or .016° ATDC) so that slight ping noticeable between 10 and 30 MPH when accelerating with wide open throttle for best performance. To adjust, loosen lock-plate hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) Model E6S1 (early cars), E6S2 (later cars). 1½" single barrel, downdraft type.

*For complete data, refer to Carburetor Index.*

**E6S1 Note**—Can be changed to E6S2 specifications by changing parts (carburetors marked E6S1\* on bowl cover factory equipped to E6S2 specifications). See article in Carburetor Section for part changes.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (½-1½ turns open—turn screw in for leaner mixture). Readjust idle speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Set idle screw for highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (min. stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal setting.

Outer Hole (max. stroke)—Winter temperatures.

**NOTE**—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See Carter (B&B) Jet Table in Carburetor Section for complete jet data.

**Float Level**—5/64" from top of float (not soldered seam) to top edge of float bowl.

**Fast Idle**—Not adjustable (built-in type).

**Automatic Choke**—Slisson Type AC-758B.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529041 oil-wetted type standard.

**Fuel Pump**—AC Type AT #1523912 diaphragm type. Type AS #1523913 combination fuel-and-vacuum pump used on cars with swinging windshield.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Auto-Lite electric. No. NG-9356D (dash unit), No. NG-9329T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Willard Type SW-2-119. 6 volt, 15 plate, 119 ampere hour capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.3 volts.

**Grounded Terminal**—Positive (+) grounded to the transmission case.

**Dimensions**—Lgth 10 5/16". Width 7". Hght 9 5/16".  
**Location**—Left side under front seat.

## STARTER

**Auto-Lite Model MAX-4020A**. Armature MAW-2030.

**Drive**—Solenoid operated pinion shift type. Drive through overrunning clutch.

**Cranking Engine**—Approx. 160 amperes, 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data				
Torque	R.P.M.	Volts	Amperes	
0 ft. lbs.	5300	5.5	65	
.65 " "	3300	5.5	100	
2.75 " "	1630	5.0	200	
5.5 " "	970	4.5	300	
8.7 " "	600	4.0	400	
12.0 " "	300	3.5	500	
16.5 " "	Lock	3.0	640	
25.0 " "	Lock	4.0	880	

**Removal**—Flange mounted on left front face of flywheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch**—Solenoid Switch Type SS-4206.  
*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Models GDZ-4801A (Std.), GDZ-4801B or GEB-4801A (Police)**. Armature No. GDZ-2006F (GDZ-4801A, B), GEB-2006F (GEB-4801A). Two brush type with current voltage control. Air-cooled.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes (GDZ Gen.), 32 amperes (GEB Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1400 RPM (GEB), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by voltage regulator and dependent on battery condition.

Performance Data—GDZ-4801A, B					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
*35	8.0	1900	35	8.0	2250

Performance Data—GEB-4801A					
0	6.4	560	0	6.4	600
4	6.6	630	4	6.6	675
8	6.8	700	8	6.8	750
12	7.0	775	12	7.0	840
16	7.2	845	16	7.2	930
20	7.4	920	20	7.4	1030
24	7.6	1000	24	7.6	1140
28	7.8	1075	28	7.8	1260
*32	8.0	1150	32	8.0	1400

\*—Current regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (GDZ Gen), 64-68 ozs. (GEB Gen.), with new brushes.

**Field Current**—1.60-1.78 amperes at 6.0 volts (all).  
**Motoring Current**—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

**Removal**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## REGULATOR

**Auto-Lite Model VRP-4001A (GDZ Gen.), VRP-4001B (GEB Gen.)**. Current-voltage type. In case n dash. **NOTE**—For negative battery ground, VRP-4005A (GDZ Gen.), VRP-4005B (GEB Gen.) are used.

*For complete data, refer to Electrical Equipment Index.*  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**  
**Cuts In**—6.4-6.6 volts at approximately 1000 generator RPM (VRP-4001A,5A), 600 RPM (VRP-4001B,5B).  
**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.  
**Air Gap**—.031" min., .034" max. with contacts open.

CONTINUED N NEXT PAGE

## C NTINUED FR M PRECEDIN PA E

## Voltage Regulator

Setting—7.2-7.5 volts at 70° F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

Contact Gap—.012" Min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting (VRP-4001A, 5A)—34-36 amperes (marked '35' on cover). (VRP-4001B, 5B) 31-33 (marked '32').

To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above. If more than slight excess noted, regulator is defective.

Adjustment &amp; Contact Gap—Same as for Voltage Regulator (above).

Air Gap—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

LIGHTING:—Headlamps—Corcoran-Brown 'Sealed Beam' type. See article in Electrical Equipment Section.

Headlamp Adjustment—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

Beam Indicator—Red light in upper left corner of speedometer dial. Lighted with upper beams on.

## Switches

Lighting—Chrysler No. 854794, 857380 Optl.

Beam Selector—Chrysler No. 859974.

Instrument—Chrysler No. 853371.

Stop Light—Chrysler No. 677112 hydraulic type.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instrument	1½	55
Beam Indicator, Ign. Sw.	1	51
Stop and Tail	21-3	1158
Rear License	3	63
Dome or Reading	15	87
Overdrive Indicator	1	51

## MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER:—Vibrating, thermostatic type. Mounted on lighting switch.

FUSES:—Clock—2 ampere. In connector behind clock.

Transmission Overdrive Control—20 amp. On relay.

Horns &amp; Windshield Wiper—No fuse used.

Radio—14 amp. In feed wire behind instr. panel.

HORNS:—Single—Delco-Remy No. 1999911 standard.

Dual—Auto-Lite HO-5001 horn set, HL-4001 (low pitch), HL-4002 (high pitch) operated by horn relay.

Current Draw—Approx. 7 amps. single, 35-40 dual.

Horn Relay:—Auto-Lite Model HRC-4001 (no fuse).

Contacts Close—1.5-3.0 volts. Open—.5 volt.

Contact Gap—.028". Air Gap—.016-.020" (closed).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head type.

Bore—3⅜". Stroke—4½".

Displacement—241.5 cu. ins. Rated HP—27.34.

Developed Horsepower—108 (Std. 6.5-1 hd.), 112 HP (Optl. 7.0-1 hd.—Std. 7 pass.) at 3600 RPM.

Compression Ratio and Pressure—As follows:

Ratio Pressure at 1000 RPM At 100 RPM

6.5-1 cast-iron hd. .140-150 lbs. Approx. 115 lbs.

7.0-1 aluminum hd. .150-160 lbs. Approx. 120 lbs.

Vacuum Reading—Steady 18-21" idling at 6 MPH.

See Chrysler Shop Notes for Engine Removal data.

PISTONS:—Aluminum alloy, U-slot, cam ground, tin coated. Length 3⅞". Weight 17.5 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—Top .0115". Skirt .0000-.0010".

Original Bore &amp; Piston Sizes, Replacement Pistons:—See Chrysler Shop Notes for sizes and markings.

Fitting New Pistons:—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" feeler between cylinder wall and piston (pin removed) on side opposite slot. With piston and block at 70° F, pull to withdraw feeler 5-7 lbs.

Installing Pistons—Slot away from camshaft.

PISTON RINGS:—4 rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower outer edge stepped), #3 &amp; 4 (slotted oil rings).

Ring Width End Gap Side Clearance

Comp. (Top) ⅜" .007-.015" .002-.004"

Comp. (#2) ⅜" .007-.015" .0015-.0035"

Oil Control 5/32" .007-.015" .001-.0025"

Replacement Rings:—Std. &amp; .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

PISTON PIN:—Diameter—.55/64". Length—2⅞". Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit (piston at 130°).

Pin Fit in Rod Bushing—Thumb push fit at 70° F.

Replacement Pins:—Std. &amp; .003", .005", .008" oversize.

CONNECTING ROD:—Weight—33.9 ozs. (with bearings and bolts). Length—7⅞".

Crankpin Journal Diameter—2⅞".

Lower Bearing—Removable, precision type, steel-backed babbitt.

Clearance—.0005-.0025". Sideplay—.0055-.0115".

Bearing Adjustment:—None (no shims). Install bearings with boss engaging groove in rod and cap.

Replacement Bearings: Refer to Chrysler Shop Notes.

Installing Rods:—Oil split hole toward camshaft.

CRANKSHAFT:—4 bearings, 9 integral counterweights. Journal Diameters—2½" all bearings.

Bearing Type—Removable, precision type steel-backed, babbitt-lined. Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front &amp; Rear Oil Seals. Replacement Bearings &amp; Bearing Caps: Refer to Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

CAMSHAFT:—4 bearing. Non-adjustable chain drive. See Chrysler Shop Notes for camshaft removal.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain:—Morse Type 1883-N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	340-.341"	4 25/32"
Exhaust	1 17/32"	340-.341"	4 25/32"

Seat Angle Lift Stem Clearance

All Valves 45° ⅜" .0015-.0035"

See Chrysler Shop Notes for Exh. valve seat insert data.

Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs:—Install with closely coiled ends to top. Free length 2". Spring Pressure Length

Valve Closed 40-45 lbs. 1¼"

Valve Open 107-115 lbs. 1⅝"

Valve Lifters:—Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve stem guide). Oversizes .001", .008", .030", .060".

Lifter Clearance in Block—.000-.001".

## VALVE TIMING

Tappet Clearance:—.008" Int., .010" Exh. (hot &amp; idling). .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and pump shield for access.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 12° BTDC. Close 44° ALDC.

Exhaust Valves—Open 50° BLDC. Close 6° ATDC.

Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 12° or .063" BTDC with 12th graduation before DC mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet cl. at .008" hot.

## LUBRICATION

LUBRICATION:—Pressure (pump on right of engine).

See Chrysler Shop Notes for oil pump removal.

Normal Oil Pressure:—30-45 lbs. @ 30 MPH, 15 idling.

Oil Pressure Relief Valve:—Under plug below starter. Opens at 40-45 lbs. To increase pressure use heavy (green), to decrease light (red), spring.

Crankcase Capacity:—5 quarts (refill).

## COOLING

COOLING SYSTEM:—Capacity—18 quarts.

See Chrysler Shop Notes for radiator core removal.

Water Pump:—Packless type with belt drive.

See Water Pump Section for complete data.

Removal—Drain water. Remove fan blade assembly, pulley, radiator outlet hose at pump, by-pass elbow (with small hose), pump mounting stud nuts, fan belt adjusting strap at generator, adjusting strap stud and lower pump stud from block.

**Thermostat**—Bishop & Babcock or Fulton. In outlet on head. Starts to open 157-162°. Fully open 183°.

**Temperature Gauge**—Motometer (Auto-Lite) Vapor tension type. A-L Part No. H-9355.

*See Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH**—Borg & Beck Model 10A7, 11A6 (Taxi) with 'Borglite' driven member. #940 (10A7), #941 (11A6) stamped on cover. Single plate, dry disc type with spiral grooved facings, pressure plate oil baffle & pedal over-center return spring.

*See Clutch Section for complete data.*

**Facings**—Spiral wound moulded woven, 2 used. Inside Diam. 7" (10A7), 6½" (11A6), Outside Diam. 10" (10A7), 11" (11A6). Thickness ⅛" (all).

**Adjustment**—Pedal should just clear toeboard (adjust stopscrew on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal**—Remove release fork pull-back spring, Transmission (see following) and housing underpan. Disconnect release fork from pivot and pull out as far as possible. Mark cover and flywheel, remove cover screws evenly, lower assembly out.

## TRANSMISSION

**TRANSMISSION**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (Low and Reverse).

*See Transmission Section for complete data.*

**Transmission Control**—Steering column shift Std. *See Transmission Section for complete data.*

**Removal**—Remove propeller shaft (loosen comp. flange nut if transmission to be disassembled—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, battery ground cable, hand brake cable, and gear shift rod and cable at transmission. Remove mounting stud nuts and lockwashers. Pull unit back, lower and remove from under car.

## OVERDRIVE

**Overdrive**—Warner Model R7B type with electrical "kick-down" control Optl. on Windsor model.

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Auto-Lite SSB-4001.

**Throttle Switch Setting**—3/32" gap between switch plunger & contact screw (throttle just wide open).

**Control Relay**—Auto-Lite HR-4201. Use only 20 ampere fuse on relay (on left side of engine dash).

**Overdrive Indicator Light**—In upper right corner of speedometer dial. Lights when 'kick-down' direct drive operating.

**Overdrive Transmission Removal**—Same as above, plus the following: Remove hand brake assembly (U-joint flange, brake drum, band and support). Disconnect solenoid wires (remove coil) and overdrive cable at case. Remove 2 upper mounting studs (insert pilot studs) and withdraw assembly.

## UNIVERSALS

**UNIVERSAL JOINTS**—Detroit-Universal Series 7200.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing**—Used on 7 passenger sedans. *See Chrysler Shop Notes for servicing.*

## REAR AXLE

**REAR AXLE**—Own Make. Semi-floating, Hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—3.9-1 (Std.), 4.3-1 (Windsor with OverDr.—Std. 7 pass.), 4.56-1 (7 pass. with Overdrive).

**Backlash**—.006-.010". Screw adjustment.

**Removal**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158). NOTE—Use Tool C-358 to pull oil washer, C-201, 2 to install.

**Wheel Bearing Adjustment**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (.010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Domestic—Delco or Monroe Direct acting. Export—Delco Direct acting or Delco Adjustable direct acting (Spec. Equip. Dom. also). *See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4¾° to 6°.

**Camber**—Pos. ¼°. Limits 0° to Pos. ¾°.

**Caster**—Neg. 1° to Pos. 1°. Not adjustable.

**Toe In**—1/16" (0-⅛"). Turn both rods equally.

**Steering Geometry**—Inner wheel 22°. Outer 20°.

## STEERING GEAR

**Steering Gear**—Gemmer Model 305. Worm-and-Roller type with "Push-Pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. *See Brake Section for complete data.*

**Wheel Cylinders**—Stepped or two-stage bore type.

**Drums**—Centrifuge type. Diameter—11".

**Lining**—Molded. Width 2". Thickness 13/64".

**Length** (front shoe) 11 15/32", (rear shoe) 7 31/32".

**Clearance**—.012" toe, .006" heel, for each shoe.

**Hand Brake**—On drum at rear of transmission.

**Adjustment**—*See Chrysler Shop Notes for data.*

**Drum**—Cast-iron type. Diameter—6".

**Lining**—Width 2". Thick. 5/32". Length 17 1/16".

## MISC. MECHANICAL

**WINDSHIELD WIPER**—Auto-lite Model EWB-4001, Electric type with circuit-breaker on back of switch.

*See Miscellaneous Section for complete data.*

**Circuit Breaker**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**Power Operated Convertible Top**—Vacuum Power type. *See Miscellaneous Section for complete data.*

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See *Chrysler Shop Notes* for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—6750101 Up (Traveler), 6673501 (Saratoga), 6613401 (New Yorker), 7806551 (Crown Imperial). On right front door hinge pillar post.

**ENGINE NUMBER:**—C26-1001 Up (C26), C27-1001 (C27). Left side of block between #2 and #3 cylinders. See *Chrysler Shop Notes* for Engine Number Lettering ("Special Standard" bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio—6.8-1 CI (Std. C26), 6.8-1 AL (Std. C27). 7.45-1 aluminum (Optl. C26 & C27).

**Ratio Pressure at 1000 RPM At 100 RPM**  
6.8-1 CI or AL hd. .... 150-160 lbs. .... Approx. 118 lbs.  
7.45-1 aluminum hd. .... 160-170 lbs. .... Approx. 124 lbs.

**VACUUM READING:**—Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A7B (Cast Iron Head), AL-7A (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.018". Cam Angle 27° (.017" gap).  
**Automatic Advance**—12° max. at 1750 RPM (distr.).  
**Vacuum Advance**—8° distr. (IGT-4101A-2), 6° distr. (IGT-4101B-2) with 17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC (C26 6.8-1 Head), 3° BTDC (C27 6.8-1 Head), At TDC (C26,27 7.45-1 Optl. Head with Ethyl Fuel) with dead center "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Both idle screws midway between "miss" and "roll" points. Idle speed 6 MPH.

**Float Level**—Fuel level  $\frac{5}{8}$ " below top edge of bowl.  
**Accelerating Pump**—Inner hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:** 3 $\frac{3}{4}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end 1 turn counter-clockwise and hook end over stop stud.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Int., .010" Exh. (hot & idling). .002" add'l exh. clearance desirable for high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and fuel pump shield for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, Type 8197.

**Ignition Lock**—Yale & Towne or Briggs & Stratton. B&S No 80651. Key Series 1BP to 1000BP. Groove #24.

**COIL:** Auto-Lite Model CE-4640. Service coil (less switch and cable CE-3224JS). Mounted on dash.

**Ignition Current**—2.25 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

**Capacity**—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4101A-2 (C26), IGT-4101B-2 (C27). Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual (Octane Selector) adjustment.

**Breaker Plate Identification**—Maximum vacuum advance limited by slot and marked by number (#8—IGT-4101A-2, #6—IGT-4101B-2) on plate.

**Breaker Gap**—Set at .018".

**Cam Angle**—27° closed, 18° open (.017" gap).

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

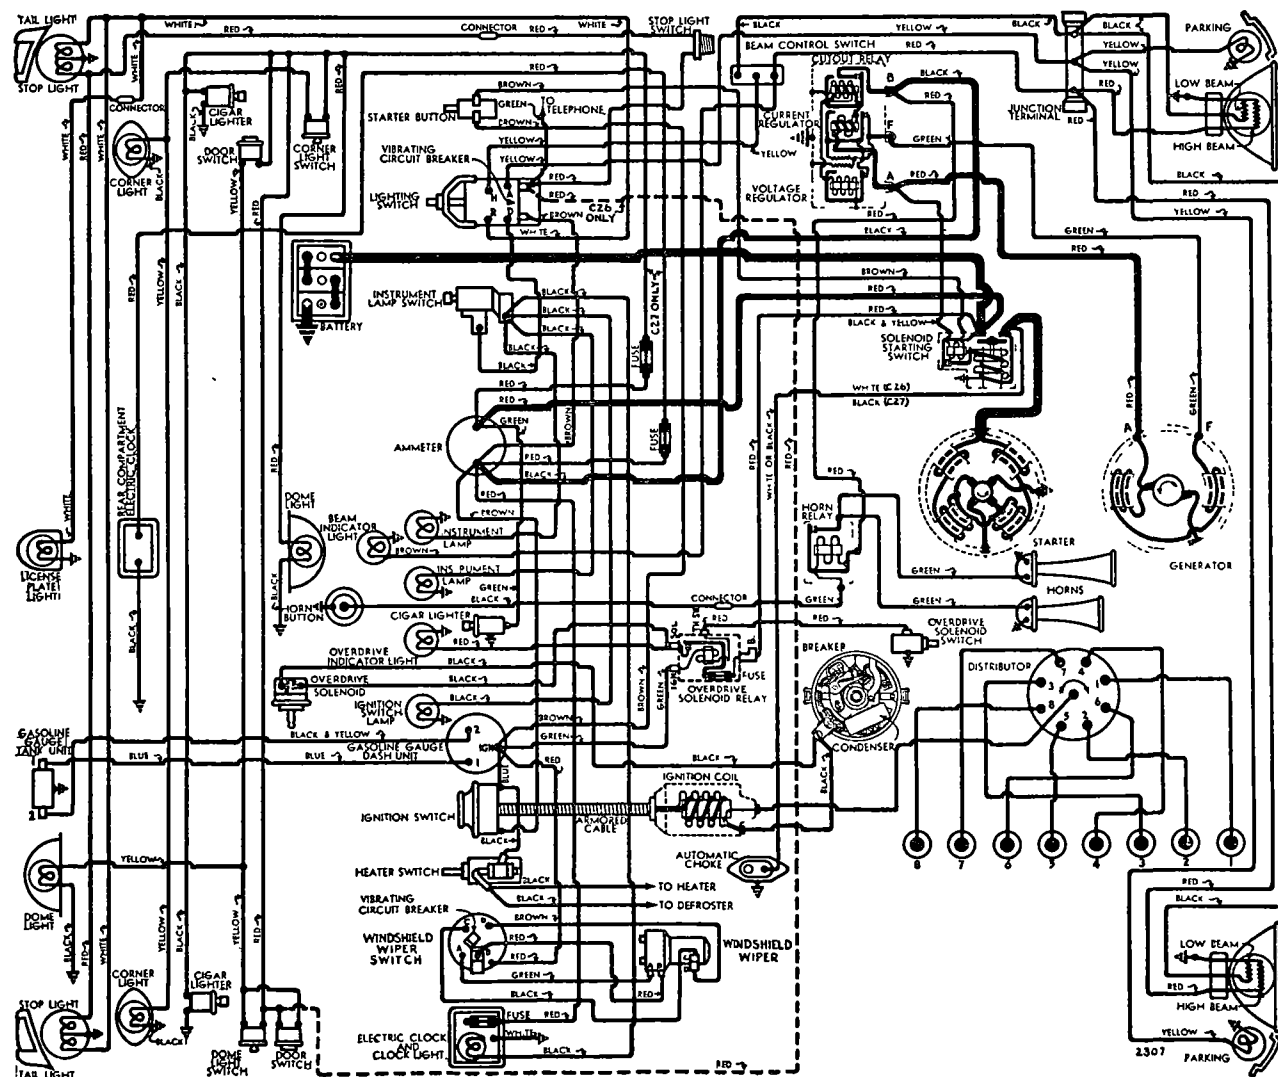

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	8"
4°	8°	11"
6°	12°	14"
8°	16°	17"

#### Vacuum Advance—IGT-4101B-2

Start	0°	5"
1°	2°	7"
3°	6°	11"
5°	10°	15"
6°	12°	17"

**Manual Adjustment**—Provides 10° advance or retard from center '0' position on scale (at distributor). See Ignition Timing for adjustment.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lockplate.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting (correct for fuel of 70 octane rating at low altitudes for 6.8-1, Ethyl fuel 7.45-1 head) shown below. See Manual Adjustment (following) for recommended corrections (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

## Flywheel Degrees Piston Position

C26—6.8-1 CI hd. ....0° at TDC.....0000° TDC.  
C27—6.8-1 AL hd. ....3° BTDC.....0038° BTDC.  
\*\*All—7.45-1 AL hd. ....0° at TDC.....0000° TDC.

\*\*—Ethyl gasoline setting.

**NOTE**—Impulse neutralizer marked DC at TDC with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #8 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment setting (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (correct mark filled in with paint or chalk), idle engine and adjust distributor as directed above).

**Manual Adjustment**—Initial ignition setting listed above should be varied not more than 4° (.007") retard or advance so that slight ping noticeable between 10 and 30 MPH when accelerating with wide open throttle for best performance. To adjust, loosen lock plate hold-down screw, rotate distributor counter-clockwise (if no ping noted), clockwise to retard (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model AAV-2, No. A-18792. Aircraft, duplex, 1¼" downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw for each barrel equally until engine fires smoothly (turn screws in for leaner mixture). Readjust idle speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Set idle adjusting screw for highest reading on gauge.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extreme hot weather. Outer Hole (long stroke)—Winter temperatures.

**Float Level**—Fuel level ⅝" below top edge of bowl.

**Fast Idle:**—Rotary cam, adjustable type.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust choke connector link length so that choke valve opening is ⅜" with fast idle screw (throttle stopscrew) against first step of fast idle cam.

**Automatic Choke:**—Sisson Type AC-600.

*For complete data, refer to Carburetion Equip. Index.*

**Throttle Guard (Cars with Fluid Drive):**—Vacuum operated throttle kicker to prevent engine stalling when accelerator pedal released quickly.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1523334 oil-wetted type standard.

**Fuel Pump:**—AC Type AW #1523869 diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite electric. No. NG-9356D (dash unit), No. NG-9330T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard Type MW-2-135. 6 volt, 17 plate, 135 ampere hour capacity (20 hour rate).

**Starting Capacity**—171 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.9 minutes. Five second voltage—4.5 volts.

**Grounded Terminal**—Positive (+) grounded to the transmission case.

**Dimensions**—Lgth. 10 5/16". Wld. 6 13/16". Hgt. 9".

**Location**—On left side under front seat.

## STARTER

**Auto-Lite Model MAX-4037 (C26), MAX-4020-A (C27, C26 Fluid Drive).** Armature MAW-2030 (all).

**Drive**—Overrunning clutch (solenoid pinion shift).

**Cranking Engine**—Approx. 160-170 amps. 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 " "	3300	5.5	100
2.75 " "	1630	5.0	200
5.5 " "	970	4.5	300
8.7 " "	600	4.0	400
12.0 " "	300	3.5	500
16.5 " "	Lock	3	640
25.0 " "	Lock	4	880

**Removal:**—Flange mounted on left front face of flywheel housing. Disconnect wire connections (tape battery lead) and oil filter lines. Remove two fastening bolts and withdraw unit.

**Starting Switch:**—Solenoid Pinion Shift type SS-4206.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GDZ-4801A (Std.), GDZ-4801B or GEB-4801A (Police).** Armature No. GDZ-2006F (GDZ-4801A, B), GEB-2006F (GEB-4801A).

Two brush type with current voltage control. Air-cooled.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

*See Regulator data following.*

**Maximum Charging Rate**—35 amperes (GDZ Gen.), 32 amperes (GEB Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1400 RPM (GEB), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by regulator (dependent on battery condition).

## Performance Data—GDZ-4801A, B

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
4	6.6	4	6.6
8	6.75	8	6.75
12	6.95	12	6.95
16	7.15	16	7.15
20	7.3	20	7.3
24	7.5	24	7.5
28	7.7	28	7.7
32	7.9	32	7.9
*35	8.0	35	8.0

## Performance Data—GEB-4801A

0	6.4	0	6.4
4	6.6	4	6.6
8	6.8	8	6.8
12	7.0	12	7.0
16	7.2	16	7.2
20	7.4	20	7.4
24	7.6	24	7.6
28	7.8	28	7.8
*32	8.0	32	8.0

\*—Current regulator setting.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (GDZ Gen), 64-68 ozs. (GEB Gen.), with new brushes.

**Field Current**—1.60-1.78 amperes at 6.0 volts (all).  
**Motoring Current**—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

**Removal:**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## REGULATOR

**Auto-Lite Model VRP-4001A (GDZ Gen.), VRP-4001B (GEB Gen.).** Current-voltage type. In case on dash. **NOTE**—For negative battery ground, VRP-4005A (GDZ Gen.), VRP-4005B (GEB Gen.) are used.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In**—6.4-6.6 volts at approximately 1000 generator RPM (VRP-4001A, 5A), 600 RPM (VRP-4001B, 5B).

**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031" min., .034" max. with contacts open.

**Measure** at hinge end of core.

## Voltage Regulator

**Setting**—7.2-7.5 volts at 70° F.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" Min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting** (VRP-4001A, 5A)—34-36 amperes (marked '35' on cover). (VRP-4001B, 5B) 31-33 (marked '32').

**To Check** (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

C N T I N U E D O N N E X T P A E

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. See article in *Electrical Equipment Section*. Headlamp Adjustment—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height. Beam Indicator—Red light in upper left corner of speedometer dial. Lighted when upper beam on. Switches

Same as Model C25 (see preceding page).

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking Instrument	1 1/2	55
Beam Indicator, Ign. Sw.	1	51
Overdrive Indicator	1	51
Stop and Tail	21-3	1158
Rear License	3	63
Dome or Reading	15	87

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:**—Vibrating, thermostatic type. Mounted on lighting switch.  
**FUSES:**—Clock—2 ampere. In connector behind clock. Rear Clock (C27 only)—2 ampere. In connector near back of ammeter. Body Wiring (C27 only)—30 ampere. In connector back of ammeter. Transmission Overdrive Control—20 amp. On relay. Radio—14 amp. In feed wire behind instr. panel. Horns & Windshield Wiper—No fuse used.  
**HORNS:**—Auto-Lite HC-5105, HO-5001 Horn Set, HL-4001 (low pitch), HL-4002 (high pitch), dual horns. Current Draw—Approx. 35-40 amperes. Horn Relay:—Auto-Lite Model HRC-4001 (no fuse). Contacts Close—1.5-3.0 volts. Open—.5 volt. Contact Gap—.026". Air Gap—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type. Bore—3 1/4". Stroke—4 7/8". Displacement—323.5 cu. ins. Rated HP—33.80. Developed Horsepower—130 HP (C26—6.8-1 Cast-iron hd.), 137 HP (C27—6.8-1 Aluminum hd.), 143 HP (C26 & C27 with optl. 7.45-1 hd.) at 3400 RPM. Compression Ratio and Pressure—As follows:  
Ratio Pressure at 1000 RPM At 100 RPM  
6.8-1 hd. (see Note).....150-160 lbs.....Approx. 118 lbs.  
7.45-1 aluminum hd. 160-170 lbs.....Approx. 124 lbs.  
NOTE—Cast-iron head (C26), Aluminum (C27). Vacuum Reading—Steady 18-21" idling at 6 MPH. See Chrysler Shop Notes for engine removal instructions.  
**PISTONS:**—Aluminum alloy, U-slot, cam ground, tin coated type. Length—3 7/8". Weight—16.33 ozs. (stripped). Removal—Pistons and rods removed from above. Clearance—Top .011". Skirt .0000-.0010". See Fitting New Pistons (following).  
Original Bore & Piston Sizes, Replacement Pistons:—See Chrysler Shop Notes for sizes and markings.  
Fitting New Pistons:—Check piston size with micrometer at bottom of skirt with gauge at right angles to pin bosses. Insert .002" feeler between cylinder wall and piston (with pin removed) opposite piston slot. Pull to withdraw feeler should be 5 to 7 lbs. Cylinders should be reconditioned when taper exceeds .0015" or out-of-round .002". Reconditioned cylinder bores should be within limits of .0005".  
Installing Pistons:—Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings). NOTE—Compression rings are coated type.

Ring	Width	End Gap	Side Clearance
Comp. (top)	1/8"	.007-.015"	.002-.0035"
Comp. (#2)	1/8"	.007-.015"	.0015-.003"
Oil Control	5/32"	.007-.015"	.001-.0025"

Replacement Rings: Refer to Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2 3/4". Floating type. Pin hole in rod bronze bushed. Pin Fit in Piston—Thumb push fit (piston at 130°). Pin Fit in Rod Bushing—Thumb push fit at 70°F. Replacement Pins:—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight—34.3 ozs. (with bearings and bolts). Length—9". Crankpin Journal Diameter—2 3/16". Lower Bearing—Removable, precision type, steel-backed, babbitt-lined type. Clearance—.001-.003". Sideplay—.006-.011".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings with boss engaging groove in rod and cap.

Replacement Bearings: Refer to Chrysler Shop Notes.

Installing Rods:—Lower bearings are offset. Install rods with widest portion of bearing toward the rear #1, 3, 5, 7; front #2, 4, 6, 8. Oil hole to camshaft.

**CRANKSHAFT:**—5 bearing type with 8 integral counterweights. Impulse neutralizer mounted on front Journal Diameters—2 45/64" all bearings. Bearing Type—Removable, precision type, steel-backed, babbitt-lined. Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front & Rear Oil Seals.

Replacement Bearings & Bearing Caps: Refer to Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#5) main bearing. Endplay—.003-.007".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive. See Chrysler Shop Notes for camshaft removal.

Journal Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 1/8".

Bearing Type—Removable steel-backed, babbitt-lined bushings (except #6 machined in crankcase). Clearance—.001-.003" (#1), .0015-.0035" (all others).

NOTE—Replacement bushings finish reamed.

End Thrust:—Taken by thrust plate assembled behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain:—Whitney #668983 center link guide type. Width 1 1/4". Pitch 1/2". Length 47 links or 23 1/2".

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length  
Intake .....1 17/32".....340-.341".....5 7/8"  
Exhaust .....1 11/32".....340-.341".....5 7/8"

Seat Angle Lift Stem Clearance  
All Valves .....45°.....3/8"......0015-.0035"

See Chrysler Shop Notes for Exh. valve seat insert data.

Valve Guides:—Remove from above. Press new guides in place with upper end 13/16" (Intake), 1" (Exhaust) below top of cylinder block (use Tool CM-83). Install with taper end up (Intake), and down (for Exhaust), ream to inside diameter of .3425-.3435". Counterbore exhaust guide at top to diameter of .365-.375" and 3/8" deep after installed in block.

Valve Springs:—Install with closely coiled ends at top. Free length 2 25/64".

## Spring Pressure Length

Valve Closed	52-58 lbs.	2 1/32"
Valve Open	129-137 lbs.	1 21/32"

**Valve Lifters:** Mushroom type. Stem diam. 5/8". Ream holes from above (pilot in valve stem guide) for lifters furnished .001", .008", .030", .060" oversize. Clearance in block—.000-.001".

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot. (.012" Exhaust clearance desirable for high speeds). NOTE—Tappet screws are self-locking type (no locknuts used). Remove right front wheel, lower housing panel, fuel pump shield, for access to valves. Valve Timing:—See Camshaft Setting above.

**Intake Valves:**—Open 6° BTDC. Close 50° ATDC. Exhaust Valves:—Open 44° BLDC. Close 12° ATDC. With .011" Intake, .014" Exh. tappet clearance Cold. Valve Timing Check—With .011" (cold) tappet clearance #8 intake valve should open with #8 piston 6° or .0170" BTDC with 6th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance.

## LUBRICATION

**LUBRICATION:**—Pressure system with gear type oil pump mounted on right side of crankcase. See Chrysler Shop Notes for oil pump removal and installation.

**Normal Oil Pressure:** 30-45 lbs. at 30 MPH, 15 idling. Oil Pressure Relief Valve:—Located under plug on lower left side of crankcase. Adjustable. To adjust, remove cap, withdraw locking wire, turn slotted plug clockwise to increase pressure, or counterclockwise to decrease. Valve opens at 40-45 lbs. Crankcase Capacity:—6 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—24 quarts.

See Chrysler Shop Notes for radiator core removal.

**Water Pump:** Packless. Sealed ball-bearing shaft.

See Water Pump Section for complete data.

**Removal:**—Drain cooling system, loosen fan shroud-to-radiator core cap screws, remove fan belt, cylinder head water outlet elbow (with radiator inlet hose and water pump by-pass hose and elbow). Disconnect pump inlet hose and take out pump-to-back plate screws. Remove nut from stud in front lower right hand side of pump (pull pump forward and use stud pliers between pump and back plate to remove stud). Lift out pump, fan, and shroud.

**Thermostat:**—Bishop & Babcock or Fulton. In cylinder head outlet elbow. Install with bellows down.

Setting—Start to open 150-155°F. Fully open 176°F.

**Temperature Gauge:**—Motometer (Auto-Lite) Vapor tension type. A-L Part No. H-9355.

See Miscellaneous Section for complete data.

**Drain Valves:** Center of radiator lower tank at front, on lower edge of water jacket on left side of engine.

## CLUTCH

## MODEL C26 (STD. EQUIP.)

**CLUTCH (C26 WITHOUT FLUID DRIVE):**—Borg & Beck Model 11A6 with 'Borglite' driven member. #941 stamped on cover. Single plate, dry disc type with spiral grooved facings, pressure plate oil baffle and pedal over-center return spring.

See Clutch Section for complete data.

**Facings:**—Spiral wound moulded woven, 2 used. Inside Diam. 6 1/2". Outside Diam. 11". Thickness 1/8".

**Adjustment:**—Clutch pedal should just clear underside of toeboard. To adjust, loosen locknut and turn

stopscrew located to rear of pedal arm above shaft. Free movement of pedal should be 1". To adjust, turn release fork adjusting nut on connector link.

**Removal:**—Remove clutch release fork pull-back spring. Remove transmission (see Transmission Removal following) and clutch underpan. Disconnect release fork from pivot and pull out as far as possible. Punch mark cover and flywheel (assemble to these marks when re-installing clutch assembly to maintain balance). Remove clutch cover screws (release tension evenly). Lower clutch assembly out.

### CLUTCH

MODEL C26 (OPTL), C27 (STD.)

**CLUTCH (C26 WITH FLUID DRIVE AND C27):**—Borg & Beck Model 10A6 with 'Borglite' driven member. #939 stamped on cover. Single plate, dry disc type with spiral grooved facings, pressure plate oil baffle and pedal over-center return spring. Clutch assembly mounted on clutch driving plate at rear of fluid drive. No spring dampener on clutch driven member. See Clutch Section for complete data.

**Adjustment:**—Same as for C26 above.

**Removal:**—Remove floor board, clutch release fork pull-back spring and cotter pin and clevis from end of release fork rod. Pull release fork out of housing. Remove transmission (see Transmission Removal following) and clutch housing underpan (jack up rear of engine enough to allow pan to clear frame cross member). Punch mark clutch cover and clutch driving plate (assemble to these marks when re-installing clutch assembly to maintain balance). Remove clutch cover-to-driving plate screws (release tension evenly). Lower clutch assembly out.

### FLUID DRIVE

**FLUID DRIVE (STD. ON C27, OPTL. ON C26):**—Consists of fluid coupling assembled to rear of engine. See Miscellaneous Section for complete data.

**Removal:**—Remove clutch (see removal instructions above for C26 with Fluid Drive and C27). If fluid drive to be disassembled, turn unit over until one filler plug is at bottom center, remove plug with 1½" socket wrench and allow unit to drain. Remove fluid drive-to-crankshaft stud nuts freeing assembly. Pull assembly to rear, lower assembly out.

### TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear type, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse). Warner Model R7B overdrive with electric 'kick-down' Std. on C27.

See Transmission Section for complete data.

**Transmission Control:** Steering column shift.

See Transmission Section for complete data.

**Removal (C26):**—Remove propeller shaft by disconnecting front and rear universal joints. Loosen companion flange nut if transmission to be disassembled. Disconnect speedometer cable, battery ground cable, hand brake cable, and gear shift rod and cable at transmission. Remove transmission-to-clutch housing mounting stud nuts and washers. Pull transmission back, down and out of car. NOTE—Use pilot studs inserted in place of two upper mounting studs when installing transmission.

**Removal (C27):**—Remove floor boards. Disconnect battery ground cable at transmission. Remove rear propeller shaft, four front companion flange nuts, four frame-to-center bearing mounting screws, slide bearing and front shaft back through frame X-member opening (if spacer used between frame and bearing mounting, replace spacer when re-

installing). Remove universal joint flange and brake drum from shaft, and clevis pin from brake cable. Take off brake assembly from overdrive case. Disconnect solenoid wires and remove coil. Disconnect speedometer and gear shifter rod and cable at transmission. Remove transmission-to-clutch housing mounting stud nuts, two upper mounting studs (install two nuts on end of stud and turn stud out), replace with pilot studs. Withdraw assembly.

### OVERDRIVE

**Overdrive:** Warner Model R7B type Overdrive unit with electrical "kick-down" control. Std. on Model C27, Optl. on C26 New Yorker and Saratoga only. See Transmission Section for complete data.

**Overdrive Solenoid:**—Auto-Lite SSB-4001.

**Throttle Switch Setting:**—3/32" gap between switch plunger & contact screw (throttle just wide open).

**Control Relay:**—Auto-Lite HR-4201. Use only 20 ampere fuse on relay (on left side of engine dash).

**Overdrive Indicator Light:**—In upper right corner speedometer. Lights when in 'kick-down' Direct.

**Overdrive Transmission Removal:**—Same as for C27 Transmission Removal (preceding) except that front propeller shaft & center bearing not used on C26.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 7300. Cross type, roller bearings. 2 on C26, 3 on C27.

See Universals Section for complete data.

**Propeller Shaft Center Bearing (C27):**—See Chrysler Shop Notes for removal and installation data.

### REAR AXLE

MODEL C26

**REAR AXLE (C26):**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—3.91-1 (standard). 4.1-1 (special). 4.3-1 or 4.89-1 (with overdrive and fluid drive).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Drain differential, remove both axleshafts (see below) and universal flange bolts at rear universal and lower propeller shaft. Take out carrier-to-axle housing capscrews (nuts used on C27) and lift out differential gear carrier assembly.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319 for C26, C-476 for C27). Block brake pedal, disconnect brake line at wheel cylinder, take off oil seal and backing plate and pull axle shaft and bearing with Tool C-158. NOTE—Use Tool C-358 to pull axle shaft oil seal washer, drift C-201 or 2 to install.

**Wheel Bearing Adjustment:**—Adjusting shims located between flanged ends of axle housing and brake backing plate. Remove wheel and hub assembly (see above). Check endplay with dial indicator (make sure that brake bolts are tight and tap end of axle shaft so that bearing cups are seated). To adjust, remove oil seal and backing plate, add or remove shims equally at both ends of axle housing until endplay is correct. Endplay—.003-.008". NOTE Shims furnished .010", .0125", .015" and .030" thick.

### REAR AXLE

MODEL C27

**REAR AXLE (C-27):**—Own Make. New type, semi-floating, hypoid gear type with Hotchkiss drive. New barrel type differential with adjustable type drive gear thrust pad.

See Rear Axle Section for complete data.

**Ratio:**—4.55-1.

All other data same as for C26 Rear Axle above.

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco or Monroe. Direct acting, hydraulic types. Delco Models 1130 and 1134 are adjustable type.

Car Model	Make	Front	Rear
C26 (Standard).....	Delco .....	1000-C.....	1001-T
C26 (Standard).....	Monroe.....	854568.....	854570
C26 (Spec. Equip.).....	Delco .....	1134-E.....	1130-W
C26 (Export).....	Delco .....	1002-C.....	1003-T
C27 (Standard).....	Delco .....	1134-E.....	1130-W

See Shock Absorber Section for complete data.

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

Specifications below apply with car weight on wheels and no passenger load.

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Positive ¼° (desired). Limits 0° to Positive ¾°. Adjustable.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe In:**—1/16" (desired). Limits 0" to ¼". Adjust by loosening clamp bolts on ends of both tie rods and turning rods equally, tighten clamp bolts. NOTE—

Clamp bolt on left end of long tie rod should be turned below tie rod to give clearance on turns.

**Steering Geometry (toe-out on turns):**—Inner wheel turned 21°30'. Outer wheel turned 20°.

### STEERING GEAR

**Steering Gear:** Gemmer Model 335. Worm-and-Roller type with "Push-Pull" adjustments.

See Steering Gear Section for complete data.

### BRAKES

**BRAKES:**—Service—(Front Wheels): New Lockheed hydraulic, Two-Cylinder type (front shoe anchored at bottom and actuated by top cylinder, rear shoe anchored at top and actuated by bottom cylinder). (Rear Wheels): Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See Brake Section for complete data.

**Wheel Cylinders:**—New straight cut bore type with new piston assembly (no spring) used on both front and rear brakes. Cylinder bore diameter 1½".

**Drums:**—Centrifuge type. Diameter—12".

**Lining:**—Molded. Width 2". Thickness 13/64". Length

—Rear wheel rear shoe 9½", all other shoes 12 9/16".

**Clearance:**—Toe (wheel cylinder end) .007" for all shoes. Heel (anchor bolt end) .006" for all shoes except rear wheel rear shoes—.007" rear wheel rear shoes only.

**Braking Power:**—61% front wheels, 39% rear wheels.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes.

**Drum:**—Cast-iron. Diameter—7".

**Lining:**—Width 2½". Thickness 5/32". Length 20½".

**Power Brake Unit (C27):**—Bendix Internal Valve type. See Brake Section for complete data.

### MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-lite Model EWB-4001. Electric type with circuit-breaker on back of switch.

See Miscellaneous Section for complete data.

**Circuit Breaker:**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**Power Operated Convertible Top:** Vacuum Power type. See Miscellaneous Section for complete data.

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—Refer to Chrysler Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On right front door hinge pillar post.

First Nos. as follows:

	Detroit	Canada
1941 C28 Royal	7,657,501	9,717,741
1941 C28 Windsor	7,901,601	
1942 C34S Royal	70,001,001	9,385,101
1942 C34W Windsor	70,501,001	

**ENGINE NUMBER:** Stamped on left side of cylinder block between #1 and #2 cylinders. First Number C28-1001 (1941), C34-1001 (1942).

Refer to Chrysler Shop Notes for Engine Number Lettering data ("Special Standard" bore and bearing sizes).

### TUNE-UP

**COMPRESSION:** Ratio & Pressure—as follows:

	Ratio	Pressure (Cranking Spd.)
C28 Std.	6.5-1	115-125 lbs.
C28 Std.	6.8-1	115-125 lbs.
C28 Optl.	7.2-1	
C34 Std.	6.6-1	125-135 lbs.

**VACUUM READING:** Steady 18-21" Idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 (Cast Iron Head), Type AL-7 (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 38° (closed).

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting—At TDC.** (All 1941 models), 2° ATDC. (1942 Models with Aluminum Pistons), 3½-4½° ATDC. (1942 Models with Cast Iron Pistons) with dead center "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—Idle screw** ½-1½ turns open. Idle speed 6 MPH. (Std. Transmission), 450 RPM or 4 MPH. max. (1941 cars with Vacumatic Trans.), 5 MPH. max. (1942 cars with Vacumatic Trans.).

**Float Level—5/64"** (E6S2, 3; E6W1; E6T1, 2; E6U1, 2; EE1 Carb.), 1/16" (EA1, EF1, EG1 Carb.) top of float below top edge of float bowl.

**Accelerating Pump—Center hole Normal, Inner hole (Summer), Outer hole (Winter) for temperature extremes.**

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise and hook free end over stop.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8112 (Std.), Model 30-R, No. 8793 (with vacumatic trans.).

►NOTE—Model 30-R switch has extra terminal for transmission control (for Vacumatic Transmission).

**Ignition Lock:**—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000BP. Groove 24.

**COIL:** Auto-Lite Model IG-4669 (Std.), IG-4671 (1941 & 1942 Cars with '41 type Vacumatic Transmission). IG-4676 (1942 C34S Canada).

Service Coil (less switch & cable) IG-3224JS.

**Ignition Current:**—2¼ amperes Idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4113-1 or 4202-1 (1941 Std.), IGS-4117 or 4117-1 (1941 with Tachometer Drive), IGS-4202B-1 (1942 with Al. Pistons), IGS-4202C-1 (1942 with Cast Iron Pistons). Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and manual adjustment.

**Breaker Plate Identification:**—Number stamped on plate as follows: #7 (IGS-4113-1, 4117, 4117-1 4202-1), #9 (IGS-4202B-1, 4202C-1).

**Breaker Gap:**—Set at .020". Limits .018-.022".

**Cam Angle or Dwell:**—38° closed, 22° open (distr. °).

**Breaker Arm Spring Tension:**—17-20 ounces.

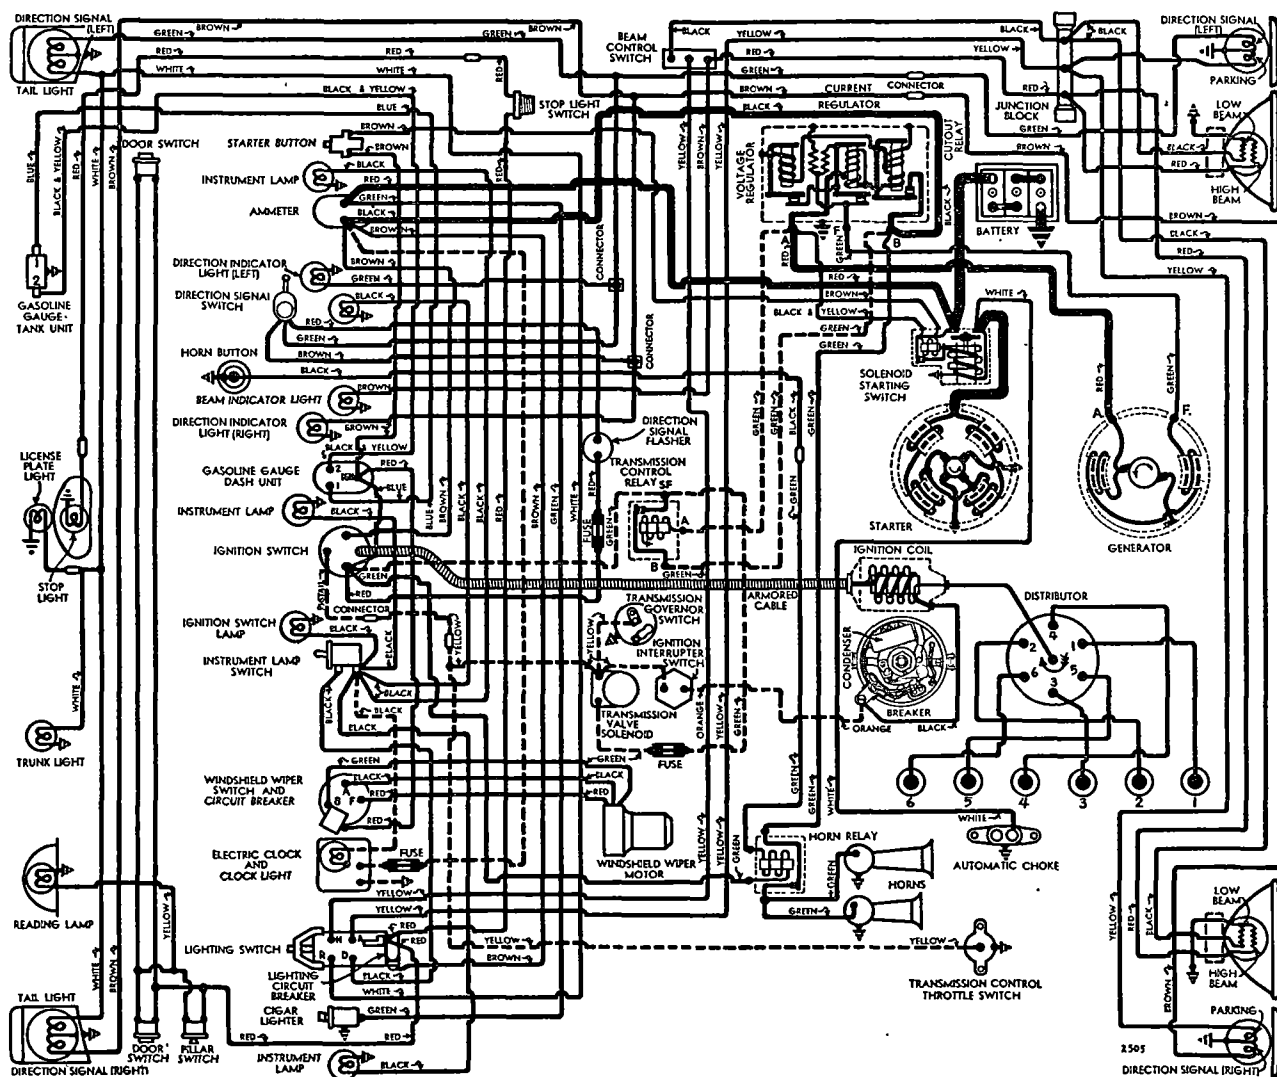

**Rotation:**—Clockwise viewed from above.

**Automatic Advance:**—IGS-4113-1, 4117, 4117-1, 4202-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700

2°	4°	7 1/2"	
5°	10°	11 1/8"	
7°	14°	13 1/2"	
9°	18°	16"	

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. Installation—Install distributor with #1 piston in firing position.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes for all engines) shown below. See Manual Adjustment (following) for Final Setting.

Flywheel Degrees	Piston Position
1941 All Engines.....0° TDC.....	.000" TDC.
1942 Early①.....2° ATDC.....	.002" ATDC.
1942 Late②.....3 1/2-4 1/2° ATDC.....	.005-.007" ATDC.
①—Aluminum Pistons. ②—Cast Iron Pistons.	

**NOTE**—Impulse neutralizer marked 'DC' at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer idle engine, adjust distributor as directed above.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) 1 1/2" single barrel, downdraft types. **NOTE**—Carburetors on cars with Fluid Drive have Slow-Closing Throttle device, Carburetors on cars with Vacuumatic Transmission have kick-down shift switch.

Car Model	Carburetor Model
1941 (Std. Trans.).....	E6S1, E6S2, E6W1
1941 (Fluid Drive).....	EA1
1941 (Vacumatic Trans.).....	E6T1, E6T2, E6U1, E6U2
1942 (Std. Trans.).....	EE1
1942 (Fluid Drive).....	EF1
1942 (Vacumatic Trans.).....	EG1

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH min. (Std.), 450 RPM or 4 MPH max. (1941 Vacumatic Trans. Cars), 5 MPH max. (1942 Cars with Vacuumatic transmission). Adjust idle adjusting screw for smooth idle (1/2-1 1/2 turns open, turn screw in for leaner mixture). Recheck idle speed.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet. Center Hole (med. stroke)—Normal summer setting. Outer Hole (max. stroke)—Winter temperatures.

**Float Level**—5/64" (E6S2, S3; E6W1; E6T1, T2; E6U1, U2; EE1 Carb.), 1/16" (EA1, EF1, EG1 Carb.) from top of float (not float seam) to top edge of bowl with valve seated.

**Metering Jet**—Refer to Carburetor Index for Carter (B&B) Downdraft Carburetor Jet Specification Table. **NOTE**—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

**Slow Closing Throttle** (EA1, EF1, EG1, E6T1, E6T2, E6U1, E6U2): Dashpot type (Cars with Fluid Drive), Solenoid type (Cars with Vacuumatic Trans.). Solenoid type is not adjustable.

For complete data, refer to Carburetion Equip. Index.

**Adjustment (Dashpot Type)**—Turn adjusting screw (above dashpot plunger) in as far as possible, then back screw out 5 full turns for 7/32" stroke.

**Fast Idle**—Built-in type. Not adjustable.

**Automatic Choke**—Sisson Type AC-758B.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1529938 (1941), 1542284 (1942) oil bath. Replacement Filter Element #1542305 ('42).

**Fuel Pump**—AC 'AT' #1523647—Exch. No. 505 diaphragm type pump. Pressure—4 lbs.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**: Auto-Lite Electric type. No. NG-9704D (Dash Unit—1941), NG-9330D (Dash Unit—1942), No. NG-9329T (Tank Unit—1941-42).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Willard Type WHT-2-17R. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.4 volts.

**Grounded Terminal**—Positive (+) to engine.

**Dimensions**—Length 10 1/4". Width 7". Height 9 3/8".

**Location**—Under hood in left fender shield.

## STARTER

**Auto-Lite Model MAX-4045, 4045A (1941), MAX-4050 (1942).** Armature No. MAW-2030.

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM, 175 amperes, 5.4 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5300.....	5.5.....	65
2.75 ".....	1630.....	5.0.....	200
5.5 ".....	970.....	4.5.....	300
8.7 ".....	600.....	4.0.....	400
12.0 ".....	300.....	3.5.....	500
16.5 ".....	Lock.....	3.....	640
25.0 ".....	Lock.....	4.....	880

**Removal**—Flange mounted on left front face of fly-wheel housing. Disconnect wires (tape battery lead), remove oil filter tubes, filter and 2 starter bolts.

**Starting Switch**: Auto-Lite Solenoid Switch No. SS-4703 (1941), SS-4705 (1942).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

**Auto-Lite Model GDZ-4801A (Std. 1941), GDZ-4801B (Std. 1942).** GEB-4801A or GEG-4818A (City Police), GEG-4818B or GEG-4823B (State Police). Two brush types with current-voltage regulation. Armature Nos. GDZ-2006F (GDZ-4801A), GEB-2006F (GEB-4801A), GEG-2006F (GEG-4818B).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate**—As given in tables below reached at approx. 25 MPH (GDZ Gen.) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

①—Current regulator setting. See Regulator data.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ounces max. (GDZ Gen.), 64-68 ozs. (GEB & GEG Gen.) with new brushes.  
**Field Current**—1.60-1.78 amperes at 6.0 volts (all).  
**Motoring Current**—4.16-4.60 amps. (GDZ Gen.), 4.0-4.5 amps. (GEB), 4.7-5.2 amps. (GEG) at 6.0 volts.  
**Removal**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.  
**Belt Adjustment**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

## REGULATOR

**REGULATOR**:—Auto-Lite VRP-4001A (GDZ Gen.), VRP-4001B (GEB Gen.), VRP-4001F (GEG Gen.).  
**Current-Voltage types**. In case on dash.  
**NOTE**—For negative battery ground, VRP-4005A (GDZ Gen.), VRP-4005B (GEB), VRP-4005E (GEG).  
*For complete data, refer to Electrical Equipment Index.*  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

## Cutout Relay

**Cuts In**—6.4-6.6 volts at approx. 1000 gen. RPM (VRP-4001A, 5A), 600 RPM (1B, 5B), 820 RPM (1F, 5E).  
**Cuts Out**—4.2-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.  
**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.  
**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting** (VRP-4001A, 5A)—34-36 amperes (marked '35' on cover). (VRP-4001B, 5B) 31-33 (marked '32' on cover). (VRP-4001F, 5E) 39-41 (marked '40').  
**To Check** (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.  
**To Adjust** (with cover removed)—Same as for Voltage Regulator (above).  
**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**LIGHTING**:—Headlamps—Corcoran-Brown 'Sealed Beam' type. *For data, refer to Elec. Equipment Index.*  
**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator**—Small red light on instrument panel above speedometer. Lighted with upper beams on.  
**Direction Signal**—Refer to Electrical Equip. Index.

## Switches

**Lighting**—Chrysler No. 934519 ('41), 934599 ('42).  
**Beam Selector**—Chrysler No. 859974.

**Instrument**—Chrysler 853371 ('41), 947193 ('42).  
**Dome Lamp Pillar**—Chrysler No. 317180.  
**Dome Lamp Door**—Chrysler No. 882943.  
**Stop Light**—Chrysler No. 677112.  
**Direction Signal**—Chrysler No. 865763 or 939577 (1941), 938926 (1942).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Dir. Signal & Parking	21-3	1158
Instrument	6	81
Glove Compt., Ash Tray	1½	55
Beam & Dir. Indic., Ign. Sw.	1	51
Rear Dir. Signal & Tail	21-3	1158
Stop Light	21	1129
Rear License	3	63
Reading or Dome	15	87

**NOTE**—Instrument Lamps for '41 were 1½ cp. No. 55.

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER**:—Vibrating, thermostatic type. Mounted on lighting switch.

**FUSES**:—Clock—2 ampere. In connector behind clock.  
**Vacumatic Transmission Control**—30 ampere. Under relay on left side of dash.

**Direction Signal**—30 ampere ('41), 9 ampere ('42). In wire fuse connector behind instrument panel.

**HORNS**:—Single—Delco-Remy No. 1999921, 1999924, 1999911 (low note), or 1999918 (high note).  
 Dual—Auto-Lite Horn Set No. HO-5003 or HT-5003.  
**Current Draw**—Approximately 7 amperes (single horn), 35-40 amperes (dual horns).

**Horn Relay**: Auto-Lite Model HRC-4001 (1941-42), HRL-4001 (1942). **NOTE**—HRL-4001 is special type with winding connected through Ignition switch so horns operative only with Ignition On.  
**Contacts Close**—1.5-3.0 volts. **Open**—5 volt.  
**Contact Gap**—.026". **Air Gap**—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS (1941)**: 6 cylinder, "L" head type. Bore—3⅞". Stroke—4½".  
**Displacement**—241.5 cu. ins. **Rated HP**—27.34.  
**Developed Horsepower**—112 (Std. 6.8-1 or 6.5-1 hd.), 115 (Optl. 7.2-1 hd.—Std. 7 pass.), at 3600 RPM.  
**Compression Ratio and Pressure**—As follows:  
 Ratio Pressure at 1000 RPM At 125 RPM  
 6.8 or 6.5-1 iron.....140-150 lbs.....115-125 lbs.  
 7.2-1 aluminum hd.....150-160 lbs.....120-130 lbs.  
**Vacuum Reading**—Steady 18-20" idling (below 1000').  
*See Chrysler Shop Notes for engine removal directions.*

**ENGINE SPECIFICATIONS (1942)**: 6 cylinder, "L" head type. Bore—3 7/16". Stroke—4½".  
**Displacement**—250.6 cubic inches. **Rated HP**—28.36.  
**Developed Horsepower**—128 at 3800 RPM.  
**Compression Ratio**—6.6-1 cast-iron head.  
**Compression Pressure**—160-170 lbs. at 1000 RPM or 125-135 lbs. at cranking speed. Variation 10 lbs. max.  
**Vacuum Reading**—18-21" steady idling at 6 MPH.  
*Refer to Chrysler Shop Notes for Engine Removal data.*

**PISTONS**: Aluminum alloy, U-slot, Cam ground, tin-plated type (1941 & first 1942 cars); Cast Iron, ribbed, Cam ground type (later 1942 cars).  
**Length**—3⅞" (Aluminum), 3½" (Cast Iron).  
**Weight**—17.5 ozs. stripped (1941 Aluminum type).  
**Removal**—Pistons and rods removed from above.  
**Clearance (1941)**—Top .023". Skirt .0000-.0010".  
**Clearance (1942 C. I.)**—Top .016". Skirt .0008-.0018".  
**Original Bore & Piston Sizes, Replacement Pistons**:—  
*Refer to Chrysler Shop Notes for sizes and markings.*

**Fitting New Pistons**:—Check piston size with micrometer at bottom of skirt 90° from pin bosses. With piston and wall dry, insert feeler between cylinder wall and piston (piston inverted, pin removed) 90° from pin bosses. Feeler pull should be 10-15 lbs. on .0015" feeler (cast-iron), 5-7 lbs. on .002" (aluminum).  
**Installing Pistons**:—Slot away from valves (alum.).

**PISTON RINGS (1941)**: 4 rings above pin. #1 compression (upper inner edge stepped), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	⅛"	.007-.015"	.002-.004"
Comp. (#2)	⅛"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.001-.0025"

**PISTON RINGS (1942)**: 4 rings above pin. #1 and #2 compression rings (upper inner edge stepped), #3 and #4 oil rings (slotted).

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.015"	.0025-.004"
Compr. #2	3/32"	.007-.015"	.002-.0035"
Oil Control	5/32"	.007-.015"	.001-.0025"

**Replacement Rings**:—Refer to Chrysler Shop Notes.

**PISTON PIN**:—Diameter—55/64". Length—2⅞". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Loose thumb push fit at 70°F, pin should fall out if piston jarred (Cast Iron), thumb push fit at 130°F. (Aluminum Pistons).

**Pin Fit in Rod Bushing**—Thumb push fit at 70°F.

**Replacement Pins**:—Std. and .003", .008" oversize.

**CONNECTING ROD**:—Length—7⅞".

**Weight**—34.24 ozs. with bearings & bolts (1941).

**Lower Bearing Diameter**—2⅞". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes.

**Lower Bearing**—Removable, precision type, thin babbitt. Clearance .001-.0015". Sideplay .0055-.0115".

**Bearing Adjustment**:—None (no shims). Replace bearings. See Chrysler Shop Notes for instructions.

**Replacement Bearings**—See Chrysler Shop Notes.

**Installing Rods**:—Oil metering hole to camshaft.

**CRANKSHAFT**:—4 bearings, 9 integral counterweights.

**Bearing Diameter**—2½". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes.

**Bearing Type**—Removable, precision type, thin babbitt on steel. Clearance—.001-.0015".

**Bearing Adjustment**:—Refer to Chrysler Shop Notes for Bearing Removal and Adjustment instructions.

**Replacement Bearings & Bearing Caps**: Refer to Chrysler Shop Notes for complete data.

**End Thrust**:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007" (.003" desired).

**CAMSHAFT**:—4 bearing. Non-adjustable chain drive. Refer to Chrysler Shop Notes for Camshaft Removal.

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust**:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain**:—Morse Type 1883N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.

**Camshaft Setting**:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with straightedge across shaft centers.

**VALVES**: Specifications for each model as follows:

C28 (1941)

Valve	Head Diameter	Stem Diameter	Length Intake	Length Exhaust
Intake	1 21/32"	.340-.341"	4 25/32"	4 25/32"
Exhaust	1 17/32"	.340-.341"	4 25/32"	4 25/32"
	Seat Angle	Lift	Stem Clearance	
All Valves	45°	⅜"	.0015-.0035"	

**ENGINE**

CONTINUED FROM PRECEDING PA E

**C34 (1942)**

Valve	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.340-.341"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"
Seat Angle		Lift	Stem Clearance
Intake	45°	3/8"	.0015-.0035"
Exhaust	45°	3/8"	.002-.004"

See Chrysler Shop Notes for Exhaust Valve Seat inserts.

**Valve Guides:**—Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block, ream to .3425-.3435".

**Valve Springs:**—Install with closely coiled end to top. Free length 2". Spring Pressure Length  
Valve Closed 40-45 lbs. 1 3/4"  
Valve Open 107-115 lbs. 1 1/8"

**Valve Lifters:**—Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", and .030".  
Lifter Clearance in Block—.000-.001".

**VALVE TIMING**

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**Valve Timing:**—See Camshaft Setting above.  
Intake Valves—Open 12° BTDC, Close 44° ALDC.  
Exhaust Valves—Open 50° BLDC, Close 6° ATDC.  
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" hot.

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine). Refer to Chrysler Shop Notes for Oil Pump Removal.

**Normal Oil Pressure:**—30-45 lbs. above 30 MPH.

**Oil Pressure Relief Valve:**—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Capacity—18 quarts.

Refer to Chrysler Shop Notes for Radiator Core Removal and Water Distribution Tube servicing.

**Water Pump:**—Packless type with grease fitting. See Water Pump Section for complete data.

**Thermostat:**—Bishop & Babcock or Fulton. On cyl. hd. Setting—Starts to open 157-162°F. Fully open 183°F.  
**Temperature Gauge:** Auto-Lite (Motometer) Vapor Tension type. Auto-Lite No. H-9703 ('41), 9929 ('42). See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (Taxi) with 'Borglite' driven member. Assy. No. 940 or 930 (10A7), 953 (9A7), 941 or 931 (11A6) stamped on cover. Single plate, dry disc types. See Clutch Section for complete data.

**Facings:**—Molded-Woven, 2 used. Inside Diam. 7" (10A7), 6" (9A7), 6 1/2" (11A6). Outside Diameter 10" (10A7), 9 1/4" (9A7), 11" (11A6). Thickness .125" (3/8").

**Adjustment:**—Pedal should just clear toeboard (adjust stop screw in lower end of pedal) & have 1" free

travel (adjusting nut on connector link at fork).

**Removal:**—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

**FLUID DRIVE**

**FLUID DRIVE (OPTL.):**—Fluid coupling at rear of engine. See Miscellaneous Section for complete data.

**TRANSMISSION****STANDARD**

**TRANSMISSION (STD.):**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift. See Transmission Section for complete data.

**Transmission Control:**—Steering column shift. Manual type Std. Power Shift (vacuum type) Optl. See Transmission Section for complete data.

**Removal:**—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car.

**TRANSMISSION****OPTIONAL EQUIPMENT**

► 1941-Early 1942 Chrysler Vacamatic Underdrive: With Diaphragm type power unit.

See Transmission Section for complete data.

Control Relay—Auto-Lite Model HRE-4001.

► **CAUTION**—To correct "Ignition Cutting Out" and "Transmission Not Shifting" on 1941-Early 1942 cars, see Interrupter Switch Insulator and Transmission Remains in First or Third (No Upshift) Special Service Notes in 1941-Early 1942 Chrysler Vacamatic Underdrive Transmission article in Transmission Section.

► Late 1942 Chrysler Vacamatic Underdrive: With Piston type power cylinder.

See Transmission Section for complete data.

Control Relay—Auto-Lite Model HRM-4001.

Governor Switch—Auto-Lite Model TG-4002R.

Solenoid Vacuum Valve—Auto-Lite SSJ-4001, 4001B.

Vacuum Piston Assy.—Auto-Lite VP-4001.

Air Cleaners—Auto-Lite No. SP-2472 (vacuum valve cleaner), SP-2481.

**Removal:**—Same as Std. transmission (above), plus the following: Remove floor board, wires from vacuum unit solenoid, interrupter and governor switches, hose from vacuum unit air cleaner to vacuum unit. Take out vacuum unit (disconnect pullout cable and return spring and remove pivot pin).

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit-Universal Series 7200. See Universals Section for complete data.

Propeller Shaft Center Bearing:—Used on 7 passenger sedans. Refer to Chrysler Shop Notes for servicing.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gear & Hotchkiss drive. Refer to Rear Axle Section for data.  
Ratio—Standard: 3.9-1 (5 pass.), 4.3-1 (7 pass.)  
Vacamatic Trans.: 3.54-1 (5 pass.), 3.91-1 (7 pass.)  
Backlash—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car, remove rear wheels.

Disconnect brake hose at frame bracket, lower ends of shock absorbers and rear universal. Disconnect Transverse Sway Bar at axle bracket. Support axle, remove rear spring hold-down clips, withdraw axle Assembly. NOTE—To remove carrier without disturbing housing, disconnect rear universal, remove axle shafts, take out carrier mounting screws.

**Axle Shaft Removal & Wheel Bearing Adjustment:**—See 1942 Chrysler Eight Model C36 article for data.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:** Domestic—Monroe Direct acting type (Std.), Delco (Cars with 18" wheels).

Export—Delco Direct Acting, or Direct Acting Adjustable types. See Shock Absorber Section for data.

**Transverse Sway Strut (7 Pass.).** Rear Sway bar with Monroe 956790 direct acting hydraulic shock absorber built in. See Shock Absorber Section for data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs and direct acting shocks. See Front Suspension Section for complete data.

**Kingpin Inclination:**—4 1/4° to 6°.

**Camber:**—Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.  
**Toe-In:**—0-1/8" (1941), 0-1/16" (1942). Adjusted by turning both tie rods equally.

**Steering Geometry:**—Outer wheel turned 20°, Inner Wheel 22° ± 1° (5 pass.), 21 1/2° ± 1° (7 pass.).

**STEERING GEAR**

**Steering Gear:** Chrysler (Gemmer design) Model 305 (5 Pass. Cars), 335 "3-tooth" type (7 Pass. Cars). See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See Brake Section for complete data.

**7 Passenger Service Brakes:**—Same design and size as used on Chrysler 8 Model C36. See 1942 Chrysler Eight C36 article for all data on 1942 7 Pass. Service Brakes.

**Drums:**—Centrifuse. Diameter 11".

**Lining:**—Molded asbestos. 2" wide. 13/64" thick.

**Length (front shoe)** 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" Toe (top), .008" Heel, for each shoe.

**Braking Power:**—60% front wheels, 40% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter 6", 7" (Vacam. Trans.).

**Lining:**—Moulded and compressed asbestos. Width 2" (Std. trans.), 2 1/2" (Vac. trans.). Thickness 5/32".

**Length** 17 1/16" (1941 with Std. Trans.), 16 11/16" (1942 with Std. Trans.), 20 3/8" (1941 with Vacamatic Trans.), 20" (1942 with Vacamatic Trans.).

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Auto-Lite Model EWD-5001, 5003 (1941), EWH-5001, 5003 (1942). Electric type with circuit breaker. 5003 types used on Conv. Coupe. See Miscellaneous Section for complete data.

**Circuit Breaker:**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**CONVERTIBLE TOP CONTROL:**—Electric type. See Miscellaneous Section for complete data.

**Top Control Motor:**—Auto-Lite Model EWG-4002 (1941), EWG-4003 (1942).

**Top Control Relay:**—Auto-Lite Model HRF-4001.

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—Refer to Chrysler Shop Notes for data.

### MODEL IDENTIFICATION

**MODEL DESIGNATIONS:**—For all models as follows:

	New Saratoga	New Yorker	Crown Imperial
1941	C30K	C30N	C33
1942	C36K	C36N	C37

**SERIAL NUMBER:**—Stamped on plate on right front door hinge pillar post. First number for each model:

	New Saratoga	New Yorker	Crown Imperial
1941	6,756,501	6,624,101	7,807,501
1942	6,762,501	6,674,201	7,808,401

**ENGINE NUMBER:**—On left side of block between #2 & #3 cylinders. First number 1001 with prefix C30 (C30K&N), C33 (C33), C36 (C36K&N), C37 (C37). Refer to Chrysler Shop Notes for Engine Number Lettering data ('Special Standard' Bore and Bearing sizes).

### TUNE-UP

**COMPRESSION:** Ratio—8.8-1 Head material Cast Iron (Std. C30 '41 & all 1942 models), Aluminum (Std. C33 '41, Optl. C30 '41).

**Pressure:**—160-170 lbs. at 1000 RPM. or 125-135 lbs. at cranking speed of 125 RPM.

**VACUUM READING:**—18-21" steady idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 (Cast Iron Head), AL-7 (Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.018. Cam Angle 27° (.017" gap).

**Automatic Advance:**—12° max. at 1750 RPM (distr.).

**Vacuum Advance:**—6° distr. with 17" vacuum (IGT-4103A-1, IGT-4104 Distr.), 8° distr. with 17" vacuum (IGT-4103-1, IGT-4201-1), 10° distr. with 16" vacuum (IGT-4201B-1).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC (1941 Cast Iron Head), 3° BTDC. (1941 Aluminum Head), 2° ATDC. (1942 Cast Iron Head) with dead center "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. **Idle Setting:**—Both idle screws midway between "miss" and "roll" points. Idle speed 6 MPH. (except '42 cars with Vacumatic Trans.—4½ MPH).

**Floet Level:**—Fuel level ⅝" below top of bowl.

**Accelerating Pump:**—Inner hole—Summer, Outer hole—Winter.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE:**—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8052 or Model 30-R, No. 8793 (with Vacumatic Trans.).

**NOTE:**—Model 30-R switch has extra terminal for transmission control (for Vacumatic transmission).

**Ignition Lock:**—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000BP. Groove 24.

**COIL:** Auto-Lite Model CE-4650 (Std. 1941), CE-4656 (Spec. 1941, Early 1942), CE-4660 (1942). Service Coil (less Switch & Cable) CE-3224JS. Mounted on dash.

**Ignition Current:**—2¼ amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

**Capacity:**—25-28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4103-1 (C30), IGT-4103A-1 (C33 Std.), IGT-4104 (C33 Tachometer Drive), IGT-4201B-1 (C36, C37), IGT-4201-1 (C36, C37 with Cast Iron Pistons). Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment.

**Breaker Plate Identification:**—Number stamped on plate as follows: #8 (IGT-4103-1, 4201-1), #6 (IGT-4103A-1, 4104), #10 (IGT-4201B-1).

**Breaker Gap:**—Set at .018". Limits .018-.020".

**Cam Angle or Dwell:**—27° clsd., 18° open (.017" gap).

**Breaker Arm Spring Tension:**—17-20 ozs.

**Rotation:**—Clockwise viewed from above.

### Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

**Vacuum Advance—IGT-4103A-1, 4104**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
1°.....	2°	7"
3°.....	6°	11"
5°.....	10°	15"
6°.....	12°	17"

**Vacuum Advance—IGT-4201B-1**

Start.....	0°	5"
2°.....	4°	7 1/4"
5°.....	10°	10 1/2"
8°.....	16°	13 3/4"
10°.....	20°	16"

**Vacuum Advance—IGT-4103-1, 4201-1**

Start.....	0°	5"
2°.....	4°	8"
4°.....	8°	11"
6°.....	12°	14"
8°.....	16°	17"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation**—Install distributor with #1 piston in firing position (see table below) and rotor opposite #1 segment in cap.

**IGNITION TIMING**

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes) shown below. See Manual Adjustment (following).

Model	Flywheel Degrees	Piston Position
1941 Cast Iron Head.....	0° TDC.....	.000" TDC.
1941 Aluminum Head.....	3° BTDC.....	.004" BTDC.
1942 All Engines.....	2° ATDC.....	.002" ATDC.

**NOTE**—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery

terminal on generator regulator. Set #1 or #8 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

**CARBURETOR**

**CARBURETION**—Carburetor, Stromberg Model AAV-2, 1 1/4" duplex downdraft with Sisson Automatic Choke. For complete data, refer to Carburetor Index.

**Idle Setting**—With engine warm and fast idle inoperative, set throttle stopscrew for 6 MPH idle speed. Adjust both idle screws (one for each barrel—adjust exactly alike) for smooth performance (turn screws in for leaner mixture), recheck idle speed. **NOTE**—On cars with Vacamatic Transmission (1942 Type), set idle speed at 4 1/2 MPH. If vacuum gauge used, set for highest reading on gauge.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extreme hot weather. Outer Hole (long stroke)—Winter temperatures.

**Float Level**—Fuel level 5/8" below top edge of bowl (even with bottom of sight hole on side of bowl) with engine idling (4 lbs. pressure).

**Metering Jet**—Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.

**Fast Idle**—Rotary cam, adjustable type.

For complete data, refer to Carburetion Equip. Index. **Setting**—Adjust connector rod so choke valve 1/8" open with fast idle screw against first step on cam.

**Automatic Choke**—Sisson Type AC-600.

For complete data, refer to Carburetion Equip. Index.

**Throttle Guard**—Vacuum operated throttle kicker.

For complete data, refer to Carburetion Equip. Index.

**Setting**—.010" clearance between cross-shaft lever adjusting screw and throttle control plunger with engine idling at correct hot or slow idle speed.

**CARB. EQUIPMENT**

**Air Cleaner**—AC #1529941 heavy duty oil-bath type. Use Replacement Filter Element Assembly #1529999.

**Fuel Pump**—AC 'AW' #1537445—Exch. No. 514. Diaphragm type fuel pump. Pressure—4 lbs.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite Electric type. No. NG-9704D (Dash Unit—1941), NG-9930D (Dash Unit—1942), No. NG-9330T (Tank Unit—1941-42).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

1941 M DELS C30, C33

**BATTERY**—Willard Type WHT-2-19R. 6 volt, 19 plate, 135 Ampere Hour capacity (20 hour rate).

**Starting Capacity**—171 amperes for 20 minutes.

CONTINUED N NEXT PAGE

1942 MODELS C36 & C37

See "1942 Chrysler Vacamatic Type" Transmission article in Transmission Section for Late 1942 Transmission Wiring

## C NTINUED FR M PRECEDIN PAGE

Zero Capacity—300 amperes for 5.8 minutes. Five second voltage 4.5 volts.  
Grounded Terminal—Positive (+) to engine.  
Dimensions—Length 10 5/16". Width 7". Height 9 3/4".  
Location—Under hood in left fender shield.

**BATTERY****1942 MODELS C36, C37**

**BATTERY:**—Auto-Lite Type CF-2-19R. 6 volt, 19 plate, 135 ampere hour capacity (20 hour rate).  
Starting Capacity—170 amperes for 20 minutes.  
Zero Capacity—300 amperes for 5.4 minutes. Five second voltage 4.45 volts.  
Dimensions—Length 10 1/4". Width 7". H'ght 8 15/16".  
Grounded Terminal—Positive (+) to engine.  
Location—Left side in engine compartment.

**STARTER**

Auto-Lite Model MAX-4045, MAX-4045A (1941), MAX-4050 (1942). Armature No. MAW-2030.  
Drive—Solenoid pinion shift & overrunning clutch.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—42-53 ozs. (new brushes).  
Cranking Engine—125 RPM, 175 amperes, 5.4 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft.lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.	640
25.0 "	Lock	4.	880

Removal:—Flange mounted on left front face of fly-wheel housing. Disconnect wires (tape battery lead), remove oil filter tubes, filter and 2 starter bolts.  
Starting Switch: Auto-Lite Solenoid Switch Model SS-4703 (1941), SS-4705 (1942).

For complete data, refer to Electrical Equipment Index.

**GENERATOR****STANDARD**

Auto-Lite Model GDZ-4801A (C30 Early Cars, C36), Model GEG-4818C (C30 Late Cars, C33; C36 Town Sedan, C37). Two brush (shunt) type with voltage and current regulation.  
Armature Nos.—GDZ-2008F (for GDZ-4801A generator), GEG-2006F (for GEG-4818C).  
Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.  
Maximum Charging Rate—35 amperes (C36 GDZ Gen.), 8.0 volts, 2200 Gen. RPM or approx. 26 MPH, 40 amperes (C37, 36 GEG Gen.), 8.0 volts, 1700 Gen. RPM or approx. 23 MPH and above with load or discharged battery (Current Regulator setting).  
Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—GDZ-4801A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

**Performance Data—GEG-4818C**

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	780	0	6.4	820
5	6.6	870	5	6.6	900
10	6.8	960	10	6.8	990
15	7.0	1040	15	7.0	1080
20	7.2	1130	20	7.2	1170
25	7.4	1220	25	7.4	1270
30	7.6	1310	30	7.6	1380
35	7.8	1410	35	7.8	1510
40①	8.0	1520	40	8.0	1680

①—Current regulator setting. See Regulator data.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ounces max. (GDZ Gen.), 64-68 ozs. (GEG generator) with new brushes.  
Field Current—1.60-1.78 amperes at 6.0 volts (all).  
Motoring Current—4.16-4.60 amperes (GDZ Gen.), 4.7-5.2 amperes (GEG generator) at 6.0 volts.  
Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.  
Belt Adjustment:—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

**GENERATOR****SPECIAL EQUIPMENT**

Auto-Lite Models GEB-4801A (City Police), GEG-4818A or 4818C (City Police), GEG-4818B or 4823B (State Police). For complete data on these generators (and regulators used with them), refer to 1941-42 Chrysler Six article (preceding).

**REGULATOR**

**REGULATOR:**—Auto-Lite VRP-4001A (GDZ generator), VRP-4001F (GEG Gen.). Current-Voltage types. In case on dash. NOTE—For negative battery ground use VRP-4005A (GDZ Gen.), VRP-4005E (GEG Gen.). For complete data, refer to Electrical Equipment Index.  
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

Cuts In—6.4-6.6 volts at approx. 1000 gen. RPM. (VRP-4001A, 5A), 820 RPM (VRP-4001F, 5E).  
Cuts Out—4.2-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" minimum.  
Air Gap—.031-.034" at hinge end (contacts open).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.  
To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stoppin).  
Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting (VRP-4001A, 5A)—34-36 amperes (marked '35' on cover). (VRP-4001F, 5E) 39-41 (marked '40').  
To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between

ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.  
To Adjust (with cover removed)—Same as for Voltage Regulator (above).  
Contact Gap & Air Gap—Same as Voltage Regulator.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data, refer to Elec. Equipment Index.  
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
Beam Indicator—Small red light on instrument panel above speedometer. Lighted with upper beams on.  
Direction Signal—Refer to Electrical Equip. Index.

**Switches**

Lighting—Chrysler No. 934519 ('41), 934599 ('42).  
Beam Selector—Chrysler No. 859974.  
Instrument—Chrysler 853371 ('41), 947193 ('42).  
Dome Lamp Pillar—Chrysler No. 317180.  
Dome Lamp Door—Chrysler No. 882943.  
Stop Light—Chrysler No. 677112.  
Direction Signal—Chrysler No. 865763 or 939577 (1941), 938926 (1942).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Dir. Signal & Parking	21-3	1158
Instrument	6	81
Glove Box, Ash Tray, Trunk	1 1/2	55
Beam & Dir. Indic., Ign. Sw	1	51
Hand Brake Indicator	21	1129
Rear Dir. Signal & Tail	21-3	1158
Stop Light	21	1129
Rear License	3	63
Reading or Dome	15	87
Corner	6	81

NOTE—1941 Instrument Lamps 1 1/2 cp. Mazda No. 55.

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:**—Thermostatic type. Mounted on back of lighting switch.

**FUSES:**—Clock—2 ampere. In connector in clock lead  
Vacumatic Transmission Control—30 ampere. On relay case on left hand side of engine dash.  
Direction Signal—9 ampere. Near ammeter.  
Rear Clock—2 ampere. In lead near ammeter.  
Body Wiring (C33, C37 only)—30 ampere. In lead near ammeter.

**HORNS:**—Dual. Auto-Lite HO or HT-5003 with relay.  
Horn Relay: Auto-Lite Model HRC-4001 (1941-42), HRL-4001 (1942). This HRL-4001 relay has winding connected through ignition switch so that horns operative only with ignition "on".

Contacts Close—1.5-3.0 volts. Open—5 volt.

Contact Gap—.026". Air Gap—.016-.020" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.

Bore—3 1/4". Stroke—4 7/8".

Displacement—323.5 cubic inches. Rated HP—33.8.

Developed Horsepower—137 at 3400 RPM (C30), 140 at 3400 RPM (C33), 140 at 3600 RPM (C37) with std. heads.

Compression Ratio—6.8-1 cast-iron hd. (C30, 36, 37). 6.8-1 aluminum head (C33, optional on C30).

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**Compression Pressure**—160-170 lbs. at 1000 RPM or 125-135 lbs. at cranking speed (125 RPM). Maximum variation between cylinders 10 lbs.

**Vacuum Reading**—18-21" steady idling at 6 MPH. Refer to *Chrysler Shop Notes for Engine Removal data*.

**PISTONS**:—Aluminum alloy, U-slot, cam ground, tin coated type (all C30, 33; early C36, 37). Cast-iron ribbed, lightweight, cam ground type (late C36, 37). NOTE—1942 type pistons use a narrower compression ring than 1941. See Piston Ring Specifications.

**Weight**—16.3 ozs. stripped ('41 aluminum type).

**Length**—3 $\frac{7}{8}$ " (aluminum pistons).

**Removal**—Pistons and rods removed from above. **Clearance (1941)**—Clearance at top land (difference in diameter) .022". Skirt .0000-.0010". See Fitting New Pistons below (use aluminum piston data).

**Clearance (1942)**—Clearance at top land (difference in diameter) .0305" (for aluminum pistons). Skirt .0005-.0015" (for aluminum pistons), .0008-.0018" (cast-iron pistons). See Fitting New Pistons (below).

**Original Bore & Piston Sizes, Replacement Pistons**:—Refer to *Chrysler Shop Notes for sizes and markings*.

**Fitting New Pistons**:—Check piston size with micrometer calipers across large diameter (90° from pin bosses) at bottom of skirt. With piston and cylinder wall dry, insert feeler between cylinder wall and piston (piston inverted, pin removed) 90° from pin bosses. Pull to withdraw feeler should be 5-7 lbs. on .002" feeler (aluminum pistons), 10-15 lbs. on .0015" feeler (cast-iron pistons). Piston and cylinder block should be at room temperature (70-75°F).

NOTE—Cylinder maximum allowable taper .0015", out-of-round .002". Use hone to 'clean-up' cylinders, bore and hone for badly scored bores. Reconditioned bores should be within limits of .0005" taper and .0005" out-of-round.

**Installing Pistons**:—Slot away from valves (alumin.).

**PISTON RINGS**:—Two compression, two slotted oil rings per piston, all above pin. NOTE—Compression rings have upper inner edge stepped (both rings '41, top ring '42), lower outer edge stepped (#2 ring '42) and all are surface coated.

**1941 Piston Ring Specifications**

Ring	Width	End Gap	Side Clearance
Comp. (top)	$\frac{1}{8}$ "	.007-.015"	.002-.0040"
Comp. (#2)	$\frac{1}{8}$ "	.007-.015"	.0015-.0025"
Oil Control	$\frac{5}{32}$ "	.007-.015"	.001-.0035"

**1942 Piston Ring Specifications**

Ring	Width	End Gap	Side Clearance
Comp. (top)	$\frac{3}{32}$ "	.007-.015"	.0025-.0040"
Comp. (#2)	$\frac{3}{32}$ "	.007-.015"	.0020-.0035"
Oil Control	$\frac{5}{32}$ "	.007-.015"	.0010-.0025"

**Replacement Rings**:—Refer to *Chrysler Shop Notes*.

**PISTON PIN**:—Diameter—55/64". Length—2 $\frac{3}{4}$ ". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Loose thumb push fit at 70°F, pin should fall out if piston jarred (Cast Iron), thumb push fit at 130°F (Aluminum Pistons).

**Pin Fit in Rod Bushing**—Thumb push fit at 70°F.

**Replacement Pins**:—Std. and .003", .008" oversize.

**CONNECTING ROD**:—Weight—37.3 ounces (with bearings and bolts). Length—9".

**Lower Bearing Diameter** 2  $\frac{3}{16}$ ". See *Engine Lettering Note in Chrysler Shop Notes for 'Special Std.' size*.

**Lower Bearing**—Removable precision type, thin babbitt on steel.

**Clearance**—.001-.0015". **Sideplay**—.006-.011".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings with boss engaging groove in rod and cap.

**Replacement Bearings**: Refer to *Chrysler Shop Notes*.

**Installing Rods**:—Lower bearings are offset. Install rods with widest portion of bearing toward the rear on #1, #3, #5, and #7; toward the front on #2, #4, #6, and #8. All rods should be installed with oil metering hole in lower end toward camshaft.

**CRANKSHAFT**:—5 bearing type with 8 integral counterweights. Impulse neutralizer mounted on front.

**Bearing Diameters** 2  $\frac{45}{64}$ ". See *Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' size*.

**Bearing Type**—Removable, precision type, thin babbitt on steel. **Clearance**—.001-.0015".

**Bearing Adjustment**:—Refer to *Chrysler Shop Notes for bearing removal, front and rear main bearing cap removal, bearing fitting, and crankshaft oil seals*.

**Replacement Bearings & Bearing Caps**: Refer to *Chrysler Shop Notes for complete data*.

**End Thrust**:—Taken by flange faces on rear (#5) main bearing. **Endplay**—.003-.007".

**CAMSHAFT**:—6 bearing. Non-adjustable chain drive. Refer to *Chrysler Shop Notes for Camshaft Removal*.

**Bearing Diameters**—#1, 2  $\frac{1}{16}$ "; #2, 2  $\frac{1}{32}$ "; #3, 2"; #4, 1  $\frac{31}{32}$ "; #5, 1  $\frac{15}{16}$ "; #6, 1 $\frac{1}{2}$ ".

**Bearing Type**—Removable, steel-backed, babbitt-lined bushings (except #6 machined in crankcase).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others). NOTE—Replacement bearings are finished (reaming, scraping or burnishing not required).

**End Thrust**:—Taken by thrust plate assembled behind camshaft sprocket hub. **Endplay** .002-.006".

**Timing Chain**:—Whitney silent type CLG205-47, No. 668983. Width  $\frac{1}{4}$ ". Pitch  $\frac{1}{2}$ ". Length 47 links, 23 $\frac{1}{2}$ ".

**Camshaft Setting**:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES: Head Diameter Stem Diameter Length**

Intake	.....1 17/32"	......340-.341"	.....5 $\frac{7}{8}$ "
Exhaust	.....1 11/32"	......3395-.3405"	.....5 $\frac{7}{8}$ "

	Seat Angle	Lift	Stem Clearance
Intake	.....45°	..... $\frac{3}{8}$ "	......0015-.0035"
Exhaust	.....45°	..... $\frac{3}{8}$ "	......002-.004"

Refer to *Chrysler Shop Notes for Exhaust Valve Seat Insert servicing and replacement data*.

**Valve Guides**:—Remove from above. Press new guides in place with upper end 1" (Intake and Exhaust) below top face of cylinder block (use Tool CM-83) with taper end up (Intake), down (Exhaust) and ream to .3425-.3435" inside diam. Counterbore exhaust guide at top to diameter of .365-.375" and  $\frac{3}{8}$ " deep after guide installed in block.

**Valve Springs**:—Install with closely coiled ends at top. Free length 2  $\frac{25}{64}$ ".

	Spring Pressure	Spring Length
Valve Closed	..... 52-58 lbs.	..... 2 1/32"
Valve Open	..... 129-137 lbs.	..... 2 11/32"

NOTE—Use special valve spring tester tool MTR-67 for checking pressure before installing springs.

**Valve Lifters**:—Mushroom type (remove from below with oil pan, camshaft and valves out of engine). Stem diameter  $\frac{5}{8}$ ". Ream guide holes from above with valves out of engine (install reamer pilot of Tool C-265 in valve guide to insure alignment of lifter). Lifters furnished for service in standard and .001", .008", .030", .060" oversize.

**Lifter Clearance in Block**—.000-.001".

**VALVE TIMING**

**Tappet Clearance**:—.008" Intake, .010" Exhaust (with engine running and at normal operating temperature). For cars to be driven at continuous high speeds an additional .002" exh. clearance desirable. NOTE—Tappet screws are self-locking type (no locknuts used). Remove right front engine inspection shield between fender and frame for access to valves.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open 6° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 44° BLDC. Close 12° ATDC.

**Valve Timing Check**—With .014" (cold) tappet clearance #8 intake valve should open with #8 piston within range of 11° BTDC to 1° ATDC or .057" BTDC to DC with 11th graduation before to 1 graduation after DC mark in line with pointer on chain case cover. Reset tappet clearance to .008", engine hot. NOTE—Car manufacturer recommends use of Timing Indicator Tool C-435 (measures piston travel) inserted in timing hole in cylinder head over #8 piston.

**LUBRICATION**

**LUBRICATION**:—Pressure system with gear type oil pump mounted on right side of crankcase.

Refer to *Chrysler Shop Notes for Oil Pump removal and installation instructions*.

**Normal Oil Pressure**:—30-45 lbs. at 30 MPH and above with proper viscosity oil and engine at normal operating temperature.

**Oil Pressure Relief Valve**:—Under cap on lower left side of crankcase. Adjustable. To adjust, remove cap, withdraw lock wire, turn slotted plug clockwise to increase pressure, counter-clockwise to decrease pressure. Relief valve opens at 40-45 lbs.

**Crankcase Capacity**:—8 quarts (refill).

**COOLING**

**COOLING SYSTEM**:—Capacity 24 qts. (C30, 33), 26 (C36, 37).

Refer to *Chrysler Shop Notes for Radiator Core Removal and Water Distribution Tube Servicing*.

**Pressure Valve**—In radiator filler cap. Opens at 1 $\frac{1}{2}$ -2 $\frac{1}{2}$  lbs. (C30, 33), at 3 lbs. (C36, 37).

**Water Pump**:—Packless type with sealed ball-bearing shaft. Grease fitting for seal lubrication.

See *Water Pump Section for complete data*.

**Removal**—Drain cooling system, remove fan belt, loosen fan shroud-to-radiator core screws on left side, remove by-pass hose and elbow, disconnect pump inlet hose, remove pump-to-back plate screws, remove generator strap, lift out pump and fan

C N T I N U E D N E X T P A E

## C CONTINUED FROM PRECEDING PAGE

**Thermostat:**—Bishop & Babcock or Fulton. In cylinder head outlet elbow. Install with bellows down.

**Setting:**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:**—Auto-Lite (Motometer) Vapor tension, Auto-Lite #H-9703 (C30, 33), H-9929 (C36, 37).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A6. Clutch cover assembly #939 (C30, 33), 961 (C36, 37), stamped on cover. Single plate, dry disc with spiral grooved facings, pressure plate oil baffle and pedal over-center return spring. Clutch assembly mounted on clutch driving plate at rear of fluid drive unit. See Clutch Section for complete data.

**Facings:**—Spiral-woven, 2 required. Inside diameter 6". Outside Diameter 10". Thickness .125".

**Adjustment:**—Pedal should just clear underside of toeboard. To adjust, loosen locknut and turn stop-screw at lower end of pedal arm above shaft. Pedal free travel should be 1". To adjust, turn clutch release fork adjusting nut on connector link at clutch release fork. 1942 NOTE—Do not disturb turnbuckle on pedal link (this controls pedal over-center spring tension).

**Removal:**—Remove transmission (see Transmission Removal instructions following). Remove clutch release bearing. Jack up rear of engine (to allow clutch housing pan to clear frame cross-member), remove clutch housing pan and dust shield. Mark clutch cover and clutch driving plate (assemble to these marks when reinstalling clutch assembly to maintain balance). Remove clutch cover-to-driving plate screws (release spring tension evenly by turning each screw out a few turns at a time). Clutch assembly and driven member can then be lowered out through pan opening.

## FLUID DRIVE

**FLUID DRIVE:**—Consists of fluid coupling assembled to rear of engine in place of conventional flywheel.

See Miscellaneous Section for complete data.

**Removal:**—Remove clutch (see Clutch Removal directions above). Using special box wrench (Tool C-589) loosen fluid drive-to-crankshaft stud nuts, pull fluid drive unit back free from crankshaft flange, remove nuts. Withdraw fluid drive and clutch driving plate from clutch housing.

## TRANSMISSION

## STANDARD

**TRANSMISSION (STD. C30, 36):**—Own Make. All helical gear type, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering column shift. Manually operated shift Standard, Power Shift (vacuum operated) Optional equipment.

See Transmission Section for complete data.

**Removal:**—Jack up front end of car (use floor jacks under lower control arms). Disconnect front universal joint (loosen companion flange nut if transmission to be disassembled). Disconnect speedom-

eter cable, hand brake cable at brake band, gearshift and gearshift selector control rods at transmission. If Power Shift used, disconnect vacuum and air hose and remove gearshift selector rod. Take out transmission-to-clutch housing cap screws and nuts. Pull transmission to rear, lower assembly out of car. NOTE—Use pilot studs when installing transmission to avoid springing clutch disc.

## TRANSMISSION

## 1941 VACAMATIC OVERDRIVE TYPE

**1941 TYPE VACAMATIC (OVERDRIVE TYPE) TRANSMISSION (STD. C33, OPTL. C30):**—New 4 speed type transmission consisting of a 2-speed manually controlled unit with an Automatic Overdrive unit (Warner Model AS1-R7B) which provides 2 additional speeds used in conjunction with a fluid coupling. IMPORTANT—This is not same design as used on 1942 cars (see 1942 type below). See Transmission Section for complete data.

**Transmission Control:**—Remote control, steering column mounted mechanical shift.

See Transmission Section for complete data.

**Control Solenoid:**—Auto-Lite SSB-4001.

**Solenoid Plunger:**—Auto-Lite SSB-1016.

**Control Relay:**—Auto-Lite HR-4201.

**Removal:**—Drain lubricant from transmission and overdrive cases. Remove propeller shaft by disconnecting front and rear universal joints (on cars with propeller shaft center bearing, free center bearing mounting from frame cross member). Loosen companion flange nut if disassembling transmission. Remove hand brake clevis pin from lower end of cable. Disconnect solenoid coil wires and remove coil. Disconnect speedometer cable and gear shifter rods from transmission, overdrive control cable clevis at overdrive case. Remove transmission-to-clutch housing cap screws and nuts, two upper studs (install two nuts on end of stud and turn stud out) and replace with pilot studs. Withdraw transmission and overdrive as an assembly.

## TRANSMISSION

## 1942 VACAMATIC UNDERDRIVE TYPE

**1942 TYPE VACAMATIC (UNDERDRIVE TYPE) TRANSMISSION (STD. C37, OPTL. C36):**—New 4 speed underdrive type transmission used in conjunction with Fluid Coupling. IMPORTANT—1942 type transmission is underdrive type (same design as used on 1941-42 Chrysler Six & DeSoto) and not similar to 1941 Vacamatic Overdrive type (see 1941 Type above).

See Transmission Section for complete data.

**Transmission Control:**—Remote control, steering column mounted mechanical shift.

See Transmission Section for complete data.

**Control Relay:**—Auto-Lite HRE-4001 (First type—early 1942), HRM-4001 (second type—late 1942).

**Governor Switch:**—Auto-Lite TG-4002R.

**Vacuum Piston Assembly:**—Auto-Lite VP-4001.

**Solenoid Vacuum Valve:**—Auto-Lite SSJ-4001, 4001B.

**Air Cleaner:**—Auto-Lite SP-2472 (vacuum valve cleaner), SP-2481.

**Removal:**—Same as Std. Transmission (above) plus the following: Remove floor board, wires from vacuum unit solenoid, interrupter and governor switches, hoses from vacuum unit air cleaner to vacuum unit. Take out vacuum unit (disconnect pullout cable and return spring, remove pivot pin).

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 7300. Cross type with roller bearings. Two used on short wheelbase cars, three with a Center Bearing on long wheelbase cars.

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on long wheelbase cars. Refer to Chrysler Shop Notes for data.

## REAR AXLE

## MODELS C30 &amp; C36

**REAR AXLE (C30, C36):**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—Standard: 4.56-1 (C30), 3.91-1 (C36). With Vacamatic Trans.: 3.91-1 (C30), 3.36-1 (C36).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Drain differential by removing two lower carrier-to-axle housing cap screws (C30, 36), drain plug at bottom of axle housing (for C33, 37). Remove both axle shafts (see Axle Shaft Removal following). Remove rear universal joint flange bolts and lower propeller shaft. Take out carrier-to-axle housing cap screws (bolts and nuts used on C33, 37) and lift out differential gear carrier assembly.

**Axle Shaft Removal:**—Remove wheel, axle shaft cotter pin and nut. Remove hub and drum assembly (use screw type puller—Tool C319 for C30, 36, Tool C476 for C33, 37—do not loosen hub by striking end of axle shaft or roller bearings at each side of axle will be damaged). Block brake pedal at toe board. Disconnect brake line at wheel cylinder. Remove brake backing plate-to-axle housing bolt nuts and take off oil seal and backing plate. If both axle shafts removed, keep wheel bearing shims separated so they may be reassembled to proper side of axle when replacing to maintain bearing adjustment (if new parts used, axle shaft end play should be checked when parts replaced). Pull axle shaft and bearing using Tool C-158. NOTE—Use Tool C-358 to remove axle drive shaft bearing, Tool C-293 to remove axle drive shaft oil seal, special drift (Tool C-201 or C-202) to install oil seal.

**Wheel Bearing Adjustment:**—Adjusting shims located between flanged ends of axle housing and brake backing plate. Remove wheel and hub assembly (see Axle Shaft Removal above). Check endplay with dial indicator (make sure that brake bolts are tight and tap end of axle shaft so that bearing cups are seated). To adjust, remove oil seal and backing plate, add or remove shims (furnished .010", .0125", .015" and .030" thick) equally at both ends of axle housing (to maintain central position of axle shaft thrust block) until proper endplay obtained.

**Endplay:**—.003-.008".

**REAR AXLE****MODELS C33 & C37**

**REAR AXLE (C33, C37):**—Own Make. Semi-floating, Hypoid gear & Hotchkiss drive. Barrel type differential with adjustable drive gear thrust pad used. See *Rear Axle Section for complete data.*

Ratio—4.55-1 (C33), 3.58-1 (C37).

All other data same as for C30, C36 Rear Axle above.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Direct acting, hydraulic types.

Car Model	Make	Front	Rear
C30 Domestic	Monroe	854568	854570
C30 Domestic①	Delco	1000-C	1001-T
C33 Domestic①	Delco	1134-E	1130-W
C36 Domestic②	Monroe	955025	955026
C37 Dom. & Exp.	Delco	1142-D	1140-W

①—Export cars carry either of these types.

②—C36 Export equipped with C37 type shocks.

NOTE—Delco 1130,34,40,42 types are adjustable.

See *Shock Absorber Section for complete data.*

**Transverse Sway Bar & Shock Absorber (C36 & C37):**—Monroe #956790 direct acting, hydraulic shock absorber built in one end of rear sway bar.

See *Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data.*

NOTE—Specifications listed below apply with car weight on wheels and no passenger or trunk load.

**Kingpin Inclination**— $4\frac{3}{4}^{\circ}$  to  $6^{\circ}$ .

**Camber**—Positive  $\frac{1}{4}^{\circ}$ . Limits  $0^{\circ}$  to Pos.  $\frac{3}{4}^{\circ}$ .

**Caster**—Negative  $1^{\circ}$  to Positive  $1^{\circ}$ . Not adjustable.

**Toe In**— $0-1/16"$ . Turn both tie rods equally.

**Steering Geometry (toe-out on turns)**—Inner wheel turned  $21^{\circ}30'$  with outer wheel turned  $20^{\circ}$ .

**STEERING GEAR**

**Steering Gear:** Chrysler (Gemmer design) Model 335. Worm-and-Roller "3-tooth" type with push-pull adjustments.

See *Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—(Front Wheels)—Lockheed hydraulic, Two-Cylinder type (front shoe anchored at bottom and actuated by top cylinder, rear shoe anchored at top and actuated by bottom cylinder). (Rear Wheels)—Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See *Brake Section for complete data.*

**Wheel Cylinders**—Straight cut bore type. Piston assembly (with spring) used. Bore diameter  $1\frac{1}{8}"$ .

**Drums**—Centrifuse. Diameter  $12"$ .

**Lining**—Molded asbestos. Width  $2"$ . Thickness  $13/64"$ . Length—Rear wheel rear shoe  $9\frac{5}{8}"$ . Front wheel front and rear shoes and Rear wheel rear shoe  $12\ 9/16"$ .

**Clearance**—Toe (wheel cylinder end) .007" for all shoes. Heel (anchor bolt end) .006" for all shoes except rear wheel rear shoes which is .007".

**Braking Power**—61% front wheels, 39% rear wheels.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment**—Refer to *Chrysler Shop Notes for data.*

**Drum**—Cast-iron. Diameter  $7"$ .

**Lining**—Moulded and compressed asbestos. Width  $2\frac{1}{2}"$ . Thickness  $5/32"$ . Length  $20"$ .

**Power Brake Unit (C33, 37):**—Bendix Internal Valve type Vacuum Cylinder.

See *Brake Section for complete data.*

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Auto-Lite Model EWD-5001, 5003 (1941), EWH-5001, 5003 (1942). Electric type with circuit breaker mounted on control switch.

NOTE—Types EWD-5003 & EWH-5003 used on Convertible Coupe models.

See *Miscellaneous Section for complete data.*

**Circuit Breaker**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**CONVERTIBLE TOP CONTROL:** Electric type. Used on Convertible Coupe models.

See *Miscellaneous Section for complete data.*

**Top Control Motor**—Auto-Lite EWG-4002 (1941), EWG-4003 (1942).

**Control Relay**—Auto-Lite Model HRF-4001.

**WINDOW REGULATORS:** Hydro-electric type (hydraulic actuation with motor driven hydraulic pump).

See *Miscellaneous Section for complete data.*

**Window Regulator Motor**—Auto-Lite MBO-4002.

**Motor Switch**—Auto-Lite SSG-4001, 4002, (C30, C33), SS-4007, 4019 (C33), SSG-4001 (C37).

**HOOD LOCK, FRONT END SHEET METAL, & OIL PAN REMOVAL:** See Chrysler Shop Notes.

## MODEL IDENTIFICATION

### STARTING SERIAL NUMBERS

	Royal	Windsor Twn. & Country
1946	70,011,001.....	70,515,001.....71,000,001
1947	70,023,023.....	70,564,429.....71,000,128
1948	70,029,674.....	70,633,017.....71,002,880

Location—On left front door hinge post.

**ENGINE NUMBER:** Stamped on boss on left side of cylinder block between #1 & #2 cylinders.

## TUNE-UP

**COMPRESSION:** Pressure—125-135 lbs. (100 lbs. min.) at cranking speed of 150 R.P.M. or 155-165 lbs. at 1000 R.P.M. (for Std. 6.6-1 Cast Iron Head).

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUGS:** Auto-Lite Type A5. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle—38° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° After top dead center.

**Timing Mark—Vibration Dampener** marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 2° graduation after DC mark at pointer on chain case then set manual (octane selector) adjustment:

**Manual (Octane Selector) Adjustment—Set** for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—Set** idle adjusting screw for smooth idling with warm engine (idle screw  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open), turn screw out for richer mixture. Idle speed 6 MPH. (450-475 Eng. RPM. with Hydraulic Trans.).

**Float Level—Top** of float (not soldered seam)  $\frac{5}{64}$ " (for EX1 carburetor on cars with Std. Trans.),  $\frac{1}{16}$ " (for EV1 carburetor on cars with Hydraulic Transmission), plus or minus  $\frac{1}{64}$ " below top edge of bowl.

**Accelerating Pump—Center** Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.

**Fuel Pump Pressure—3 $\frac{1}{2}$ -5 $\frac{1}{2}$  lbs.**

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx.  $\frac{3}{4}$  turn, not over one turn or under  $\frac{1}{2}$  turn, hook end on stop stud.

**VALVES:** See Valve Timing.

**Tappet Clearance—.008"** Intake, .010" Exhaust, Hot. **NOTE—Tappet** adjusting screws are self-locking type (no locknuts).

**STARTING:** See Battery, Starter, Generator, and Regulator.

## IGNITION

**IGNITION SWITCH:** Briggs & Stratton or Mitchelllock. **NOTE—No** armored cable used.

Briggs & Stratton—B & S Switch No. 85985.

Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).

**Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton.** B & S No. 85915 (Key Series CA1-CA800)

**COIL:** Auto-Lite No. IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket. distributor on ignition cable bracket.

**Ignition Current—2.25 amperes** idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGS-4208A-1. Full automatic advance type with auxiliary vacuum spark control and manual (octane selector) adjustment. **Breaker Plate Identification—Maximum** vacuum

advance limited by slot in plate. Plate marked #9.

**Breaker Gap—Set** at .020".

**Cam Angle or Dwell—38°** closed, 22° open (distr. °).

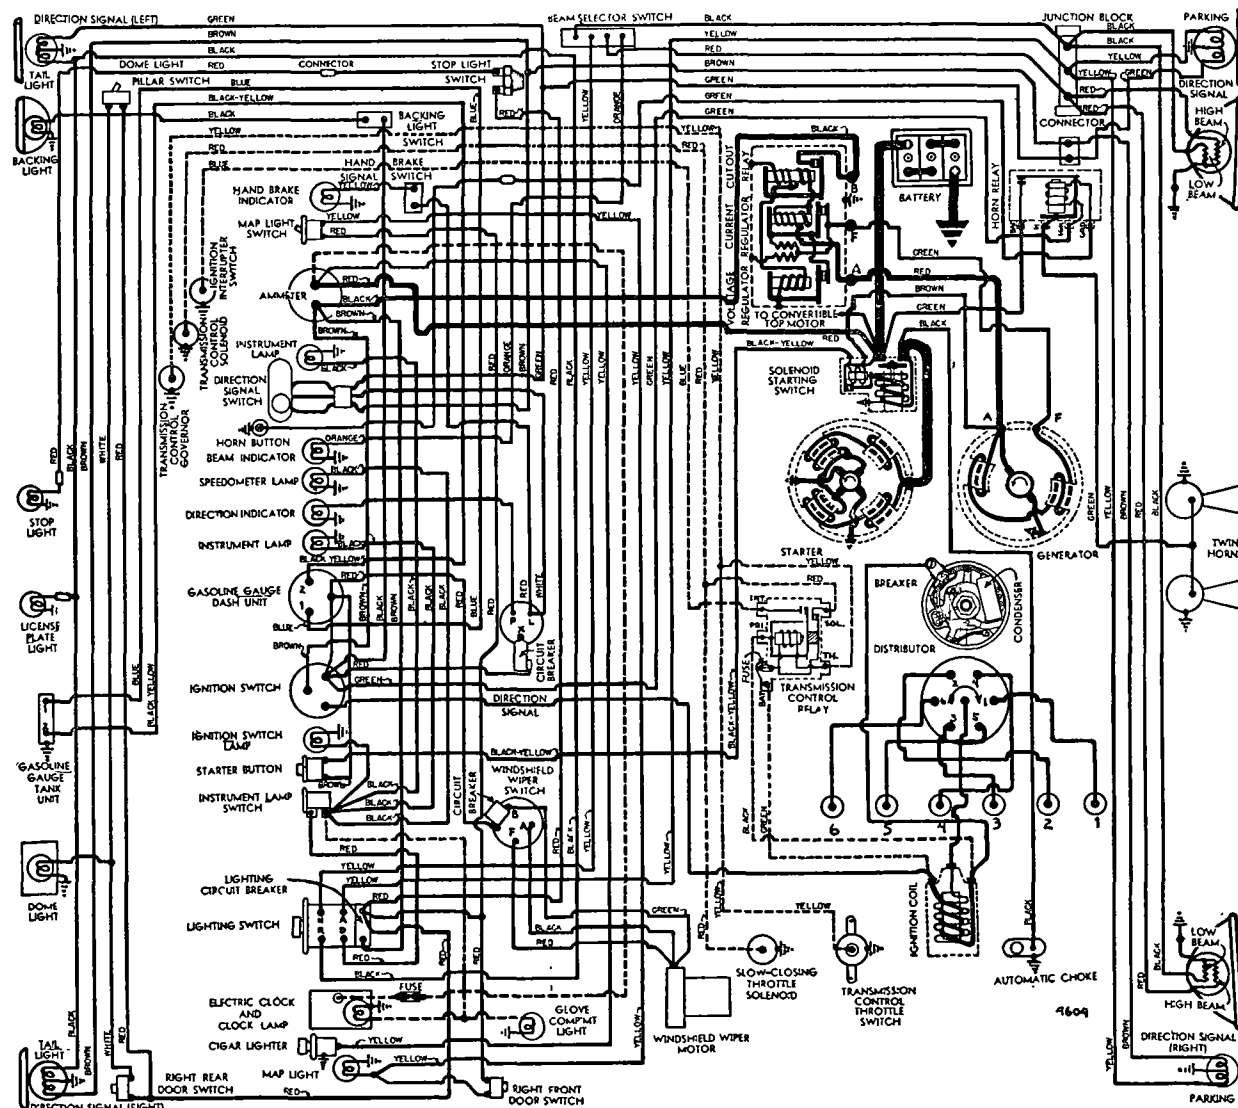

**Breaker Arm Spring Tension—17-20 ounces.**

**Rotation—Clockwise** viewed from above.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	780	12.....	1560
9.....	1160	18.....	2320
12.....	1530	24.....	3060

**Vacuum Spark Control: Auto-Lite Unit.** On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2°	4°	7 1/4"
4°	8°	9 3/8"
6°	12°	11 5/8"
9°	18°	15"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position

## IGNITION TIMING

**Std. Setting**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees** **Piston Position**  
All Engines ..... 2° ATDC ..... 002° ATDC

**NOTE**—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

## CARBURETOR

**Carter (B&B) EX1**..... **No Fluid Drive**  
**Carter (B&B) EV1**..... **Fluid Dr. & Hydraulic Trans.**  
1 1/2" single barrel, downdraft type with Sisson automatic choke control. **NOTE**—EV1 has Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH min. (Std.), 450-475 Eng. RPM (for Cars with Hydraulic Transmission). Adjust idle adjusting screw for smooth idle (3/4-1 1/4 turns open, turn screw in for leaner mixture). Recheck idle speed.

**NOTE**—If vacuum gauge used, adjust for highest obtainable vacuum (see Vacuum Gauge data above).

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.

**Center Hole** (med. stroke)—Normal summer setting.  
**Outer Hole** (max. stroke)—Winter temperatures.

**Float Level**—5/64" (EX1 carburetor), 1/16" (for EV1), from top of float (not seam) to top edge of bowl with valve seated. Check with tool C-449 (exc. EV1).

**Metering Jet**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

**NOTE**—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

**Slow-closing Throttle (EV1)**: Electro-magnetic dash-pot type. No adjustment required.

See Carburetion Equipment Section for complete data.

**Fast Idle**: Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

**Automatic Choke**:—Sisson Type AC-758B.

See Carburetion Equipment Section for complete data.

**Setting**—With throttle 1/2 open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1542284 Heavy Duty Oil-bath type. Filter Element AC No. 1544091.

**Servicing**—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. **NOTE**—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

**Fuel Pump**: AC No. 1539042 or Carter Type M594S or M639S. Diaphragm type fuel pumps.

**Replacement Pump**—AC No. 577 (for 1539042).

**Pressure**—3 1/2-5 1/2 lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter**: New Oillite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge**: Auto-Lite Electric type.

**Dash Unit**—Auto-Lite NG-10896D (block lettering), No. NG-11238D (with script lettering).

**Tank Unit**—Auto-Lite No. NG-10862-T.

See Carburetion Equipment Section for complete data.

## BATTERY

**Willard Type WHT-2-17R**. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.4 volts.

**Grounded Terminal**—Positive (+) to engine.

**Dimensions**—Length 10 1/4". Width 7". Height 9 3/8".

**Location**—Under hood in left fender shield.

## STARTER

**Auto-Lite Model MAX-4050**. Armature MAW-2030.  
**Drive**—Solenoid pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—42-53 ozs. (new brushes).  
**Cranking Engine**—150 RPM, 175 amperes, 5.4 volts.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0	5300	5.5	65
2.75	1630	5.0	200
5.5	970	4.5	300
8.7	600	4.0	400
12.0	300	3.5	500
16.5	Lock	3.0	640
25.0	Lock	4.0	880

**Removal**: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch**: Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

**Std.**—Auto-Lite GDZ-4801A. Armature GDZ-2006F.  
**Spec. Equip.**—Auto-Lite GEG-4823A or GEG-4823B Armature No. GEG-2006F (both).

Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.  
**SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.**

## REGULATOR

**Std.**—VRP-4401A, VRP-4501A, or VRP-4503A. (VRP-4001A used on Canadian cars).

**Spec. Equip.**—VRP-4001F (for GEG-4823A), VRP-4401B (for GEG-4823B), VRP-4005E used for negative ground.

**SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.**

## LIGHTING

**Headlamps**: Corcoran-Brown "Sealed Beam" type. Beam selector switch on toeboard controls upper and lower beams.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Lighted when Country (upper) beams in use. Located above center of speedometer face on early cars, in upper left corner of speedometer face on later cars.

**Direction Signal**: Two types used (see Indicators).

See Electrical Equipment Section for complete data.

**Direction Signal Indicators**—In upper edge of speedometer face. Early type has LEFT and RIGHT arrow. Later type use one jewel light in upper right corner only (left jewel light on these cars is High Beam Indicator).

**Direction Signal Flasher**—Chrysler No. 1161586.

**Direction Signal Circuit Breaker**—Chrysler No. 1161568.

## Switches

**Lighting**—Chrysler No. 1163581.

**Beam Selector**—Chrysler No. 859974.

**Instrument**—Chrysler No. 1235694.

**Map Light**—Chrysler No. 1154278.

**Stop Light**—Chrysler No. 920355.

**Hand Brakes**—Chrysler No. 867077.

**Dome Lamp Pillar**—Chrysler No. 317180.

**Door Switches**—Chrysler No. 882943.

**Direction Signal**—Chrysler No. 1163984.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.  
**Direction Signal**—On flasher behind instrument panel. Vibrating type. Protects direction signal circuit.  
**Windshield Wiper**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.  
**FUSES:** Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender.  
**Clock**—2 ampere. In clock lead wire.  
**Radio**—14 ampere. In fuse connector at radio.  
**HORNS:** Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.  
**Horn Relay:** Auto-Lite Model HRL-4101. Connected through ignition switch, operates only with ignition "on".  
**Contacts Close**—1.5-3.0 volts (seal to core with 4.0 volts maximum).  
**Contacts Open**—5 volt min. (open from seal).  
**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed). .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** Six cylinder, "L" head.  
**Bore** 3 7/16". **Stroke**—4½".  
**Displacement**—250.6 cu. ins. **Rated H.P.**—28.36.  
**Developed Horsepower**—114 at 3600 RPM.  
**Compression Ratio**—6.6-1 Std. cast-iron head.  
**Compression & Vacuum Reading**—See Tune-up data.

**ORIGINAL BORE & PISTONS:** See Chrysler Shop Notes.

**ORIGINAL BEARING SIZES:** See Chrysler Shop Notes.

**OIL PAN REMOVAL:** See Chrysler Shop Notes.

**ENGINE REMOVAL:** See Chrysler Shop Notes.

**TIGHTENING TORQUES:** See Chrysler Shop Notes.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Chrysler Shop Notes.

**PISTONS:** Aluminum alloy, U-slot, cam ground type.  
**NOTE**—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom). **Length**—3¾". **Weight**—18.5 ozs. (stripped).  
**Clearance**—.0008" on thrust face ¾" from bottom of skirt. Ring land diameter .0305" larger than skirt.  
**Removal**—Pistons and rods removed from above.

**Fitting New Pistons:**—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. **Feeler** pull 5-7 lbs. (with piston and block at 70° F).  
**Replacement Pistons:** See "Pistons" in Chrysler Shop Notes.

**NOTE**—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	5/32"	.007-.015"	.001-.0025"

**Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

**Replacement Rings:** See "Piston Rings" in Chrysler Shop Notes.

**PISTON PIN:** Diameter 55/64". Length 2⅞". Floating type with locking ring at each end.

**Pin Fit in Piston**—Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—Tight thumb push fit at normal room temperature.

**Replacement Pins:** Standard size and .0006", .003", .008" oversize.

**CONNECTING ROD:** Length 7⅞". Weight 32.4 ozs. with bolts less bearings. **NOTE**—Piston pin hole (upper bearing) bronze bushed.

**Lower Bearing Diameter**—2⅞". See "Original Bearing Size" in Chrysler Shop Notes.

**Lower Bearing**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.0005-.0015". Sideplay—.006-.011".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps. See "Connecting Rods & Bearings" in Chrysler Shop Notes.

**Replacement Bearings:** See "Connecting Rods & Bearings" in Chrysler Shop Notes.

**Installing Rods:** Oil metering hole toward camshaft.  
**CRANKSHAFT:** 4 bearings, 9 integral counterweights with vibration dampener on front end.

**Crankshaft Front & Rear Oil Seals:** See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

**Bearing Diameter**—2½". See "Original Bearing Size" in Chrysler Shop Notes.

**Bearing Type**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.001-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

**Replacement Bearings:** See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

**End Thrust:**—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive.  
**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Camshaft Removal:** See "Camshaft & Bearings" in Chrysler Shop Notes.

**Timing Chain:** Width 1". Pitch .500" (½"). Length 24" or 48 links.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.002-.004"

**Exhaust Valve Seat Insert Servicing**—See "Valve System" in Chrysler Shop Notes.

**Valve Guides:**—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

**Valve Springs:**—Install with closely coiled end to top. Free length 2". Spring Pressure Length

Valve Closed	40-45 lbs.	1¼"
Valve Open	107-115 lbs.	1¾"

**Valve Lifters:**—Mushroom type (remove from below). Stem diam. ⅞". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".

**Lifter Clearance in Block**—.000-.001".

## VALVE TIMING

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE**—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump used.

**Crankcase Capacity**—5 quarts (refill).

**Normal Oil Pressure**—55-65 lbs. above 30 MPH. with warm oil. **CAUTION**—Pressure of 35-45 lbs. at driving speeds indicates oil filter may be clogged and should be replaced.

**Oil Pressure Relief Valve**—Under plug ahead of starter. Has new bleed duct which connects with new idle oil line to provide additional oil at idling speeds. Adjustable by replacing spring. 3 types: 1) Plain—unpainted. 2) Light—painted Red. 3) Heavy—painted Green. **CAUTION**—Install replacement spring of same color as original spring.

**Oil Pump:** New "Rotor" type on right side of crankcase.

**Servicing**—See "Oil Pump" in Chrysler Shop Notes.

**Oil Filter:** New "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.

**Servicing**—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 55-65 lbs. above 30 MPH.

**Oil Pressure Gauge:** Auto-Lite G-10893 (block lettering), No. G-11235 (script lettering). Not electric.

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass type thermostat, and water distribution tube in cylinder block behind pump. Capacity—17 quarts.

**Radiator Core Removal:** See "Radiator" in *Chrysler Shop Notes*.

**Water Distribution Tube Servicing:** See "Cooling System" in *Chrysler Shop Notes*.

**Water Pump:** Packless type with grease fitting. See *Water Pump Section for complete data*.

**Removal—**Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment—**See *Generator Belt Adjustment*.

**Thermostat:** By-pass type in cyl. head water outlet.

**Setting—**Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite H-10895 (block lettering), No. H-11237 (script lettering). Not electric.

## CLUTCH

**Borg & Beck Models 10A7 (Std.), 9A7 (With Fluid Drive), 11A6 (Taxicab).** Single plate, dry disc.

**Identification Note—**Cover stamped 953 (9A7), 930 (10A7), 931 (11A6).

See *Clutch Section for complete data*.

**Facings—**Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	8"	9 1/4"	.125" (1/8")
10A7	7"	10"	.125" (1/8")
11A6	6 1/2"	11"	.125" (1/8")

**Pedal Adjustment:** Should just clear toeboard (adjust stop screw on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Clutch Over-Center Spring—**See "Clutch Notes" in *Chrysler Shop Notes for setting procedure*.

**Removal—**Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

**Chrysler—**Fluid coupling at rear of engine. Optl. See *Miscellaneous Section for complete data*.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

### STANDARD

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See *Transmission Section for complete data*.

**Transmission Control:** Manual steering col. shift.

See *Transmission Section for complete data*.

**Removal:** Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to clutch housing cap screws and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

## TRANSMISSION

### OPTIONAL EQUIPMENT

**Hydraulically Operated Type (with Fluid Drive).** New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control. See *Transmission Section for complete data*.

**Transmission Oil—**3 pints, 10-W engine oil.

**Transmission Control:** See Transmission article for adjustment instructions.

See *Transmission Section for complete data*.

**Kickdown Solenoid—**Auto-Lite No. SSS-4002.

**Kickdown Relay—**Auto-Lite No. HRM-4102.

**Governor—**Auto-Lite No. TG-4202R, 3R, or 4R.

**Kickdown Switch—**Part of carburetor assembly.

**Ignition Interrupter Switch—**On right side of transmission above Governor.

**Fuse—**30 ampere. On Kickdown Relay.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupt switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

**INSTALLATION CAUTION—**Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

## UNIVERSALS

**Detroit Universal Series 7200.** Cross type with roller bearings.

See *Universals Section for complete data*.

**Propeller Shaft Center Bearing:** Used on 7 Passenger. See "Propeller Shaft" in *Chrysler Shop Notes*.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data*.

Axle Ratio	Std. Trans.	Hydr. Trans.
All exc. T&C & 7 Pass.	3.9-1①	3.54-1②
T&C & 7 Pass.	4.3-1③	3.91-1④
①—Special Ratios: 4.1-1, 4.3-1 (Exp.), 4.56-1 (Exp.), 4.78-1 (Exp.).		
②—Special Ratios: 3.9-1 (Exp.).		
③—Special Ratios: 4.1-1, 4.56-1 & 4.89-1 (Exp.).		
④—Special Ratios: 4.1-1 (Exp.).		
Backlash—.006-.010". Screw adjustment.		

**Removal:** Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws. **Axle Shaft Removal—**Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Outer Oil Seal:** New leather type mounted on brake support (backing plate).

**Oil Seal Servicing—**See "Rear Axle" in *Chrysler Shop Notes*.

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

**Delco—**Model 1030-C (Front), 1030-T (Rear).

**Monroe—**Model K-11148 (Front), K-11149 (Rear).

Direct acting, hydraulic types.

See *Shock Absorber Section for complete data*.

**Hydraulic Transverse Sway Absorber:** Rear sway bar with built-in shock absorber used on Conv. Coupe, Town & Country, and 7 Passenger models.

See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See *Front Suspension Section for complete data*.

**Kingpin Inclination—**4 3/4° to 6°.

**Camber—**Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster—**Negative 1° to Positive 1°. Not adjustable.

**Toe In—**0-1/16". Turn both tie rods equally.

**Steering Geometry—**Inner wheel 22 1/2°. Outer 20°.

## STEERING GEAR

**Own Make.** Similar to Gemmer models as follows:

All (except later Town & Country & 7 Pass.)—305.

7 Passenger and Town & Country (After Serial No. 71,000,965)—Model 335.

NOTE—See Gemmer 305 & 335 article for data.

See *Steering Gear Section for complete data*.

## BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels—**Double anchor type with single double-acting wheel cylinder.

See *Brake Section for complete data*.

**Wheel Cylinders—**1 1/8" bore. Single acting (front), double acting (rear wheels).

**Drums—**Centrifuge. Diameter 11" (12" on Town & Country and 7 Passenger models).

**Lining—**Molded Asbestos. 2" wide. 13/64" thick. Length per shoe: 11" type—8 7/8" (rear wheel rear shoe), 11 1/2" (all others). 12" type—9 5/8" (rear wheel rear shoe), 12 9/16" (all others).

**Clearance—**.006" at each end of all shoes.

**Braking Power—**60% front wheels, 40% rear.

**Hand Brake:** On drum at rear of transmission. Adjustment—See "Hand Brake Notes" in *Chrysler Shop Notes*.

**Drum—**Cast-iron. 6" (7" on cars with Hydraulic trans. and all Town & Country and 7 Pass.).

**Lining—**Width 2" (2 1/2" on 7" type). Thickness 5/32". Length 16 11/16" (20" on 7" type).

**Clearance—**.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See *Miscellaneous Section for complete data*.

**Circuit Breaker—**Vibrating, thermostatic type.

**CONVERTIBLE TOP CONTROL:** Electric type.

See *Miscellaneous Section for complete data*.

**HOOD LOCK, FRONT END SHEET METAL & OIL PAN REMOVAL:** See Chrysler Shop Notes.

## MODEL IDENTIFICATION

### STARTING SERIAL NUMBERS

	New	Town & Country	Crown Imperial
1946	6,765,001	7,025,001	7,400,001
1947	6,766,546	7,037,249	7,402,037
1948	6,768,486	7,062,598	7,405,174

Location—On left front door hinge post.

**ENGINE NUMBER:** Stamped on boss on left side of crankcase between #2 and #3 cylinders.

## TUNE-UP

**COMPRESSION:** Pressure—125-135 lbs. at cranking speed of 150 RPM. for Std. 6.7-1 Cast Iron head.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUGS:** Auto-Lite Type A5. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018" Cam Angle—27° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° After top dead center.

**Timing Mark—Vibration Dampener** marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 2° graduation after DC mark at pointer on chain case cover, then set manual (octane selector) adjustment:

**Manual (Octane Selector) Adjustment—**Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**Set idle adjusting screw for smooth idling with warm engine (idle screw  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open on Carter B&B), turn screw out for richer mixture. Idle speed 7-8 MPH. or 500 RPM (450-475 RPM. on cars with Hydraulic Transmission).

**Float Level (Stromberg)—**Fuel level  $\frac{5}{8}$ " below top of bowl (even with bottom of inspection hole plug on left side of bowl with engine idling).

**Float Level (Carter B&B)—**Top of float (not soldered seam)  $\frac{1}{16}$ "  $\pm$   $\frac{1}{64}$ " below top edge of bowl. **Accelerating Pump—**Center Hole (med. stroke) Normal. Inner Hole—Summer. Outer Hole—Winter. Center hole not used on Stromberg Carburetors.

**Fuel Pump Pressure—**3 $\frac{1}{2}$ -5 $\frac{1}{2}$  lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. 1 $\frac{1}{4}$  turns, not over 1 $\frac{1}{2}$  turns or under 1 turn, hook end over stop stud.

**VALVES:** See Valve Timing.

**Tappet Clearance—.008" Intake, .010" Exhaust, Hot** NOTE—Tappet adjusting screws are self-locking (no locknuts).

**STARTING:** See Battery, Starter, Generator, and Regulator.

## IGNITION

**IGNITION SWITCH:** Briggs & Stratton or Mitchell lock. NOTE—No armored cable used.

Briggs & Stratton—B & S Switch No. 85985.

Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).

**Lock Cylinder—**Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800) or No. 80592 on Early cars (Key Series 1BP-1000BP).

**COIL:** Auto-Lite CE-4030 or CE-4034. Mounted directly above distributor on ignition cable bracket.

**Ignition Current—**2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGT-4201-1. Full automatic advance type with auxiliary vacuum spark

control and manual (Octane Selector) adjustment.

**Breaker Plate Identification—**Maximum vacuum advance limited by slot in plate. Plate marked #8.

**Breaker Gap—**Set at .018." Limits .015-.019".

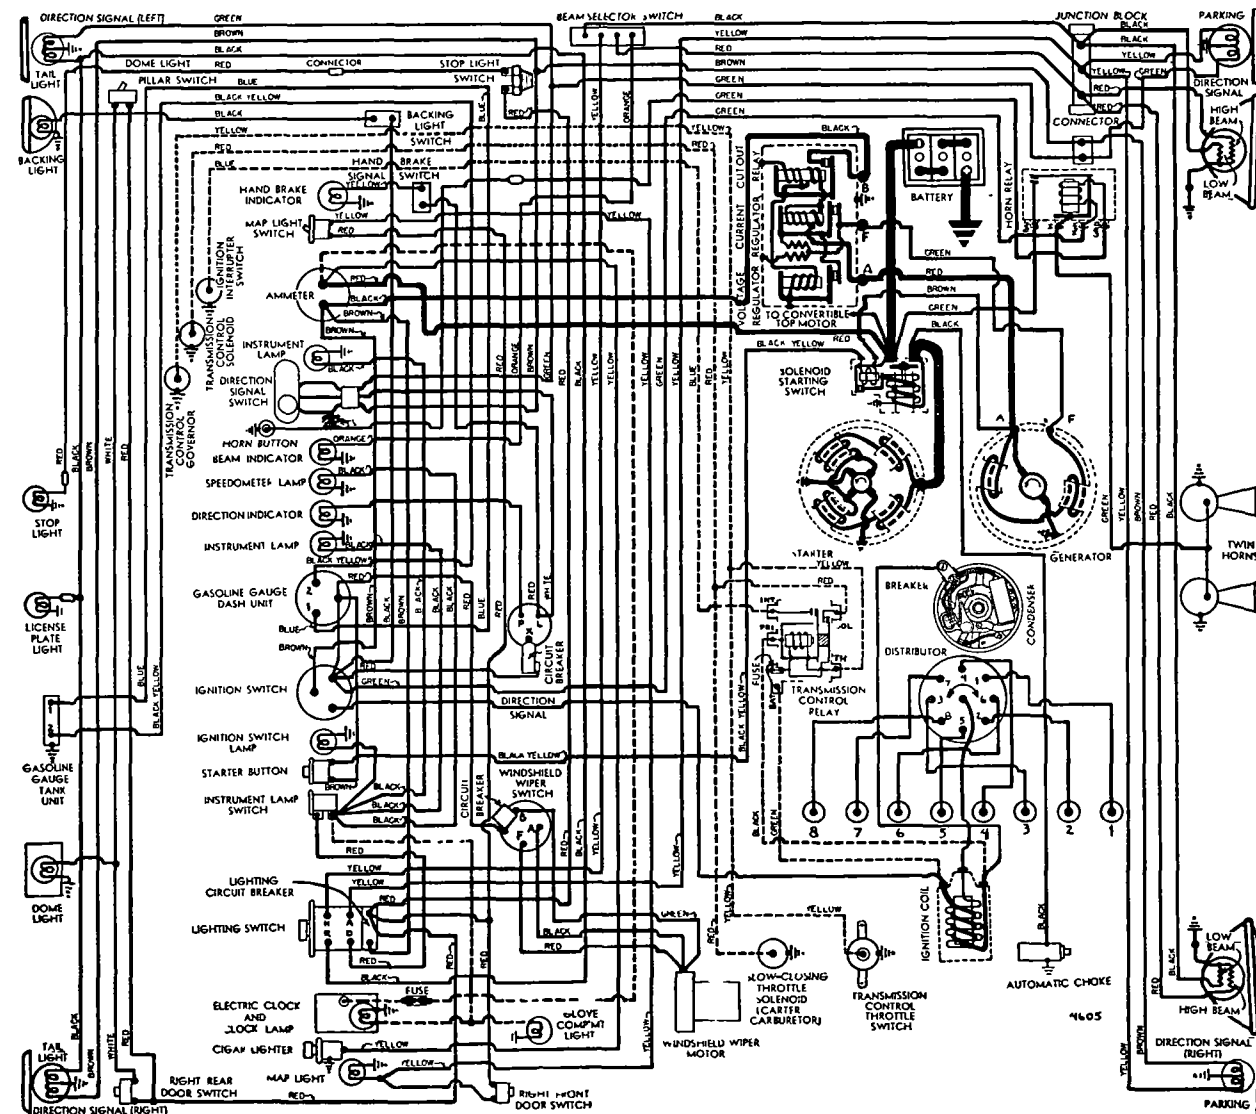

**Cam Angle—**27° closed, 18° open (.017" gap).

**Breaker Arm Spring Tension—**17-20 ounces.

**Rotation—**Clockwise viewed from the top.

### Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

CHRYSLER 8 M DEL C39

**Vacuum Spark Control: Auto-Lite Unit.** On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	8"
4°	8°	11"
6°	12°	14"
8°	16°	17"

**Manual Adjustment—**Provides for minor changes in ignition timing at distributor. See Ignition Timing

**Distributor Removal—**Mounted on left side of crankcase. To remove, disconnect vacuum line, take out

hold-down screw in lock plate. **Installation Note—**Install distributor with #1 piston in firing position and rotor opposite #1 segment in cap.

### IGNITION TIMING

**Std. Setting—**Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees**      **Piston Position**

All Engines ..... 2° ATDC ..... .002" ATDC  
**NOTE—**Impulse neutralizer marked at TDC with 15 (1°) graduations on either side.

**Timing (Using Timing Light)—**Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #8 piston in firing position (see setting above) with

correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)—**Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as above)

**Manual Adjustment—**Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

### CARBURETOR

#### STROMBERG

**Stromberg Model AAVS-2.** Two types used as follows:

1)—Square Air Horn. Stromberg No. 380165 marked with Code No. 4-111. Chrysler No. 1072857.

2)—Round Air Horn. Stromberg No. 380169 marked with Code No. 4-112. Chrysler No. 1122911.

**Type—**1¼" dual (double barrel) downdraft type with new single idle adjusting screw. **NOTE—**Cars with Fluid Drive have Throttle Guard and Transmission Kick-down Switch (part of carburetor).

See Carburetor Section for complete data.

**Idle Adjustment—**New single idle adjusting screw now used. With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 7-8 MPH, or 500 RPM (450-475 RPM on cars with Hydraulic Transmission). Adjust the new single idle adjusting screw for smooth idle (turning screw in gives leaner mixture). Recheck idle speed. If vacuum gauge used, set for highest steady reading on gauge.

**Accelerating Pump Setting—**Throttle lever has two holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extreme hot weather. Outer Hole (long stroke)—Winter temperatures.

**Floater Level—**Fuel level ⅛" below top edge of bowl (even with bottom of sight hole on side of bowl) with engine idling (4 lbs. pressure).

**Metering Jet—**See Stromberg Jet Table in Carburetor Section for complete jet data.

**Fast Idle (Stromberg):** Rotary cam, adjustable type.

See Carburetion Equipment Section for complete data.

**Setting—**Adjust connector rod so choke valve ⅛" open with fast idle screw against first step on cam.

**Automatic Choke—**Slisson Type AC-600.

See Carburetion Equipment Section for complete data.

**Setting—**Remove air cleaner and choke cover. Line up hole in armature and magnet core with shank end of ⅛" drill, holding armature tight against magnet (Tool AC-620 available for use in place of drill). Loosen automatic choke lever clampscrew. Hold throttle open approx. 1/3 open, move choke lever to close choke valve tight, tighten clampscrew.

**Throttle Guard (on cars with Stromberg Carburetors):** Vacuum operated throttle kicker prevents stalling.

See Carburetion Equipment Section for complete data.  
**Setting—**.010" clearance between throttle valve lever adjusting screw and throttle control plunger with engine idling at correct hot or slow idling speed.

CHRYSLER CR WN IMPERIAL, MODEL C40

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CARBURETOR**

CARTER (B&amp;B)

Carter (B&B) Model E7A1. 1½" single barrel, down-draft type with Slow-closing Throttle and Kick-down Switch for Hydraulic Transmission.

See Carburetor Section for complete data.

Idle Adjustment—Adjustment same as for Stromberg carburetor. Idle adjustment screw setting ¾-1¼ turns open.

Accelerating Pump Setting—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal setting.

Outer Hole (max. stroke)—Winter temperatures.

Float Level—Top of float (not soldered seam) 1/16" ± 1/64" below top edge of bowl with valve seated.

Metering Jet—See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.

Fast Idle (Carter B&B): Throttle stop screw stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

Automatic Choke: Sisson Type AC-600. See data under Stromberg Carburetor (above).

Slow-Closing Throttle (on Carter B&B Carburetors): Electro-magnetic dashpot type. No adjustment.

See Carburetion Equipment Section for complete data.

**CARB. EQUIPMENT**

Air Cleaner: AC No. 1543852 Heavy Duty oil-bath type. Filter Element AC No. 13.

Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump half-filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

Fuel Pump: AC No. 1539215. Diaphragm type.

Replacement Pump—AC No. 514 or 590.

Pressure—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

Fuel Tank Filter: New Oilite metal filter in tank.

Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.

Dash Unit—Auto-Lite NG-10896D (block lettering), No. NG-11238D (with script lettering).

Tank Unit—Auto-Lite No. NG-9330-T.

See Carburetion Equipment Section for complete data.

**BATTERY**

Auto-Lite Type CF-2-19R. 6 volt, 19 plate, 135 Ampere Hour Capacity (20 hour rate).

Starting Capacity—170 amperes for 20 minutes.

Zero Capacity—300 amperes for 5.4 minutes. Five second voltage 4.45 volts.

Grounded Terminal—Positive (+) to engine.

Dimensions—Length 10¼". Width 7". Ht. 8 15/16".

Location—Under hood in left fender shield.

**STARTER**

Auto-Lite Model MAX-4050. Armature MAW-2030.

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—150 RPM., 175 amperes, 5.4 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
0.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

Removal: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

Starting Switch: Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

**GENERATOR**

C-39—Auto-Lite GDZ-4801A. Armature GDZ-2006F.

C-38 & C-39 Spec. Equip.—Auto-Lite GEG-4823-A or GEG-4823B. Armature No. GEG-2006F (both).

C-40—Auto-Lite GEG-4823-1. Armature GEG-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

Maximum Charging Rate—35 amperes (C39 GDZ Gen.), 8.0 volts, 2200 Gen. RPM or approx. 26 MPH, 40 amperes (C40 GEG Gen.), 8.0 volts, 1700 Gen. RPM or approx. 24 MPH and above with load or discharged battery (Current Regulator setting).

**Performance Data—GDZ-4801A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35	8.0	1900	35	8.0	2250

**Performance Data—GEG-4823**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	820
5	6.6	870	5	6.6	900
10	6.8	960	10	6.8	990
15	7.0	1040	15	7.0	1080
20	7.2	1130	20	7.2	1170
25	7.4	1220	25	7.4	1270
30	7.6	1310	30	7.6	1380
35	7.8	1410	35	7.8	1510
40	8.0	1520	40	8.0	1680

①—Current regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—53 ounces max. (GDZ Gen.), 64-68 ozs. (GEG Gen.) with new brushes.

Field Current—1.60-1.78 amperes at 6.0 volts (all).

Motoring Current—4.16-4.60 amps. (for GDZ Gen.), 4.7-5.2 amperes (GEG Gen.) at 6.0 volts.

Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

**REGULATOR**

C-39—VRP-4401A, VRP-4501A, VRP-4503A (for GDZ Generator), VRP-4001F (for GEG-4823A Gen.), VRP-4401B (for GEG-4823B Gen.). VRP-4005E for negative ground.

C-40—Auto-Lite VRP-4001F (for GEG Generator). Vibrating type Voltage and Current Regulators in case with Cutout Relay.

NOTE—VRP-4001A settings same as for VRP-4401A.

See Electrical Equipment Section for complete data.

NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).

Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. Contact Gap—.012" min. (armature against stop pin). Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting (VRP-4001A, 4401A)—34-36 amperes ("35").

Setting (VRP-4001F, 4005E, 4401B)—39-41 amperes, marked "40".

Setting (VRP-4501A, 4503A)—35 amperes (42 amperes at 70° F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—These current regulators are temperature-compensated and setting decreases with temperature rise in service as above.

To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

To Adjust (with cover removed)—Same as for Voltage Regulator (above).

Contact Gap & Air Gap—Same as Voltage Regulator.

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. Beam selector switch on toeboard controls upper and lower beams.

See *Electrical Equipment Section for complete data.*

**Headlamp Adjustment:** Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:** Lighted when Country (upper) beams in use. Located above center of speedometer face on early cars, in upper left corner of speedometer face on later cars.

**Direction Signal:** Two types used (see Indicators).

See *Electrical Equipment Section for complete data.*

**Direction Signal Indicators:** In upper edge of speedometer face. Early type has LEFT and RIGHT arrow. Later type use one jewel light in upper right corner only. (Left jewel light on these cars is High Beam Indicator).

**Direction Signal Flasher:** Chrysler No. 1161588.

**Direction Signal Circuit Breaker:** Chrysler No. 1161588.

## Switches

**Lighting:** Chrysler No. 1163581.

**Beam Selector:** Chrysler No. 859974.

**Instrument:** Chrysler No. 1235694.

**Map Light:** Chrysler 1154278 (C39), 1232660 (C40).

**Stop Light:** Chrysler No. 920355.

**Hand Brakes:** Chrysler No. 867077.

**Dome Lamp Pillar:** Chrysler No. 317180.

**Door Switches:** Chrysler No. 882943.

**Direction Signal:** Chrysler No. 1163984.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 watts—Sealed Beam	
Front Dir. Sig. & Parking	21-3	1158
Instrument (C39)	3	63
Instrument (C40)	6	81

Rear License	3	63
Dome	15	87
①—C39 Town & Country 6 cp. No. 81, C39 Convertible (Quarter Lights) 6 cp. No. 81, C39 7 Pass. (Corner Lights) & C40 Corner Lights 3 cp. No. 63.		

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.

**Direction Signal:** On flasher behind instrument panel. Vibrating type. Protects dir. signal circuit.

**Windshield Wiper:** Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**Window Lift (C40):** Mounted on dash alongside Window Lift Motor.

**Convertible Top:** Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute or less.

**FUSES:** Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender. Clock—3 ampere. In clock lead.

**Body Wiring (C40):** 30 amp. Near ammeter.

**Radio:** 14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Model HRL-4101. Connected through ignition switch, operates only with ignition "on".

**Contacts Close:** 1.5-3.0 volts (seal to core with 4.0 volts maximum).

**Contacts Open:** .5 volt min. (open from seal).

**Contact Gap:** .026". **Air Gap:** .016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type.

**Bore:** 3 1/4". **Stroke:** 4 7/8".

**Displacement:** 323.5 cu. ins. **Rated H. P.:** 33.80.

**Developed Horsepower:** 135 at 3400 RPM.

**Compression Ratio:** 6.7-1 Std. cast-iron head.

**Compression & Vacuum Reading:** See *Tune-up data.*

**ORIGINAL BORE & PISTONS:** See *Chrysler Shop Notes.*

**ORIGINAL BEARING SIZES:** See *Chrysler Shop Notes.*

**OIL PAN REMOVAL:** See *Chrysler Shop Notes.*

**ENGINE REMOVAL:** See *Chrysler Shop Notes.*

**TIGHTENING TORQUES:** See *Chrysler Shop Notes.*

**CYLINDER HEAD:** Tightening Torque & Cylinder

Head Diagram—See *Chrysler Shop Notes.*

**PISTONS:** Aluminum alloy, U-slot, cam ground type.

**NOTE:** Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

**Length:** 3 3/8". **Weight:** 16.5 ozs. (stripped).

**Removal:** Pistons and rods removed from above.

**Clearance:** .0008" on thrust face 3/4" from bottom of skirt. Ring land diameter .0305" larger than skirt.

**Fitting New Pistons:** Measure piston size with micrometer across thrust faces (right angles to pin bosses) 3/4" from bottom of skirt. Fit piston in bore using .002" x 1/2" feeler, insert piston upside down in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler with bore and piston at 70°F.

**NOTE:** Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reborring and honing to limits listed above.

**Replacement Pistons:** See *"Pistons" in Chrysler Shop Notes.*

**Installing Pistons:** "U" slot away from valves.

**PISTON RINGS:** Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Rings	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	.5/32"	.007-.015"	.001-.0025"

**Installing Rings:** #1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

**Replacement Rings:** See *"Piston Rings" in Chrysler Shop Notes.*

**PISTON PIN:** Diameter 55/64". Length 2 3/4". Floating type with locking ring at each end.

**Pin Fit in Piston:** Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing:** Tight thumb push fit at normal room temperature.

**Replacement Pins:** Standard size and .0006", .003", .008" oversize.

**CONNECTING ROD:** Length—9".

**NOTE:** Pin hole in rod bronze-bushed.

**Lower Bearing Diameter—2 3/16".** See *"Original Bearing Size" in Chrysler Shop Notes.*

**Lower Bearing:** Removable, precision type, thin babbitt on steel. No shims.

**Clearance:** .0005-.0015". **Sideplay:** .006-.011".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps. See *"Connecting Rods & Bearings" in Chrysler Shop Notes.*

**Replacement Bearings:** See *"Connecting Rods & Bearings" in Chrysler Shop Notes.*

**Installing Rods:** Offset type. Wide side of bearing to rear for #1, 3, 5, 7; to front for #2, 4, 6, 8. Oil spray hole in rod toward camshaft on all rods.

**CRANKSHAFT:** 5 bearings, 8 integral counterweights with vibration dampener on front end.

**Crankshaft Front & Rear Oil Seals:** See *"Crankshaft and Main Bearings" in Chrysler Shop Notes.*

**Bearing Diameter—2 45/64".** See *"Original Bearing Size" in Chrysler Shop Notes.*

**Bearings:** Removable, precision type, thin babbitt on steel. No shims.

**Clearance:** .001-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. See *"Crankshaft and Main Bearings" in Chrysler Shop Notes.*

**End Thrust:** Taken by flange faces on rear (#5) main bearing. **Endplay:** .003-.007".

**CAMSHAFT:** 6 bearing. Non-adjustable chain drive.

**Bearing Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 1/8".**

**Bearings:** Removable, steel-backed, babbitt-lined bushings (except #6—machined in crankcase).

**Clearance:** .001-.003" (#1), .0015-.0035" (all others).

**NOTE:** Replacement bearings are finished (reaming, scraping, or burnishing not required).

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. **Endplay:** .002-.006".

**Camshaft Removal:** See *"Camshaft & Bearings" in Chrysler Shop Notes.*

**Timing Chain:** Width 1 1/4". Pitch .500" (1/2"). Length 23 1/2" or 47 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that "O" marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	5 7/8"
Exhaust	1 11/32"	.3395-.3405"	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.0015-.0035"
Exhaust	45°	3/8"	.002-.004"

**Exhaust Valve Seat Insert Servicing:** See *"Valve System" in Chrysler Shop Notes.*

**Valve Guides:** Remove from above. Press new guides in with stepped end down and upper end 1" (Intake), 1 3/32" (Exhaust), below top of block. Ream guides to inside diameter of .3425-.3435" (Tool DD-849). Exhaust guides counterbored on upper end.

**Valve Springs:** Install springs with close-coil end to top. Spring Free Length 2".

C NTINUED ON NEXT PAGE

**ENGINE****C CONTINUED FROM PRECEDING PAGE****Spring Pressure Spring Length**

Valve Closed .....	40-45 lbs. ....	1 3/4"
Valve Open .....	107-115 lbs. ....	1 3/8"

**Valve Lifters:** Mushroom type (remove from below with camshaft out of engine). Stem diameter 5/8". Service by reaming lifter holes (work from above piloting reamer Tool C-265 in valve guide) and installing oversize lifters. Clearance—.000-.001".

**Replacement Lifters**—.001", .008", .030", .060" oversize.

**VALVE TIMING**

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot. Additional .002" Exhaust clearance recommended for sustained high speed driving. Self-locking tappet screws used. NOTE—Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" tappet clearance (Cold), #8 intake valve should open with #8 piston 5° to 17° or .012" to .135" BTDC. with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot running clearance.

**LUBRICATION**

**Engine Oiling System:** Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump on right side of engine.

**Crankcase Capacity**—6 quarts (refill).

**Normal Oil Pressure**—55-65 lbs. above 30 MPH. with warm oil. CAUTION—Pressure of 35-45 lbs. at driving speeds indicates oil filter may be clogged and should be replaced.

**Oil Pressure Relief Valve**—Under cap on lower left side of crankcase. Has new bleed duct which connects with new idle oil passage to provide additional oil at idling speeds. Valve has screw adjustment but factory setting seldom requires changing. Opens at 40-45 lbs.

**Oil Pump:** New "Rotor" type on right side of crankcase.

**Servicing**—See "Oil Pump" in Chrysler Shop Notes.

**Oil Filter:** New "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.

**Servicing**—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. Checking: If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 55-65 lbs. above 30 MPH.

**Oil Pressure Gauge:** Auto-Lite G-10893 (block lettering), No. G-11235 (script lettering). Not electric.

**COOLING**

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap, and positive circulation with pump on front of engine, by-pass type thermostat, and water distribution tube in block.

**Capacity**—26 quarts.

**Pressure Valve**—In filler cap. Opens at 3 lbs.

**Radiator Core Removal:** See "Radiator" in Chrysler Shop Notes.

**Water Distribution Tube Servicing:** See "Cooling System" in Chrysler Shop Notes.

**Water Pump:** Packless type with shaft mounted on 2 ball bearings with lubricant fitting for bearing lubrication and grease nipple for seal lubrication. See Water Pump Section for complete data.

**Removal**—Drain cooling system. Remove fan blade assembly, fan belt, by-pass hose and elbow, inlet hose, pump mounting capscrews. Take pump off. Spacer behind pump need not be taken off engine. **Belt Adjustment**—See Generator Belt Adjustment.

**Thermostat:** In cylinder head water outlet.

**Setting**—Starts to open 157-162°F. Fully open 183°F. **INSTALLATION NOTE**—Install thermostat with 2 ports facing front, 2 ports to rear. Some thermostats equipped with heavy shield welded on bottom (for bellows protection at high speeds), this type thermostat cannot be installed on earlier cars.

**Temperature Gauge:** Auto-Lite H-10895 (block lettering), No. H-11237 (script lettering). Not electric.

**CLUTCH**

**Borg & Beck Model 10A6 with "Borglite" driven member.** Single plate, dry disc type. NOTE—Cover Assembly No. 961 stamped on cover.

See Clutch Section for complete data.

**Facings**—Woven type, 2 used. Inside Diameter 6". Outside Diameter 10". Thickness .125" (1/8").

**Pedal Adjustment:** Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.

**CAUTION**—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).

**Clutch Over-Center Spring**—See "Clutch Notes" in Chrysler Shop Notes for setting procedure.

**Removal:** Remove Transmission (see TRANSMISSION). Remove clutch housing underpan and clutch release bearing and sleeve. Mark clutch and fluid drive clutch driving plate for re-assembly. Remove all clutch cover mounting screws evenly, lower cover and driven member out through opening in housing.

**FLUID DRIVE**

**Chrysler**—Fluid coupling at rear of engine.

See Miscellaneous Section for complete data.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

**TRANSMISSION****STANDARD MODEL C39**

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See Transmission Section for complete data.

**Transmission Control:** Manual steering col. shift.

See Transmission Section for complete data.

**Removal:** Jack up front end of car. Disconnect front universal (loosen companion flange nut if transmission to be dismantled). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission. Remove transmission mounting screws and nuts at clutch housing, pull transmission straight back to free clutch shaft, lower transmission and remove from under car.

**NOTE**—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent spring clutch driven member.

**TRANSMISSION****STANDARD C40, OPTIONAL C39**

**Hydraulically Operated Type (with Fluid Drive).** New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control. See Transmission Section for complete data.

**Transmission Control:** See Transmission article for adjustment directions.

See Transmission Section for complete data.

**Kickdown Solenoid**—Auto-Lite No. SSS-4002.

**Kickdown Relay**—Auto-Lite No. HRM-4102.

**Governor**—Auto-Lite No. TG-4202R, 3R, or 4R.

**Kickdown Switch**—Part of carburetor assembly.

**Ignition Interrupter Switch**—On right side of transmission above Governor.

**Fuse**—30 ampere. On Kickdown Relay.

**Transmission Oil**—3 pints, 10-W engine oil.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

**INSTALLATION CAUTION**—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

**UNIVERSALS**

**Detroit Universal Series 7300.** Cross type with roller bearings. Two used (3 with center bearing on 7 Pass.).

See Universals Section for complete data.

**Propeller Shaft Center Bearing:** Used on 7 Passenger. See "Propeller Shaft" in Chrysler Shop Notes.

**REAR AXLE****MODEL C39**

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio (Std. Trans.)**—3.9-1 Std.; 4.3-1, 4.56-1, 4.89-1 Special Equip.

**Ratio (Hydr. Trans.)**—3.36-1 Std.; 3.9-1 (Spec. Exp.), 4.1-1 (Spec. Exp.).

**Backlash**—.006-.010". Screw adjustment.

**Removal:** Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

**Axle Shaft Removal:** Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). **NOTE**—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

**Axle Shaft Outer Oil Seal:** New leather type mounted on brake support (backing plate).

**Oil Seal Servicing—**See "Rear Axle" in *Chrysler Shop Notes*.

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## REAR AXLE

### MODEL C40

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.

**See Rear Axle Section for complete data.**

**Ratio—**3.58-1.

**Ring Gear Thrust Pad Setting—**Loosen locknut on left side of carrier housing, tighten thrust pad screw finger tight, back screw off 1/8 turn, tighten locknut.

**ALL OTHER DATA SAME AS FOR C39 REAR AXLE**

## SHOCK ABSORBERS

**C39 (Delco)—**Model 1030-C (Front), 1030-T (Rear).

**C39 (Monroe)—**K-11148 (Front), K-11149 (Rear).

**C40—**Delco Model 942-D (Front), 940-W (Rear).

Direct acting, hydraulic types.

**See Shock Absorber Section for complete data.**

**Hydraulic Transverse Sway Absorber:** Rear sway bar with built-in shock absorber used on all models.

**See Shock Absorber Section for complete data.**

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

**See Front Suspension Section for complete data.**

**Kingpin Inclination—**4 3/4° to 6°.

**Camber—**Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster—**Negative 1° to Positive 1°. Not adjustable.

**Toe In—**0-1/16". Turn both tie rods equally.

**NOTE—**Turn clamp bolt beneath tie rod on left end of long rod for clearance on extreme turns.

**Steering Geometry—**Inner wheel 22 1/2°. Outer 20°.

## STEERING GEAR

**Own Make.** (Gemmer design) Model 335 "3-tooth" type worm-and-roller with "push-pull" adjustment.

**NOTE—**See Gemmer 335 steering gear article.

**See Steering Gear Section for complete data.**

## BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic type as follows:

**Front Wheels—**Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels—**Double anchor type with single double-acting wheel cylinder.

**See Brake Section for complete data.**

**Wheel Cylinders—**1 1/4" bore (front wheel front shoe—top cylinder), 1 1/8" bore (all others). Single acting (front), double acting (rear wheels).

**Drums—**Centrifuse. Diameter 12".

**Lining—**Moulded asbestos. Width 2". Thickness 13/64". Length 9 5/8" (rear wheel rear shoe), 12 9/16" (all other shoes).

**Clearance—**.006" at each end of all shoes.

**Braking Power—**60% front wheels, 40% rear.

**Power Brake Unit (C40):** New diaphragm type with internal valve.

**See Brake Section for complete data.**

**Hand Brake:** On drum at rear of transmission.

**Adjustment—**See "Hand Brake Notes" in *Chrysler Shop Notes*.

**Drum—**Cast-iron. Diameter 7".

**Lining—**Molded asbestos. Width 2 1/2". Thickness 5/32". Length 20".

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

**See Miscellaneous Section for complete data.**

**CONVERTIBLE TOP CONTROL:** Electric type.

**See Miscellaneous Section for complete data.**

**WINDOW REGULATORS (C40):** Hydro-electric type.

**See Miscellaneous Section for complete data.**

**SPECIAL SERVICE NOTES: Engine Installation**—Complete engine and drive unit (including steering gear) mounted on separate sub-assembly which is bolted to main body side members at engine cowl.

**Supercharged Model**—This model has special Carburetor, Distributor (requires synchronization), Valve Timing and Ignition Setting.

**Rotation**—Crankshaft rotation counter-clockwise or opposite direction from conventional (occasioned by reversal of engine).

### MODEL IDENTIFICATION

**SERIAL NUMBER:** First number 1101 (1936). Stamped on Service Motor Plate on right side of cowl under engine hood.

**ENGINE NUMBER:** First number FB-100 (1936). Stamped on left side of engine block at front end.

### TUNE-UP

**COMPRESSION:** Ratio—6.5-1 (1936), 6.32-1 (1937) Std. Aluminum Heads.

**Pressure**—110 lbs. at cranking speed of 130 R.P.M.

**VACUUM READING:**—18-20" steady reading with engine idling at 6 M.P.H.

**FIRING ORDER:** 4L-2L-2R-1R-3R-4R-1L-3L (Std.), 1L-3L-3R-2L-2R-1R-4L-4R (Schgd. 812) with cylinder banks right 'R' and left 'L' as viewed from drivers seat and #1 cylinder at front or flywheel end.

**SPARK PLUGS:** Champion Type J9B. 14 mm. Metric Gaps—.025" (Std. 810, 812), .028" (Schgd. 812).

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap (810, 812)—.017". (Schgd. 812) .020". Cam Angle (810, 812)—27.5°. (Schgd. 812) 36°. Breaker Arm Spring Tension—17-20 ounces. Synchronization (Schgd. 812)—Movable contacts open 45° (distr.) after fixed set. Automatic Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—5° BTDC (Std. 810, 812), 2° BTDC (Schgd. 812) with point on flywheel 2 teeth (Std. 810, 812), 1 (Schgd. 812) before dead center mark "4L" at pointer in inspection hole on right side of housing. NOTE—On Schgd. 812, contacts open alternately at 45-45° (distr.) intervals.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Both idle screws midway between "miss" and "roll" points. Idle speed 500 R.P.M. or 6 MPH.

**Float Level**—Fuel level 15/32" (EE-15), 5/8" (AA-25) below top edge of bowl.

**Accelerating Pump**—Not adjustable.

**Fuel Pump Pressure:** 4 1/4 lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.008" all valves (Std. 810, 812), .008-.010" all valves (Schgd. 812) with Engine cold. NOTE—Carburetor and intake manifold must be removed to get at valves (manifold serves as cover for valve chamber). Tappet adjusting screw located on upper end of rocker arms.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 16-S No. 6679. Connected to coil by armored cable. Switch has two "on" positions, Right Startix On, Left Startix Off. **Ignition Lock**—Yale & Towne No. 9366. Mitchell No. 6622.

**COIL:** Auto-Lite Model CE-4620. Service Coil (less Switch & Cable) CE-3224JS.

**Ignition Current**—3 amperes idling, 4 1/2-5 1/2 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671 (Std. 810, 812—IGP distr.), IGB-1025C (Schgd. 812—IGH distr.).

**Capacity**—.20-.25 microfarad.

**DISTRIBUTOR (STD. 810, 812):** Auto-Lite Model IGP-4006. Single breaker, 8 lobe cam, full automatic advance type. No synchronization required.

**Breaker Gap**—Set at .017".

**Cam Angle or Dwell**—27.5° closed, 17.5° open.

**Breaker Arm Spring Tension**—18-20 ounces.

**Automatic Advance**—IGP-4006

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
2.5.....	600	5.....	1200
5.....	900	10.....	1800
7.5.....	1200	15.....	2400
10.....	1500	20.....	3000

**Removal:**—Distributor mounted between cylinder banks at forward end of engine. To remove, take out hold-down screw in advance arm.

**DISTRIBUTOR (SCHGD. 812):** Auto-Lite Model IGH-4028. Double breaker, 4 lobe cam, full automatic advance type. Must be synchronized.

**Firing Interval**—Contacts open alternately at regular 45° intervals corresponding to 90° firing intervals of the engine. See Ignition Timing for synchronization instructions.

**Breaker Gap**—Set at .020" (both sets equal).

**Cam Angle or Dwell**—36° closed, 9° open for both sets operating together when correctly synchronized.

**Breaker Arm Spring Tension**—16-20 ounces.

**Automatic Advance**—IGH-4028

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
9.....	1800	18.....	3600

**Removal:**—Same as for IGP-4006 above.

1936 MODELS

## IGNITION TIMING

### Flywheel Degrees Piston Position

Std. 810, 812	5° BTDC	.0089° BTDC
Schgd. 812 (FC Eng)	2° BTDC	.0014° BTDC

**To Set Timing (Neon Timing Light)**—This method recommended by manufacturer. Mark second tooth (Std. 812), first tooth (Schgd. 812) on flywheel before timing mark '4L' (dead center mark) with white paint. Clip one timing light to #4L spark plug (rear cylinder, left bank), direct light on flywheel through inspection hole in right side of flywheel housing. Idle engine, loosen distributor advance arm clamp bolt, rotate distributor until marked tooth appears in line with pointer on housing, tighten clamp bolt. Then synchronize movable contacts (Schgd. 812 only).

**To Set Timing (Without Timing Light)**—Crank engine by engaging gears and rolling car on floor or

by jacking up one wheel and turning wheel by hand. With #4L piston on compression, turn engine over until a point on the flywheel 2 teeth (Std. 812), 1 tooth (Schgd. 812) before the dead center mark '4L' lines up with the pointer in the inspection hole in the right side of the flywheel housing. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (On Schgd. 812, this should be stationary set mounted directly on breaker plate), tighten clamp bolt. Then synchronize movable contacts (Schgd. 812 only).

**Synchronization (IGH-4028)**—Manufacturer recommends use of synchronizing test equipment to set movable contacts. Set distributor for regular 45-45 (distributor) degree firing intervals. See Electrical Equipment Section for data on 'IGH' synchronization. Distributor can be synchronized on engine by turning engine over 1 full revolution plus 90° from firing position of piston #4L (first timing

point) to firing position for piston #4R with point on flywheel 1 tooth before mark '4R' at pointer in inspection hole. Then loosen lock screws on movable sub-plate carrying second set of contacts, move plate until contacts begin to open, tighten screws.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-15 (Std. 810, 812), Model AA-25 (Schgd. 812). Duplex, dual (double barrel), downdraft types.

For complete data, refer to Carburetor Index.

Settings (Idle Setting, Float Level, & Accelerating Pump): See Tune-Up.

Fast Idle:—Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke**—Mounted on carburetor and linked directly to choke valve shaft. Operated by electric heating coil.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1525598 (1936), 1528345 (1937).

**Fuel Pump**:—AC. Mod. D, #1523340. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**:—Stewart-Warner. Combination gasoline and oil gauge. Electric type.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—U.S.L. Type FN-19F. 6 volt, 19 plate, 108 ampere hour capacity (20 hour rate).

Starting Capacity—135 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.9 minutes.

Grounded Terminal—Positive (+) terminal.

Location—On left side under drivers seat.

## STARTER

**Auto-Lite Model MAX-4021**. Armature MAW-2006.

Drive—Barrel type Outboard Bendix No. A-1729.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—130 R.P.M., 180 amps., 5.1 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300 Min.	5.5	65 Max.
.65 "	3300	5.5	100
2.75 "	1830	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**:—Starter flange mounted on right rear face of flywheel housing (flywheel at front of engine).

To remove, take out 3 flange mounting screws.

**Starting Switch**:—Startix Type D. Automatic starting controlled by ignition switch. Operative only with clutch disengaged (lead taken through clutch pedal circuit breaker or 'master shift switch').

For complete data, refer to Electrical Equipment Index.

## GENERATOR

### 1936-37 MODELS

**Auto-Lite Model GAR-4630-5**. Armature GAR-2077

(first), Model GBR-4603-4 Armature GAR-2116

(later). Third brush control in conjunction with

Current Regulator (two-rate charging control).

**NOTE**—Model GBR-4603-4 fitted with resistance-jumper control switch on side of regulator case which should be opened (regulator operative) for

1937 M. DELS

See Auto-Lite Regulator Article in Electrical Equipment Section for VRB Regulator wiring.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

summer driving and closed (regulator resistance short-circuited) for winter driving.  
**Charging Rate Adjustment**—Use test meters to check output. Short out regulator by closing control switch (above) or by connecting jumper between fuse cup on regulator case and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate. Brush held in position by friction. Remove jumper wire.  
**Maximum Charging Rate**—22 amperes (GAR-4630-5) 26 amperes (GBR-4603-4) cold, reached at 2400 R.P.M., 1500 engine R.P.M. (tachometer).

**Performance Data—GAR-4630-5**

Cold — Regulator Contacts Closed — Hot					
Ampers	Volts	R.P.M.	Ampers	Volts	R.P.M.
0	6.4	720	0	6.4	760
4	6.8	860	4	6.8	925
8	7.25	1000	8	7.25	1125
12	7.7	1160	12	7.7	1350
16	8.1	1360	16	8.1	1680
20	8.5	1660	19.2	8.4	2600
22.4	8.8	2400			

**Performance Data—GBR-4603-4**

0	6.4	720	0	6.4	780
4	6.65	820	4	6.7	900
8	6.9	920	8	6.95	1060
12	7.1	1050	12	7.2	1250
16	7.4	1200	16	7.5	1440
20	7.6	1400	20	7.8	1840
26	8.0	2400	23	8.0	2800

**Rotation**—Counter-clockwise at commutator end.  
**Bush Spring Tension**—24 ozs. min., 36 ozs. max.  
**Field Current**—3.51-3.89 (GAR-4630-5), 4.13-4.62 (GBR-4603-4) amperes at 6.0 volts.  
**Field Fuse**—5 ampere in cup on regulator.  
**Motoring Current**—5.03-5.57 (GAR-4630-5), 5.84-6.46 (GBR-4603-4) amperes at 6.0 volts. Allow ½ ampere additional if relay and regulator in circuit.

**GENERATOR****1937 MODELS**

**Auto-Lite Model GCO-4804-A.** Two brush, shunt type with external voltage and current regulation. **Maximum Charging Rate**—28 amps., 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator.

**Charging Rate Adjustment**—None. See Regulator.

Cold			Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	825	0	6.4	900			
4	6.6	940	4	6.6	1025			
8	6.85	1050	8	6.85	1160			
12	7.1	1175	12	7.1	1310			
16	7.3	1300	16	7.3	1475

24	7.8	1610	24	7.8	1880			
28	8.0	1850	28	8.0	2200			

**NOTE**—Cur. regulator limits output to 28 amps. max.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.94-4.36 amperes at 6.0 volts.

**Removal**—Generator pivot mounted between cylinder banks at rear of engine with belt drive from pulley on camshaft. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Adjusted in usual manner by loosening pivot bolts and clamp bolt and lifting up on generator.

**REGULATOR****1936-37 MODELS**

**Auto-Lite Model TC-4302A (GAR-4630-5 Gen.), TC-4306A (GBR-4603-4).** 'Two-charge' Type. Cutout Relay and Current Regulator (two-rate charging control) in case on generator frame.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—5-2.5 ampere discharge at 6.3 volts.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

**Current Regulator**

**Contacts Open**—8.25-8.75 volts at 70° F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

**REGULATOR****1937 MODELS**

**Auto-Lite Model VRB-4002D, VRB-4008C (GCO-4804A Gen.).** Consists of Cutout Relay, vibrating Voltage and Current Regulator in case on dash. *For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—.5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" Minimum.

**Air Gap**—.034-.038" at hinge end, contacts open.

**Voltage Regulator**

**Setting**—7.5-7.8 volts at 70° F. (Before #8R-000001), 7.3-7.6 volts at 70° F. (After #8R-000001). See Electrical Equipment Section for complete settings and changes.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

**Current Regulator**

**Setting**—27-29 amperes (Marked '28' on cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Reg.

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type with special retracting mechanism operated by individual cranks on instrument panel.

**Headlamp Adjustment**—Raise each headlamp to full height, turn on bright or upper beams. Lamp beam should be centered on 8" diameter circular targets drawn on wall 25' distant with centers 31" above floor and 27½" right and left of car center line. To aim beams vertically, loosen locknut and turn slotted adjusting screw on rear of headlamp housing under fender. To aim beams horizontally, loosen mounting screws on sides of headlamp body, shift headlamp (screw holes are slotted).

**NOTE**—When headlamps lowered into fender, door must line up with fender contour. To adjust, turn stopscrew on crank lever which contacts door edge (at bottom and in back with headlamp up—cover plate at bottom of lamp housing under fender may be removed to get at lamp mechanism).

**Headlamp Indicator**—In speedometer dial. Lighted when bright or upper headlamp beams are lighted.

**Switches**

**Lighting**—Soreng-Manegold Model A5640A.

**MISC. ELECTRICAL**

**FUSES**—Lighting—20 amp. on back of lighting switch.

**Generator Field**—5 ampere in fuse cup on regulator.

**HORNS**—Auto-Lite Horn Set No. HC-5005. Vibrator type, twin horns operated by horn relay.

**ENGINE**

**ENGINE SPECIFICATIONS**: Lycoming Model FB. (Std. 810 & 812), Model FC (Schgd. 812). Eight cylinder, 90° V type.

**NOTE**—Engine is reversed in chassis with flywheel and clutch at forward end and timing chain at rear. Crankshaft rotation is clockwise at timing chain end (rear) so that rotation as viewed from front of car is counter-clockwise.

**Bore**—3½". **Stroke**—3¾".

**Displacement**—288.6 cu. ins. **Rated H.P.**—39.2.

**Developed Horsepower**—125 HP. at 3500 RPM (Std. 810 & 812), 175 HP. at 4200 (Schgd. 812).

**Compression Ratio**—6.5-1 (1936), 6.32-1 (1937). Cylinder Heads are Aluminum.

**Compression & Vacuum Reading**—See Tune-Up.

**NOTE**—Capscrews used to hold down the aluminum cylinder head are of unequal length and must be installed in correct position. 6 long screws (2 1/32") used in top or inner row on head, fourteen medium screws (1 21/32") in two rows across middle of head, four short screws (1 5/16") in lower or outer row on head.

**PISTONS**—Ray Day, aluminum alloy, strut type with domed head. **Length**—3 15/16".

**Weight**—1.65 lbs. with rings and pin.

**Clearance**—.002-.0025" skirt. See Fitting Pistons.

**Removal**—Pistons and rods removed from above.

**Replacement Pistons**—.005", .010", .015" oversize.

**Fitting New Pistons**—Check piston skirt and cylinder bore with micrometers or use .002" feeler ½" wide between piston and wall on side opposite slot. Tension to withdraw feeler must be 6-11 lbs.

**Installing Pistons**—Slot should be toward camshaft for pistons in both banks.

**PISTON RINGS**—Two compression, two oil control rings, all above pin. Oil ring grooves drilled with eight 1/16" oil drain holes (#3), eight ½" holes and oil holes to pin bosses (#4).

**Ring** **Width** **End Gap** **Side Clearance**

Comp. (#1) ..... 3/32" ..... .0075-.0155" ..... .002"

Comp. (#2) ..... 3/32" ..... .0075-.0155" ..... .0015-.002"

Oil (#3) ..... ½" ..... .0075-.0155" ..... .0015-.003"

Oil (#4) ..... 3/16" ..... .0075-.0155" ..... .0015-.003"

**PISTON PIN**—Diameter—7/8". **Length**—2 19/32". Pin floats in piston and rod. Held by locking ring at each end. Pin hole in connecting rod bronze-bushed.

**Pin Fit in Piston**—Tight palm push fit at 70° F.

**Pin Fit in Rod Bushing**—.0003-.0005" clearance.

**CONNECTING ROD**—Weight—30¾ ozs. **Length**—7¾". **Crankpin Journal Diameter**—2".

**Lower Bearing**—Spun babbitt type. No shims.

**Clearance**—.001-.0015". **Sideplay** .006-.010" total.

**Bearing Adjustment**—None (no shims). Rods serviced on exchange basis. Bearing caps can be filed.

**Installing Rods**—Rods for right bank toward front, left bank toward rear (side-by-side mounting) with large chamfer on counter-bore toward crankshaft cheek and oil jet hole toward top of block.

**CRANKSHAFT**—3 bearing. Integral counterweights.

**Journal Diameters**—2½" all bearings.

**Bearing Type**—Bronze-backed, babbitt-lined.

**Clearance**—.0015-.00375".

**Bearing Adjustment**—None (no shims). Replace bearings. Bearing caps can be filed to reduce clear-

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

ance. Check clearance by assembling .0015" shim 1/2" wide between shaft and cap. Shaft should turn freely with shim in place and bearing cap tight.

**End Thrust:**—Taken by center main bearing. Endplay .004-.009". Adjusted by replacing bearing.

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive. **Bearing Type:**—Removable bushings.

**Clearance:**—.002-.003".

• **Adjustment:**—Replace bushings.

**End Thrust:**—Taken by flange on front bushing. Endplay .003-.007". Serviced by replacing bushing.

**Camshaft Removal:**—Remove from front (flywheel) end. Take out 5/16" setscrew behind water pump drive pulley which holds oil pump and distributor drive assembly, lift drive assembly out of crankcase.

**Timing Chain:**—Whitney. Width 1 1/4". Pitch .500". Length 29" or 58 links.

**NOTE:**—Chains with master link can be split at this link. On chains without master link, remove and install chain 'endless' with sprocket off engine.

**Camshaft Setting:**—Sprockets are marked. Turn crankshaft until piston #4L on top dead center with timing mark '4L' at indicator. Turn camshaft until intake valve in this cylinder about to open. Mesh chain so that there are exactly 15 chain teeth or links between marks.

**VALVES:**—Valves actuated by rocker arm which contacts cam through roller mounted on arm. Rocker arms carried on twin rocker shafts.

	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	3405-.3425"	5 17/64"
Exhaust	1 33/64"	3405-.3425"	5 9/32"

	Seat Angle	Lift	Stem Clearance
Intake	30°	11/32"	.001-.0025"
Exhaust	45°	11/32"	.0015-.003"

**NOTE:**—Measure stem clearance at bottom of guide.

**Valve Rockers:**—Mounted vertically on tubular shaft at lower end and contact valve stem directly at upper end. Rocker arm shaft hole is bronze-bushed. **Clearance on Shaft:**—.0005-.0025".

**Rocker Arm Roller:**—Clearances on rocker arm pin .002-.003". Sideplay .005-.008".

**Rocker Arm Assembly:**—Tubular shafts held by setscrew at forward end. Rocker arms pressure-oiled through the hollow shaft. See that drilled holes in forward ends line up with setscrews in bosses and that setscrews fully engage lock holes to insure oil holes lining up. To remove shafts, remove 1/2" pipe plugs at forward end (flywheel off engine), take out setscrews, pull shafts out. Install rocker arm assemblies as follows:

**1936 Type before Engine No. FB-1310:**—Install rocker arm assembly for each cylinder (between crankcase ribs) from front to rear in this order: Right Bank—Rocker Arm, Spacer, Rocker Arm, Spring, Left Bank—Rocker Arm, Spring, Rocker Arm (Front Cylinder), Spring, Rocker Arm, Spacer, Rocker Arm (All other Cylinders).

**1936 After Eng No. FB-1310 & 1937 Type:**—Assemble arms as follows: Right Bank (Front to rear)—rocker arm, spring, rocker arm, large spacer, small spacer (for each cylinder—between crankcase ribs); Left bank (front to rear)—small spacer, large spacer, rocker arm, spring, rocker arm (except for front cylinder where no spacers used).

Valve Springs:	Pressure	Length
Valve Closed	59 1/2 lbs.	2 3/16"
Valve Open	122 lbs.	1 27/32"

**VALVE TIMING**

**Tappet Clearance:** .008" all valves (Std. 810 & 812), .008-.010" all valves (Schgd. 812), Engine Cold.

**Valve Timing:**—See Camshaft Setting above.

**Standard 810 & 812**

**Intake Valves:**—Open 7 1/2° BTDC. Close 37 1/2° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 5° ATDC.

**Supercharged 812**

**Intake Valves:**—Open 9° BTDC. Close 44° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 10° ATDC.

**To Check Timing:**—Set tappet clearance #4L intake valve (rear cyl., left bank) at .016". This valve should open with piston 7 1/2° or .0200" (Std. 810 & 812), 9° or .0287" (Schgd. 812) before top dead center and point on flywheel 3 teeth (Std. 810 & 812), 3 1/2 (Schgd. 812) before dead center mark '#4L' lines up with indicator in inspection hole in right side of housing. Reset tappet clearance.

**LUBRICATION**

**LUBRICATION:**—Pressure system with gear type oil pump mounted in crankcase. Oil pump or distributor may be removed without disturbing drive.

**Normal Oil Pressure:**—30-40 lbs. with warm oil.

**Oil Pressure Regulator:**—Located on oil pump cover. Operates at 40 lbs. Adjustable by turning screw.

**Crankcase Capacity:**—7 quarts.

**CLUTCH**

**CLUTCH:**—Long, Model 10CF-CI. Semi-centrifugal, single plate, dry disc type.

**See Clutch Section for complete data.**

**Facings:**—Molded type, 2 required. Inside Diam. 6", Outside Diam. 10". Thickness .137".

**Adjustment:**—Pedal free movement should be 1 1/4".

To adjust, remove clevis pin in clutch throw-out lever at forward end of connecting rod, loosen lock-nut at rear end of rod, turn rod in or out of rear clevis. Check operation of Transmission Control clutch pedal circuit breaker (Master Shift Switch) whenever the clutch pedal is adjusted (see article in Transmission Section for complete data).

**NOTE:**—Linkage changed after Serial No. 810-1544 to insure softer action by bolting extension on clutch throw-out shaft lever. Clutch pedal must have 7" travel (pedal 7" above floor when engaged). Adjust by changing position of stop clamp on pedal shaft under floor.

**Removal:**—Remove kingpins, remove drive shaft at inner universal by knocking out taper pin in shaft, remove both inner universals attached to side of transmission case, then remove driving unit. Remove clutch bell housing, take out capscrews mounting clutch on flywheel (turning all screws out evenly), lift clutch out.

**DRIVING UNIT**

**DRIVING UNIT:**—Transmission and differential assembly mounted in single case bolted to forward (flywheel) end of engine.

**See Transmission Section for complete data.**

**Removal:**—Remove louvre assembly, radiator, and sheet metal cover over drive unit. Raise front end of car with jacks under support arms so that wheels just clear floor. Remove front wheels, top and bottom kingpins, rubber bumper on frame siderrail above drive shaft, disconnect tie rod at spindle arms. Drive groove pins out of outer end of inner universal assemblies, remove outer universal and shaft (pull

out to clear at splined joint), place these assemblies on floor so as to not strain front brake tubes. Remove capscrews in inner universal housing flange, remove inner universal assemblies. Take out bolts in engine mounting bracket on front cross-member, support engine at forward end, take out mounting bolts on driving unit flange on clutch bell housing.

**DIFFERENTIAL ASSEMBLY:**—Own Make. Spiral bevel gear type (in Driving Unit). Drives to front wheels through individual shafts with universal joints at inner and outer ends.

**See Transmission Section for complete data.**

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—See Driving Unit Section above.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. 4 speed (over-drive on fourth). Constant mesh, helical gears, synchromesh (except low and reverse), sliding spur gears low and reverse). No direct drive.

**See Transmission Section for complete data.**

**Removal:**—See Driving Unit section above.

**TRANSMISSION REMOTE CONTROL GEAR SHIFT:**—Bendix electro-pneumatic type gear shift standard equipment. Complete description, adjustment directions, wiring diagram and Trouble Shooting given in separate article.

**See Transmission Section for complete data.**

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Bendix, Constant-velocity Ball type, 4 used (one at each end of each shaft).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco Model 1741-U, T (front), 1748-C, D (rear). Double acting hydraulic type.

**See Shock Absorber Section for complete data.**

**FRONT SUSPENSION**

**Front Suspension:**—Own design, independent type.

Each front wheel mounted on rear end of suspension arm which is pivoted on frame at forward end. Transverse front spring linked to suspension arm by special suspension bolt at outer ends.

**Kingpin Inclination:**—6° crosswise.

**Caster:**—2 1/2°. Suspension arm built with 1° caster. To adjust, turn nut at upper end of suspension bolt (tighten nut to increase caster).

**Camber:**—1°. No adjustment provided.

**Toe In:**—0-1/8" toe out (wheels must point out at front). To check, see that intermediate steering arm centered (forward ends equal distances from frame), loosen tie rod clamps, turn rods equally.

**STEERING GEAR**

Gemmer Model 330, Worm-and-Roller type.

**See Steering Gear Section for complete data.**

**BRAKES**

**Service:**—Lockheed Hydraulic, single anchor type. Hand lever applies rear wheel service brakes.

**See Brake Section for complete data.**

**Wheel Cylinders:**—Stepped bore type. Install with large end of cylinder forward. Not interchangeable.

**Drum Diameter:**—11".

**Lining:**—Molded & Woven type. Width 2 1/4". Thickness 3/16". Length 19" per wheel (front), 11" (rear).

**Clearance:**—.010" toe, .005" heel on each shoe.

**Hand Brake:**—See Service Brakes above.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

	In. Lbs.
1947-48 MODELS	
Spark Plugs	225-250
Cyl. Block Hold-down Stud Nuts	125-165
Main Bearing Cap Stud Nuts	150-180
Connecting Rod Cap Stud Nuts	200-280
Camshaft Bearing Capscrew (#1 only)	90-100
Camshaft Bearing Capscrew (exc. #1)	75-100
Flywheel Mounting Capscrew	225-285
Flywheel Housing Capscrews	225-285
Clutch Mounting Capscrews	150-180
Oil Pump Housing Capscrews	50-80
Oil Pump Mounting Capscrews	125-165
Intake & Exhaust Manifold Capscrews	225-285
Carburetor Mounting Stud Nuts	125-165
Generator Bracket Bolts (5/16")	125-165
Generator Bracket Bolts (3/8")	200-250
Generator Mounting Band Bolts	200-225
Water Pump Mounting Bolts	125-165
Fan Shaft Nut	225-285
Spring Shackle Bolts	180-200

## ENGINE REMOVAL

### 1939-42 MODELS

**ENGINE REMOVAL FOR SERVICING:** The engine should be removed from chassis for all major service work as follows: Disconnect battery ground cable, distributor cables, choke and throttle connections, oil gauge tube line at engine. Close shut-off valve at gasoline tank on Coupe models. On all models, disconnect gas line at carburetor. Remove exhaust pipe (connecting manifold and muffler), accelerator bracket, generator, starting motor (accessible by removing plate in driver's compartment). Disconnect clutch cable bracket on transmission case, clutch cable clevis at clutch yoke, speedometer cable at transmission. Block up front end of car and remove front axle assembly and front wheels. Drain oil, remove the oil pan and oil suction tube. Block up engine and transmission, remove hold-down bolts in front motor support and free rear support. Take out capscrews mounting transmission on flywheel housing, pull engine forward. Disconnect torque tube at adaptor on rear of transmission case, remove transmission. Lower engine to floor, raise front end of car, remove engine from below.

**Engine Installation**—Install engine in same manner. Check ignition timing if distributor disturbed.

### 1947-48 MODELS

**ENGINE REMOVAL (FOR SERVICING):** Engine should be removed from chassis as follows: Remove hood, drain radiator. Disconnect battery cable at battery, disconnect and remove starting switch-to-starter cable. Disconnect all ignition leads at distributor, fuel line at fuel pump, throttle and choke cables at carburetor, oil pressure gauge line at right rear corner of engine, windshield wiper hose at manifold, generator wire at Cutout Relay, hose connections at engine block outlet and water pump, exhaust pipe at manifold connection, engine ground strap at flywheel housing, clutch release cable at release lever under flywheel housing, temperature indicator cable and bulb at engine outlet connection. Remove radiator brace rod connected to top of radiator, take out two base bolts under radiator and carefully lift radiator out of engine compartment. Remove hood latch cable. Slack off fan drive belt, remove fan assembly and belt. Place sup-

port jack under engine, split front & rear flywheel housing by taking out 5 bolts, remove nut and lock washer on right front engine mounting stud (goes through frame), remove left front engine mounting bolt. Attach lifting sling to engine (loop sling under oil pan), support engine weight with sling and hoist, move engine straight forward approximately 4" (to clear clutch shaft), lift engine out tilting the front end up slightly for clearance.

### 1947-48 MODELS

**CYLINDER BLOCK REMOVAL (FOR VALVE SERVICING):** With the engine out of the car (see Engine Removal), remove water pump, fuel pump, carburetor, manifolds, and spark plugs. Remove camshaft cover, take out mounting bolts in all camshaft bearings and lift off camshaft and bearings (oil metering tube in upper end of towershaft at front of camshaft will come out with camshaft). Unscrew and remove towershaft adjuster, lift out towershaft upper bevel gear. Remove 11 elastic stopnuts holding cylinder block on crankcase, lift cylinder block straight up until it clears pistons and towershaft.

**Cylinder Block Installation**—Before Eng. No. 31599 (With 3-ring Pistons): See that face of cylinder block and crankcase clean and that gasket is in good condition. Turn crankshaft until two pistons are at top dead center. Use "split" type ring compressor to compress rings on these two pistons, slide block half-way down over these pistons, then turn crankshaft until other two pistons are in contact with block, compress rings on these pistons, lower block into position on crankcase (use locating dowel), use plain washer under mounting stud nuts, tighten all nuts evenly (see Tightening Torques).

**Cylinder Block Installation**—After Eng. No. 31599 (With 4-ring Pistons): Disconnect piston and connecting rod assemblies from crankshaft and insert these in cylinder block before installing block on crankcase. See that face of cylinder block and crankcase are clean, use new gasket and elastic stop nuts. Install cylinder block on crankcase (use locating dowel) making certain that connecting rods turned so that rod markings are on distributor (left) side of engine. Use plain washer under cylinder block mounting stud nuts, tighten all nuts evenly (see Tightening Torque data). Install connecting rod bearing caps, install oil pan.

## PISTON & CONNECTING ROD REMOVAL

### 1939-42 MODELS

**PISTON & CONNECTING ROD REMOVAL:** With engine removed from chassis (above), take out 7 Phillips screws in each shroud, remove shrouds from cylinders. Remove cylinder heads and oil pan. Take out connecting rod bearing cap screws, push piston & rod assembly out through cylinder barrel.

## CRANKSHAFT & MAIN BEARINGS

### 1939-42 MODELS

**CRANKSHAFT REMOVAL:** For Main Bearing and Crankshaft Oil Seal Servicing. With engine removed from chassis (above), dismantle engine and remove camshaft (see Camshaft Removal below). Take out 4 capscrews mounting flywheel on crankshaft flange, pull flywheel. Pull crankshaft out through front end of crankcase by hand.

**Main Bearing Renewal**—Drive old bearings out (rear bearing in crankcase, front bearing in gear housing cover), drive new bearing bushings in place. Bearings are precision type and need not be reamed. **Oil Seal Renewal**—Drive old oil seals out of crankcase (rear), gear housing cover (front) with drift pin. Use mandril or hardwood block to drive new seals in place. **CAUTION**—When installing crankshaft use care not to damage leather oil seals.

### 1947-48 MODELS

**CRANKSHAFT SERVICING: Crankshaft Removal**—With engine out of car (see Engine Removal), remove oil pan, remove oil pump (see Oil Pump Servicing), remove gear on lower end of distributor shaft, remove all crankshaft bearing caps, lift crankshaft out (not necessary to remove clutch—crankshaft, flywheel, and clutch removes as unit).

**Crankshaft Installation**—Reverse removal instructions (above), tighten bearing cap nuts evenly (see Tightening Torque Wrench data), use new lockwashers, palnuts and gaskets. Replace oil seals

### 1947-48 MODELS

**OIL SEALS: Front & Rear Main Bearing Seals**—Carefully clean out seal groove, press new seal in groove with fingers and "roll" it in place with round tool (roll seal from both ends toward center to insure full seating in bottom of groove). Hold seal in place with wooden block and cut ends off flush with face of crankcase and bearing cap.

**NOTE**—Front seal is installed in groove in crankcase and oil pan and bears on hub of crankshaft pulley.

### 1947-48 MODELS

**OIL PAN INSTALLATION:** Re-inforcement strips must be installed under the pan flange at each front corner of the pan.

## CAMSHAFT & BEARINGS

### 1939-42 MODELS

**CAMSHAFT REMOVAL:** With engine removed from chassis (above), remove intake and exhaust manifolds, cylinder shrouds (retained by Phillips screws), cylinder heads and oil pan. Remove connecting rod and piston assemblies, gear housing cover (with oil pump), and valve cover. Block up valves by placing 5/16"x3/4" capscrew between crankcase and spring washer on each valve, pull camshaft and timing gear assembly out through front of crankcase.

### 1939-42 MODELS

**CAMSHAFT BUSHING RENEWAL:** Take out 8 capscrews in gear housing cover and Phillips screws in oil pan which enter gear cover, remove gear cover. Drive or press camshaft bushing out of timing gear cover and install new bushing in same manner. **NOTE**—Rear camshaft bushing is integral with crankcase and cannot be serviced.

### 1947-48 MODELS

**CAMSHAFT DRIVE (TOWERSHAFT) ASSEMBLY:** On first cars, Towershaft is positioned by nut and thrust washer on shaft above lower bushing in crankcase. On later cars (Eng. No. 3708 Up), towershaft is positioned by the "towershaft adjuster" (hollow hexagonal headed capscrew) installed in upper end of towershaft above upper bevel gear. **CAUTION**—Each type towershaft serviced differently as detailed below.

**Towershaft Assembly Servicing (Before Eng. No. 3708).** This type is locked in crankcase by nut on shaft.

**Disassembly**—To remove towershaft and lower bevel gear (integral with shaft) with engine out of car and cylinder block removed, remove special nut and thrust washer on shaft in crankcase, pull towershaft out of the bushing from below.

**Towershaft Assembly**—Insert bushing in crankcase from below, insert towershaft (see Engine Assembly Note below for gear marks and meshing data), install thrust washer and special nut, tighten nut until endplay or clearance between back face of lower gear and face of bushing is .004". Towershaft clearance in bushings should be .0005-.002". Backlash in gears should be .001-.003" (lower bevel gears—see Towershaft Gear Backlash Adjustment below), .003-.005" (upper bevel gears—see Camshaft Endplay Adjustment below).

**CAUTION**—Install bushing in upper end of towershaft housing on cylinder block before installing upper towershaft gear (see Camshaft Drive Gear Meshing Data below).

**Towershaft Assembly Servicing (After Eng. No. 3708).**  
**Disassembly**—Towershaft and lower bevel gear (integral with shaft) can be withdrawn from below after towershaft adjuster has been unscrewed from upper end of shaft and upper bevel gear lifted out. **NOTE**—Crankshaft must be removed to allow towershaft to be taken out (see Crankshaft Removal).

**Towershaft Assembly**—Insert bushing in crankcase from below, insert towershaft, install crankshaft and mesh bevel gears (see Camshaft Drive Gear Meshing Data below), check and adjust lower bevel gear backlash. After cylinder block installed on crankcase, see that upper bushing in place in upper end of towershaft housing, install towershaft upper bevel gear, install towershaft adjuster, tighten adjuster until clearance between shoulder on upper gear and face of upper bushing is .004" (measure with feeler gauge while prying upward on adjuster). Towershaft clearance in bushings should be .0005-.002" (lower bushing), .0005-.0015" (upper gear hub in upper bushing). Backlash in gears should be .003-.005" (lower bevel gears—see Towershaft Gear Backlash Adjustment below), .003-.005" (upper bevel gears—see Camshaft Endplay Adjustment).

**Towershaft Lower Gear Backlash Adjustment:** To check backlash, push crankshaft forward until thrust flange is against rear main bearing. Mount dial indicator so as to measure movement of towershaft lower bevel gear, rock towershaft back and forth. Backlash .003-.005" and adjusted as follows:

**Backlash Adjustment (Before Engine No. 29880).** With crankshaft pulley removed, add or remove shims from between pulley hub and shoulder on bevel gear until backlash correct. Shims furnished as follows: W-300159-1 (.003"), W-300159-2 (.005"), W-300159-3 (.015"). **NOTE**—See that gasket installed between pulley hub and adjusting shims.

**Backlash Adjustment (After Engine No. 29880).** When installing towershaft assembly, screw the crankshaft adjuster (slotted stud in forward end of crankshaft) in until lower bevel gears are snug. Start the engine. If gears are noisy, stop engine, unscrew crankshaft adjuster slightly, repeat test. When gears run quietly, tighten nut on adjuster securely (hold adjuster with screwdriver to prevent change in adjustment).

**Towershaft Upper Gear Backlash Adjustment:** See Camshaft Endplay Adjustment (below).

#### 1947-48 MODELS

**CAMSHAFT ENDPLAY ADJUSTMENT:** To check endplay with camshaft installed on engine, push camshaft forward as far as possible, measure clearance between rear face of camshaft gear hub and front bearing with a feeler gauge. Endplay should be .003-.005". Adjust as follows:

**Adjustment (Before Serial No. CC-24199):** Remove camshaft assembly from engine, remove camshaft gear (remove nut and lockwasher, press gear off shaft, using care not to damage oil hole in shaft), install thrust washer of correct thickness behind gear, re-install camshaft assembly.

**Adjustment (After Serial No. CC-24199):** Not necessary to remove camshaft or camshaft gear (horseshoe type thrustwasher). To adjust endplay, loosen front camshaft bearing capscrews, slip bearing strap up on capscrews for access to thrust washer, lift thrustwasher out and replace with washer of correct thickness.

**CAUTION**—Make certain that closed end of thrustwasher is upward (under bearing strap tab) and that bearing strap tab is forward so as to retain thrustwasher when bearing capscrews tightened.

#### 1947-48 MODELS

**CAMSHAFT DRIVE GEAR MESHING MARKS:** With engine completely disassembled, install and mesh all gears of the valve system as follows:

**Crankshaft Gear**—Install gear on crankshaft splines with marked spline on shaft in line with punchmark on gear hub. **NOTE**—On first cars where gear hub not marked, marked spline on shaft should be on same side and in line with marked tooth on gear.

**Tower Shaft Lower Gear**—Gear is integral with shaft. The two punch-marked teeth on tower gear should straddle punch-marked tooth on crankshaft gear.

**Tower Shaft Upper Gear**—Install gear on shaft with punch marks in line. Mesh punch-marked tooth on gear between two punch-marked teeth of camshaft gear.

**Camshaft Gear**—Gear is keyed on shaft.

#### 1947-48 MODELS

**CAMSHAFT OIL METERING HOUSING ASSEMBLY:** Install oil metering housing (90° fitting between upper end of towershaft and camshaft) in forward end of camshaft with camshaft off engine, then engage lower end of housing in upper end of towershaft as camshaft is placed in position on cylinder block. Housing clearance should be .0002-.0023" in camshaft and .0005-.0025" in towershaft gear adjuster. Backlash between camshaft and towershaft gears should be .003-.005".

### TAPPET CLEARANCE ADJUSTMENT

#### 1947-48 MODELS

**TAPPET CLEARANCE ADJUSTMENT PROCEDURE:** Adjustments must be made differently on first cars (no shims) and later cars (with adjusting shims)

**First Cars without Adjusting Shims**—Must be checked with camshaft and cam follower assemblies installed on engine. Turn camshaft until heel of cam is directly over cam follower, press valve in so that it rests firmly on seat, check clearance with feeler gauge. If clearance insufficient, grind valve stem tip, if clearance too great, replace valve.

**CAUTION**—Valve stem tip must be ground square with valve stem.

**Later Cars with Adjusting Shims**—Check clearance in same manner as first cars (above), select adjusting shim pack of correct thickness for correct tappet clearance, insert shims through slot in head of cam follower (above spacer washer), lock shims in place by bending up ends. Shims furnished in following sizes:

#### Cam Follower Shims

Thickness	Part No.	Thickness	Part No.
.010".....	W-206284-1	.016".....	W-206284-4
.012".....	W-206284-2	.018".....	W-206284-5
.014".....	W-206284-3	.020".....	W-206284-6

#### Tappet Clearance

Intake—.004-.005"      Exhaust—.005-.007".

### VALVE SYSTEM

#### 1947-48 MODELS

**VALVE SERVICING:** With engine removed from chassis, remove cylinder block (see Cylinder Block Removal above), lift out valve lifters (cam followers) and number these to insure re-installation in same positions (**CAUTION**—Do not lose tappet clearance adjusting shims and spacer washers on later cars). Use special bar type valve lifter to compress valve springs, remove split locks, spring retainer, and spring from each valve, remove valve from inside cylinder. Reface valves in usual manner (see data below for refacing valve seats), re-install assemblies, check tappet clearance.

**Valve Seat Resurfacing**—Special tools must be used to avoid marring cylinder walls (valve seats must be serviced from within cylinder). Use special Blue Point Stone Carrier, VG-10-2B, turned down to 1" diameter, and 5/16" pilot with following stones: SE-400-R Valve Seat Stone (Roughing), SE-400-F (finishing). Stones must be turned to 1 3/16" diameter for Intake Valves, 1 1/16" for Exhaust.

### COOLING SYSTEM

#### 1947-48 MODELS

**WATER PUMP (GENERATOR BRACKET) ALIGNMENT:** This procedure required for first type Water Pump No. C-205175, only (used with Generator GAS-4190).

**NOTE**—Later type Water Pump, C-207187, used with Generator GDZ-4806B, does not require alignment.

**Water Pump Alignment**—Whenever the generator bracket mounting bolts have been disturbed, bracket must be aligned with special fixture, No. 206923, as directed below to prevent water pump misalignment and rapid wear of water pump bushing.

**Alignment (with Fixture 206923).** Attach water pump to crankcase, tightening mounting bolts only finger tight. With generator mounting bracket bolts and clamp bolts loose, install special fixture No. 206923 on bracket in place of generator (slide water pump shaft into recessed hole in end of fixture). Tighten generator bracket mounting bolts securely (through slot in fixture), then tighten water pump attaching bolts. Remove fixture. Assemble water pump drive coupling and install generator.

**CAUTION**—Do not loosen generator bracket mounting bolts after bracket has been aligned.

**ENGINE NOTE:**—Engine is two-cylinder, horizontally opposed type with connecting rods on individual crankpins so that both pistons move in and out together. Cylinders fire alternately at 360° intervals (one complete revolution between firing points).

**ENGINE REMOVAL NOTE:**—Engine removal from chassis required for all service work. See *Crosley Special Shop Notes* for removal directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on front face of cowl below battery shelf (in engine compartment). First number 390-10000 (Model A), 390-30000 (CB41), 390-30700 (CB42).

**ENGINE NUMBER:**—Stamped on top center of engine block at rear of carburetor. First number C-10000 (Model A), C-21000 (CB41), C-25000 (CB42).

### TUNE-UP

**COMPRESSION:**—Ratio—5.5-1 (Mod. A), 5.6-1 (Others). Pressure—90 lbs. (Model A), 80 lbs. (Others) at cranking speed.

**VACUUM READING:**—No means of connecting gauge.

**FIRING ORDER:**—1-2. Cylinders fire alternately at intervals of 360° (one complete revolution of the crankshaft).

**SPARK PLUGS:**—Auto-Lite A-5. 14 MM. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle 46° (closed).

Automatic Advance—14° at 2300 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—Half-round notch in rim of flywheel in line with rib on top center of crankcase (Model A),  $\frac{1}{2}$ – $\frac{5}{8}$ " ahead of the rib (CB41, CB42).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw  $\frac{3}{4}$ –1 $\frac{1}{4}$  turn open. Idle speed 7 MPH.

**High Speed (Main Adjustment) Setting:**—Screw  $1\frac{1}{2}$ –1 $\frac{3}{4}$  turns open. Set for maximum engine speed with throttle opening of 30-35 MPH.

**Float Level:**—Fuel level  $23\frac{3}{32}$ " below top of bowl.

**Fuel Pump Pressure:**  $3\frac{1}{2}$  lbs. maximum (CB41, CB42).

**MANIFOLD HEAT CONTROL:**—No adjustment.

**VALVES:** See Valve Timing.

**Tapet Clearance (Model A):**—.006-.0065" Intake, .007-.0075" Exhaust (Cold). No adjustment.

**Tapet Clearance (CB41, CB42):**—.007" maximum Intake, .009" maximum Exhaust (Cold). No adjustment.

**STARTING:** See Battery, Starter, and Generator.

### IGNITION

**Ignition Switch:**—Douglas No. 2980.

**COIL:** Auto-Lite Model IG-4065. Service Coil IG-4070. Mounted on shelf between battery and fuel tank.

**Ignition Current:**—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

**Capacity:**—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4142-A. Single breaker, two lobe cam, full automatic advance type. Breaker Gap—.020".

**Rotation:**—Clockwise viewed from the top.

**Cam Angle or Dwell:**—46° closed, 134° open.

**Breaker Arm Spring Tension:**—17-20 ozs.

Automatic Advance

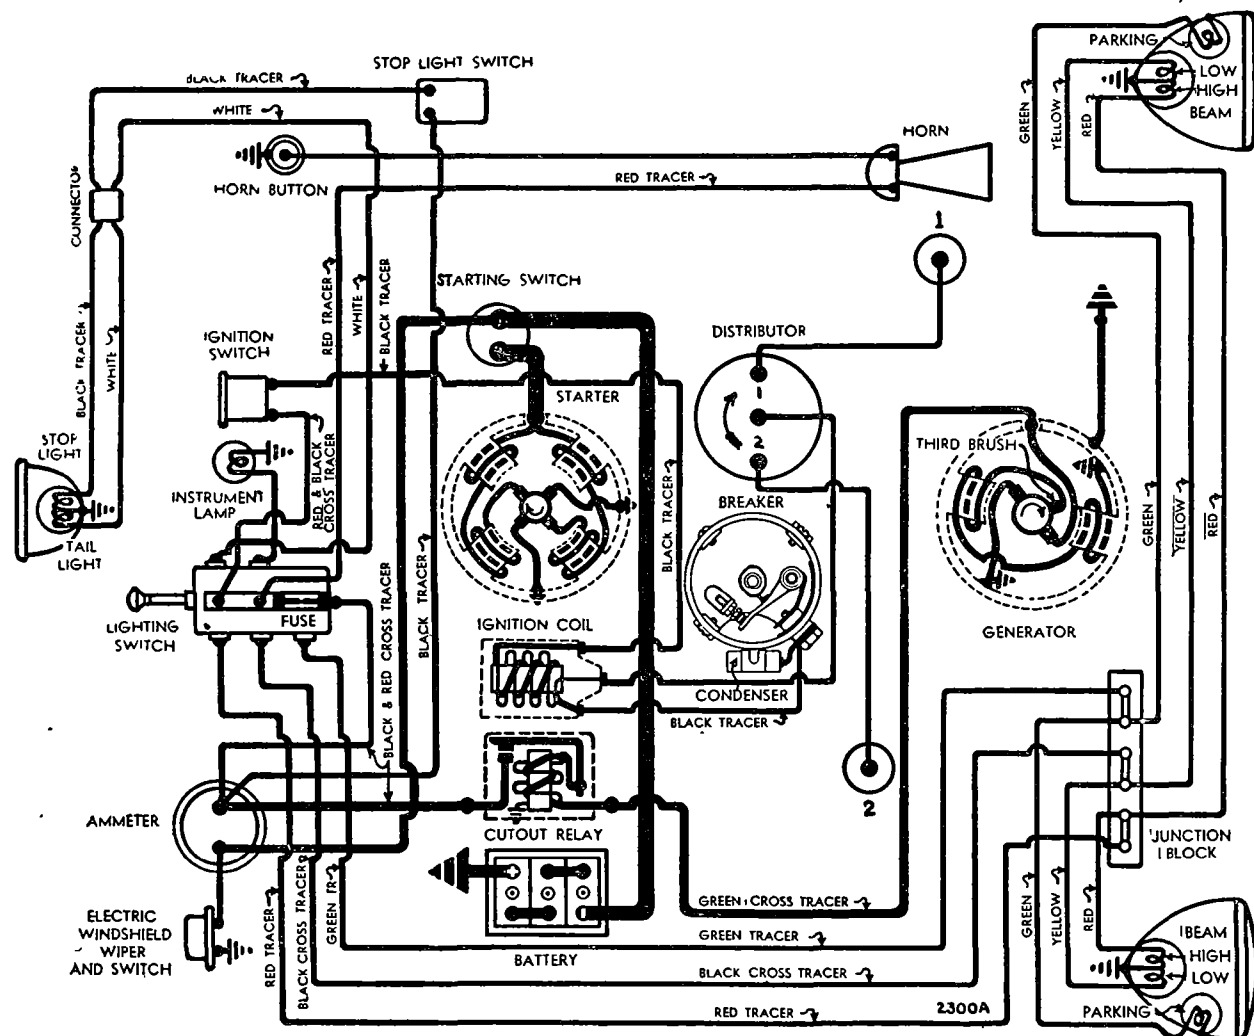

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	480	6	960
6	650	12	1300
10	1475	20	2950
14	2300	28	2600

**Removal:**—Distributor mounted on top of engine on left side. To remove, take out hold-down screw in advance arm, lift distributor out.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting below correct for fuel of 70 Octane Rating (Model A), 76 Octane Rating (Others). See Final Adjustment (below) for correction dependent on fuel regularly used.

**To Set Timing:**—Turn engine over until piston reaches firing position when half-round notch in rim of flywheel is in line with small rib on top center of crankcase (Model A), or with half-round notch  $\frac{1}{2}$ – $\frac{5}{8}$ " ahead of the small rib (Others) on top center of crankcase. Loosen advance arm clamp screw, rotate distributor until contacts just begin to open, tighten clamp screw. See that distributor cap terminal which is in line with rotor is connected to spark plug in cylinder entering power stroke (flywheel mark will be at indicator at firing point for each cylinder on alternate revolutions of the crankshaft).

**Final Adjustment:**—If Ethyl fuel, or fuel of better than 76 Octane Rating used, loosen advance arm clampscrew and rotate distributor so as to advance timing until slight 'ping' secured when engine pulling under load.

### CARBURETOR

**CARBURETION:**—Carburetor—Tillotson Model DY-1A. 1", plain tube, single barrel downdraft type with low and high speed adjustments.

*For complete data, refer to Carburetor Index.*

**ADJUSTMENT NOTE:**—If carburetor out of adjustment so that engine can not be warmed up, make preliminary adjustment as given below, then run engine until warm before making adjustments.

**Preliminary Adjustment:**—Turn main (high speed) adjusting screw in or clockwise lightly until it is seated, then back adjusting screw out exactly two full turns. Turn idle (low speed) adjusting screw in or clockwise lightly until seated, then back adjust-

ing screw out exactly one full turn. Start engine and run until thoroughly warm, then adjust as follows:

**High Speed (Main) Adjustment**—Open throttle so that engine runs at speed of 30-35 M.P.H. Turn main adjusting screw in or clockwise slowly (¼ turn at a time) until engine slows down due to lack of fuel, then turn adjusting screw out very slowly (⅛ turn at a time) until maximum speed is secured. Correct setting is approximately 1½-1¾ turns of the screw from the inner seated position.

**Low Speed (Idle) Adjustment**—Close throttle, set throttle lever stop screw so that engine idles faster than normal. Turn idle adjusting screw in or clockwise slowly until engine begins to miss, then turn screw out until engine fires smoothly. Open throttle momentarily to clear manifold, recheck idle adjustment. Correct setting is approximately ¾-1¼ turns of the screw from the inner seated position. Adjust throttle lever stop screw for high gear idling speed of 7 M.P.H.

## CARB. EQUIPMENT

**Air Cleaner**—Oil-wetted type.

**Fuel Pump (Model A)**—None used (gravity feed).

**Fuel Pump (CB41, CB42)**—AC Type R, No. 1537402. Diaphragm type. Driven from front end of camshaft.

For complete data, refer to Carburetion Equip. Index. Pressure—3½ lbs. maximum.

## BATTERY

**BATTERY**—Auto-Lite Model AB-13. 6 volt, 13 plate, 80 ampere hour capacity (20 hour rate).

**Starting Capacity**—98 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 2.0 minutes.

**Grounded Terminal**—Positive (+) terminal grounded to right hand side of cowl. Engine Ground—Strap between engine and frame cross-member at front engine mounting on right hand side.

**Location**—On shelf on front of cowl in engine compartment on right hand side.

**Dimensions**—Length 9". Width 7". Height 8¾".

## STARTER

**Auto-Lite Model MZ-4077 or MZ-4101.**

**Armature**—MZ-2085 (MZ-4077), MZ-2165 (MZ-4101).

**Drive (MZ-4077)**—Compression Type Bendix number RCBX11-10. (MZ-4101)—Overrunning clutch, positive pinion shift, operated by starter pedal.

**Rotation**—Clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.80 "	Lock	3.0	420
11.80 "	Lock	4.0	560

**Removal**—Starter cradle mounted on top of flywheel housing. To remove, take out starting motor top plate (in driver's compartment), disconnect cable, take out two bolts in starter clamp band, lift starter out.

**Starting Switch**—Auto-Lite SW-4001 (for MZ-4077), SW-3911 (for MZ-4101 starter). Mounted on toe-board.

## GENERATOR

**Auto-Lite Model GBM-4619-5. Armature GBM-2066. Third brush control type. No ventilation. Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand clockwise to increase, or counter-clockwise to decrease, charging rate. Brush held in position by friction.

**Maximum Charging Rate**—12 amperes, 8.0 volts.

### Performance Data

Cold			Hot		
Amperes	Volts.	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	850	0	6.4	900
2	6.6	960	2	6.65	1040
4	6.75	1030	4	6.9	1180
6	7.05	1160	6	7.2	1330
8	7.25	1265	8	7.4	1500
10	7.45	1380	10	7.7	1720
12	7.7	1510	12	7.9	2080
14	7.9	1740	12.45	8.0	2400
15	8.0	2300			

**Rotation**—Clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs.

**Field Current**—3.8-4.2 amperes at 6.0 volts.

**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal**—Generator flange mounted on timing gear cover and driven directly from front end of crankshaft. To remove, disconnect lead, take out four flange mounting capscrews, remove generator from below.

## CUTOUT RELAY

**Auto-Lite Model CB-4025. Mounted on shelf on front of cowl between battery and fuel tank.**

For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—5-2.5 ampere discharge current (after charging at 15 amperes).

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Moto-lamp type with upper and lower beams controlled by lighting switch.

**Headlamp Adjustment**—Aim each headlamp so that hot spot centered on vertical line directly ahead of each lamp center and upper edge of hot spot on horizontal line at lamp center height.

### Switches

**Lighting**—Douglas No. 5731.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlights	32-21	2320C
Parking, Instrument	1.5	55
Stop & Tail	21-3	1158

## MISC. ELECTRICAL

**FUSES**—Lighting—10 amperes (Model A), 20 amperes (CB41, CB42). On lighting switch.

**HORN**—Sparton. Disc type vibrator horn.

**Current**—5 amperes.

## ENGINE

**ENGINE SPECIFICATIONS (MODEL A)**—Waukesha. Two cylinder, 'L' head, horizontal opposed, air-cooled type with shrouded cylinders and air circulating fan built in flywheel.

**Bore**—3". **Stroke**—2¾".

**Displacement**—38.87 cubic inches. **Rated HP**—7.2.

**Developed Horsepower**—12 at 4000 RPM.

**Compression Ratio**—5.5-1.

**Compression Pressure**—90 lbs. at cranking speed.

**Vacuum Reading**—No means of connecting gauge. **ENGINE SPECIFICATIONS (CB41, 42)**—Waukesha. 2 cylinder, 'L' head, horizontal opposed, air-cooled type with shrouded cylinders and air circulating fan built in flywheel.

**Bore**—3". **Stroke**—2½". **Rated Horsepower**—7.2.

**Displacement**—35.3 cubic inches.

**Developed Horsepower**—12 at 4000 RPM.

**Compression Ratio**—5.6-1.

**Compression Pressure**—80 lbs. at cranking speed.

**Vacuum Reading**—No means of connecting gauge.

**PISTONS**—Electric furnace cast iron. Matched for equal weight within ¼ oz.

**Weight**—Model A 18.5 ozs. Model CB41 17.5 ozs.

Model CB42 20 ozs. All with pin installed.

**Length**—2½" (Model A), 2.807" (CB41), 2.802" (CB42).

**Removal**—Pistons & rods removed from above with engine out of chassis. See *Crosley Special Shop Notes for engine removal instructions*.

**Clearance**—.004" Max. See *Fitting New Pistons*.

**Fitting New Pistons**—Use feeler gauges installed between piston and cylinder wall at right angles to pin hole. Piston should pass through bore on .004" feeler and lock on .0055" feeler.

**Replacement Pistons**—Pistons furnished finished or semi-finished in the following sizes: Finished pistons Std. and .010", .020" oversize. Semi-finished pistons .030" and .050" oversize.

**PISTON RINGS**—Two tapered compression rings, one oil control ring per piston, all above pin.

**Ring** Width End Gap Side Clearance

Comp. (Top) ⅛" .010" Max. .003-.0045"

Comp. (#2) ⅛" .010" Max. .0015-.003"

Oil ('39-40) 3/16" .010" Max. .001-.0025"

Oil ('41 & up) 5/32" .010" Max. .0015-.003"

**NOTE**—Install oil ring with scraper edge down.

**Replacement Rings**—Std., .010", .020" oversizes.

**PISTON PIN**—Diameter ⅝" (Model A), ¾" (CB41, 42). Floating type. Retained by locking rings.

**Pin Fit in Piston**—.0002" clearance or thumb push fit at normal temperature.

**Pin Fit in Rod Bushing**—.0003" clearance (Model A), .0004" clearance (CB41, 42). Ream new bushings until this clearance secured.

**Replacement Pins**—Std. and .005", .010" oversize.

**CONNECTING ROD**—Length 4⅝" (A), 4¾" (CB41, 42).

**Weight**—12.5 ozs. (Model A), 18 ozs. (Model CB41, 42).

**Crankpin Journal Diam.**—1½" (A), 1⅞" (CB41, 42).

**Lower Bearing**—Removable steel-backed, babbitt lined type.

**Clearance**—.0025". **Sideplay**—.008".

**Adjustment**—None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings**—Furnished Std. and .003" undersize. Install bearings with locating lugs fitted in notches in rod and cap. **NOTE**—Bearings can be renewed through pan opening without removing engine from chassis.

**CRANKSHAFT**—Two bearing, counterweighted type. See *Crosley Special Shop Notes for Engine Removal directions for main bearing and crankshaft oil seal servicing*.

**Journal Diameters**—Front 1⅞" (Model A), 1 13/16" (Models CB41, CB42). Rear 2¼" (all).

**Bearing Type**—Steel-backed, babbitt-lined bushings (not split). Front bearing mounted in timing gear housing cover.

**Clearance**—.001-.003" (frt.), .0015-.003" (rear).

**Adjustment**—None. Replace bearings. See *Crosley Special Shop Notes for Crankshaft Removal directions*.

CONTINUED ON NEXT PAGE

**ENGINE****C** NTINUED FROM PRECEDING PAGE

**End Thrust:**—Taken by rear bearing. Adjustable by replacing fiber thrust washer. Endplay—.003-.005".

**CAMSHAFT:**—Proferal (alloy iron). Two bearing, gear driven.

**Bearing Type:**—Removable bushing in rear cover (front), machined in crankcase (rear).

**Clearance:**—.001-.003".

**Endplay:**—.006-.009". Controlled by timing gear.

See *Crosley Special Shop Notes for Camshaft Removal and front bushing servicing data.*

**Timing Gears:**—Allowable runout .001". To renew gears, remove camshaft (see *Crosley Shop Notes* for data), use puller to remove old gears.

**Camshaft Setting:**—Mesh gears so that 'C' mark on camshaft gear and punchmark on crankshaft gear line up (install gears with these marks forward).

VALVES:	Head Diameter	Stem Diameter
Intake	1 3/8"	5/16"
Exhaust	1 5/32"	5/16"

	Seat Angle	Lift: A	CB41, 42	Stem Clear.
Intake	45°	270"	300"	.001-.003"
Exhaust	45°	270"	300"	.002-.004"

**Valve Springs:**—Free length 1 27/32".

	Pressure	Length
Valve Closed	20 lbs.	1 1/2"
Valve Open	41 lbs.	1 15/64"

**Valve Guides:**—Guides can be removed and renewed with engine out of car and dismantled (See *Shop Notes* for engine removal directions). Ream new guides with 5/16" reamer for correct stem clearance (above).

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out of engine (see *Shop Notes* for Camshaft removal directions).

**Lifter Clearance:**—.0005-.0015".

**VALVE TIMING**

**Tappet Clearance (Model A):**—.006-.0065 Intake, .007-.0075" Exhaust, cold. Not adjustable.

**Tappet Clearance (CB41, CB42):**—.007" max. Intake, .009" max. Exhaust, cold. Not adjustable.

**NOTE:**—After grinding valves, check tappet clearance with feeler gauge. Grind off end of valve stem if clearance less than figures given above.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake Valves:**—Open 20° BTDC. Close 60° ALDC.  
**Exhaust Valves:**—Open 60° BLDC. Close 20° ATDC.  
**To Check Valve Timing:**—Intake valve should open when point on flywheel 5.5 teeth before TDC mark (half round notch on rim of flywheel) lines up with small ribcast on top center of crankcase. Exhaust closing point is 5.5 teeth past TDC point.

**LUBRICATION**

**LUBRICATION:**—Pressure to crankshaft, connecting rod and camshaft bearings.

**Oil Pump:**—Rotary vane type mounted on timing gear cover and driven directly from camshaft.

**Removal:**—Take out 4 screws mounting pump on timing gear cover, remove pump. Serviced by replacement. Use new gasket when installing pump.

**Normal Oil Pressure:**—35-45 lbs. with warm oil.

**Oil Pressure Regulator:**—On timing gear case cover. Adjustable by varying valve spring tension (increase tension to increase oil pressure).

**Crankcase Capacity:**—2 qts. (Model A), 3 qts. (CB41, 42).

**COOLING**

**COOLING:**—Air-cooled by suction fan built in flywheel which draws air past cylinder barrel and head fins through ducts formed by shroud bolted over cylinders.

**Cooling Fan Capacity:**—700 cu. ft. of air per minute at 3600 R.P.M.

**CLUTCH**

**CLUTCH:**—Rockford. Single plate dry disc type.

See *Clutch Section* for complete data.

**Facings:**—Not furnished separately (each facing consists of 4 segments).

**Adjustment:**—Clutch pedal free travel should be 1.5". To adjust, loosen locknut and turn clevis on connector cable at lower end of throw-out yoke.

**Removal:**—Remove transmission (see *Transmission Removal* below) and rear axle as an assembly (do not disconnect drive shaft at rear of transmission case as for transmission removal only). Disconnect clevis at bottom of clutch yoke, remove throw-out bearing from top of yoke, take out six cap screws mounting clutch lever brackets on flywheel, remove clutch assembly.

**TRANSMISSION**

**TRANSMISSION:**—Warner Model AS1-T92. Sliding spur gear type (all speeds).

See *Transmission Section* for complete data.

**'41-'42 NOTE:**—Transmission has Adapter (Crosley # 200957) bolted on rear of transmission for universal joint (universal joint not used prior to 1941). Adaptor is also Rear Engine Mounting.

**Removal:** Remove rear axle (see *Rear Axle Removal* following). Take out four transmission-to-flywheel housing cap screws, pull transmission straight back and remove.

**UNIVERSALS**

**MODEL A (1939-40)**—No universal used on this model.

**MODELS CB41 ('41), CB42 ('42)**—Spicer #102. One used in ball housing at rear of transmission adaptor. See *Universals Section* for complete data.

**REAR AXLE**

**REAR AXLE:**—Spicer (Salisbury) Model 11. Semi-floating spiral bevel gear type with Torque Tube drive.

See *Rear Axle Section* for complete data.

**Ratio:**—5.14-1 or 5.57-1.

**Backlash:**—.004-.008". Shim adjustment.

**Removal (1939-40):**—Disconnect shock absorbers, brake cables and conduits at backing plate. Hoist rear end of car to remove weight from springs, disconnect springs at axle. Free exhaust pipe and muffler from torque tube, block up rear end of transmission (supported by torque tube). Take out cap screws in torque tube flange on rear of transmission case, pull torque tube and rear axle assembly to rear and remove being careful not to lose spring and two washers on front end of propeller shaft at rear of speedometer gear.

**Removal ('41-'42):**—Disconnect shock absorber links, and brake cables and conduits at backing plates. Hoist rear of car to remove weight from springs, disconnect springs at rear axle. Take out cap screws in universal joint ball housing on transmission adaptor, pull rear axle and torque tube assembly to rear to disengage propeller shaft at universal joint being careful not to lose washer and spring on shaft at rear of speedometer gear. Remove axle assembly from beneath car.

**Axle Shaft Removal:**—Remove hub cap, wheel, axle nut, pull hub (use puller No. 202318). Disconnect brake cable and conduit on backing plate, take out four cap screws and remove backing plate being careful not to lose bearing adjusting shims (between backing plate and axle housing flange). Pull axle and bearing out.

**Wheel Bearing Adjustment:**—Check endplay with dial indicator. Adjust by removing backing plate (see *Axle Shaft Removal* above) and adding or removing shims between backing plate and axle housing.

**Endplay:**—.002-.007" between shaft and thrust block (total for both shafts).

**TORQUE TUBE AND PROPELLER SHAFT (1939-40):**

Spicer No. 98-1107X. Shaft is supported by bearing at center of torque tube and has splined joint at each end to engage transmission mainshaft (front), rear axle pinion shaft (rear). Torque tube has flanged ends which bolt directly to transmission case and rear axle housing.

**Propeller Shaft Removal:**—Remove rear axle and torque tube as a unit (see *Rear Axle Removal* above), withdraw propeller shaft through forward end of torque tube.

**CAUTION:**—When installing assembly in car make certain that spring and washers assembled on forward end of propeller shaft (necessary to prevent endplay in shaft).

**TORQUE TUBE AND PROPELLER SHAFT (1941-42):**

Spicer No. 98-1182X. Shaft is supported by bearing at center of torque tube and has splined end to engage rear axle pinion shaft (rear end), universal joint (front end). Front end of torque tube has been modified to include a ball housing for the universal joint and adaptor is used between the torque tube and the transmission case (rear engine mounting is located on adaptor).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco Model 1201G, H (front), 1201J, K (rear). Single acting, hydraulic type. See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional T-beam section front axle with reverse Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—6°30' crosswise.

**Camber:**—2°. No adjustment provided.

**Caster:**—6 1/2°-11°. No adjustment provided.

**Toe In:**—3/64-1/16". Adjust in usual manner by loosening tie rod clamp bolts and turning rod.

**STEERING GEAR**

**Steering Gear:** Ross Model S-12. Cam-and-Lever type. See *Steering Gear Section* for complete data.

**BRAKES**

**BRAKES:**—Service—Hawley. Four wheel, mechanical type with 'floating' lining. Hand lever applies all four service brakes.

See *Brake Section* for complete data.

**Drum Diameter:**—6".

**Lining:**—Width 1". Thickness 5/32". Length 18 3/4" per wheel. NOTE—Lining furnished in correct length to fit loosely around shoe assembly with 1/16-1/8" gap at ends (not riveted on shoes).

**Clearance:**—Just clear of drag.

**Hand Brake:**—See *Service Brakes* above.

### CARS WITH THIRD-BRUSH GENERATOR & CUTOUT RELAY

## C NTINUED FROM PRECEDING PAGE

inspection hole in right front face of housing. Loosen first timing mark on flywheel is in center of en advance arm clamp bolt, rotate distributor housing until contacts begin to open, tighten clamp bolt. Check rotor and make certain it is at #1 segment in distributor cap, check spark plug connections. **To Check Timing (with Neon Timing Light)**—Attach neon timing light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Start engine and allow it to idle (speed must not exceed 700 RPM to avoid automatic advance action). Loosen distributor clamp bolt in advance arm, rotate distributor until timing mark (located 12° before TDC mark) appears to be in center of inspection hole, tighten clamp bolt.

## CARBURETOR

Tillotson Model DY-9B (superseding DY-9A). 7/8", Single barrel, plain tube, downdraft type with manual choke control.

See Carburetor Section for complete data.

**NOTE**—This carburetor has Main (High Speed) adjustment as well as conventional Idling (Low Speed) adjustment.

**Adjustment & Float Level**—See Tune-up for data.

**Metering Jets**—See Tillotson DY-9A, B Carburetor article in Carburetor Section for complete data.

## CARB. EQUIPMENT

**Air Cleaner**: Oil-wetted type Std. Heavy duty oil-bath type available as an accessory.

**Servicing (Oil-wetted type)**—Remove cleaner, wash, dry, and re-oil filter element at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath type)**—Remove and disassemble cleaner, wash out with gasoline (including filter), refill reservoir with light engine oil to indicated level (approx. 1/4 pint) every 5000 miles or more often if required (inspect every 1000 miles).

**Fuel Pump**: AC No. 1538923 (Crosley No. 300042).

See Carburetion Equipment Section for data.

Pressure—1 1/2-3 1/4 lbs.

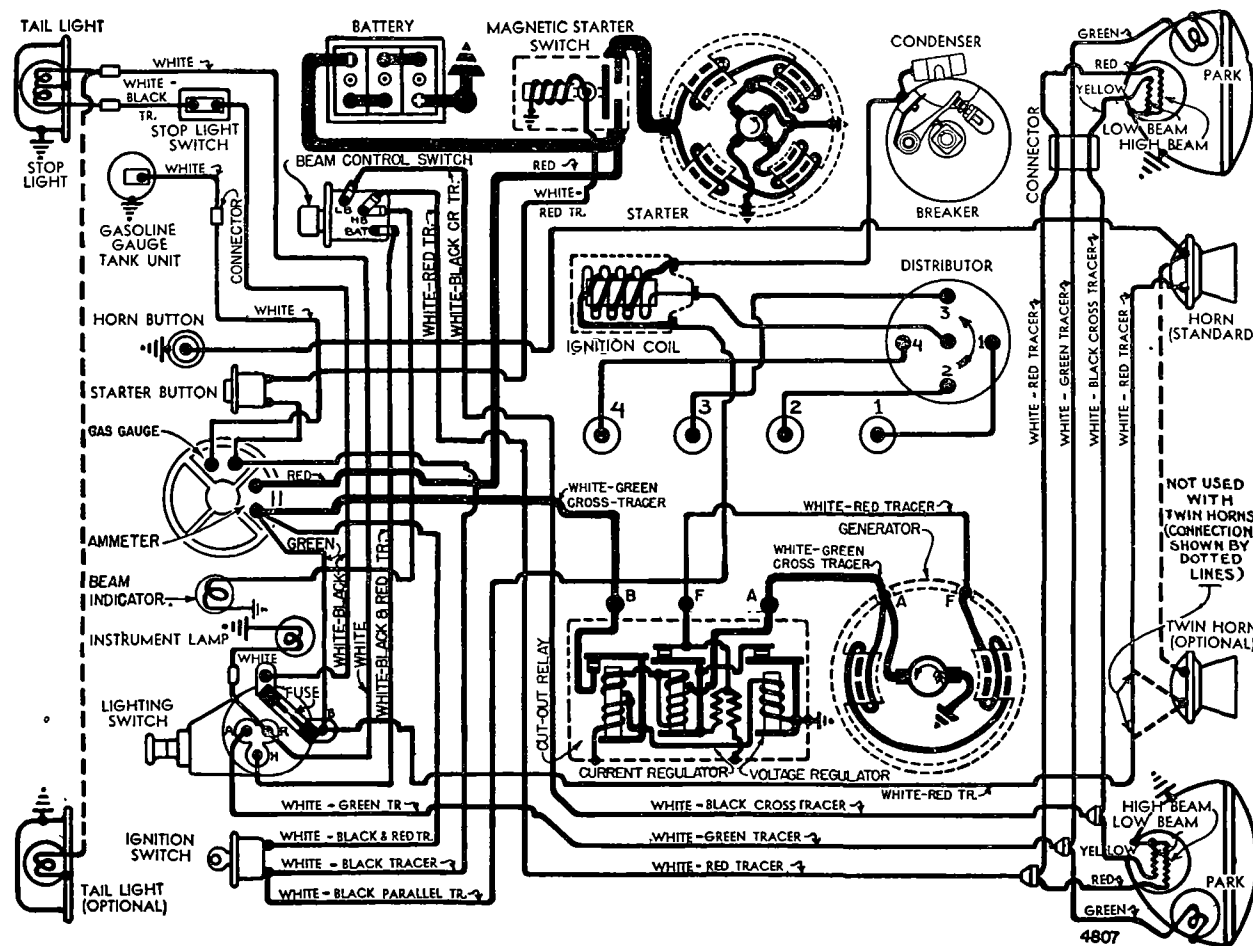

**Gasoline Gauge**: Stewart (Stewart-Warner) Electric

See Carburetion Equipment Section for data.

## BATTERY

Auto-Lite Type AB-13 or 1M-80. 6 volt, 13 Plate, 80 Ampere Hour capacity (20 hour rate).

Starting Capacity—96 amperes for 20 minutes.

CARS WITH TW -BRUSH ENERAT R & REGULAT R

**Zero Capacity**—300 amperes for 2.0 minutes. Five second voltage 3.8 volts.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left hand side in engine compartment.

**Dimensions**—Length 8 15/16". Width 7". Height 8 5/8"

## STARTER

Auto-Lite MAK-4027 (First Cars), MZ-4147 with No. B-206550 Adapter (Later Cars).

**Armature**—Auto-Lite No. MAK-2074 (MAK-4207).

**Drive**—Bendix Drive No. A2920.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—38-61 ozs. (MAK-4027), 42-53 ozs. (MZ-4147) with new brushes.

## Performance Data—MAK-4027

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.5	70
.3 "	3240	5.5	100
1.35 "	1880	5.0	200
3.1 "	1000	4.5	300
4.8 "	220	4.0	400
7.0 "	Lock	4.0	520

## Performance Data—MZ-4147

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
4.4 "	Lock	2.0	280

**Removal (MAK-4027)**: Starter flange mounted directly on left front face of flywheel housing. To remove, disconnect cable, take out flange mounting bolts.

**Removal (MZ-4147)**: Starter flange mounted on adapter bolted on left front face of flywheel housing. To remove, disconnect cable, take out capscrews mounting starter on adapter (do not disturb adapter).

**Starting Switch**: Auto-Lite Model SS-4007 Magnetic Switch and Pushbutton Model XA-456 or XA-456E. Switch is mounted on dash and controlled by pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

## THIRD-BRUSH TYPE

Auto-Lite Model GAS-4190. Armature GAS-2336.

Third brush control type with Cutout Relay mounted on generator mounting bracket.

**Charging Rate Adjustment**—Shift third brush by hand counter-clockwise to increase, or clockwise to decrease, charging rate. Brush is held in position by friction. **NOTE**—Std. third brush position is with space of 2 commutator bars (minimum), to 2 commutator bars plus 1 mica strip (maximum) between third brush and nearest (insulated) main brush.

**Maximum Charging Rate**—12 amperes at 8.0 volts.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	880	0	6.4	975
2	6.6	985	2	6.8	1135
4	6.9	1100	4	7.0	1310
6	7.2	1230	6	7.35	1540
8	7.3	1420	8	7.7	1860
10	7.6	1650	10.2	8.0	2800
12	7.8	2000			
14	8.0	2800			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—15-20 ounces.  
**Field Current**—4.09-4.52 amperes at 6.0 volts.  
**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal:** Generator is cradle mounted on right side of engine with fan belt drive (water pump driven by armature shaft extension). To remove generator, disconnect water pump drive coupling and generator lead, slack off drive belt tension and remove belt, remove two bolts at lower end of mounting clamp band, slide generator out. **NOTE**—Generator has locating dowel pin on field frame which engages dowel pin hole in mounting band. Dowel must be disengaged when removing generator and dowel must be engaged in dowel pin hole in band when installing generator.

► **CAUTION**—Do not disturb the generator mounting bracket bolts. Bracket must be properly aligned (using fixture) to prevent water pump misalignment and rapid wear whenever bracket bolts loosened.  
**Generator Bracket Alignment**—See *Crosley Shop Notes*.

**Belt Adjustment:** Loosen nuts on two bolts mounting fan shaft bracket on front of engine, move fan upward (right hand bolt hole slotted) until belt deflection is  $\frac{1}{2}$ " (thumb pressure) midway between generator and fan pulleys, tighten nuts and recheck. **NOTE**—Two holes provided in bracket for left hand fan mounting bolt. Additional range of adjustment can be secured by shifting bolt to upper hole.

## GENERATOR TWO-BRUSH TYPE

Auto-Lite Model GDZ-4806-A or 4806B. Two brush type with voltage and current regulation.  
**Maximum Charging Rate**—35 amperes at 8.0 volts.  
**Charging Rate Adjustment**—None. See Regulator.

Cold			Performance Data		Hot

①—Current Regulator setting. See Regulator data.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—35-53 ozs. (new brushes).  
**Field Current**—1.60-1.78 amperes at 6.0 volts.  
**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal:** Generator cradle mounted on right side of engine with fan belt drive (water pump driven by armature shaft extension). To remove generator, disconnect leads, slack off belt adjustment and remove fan belt, remove front bolt in water pump coupling. Remove two 5/16" elastic stop nuts on generator mounting band, lift generator out.

**Belt Adjustment:** Same as for 3-brush generators. See instructions above.

## CUTOUT RELAY

### USED WITH THIRD-BRUSH GENERATOR

Auto-Lite Model CB-4025. Mounted on generator mounting clamp band directly above generator.  
 See *Electrical Equipment Section* for complete data.

**Cuts In**—6.5-7.25 volts.  
**Cuts Out**—5-2.5 ampere discharge current (after charging at 15 amperes).  
**Contact Gap**—.015-.045" (armature against stop).  
**Air Gap**—.010-.030" (contacts closed).

## REGULATOR

### USED WITH TWO-BRUSH GENERATOR

Auto-Lite Model VRP-4004F. Voltage-current type. See *Electrical Equipment Section* for complete data.  
**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).  
**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.  
**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See *Electrical Equipment Section* for settings at other temperatures.  
**Checking** (without breaking seals) & **Adjustment**—See *Electrical Equipment Section* for complete data.  
**Contact Gap**—.012" min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).  
**Checking** (without breaking seals) & **Adjustment**—See *Electrical Equipment Section* for complete data.  
**Contact Gap**—.012" min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps:** Double filament, pre-focused type. Upper and lower beams controlled by Beam Selector Switch on toeboard.  
**Adjustment**—Aim upper beams straight ahead with top of "hot spot" 3" below lamp center height at 25 feet.

### Switches

**Lighting**—Crosley No. 205936.  
**Beam Selector**—Crosley No. 205956.

### Lamp Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Ind.	1.5	55
Stop & Tail (L. H.)	21-3	1158
Tail (R. H.)	3	67

## MISC. ELECTRICAL

**FUSE:** Lighting—20 ampere. On lighting switch.

**HORN:** Crosley No. 205288. Single horn standard. Dual horns consists of two single horns.

## ENGINE

**ENGINE SPECIFICATIONS:** Four cylinder, Overhead Valve type with Overhead Camshaft. Cylinder block (with integral Head) is built-up type bolted on aluminum crankcase with pressed steel oil pan.  
**Bore**—2.5". **Stroke**—2.25".  
**Displacement**—44 cu. ins. **Rated H. P.**—10.  
**Developed Horsepower**—26.5 at 5400 RPM.  
**Compression Ratio**—7.5-1.  
**Compression & Vacuum Reading**—See *Tune-Up data*.

**ENGINE SERVICE NOTE:** Cylinder Heads are integral with cylinder barrels and cylinder block must be removed from crankcase for work on Valves, Pistons, Rings, etc.

**ENGINE REMOVAL and Cylinder Block Removal:** See *Crosley Shop Notes*.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS:** See *Crosley Shop Notes*.

**PISTONS:** Aluminum alloy, heat treated, cam ground, three-ring type (Before Eng. No. 31599), four-ring type (Eng. No. 31599 Up). Length—1.906".  
**Weight (3-ring type)**—4.92 ozs. (equal within  $\frac{1}{8}$  oz.)  
**Clearance**—.002-.0035" (skirt). See *Fitting New Pistons*.

**Removal**—Pistons and rods removed through lower end of cylinder when cylinder block removed from crankcase (cylinder head integral with block).  
 See *Crosley Shop Notes for Cylinder Block Removal*.

**Fitting New Pistons:** Use .002" feeler gauge,  $\frac{1}{2}$ " wide, to check clearance. Place feeler gauge 90° from piston pin holes in piston on maximum thrust side. Pull required to withdraw feeler should be 4-6 lbs.

**Replacement Pistons:** Furnished Std. Size and .005", .010", .020", .030" Oversize.

**PISTON RINGS** (Before Eng. No. 31599): Two compression, one oil control ring, all above pin. Drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	1/16"	.007-.017"	.0025-.004"
Oil Cont. (#3)	3/32"	.007-.015"	.0015-.003"

**Installing Rings**—Compression rings have inner bevel which must be upward (mark "TOP" on side of rings upward).

**PISTON RINGS** (Eng. No. 31599 Up): Two compression, one oil control ring above pin, additional oil control ring below pin (4-ring type piston). Drain holes provided in both oil ring grooves.

Ring	Width	End Gap	Side Clear.
Compr. (#1,2)	.0620-.0625"	.007-.017"	.0025-.005"
Oil (#3, 4)	.1545-.1550"	.007-.015"	.0015-.003"

**Installing Rings**—Side marked "TOP" on compression rings must be upward.

**Replacement Rings:** Furnished Std. Size and .010", .020", .030" Oversize.

**PISTON PIN:** Floating type with aluminum plug insert in each end of pin. Pin hole in rod has lead-bronze bushing.

**Pin Fit in Piston**—.0001-.0006" clearance (3-ring type piston), .0004" Loose to .0003" Tight (4-ring type piston) at room temperature or 70°F.

**CAUTION**—Heat piston to 160°F. when inserting pin to avoid distorting piston skirt.

**Pin Fit in Rod Bushing**—.0000-.0005" clearance or tight thumb push fit at room temperature (70°F).

**NOTE**—Bushing is split leaded-bronze type and of size for press fit in connecting rod hole (.6875-.6880"). Hone bushing for correct pin fit after installation (pressing bushing into place will close up gap and leave pin hole undersize).

**Piston Pin Plugs**—Must be snug fit in ends of pin.

**Replacement Piston Pins:** .001", .002", .003" Oversize.

**CONNECTING ROD:** Length—4.125". Weight—9.62 ozs. (all rods equal within  $\frac{1}{8}$  oz.).

**NOTE**—Bearing cap bolts are forged integrally with the connecting rod.

**Crankpin Journal Diameter**—1.374-1.375".

CONTINUED ON NEXT PAGE

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Lower Bearing Type**—Replaceable, precision type steel-backed, babbit-lined. No shims.

**NOTE**—Connecting rod bearings are interchangeable with the three intermediate lower main bearing halves (not interchangeable with crankshaft upper bearings).

**Clearance**—.0015-.003" Sideplay—.0175".

**Bearing Adjustment**: None (no shims). Replace bearings (precision type, no fitting required). Do not file bearing caps. **NOTE**—Palnuts used on connecting rod bolts. Always use new Palnuts.

**Replacement Bearings**: Furnished Std. Size and .001", .010", .020" Undersize.

**Installing Rods**: Numerical marking on rod and bearing cap together and on same side of engine as similar marking on bottom of crankcase (left hand or distributor side).

**CRANKSHAFT**: Five main bearing type with individually counterweighted crankpins.

**Journal Diameters**—1.374-1.375" (except rear bearing), 1.499-1.500" (rear bearing only).

**Bearing Type**—Replaceable, precision type, steel-backed, babbit-lined. Rear bearing is flanged (for end thrust).

**NOTE**—The three intermediate main bearings are interchangeable and these lower bearing halves are interchangeable with connecting rod bearings. Upper and lower bearing halves are not interchangeable (upper halves may be identified by oil holes which must register with oil channels in crankcase).

**Clearance**—.0015-.003".

**Bearing Adjustment**: None (no shims). Replace bearings. Do not file bearing caps. Engine must be removed from chassis and crankshaft removed for main bearing work.

See *Crosley Shop Notes for Engine Removal and Crankshaft Removal Instructions*.

**NOTE**—When installing bearings, make certain that oil holes in bearing upper halves register with oil channels in crankcase (see Bearing Note above). Bearings are numbered (1 to 5) on left side of engine and cannot be interchanged.

**Crankshaft Oil Seals**—Replace rear main bearing oil seal whenever rear main bearing is disturbed. **Oil Seal Replacement**—See "Crankshaft & Main Bearings" in *Crosley Shop Notes*.

**Replacement Bearings**: Furnished Std. Size and .001", .010", .020" Undersize.

**End Thrust**: Taken by flanges on #5 (rear bearing). Replace rear main bearing when endplay exceeds .008". **Endplay**—.003-.008".

**CAMSHAFT**: Five bearing type mounted on top of engine and driven through bevel gears by vertical tower shaft at front of engine.

**Bearing Type**—Consist of five split aluminum bearings bolted individually on pads on top of engine. On first engines, integral studs provided on upper halves of all bearings except rear (#5) for camshaft cover retaining nuts. On later engines, top of all bearing upper halves are machined flat and a separate bearing strap is assembled on top of bearing under bearing capscrews. These bearing straps have stud for camshaft cover retaining nuts (except rear #5 bearing strap which is plain type).

**Bearing Interchangeability**—All lower bearing halves except front (#1) interchangeable on all engines. Intermediate (#2,3,4) upper halves of first type (with integral studs) interchangeable. All except front upper bearing halves of later type (with separate bearing straps) are interchangeable. Bearing straps used with this type are interchangeable on intermediate bearings (#2,3,4). Rear bearing strap is plain type.

**Clearance**—.0015-.0027".

**Endplay**—Taken by thrust washer between camshaft gear and front camshaft bearing. With correct endplay, backlash between camshaft gear and upper tower shaft gear will be .003-.005".

**Endplay Adjustment**—See "Camshaft & Bearings" in *Crosley Shop Notes*.

**Camshaft Drive (Towershaft) Assembly**: See "Camshaft & Bearings" in *Crosley Shop Notes*.

**Camshaft Setting**: For correct valve timing, with camshaft out of engine, proceed as follows:

1) Turn engine over slowly until the following three conditions occur simultaneously: a) Top dead center mark on flywheel is in center of inspection hole in right front face of housing, b) Distributor rotor points toward #1 cylinder segment in distributor cap, c) Punch-marked tooth of upper tower gear (see below) points toward rear of engine and is in line with center-line of camshaft bearings.

2) With engine positioned as above, assemble the camshaft, pushing the oil metering housing into upper tower shaft gear and meshing punch-marked tooth of upper tower shaft gear between two punch-marked teeth of camshaft gear. Complete camshaft assembly by installing bearing caps.

3) Check camshaft endplay (see data above).

4) Turn engine over slowly by hand for at least two revolutions.

**VALVES**: Engine must be dismantled (removed from chassis, cylinder block taken off) for valve work.

**Valve Servicing**—See "Valve System" in *Crosley Shop Notes*.

**Valve Springs**: Intake & exhaust valve springs interchangeable.

	Spring Pressure	Length
Valve Closed	28 lbs.	1 3/4"
Valve Open	48 lbs.	1 7/32"

**Valve Guides**: Guides are pressed in cylinder head from above. To remove guides, invert cylinder block on arbor press, use a shoulder drift pin (max. O. D. 13/32") to press guide out. Press new guides in place (coat stem with Permatex #3 or equivalent) from above until shoulder on guide seats solidly on bushing in cylinder head. Ream guides for correct valve stem clearance. **NOTE**—Reface valve seats using the new guide hole to pilot the facing tool, grind valves before installing.

**Valve Lifter (Cam Follower)**: Consists of an inverted cup operating in guide hole in cylinder block directly above each valve assembly (cam follower spacer and tappet clearance adjusting shims located within cam follower above valve stem).

**Cam Follower Clearance**—.0005-.0015".

## VALVE TIMING

**Tappet Clearance**: .004-.005" Intake; .006-.007" Exhaust Cold. Clearance adjusted on first cars by grinding off end of valve stem, adjusting shims located within cam follower on later cars.

**Tappet Clearance Adjustment Procedure**—See "Valve System" in *Crosley Shop Notes*.

**Valve Timing**: See Camshaft Setting (above).

**Intake Valves**—Open 5° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 5° ATDC.

**Valve Timing Check**—See Camshaft setting for assembly of valve gear.

## LUBRICATION

**Engine Oiling System**: Pressure to main bearings, connecting rod bearings, camshaft bearings, and timing gear bearings (oil flow to camshaft bearings is through hollow towershaft and hollow camshaft). Oil pump in crankcase at forward end of engine. **Crankcase Capacity**—2 qts. (refill), 2.8 qts. (when filter drained or filter element replaced).

**Normal Oil Pressure**—40-50 lbs. at 30 MPH (hot oil). 7 lbs. minimum with engine idling.

**Oil Pressure Regulator**—Located under plug on right front corner of engine. Not adjustable.

**Oil Pump**: **Disassembly**—Take out center capscrew on lower cover, remove cover, gasket, and screen. Take out four capscrews in pump cover, remove cover and gasket, lift out idler gear and shaft. To remove pump shaft and gear, file off end of pin in pump drive gear, drive pin out and remove gear.

**Reassembly**—Use new gaskets. Make certain that plain washer and lockwasher used on each cover screw and that lower cover (with oil inlet pipe) is tight. See Tightening Torque Wrench data for housing and mounting screw torques.

**Oil Filter**: Replace filter element at 8000-10000 mile intervals. **NOTE**—Add .8 qt. of oil in crankcase when oil filter drained or element replaced.

**Crankcase Ventilation**: Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe located at rear of valve chamber.

**Servicing**—Wash filter element in kerosene and re-oil at 2000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System**: Not pressurized (Pressure type Radiator Filler Cap available as accessory equipment). **Capacity**—4 quarts (5 quarts with Heater).

**Water Pump (No. C-205175—Before Eng. No. 27637)**. Packless type. Mounted on right side of engine.

**NOTE**—This pump used with Generator GAS-4190. See *Water Pump Section for complete data*.

**CAUTION**—To prevent excessive pump bushing wear, generator mounting bracket must be aligned whenever alignment disturbed.

**Water Pump (Generator Mounting Bracket) Alignment**—See "Cooling System" in *Crosley Shop Notes*.

**Removal**—Disconnect drive coupling at water pump, drain cooling system by taking out plug in pump housing, disconnect two water hoses, take out two mounting bolts in flange at rear of pump, lift pump out.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Water Pump (No. C-207187—After Eng. No. 27637)**. Packless type. Mounted on right side of engine.

**NOTE**—This pump used with Generator GDZ-4806B. See *Water Pump Section for complete data*.

**Removal**—Disconnect drive coupling at water pump,

drain cooling system by taking out drain plug at bottom of radiator, disconnect two water hoses, take out two mounting bolts in flange in front of pump, lift pump out.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: In engine outlet connection (blocker type). Opens at 170°F.

**Temperature Gauge**: Vapor pressure type (not electric).

## CLUTCH

Rockford Model R-4608. Single plate, dry disc.

See *Clutch Section for complete data*.

**Facings**—Molded type, I. D. 4". O. D. 6" Thickness 7/64" (flywheel side), 9/64" (pressure plate side).

**Pedal Adjustment**: Pedal free travel should be 1". To adjust, turn clevis end in or out on cable.

**Removal**: Remove transmission (see *Transmission Removal* below). Working from below through the housing opening, remove two bolts in each of three release lever brackets, remove pressure plate and driven member through opening.

## TRANSMISSION

Warner Model AS1-T92. Three-speed, sliding spur gear type with conventional shift lever mounted on transmission case cover.

See *Transmission Section for complete data*.

**Removal**: Raise rear of car until weight removed from rear springs, disconnect rear springs from axle. Disconnect brake cable and conduit at each rear wheel backing plate, disconnect speedometer cable, clutch release cable clamp from bottom of transmission case. Support rear end of engine on blocks remove rear engine mount (under transmission case at rear end). Remove transmission control housing and shift lever assembly. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and propeller shaft assembly to rear and clear of the transmission case (CAUTION—Do not lose spring and washer located between propeller shaft and speedometer gear). Remove four capscrews mounting transmission on flywheel housing, pull transmission straight back to clear clutch shaft and remove from car.

## UNIVERSALS

Spicer Model 102 (First Cars), New England Products (Later Cars). One used. Plain bushing type. In ball housing at rear of transmission adapter.

See *Universals Section for complete data*.

## REAR AXLE

Spicer Salisbury Model 11. Semi-floating, spiral bevel gear type with Torque Tube drive.

See *Rear Axle Section for complete data*.

**Ratio**—5.17-1 Std.

**Backlash**—.003-.008". Shim adjustment.

**Removal**: Disconnect brake cable clevis at brake cam lever and unfasten brake cable conduit at clamp on backing plate at each rear wheel. Raise rear of car until all weight removed from rear springs, disconnect rear springs from axle. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and torque tube assembly to rear until free from transmission. CAUTION—Do not lose spring and washer located between universal joint and speedometer gear in transmission.

**Axle Shaft Removal**: Remove rear wheel hub cap, rear wheel, and wheel hub (use Puller No. 202318). Disconnect brake cable from brake cam lever and free cable conduit from clamp on backing plate. Take out four capscrews mounting backing plate on axle housing, remove backing plate being careful not to lose bearing adjusting shims on housing flange. Pull axle shaft out of housing.

**Wheel Bearing Adjustment**: Check endplay at each wheel with dial indicator. Adjust by adding or removing shims located between backing plate and flange on axle housing (see *Axle Shaft Removal* for dismantling instructions).

**Endplay**—.002-.007" total for both wheels (between inner ends of shafts and thrust block in differential).

## TORQUE TUBE & PROPELLER SHAFT ASSEMBLY:

Spicer No. 98-1182X. Torque tube assembly has flanged end at rear (bolted to rear axle housing flange) and thrust ball at forward end (cap assembly bolted on adapter on rear end of transmission). Propeller shaft is splined on pinion shaft (rear end) and in universal joint (forward end) and is positioned by spring located between universal joint and speedometer gear in transmission case. NOTE—A propeller shaft center bearing is located within the torque tube and is provided with a grease fitting on the tube at this point.

**Propeller Shaft Removal**: Remove Rear Axle and Torque Tube Assembly (see *Rear Axle Removal* above), withdraw propeller shaft through forward end of tube.

CAUTION—When installing assembly in car, make certain that spring and washer installed on transmission shaft ahead of universal joint. This spring takes up endplay in propeller shaft.

## SHOCK ABSORBERS

Houde (Houdaille) Type—Before Serial No. 21135. Double acting, adjustable, hydraulic type.

See *Shock Absorber Section for complete data*.

**Adjustment (Houde)**—Handle on end of shaft (in center of lever) adjustable between end stops and should be turned clockwise for more control, or counter-clockwise for less control and softer ride.

Do not change adjustment more than 1/32-1/16" from original factory setting.

NOTE—Original factory setting indicated by scribed line on end of shaft (pointer on adjusting handle aligned with this mark).

**Refilling**—Check fluid and fill to level of filler plug hole with Houdaille L-1404 fluid at 5000 miles intervals. CAUTION—Only L-1404 fluid should be used in this type shock absorber (may be identified by round-top filler plug).

Delco Model 1438-T,U (Front), 1438-V,W (rear)—After Serial No. 21135. Single acting, hydraulic type.

See *Shock Absorber Section for complete data*.

**Adjustment**—None (except by changing valves).

**Refilling**—Check fluid and fill to level of filler plug hole on cover plate (see Note) at 10000 mile intervals. NOTE—If cover plate does not have filler plug, this coverplate can be replaced by cover having filler hole and plug (for filling on car) or shock absorber can be removed and refilled on the bench.

## FRONT SUSPENSION

**Front Suspension**: Conventional axle with semi-elliptic springs.

**Kingpin Inclination**—6½° crosswise.

**Camber**—2°. No adjustment (axle may be bent for minor adjustments).

**Caster**—7½°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Toe In**—3/64-1/16". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

Ross Model S-12. Cam-and-Lever type.

See *Steering Gear Section for complete data*.

## BRAKES

**Service**: Hawley. Four-Wheel, mechanical, two-shoe type. Hand lever applies all four service brakes.

See *Brake Section for complete data*.

**Drums**—Cast Iron, Diameter 6".

**Clearance**—.010" at both ends of each shoe (adjusting screw backed off approximately ¼ turn from point where wheels start to drag).

**Lining**—Molded type. Width 63/64". Thickness 5/32". Length per wheel 16".

NOTE—Bonded Lining used on some cars.

**Hand Brake**: See *Service Brakes* (above).

NOTE—Hand brake handle (on floor ahead of seat) is linked directly to hand brake lever on cross-shaft.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge pillar post. First number for each model as follows:

Model	Detroit	Canada
Custom S1 .....	6,043,001.....	9,664,641
Deluxe S1 .....	5,500,001.....	9,664,641
S2 .....	5,089,001.....	9,603,551

**ENGINE NUMBER:** First No. 1001 with model prefix (S1-, S2-). Stamped on boss on left side of cylinder block between #1 and #2 cylinders (S1), above water pump (S2).

See Chrysler Special Shop Notes for Engine Number lettering (Special Standard Bore & Bearing Sizes).

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. cast-iron head (S1), 6.5-1 Aluminum head (Optl. S1, Std. S2), 7.0-1 Alum. head (Optl. S2).

**Pressure:**—(S1 Std. 6.0-1 head) 120-130 lbs. at 1000 R.P.M. or approx. 103 lbs. at cranking speed. (Optl. S1, Std. S2 6.5-1 Al. head) 125-135 lbs. at 1000 R.P.M. or approx. 110 lbs. at cranking speed. (S2—Optl. 7.0-1 Al. head) 130-140 lbs. at 1000 R.P.M. or approx. 117 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 16-18" with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J8 (Cast Iron Heads), Type H10 (Aluminum Heads). 14 mm. Metric type. Gaps—.025".

**NOTE:**—S1 only—spark plugs used in aluminum heads have longer thread. Not interchangeable with standard plugs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.020". Cam Angle 38° (closed).

**Automatic Advance:**—12° max. at 1530 RPM (IGS-4006-1, 4008-1), 1750 RPM (IGS-4006A-1, 4008A-1). Distributor degrees and RPM.

**Vacuum Advance:**—8° distr. with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—At TDC. (S1 6.0-1 Head), 5° ATDC. (S1, S2 6.5-1 Head), 7° ATDC. (7.0-1 Head) with dead center "0" mark or correct degree mark on impulse neutralizer at indicator at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ¼-1 turn open. Idle speed 300 RPM or 6 MPH.

**Float Level:**—5/64" top of float below top of bowl. Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .008" Exh., with engine hot. .010" Exh., recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B. Type 6518 (S1), 6746 (S1-Conv. sedan and coupe), 6688 (S2). Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne Mod. DP-108, Mitchell No. 6286.

**COIL:** Auto-Lite Model IG-4630 (S1), IG-4637 (S1 Conv. sedan and coupe) IG-4636 (S2), IG-4639 (S2-RHD). Service Winding (coil less switch and cable IG-3224JS).

**Ignition Current:**—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A. Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4006-1 or 4006A-1, IGS-4008-1 or IGS-4008-A-1 with Tachometer Drive. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap:**—Set at .020". Limits .018-.020".

**Cam Angle or Dwell:**—38° closed, 22° open.

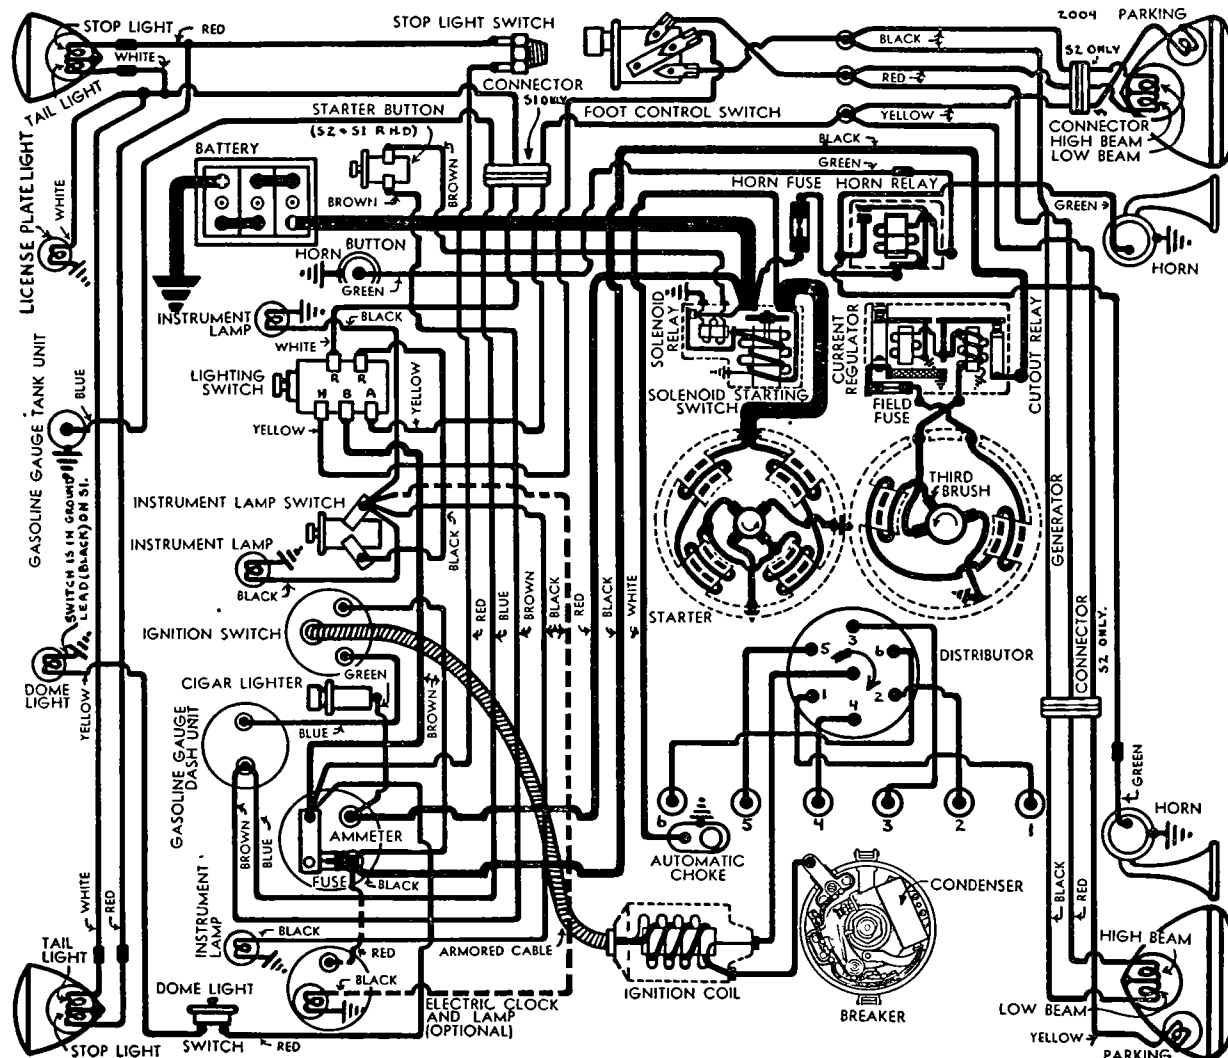

**Breaker Arm Spring Tension:**—16-20 ounces.

## Automatic Advance—IGS-4006-1, 8-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3 .....	400	6.....	800
6 .....	780	12.....	1560
9 .....	1160	18.....	2320
12.....	1530	24.....	3060

## Automatic Advance—IGS-4006-A-1, 8-A-1

Start.....	350	0.....	700
3.....	400	6.....	800
6.....	850	12.....	1700
9.....	1300	18.....	2600
12.....	1750	24.....	3500

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5.1"
4°	8°	10-11"
8°	16°	15"

**Distributor Removal**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line. On S2 distributor accessible by removing left front wheel and cover plate under fender.

## IGNITION TIMING

**IGNITION TIMING**—Settings for all engines as follows

	Flywheel Degrees	Piston Pos.
6.0-1 Std. hd. (S1)	At TDC.	0000" TDC.
6.5-1 Optl. hd. (S1)	5° ATDC	0108" ATDC.
6.5-1 Std. hd. (S2)	5° ATDC	0108" ATDC.
7.0-1 Optl. hd. Ethyl fuel	7° ATDC	0211" ATDC.

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used. NOTE—Impulse neutralizer at front of engine marked 'O' at top dead center with 15 one degree graduations before and after this point.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with chalk or white paint. See Equipment Section.

**Manual Adjustment**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10 to 30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (B & B) Model E6G1, 1½" downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications.

For complete data, refer to Carburetor Index.

NOTE—Do not make carburetor adjustments until engine is well warmed up so that choke valve is wide open and fast idle inoperative.

**Idle Adjustment**—Adjust throttle stopscrew so that engine speed is 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Setting should be ¼-1 turn of the screw from closed or seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

Inner Hole (Min. stroke)—Extremely warm weather  
Center Hole—Normal summer temperatures.

Outer Hole (Max. stroke)—Winter temperatures.

NOTE—5% and 10% lean main metering screws (high altitude calibration) may be used in lower altitudes for maximum fuel economy although with considerably reduced speed and power. See Carter (B & B) Jet Specifications in Carburetion Section.

**Throttle Cracking**—Throttle opened approx. one-third when starter pedal depressed. This setting should be checked and adjusted when checking automatic choke.

**Fast Idle**—Integral with carburetor. No adjustment.  
**Automatic Choke**—Slisson Type AC-751.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—Burgess oil-wetted type standard, AC. #1526712 oil-bath type optional.

**Fuel Pump**—AC. Type B, #1522237 (first cars), #1522995 (later cars). Diaphragm type. See article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Motometer (Auto-Lite) Electric.  
**Dash Unit**—NG-7875-D (S1 Deluxe), NG-7798-D (S1 Cust., S2). Tank Unit—NG-7887-T (S-1), NG-6875-T (S2).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Willard Type WH-2-15, RH-2-15 (Export). 6 volt, 15 plate, 119 ampere hour capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under driver's seat.

## STARTER

**Auto-Lite Model MAX-4015 (S1), MAX-4016 (S2 & S1 Export)**. Armature No. MAW-2030.

**Drive**—Manual shift (S1), magnetic shift S1 Exp, S2). with outboard pinion.

**Cranking Engine**—Approx. 200 amperes at 5.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out capscrews. On S2 remove left front wheel and cover plate under fender.

**Starting Switch**—S1—Type SW-2813 (MAX-4015). See Equipment Section for pedal adjustment. S-1 (Exp), S2—Solenoid Switch Type SS-4104. Controlled through relay by push-button on dash. Operative with ignition turned 'on.'

For complete data, refer to Electrical Equipment Index.

## GENERATOR

**Auto-Lite Model GAR-4608A-5. Armature GAR-2116F.** Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Commutator Bar Method**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate**—As given above. Do not exceed.

### Performance Data

Cold — Regulator Contacts Closed — Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	825
4	6.8	950	4	6.8	1000
8	7.25	1100	8	7.25	1200
12	7.7	1275	12	7.7	1440
16	8.1	1525	16	8.1	1825
21	8.6	2400	18.5	8.35	2500

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24 ozs. min. (old brushes), 36 ozs. max. (new brushes).

**Field Current**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Field Fuse**—5 ampere in plug on regulator case.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt. On S2 remove left front wheel and cover plate under fender.

**Belt Adjustment**—Swing generator away from engine until 45-50 lb. reading on scale attached to generator frame.

## REGULATOR

**Auto-Lite Model TC-4301A. "Two-Charge" Type.** On generator. Consists of Cutout Relay & Current Regulator (two-rate charging control). See article in Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—5-2.5 ampere discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

### Current Regulator

**Contacts Open**—8.25-8.75 volts at 70° F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Corcoran Brown, Pre-focused type. Headlamps aimed straight ahead (upper beam with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch.

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

## Switches

**Lighting**—DeSoto Part No. 655795. Douglas Switch which is available only through DeSoto Parts Dept.  
**Foot Selector**—Clum Model 9654 (S1), 9661 (S2).  
**Stop Light**—R.B.M. No. 910. Hydraulic type mounted on brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking	3	63
Stop and Tail	21-3	1158
Instrument, Ign. Sw.	1½	55
Dome	15	87

## MISC. ELECTRICAL

**FUSES**—**Lighting**—20 ampere on back of ammeter.  
**Generator Field**—5 ampere in plug on regulator.  
**Twin Horns**—30 ampere in connector near starter.

**HORNS**—Std. Motometer (S1). Klaxon Model K-33-C Type 2151 (low note), 2152 (high note) (S1 Optl.). Klaxon Model K-33-F Type 2107 (low note), 2108 (high note) (S2 Std.). Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 Volts	Air Gap
2107 (low note)	11-13	.040-.044"
2108 (high note)	9-11	.032-.036"
2151 (low note)	11-13	.042-.046"
2152 (high note)	10-12	.032-.036"

**Horn Relay**—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amp. Contact Gap—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head.

**Bore**—3⅜". **Stroke**—4½".

**Displacement**—241.5 cubic inches.

**Rated Horsepower**—27.34 (AMA).

**Developed Horsepower**—93 HP. (6.0-1 Head), 100 HP. (6.5-1 Head), 105 HP. (7.0-1 Head) at 3400 RPM.

**Compression Ratio**—6.0-1 Cast Iron Head (Std. S1), 6.5-1 Aluminum Head (Std. S2, Optl. S-1), 7.0-1 Aluminum Head (Optl. S2).

**Compression Pressure**—6.0-1 Std. Head 120-130 lbs. at 1000 R.P.M. or approx. 103 lbs. at cranking speed.  
 6.5-1 Optl. Head 125-135 lbs. at 1000 R.P.M. or approx. 110 lbs. at cranking speed.

**7.0-1 Optl. head** 130-140 lbs. at 1000 R.P.M. or approx. 117 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of 16-18" with engine idling at 6 M.P.H.

**NOTE**—Aluminum heads should be tightened cold. Special head studs, head gaskets and spark plugs used on aluminum head engines.

**PISTONS**—Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface). **Length**—3⅞".

**Weight**—Held to two gram max. variation.

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .022". Skirt .002". See Fitting New Pistons.

**Replacement Pistons**—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished: (1) standard to .023" oversize, (2) .025-.050" oversize, not interchangeable. Pistons should be slotted and then finished on cam-grinding equipment.

**Fitting New Pistons**—Micrometer gauge recommended. Using ½" feeler gauge (.002") inserted between piston and cylinder wall on side opposite slot, pull required to withdraw feeler must be 3-4 lbs.

**Installing Pistons**—Slot should be toward left or away from camshaft.

**PISTON RINGS**—Two compression, one undercut oil wiper ring (#3), one oil control ring per piston, all above pin. Lower ring grooves drilled radially with twelve ⅛" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. all	⅜"	.007-.015"	.002-.003"
Oil (both)	5/32"	.007-.015"	.002-.003"

**Replacement Rings**—Furnished in standard and .003", .010", .020", .030", .040", .050", .060" oversizes. **NOTE**—Install undercut compression and oil wiper ring with step down.

**PISTON PIN**—Diameter 55/64". Length 2⅞". Pin floats in piston and rod. Held by locking rings at each end. Pin hole in rod is bronze bushed.

**NOTE**—Heat piston in boiling water to remove or install pins.

**Pin Fit in Piston**—Tight thumb push fit with piston heated to 130° F.

**Pin Fit in Rod Bushing**—Tight thumb push fit with pin and rod at 70° F.

**Replacement Pins**—Pins furnished in standard and .003", .005", .008" oversizes. Ream rod bushing and pin holes in piston bosses for correct fit.

**CONNECTING ROD**—**Weight**—All rods held within limits.

**Length**—8¾" (center-to-center).

**Crankpin Journal Diameter**—2⅞".

**Lower Bearing**—Removable steel-backed, copper-lead lined. Furnished standard and .010" undersize. **Clearance**—.0005-.0025". Sideplay .0055-.0115".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings with small bosses engaging grooves in rod and cap.

**Installing Rods**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5) or toward front (#2, 4, 6). Oil hole in lower bearing upper half must be toward camshaft on all rods.

**CRANKSHAFT**—4 bearing. Integral counterweights. **Journal Diameters**—2½" all bearings.

**Bearing Type**—Removable steel-backed, babbitt-lined. Furnished standard and .010" undersize. **Clearance**—.001-.002".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings & Bearing Caps**: Refer to Chrysler Shop Notes for complete data.

**End Thrust**—Taken by flange faces on rear (#4) bearing. Endplay .003-.007".

**CAMSHAFT**—4 bearing. Non-adjustable chain drive. **Journal Diameters**—#1, 2"; #2, 1 31/32"; #3 1 15/16"; #4, 1⅝".

**Bearing Type**—Removable steel-backed, babbitt-lined (except #4 machined in crankcase).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others). **NOTE**—New bearings require no line-reaming.

**End Thrust**—Taken by thrust plate at rear of sprocket hub. Endplay .003-.005".

**Timing Chain**—Morse. Width 1". Pitch ½". Length 24" or 48 links.

**Camshaft Setting**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**NOTE**—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	5⅝"
Exhaust	1 15/32"	.340-.341"	5⅝"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.001-.003"
Exhaust	45°	11/32"	.003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

**Valve Guides**—Use special tool to remove and install guides. Insert guides with taper end up (intake) and down (exhaust). Top of guide must be 13/16" below top of block. After installing finish ream new guides to inside diameter of .342-.343" (Int.) .344-.345" (Ex.)

**Valve Springs**—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than 1½".

	Spring Pressure	Length
Valve Closed	48-50 lbs.	2 1/32"
Valve Open	104-110 lbs.	1 11/16"

**Valve Lifters**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance**:.006" Intake, .008" Exhaust, Engine Hot. .010" Exhaust clearance recommended for sustained high speed driving.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open TDC. Close 50° ALDC.

**Exhaust Valves**—Open 48° BLDC. Close 2° ATDC.

**To Check Valve Timing**—Set tappet clearance #1 intake valve at .010". Intake valve should open at top dead center when 'O' mark on impulse neutralizer at front of engine lines up with jointer on chain case cover. Reset tappet clearance at .006" h t.

## LUBRICATION

**LUBRICATION**—Pressure. Gear type oil pump located at right of crankcase.

**NOTE**—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure**—30-40 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve**—Under plug on left hand side of crankcase. Operates at 40 lbs. Adjustable by changing spring. Standard spring unpainted. Heavy spring (to increase pressure) painted green. Lighter spring (to decrease pressure) painted red.

**Crankcase Capacity**—6 qts. (refill).

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A6. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven type, 2 required. Inside Diam.  $6\frac{1}{8}$ ". Outside Diam.  $9\frac{3}{8}$ ". Thickness  $\frac{1}{8}$ ".

**Adjustment:**—Clutch pedal should just clear under side of toeboard. To adjust, turn stopscrew located above clutch pedal shaft. Free movement of clutch pedal should be  $1\frac{1}{16}$ ". Adjust by loosening locknut and turning adjusting nut on clutch fork connecting rod (S1), by turning clutch shaft collar adjusting screw at right hand end of clutch pedal shaft (S2).

**Removal (S1):** Disconnect clutch linkage, remove fork pivot screw, take out clutch fork. Remove transmission (release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Removal (S2):** Disconnect linkage, remove transmission (rotating clutch release fork shaft so that release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Automatic Clutch:**—See article in Clutch Section.

*See Clutch Section for complete data.*

## FRONT SUSPENSION

### MODEL S1

**Front Suspension (S1):** Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Specifications below apply with car weight on wheels (check suspension unit height first).

**Wheel Setting (Front Suspension Height):**—Distance from center line of lower control arm yoke pin

to top of frame cross member should be  $7\frac{1}{4}$ – $7\frac{3}{8}$ " with car weight on wheels but no load in car.

**Kingpin Inclination:**— $10^\circ$  plus or minus  $\frac{1}{2}^\circ$  (including camber angle),  $8\frac{3}{4}$ – $10\frac{1}{4}^\circ$  (without camber).

**Camber:**— $\frac{1}{4}^\circ$ . Limits minus  $\frac{1}{4}^\circ$ –plus  $\frac{1}{2}^\circ$ .

**Caster:**— $1\frac{1}{2}^\circ$ . Toe In— $0$ – $\frac{1}{8}$ ".

## FRONT SUSPENSION

### MODEL S2

**Front Suspension (S2):** Conventional tubular section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**— $9\frac{1}{2}^\circ$  plus or minus  $\frac{1}{2}^\circ$ . Cross-wise.

**Caster:**— $2^\circ$ . Limits  $1$ – $3^\circ$ . Adjust by wedge shims inserted between springs and spring pad on axle. Shims or angle plates furnished  $\frac{1}{2}$ ,  $1$ ,  $2^\circ$ .

**Camber:**— $\frac{1}{2}^\circ$ . Limits  $\frac{1}{4}$ – $\frac{3}{4}^\circ$ . No adjustment. Manufacturer recommends that no attempt be made to correct camber by bending tubular axle centers.

**Toe In:**— $0$ – $\frac{1}{8}$ " measured at hub height. Adjust as usual by changing length of tie rod.

## STEERING GEAR

**Steering Gear:** Gemmer Model. Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

### MODEL S1

**BRAKES:**—Service—Lockheed Hydraulic, double anchor type. Hand lever applies brake at rear of transmission or rear wheel service brakes (on cars with overdrive transmission).

*See Brake Section for complete data.*

**Wheel Cylinders:**—Diameters, Front Wheel (Front end  $1\frac{1}{4}$ ", Rear  $1\frac{3}{8}$ "), Rear Wheel (Front end  $1\frac{1}{8}$ ", Rear  $1\frac{1}{4}$ ").

**NOTE:**—Wheel cylinders marked 'R'—right side of car. 'L'—left side of car and not interchangeable.

**Drum Diameter:**— $10$ " (Del.),  $11$ " (Cst.).

**Lining:**—Moulded type. Width  $2$ ". Thickness  $\frac{13}{64}$ " (Del.),  $\frac{3}{16}$ " (Cst.). Length per wheel  $19\frac{13}{16}$ " (Del.),  $22\frac{5}{32}$ " (Cst.).

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—External type on drum at rear of transmission (cars without overdrive). See Service Brake for hand brake adjustment on cars with overdrive.

**Adjustment:**—With lever in released position, remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is  $\frac{1}{16}$ ", lock anchor screw with wire. Adjust brake band guide bolt nut to give  $\frac{1}{16}$ " clearance (as above) for lower portion of band, secure with locknut. Finally, adjust brake adjusting bolt nut to give  $\frac{1}{16}$ " clearance (as above).

**Drum Diameter:**— $7\frac{13}{16}$ ".

**Lining:**—Width  $2$ ". Thickness  $\frac{1}{4}$ ". Length  $24\frac{3}{16}$ ".

**NOTE:**—When relining, cut out lining adjacent to anchor and chamfer ends. Clearance between anchor and sides of anchor saddle .005" maximum.

## BRAKES

### MODEL S2

**BRAKES:**—Service—Lockheed Hydraulic, double anchor type. Hand lever applies independent shaft brake. *See Brake Section for complete data.*

**Wheel Cylinders:**—Diameters, Front Wheel (Front end  $1\frac{1}{4}$ ", Rear end  $1\frac{3}{8}$ "), Rear Wheel (Front end  $1$ ", Rear end  $1\frac{1}{8}$ ").

**NOTE:**—Wheel cylinders marked 'R' right side of car, 'L' left side of car. Not interchangeable.

**Drum Diameter:**— $11$ ".

**Lining:**—Moulded type. Width  $2$ ". Thickness  $\frac{3}{16}$ ". Length  $22\frac{5}{32}$ " per wheel.

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—External type on drum at rear of transmission.

**Adjustment:**—With lever in released position remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is  $\frac{1}{32}$ ", lock anchor screw with wire. Back off adjusting bolt nut until free. Adjust bracket bolt nuts for each end of brake band to  $\frac{1}{32}$ " clearance (as above), secure with locknuts. Finally, tighten adjusting bolt nut until tension on bracket bolt nuts is just relieved at either end.

**Drum Diameter:**— $7$ ".

**Lining:**—Width  $2\frac{1}{2}$ ". Thickness  $\frac{3}{32}$ ". Length  $21\frac{1}{8}$ ".

**NOTE:**—Clearance at anchor and saddle .005" max.

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Turn radiator ornament counter-clockwise, raise hood about 1", push back safety catch at front under lower edge of hood releasing catch and raise hood. Side panels removed by freeing latches on inside lower edges of panels.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on right front door hinge pillar post. First numbers as follows:

	Detroit	Canada
S3 (1937)	5,517,301	9,665,556
S5 (1938)	5,598,301	9,666,936

**ENGINE NUMBER:** First number 1001 with prefix indicating model (S3-, S5-). Stamped on left side of cylinder block between #1 and #2 cylinders.

See Chrysler Shop Notes for engine number lettering ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:  
 Ratio Pressure at 1000 R.P.M. At 100 R.P.M.  
 6.5-1 Std. hd. 140-150 lbs. Approx. 115 lbs.  
 7.0-1 Optl. hd. 150-160 lbs. Approx. 117 lbs.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A-7 (Cast Iron Heads), Champion H-10 (Aluminum Heads). 14 mm. Metric type.  
 Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 38° (closed).

Automatic Advance—12° max. at 1750 RPM (distr.).

Vacuum Advance—10° distr. (IGS-4010-1), 7° distr. (IGS-4010C-1) with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° ATDC (S3 Std. 6.5-1 Head), At TDC (S3 Optl. 7.0-1 Head), At TDC (S5 Std. 6.5-1 Head), 3° ATDC (S5 Optl. 7.0-1 Head) with dead center "0" or "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.  
 Idle Setting—Idle screw ½-1¼ turn open. Idle speed 300 RPM or 6 MPH.

Float Level—5/64" top of float below top edge of float bowl.

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure: 3½ lbs. maximum (Type B, AL), 4¼ lbs. maximum (Type AS, AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic type. See that shaft and valve rotate freely. When installing coil, wind free end ½ turn counter-clockwise and hook end over stop pin.  
**CAUTION:**—Do not wind up coil more than ½ turn.

**VALVES:** See Valve Timing.

Tappet Clearance (1937)—.010" Int., .010" Exh., Hot.  
 Tappet Clearance (1938)—.008" Intake, .010" Exhaust, Engine Hot. **NOTE:**—.002" additional Exhaust clearance recommended for sustained high speeds.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock. Model 24-B, Type 7055 (1937), Model 24-R, Type 7061 (1938). Connected to the coil by armored cable.

**Ignition Lock:**—Yale & Towne. Mitchell No. 7075 (1937), 6286 (1938).

**COIL:** Auto-Lite Model IG-4642 or CL-4602 (1937), CL-4601 (1938). Service Coil (less Switch & Cable) IG-3224JS or CL-3224JS. Mounted on dash.

Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4010-1, 4010C-1.

Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and Manual Adjustment. See Electrical Equipment Section for distributor servicing data.

**NOTE:**—IGS-4010C-1 distributor used after Engine No. S5-1982 (U.S.), Serial No. 9,667,736 (Canada).

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—38° (closed), 22° (open).

**Breaker Arm Spring Tension:**—18-20 ounces.

**Rotation:**—Clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
7	1000	14	2000
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

See Electrical Equipment Section for Regulator wiring with 2 Resistors (After Regulator Serial N . 8R-000001).

Vacuum Advance—IGS-4010-1		
Dist. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4 3/4"
2° .....	4°	6 1/4"
5° .....	10°	8 3/8"
8° .....	16°	10 7/8"
10° .....	20°	12"

Vacuum Advance—IGS-4010C-1		
Start.....	0°	5"
1° .....	2°	6"
3° .....	6°	8"
5° .....	10°	10"
7° .....	14°	12"

**Manual Adjustment**—Provided to compensate for fuel and altitude conditions. See Manual Adjustment Setting.

**Distributor Removal**—Mounted on left side of engine. To remove, take out hold-down screw in advance arm and disconnect vacuum line.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (for gasoline of approximately 70 octane rating). See Manual Adjustment Setting (following).

Flywheel Degrees Piston Position		
S3 Std. (6.5-1) .....	2° ATDC	.002" ATDC.
S3 Optl. (7.0-1) .....	At TDC	.000" TDC.
S5 Std. (6.5-1) .....	At TDC	.000" TDC.
S5 Optl. (7.0-1) .....	3° ATDC	.004" ATDC.

**NOTE**—Impulse neutralizer marked 'DC' at TDC point with 15-1° graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator regulator. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct mark on impulse neutralizer at front of engine lines up with pointer on chain case cover. Loosen advance arm hold-down screw and center pointer on scale (opposite 'O' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until test lamp goes out indicating that points are just opening, tighten clamp bolt.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (correct mark filled in with paint or chalk), idle engine, adjust distributor as directed above.

**Manual Adjustment Setting**—After ignition set as above, road test car to give slight ping with wide open throttle at speeds of 10-30 M.P.H. To adjust, loosen hold-down screw and advance (counter-clockwise) or retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) Models E6I1, E6K1, E6K2, E6K3, E6K4, (1937), E6M1 (1938 Std.), E6L1 (1938 Taxicab). 1 1/2" single barrel, downdraft types.

**NOTE**—See Carburetor article in Carburetion Section for recommended changes on first 1937 carburetors. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stop-screw so that idle speed is approximately 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1/2-1 1/4 turns of screw from inner closed or seated position. Readjust throttle stop-

screw for correct idling speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Idle screw should be set to give highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for link engagement. Set as follows:

**Inner Hole (Short stroke)**—Extremely warm weather or altitudes above 3000 feet.

**Center Hole**—Normal summer temperatures.

**Outer Hole (Long stroke)**—Winter temperatures.

**NOTE**—Lean main metering jets (high altitude calibration) may be used at lower altitudes for maximum fuel economy although with considerable reduced speed and power. See Carter (B & B) Jet Specifications in Carburetor Section.

**Throttle Cracker**—Consists of an inter-connecting linkage between the starter pedal and the accelerator rod by which the throttle is opened slightly when the starter pedal is depressed. Adjusting screw located on forward side of throttle cracker lever (directly above starter switch).

**Fast Idle**—Integral with carburetor. No adjustment.

**Automatic Choke**—Sission Type AC-758B. See article in Carburetor Equipment Section for complete data and linkage adjustment.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**: Burgess (1937), AC No. 1528700 (1938) oil-wetted type Std., AC No. 1526838 (1937), No. 1528197 (1938) oil-bath type Optl.

**NOTE**—Oil Vent Cleaner AC No. 1525313 used with oil-bath type cleaner on 1938 cars.

**Fuel Pump**—AC. Type B #1522995 or AT #1523647 diaphragm type standard. Type AL #1523137 or AS #1523648 combination fuel-and-vacuum pumps optional. Types AT and AS are 'inverted' design.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite (Motometer) Electric. Dash Unit—NG-8305D (1937), NG-8770D (1938).

Tank Unit—NG-8257T (1937), NG-8697T (1938).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Willard, Type WHT-2-105, RHT-2-105 (Special Export). 6 volt, 15 plate, 105 AH. capacity (20 hr. rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.9 minutes. Five second voltage—4.27 volts.

**Grounded Terminal**—Positive (+) to transmission. **Dimension**—Length 10 5/16". Width 7 1/16". Height 8 13/16".

**Location**—Left side under driver's seat.

## STARTER

**Auto-Lite Model MAW-4010 (Std.), MAW-4011 or 4011A (Export)**. Armature No. MAW-2030.

**Drive**—Manual (Domestic), solenoid (Export) operated pinion shaft, through overrunning clutch.

**Cranking Engine**—Approx. 160 amperes, 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lb. ....	4900	5.5	65
.60 " " .....	3300	5.5	100
2.75 " " .....	1480	5.0	200
5.45 " " .....	820	4.5	300
8.50 " " .....	400	4.0	400
11.55 " " .....	110	3.5	500
11.55 " " .....	Lock	3	505
18. " " .....	Lock	4	670

**Removal**—Flange mounted on left front face of fly-wheel housing. Disconnect wire connections (tape battery lead), oil filter lines and two clips on starter linkage. Remove two fastening bolts and withdraw unit.

**Starting Switch**—(MAW-4010)—SW-2813. Mounted on starter field frame and operated by pinion shift (starter pedal). See article in Electrical Equipment Section for pedal adjustment.

(MAW-4011, A)—Auto-Lite Type SS-4104 (MAW-4011), SS-4203 (MAW-4011A). Solenoid switch controlled by pushbutton on instrument panel.

For complete data, refer to Electrical Equipment Index.

## Solenoid Switch

Closes against 170 lb. pull with 3/8" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

## Solenoid Relay

**Contacts Close**—3.5-4.5 volts. **Open**—1.5-2.5 volts. **Contact Gap**—.025-.030". **Air Gap**—.005-.007" (closed).

## GENERATOR

### MODEL S3

**Auto-Lite Model GBW-4803-A, B (Exp.), C (Exp. Bolivia)**. Armature No. GBW-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley. **Maximum Charging Rate**—22 amps., 8.0 volts, 1780 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Charging Rate Adjustment**—No adjustment on Generator. See Regulator section below for Voltage and Current Regulator settings.

Cold Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	775	0	6.4	870
4	6.7	940	4	6.7	1065
10	7.1	1200	10	7.1	1385
16	7.6	1480	16	7.6	1780
20	7.85	1675	20	7.85	2125
22	8.0	1780	22	8.0	2400

**NOTE**—Current regulator limits maximum output to 22 amperes.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—3.04-3.36 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolts.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

### MODEL S5

**Auto-Lite Model GDA-4801A, B (Export)**. Armature No. GDA-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. See Regulator section for Voltage and Current settings.

**Maximum Charging Rate**—28 amperes, 8.0 volts, 2025 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

## CONTINUED FROM PRECEDING PAGE

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	930	0	6.4	1010
4	6.6	1080	4	6.6	1180
8	6.85	1210	8	6.85	1350
12	7.1	1350	12	7.1	1530
16	7.3	1500	16	7.3	1730
20	7.5	1660	20	7.5	1950
24	7.75	1830	24	7.75	2220
28	8.0	2025	28	8.0	2520

NOTE—Current reg. limits output to 28 amps.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—53 ozs. max. (new brushes).

Field Current—1.66-1.84 amperes at 6.0 volts.

Motoring Current—3.50-4.15 amperes at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

Belt Adjustment:—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

## SPECIAL EQUIPMENT

SPECIAL GENERATOR:—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

## REGULATOR

Auto-Lite Model VRB-4005A (1937 "GBW" Gen.), VRB-4004B (1938 "GDA" Gen.). Voltage-Current Type. Consists of Cutout Relay, vibrating type Voltage Regulator, and Current Regulator in case on dash.

For complete data, refer to Electrical Equipment Index. NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold.

Cuts Out—5 ampere min., 3.0 amperes max. Cold.

Contact Gap—.015" minimum.

Air Gap—.034" min., .038" max. with contacts open.

Measure at hinge end of core.

## Voltage Regulator

Setting—7.5-7.8 volts at 70°F (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F (After 8R-000001). See Electrical Equipment Section for complete settings and Regulator changes.

To Check—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.3-7.6 volts (cold 70°), 7.1-7.4 volts (hot 140°) for units after #8R-000001. To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger.

Contact Gap—.010" min., .020" max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

## Current Regulator

Setting—21-23 amperes—marked "22" (VRB-4005A),

27-29 amperes—marked "28" (VRB-4004B).

To Check (without breaking seals)—Connect ammeter and voltmeter as directed for Voltage Regu-

lator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Current Regulator is defective.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower hanger. Contact Gap & Air Gap—See Voltage Regulator.

## LIGHTING

LIGHTING:—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by foot control switch with lighting switch in full out position.

Headlamp Adjustment—Aim headlamps straight ahead (upper beam lighted, lenses in place, car unloaded) with center of hot spot 3" below center horizontal line of headlamps at 25 feet.

Headlamp Beam Indicator—In light switch knob. Lighted when headlamp upper beam in use.

## Switches—1937

Lighting—De Soto Part No. 667044.

Instrument Light—De Soto Part No. 667043.

Foot Selector—De Soto Part No. 659512.

Stop Light—De Soto Part No. 661721.

## Switches—1938

Lighting—De Soto Part No. 684038.

Instrument Panel—De Soto Part No. 678457.

Foot Selector—De Soto Part No. 659512.

Stop Light—De Soto Part No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Tail and Stop	3-21	1158
Parking	1½	55
Instrument	1	51
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

FUSES:—Lighting (used on early cars)—20 amperes on back of ammeter. Later cars equipped with Circuit Breaker (see below).

Single Horn—Early cars as shown on diagram. On later cars horn feed taken from BAT terminal on regulator with 20 ampere fuse in connector on dash.

Dual Horns—30 amperes on horn relay. NOTE—New long type (SFE-30) fuse used. Replaces 3AG type.

CIRCUIT BREAKER:—Used on later cars. Thermostatic, non-adjustable, vibrating type. Mounted on back of ammeter and protects lighting circuits. Limits current to 30 amperes.

HORNS (1937): Single—Auto-Lite Model HB-4002 or HB-4002B Standard.

Dual—Auto-Lite horn set HC-5103 (up to car serial no. 5,552,569), HC-5103B (above). Dual horns operated by HR-4002 horn relay.

Horn Relay:—Auto-Lite Model HR-4002. A 30 ampere fuse mounted on base.

Contacts Close—3.0-4.0 volts. Open 1.5-2.5 volts.

Contact Gap—.026". Air Gap—.012-.017" (closed).

HORNS (1938): Klaxon K26-J Type 2351 Single horn Std., Auto-Lite Horn Set Model HC-5105 Twin horns Optl. Twin horns operated by horn relay.

Horn Relay:—Auto-Lite Model HR-4101. Has 30 ampere fuse mounted on base.

Contacts Close—2.5-3.5 volts.

Contact Gap—.026". Air Gap—.012-.017" (closed).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head.

Bore—3⅞". Stroke—4¼".

Displacement—228.1 cubic inches.

Rated Horsepower—27.34 (A.M.A.).

Developed Horsepower—93 HP. (Std. 6.5-1 head).

100 HP. (Optl. 7.0-1 head) at 3600 R.P.M.

Compression Ratio and Pressure—As follows:

Ratio Pressure at 1000 RPM. At 100 RPM.

6.5-1 Std. C.I. hd. 140-150 lbs. Approx. 115 lbs.

7.0-1 Optl. Al. hd. 150-160 lbs. Approx. 117 lbs.

Vacuum Reading—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

PISTONS:—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3⅞".

Weight—17.45 ozs. (plus or minus 2 grams).

Removal—Pistons and rods removed from above.

Clearance—Top .022". See Fitting New Pistons.

Replacement Pistons:—See Chrysler Shop Notes.

Fitting New Pistons:—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" feeler between cylinder wall and piston (with pin removed) on side opposite slot. With piston and block at 70°F. pull to withdraw feeler 5-7 lbs.

Installing Pistons:—Slot away from camshaft.

PISTON RINGS:—2 undercut compression, 2 slotted oil rings per piston, above pin. Lower ring grooves drilled with ten ⅛" oil drain holes (#3), five (#4).

Ring Width End Gap Side Clearance

Compression ⅛" .007-.015" .002-.0035"

Oil 5/32" .007-.015" .0015-.003"

Replacement Rings:—Furnished std., .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" over-size.

PISTON PIN:—Diameter—55/64". Length—2⅞". Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit (piston at 130°).

Pit Fit in Rod Bushing—Thumb push fit at 70°F.

Replacement Pins:—Furnished std. & .003", .005", .008" oversize. Ream bushing and pin hole to size.

CONNECTING ROD: Length—8".

Weight—31.91 ozs. (1937), 32.80 ozs. (1938).

Crankpin Journal Diameter—2⅞".

Lower Bearing—Removable steel-backed, babbit-lined. Furnished std. & .002", .010", .012" undersize.

Clearance—.0005-.0025". Sideplay—.0055-.0115".

Bearing Adjustment:—None. Install new bearings with bosses engaging grooves in rod and cap.

Installing Rods:—Oil spit hole toward camshaft.

CRANKSHAFT:—4 bearing, 7 counterweights with impulse neutralizer mounted on forward end.

Journal Diameters—2½" all bearings.

Bearing Type—Removable steel-backed, babbit.

Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for Engine Removal (recommended), Front Main Bearing Cap Removal, Adjustment data, & Crankshaft Oil Seals.

Replacement Bearings & Bearing Caps: Refer to Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

CAMSHAFT:—4 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3,

1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbit-lined bushings (except #4 machined in block).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Timing Chain:**—Morse #1866 (restricted bend). Width 1". Pitch .500". Length 24" or 48 links. *See Chrysler Special Shop Notes for front end removal for work on timing chain.*

**Camshaft Setting:**—Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES:**— Head Diameter Stem Diameter Length  
Intake .....1 21/32".....340-.341".....4 25/32"  
Exhaust .....1 17/32".....340-.341".....4 25/32"

Seat Angle Lift Stem Clearance  
All valves.....45".....11/32"......001-.003"

*See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation.*

**Valve Guides:**—Install with taper end up to 7/8" below top of block, then ream to .342-.343".

**Valve Springs:**—Free length approx. 2". Limit of compression 1 3/8". Spring Pressure Spring Length  
Valve Closed .....40-45 lbs.....1 3/4"  
Valve Open .....101-109 lbs.....1 13/32"

**Valve Lifters:**—Mushroom type. Ream guides from above for following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

**Tappet Clearance:** .010" Intake & Exhaust Hot (1937), .008" Intake, .010" Exhaust with engine Hot (1938). .012" Exh. setting recommended for sustained high speed driving. Valves accessible by removing right front wheel and fender panel.

**Valve Timing (1937):** *See Camshaft Setting above.*

**Intake Valves:**—Open TDC. Close 50° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 2° ATDC.

**To Check Timing:**—Set tappet clearance #1 intake valve at .014". Intake valve should open at top dead center when 'O' mark on crankshaft pulley at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .010" (hot).

**Valve Timing (1938):** *See Camshaft Setting above.*

**Intake Valves:**—Open 8° BTDC. Close 42° ALDC.

**Exhaust Valves:**—Open 48° BLDC. Close 2° ATDC.

**To Check Timing:**—Set tappet clearance #1 intake valve at .014". This valve should open with piston 8° (.0260") before top dead center with 8° BTDC. mark on impulse neutralizer at front of engine lined up with pointer on chain case cover. Reset tappet clearance at .008" (hot).

**TRANSMISSION**

**LUBRICATION:**—Gear type oil pump right of engine.

*See Chrysler Special Shop Notes for oil pump removal and installation instructions.*

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left side of engine. Operates at 40 lbs. Adjustable. Change to heavy (green) spring to increase pressure, light (red) spring to decrease pressure.

**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Water Pump—Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal:**—With water drained and fan belt removed, remove fan blades and pulley (attached by 4 capscrews), disconnect pump hoses, remove nuts on pump mounting studs and lift assembly out.

**Thermostat:**—Fulton. In water outlet on cyl. head.

**NOTE:**—Install thermostat with bellows down.

**Setting:**—Start to open 150-155°F. Fully open 176°F.

**Water Capacity:**—20 quarts.

**Drain Valves:**—At lower left corner of radiator and on left side of block in front of distributor.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi). Single plate, dry disc type. 1938 clutch has new spiral grooved type facings and pressure plate oil baffle. **NOTE:**—Clutch marked for identification by number stamped on cover: 899 (1937), 913 (1938), 917 (1938 Taxicab).

*See Clutch Section for complete data.*

**Facings:**—Molded-woven (spiral grooved), 2 required. Thickness 1/8". Inside diameter 6", 6 1/2" (Taxi). Outside diameter 10", 11" (Taxi).

**Adjustment:**—Adjust stop screw (to rear of pedal) so that pedal arm just clears floor board. Pedal free movement should be 1 1/16". Adjust by turning adjusting nut on connecting rod at release fork.

**Removal:**—Remove floor board, release fork pull-back spring, free clevis pin on release fork rod. Remove transmission (see Transmission Removal below), remove housing underpan, mark cover and flywheel, remove cover bolts, lower assembly out. **NOTE:**—Remove release fork by pulling fork out of housing.

**TRANSMISSION**

**TRANSMISSION:**—Own make. All helical gear type with synchro-mesh for second and high speeds. *See Transmission Section for complete data.*

**Removal:**—Remove floor boards, propeller shaft (see Propeller Shaft Center Bearing below for 7 pass. models), disconnect hand brake cable (remove brake band on cars with Gas Saver). Remove two front cover screws, take off nuts on mounting studs (remove two upper mounting studs by installing 2 nuts on outer end of stud and turning studs out), install two pilot studs and withdraw transmission.

**OVERDRIVE**

**Overdrive Transmission:**—Warner Model AS25-T86 (1937), AS1-T86A (1938) Optl. **NOTE:**—This overdrive called "Gas Saver" Transmission.

*See Transmission Section for complete data.*

**Removal:**—Same as for standard transmission (above) after overdrive control disconnected.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit-Universal. Series 4200. Ball and trunnion type with roller bearings, 2 used. **NOTE:**—Three universals used on 7-pass. sedan.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—Used on 7 pass. sedans. *See Chrysler Special Shop Notes for removal and installation instructions.*

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 (std.), 4.3-1 (7 pass. & Gas. Saver tr.).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Remove wheel, hub, and drum assembly (using screw type hub puller). Place block under brake pedal, disconnect brake line, remove backing plate and oil seal, pull axle shaft and bearing (Tool C-158). With shafts removed, carrier may be removed by disconnecting rear universal at flange, and removing housing capscrews.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged ends of axle housing. With wheel and hub removed measure endplay with dial indicator. To adjust remove backing plate (see above) and add

or remove shims (equally at both sides) to proper clearance. Endplay—.003-.008".

**SHOCK ABSORBERS**

**Delco Model 1162-G (Front 1937), 1162-D (Front 1938), 1163-U (Rear 1937-38).** Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

Specifications below apply with no passenger load.

**Kingpin Inclination:**—4 3/4-6°.

**Camber:**—Plus 1/4°. Limits minus 1/4° to plus 1/2°.

**Caster:**—1 1/2°. Limits 1/2-2 1/2°.

**Toe-In:**—1/16" (0-1/8"). Set long tie rod at exactly 31 7/32" (1937), 31 5/8" (1938) between ball centers, then adjust short tie rod for correct toe-in.

**Steering Geometry:**—Outer wheel 20°. Inner wheel 22°40', 22°50' (7 passenger sedans).

**STEERING GEAR**

**Steering Gear:**—Gemmer Model 300 (1937), 305 (1938). Worm-and-Roller type. Model 305 has "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES****MODEL S3**

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front Wheel—Front cyl. 1 1/4", Rear 1 3/8".

Rear Wheel—Front cyl. 1 1/8", Rear 1 1/4".

**Drum Diameter:**—10".

**Lining:**—Moulded. Width 2". Thickness .200". Length (Rear wh.-rear shoe) 7 25/64", (all others) 9 29/32".

**Clearance:**—.012" toe, .060" heel for each shoe.

**Braking Power:**—55% front wheels, 45% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—Fully release hand brake lever. Remove anchor screw locking wire (left side), adjust anchor screw for .025" clearance bet. band & drum, set anchor screw with lock wire. Free large adjusting bolt nut (upper end of band), loosen locknut, adjust guide bolt nut to .025" cl. bet. band & drum, set with locknut. Tighten adjusting bolt nut until tension on either side of guide bolt is just relieved (groove in nut must align with ridge in lockwash'r).

**Drum Diameter:**—6".

**Lining:**—Width 2". Thickness 5/32". Lgth. 16 15/16". **NOTE:**—Clearance at anchor and saddle .005" max.

**BRAKES****MODEL S5**

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

Front Wheel—Front cylinder 1 1/4". Rear 1 3/8".

Rear Wheel—Front cylinder 1 1/8". Rear 1 1/4".

**Drum:**—Cast-iron. Diameter—11".

**Lining:**—Moulded. Width 2". Thickness 13/64". Length (front shoe) 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" toe, .008" heel for each shoe.

**Braking Power:**—55% front, 45% rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes.*

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on right front door hinge pillar post. First numbers as follows:

	Detroit	Canada
S6 (1939) .....	5,634,001.....	9,668,606
S7 Custom (1940) .....	5,688,001.....	9,393,281
S7 Deluxe (1940) .....	6,064,301.....	
S7 Taxicab (1940) .....	5,096,701.....	

**ENGINE NUMBER:** First number 1001 with prefix indicating model (S6-, S7-). Stamped on left side of engine block between #1 and #2 cylinders. See Chrysler Shop Notes for engine number lettering ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.5-1 cast-iron hd. ....	145-155 lbs.	Approx. 115 lbs.
*7.0-1 aluminum hd. ....	150-160 lbs.	Approx. 120 lbs.

NOTE—7.0-1 Head Std. on 7 Pass. Sedans.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 or A-7B (Cast Iron Head), AL-6 (1939 Aluminum Head), AL-7A (1940 Aluminum Head). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle 38° (closed). Automatic Advance—12° max. at 1750 RPM (distr.). Vacuum Advance—7° distr. with 12" vacuum (IGS-4102-1), 15" vacuum (IGS-4102C-1, 4108-1), or 10" distr. with 12" vacuum (IGS-4102-B-2).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—2° BTDC. (6.5-1 Cast Iron Head), 2° ATDC. (7.0-1 Aluminum Head) with 2° mark (before or after dead center mark "DC") on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ½-1¼ turn open. Idle speed 6 MPH.

Float Level—5/64" from top of float (not float seam) to top edge of float bowl.

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure: 3½ lbs. maximum (Type B, AL), 4¼ lbs. maximum (Type AS, AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end ½ turn counter-clockwise and hook end over stop stud.

CAUTION—Do not wind coil up more than ½ turn.

**VALVES:** See Valve Timing.

Tappet Clearance:—.008" Int., .010" Exh. (hot & idling). .002" add'tl exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and fuel pump shield for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock. Model 24-R, Type 8054 (1939), 8197 (1940). Connected to coil by armored cable.

Ignition Lock—Yale & Towne or Briggs & Stratton. B&S No. 80651. Key Series 1BP to 1000BP. Groove #24.

**COIL:** Auto-Lite Model IG-4657 (1939), IG-4661 (1940). Service Coil (less Switch & Cable) IG-3224JS. Coil is mounted on the dash.

Ignition Current—2.25 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4102-1 or 4102C-1 (Std. 1939), IGS-4102B-2 (Canada 1939), IGS-4108-1 (Std. 1940). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual (Octane Selector) adjustment. NOTE—IGS-4102-1 used up to Eng. No. 6132 (1939). Breaker Plate Identification—Maximum vacuum advance limited by slot and marked with number

as follows: #7 (IGS-4102-1, 4102C-1, 4108-1), #10 (IGS-4102B-2).

Breaker Gap—Set at .020". Limits .018-.022".

Cam Angle or Dwell—38° closed, 22° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from the top.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	350	0 .....	700
3 .....	400	6 .....	800
6 .....	850	12 .....	1700
9 .....	1300	18 .....	2600
12 .....	1750	24 .....	3500

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance—IGS-4102-1			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	5"	
3°	6°	8"	
5°	10°	10"	
7°	14°	12"	

Vacuum Advance—IGS-4102C-1, 4108-1			
Start	0°	5"	
3°	6°	9-10"	
5°	10°	12-13"	
7°	14°	15"	

Vacuum Advance—IGS-4102B-2			
Start	0°	4 3/4"	
2°	4°	6 1/4"	
5°	10°	8 3/8"	
8°	16°	10 1/2"	
10°	20°	12"	

**Manual Adjustment**—At distributor. Provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

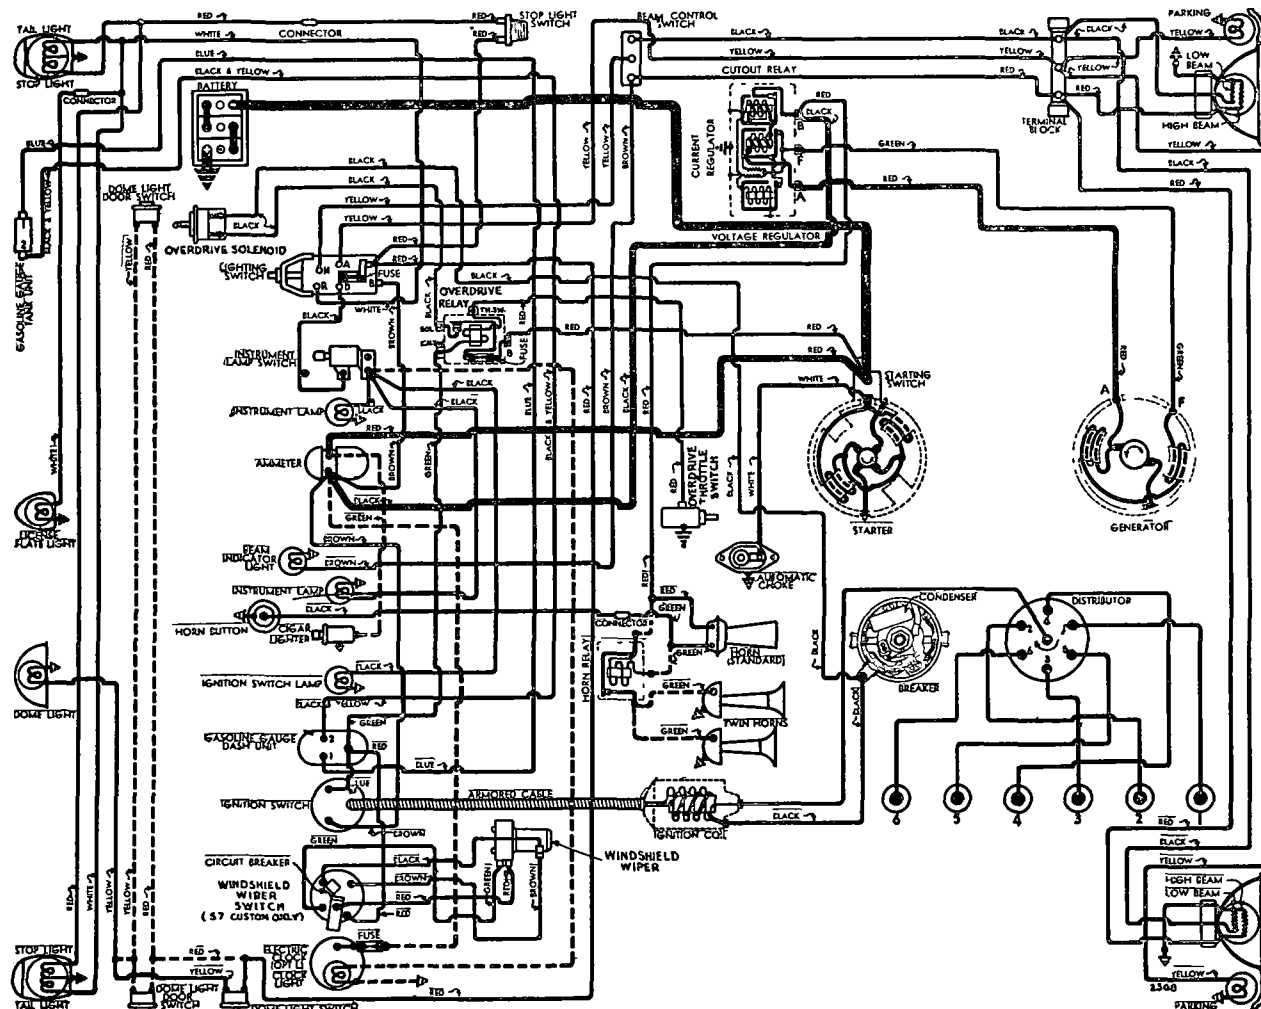

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes for both cast-iron and aluminum heads) shown below. See Manual adjustment (following) for correction (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

Flywheel Degrees	Piston Position
6.5-1 cast-iron hd. ....2° BTDC.....	.002" BTDC.
7.0-1 aluminum hd. ....2° ATDC.....	.002" ATDC.

**NOTE**—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on the generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

Check Manual Adjustment as directed below. **Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (fill in correct mark on impulse neutralizer with chalk or paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Standard ignition setting should be varied not more than 4° (cast-iron head —6° or .015" BTDC to 2° or .002" ATDC. Aluminum head—2° or .002" BTDC to 6° or .015" ATDC) so that slight ping noticeable between 10 and 30 M.P.H. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**Carter (Ball & Ball) Model E6N1 (Early 1939), E6N2 (Late 1939, Early 1940), E6N3 (Late 1940).** 1 1/2" single barrel, downdraft type.

**For complete data, refer to Carburetor Index.** **NOTE**—Carburetor jets changed (new metering jet used on E6N3). See *Carter (B&B) carburetor article and Jet Table in Carburetor Section for complete data.* **Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (1/2-1 1/4 turns open—turn screw in for leaner mixture). Readjust idle speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Idle screw should be set to give highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (min. stroke)—Extreme hot temperatures or altitudes above 3000 feet. Center Hole (med. stroke)—Normal setting. Outer Hole (max. stroke)—Winter temperatures. **NOTE**—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See *Carter (B&B) Jet Table in Carburetor Section for complete jet data.* **Float Level**—5/64" from top of float (not soldered seam) to top edge of float bowl.

**Throttle Cracker**—Interconnector between starting pedal and accelerator rod which opens throttle slightly when pedal depressed for starting. Adjust by loosening throttle pickup clamp bolt (above starter switch), shift clamp on rod.

**Fast Idle**—Not adjustable (built-in type).

**Automatic Choke**—Slisson Type AC-758B.

**For complete data, refer to Carburetion Equip. Index.**

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1529041 oil-wetted type standard. #1529042 oil-bath type optional.

**NOTE**—#1525313 crankcase vent cleaner also used.

**Fuel Pump**—AC Type AT #1523912 diaphragm type. Type AL #1523915 (1939 RHD Cars), Type AS #1523913 (1940 Cars with swinging windshield) combination fuel-and-vacuum pumps. **NOTE**—Type B #1523914 fuel pump also used on 1939 cars.

**For complete data, refer to Carburetion Equip. Index.**

**Gasoline Gauge**: Auto-Lite Electric. Dash Unit—NG-9040D (1939), 9349D (1940). Tank Unit—NG-8989T (1939), NG-9329T (1940).

**For complete data, refer to Carburetion Equip. Index.**

CONTINUED N NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

## BATTERY

**BATTERY:**—Willard Type SW-2-105. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).  
**Starting Capacity:**—133 amperes for 20 minutes.  
**Zero Capacity:**—300 amperes for 3.9 minutes. Five second voltage—4.3 volts.  
**Grounded Terminal:**—Positive (+) grounded to transmission.  
**Dimensions:**—Length 10¼". Width 7". Height 9".  
**Location:**—On left side under front seat.

## STARTER

**Auto-Lite Model MAW-4016.** Armature MAW-2030. Drive—Overrunning clutch, manual pinion shift. Rotation—Counter-clockwise at commutator end. Cranking Engine—150-175 amperes, 5.1 volts. Brush Spring Tension—42-53 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 " "	3300	5.5	100
2.75 " "	1480	5.0	200
5.45 " "	820	4.5	300
8.50 " "	400	4.0	400
11.55 " "	110	3.5	500
11.5 " "	Lock	3.0	505
18.0 " "	Lock	4.0	670

**Removal:**—Flange mounted on left front face of fly-wheel housing. Remove cables, 2 clips on starter linkage, oil filter lines, 2 mounting bolts. Lift off. **Starting Switch:**—Model SW-2813. On starter. Manually operated by starter (pinion shift) pedal.

## GENERATOR

## MODEL S6

**Auto-Lite Model GDA-4801A (Std.),** Armature GDA-2006F. Model GCB-4802A (City Police '37, '38, '39), GCB-4802B (State Police '37). Armature GCB-2006F. Two brush type with current-voltage control. Charging Rate Adjustment—See Regulator data. Maximum Charging Rate—As given in tables below with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

## Performance Data—GDA-4801A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	930	0	6.4	1010
4	6.6	1060	4	6.6	1180
8	6.85	1210	8	6.85	1350
12	7.1	1350	12	7.1	1530
16	7.3	1500	16	7.3	1730
20	7.5	1660	20	7.5	1950
24	7.75	1830	24	7.75	2220
*28	8.0	2025	28	8.0	2520

## Performance Data—GCB-4802A, B

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	460	0	6.4	500
4	6.7	540	4	6.7	580
8	6.9	620	8	6.9	670

16	7.4	800	16	7.4	865
20	7.7	890	20	7.7	990
*25	8.0	900	25	8.0	1120

\*—Current Regulator setting. See Regulator data. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—53 oz. (GDA), 64-68 oz. (GCB). Field Current—1.66-1.84 amperes at 6.0 volts (GDA), 1.5-1.7 amperes at 6.0 volts (GCB). Motoring Current—3.50-4.15 amps. at 6.0 volts (GDA), 2.8-3.2 amperes at 6.0 volts (GCB).

## GENERATOR

## MODEL S7

**Auto-Lite Model GDZ-4801A (Std.),** GDZ-4801B or GEB-4801A (Police). Armature No. GDZ-2006F (GDZ-4801A, B), GEB-2006F (GEB-4801A). Two brush type with current voltage control. Air-cooled. Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate:**—35 amperes (GDZ Gen.), 32 amperes (GEB Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1400 RPM (GEB), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by voltage regulator and dependent on battery condition.

## Performance Data—GDZ-4801A, B

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000

*35	8.0	1900	35	8.0	2250

## Performance Data—GEB-4801A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	560	0	6.4	600
4	6.6	630	4	6.6	675
8	6.8	700	8	6.8	750
12	7.0	775	12	7.0	840
16	7.2	845	16	7.2	930
20	7.4	920	20	7.4	1030
24	7.6	1000	24	7.6	1140
28	7.8	1075	28	7.8	1260
*32	8.0	1150	32	8.0	1400

\*—Current regulator setting. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—53 ozs. max. (GDZ Gen.), 64-68 ozs. (GEB Gen.), with new brushes.

Field Current—1.60-1.78 amperes at 6.0 volts (all). Motoring Current—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

**Removal:**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts. **Belt Adjustment:**—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## REGULATOR

## MODEL S6

**Auto-Lite Model VRB-4004B (GDA Gen.),** VRB-4004C (GCB Gen. '37 Police), VRB-4009A (GCB Gen. '38-'39 Police). Current-Voltage type. In case on dash. See article in Electrical Equipment Section. NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In:**—6.4-7.0 volts Cold. **Cuts Out:**—5 ampere min., 3.0 amperes max. Cold. **Contact Gap:**—.015" minimum. **Air Gap:**—.034" min., .038" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting:**—7.3-7.6 volts at 70° F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial number.

**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage is steady. Voltage reading should be 7.3-7.7 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap:**—.010-.020" (armature against stop pin). **Air Gap:**—.0595-.0625" with contacts just opening.

## Current Regulator

**Setting (VRB-4004B):**—27-29 amperes (marked '28' on cover. (VRB-4004C, 9A) 24-26 amps. (marked '25')). **To Check (without breaking seals):**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH., charging battery, add load (use bank of headlamp bulbs, or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above. If more than slight excess noted, regulator is defective.

**Adjustment, Contact Gap, Air Gap:**—Same as for Voltage Regulator (above).

## REGULATOR

## MODEL S7

**Auto-Lite Model VRP-4001A (GDZ Gen.),** VRP-4001B (GEB Gen.). Current-voltage type. In case on dash. NOTE—For negative battery ground, VRP-4005A (GDZ Gen.), VRP-4005B (GEB Gen.) are used. For complete data, refer to Electrical Equipment Index. NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In:**—6.4-6.6 volts at approximately 1000 generator RPM (VRP-4001A, 5A), 600 RPM (VRP-4001B, 5B). **Cuts Out:**—4.2-4.8 volts (approx. 4-6 amps. disch.). **Contact Gap:**—.015" minimum.

**Air Gap:**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. **To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures. **To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap:**—.012" Min. (armature against stop pin). **Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting (VRP-4001A, 5A):**—34-36 amperes (marked '35' on cover). (VRP-4001B, 5B) 31-33 (marked '32'). **To Check (without breaking seals):**—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above. If more than slight excess noted, regulator is defective. **Adjustment & Contact Gap:**—Same as for Voltage Regulator (above). **Air Gap:**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

**LIGHTING**

**Headlamps.** Hall. Pre-focused type (1939), "Sealed Beam" type (1940). Upper and lower beams controlled by Beam Selector Switch on toeboard.

*For complete data, refer to Electrical Equipment Index.*  
**Headlamp Adjustment.** Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator.** Red light on panel above instrument cluster. Lighted with upper beam on.

**Switches—1939**

**Lighting.** Chrysler No. 853295 or 852535.

**Beam Selector.** Chrysler No. 853323 or 659512.

**Instrument.** Chrysler No. 695943.

**Stop Light.** Chrysler No. 677112.

**Switches—1940**

**Lighting.** Chrysler No. 854756, 854757 Optl.

**Beam Selector.** Chrysler No. 859974.

**Instrument.** Chrysler No. 853371.

**Stop Light.** Chrysler No. 677112.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instrument	1½	55
Beam Indicator, Ign. Sw.	1	51
Stop and Tail	21-3	1158
Rear License	3	63
Dome or Reading	15	87

NOTE—Headlamps on 1939 cars were 32-32 cp., Mazda No. 2331.

**MISC. ELECTRICAL**

**FUSES:** Lighting—20 ampere (1939), 30 ampere (1940), located on back of lighting switch.

**Horns** (1939)—20 ampere in horn lead (Single Horn), 30 ampere on horn relay (Dual Horns).

**Horns** (1940)—No fuse used.

**Windshield Wiper** (1939)—14 ampere. On switch or in lead.

**Windshield Wiper** (1940)—No fuse (circuit breaker). Clock—2 ampere. In connector behind clock.

**Transmission Overdrive Control.**—20 amp. On relay.

**HORNS** (1939): Single—Klaxon Model K-16 Type 2016. Dual—Auto-Lite HH or HL-4001 (low pitch), HH or HL-4002 (high pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Model HR-4101. 30 ampere fuse on base. Contacts Close—2.5-3.5 volts.

**Contact Gap.**—0.26". Air Gap—.012-.017" (closed).

**HORNS** (1940): Single—Delco-Remy No. 1999911 Std. Dual—Auto-Lite HO-5001 horn set. HL-4001 (low pitch), HL-4002 (high pitch) operated by horn relay.

**Current Draw.**—Approx. 7 amps. single, 35-40 dual.

**Horn Relay:**—Auto-Lite Model HRC-4001 (no fuse). Contacts Close—1.5-3.0 volts. Open—.5 volt.

**Contact Gap.**—0.26". Air Gap—.016-.020" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type. Bore—3⅞". Stroke—4¼".

**Displacement.**—228.1 cu. ins. **Rated HP.**—27.34.

**Developed Horsepower.**—93 HP (1939 6.5-1 Head), 100 HP. (1940 6.5-1 Head), 100 HP. (1939 7.0-1 Head), 105 HP. (1940 7.0-1 Head) at 3600 RPM.

**Compression Ratio and Pressure.**—As follows:

**Ratio** **Pressure at 1000 RPM** **At 100 RPM**  
6.5-1 cast-iron hd. 145-155 lbs. Approx. 115 lbs.

7.0-1 aluminum hd. 150-160 lbs. Approx. 120 lbs.

**Vacuum Reading.**—Steady 18-21" idling at 6 MPH.

*See Chrysler Shop Notes for Engine Removal data.*

**PISTONS:** Aluminum alloy, U-slot, cam ground type with Anodic finish (1939), tin-plated (1940).

**Length.**—3⅞". **Weight.**—17.5 ozs. stripped.

**Removal.**—Pistons and rods removed from above.

**Clearance** (1939)—Top .021", Skirt .0005-.0010".

**Clearance** (1940)—Top .0115", Skirt .0000-.0010".

**Original Bore & Piston Sizes, Replacement Pistons:**—*See Chrysler Shop Notes for sizes and markings.*

**Fitting New Pistons:**—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" feeler between cylinder wall and piston (pin removed) on side opposite slot. With piston and block at 70° F, pull to withdraw feeler 5-7 lbs.

**Installing Pistons.**—Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

**Ring** **Width** **End Gap** **Side Clearance**

Comp. (Top) ⅜" .007-.015" .002-.004"

Comp. (#2) ⅜" .007-.015" .0015-.0035"

Oil Control 5/32" .007-.015" .001-.0025"

**NOTE.**—Side Clearance for oil control rings on 1939 cars—.0015-.003".

**Replacement Rings:**—Std. & .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2⅞". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston.**—Thumb push fit (piston at 130°).

**Pin Fit in Rod Bushing.**—Thumb push fit at 70° F.

**Replacement Pins:**—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:** Length—8".

**Weight.**—32.80 ozs. (1939), 35.2 ozs. (1940) with bearings and bolts.

**Crankpin Journal Diameter.**—2⅞".

**Lower Bearing.**—Removable, precision type, steel-backed babbit.

**Clearance.**—.0005-.0025". **Sideplay.**—.0055-.0115".

**Replacement Bearings:** *Refer to Chrysler Shop Notes.* **Bearing Adjustment:**—None (no shims). Install bearings with boss engaging groove in rod and cap.

**Installing Rods:**—Oil spit hole toward camshaft.

**CRANKSHAFT:**—4 bearing type with 7 counterweights. **Journal Diameters.**—2½" all bearings.

**Bearing Type.**—Removable, precision type steel-backed, babbit-lined. **Clearance.**—.001-.002".

**Bearing Adjustment:**—*See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front & Rear Oil Seals.*

**Replacement Bearings & Bearing Caps:** *Refer to Chrysler Shop Notes for complete data.*

**End Thrust:**—Taken by flange faces on rear (#4) main bearing. **Endplay.**—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. *See Chrysler Shop Notes for camshaft removal.*

**Journal Diameters.**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type.**—Removable steel-backed, babbit-lined bushings (except #4 machined in block).

**Clearance.**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. **Endplay.**—.002-.006".

**Timing Chain:** Morse. Type 1866N, No. 2661 (1939), Type 1883N, No. 2661 (1940). Width 1", Pitch .500 (½"), Length 24" or 48 links.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:** **Head Diameter** **Stem Diameter** **Length**

Intake .....1 21/32".....340-.341".....4 25/32"

Exhaust .....1 17/32".....340-.341".....4 25/32"

**Seat Angle** **Lift** **Stem Clearance**

All Valves (1939) .....45°.....11/32"......001-.003"

All Valves (1940) .....45°.....3/8"......0015-.0035"

*See Chrysler Shop Notes for Exh. valve seat insert data.*

**Valve Guides:**—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

**Valve Springs:**—Install with closely coiled ends to top. **Free length** 2". **Spring Pressure** **Length**

Valve Closed .....40-45 lbs. ....1¾"

Valve Open .....107-115 lbs. ....1¾"

**Valve Lifters:**—Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve stem guide). Oversizes .001", .008", .030", .060". **Lifter Clearance in Block.**—.000-.001".

**VALVE TIMING**

**Tappet Clearance:**—.008" Int., .010" Exh. (hot & idling). .002" additional exh. clearance desirable for sustained high speeds. **NOTE.**—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and pump shield for access.

**Valve Timing** (1939): *See Camshaft Setting above.*

**Intake Valves.**—Open 8° BTDC. Close 42° ALDC.

**Exhaust Valves.**—Open 48° BLDC. Close 2° ATDC.

These figures correct with .014" tappet clearance.

**Valve Timing Check.**—Set tappet clearance #6 intake valve at .014". This valve should open with piston 8° (.0260") before top dead center with 8° BTDC. mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet cl. at .008" hot.

**Valve Timing** (1940): *See Camshaft Setting above.*

**Intake Valves.**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves.**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check.**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 12° or .059" BTDC with 12th graduation before DC mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet cl. at .008" hot.

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine).

*See Chrysler Shop Notes for oil pump removal.*

**Normal Oil Pressure:**—30-45 lbs. @ 30 MPH, 15 idling.

**Oil Pressure Relief Valve:**—Under plug below starter. Opens at 40-45 lbs. To increase pressure use heavy (green), to decrease light (red), spring.

**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**Capacity.**—19 qts. (1939), 17 qts. (1940).

*See Chrysler Shop Notes for radiator core removal.*

**Water Pump:**—Packless type with belt drive.

*See Water Pump Section for complete data.*

**Removal.**—Drain water. Remove fan blade assembly, pulley, radiator outlet hose at pump, by-pass elbow (with small hose), pump mounting stud nuts, fan belt adjusting strap at generator, adjusting strap stud and lower pump stud from block.

**Thermostat.**—Bishop & Babcock or Fulton. On head. **Setting.**—Starts to open 157-162° F. Fully open 183° F.

**Temperature Gauge:** Motometer (Auto-Lite) Vapor Tension type, No. 9039 (1939), 9348 (1940).

*See Miscellaneous Section for complete data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi) with Borglite Driven Member. Single plate, dry disc with spiral grooved facings, pressure plate oil baffle & pedal over-center return spring.

**NOTE:**—Cover stamped with identification number as follows: 928 (1939 10A7), 938 (1940 10A7), 931 (1939-40 11A6).

*See Clutch Section for complete data.*

**Facings:**—Spiral wound moulded woven, 2 used. Inside Diam. 7" (10A7), 6½" (11A6), Outside Diam. 10" (10A7), 11" (11A6). Thickness ⅛" (all).

**Adjustment:**—Pedal should just clear toeboard (adjust stop screw on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal:**—Remove release fork pull-back spring, Transmission (see following) and housing underpan. Disconnect release fork from pivot and pull out as far as possible. Mark cover and flywheel, remove cover screws evenly, lower assembly out.

**TRANSMISSION**

Warner Model (1939), Own Make (1940). All helical gear, constant-mesh, synchro-mesh (Second and High), sliding gear (Low and Reverse).

*See Transmission Section for complete data.*

**Transmission Control:**—Steering column shift Std. *See Transmission Section for complete data.*

**Removal:**—Remove propeller shaft (loosen comp. flange nut if transmission to be disassembled—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, battery ground cable, hand brake cable, and gear shift rod and cable at transmission. Remove mounting stud nuts, cover assembly, and two upper mounting studs (insert pilot studs in these holes), pull transmission straight back and remove from beneath car.

**OVERDRIVE**

**Overdrive:** Warner Model AS3-T86A Overdrive Transmission Optl. (1939), Type R7B Overdrive Unit Optl. (1940). Overdrive has electrical "kick-down" control.

*See Transmission Section for complete data.*

**Overdrive Transmission Removal:**—Same as above, plus the following: Remove hand brake assembly

(U-joint flange, brake drum, band and support). Disconnect solenoid wires (remove coil) and overdrive cable at case. Remove 2 upper mounting studs (insert pilot studs in these holes), withdraw assembly. On 1939 model, turn transmission over on left side while it is being withdrawn until shaft clears release bearing, then push up at forward end (shaft just above bearing) and forward, with shaft between clutch fingers, until rear end can be lowered.

**Overdrive Control (1940):** Overdrive control units are as follows:

**Overdrive Solenoid:**—Auto-Lite SSB-4001.

**Throttle Switch Setting:**—3/32" gap between switch plunger & contact screw (throttle just wide open).

**Control Relay:**—Auto-Lite HR-4201. Use only 20 ampere fuse on relay (on left side of engine dash).

**UNIVERSALS**

Detroit Universal Series 4200 (1939-40), Series 7200 (1940). Universals are Ball-and-Trunnion Type (4200), Cross Type (7200) with roller bearings. Two used.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. *See Chrysler Shop Notes for servicing.*

**REAR AXLE**

**REAR AXLE:**—Own Make, Semi-floating, Hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 (Std. 5 pass.). 4.3-1 (5 pass. with overdrive—Std. 7 pass.). 4.56-1 (7 pass. with Overdrive). **Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158). **NOTE:**—Use Tool C-358 to pull oil washer, C-201, 2 to install.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate, add or remove shims equally at both wheels. **Endplay:**—.003-.008".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Domestic—Delco Direct Acting. Export—Delco Direct Acting or Delco Adjustable Direct acting (Special Equip. Dom. also).

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Pos. ¼°. Limits 0° to Pos. ¾°.

**Caster:**—1½°. Limits ½°-2½° (1939), Neg. 1° to Pos. 1° (1940). Not adjustable.

**Toe-In:**—1/16" (0-⅛"). On 1939 cars, set long tie rod at exactly 31⅝" between ball centers, then adjust short rod for correct toe-in. On 1940 cars, adjust both tie rods equally.

**Steering Geometry:**—Inner wheel 22°40' (1939), 22° (1940), Outer wheel exactly 20°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drums:**—Centrifuse type. Diameter—11".

**Lining:**—Molded. Width 2". Thickness 13/64". Length (front shoe) 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes for data.*

**Drum:**—Cast-iron type. Diameter—6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Auto-Lite EW-5001, EW-5101 (1939), EWB-4001 (1940 except Custom Models). Electric type. Protected by fuse in feed lead (Early 1939), fuse on switch (Late 1939), circuit breaker on switch (1940).

*See Miscellaneous Section for complete data.*

**Fuse (1939):**—14 ampere. On switch or in lead.

**Circuit Breaker (1940):**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**1940 Power Operated Conv. Top:** Vacuum Power type.

*See Miscellaneous Section for complete data.*

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—Refer to Chrysler Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on right front door hinge pillar post. First numbers as follows:

	Detroit	Canada
1941 S8C Custom	5,720,401	9,373,196
1941 S8S Deluxe	6,096,001	
1941 S8 Taxicab	5,099,101	
1942 S10C Custom	5,771,001	9,949,051
1942 S10S Deluxe	6,142,001	
1942 S10 Taxicab	5,101,701	

**ENGINE NUMBER:** First number 1001 (each year) with prefix indicating model (S8-, S10-). Stamped on left side of engine block between #1 and #2 cylinders. Refer to Chrysler Shop Notes for Engine Number Lettering data ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:** Pressure—115-125 lbs. (S8 1941), 125-135 lbs. (S10 1942) at cranking speed (125 RPM).

**VACUUM READING:**—18-21" steady idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7 (Cast Iron Heads), AL-7 (Aluminum Heads). 14 mm. Metric type.

Gaps—.025"

**NOTE:** Spark plug tightening tension 26-32 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020" Cam Angle 38° (closed).

**Automatic Advance**—12° max. at 1750 RPM (IGS-4113-1, 4117, 4117-1, 4202-1), 11° max. at 1400 RPM (IGS-4202A-1, 4202C-1). Distr. degrees & RPM.

**Vacuum Advance**—7° distr. with 15" Vacuum (IGS-4113-1, 4117, 4117-1, 4202-1), 6° distr. with 14" vacuum (IGS-4202A-1), 9° distr. with 16" vacuum (IGS-4202C-1).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC (1941 All Engines), At TDC (1942 Engines with Aluminum Pistons), 3½-4½° ADTC. (1942 Engines with Cast Iron Pistons) with dead center "DC" mark or correct degree mark on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw ½-1½ turns open. Idle speed 6 MPH. (All Cars with Std. Trans.), 450 RPM or 4 MPH max. (1941 Cars with Simplimatic Trans.), 5 MPH max. (1942 Cars with Simplimatic Trans.). **CAUTION**—On 1941 cars, if engine will not idle smoothly at slow speed, crankcase ventilator and tube may be plugged. See LUBRICATION following for Crankcase Ventilator data.

**Float Level**—5/64" (E6N3; E6S2,S3; E6V1; E6U1,U2; EE1), 1/16" (EB1, EF1, EG1) top of float below top edge of float bowl.

**Accelerating Pump**—Center hole Normal, Inner hole (Summer), Outer hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise and hook free end over stop.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and

idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE**—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8112 (Std.), Model 30-R, No. 8793 (with Simplimatic Trans.). **NOTE**—Model 30-R switch has extra terminal for transmission control (for Simplimatic transmissions).

**Ignition Lock:**—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000 BP. Groove 24.

**COIL:** Auto-Lite Model IG-4669 (Std. Trans.), IG-4671 (with Simplimatic Trans.). Service winding (less switch and cable) IG-3224JS. Mounted on dash. **Ignition Current**—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

**Capacity:**—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4113-1 or 4202-1 (1941 Std.), IGS-4117 or 4117-1 (1941 with Tachometer Drive), IGS-4202A-1 (1942 with Aluminum Pistons), IGS-4202C-1 (1942 with Cast Iron Pistons). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment.

**Breaker Plate Identification**—Number stamped on plate as follows: #7 (IGS-4113-1, 4117, 4117-1, 4202-1), #6 (IGS-4202A-1), #9 (IGS-4202C-1).

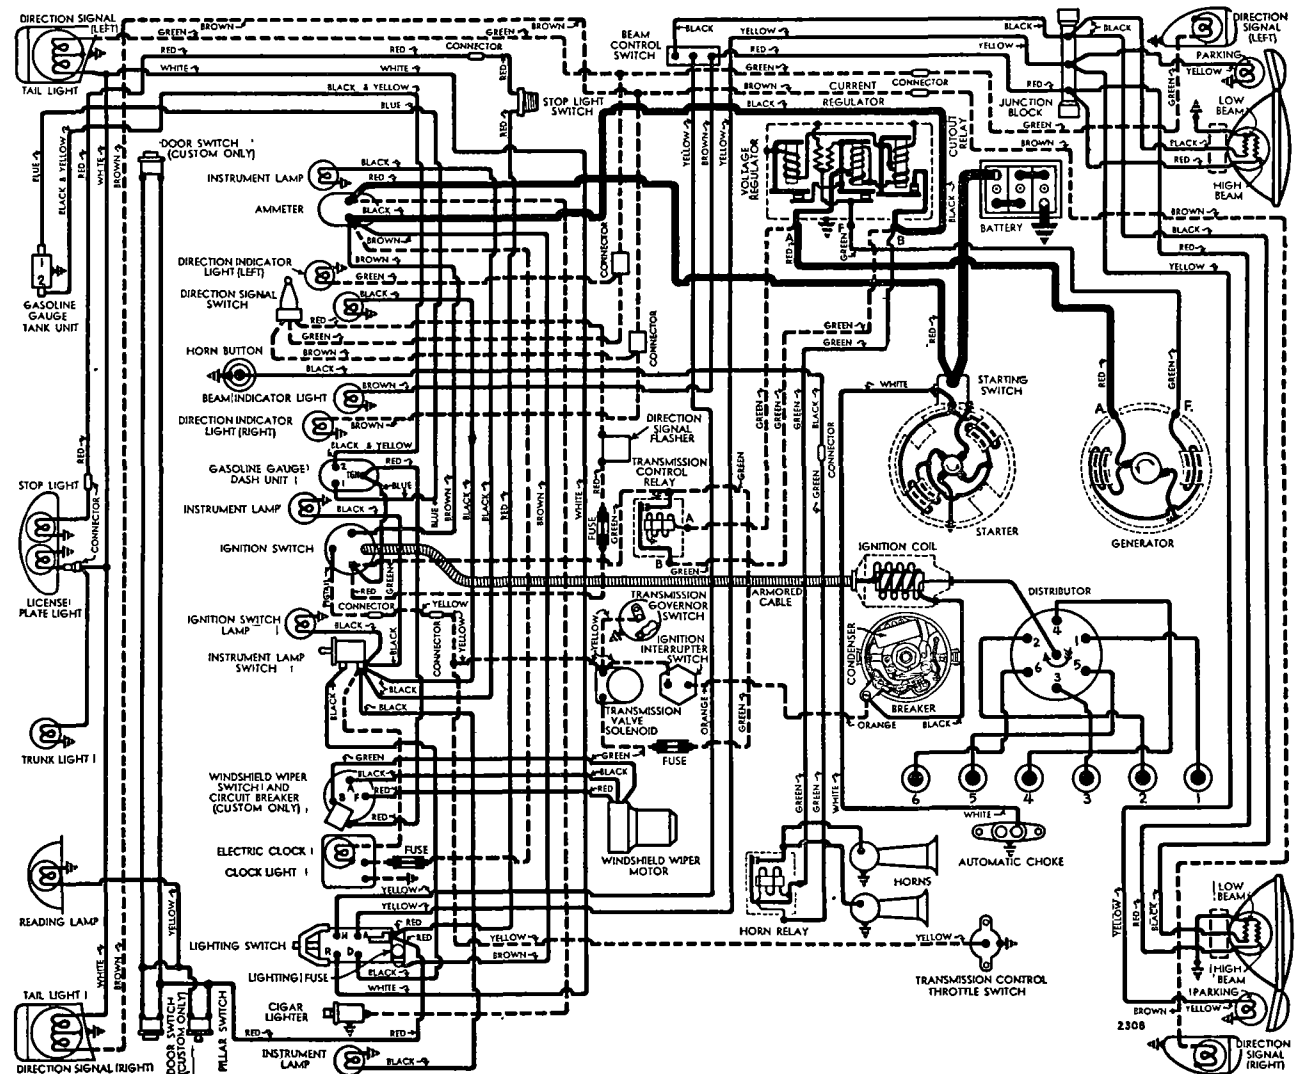

**Breaker Gap**—.020". Limits .018-.022".

**Cam Angle or Dwell**—38° closed, 22° open.

**Breaker Arm Spring Tension**—17-20 ozs.

**Rotation**—Clockwise viewed from above.

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDING PAGE

## IGS-4113-1, 4117, 4117-1, 4202-1

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

## IGS-4202A-1, 4202C-1

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	770	12	1540
9	1150	18	2300
11	1400	22	2800

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

## Vacuum Advance

## IGS-4113-1, 4117, 4117-1, 4202-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
3°	6°	9 1/4"
5°	10°	12 1/8"
7°	14°	15"

## Vacuum Advance—IGS-4202A-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5 1/8"
3°	6°	9 5/8"
5°	10°	12 1/2"
6°	12°	14"

## Vacuum Advance—IGS 4202C-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
5°	10°	11 1/8"
7°	14°	13 1/2"
9°	18°	16"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

1942 MODEL S10

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation**—Install distributor with #1 piston in firing position (see table below) and rotor opposite #1 segment in cap.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes for all engines) shown below. See Manual Adjustment

1941 All Engines	0° at TDC	000" at TDC
1942 Early①	0° at TDC	000" at TDC
1942 Late②	3 1/2-4 1/2° ATDC	.005-.008" ATDC

①—Aluminum Pistons. ②—Cast Iron Pistons.

**NOTE**—Impulse neutralizer marked "DC" at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping) clockwise (if ping too severe), tighten screw.

## CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) 1 1/2" single barrel downdraft types. **NOTE**—Carburetors on cars with Fluid Drive have Slow-Closing Throttle device, Carburetors on cars with Simplimatic Transmission have transmission control kick-down switch.

Car Model	Carburetor Model
1941 (Std. Transmission)	E6N3, E6S2, E6S3
1941 (Fluid Drive)	EB1
1941 (Simplimatic Trans.)	E6V1, E6U1, E6U2
1942 (Std. Transmission)	EE1
1942 (Fluid Drive)	EF1
1942 (Simplimatic Trans.)	EG1

For complete data, refer to Carburetor Index.

**Settings (Idle Setting, Float Level, and Accelerating Pump)**: See Tune-Up.

**Metering Jet**—Refer to Carburetor Index for Carter (B&B) Downdraft Carburetor Jet Specification Table.

**Throttle Cracker**—Not adjustable.

**Slow Closing Throttle (E6V1, E6U1, E6U2, EB1, EF1, EG1)**: Dashpot type (Cars with Fluid Drive), Solenoid type (Cars with Simplimatic Trans.). Solenoid type is not adjustable.

**Adjustment (Dashpot Type)**—Turn adjusting screw (above dashpot plunger) in as far as possible, then back screw out 5 full turns for 7/32" stroke.

**Fast Idle**—Built-in type. Not adjustable.

**Automatic Choke**—Sisson Type AC-758B.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1529938 (1941), 1542284 (1942) heavy duty oil-bath type. NOTE—Use replacement Filter Element Assembly No. 1542305 (1942).

**Fuel Pump:**—AC 'AT' #1523647—Exch. No. 505 diaphragm type pump. Pressure—4 lbs.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:** Auto-Lite Electric type. #NG-9685D or NG-9837D (Dash Unit—1941), NG-9925D (Dash Unit—1942), #NG-9329T (Tank Unit 1941-42).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Willard Type WHT-2-15R. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

Starting Capacity—133 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.9 minutes. Five second voltage 4.3 volts.

Grounded Terminal—Positive (+) to engine.

Dimensions—Length 10¼". Width 7". Height 9¾"

Location—Under hood in left fender shield.

**STARTER**

**Auto-Lite Model MAW-4019, MAW-4019A (1941); MAW-4026 (Std. 1942), MAX-4050 (1942 Fluid Drive Cars).** Armature No. MAW-2030 (All Models).

Drive—Overrunning clutch (manual pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 RPM, 175 amperes, 5.4 volts.

**Performance Data**

MAW-4019, 4019A, 4026

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.	505
18. "	Lock	4.	670

**Performance Data—MAX-4050**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.	640
25.0 "	Lock	4.	880

**Removal:**—Flange mounted on left front face of fly-wheel housing. Disconnect wires (tape battery lead). Remove oil filter tubes, filter and 2 starter bolts.

**Starting Switch:** (MAW-4019, 4019A, 4026) Auto-Lite Type SW-2813. Manually operated by starting pedal. (MAX-4050) Auto-Lite Type SS-4705. Solenoid type controlled by pushbutton on instrument panel.

For complete data, refer to Electrical Equipment Index.

**GENERATOR**

**Auto-Lite Model GDZ-4801A (Std. '41), GDZ-4801B (Std. 1942), GEB-4801A or GEG-4818A (City Police), GEG-4818B or GEG-4823B (State Police).** Two brush, shunt types with current and voltage regulation. Ventilated.

**Armature:**—GDZ-2006F (GDZ Gen.), GEB-2006F (GEB Gen.), GEG-2006F (GEG Gen.).

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate:**—35 amperes, 8.0 volts, 2200 gen. RPM or approx. 25 MPH, and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—GDZ-4801A,B**

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
5	6.65	5	6.65
10	6.85	10	6.85

35	7.8	1410
40	8.0	1520

①—Current regulator setting. See Regulator data.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ounces max. (GDZ Gen.),

64-68 ozs. (GEB & GEG Gen.) with new brushes.

**Field Current:**—1.60-1.78 amperes at 6.0 volts (all).

**Motoring Current:**—4.16-4.60 amps. (GDZ Gen.), 4.0-

4.5 amps. (GEB), 4.7-5.2 amps. (GEG) at 6.0 volts.

**Removal:**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs.

tension secured on scale attached to field frame.

**REGULATOR**

**REGULATOR:**—Auto-Lite VRP-4001A (GDZ Gen.), VRP-4001B (GEB Gen.), VRP-4001F (GEG Gen.).

Current-Voltage types. In case on dash.

NOTE—For negative battery ground, VRP-4005A (GDZ Gen.), VRP-4005B (GEB), VRP-4005E (GEG)

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In:**—6.4-6.6 volts at approx. 1000 Gen. RPM. (VRP-4001A,5A), 600 RPM. (VRP-4001B,5B), 820 RPM. (VRP-4001F,5E).

**Cuts Out:**—4.2-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting:**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap:**—.012" min. (armature against stoppin).

**Air Gap:**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting (VRP-4001A,5A):**—34-36 amperes, marked "35" on cover, (VRP-4001B,5B) 31-33 amperes marked "32", (VRP-4001F,5E) 39-41 amperes, marked "40".

**Checking (without breaking seal) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap & Air Gap:**—Same as Voltage Regulator.

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:**—Small red light on instrument panel above speedometer. Lighted with upper beams on.

**Direction Signal:**—Refer to Electrical Equip. Index.

**Switches—1941**

**Lighting:**—DeSoto No. 910506.

**Beam Selector:**—DeSoto 859974.

**Instrument:**—DeSoto No. 853371.

**Direction Signal:**—DeSoto No. 865763, 910566 (RHD).

**Switches—1942**

**Lighting:**—DeSoto No. 976108.

**Beam Selector:**—DeSoto No. 859974.

**Instrument:**—DeSoto No. 976098.

**Map Light:**—DeSoto No. 974926.

**Dome Lamp Pillar:**—DeSoto No. 317180.

**Door Switches:**—DeSoto No. 882943.

**Stop Light:**—DeSoto No. 677112.

**Direction Signal:**—DeSoto No. 938926.

**HEAD LAMP SHUTTERS**

► **HEADLAMP SHUTTERS (1942 S10):** Headlamps

recessed in front fenders and are shielded by sliding panels which fit flush with fenders when shutter control handle in closed position.

**Operation:**—Shutters (sliding panels) are controlled by a handle under instrument panel to right of steering column. Button in shutter handle controls latch which locks handle in open or closed position. Plunger type lighting switch mounted on under side of shutter handle housing. Contact on end of shutter handle rod depresses plunger and turns on headlamps with shutter handle in full open position. To open shutters and turn on headlamps, push in on control button on shutter handle (to release locking latch), pull handle out to open position. To close shutters, push in on control button and push handle in. NOTE—No separate light switch control used.

**Adjustments:**—Shutters are operated by control linkage (part of assembly consists of an axle which is mounted crosswise on car and each shutter is attached to this axle). Adjustments are provided for fitting and synchronizing shutters as follows:

(1) Eccentric pin located on axle mounting plate provides for positioning panels for fore-and-aft or up-and-down fit with fender opening. To adjust, loosen nuts and turn pin (end of pin is slotted). (2) Axle collar on axle mounting plate permits side-wise positioning of panels with fender opening. To adjust, loosen collar and slotted axle coupling, move panel sideways until proper fit obtained. (3) Flange on axle shaft provided with two bolts which pass

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

through slotted holes in flange. These two bolts can be loosened (after disconnecting clevis rod which attaches to lever extending to axle flange) and shutters synchronized by closing both shutters with just enough tension to compress rubber bumpers. With shutters in this position, tighten bolts. Then adjust clevis rod length so that slight tension obtained in control linkage when clevis pin is inserted with shutters closed. (4) Adjustable clamp just ahead of shutter handle mounting bracket on back of instrument handle provides adjustment for the correct positioning of shutters in open position. To adjust, loosen clamp, push in on control button on shutter handle and pull handle out until shutters compress rubber bumpers at each headlamp, then with shutters in this position move bracket so that latch in control rod (with button released latch protrudes through slot in shutter handle housing) will be held by bracket in this open position. NOTE—Headlamps are 'Sealed Beam' type and can be removed or installed after removing trim plate which is attached by four screws. Refer to Electrical Equip. Index for Sealed Beam Headlamp article for complete data on removal and adjustment

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (1942):** Vibrating, thermostatic type. Mounted on lighting switch. NOTE—Fuse used to protect lighting circuits on 1941 cars.

**FUSES:** Lighting (1941)—30 ampere. On back of lighting switch (circuit breaker used on 1942 cars). Clock—2 ampere. In connector behind clock. Simplimatic Transmission Control—30 ampere. Under relay on left side of dash. Direction Signal—30 ampere (1941), 9 ampere (1942). In wire fuse connector behind instr. panel.

**HORNS:**—Dual. Auto-Lite HO or HT-5003 with relay. Current Draw—35-40 amperes.

**Horn Relay:** Auto-Lite Model HRC-4001 (1941-42), HRL-4001 (Late 1942). NOTE—HRL-4001 is special type relay with winding connected through ignition switch so that horns operative only with ignition "on".

Contacts Close—1.5-3.0 volts. Open—.5 volt.  
Contact Gap—.026". Air Gap—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS (1941):** Six cylinder, "L" head type. Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{1}{4}$ ". Displacement—228.1 cu. ins. Rated HP—27.34. Developed Horsepower—105 HP (Std. 6.8-1 head), 108 HP (Optl. 7.2-1 hd.—Std. 7 pass.) at 3600 RPM. Compression Ratio and Pressure—As follows:

Ratio	Pressure at 1000 RPM	At 125 RPM
6.8 or 6.5 iron	145-155 lbs.	115-125 lbs.
7.2-1 aluminum head	150-160 lbs.	120-130 lbs.

Vacuum Reading—Steady 18-20" idling (below 1000'). See Chrysler Shop Notes for engine removal directions.

**ENGINE SPECIFICATIONS (1942):** Six cylinder, "L" head type. Bore—3 $\frac{7}{16}$ ". Stroke—4 $\frac{1}{4}$ ". Displacement—236.6 cubic inches. Rated HP—28.36. Developed Horsepower—115 at 3800 RPM. Compression Ratio—6.8-1 cast-iron head standard. Compression Pressure—160-170 lbs. at 1000 RPM or 125-135 lbs. at cranking speed. Variation 10 lbs. max. Vacuum Reading—18-21" steady idling at 6 MPH. Refer to Chrysler Shop Notes for Engine Removal data.

**PISTONS:** Aluminum alloy, U-slot, Cam-ground, tin-plated type (1941 & first 1942 Cars), Cast Iron, ribbed, Cam-ground type (Late 1942 Cars). Length—3 $\frac{3}{8}$ " (Aluminum), 3 $\frac{1}{2}$ " (Cast Iron). Weight—17.5 ozs. stripped (1941 Aluminum type). Removal—Pistons and rods removed from above. Clearance (1941)—Top .023". Skirt .0000-.0010". Clearance (1942 C.I.)—Top .016". Skirt .0008-.0018". Original Bore & Piston Sizes, Replacement Pistons:—Refer to Chrysler Shop Notes for sizes and markings. Fitting New Pistons:—Check piston size with micrometer at bottom of skirt 90° from pin bosses. With piston and wall dry, insert feeler between cylinder wall and piston (piston inverted, pin removed) 90° from pin bosses. Pull should be 10-15 lbs. on .0015" feeler (cast iron), 5-7 lbs. on .002" (aluminum). Installing Pistons:—Slot away from valves (alum.).

**PISTON RINGS (1941):** 4 rings above pin, #1 Compression (upper inner edge stepped), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	1 $\frac{1}{8}$ "	.007-.015"	.002-.004"
Comp. (#2)	1 $\frac{1}{8}$ "	.007-.015"	.0015-.0035"
Oil Control	5 $\frac{1}{32}$ "	.007-.015"	.001-.0025"

**PISTON RINGS (1942):** 4 rings above pin, #1 & 2 Compression (upper inner edge stepped), #3 & 4 Oil Rings (slotted type).

Ring	Width	End Gap	Side Clearance
Compr. #1	3 $\frac{1}{32}$ "	.007-.015"	.0025-.004"
Compr. #2	3 $\frac{1}{32}$ "	.007-.015"	.002-.0035"
Oil Control	5 $\frac{1}{32}$ "	.007-.015"	.001-.0025"

Replacement Rings:—Refer to Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2 $\frac{7}{8}$ ". Floating type. Pin hole in rod bronze bushed. Pin Fit in Piston—Loose thumb push fit at 70°F, pin should fall out if piston jarred (Cast Iron), thumb push fit at 130°F. (Aluminum Pistons). Pin Fit in Rod Bushing—Thumb push fit at 70°F. Replacement Pins:—Standard & .003", .008" oversize.

**CONNECTING ROD:**—Length—8". Weight—35.2 ozs. with bearings & bolts (1941). Lower Bearing Diameter—2 $\frac{1}{8}$ ". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes. Lower Bearing—Removable, precision type, thin babbitt. Clearance .001-.0015". Sideplay .0055-.0115". Bearing Adjustment: None (no shims). Replace bearings. See Chrysler Shop Notes for instructions. Replacement Bearings: See Chrysler Shop Notes. Installing Rods:—Oil metering hole to camshaft.

**CRANKSHAFT:**—4 bearings, 7 integral counterweights. For Crankshaft Oil Seal data refer to Chrysler Shop Notes.

Bearing Diameter—2 $\frac{1}{2}$ ". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes. Bearing Type—Removable, precision type, thin babbitt on steel. Clearance—.001-.0015". Bearing Adjustment:—Refer to Chrysler Shop Notes for Bearing Removal and Adjustment data. Replacement Bearings & Bearing Caps: Refer to Chrysler Shop Notes for complete data. End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007" (.003" desired).

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Refer to Chrysler Shop Notes for Camshaft Removal. Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block). Bearing Diameters—#1, 2", #2, 1 $\frac{31}{32}$ "; #3, 1 $\frac{15}{16}$ "; #4, 1 $\frac{1}{4}$ ". Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:**—Morse Type 1883N, No. 2661. Width 1". Pitch 500" (1 $\frac{1}{2}$ "). Length 24" or 48 links.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with straightedge across shaft centers.

**VALVES:** Specifications for each model as follows:

## Model S8 (1941)

Valve	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.340-.341"	4 25/32"
Exhaust	1 17/32"	.340-.341"	4 25/32"
Seat Angle Lift Stem Clearance			
All Valves	45°	3/8"	.0015-.0035"

## Model S10 (1942)

Valve	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.340-.341"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"
Seat Angle Lift Stem Clearance			
Intake	45°	3/8"	.0015-.0035"
Exhaust	45°	3/8"	.002-.004"

See Chrysler Shop Notes for Exhaust Valve Seat inserts.

**Valve Guides:**—Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block, ream to .3425-.3435".

**Valve Springs:**—Install with closely coiled end to top. Free length 2". Spring Pressure Length  
Valve Closed 40-45 lbs. 1 $\frac{3}{4}$ "  
Valve Open 107-115 lbs. 1 $\frac{1}{8}$ "

**Valve Lifters:**—Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", and .030". Lifter Clearance in Block—.000-.001".

## VALVE TIMING

**Tappet Clearance:**—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 12° BTDC. Close 44° ALDC.  
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.  
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 12° or .059" BTDC with 12th graduation before DC mark on impulse neutralizer aligned with pointer on chain cover. Reset tappet clearance .008" hot. NOTE—Permissible range on Intake Opening Point 5° to 17° BTDC. or .011" to .122" BTDC.

## LUBRICATION

**LUBRICATION:**—Pressure (pump on right of engine).

Refer to Chrysler Shop Notes for Oil Pump Removal.  
Normal Oil Pressure:—30-45 lbs. above 30 MPH.

**Oil Pressure Relief Valve:**—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Crankcase Capacity:**—5 quarts (refill).

**Crankcase Ventilator (1941 S8):** Positive type ventilator consists of ventilator housing and valve on side of block with tube connection to intake manifold. Air intake through filter in oil filler cap.

**CAUTION:**—If ventilator housing or tube plugged, excess air will bleed into intake manifold causing engine to idle fast and unevenly and will not permit slow idling.

**Servicing:**—Ventilator housing and tube should be cleaned every 20,000 miles (or 5,000 miles in severe service). Remove housing and tube, cleaning out all

sludge and carbon. Use cloth swab on end of wire to thoroughly clean tube. CAUTION—Do not overtighten nut on ventilator housing.

## COOLING

**COOLING SYSTEM:**—Capacity—18 quarts. Refer to Chrysler Shop Notes for Radiator Core Removal and Water Distribution Tube servicing.

**Water Pump:**—Packless type with grease fitting. See Water Pump Section for complete data.

**Thermostat:**—Bishop & Babcock or Fulton. On cyl. hd. Setting—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite (Motometer) Vapor Tension type. Auto-Lite No. H-9684 or H-9836 (1941), H-9924 (1942).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (Taxi) with 'Borglite' driven member. Assembly No. 957 or 938 (10A7), 952 (9A7), 931 (11A6) stamped on cover. Single plate, dry disc types. See Clutch Section for complete data.

**Facings:**—Molded-Woven, 2 used. Inside Diam. 7" (10A7), 6" (9A7), 6½" (11A6). Outside Diameter 10" (10A7), 9¼" (9A7), 11" (11A6). Thickness .125" (⅛").

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Removal:**—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

### OPTIONAL EQUIPMENT

**FLUID DRIVE:** Fluid coupling at rear of engine. See Miscellaneous Section for complete data.

## TRANSMISSION

### STANDARD

**TRANSMISSION (STD.):**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift. See Transmission Section for complete data.

**Transmission Control:**—Steering column shift. Manual type Std. Power Shift (vacuum type) Optl. See Transmission Section for complete data.

**Removal:**—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car.

## TRANSMISSION

### SIMPLIMATIC UNDERDRIVE TYPE

►1941-Early 1942 De Soto Simplimatic Underdrive: With Diaphragm type power unit.

See Transmission Section for complete data.

Control Relay—Auto-Lite Model HRE-4001.

►CAUTION—To correct "Ignition Cutting Out" and "Transmission Not Shifting" on 1941-Early 1942 cars, see Interrupter Switch Insulator and Transmission Re-

mains in First or Third (No Upshift) Special Service Notes in 1941-Early 1942 De Soto Simplimatic Underdrive Transmission article in Transmission Section.

►Late 1942 De Soto Simplimatic Underdrive: With Piston type power cylinder.

See Transmission Section for complete data.

Control Relay—Auto-Lite Model HRM-4001.

Governor Switch—Auto-Lite Model TG-4002R.

Solenoid Vacuum Valve—Auto-Lite SSJ-4001, 4001B.

Vacuum Piston Assembly—Auto-Lite VP-4001.

Air Cleaners—Auto-Lite No. SP-2472 (vacuum valve cleaner); SP-2481.

**Removal:**—Same as Std. transmission (above), plus the following: Remove floor board, wires from vacuum unit solenoid, interrupter and governor switches, hose from vacuum unit air cleaner to vacuum unit. Take out vacuum unit (disconnect pullout cable and return spring and remove pivot pin).

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2CR (5 pass.), Detroit-Universal Series 7200 (7 pass. & Canada).

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. Refer to Chrysler Shop Notes for servicing.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gear with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio (With Std. Trans.):**—4.1-1 (5 Pass. 1941), 3.9-1 (5 Pass. 1942), 4.3-1 (7 Pass. 1941-42).

**Ratio (With Simplimatic Trans.):**—3.54-1 (5 Pass. 1941), 3.54-1 or 3.73-1 (5 Pass. 1942), 3.91-1 (7 Pass. 1941-42).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car, remove rear wheels. Disconnect brake hose at frame bracket, lower ends of shock absorbers and rear universal. Disconnect Transverse Sway Bar at axle bracket. Support axle, remove rear spring hold-down clips, withdraw axle Assembly. NOTE—To remove carrier without disturbing housing, disconnect rear universal, remove axle shafts, take out carrier mounting screws.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158). NOTE—Use Tool C-358 to pull oil seal, drift C201 or 202 to install. **Wheel Bearing Adjustment:**—Controlled by shims between brake backing plates and flanged ends of housing. Remove brake backing plates (see above) and add or remove shims (equally on both sides) to give proper clearance. Endplay—.003-.008".

NOTE—Shims supplied .010", .0125", .030" thick.

## SHOCK ABSORBERS

**Domestic (1941):**—Delco Direct Acting, Hydraulic Domestic (1942)—Monroe No. 955029 (Front), 955030 (Rear), Direct Acting, Hydraulic type.

**Export:**—Delco Direct Acting, adjustable types. Front: 1142-D (all), Rear: 1140-W, Y (18" wheels). See Shock Absorber Section for complete data.

**Transverse Sway Strut (7 Pass.):** Rear Sway bar with Monroe 956790 direct acting hydraulic shock absorber built-in bar.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and direct acting shocks. See Front Suspension Section for complete data.

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Positive ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe-In:**—0-⅛" (1941), 0-1/16" (1942). Adjust by turning both tie rods equally.

**Steering Geometry:**—Outer wheel turned 20°, Inner wheel 22°0' (1941), 22° 1' (5 Pass. 1942), 21½° 1' (7 Pass. 1942).

## STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design) Model 305 (5 Pass. models), Model 335 "3-tooth" (7 Pass. Models) Worm-and-Roller type with push-pull adjustments.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See Brake Section for complete data.

**7 Passenger Service Brakes:**—Same design and size as used on Chrysler 8 Model C36. See 1942 Chrysler Eight Model C36 article for all data on 1942 7 Pass. Service Brakes.

**Drums:**—Cast-iron. Diameter 11".

**Lining:**—Molded asbestos. 2" wide. 13/64" thick. Length (front shoe) 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" Toe (top), .006" Heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—Refer to Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter 6", 7" (Simpl. Trans.).

**Lining:**—Moulded and compressed asbestos. Width 2" (All 1941 cars, 1942 cars with Std. Trans.), 2½" (1942 cars with Simplimatic Trans.). Thickness 5/32". Length 17 1/16" (1941 cars with Std. Trans.), 16 11/16" (1942 cars with Std. Trans.), 20½" 1941 cars with Simplimatic Trans.), 20" (1942 cars with Simplimatic Trans.).

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWD-5001, 5003 (1941); EWH-5001, 5003 (1942). Electric type with circuit breaker mounted on switch.

NOTE—EWD-5003, EWH-5003 used on Conv. Coupe. See Miscellaneous Section for complete data.

**Circuit Breaker:**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**CONVERTIBLE TOP CONTROL:**—Electric type.

See Miscellaneous Section for complete data.

**Top Control Motor:**—Auto-Lite Model EWG-4002 (1941), EWG-4003 (1942).

**Top Control Relay:**—Auto-Lite Model HRF-4001.

**WINDOW REGULATORS:** Hydro-electric type (hydraulic actuation with motor driven hydraulic pump). See Miscellaneous Section for complete data.

**Window Regulator Motor:**—Auto-Lite MBO-4002.

**Motor Switch:**—Auto-Lite Model SSG-4002.

**HOOD LOCK, FRONT END SHEET METAL & OIL PAN REMOVAL:** See Chrysler Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On left front door hinge post.

1946 Detroit Numbers—S11S Deluxe 6,154,001 Up, Custom S11C 5,784,001 Up, S11 Taxicab 5,102,501 Up.

1947 Detroit Numbers—S11S Deluxe 6,172,863 Up, Custom S11C 5,825,875 Up, S11 Taxicab 5,105,414 Up.

1948 Detroit Numbers—S11S Deluxe 6,190,370 Up, Custom S11C 5,885,816 Up, S11 Taxicab 5,110,108 Up.

**ENGINE NUMBER:** Stamped on boss on left side of block between #1 and #2 cylinders.

### TUNE-UP

**COMPRESSION:** Pressure—125-135 lbs. (100 lbs. min.) at cranking speed of 150 RPM. or 155-165 lbs. at 1000 RPM. (for Std. 6.6-1 Cast Iron Head).

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4

**SPARK PLUGS:** Auto-Lite Type A5. 14 mm. Metric. Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle—38° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At Top Dead Center.

**Timing Mark—Vibration Dampener** marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual (octane selector) adjustment as follows:

**Manual (Octane Selector) Adjustment—Set** for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—Set** idle adjusting screw for smooth idling with warm engine (Carter— $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open), turn screw out for richer mixture. Idle speed 6 MPH. (450-475 Eng. RPM. with Hydraulic Trans.).

**Float Level (Carter B&B)—Top** of float (not seam)  $\frac{5}{64}$ " (for EX1 carb. on cars with Std. Trans.),  $\frac{1}{16}$ " (for EV1 carburetor on cars with Hydraulic Transmission), plus or minus  $\frac{1}{64}$ " below top edge of bowl.

**Float Level (Stromberg)—Fuel level**  $\frac{5}{8}$ " below top of bowl (even with bottom of inspection hole).

**Accelerating Pump—Center Hole** (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.

**Fuel Pump Pressure— $3\frac{1}{2}$ -5 $\frac{1}{2}$  lbs.**

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx.  $\frac{3}{4}$  turn, not over one turn or under  $\frac{1}{2}$  turn, hook end on stop stud.

**VALVES:** See Valve Timing.

**Tappet Clearance—.008"** Intake, .010" Exhaust, Hot. NOTE—Tappet adjusting screws are self-locking

**STARTING:** See Battery, Starter, Generator, and Regulator.

### IGNITION

**IGNITION SWITCH:** Briggs & Stratton or Mitchelllock. NOTE—No armored cable used.

Briggs & Stratton—B & S Switch No. 85985.

Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).

Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800)

**COIL:** Auto-Lite No. IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket.

Ignition Current—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A. Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGS-4208-1. Full automatic advance type with auxiliary vacuum spark control and manual (octane selector) adjustment. Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #6. Breaker Gap—.020".

Cam Angle or Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

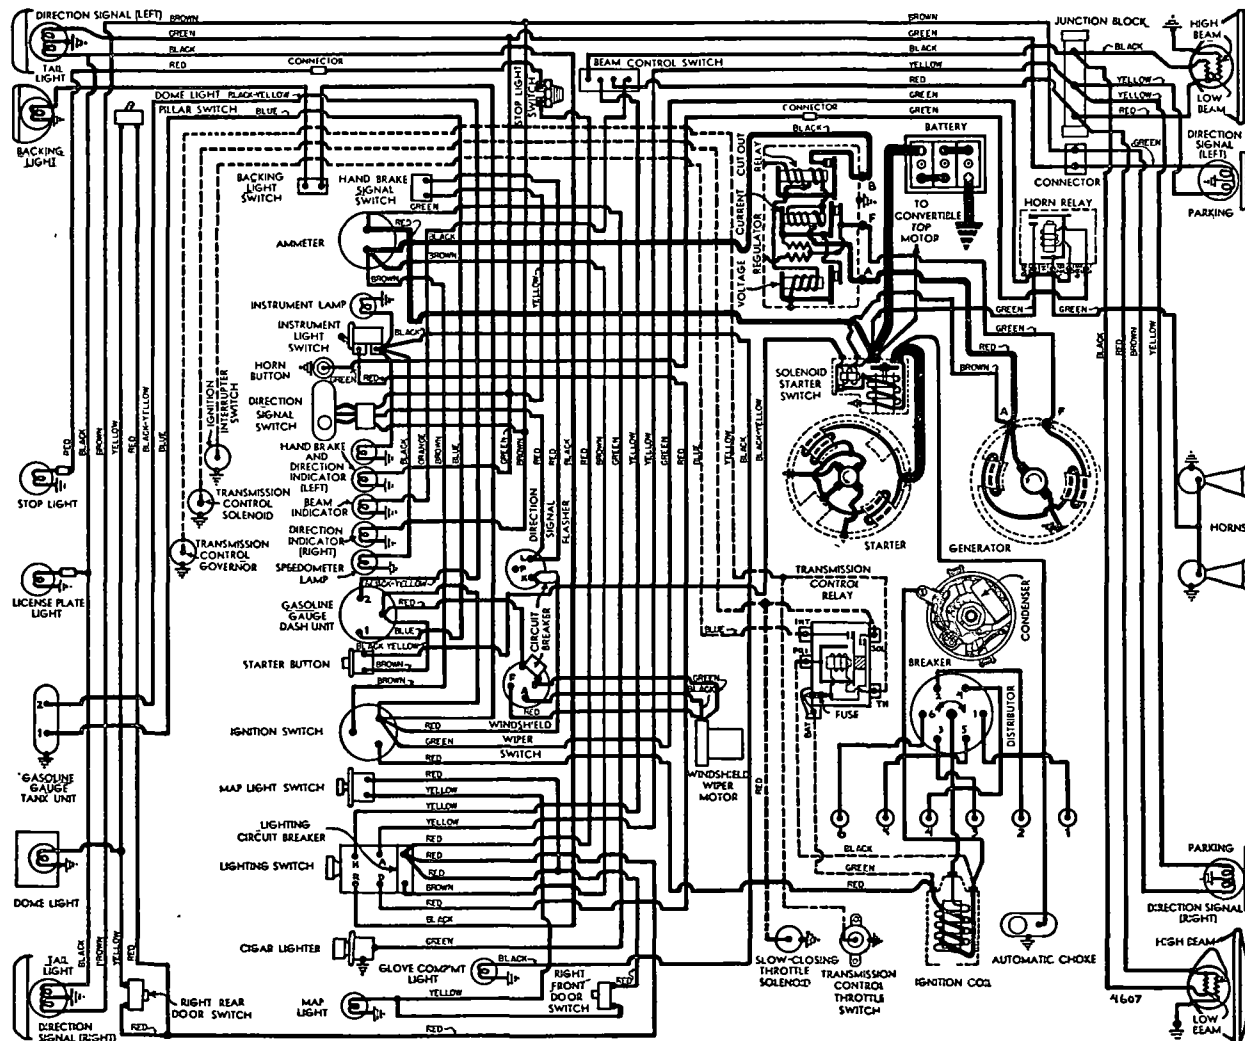

Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	770	12.....	1540
9.....	1150	18.....	2300
11.....	1400	22.....	2800

**Manual Adjustment—Provides** for minor changes in ignition timing at distributor. See Ignition Timing

**Vacuum Spark Control: Auto-Lite Unit.** On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5 $\frac{1}{8}$ "
1°.....	2°	6 $\frac{1}{8}$ "
3°.....	6°	9 $\frac{1}{8}$ "
5°.....	10°	12 $\frac{1}{2}$ "
6°.....	12°	14"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note:**—Install distributor with #1 piston in firing position (at TDC) and rotor opposite #1 segment in cap.

## IGNITION TIMING

**Std. Setting:**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees    Piston Position**

**All Engines** ..... 0° at TDC ..... 000° TDC  
NOTE—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as directed above).

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

## CARBURETOR

**CARTER (B&B)**

**Carter (B&B) EX1** ..... No Fluid Drive  
**Carter (B&B) EV1** ..... Fluid Dr. & Tiptoe Shift Trans. 1½" single barrel, downdraft type with Sisson automatic choke control. NOTE—EV1 has Slow-closing Throttle and Step-down Switch for Tiptoe Shift. See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

## CARBURETOR

**STROMBERG**

**Stromberg Model BXVD-3**. Stromberg No. 380218. Code No. 3-82. 1½" single barrel, downdraft type. See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Stromberg Jet Table in Carburetor Section for complete data.

## CARB. EQUIPMENT

**Fast Idle:** Throttle opened to fast idle position when choke valve closed. No adjustment.

**Slow Closing Throttle (Fluid Drive Cars):** Stromberg Adjustable Dashpot type or Carter (B&B) electromagnetic Dashpot type.

See Carburetion Equipment Section for complete data.

**Setting (Carter B&B)**—Not adjustable.

**Setting (Stromberg)**—With all slack removed from linkage, set adjusting screw on dash pot lever under float bowl so that piston travel is 5/16-11/32"

(measured on dash pot rod on bowl cover). Turn screw out to lengthen stroke, in to shorten.

**Automatic Choke:**—Sisson Type AC-758B.

See Carburetion Equipment Section for complete data.  
**Setting:**—With throttle ½ open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

**Air Cleaner:** AC No. 1542284 Heavy-duty oil-bath type. Filter Element AC No. 1544091.

**Servicing:**—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

**Fuel Pump:** AC No. 1539042 or Carter Type M594S or M639S. Diaphragm type fuel pumps.

**Replacement Pump:**—AC No. 577 (for 1539042).

**Pressure:**—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** New Oilite metal filter in tank.

**Servicing:**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite electric. No. NG-10891D (dash unit), No. NG-10862T (tank unit).

See Carburetion Equipment Section for complete data.

## BATTERY

**Willard Type SW-2-110**, 6 Volt, 17 Plate, 110 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal:**—Positive (+) to engine.

**Dimensions:**—Lgth. 10 3/16". W. 6 15/16". H. 9 5/16".

**Location:**—Under hood in left fender shield.

## STARTER

**Auto-Lite Model MAW-4025**. Armature MAW-2030.

**Drive:**—Solenoid pinion shift & overrunning clutch.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—150 RPM, 175 amperes, 5.4 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.	505
18. "	Lock	4.	670

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

**STANDARD**

**Auto-Lite Model GDZ-4801A**. Armature GDZ-2006F.

Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—None. See Regulator.

**Maximum Charging Rate:**—As given in tables below reached at approx. 25 MPH. car speed and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—GDZ-4801A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—35-53 ozs. (new brushes).

**Field Current:**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:** Disconnect wires, take out adjusting strap bolt and mounting bracket bolts.

**Belt Adjustment:** Loosen adjusting strap bolt, pull generator out until belt just snug, tighten bolt.

## GENERATOR

**SPECIAL EQUIPMENT**

**Auto-Lite GEG-4823A or GEG-4823B**. Armature No. GEG-2006F (both). Two brush (shunt) type with voltage and current regulation. Ventilated.  
SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

## REGULATOR

**Std.**—VRP-4401A, VRP-4501A, or VRP-4503A (VRP-4001A used on Canadian Cars).

**Spec. Equip.** (for GEG-4823A, B Gen.)—VRP-4001F or VRP-4401B. VRP-4005E used for negative ground. Vibrating type voltage and current regulators.

See Electrical Equipment Section for complete data.

**NOTE:**—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In:**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" Min. **Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting:**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap:**—.012" min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting (VRP-4001A, 4401A)**—34-36 amperes ("35").  
**Setting (VRP-4001F, 4005E, 4401B)**—39-41 amperes, marked "40".

**Setting (VRP-4501A, 4503A)**—35 amperes (42 amperes at 70°F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—

These current regulators are temperature-compensated and setting decreases with temperature rise in service as above.

**Checking (without breaking seals) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap:**—.012" min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

C NTINUED FR M PRECEDIN PAGE

**LIGHTING**

**Headlamps:** Corcoran-Brown "Sealed Beam" type. See *Electrical Equipment Section* for complete data.  
**Headlamp Adjustment:** Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator:** Red light on upper edge of panel above speedometer. Lighted with upper beams on.  
**Direction Signal:** Optl. See *Electrical Equipment Section*.  
**Direction Signal Indicators:** In upper corners of speedometer face. Left for left turn, Right for right turn.  
**Direction Signal Flasher:** De Soto No. 1161586.

**Switches**

**Lighting:** De Soto No. 1149863.  
**Instrument:** De Soto 976098 (early), 1154278 (late).  
**Beam Selector:** DeSoto No. 859974.  
**Map Light:** DeSoto No. 1149306.  
**Stop Light:** DeSoto No. 920355.  
**Dome Lamp Pillar:** DeSoto No. 317180.  
**Door Switches:** DeSoto No. 882943.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	45-35 watts. Sealed Beam	
Park & Tail (no Dir. Signal)	3	63
Front Dir. Sig. & Parking	21-3	1158
Rear Dir. Sig. & Tail	21-3	1158
Stop Light	21	1129
Rear License	3	63
Indicators, Ign. Sw., Glove	1	51
Instrument, Map Light	3	63
Dome①	15	87
①—Convertible (Quarter Lights) 6 cp. No. 81, 7 Pass. & Limo. (Pillar Lights) 3 cp. No. 63.		

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.  
**Direction Signal:** On flasher behind instrument panel. Vibrating type. Protects direction signal.  
**Windshield Wiper:** Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**FUSES:** Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender. Clock—2 ampere. In clock lead wire.

**Horns:** Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Model HRL-4101. Connected through ignition switch, operates only when "on".  
**Contacts Close:** 1.5-3.0 volts (seal to core with 4.0 volts maximum).  
**Contacts Open:** .5 volt min. (open from seal).  
**Contact Gap:** .026". **Air Gap:** .016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

**ENGINE**

**ENGINE SPECIFICATIONS:** Six cylinder, "L" head.  
**Bore:** 3 7/16". **Stroke:** 4 1/4".  
**Displacement:** 236.6 cu. ins. **Rated H.P.:** 28.38.  
**Developed Horsepower:** 109 at 3600 RPM.  
**Compression Ratio:** 6.6-1 std. cast-iron head.  
**Compression & Vacuum Reading:** See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Chrysler Shop Notes*.

**OIL PAN REMOVAL:** See *Chrysler Shop Notes*.

**ORIGINAL BEARING SIZES:** See *Chrysler Shop Notes*.

**ENGINE REMOVAL:** See *Chrysler Shop Notes*.

**TIGHTENING TORQUE:** See *Chrysler Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Chrysler Shop Notes*.

**PISTONS:** Aluminum alloy, U-slot, cam ground type.  
**NOTE:** Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).  
**Length:** 3 3/8". **Weight:** 18.5 ozs. (stripped).

**Clearance:** .0008" on thrust face 3/4" from bottom of skirt. Ring land diameter .0305" larger than skirt.  
**Removal:** Pistons and rods removed from above.

**Fitting New Pistons:** Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x 1/2" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70° F.).

**Replacement Pistons:** See *"Pistons" in Chrysler Shop Notes*.

**NOTE:** Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .005" require reboring and honing to limits listed above.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"
<b>Installing Rings:</b> #1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.			

**Replacement Piston Rings:** See *Chrysler Shop Notes*.

**PISTON PIN:** Diameter 55/64". Length 2 7/8". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston:** Thumb push fit (piston at 160°).

**Pin Fit in Rod Bushing:** Thumb push fit at 70° F.

**Replacement Pins:** Std., .0006", .003", .008" oversize.

**CONNECTING ROD:** Length 8". Weight 34.1 ozs. with bolts less bearings.

**Lower Bearing Diameter:** 2 1/8". See *"Original Bearing Size" in Chrysler Shop Notes*.

**Lower Bearing:** Removable, precision type, thin babbitt on steel.

**Clearance:** .0005-.0015". **Sideplay:** .005-.012".

**Bearing Adjustment:** None (no shims). Replace bearings. See *"Connecting Rods & Bearings" in Chrysler Shop Notes*.

**Replacement Bearings:** See *"Connecting Rods & Bearings" in Chrysler Shop Notes*.

**Installing Rods:** Oil metering hole toward camshaft.

**CRANKSHAFT:** 4 bearing, 7 integral counterweights with vibration dampener on front end.

**Crankshaft Front & Rear Oil Seals:** See *"Crankshaft and Main Bearings" in Chrysler Shop Notes*.

**Bearing Diameter:** 2 1/2". See *"Original Bearing Size" in Chrysler Shop Notes*.

**Bearing Type:** Removable, precision type, thin babbitt on steel. No shims.

**Clearance:** .0005-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. See *"Crankshaft and Main Bearings" in Chrysler Shop Notes*.

**Replacement Bearings:** See *"Crankshaft and Main Bearings" in Chrysler Shop Notes*.

**End Thrust:** Taken by flange faces on rear (#4) main bearing. End Play—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Bearing Diameters:** #1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearing Type:** Removable, steel-backed, babbitt-lined bushings (except #4 machined in block).  
**Clearance:** .001-.003" (#1), .0015-.0035" (all others).

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Camshaft Removal:** See *"Camshaft & Bearings" in Chrysler Shop Notes*.

**Timing Chain:** Width 1". Pitch .500" (1/2"). Length 24" or 48 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3385-.3395"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.003-.005"

**Exhaust Valve Seat Insert Servicing:** See *"Valve System" in Chrysler Shop Notes*.

**Valve Guides:** Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block (tool CM-83), finish ream to .3425-.3435".

Valve Springs:	Free length 2"	Spring Pressure	Length
Valve Closed	40-45 lbs.	13 1/4"	
Valve Open	107-115 lbs.	1 1/8"	

**Valve Lifters:** Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".  
**Lifter Clearance in Block:** .000-.001".

**VALVE TIMING**

**Tappet Clearance:** .008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. **NOTE:** Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves:** Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves:** Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check:** With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot.

**LUBRICATION**

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump mounted externally on right side of crankcase.

**Crankcase Capacity:** 5 quarts (refill).

**Normal Oil Pressure:** 45-55 lbs. above 30 MPH.

**Oil Pressure Relief Valve:** Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Oil Pump:** New "Rotor" type on right side of engine. **Servicing:** See *"Oil Pump" in Chrysler Shop Notes*.

**Oil Filter:** On left side of engine above starter.

**Servicing:** Replace element at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. G-10888 (not elec.).

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.  
Capacity—17 quarts.

**Radiator Core Removal:** See "Radiator" in *Chrysler Shop Notes*.

**Water Distribution Tube Servicing:** See "Cooling System" in *Chrysler Shop Notes*.

**Water Pump:** Packless type with grease fitting.

See *Water Pump Section for complete data*.

**Removal:** Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment:** See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head water outlet.

**INSTALLATION NOTE:** Install thermostat with 2 ports facing front, and 2 ports facing rear.

**Setting:** Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite No. H-10890 (not elec.).

## CLUTCH

**Borg & Beck Model 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (Taxi).** Single plate, dry disc type with "Borglite" driven member.

**NOTE:** Cover assembly marked 952 (9A7), 957 (10A7), 931 (11A6).

See *Clutch Section for complete data*.

**Facings:** Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9 1/4"	125" (1/8")
10A7	7"	10"	125" (1/8")
11A6	6 1/2"	11"	125" (1/8")

**Pedal Adjustment:** Should just clear toeboard (adjust stop screw on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Clutch Over-Center Spring:** See "Clutch Notes" in *Chrysler Shop Notes for setting procedure*.

**Removal:** Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

**DeSoto:** Fluid coupling at rear of engine. Optl. See *Miscellaneous Section for complete data*.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

### STANDARD

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See *Transmission Section for complete data*.

**Transmission Control:** Manual steering col. shift.

See *Transmission Section for complete data*.

**Removal:** Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift

used). Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. **NOTE:** Use pilot studs when installing assembly.

## TRANSMISSION

### OPTIONAL EQUIPMENT

**Tip-Toe Shift Type (with Fluid Drive).** New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control.

See *Transmission Section for complete data*.

**Transmission Control:** See Transmission article for adjustment instructions.

See *Transmission Section for complete data*.

**Kickdown Solenoid:** Auto-Lite No. SSS-4002.

**Kickdown Relay:** Auto-Lite No. HRM-4102.

**Governor:** Auto-Lite No. TG-4202R, 3R, or 4R.

**Kickdown Switch:** Part of carburetor assembly.

**Ignition Interrupter Switch:** On right side of transmission above Governor.

**Fuse:** 30 ampere. On Kickdown Relay.

**Transmission Oil:** 3 pints, 10-W engine oil.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

**INSTALLATION CAUTION:** Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

## UNIVERSALS

**Detroit Universal Series 7200.** Cross type with roller bearings. See *Universals Section for complete data*.

**Propeller Shaft Center Bearing:** Used on 7 passenger. See "Propeller Shaft" in *Chrysler Shop Notes*.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Axle Ratios**

Serial Nos. 5821234 to 5821693.

**Backlash:**—.006-.010". Screw adjustment.

**Removal:** Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws. **Axle Shaft Removal:** Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). **NOTE:** Use puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Outer Seal:** New leather type mounted on brake support (backing plate).

**Oil Seal Servicing:** See "Rear Axle" in *Chrysler Shop Notes*.

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

**Delco:** Model 1030-C (Front), 1030-T (Rear).

**Monroe:** Model K-11148 (Front), K-11149 (Rear).

**Export:** Delco Model 942D (front), 940W (rear).

Direct acting, hydraulic types.

See *Shock Absorber Section for complete data*.

**Hydraulic Transverse Sway Absorber:** Rear sway bar with built-in shock absorber used on 7 Pass. Sedan. See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

**Front Suspension:** Independent linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

**Kingpin Inclination:** 4 3/4° to 6°.

**Camber:** Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster:** Negative 1° to Positive 1°. Not adjustable.

**Toe In:** 0-1/16". Turn both tie rods equally.

**Steering Geometry:** Inner wheel 22 1/2°, Outer 20°.

## STEERING GEAR

**Own Make.** (Gemmer design) Model 305 (All except 7 Pass. & Suburban Sedan), Model 335 (7 Pass. & Suburban Sedan).

**NOTE:** See Gemmer 305 & 335 article for data.

See *Steering Gear Section for complete data*.

## BRAKES

**Service:** DeSoto "Safe-guard" Lockheed Hydraulic

**Front Wheels:** Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels:** Double anchor type with single double-acting wheel cylinder.

See *Brake Section for complete data*.

**Wheel Cylinders:** 1 1/8" bore. Single acting (front), double acting (rear wheels).

**Drums:** Cast-iron. Diameter 11" (12" on 7 pass.).

**Lining:** Molded Asbestos. 2" Wide. 13/64" thick.

**Length per shoe:** 11" type—8 7/8" (rear wheel rear shoe), 11 1/2" (all others). 12" type—9 5/8" (rear wheel rear shoe), 12 9/16" (all others).

**Clearance:**—.006" at each end of all shoes.

**Braking Power:**—60% front wheels, 40% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:** See "Hand Brake" in *Chrysler Shop Notes*.

**Drum:** Cast-iron. 6" (7" Tip-Toe Shift & 7 Pass.).

**Lining:** Width 2" (2 1/2" on 7" type). Thickness 5/32".

**Length:** 16 11/16" (20" on 7" type).

**Clearance:**—.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See *Miscellaneous Section for complete data*.

**Circuit Breaker:** Vibrating, thermostatic type.

Starts to operate with current of 12 amperes.

**CONVERTIBLE TOP CONTROL:** Electric type.

See *Miscellaneous Section for complete data*.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—4,015,051 (Detroit), 9,405,681 (Canada). On right front door hinge pillar post.

**ENGINE NUMBER:**—First Number—D2-1001. Stamped on boss on left side of cylinder block between #1 and #2 cylinders. See *Chrysler Shop Notes* for engine number lettering data (denoting special bore and bearing sizes).

## TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std. cast-iron head. No optl. ratios.

Pressure—135-145 lbs. at 1000 R.P.M. or approx. 110 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 16-18" with engine idling at 7-8 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8. 14 mm. Metric type.

Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 38° (closed).

Automatic Advance—12° max. at 1530 RPM (IGS-4002-1), 1750 RPM (IGS-4002A-1), Distr. ° & RPM. Vacuum Advance—8° distr. with 12" vacuum (IGS-4002-1), 15" vacuum (IGS-4002A-1).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° ATDC. with 4° mark after dead center "0" mark on fan pulley at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw midway between "miss" and "roll" points. Idle speed 7-8 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top of bowl.

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure:  $4\frac{1}{4}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Int., .008" Exh., with engine hot. .010" Exh., recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, Type 6508. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne Mod. DP-108, Mitchell No. 6286.

**COIL:** Auto-Lite Model IG-4628. Service coil (less Switch & Cable) IG-3224JS.

Ignition Current—2½ amperes idling, 5½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4002-1, 4002A-1. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**NOTE:**—IGS-4002-1 distributor used up to Engine No. D2-110250, IGS-4002A-1 after this number. See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to *Electrical Equipment Index*. Breaker Gap—Set at .020". Limits .018-.020".

Cam Angle or Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance—IGS-4002-1 Distributor Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	780	12.....	1560
9.....	1160	18.....	2320
12.....	1530	24.....	3060

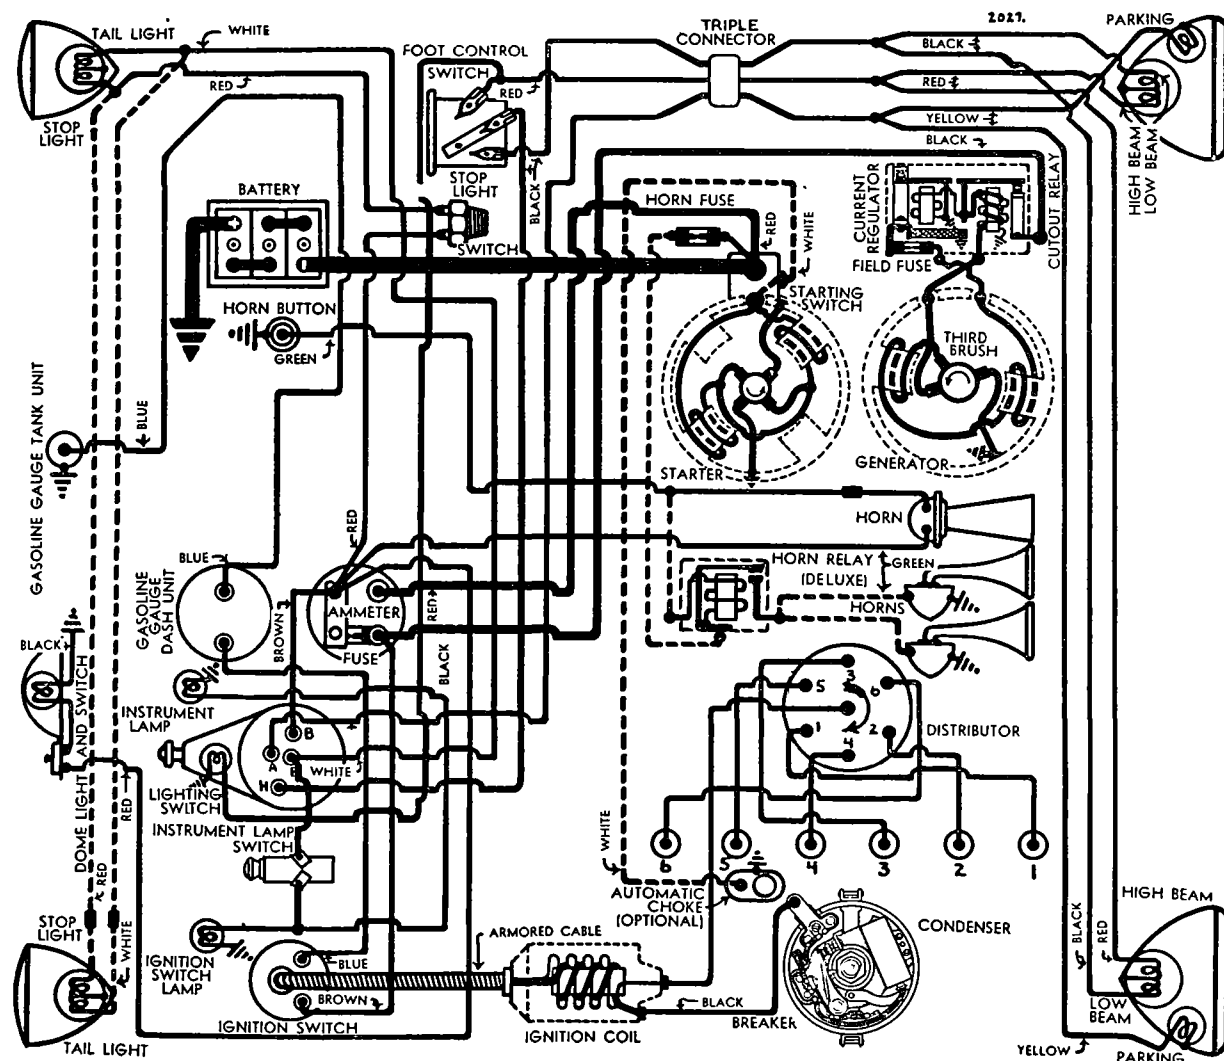

Automatic Advance—IGS-4002A-1

3.....	400	6.....	800
6.....	850	12.....	1700
9.....	1300	18.....	2600
12.....	1750	24.....	3500

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all

speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance—IGS-4002-1		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2°	4°	6¾"
4°	8°	8½"
6°	12°	10¼"
8°	16°	12"

2°	4°	7⅝"
4°	8°	10"
6°	12°	12½"
8°	16°	15"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degrees Piston Pos.

All engines .....4° ATDC......0068° ATDC

See 'Manual Adjustment' (following) for final setting for best performance depending on fuel used.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. Turn engine over until #1 piston is 4° or .0068" past top dead center, stop when fourth graduation to left of center 'O' mark on fan pulley at front of engine lines up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until lamp goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light at fan pulley, fill in 4° mark to left of center 'O' mark with chalk or white paint.

**Manual Adjustment:**—After ignition set as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10 to 30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EXV-2, 1¼" downdraft type. See Carburetion Section for adjustment, overhaul, and Jet Specifications.

For complete data, refer to Carburetor Index.

**NOTE:**—Do not adjust carburetor until engine is warmed up so that engine will idle at hot or slow idling speed with choke valve wide open.

**Idle Adjustment:**—Adjust throttle stopscrew so that idle speed is 7-8 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Engage pump link in proper hole in throttle lever as follows:

**Inner Hole:**—(Min. stroke)—Extremely warm weather.

**Center Hole:**—Normal summer temperatures.

**Outer Hole:**—(Max. stroke)—Winter temperatures.

**NOTE:**—5% and 10% lean main metering jets (high altitude calibration) may be used at lower altitudes for maximum fuel economy although with considerably reduced speed and power. See Stromberg Jet Specifications in Carburetion Section.

**Throttle Cracking:** Throttle opened approx. one-third when starter pedal depressed. This setting should be checked and adjusted when checking automatic choke.

**Fast Idle:**—No adjustment required. Throttle stopscrew should rest on high point of cam.

**Automatic Choke:** Sisson Type AC-751B.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525919 oil-wetted type standard, #1526712 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type D #1522237 (early cars), #1522995 (later cars) diaphragm types.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Motometer Electric. No. NG-7687-T (tank unit), NG-7720-D (dash unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—Willard, Type WT-1-15, WT-1-90 (Export). 6 volt, 15 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity:**—117 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—On left side under driver's seat.

**R-2-15 (Special Export):**—6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity:**—127 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.3 minutes.

## STARTER

**Auto-Lite Model MAW-4010, MAW-4011 (RHD).**

**Armature No. MAW-2030.**

**Drive:**—Positive shift outboard pinion.

**Cranking Engine:**—Approx. 175 amperes at 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	4900.....	5.5.....	65
.60 " .....	3300.....	5.5.....	100
2.75 " .....	1480.....	5.0.....	200
5.45 " .....	820.....	4.5.....	300
8.50 " .....	400.....	4.0.....	400
11.55 " .....	110.....	3.5.....	500
11.5 " .....	Lock.....	3.0.....	505
18.0 " .....	Lock.....	4.0.....	670

**Removal:**—Flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws.

**Starting Switch (MAW-4010):**—SW-2813. Mounted on starter field frame and operated by pinion shaft (starting pedal). See Equipment Section for pedal adjustment.

**(MAW-4011):**—Solenoid Switch Type SS-4104. Controlled through relay by pushbutton on dash. Operative with ignition turned 'on'.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch

Closes against 105 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close:**—3.5-4.5 volts. **Open:**—1.5-2.5 volts.

**Contact Gap:**—.025-.030". **Air Gap:**—.005-.007" (closed).

## GENERATOR

### STANDARD

**Auto-Lite Model GAR-4608A-5 or 4608E-5. Armature GAR-2116F.** Third brush control with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

**Commutator Bar Method:**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate:**—As given above. Do not exceed.

### Performance Data

Cold — Regulator Contacts Closed — Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0 .....	6.4 .....	800	0 .....	6.4 .....	825
4 .....	6.8 .....	950	4 .....	6.8 .....	1000
8 .....	7.25 .....	1100	8 .....	7.25 .....	1200
12 .....	7.7 .....	1275	12 .....	7.7 .....	1440
16 .....	8.1 .....	1525	16 .....	8.1 .....	1825
21 .....	8.6 .....	2400	18.5 .....	8.35 .....	2500

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24 ozs. min. (old brushes), 36 ozs. max. (new brushes).

**Field Current:**—3.51-3.89 amperes at 6.0 volts.

**Motoring Current:**—5.03-5.57 amperes at 6.0 volts.

**Field Fuse:**—5 ampere in plug on regulator case.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until 45-50 lb. reading on scale attached to generator frame.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generator' article for complete data on special generators and regulators which may be found on these cars.

## REGULATOR

**Auto-Lite Model TC-4301A. "Two-Charge" Type.** On generator. Consists of Cutout Relay & Current Regulator (two-rate charging control). See article in Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In:**—6.5-7.25 volts.

**Cuts Out:**—5-2.5 ampere discharge current.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDIN PAGE

## Current Regulator

Contacts Open—8.25-8.75 volts at 70° F.  
 Contacts Close—1.2-1.4 volts below opening point.  
 Contact Gap—.005" minimum.  
 Air Gap—.045" with contacts closed.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran Brown, Pro-focused type. Headlamps aimed straight ahead (upper beam with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch.

Headlamp Beam Indicator—In light switch knob. Lighted when headlamp upper beams in use.

## Switches

Lighting—Dodge Part No. 652143. Douglas Switch which is available only through Dodge Parts Dept.  
 Foot Selector—Clum Model 9654.

Stop Lamp—R.B.M. Model 910. Hydraulic type mounted on brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instr., Indicator	1½	55
Stop and Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 ampere on back of ammeter.

Generator Field—5 ampere in plug on regulator case.

Twin Horns—30 ampere in connector near starter.

**HORNS:**—Auto-Lite Model HA-4018 Std. Klaxon Model K-33-C Type 2151 (low note), 2152 (high note) Optl. (with horn relay).

Horn Type	Current at 6 volts	Air Gap
2151 (low note)	11-13	.042-.046"
2152 (high note)	10-12	.032-.036"

Horn Relay:—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amperes.

Contact Gap—.015-.025".

Air Gap—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

Bore—3¼". Stroke—4¾".

Displacement—217.8 cubic inches.

Rated Horsepower—25.35 (AMA).

Developed Horsepower—87 HP at 3600 R.P.M.

Compression Ratio—6.5-1 Std. cast-iron head. No optl. ratios.

Compression Pressure—135-145 lbs. at 1000 R.P.M. or approx. 110 lbs. at cranking speed.

Vacuum Reading—Gauge should show steady reading of 16-18" with engine idling at 7-8 M.P.H.

**PISTONS:**—Aluminum alloy, Invar strut, slotted skirt Length—3 11/16".

Weight—Held to two gram max. variation.

Removal—Pistons and rods removed from above.

Clearance—Top .022". Bottom .0015-.002". See Fitting New Pistons.

**Replacement Pistons:**—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished: (1) standard to .023" oversize, (2) .025-.050" oversize, not interchangeable. Pistons should be slotted and then finished to correct fit.

**Fitting New Pistons:**—Micrometer gauge recommended. Using feeler gauge (.002") inserted between piston and cylinder wall on side opposite slot, pull required to withdraw feeler must be 7-10 lbs.

**Installing Pistons:**—Slot should be toward left or away from camshaft.

**PISTON RINGS:**—Two undercut compression rings, two oil control rings per piston, all above pin. Lower ring grooves drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. all	⅛"	.007-.015"	.001-.003"
Oil (both)	5/32"	.007-.015"	.003-.005"

**Replacement Rings:**—Furnished in standard and .003", .010", .020", .030", .040", .050", .060" oversizes. NOTE—Install compression rings with step down.

**PISTON PIN:**—Diameter—55/64". Length—2¾". Pin floats in piston and rod. Held by retaining rings. Pin hole in rod is bronze bushed.

NOTE—Heat piston in boiling water to remove or install pins.

Pin Fit in Piston—Tight thumb push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Tight thumb push fit with piston and rod at 70° F.

**Replacement Pins:**—Pins furnished in standard and .003", .005", .008" oversizes. Ream rod bushing and pin holes in piston bosses for correct fit.

**CONNECTING ROD:**—Weight All rods held to ¼ oz. maximum variation. Length—7 15/16".

Crankpin Journal Diameter—2 1/16".

Lower Bearing—Steel-backed, copper-lead lined, interchangeable. Furnished standard and .010" undersize.

Clearance—.001-.003". Sideplay .0055-.0115".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings with bosses engaging grooves in rod and cap.

**Installing Rods:**—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5) and toward front (#2, 4, 6). Oil hole in lower bearing upper half must be toward camshaft.

**CRANKSHAFT:**—4 bearing. Integral counterweights.

Journal Diameters—2½" for all bearings.

Bearing Type—Removable steel-backed, babbitt-lined (#1 and 4), copper-lead or cadmium-nickel (#2 and 3). Furnished standard and .010" undersize.

Clearance—(#1 and 4) .001-.002". (#2 and 3) .0015-.0025".

Bearing Adjustment:—None (no shims). Replace

bearings. For Front Main Bearing Cap Removal and Bearing Adjustment data, refer to Chrysler Shop Notes.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) bearing. Endplay .003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2"; #2, 1 13/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined (except #4 machined in crankcase).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

NOTE—New bearings require no line-reaming.

**End Thrust:**—Taken by thrust plate at rear of sprocket hub. Endplay .002-.006".

**Timing Chain:**—Morse. Width 1". Pitch .500". Length 24" or 48 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers. Install chain endless.

NOTE—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

VALVES:	Head diam.	Stem diam.	Length
All valves	1 15/32"	.340-.341"	4 25/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.001-.003"
Exhaust	45°	5/16"	.003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

**Valve Guides:**—Use special tool to remove and install guides. Insert guides with taper end up (intake) and down (exhaust). Top of guide must be ⅞" below top of block. Finish ream new guides to inside diameter of .342-.343" (Int.), .344-.345" (Exh.).

**Valve Springs:**—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than 1⅞".

	Spring Pressure	Spring Length
Valve Closed	34-38 lbs.	1¾"
Valve Open	77-83 lbs.	1 7/16"

**Valve Lifters:**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .008 Exh. (hot). .010" Exh. recommended for sustained high speed.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 6° ATDC. Close 46° ALDC.

Exhaust Valves—Open 42° BLDC. Close 8° ATDC.

**To Check Valve Timing:**—Install regular timing gauge in timing plug hole over #6 piston, set tappet clearance #6 valves at .011" (intake), .012" (exhaust). Intake valve should open with piston .015" past top dead center, and exhaust valve close with piston .027" past top dead center. Reset tappet clearance at .006" Int., .008" Exh., hot.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump located at right of crankcase.

**NOTE**—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure**—30-40 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left hand side of crankcase. Operates at 40 lbs. Adjustable by changing spring. Stand. spring unpainted. Heavy spring (to increase pressure) painted green. Lighter spring (to decrease pressure) painted red.

**Crankcase Capacity**—5 qts. (refill).

## CLUTCH

**CLUTCH:**—Borg & Beck Model 10A6. Single plate, dry disc type. *See Clutch Section for complete data.*

**Facings**—Woven (pressure plate side), molded (flywheel side), Inside Diam.  $6\frac{1}{8}$ ". Outside Diam.  $9\frac{3}{8}$ ". Thickness  $\frac{1}{8}$ ".

**Adjustment**—Clutch pedal should just clear underside of toe board with clutch engaged. To adjust, turn stopscrew located just above clutch pedal shaft. Free movement of pedal should be  $1\frac{1}{16}$ ". To adjust, loosen locknut and turn adjusting nut (clevis) on clutch fork adjusting rod.

**NOTE**—Mark clutch cover and flywheel before disassembling and reassemble in same position.

**Removal**—Disconnect clutch pedal linkage, remove fork pivot screw, take out clutch fork. Remove transmission (release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Automatic Clutch:**—See article in Clutch Section.

*See Clutch Section for complete data.*

## TRANSMISSION

**Own Make.** All helical gear type with constant-mesh, synchro-mesh helical gears for Second and High.

*See Transmission Section for complete data.*

**Removal:** Remove floor boards. Disconnect battery ground cable, speedometer cable, and drive shaft at universal joints. Remove gearshift lever and housing assembly. Remove hand brake lever and brake drum assembly. Disconnect clutch release fork and linkage and spring (to allow fork to clear clutch release bearing as transmission removed). Remove mounting bolts (insert two pilot studs in top mounting holes to support transmission as it is withdrawn), pull transmission straight back to clear clutch shaft and remove from car.

## UNIVERSALS

**Detroit Series 4200.** Roller bearing, Ball-and-Trunion type. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**Own Make.** Spiral Bevel or Hypoid Gear, semi-floating type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.125-1 (Sedans), 3.88-1 (Coupes), 4.33-1 (7 Pass. Sedans).

**Backlash**—.006-.008". Screw adjustment.

**Removal:** Remove wheel, hub and drum assembly (use screw type hub puller). Disconnect brake line, remove backing plate and oil seal assembly, pull axle shaft and bearing (use puller), disconnect drive shaft at rear universal joint. Take out mounting screws and withdraw differential carrier assembly.

**NOTE**—Bleed brake line after rear axle re-installed and brake line connected.

**Wheel Bearing Adjustment**—Endplay controlled by shims between backing plate and flanged end of axle housing. Adjust by adding or removing shims equally at both sides. Shims accessible by removing wheel hub, drum, backing plate and oil seal (see Removal data above). Check endplay with dial indicator.

**Endplay**—.003-.008".

## FRONT SUSPENSION

**Front Suspension:**—Conventional tubular section axle (Reverse-Elliott ends), semi-elliptic springs.

**Kingpin Inclination**— $9\frac{1}{2}$ ° crosswise (limits 9-10°),

**Caster**—2° (1-3°). Adjust by inserting wedge plates between springs and axle pads. Wedges available in  $\frac{1}{2}$ , 1, 2° angles.

**Camber**— $\frac{1}{2}$ ° ( $\frac{1}{4}$ - $\frac{3}{4}$ °). No adjustment. Replace tubular axle if camber is out more than  $\frac{1}{2}$ °.

**Toe In**—0- $\frac{1}{8}$ ". Adjust in usual manner by loosening tie rod end clamps and rotating tie rod.

## STEERING GEAR

**Steering Gear:** Gemmer Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies brake at rear of transmission or rear wheel service brakes (on 7 pass. *See Brake Section for complete data.*

**Wheel Cylinders**—Diameters, Front Wheel (Front end  $1\frac{1}{4}$ ", Rear end  $1\frac{3}{8}$ "). Rear Wheel (Front end  $1\frac{1}{8}$ ", Rear end  $1\frac{1}{4}$ ").

**NOTE**—Wheel cylinders marked 'R' right side of car, 'L' left side of car. Not interchangeable.

**Drum Diameter**—10".

**Lining**—Moulded type. Width 2". Thickness  $13\frac{13}{64}$ ". Length per wheel  $19\frac{13}{16}$ ".

**Clearance**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—External type on drum at rear of transmission. See Service Brake (above) for cars with Rear wheel hand brake.

**Adjustment**—With lever in released position, remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is  $1\frac{1}{16}$ ", lock anchor screw with wire. Adjust brake band guide bolt nut to give  $1\frac{1}{16}$ " clearance (as above) for lower portion of band, secure with locknut. Finally, adjust brake adjusting bolt nut to give  $1\frac{1}{16}$ " clearance (as above), making sure that groove in bolt nut is lined up with ridge lockwasher.

**Drum Diameter**—8".

**Lining**—Width 2". Thickness  $5\frac{5}{32}$ ". Length  $18\frac{13}{32}$ ".

**NOTE**—When relining, cut out lining adjacent to anchor and chamfer ends. Clearance between anchor and sides of anchor saddle .005" maximum.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On right front door hinge pillar post. First number as follows:

	Detroit	Evansville	Canada
1937 D5	4,530,451		9,409,056
1938 D8	30,001,001	40,001,001	9,413,746

**ENGINE NUMBER:** First number D5-1001 (1937), D8-1001 (1938). Stamped on left side of engine block between #1 and #2 cylinders.

See Chrysler Shop Notes for Engine number lettering ("Special Standard" bore and bearing sizes).

**TUNE-UP**

**COMPRESSION:**—Ratio—6.5-1 cast-iron head.

Pressure—135-145 lbs. at 1000 R.P.M. or approximately 110 lbs. at cranking speed.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H. **FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion J-8 or Auto-Lite A-7, 14 mm. Metric.

Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 38° (closed).

Automatic Advance—12° max. at 1750 RPM (distr.). Vacuum Advance—8° distr. with 15" vacuum (IGS-4002A-1), 10° distr. with 12" vacuum (IGS-4014-1).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° ATDC. with 4° mark after dead center "0" mark on fan pulley at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw midway between "miss" and "roll" points. Idle speed 7-8 MPH.

Float Level—Fuel level  $\frac{5}{8}$  below top of bowl.

Accelerating Pump—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. max. (Type B, AL),  $4\frac{1}{4}$  lbs. max. (Type AS, AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind free end up  $\frac{1}{3}$  turn counter-clockwise and hook end over stop pin.

CAUTION—Do not wind coil up more than  $\frac{1}{3}$  turn.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Intake, .008" Exh., (hot).

NOTE—.002" additional Exhaust clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Model 24-R, Type 7061 (1937), 7640 (1938). Connected to coil by armored cable.

Ignition Lock—Yale & Towne. Mitchell No. 6286.

**COIL:** Auto-Lite Model IG-4641 or CL-4601 (1937), CL-4605 (1938). Service Coil (less Switch & Cable) IG-3224JS or CL-3224JS.

Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG3927A.

Capacity .25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4002A-1 (U.S.), IGS-4014-1 (Canada). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. See Electrical Equipment Section for Distributor servicing data.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap**—Set at .020".  
**Cam Angle or Dwell**—38° (closed), 22° (open).  
**Breaker Arm Spring Tension**—18-20 ounces.  
**Rotation**—Clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	850	12.....	1700
9.....	1300	18.....	2600
12.....	1750	24.....	3500

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance—IGS-4002A-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start.....	0°	5 $\frac{1}{4}$ "
4°	8°	10"
8°	16°	15"

**Vacuum Advance—IGS-4014-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start.....	0°	4 $\frac{3}{4}$ "
5°	10°	8 $\frac{3}{8}$ "
10°	20°	12"

**Manual Adjustment**—Provided to compensate for fuel and altitude conditions. See Manual Adjustment Setting.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

See Electrical Equipment Section for Regulator wiring with 2 Resistors (After Regulator Serial No. 8R-000001).

**IGNITION TIMING**

**IGNITION TIMING:**—Initial setting (for gasoline of approximately 70 octane rating). See Manual Adjustment Setting (following).

**Flywheel Degrees Piston Position**

All engines 6.5-1 hd.....4° ATDC.....0068° ATDC.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston is 4° (or .0068") past top dead center, stop when fourth graduation to left of center '0' mark on fan pulley at front of engine lines up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until lamp goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in 4° ATDC. mark with white paint.

**Manual Adjustment Setting:**—After ignition set as above, road test car to give slight ping with wide open throttle at speeds of 10-30 M.P.H. To adjust, loosen hold-down screw and advance (counter-clockwise) or retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EXV-2. 1¼" downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm, choke valve wide open (fast idle inoperative), adjust throttle stopscrew so that idle speed is 7-8 MPH. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Throttle lever has 3 holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Hot temperatures. Center Hole—Normal summer temperatures. Outer Hole (long stroke)—Winter temperatures.

**Fast Idle:**—No adjustment required. Throttle stopscrew on high point of cam (choke valve closed).

**Throttle Cracker:**—Consists of an inter-connecting linkage between the starter pedal and the accelerator rod by which the throttle valve is opened slightly when starter pedal is depressed. Adjusting screw is located on forward side of throttle cracker lever (directly above starter switch).

**Automatic Choke:**—Sisson Type AC-758B. See article in Carburetion Equipment Section for data.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1528200 oil-wetted type standard, #1528197 oil-bath type optional used in conjunction with oil vent cleaner #1525313.

**Fuel Pump:**—AC. Type B #1522995 or AT #1523647 diaphragm type standard. Type AL #1523137 or AS #1523648 combination fuel-and-vacuum pumps optional. Types AT & AS are 'inverted' design.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Auto-Lite (Motometer) Electric. Dash Unit—NG-8295D (1937), NG-8729D (1938).

Tank Unit—NG-8257T (1937), NG-8697T (1938).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Willard, Type WT-1-95. 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity:**—117 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes. Five second voltage—4.17 volts.

**Grounded Terminal:**—Positive (+) terminal. Grounded to transmission.

**Dimensions:**—Length 10 5/16". Width 7 1/16". Height 8 13/16".

**Location:**—Left side under driver's seat.

(Special Export) Willard, Type RHT-2-105. 6 volt, 15 plate, 105 AH. capacity (20 hr. rate).

**Starting Capacity:**—133 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.9 minutes. Five second voltage—4.27 volts.

All other data as given above for WT-1-95.

**STARTER**

Auto-Lite Model MAW-4010 (Std.), MAW-4011A (Exp.). Armature MAW-2030 (All Models).

**Drive:**—Manual (Domestic), solenoid (Export) operated pinion shift. Drive through overrunning clutch.

**Cranking Engine:**—Approx. 160 amperes at 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.55 "	Lock	3	505
18. "	Lock	4	670

**Removal:**—Flange mounted on left front face of flywheel housing. Disconnect wire connections (tape battery lead), oil filter lines and two clips on starter linkage. Remove two fastening bolts and withdraw unit.

**Starting Switch:**—(MAW-4010)—SW-2813. Mounted on starter field frame and operated by pinion shift (starter pedal). See article in Electrical Equipment Section for pedal adjustment.

(MAW-4011A)—Solenoid Switch, Auto-Lite SS-4104 (1937), SS-4203 (1938). Controlled through relay by pushbutton on instrument panel.

For complete data, refer to Electrical Equipment Index.

**Solenoid Switch**

Closes against 170 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

**Solenoid Relay**

Contacts Close—3.5-4.5 volts. Open—1.5-2.5 volts. Contact Gap—.025-.030". Air Gap—.005-.007" (closed).

**GENERATOR****STANDARD (1937)**

Auto-Lite Model GBW-4803A, C (Export). Armature No. GBW-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate:**—22 amperes, 8.0 volts, 1780 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Charging Rate Adjustment:**—No adjustment on generator. See Regulator section below for Voltage and Current Regulator settings.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	775	0	6.4	870
4	6.7	940	4	6.7	1065
10	7.1	1200	10	7.1	1385
16	7.6	1480	16	7.6	1780
20	7.85	1675	20	7.85	2125
22	8.0	1780	22	8.0	2400

NOTE—Current regulator limits output to 22 amps.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current:**—3.04-3.36 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

**GENERATOR****STANDARD (1938)**

Auto-Lite Model GDA-4801A, B (Export). Armature No. GDA-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—No adjustment at generator. See Regulator section for settings.

**Maximum Charging Rate:**—28 amperes, 8.0 volts, 2025 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	930	0	6.4	1010
4	6.6	1060	4	6.6	1180
8	6.85	1210	8	6.85	1350
12	7.1	1350	12	7.1	1530
16	7.3	1500	16	7.3	1730
20	7.5	1660	20	7.5	1950
24	7.75	1830	24	7.75	2220
28	8.0	2025	28	8.0	2520

NOTE—Current reg. limits output to 28 amps.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current:**—3.50-4.15 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen clamp bolt and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATOR:**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data.

**Special Generators (Other Makes):**—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special generators and regulators which may be found on these cars.

**REGULATOR**

Auto-Lite Model VRB-4005A (GBW Generators), VRB-4004B (GDA Generators). Voltage-Current Type. Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case on dash. For complete data, refer to Electrical Equipment Index.

C N T I N U E D N E X T P A G E

## C CONTINUED FROM PRECEDING PAGE

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 amperes min., 3.0 amperes max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" min., .038" max. with contacts open. Measure at hinge end of core.

**Voltage Regulator**

**Setting**—7.5-7.8 volts at 70°F (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F (After 8R-000001). See Electrical Equipment Section for complete settings and Regulator changes.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.3-7.6 volts (cold 70°), 7.1-7.4 volts (hot 140°) for units after #8R-000001.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

**Current Regulator**

**Setting**—(VRB-4005A) 21-23 amperes marked "22" on cover. (VRB-4004B) 27-29 amperes, marked "28".

**To Check (without breaking seals)**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate bringing current regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Regulator defective. **Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by beam control switch on toeboard.

**Headlamp Adjustment**—Aim headlamps straight ahead (upper beam lighted, lenses in place, car unloaded) with center of hot spot 3" (1937), 4" (1938) below center horizontal line of headlamps at 25 feet. Lower beam is deflected slightly to right.

**Headlamp Beam Indicator**—In light switch knob. Lighted when headlamp upper beam in use.

**Switches—1937**

**Lighting**—Dodge Part No. 675344.

**Instrument Light**—Dodge Part No. 675345.

**Foot Selector**—Dodge Part No. 659512.

**Stop Light**—Dodge Part No. 661721.

**Switches—1938**

**Lighting**—Dodge Part No. 684038.

**Instrument Panel**—Dodge Part No. 685889.

**Foot Dimmer**—Dodge Part No. 659512.

**Stop Light**—Dodge Part No. 677112.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Tail and Stop	3-21	1158
Parking, Beam Indicator	1½	55
Instrument	1½	55
Dome	15	87
Rear License	3	63

**NOTE**—Instrument and Indicator Lamps for 1937 were 1 cp., Mazda No. 51.

**MISC. ELECTRICAL**

**FUSES**—Lighting (used on early cars)—20 amperes on back of ammeter. Later cars equipped with Circuit Breaker (see below).

**Single Horn**—Early cars as shown on diagram. On later cars horn feed taken from BAT terminal on regulator (1938), starting switch (1937) with fuse in wire connector.

**Dual Horns**—30 ampere on horn relay. **NOTE**—New long type (SFE-30) fuse used. Replaces 3AG type.

**CIRCUIT BREAKER**—Used on later cars. Thermostatic, non-adjustable, vibrating type. Mounted on back of ammeter and protects lighting circuits. Limits current to 30 amperes.

**HORNS (1937)**: Auto-Lite HA-4020. Single horn standard. Model HC-5103, HC-5103B dual horns with HR-4002 horn relay optional.

**Horn Relay**: Auto-Lite Model HR-4002. A 30 ampere fuse mounted on base.

**Contacts Close**—3.0-4.0 volts. **Open** 1.5-2.5 volts.

**Contact Gap**—.026". **Air Gap**—.012-.017" (closed).

**HORNS (1938)**: Klaxon K-16, Type 2016 Single Horn Std., Auto-Lite Horn Set Model HC-5105 Twin Horns Optl. Twin horns operated by horn relay.

**Horn Relay**: Auto-Lite HR-4101. Has 30 ampere fuse mounted on base.

**Contacts Close**—2.5-3.5 volts.

**Contact Gap**—.026". **Air Gap**—.012-.017" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**:—6 cylinder, 'L' head.

**Bore**—3¼". **Stroke**—4¾".

**Displacement**—217.8 cubic inches.

**Rated Horsepower**—25.35 (A.M.A.)

**Developed Horsepower**—87 HP. at 3600 R.P.M.

**Compression Ratio**—6.5-1 cast-iron hd. No optl.

**Compression Pressure**—135-145 lbs. at 1000 R.P.M. or approximately 110 lbs. at cranking speed.

**Vacuum Reading**—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**PISTONS**: Aluminum alloy, split skirt, Invar Strut (1937), Steel Strut (1938). Length 3 11/16".

**Weight**—17.92 ozs. (1937), 17.45 ozs. (1938).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .022". See Fitting New Pistons.

**Replacement Pistons**:—See Chrysler Shop Notes.

**Fitting New Pistons**:—Check piston size with micrometer gauge on skirt across piston pin support ribs. Insert .002" feeler between cylinder wall and piston on side opposite slot. With piston and block at 70°F. pull to withdraw feeler must be 7-14 lbs.

**Installing Pistons**:—Slot away from camshaft.

**PISTON RINGS**:—2 undercut compression, 2 slotted oil rings per piston, all above pin.

**NOTE**—Install top ring with step on inner edge to

bottom (1937), top (1938), #2 compression ring with step to bottom (1937-38).

Ring	Width	End Gap	Side Clearance
Comp. (#1)	⅞"	.007-.015"	.002-.0035"
Comp. (#2)	⅞"	.007-.015"	.0015-.003"
Oil Control	5/32"	.007-.015"	.0015-.003"

**NOTE**—Side clearance for #1 compression ring was .0015-.003" (1937).

**Replacement Rings**:—Furnished std. and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN**:—Diameter—55/64". Length—2¾".

**Floating type**. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—Thumb push fit at 70°F.

**Replacement Pins**:—Furnished std. & .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD**: Length—7 15/16".

**Weight**—30.6 ozs. (1937), 30.01 ozs. (1938).

**Crankpin Journal Diameter**—2 1/16".

**Lower Bearing**—Removable steel-backed, babbitt-lined. Bearings furnished Std. & .0015", .010" Undersize (1937), Std. & .002", .010", .012" Undersize (1938). **Clearance**—.0005-.0025". **Sideplay**—.0055-.0115".

**Bearing Adjustment**:—None. Install new bearings with bosses engaging grooves in rod and cap.

**Installing Rods**:—Install rods with wide portion of bearing to rear on #1, 3, 5, to front on #2, 4, 6. Oil split hole to camshaft (all rods).

**CRANKSHAFT**:—4 bearing type. Impulse neutralizer mounted on forward end.

**Journal Diameters**—2½" all bearings.

**Bearing Type**—Steel-backed, babbitt-lined type. **Clearance**—.001-.002".

**Bearing Adjustment**:—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front & Rear Oil Seals.

**Replacement Bearings & Bearing Caps**: Refer to Chrysler Shop Notes for complete data.

**End Thrust**:—Taken by flange faces on rear (#4) bearing. **Endplay**—.003-.007".

**CAMSHAFT**:—4 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance**—.001-.003", #1), .0015-.0035" (all others). **NOTE**—Replacement bushings finish reamed.

**End Thrust**:—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain**:—Morse #1866 (restricted bend). Width 1". Pitch .500". Length 24" or 48 links.

See Chrysler Special Shop Notes for front end removal for work on timing chain.

**Camshaft Setting**:—Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge cross the shaft centers.

**VALVES**: **Head Diameter** **Stem Diameter** **Length**  
All valves..... 1 15/32"..... 3/40-.341"..... 4 25/32"

**Seat Angle** **Lift** **Stem Clearance**

**Intake**..... 45°..... 5/16"..... .001-.003"

**Exhaust**..... 45°..... 5/16"..... .003-.005"

See Chrysler Special Shop Notes for Exhaust Valve Seat insert removal and installation.

**Valve Guides**:—Install with round end up to ⅞" below top of block. Finish ream guides after installing to .342-.343" Int., .344-.345" Exh.

**ENGINE**

C CONTINUED FROM PRECEDING PAGE

**Valve Springs:**—Free length approx. 2 3/32". Limit of compression 1 9/32".

	Spring Pressure	Spring Length
Valve Closed	34-38 lbs.	1 3/4"
Valve Open	77-83 lbs.	1 7/16"

**Valve Lifters:**—Mushroom type. Ream guides from above for following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

**Tappet Clearance:** .006" Int., .008" Exh. Hot. .010" Exh. setting recommended for sustained high speed driving. Valves accessible by removing right front wheel and wheel housing panel.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves:**—Open 42° BLDC. Close 8° ATDC.

**To Check Timing:**—Set tappet clearance #6 intake valve at .011". This valve should open with piston 6° (.0153") past top dead center when 6° ATDC. mark on impulse neutralizer at front of engine lines up with pointer on chain case cover. Reset tappet clearance at .006" (hot).

**LUBRICATION**

**LUBRICATION:**—Gear type oil pump on right of engine.

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left side of engine. Operates at 40 lbs. Adjustable. Change to heavy (green) spring to increase pressure, light (red) spring to decrease.

**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal:**—With water drained and fan belt removed, remove fan blades and pulley (attached by 4 capscrews), disconnect pump hoses, remove nuts from pump mounting studs and lift out.

**Thermostat:**—Fulton. In water outlet on head.

**NOTE:**—Install thermostat with bellows down.

**Setting:**—(1937) Starts to open 155-160° F., Fully open at 185° F. (1938) Starts to open 150-155° F., Fully open at 176° F.

**Water Capacity:** 16 qts. (1937), 15 qts. (1938).

**Drain Valves:**—At lower left corner of radiator and on left side of block in front of distributor.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi). Single plate, dry disc type. **NOTE:**—1938 Clutch has new spiral grooved type facings and pressure plate oil baffle.

**NOTE:**—Clutch marked for identification by number stamped on cover: #899 (10A7 1937), 913 (10A7 1938), 917 (11A6 1938).

*See Clutch Section for complete data.*

**Facings:**—Molded-woven (spiral grooved), 2 required. Thickness 1/8". Inside diameter 6", 6 1/2" (Taxi). Outside diameter 10", 11" (Taxi).

**Adjustment:**—Adjust stopscrew (to rear of pedal) so that pedal arm just clears floor board. Pedal free movement must be 1 1/16". Adjusting nut provided on fork rod next to release fork.

**Removal:**—Remove floor board, release fork pull-back spring, free clevis pin on release fork rod. Remove transmission (see Transmission Removal below), remove housing underpan, mark cover and fly-wheel, remove cover bolts evenly, take out assembly. **NOTE:**—On 1937 model, pull release fork out of housing before removing clutch.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear type with synchro-mesh on second and high speeds.

*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, battery cable, disconnect front and rear universals (see Propeller Shaft Center Bearing below for 7 pass. sedan), free hand brake cable at clevis. Take off nuts on mounting studs, disconnect clutch release fork pull-back spring, free clevis pin on release fork rod, remove cover (gear-shifter assembly), insert 2 pilot studs in top holes and withdraw transmission.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit-Universal. Series 4200.

Ball and trunnion type with roller bearings. 2 used.

**NOTE:**—Three universals used on 7 pass. sedan.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—Used on 7 passenger models. *See Chrysler Shop Notes.*

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—Standard 4.1-1 (Sedans), 3.9-1 (Coupes), 4.3-1 (7 pass. sedan & cars with 6.00 X 18 tires).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Remove wheel, hub, and drum assembly (using screw type hub puller). Place block under brake pedal, disconnect brake line, remove backing

plate and oil seal, pull axle shaft and bearing (Tool C-158). With shafts removed, carrier may be removed by disconnecting rear universal at flange, and removing housing capscrews.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged ends of axle housing. With wheel and hub removed measure endplay with dial indicator. To adjust remove backing plate (see above) and add or remove shims (equally at both sides) to proper clearance. **Endplay:**—.003-.008".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:** Own Make (1937), Delco (1938). Direct Acting, hydraulic type. Delco Models 1162-U (Front), 1163-U (Rear).

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional tubular section axle, Reverse-Elliott ends, semi-elliptic springs.

**Kingpin Inclination:**—4 1/2-5 1/2° crosswise.

**Caster:**—2° (1-3°). Adjust by inserting wedge plates between springs and axle center. Thick portion to rear increases caster, to front decreases caster.

**Camber:**—1/2° (1/4-3/4°). Not adjustable.

**Toe In:**—1/16" (0-1/8"). Turn tie rod to adjust.

**Steering Geometry:**—Outer wheel 20°. Inner wheel 22°50' (exc. 7 Pass.), 22°20' (7 Pass.).

**STEERING GEAR**

**Steering Gear:** Gemmer Worm & Roller Model 300.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front Wheel—Front cylinder 1 1/4", Rear 1 3/8".

Rear Wheel—Front cylinder 1 1/8", Rear 1 1/4".

**Drum:**—Cast-iron. Diameter—11".

**Lining:**—Moulded. Width 2". Thickness 13/64".

Length (front shoe) 11 15/32", (rear shoe) 7 31/32".

**Clearance:**—.012" toe, .006" heel for each shoe.

**Braking Power:**—55% front, 45% rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—*See Chrysler Special Shop Notes.*

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post.  
 Detroit Canada  
 Deluxe .....30,100,001 & up.....9,416,686 & up  
 Special .....4,267,701 & up.....

**ENGINE NUMBER:**—First number D-11-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Shop Notes for Engine Number Lettering ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 cast-iron head. No optl. Pressure—135-145 lbs. at 1000 R.P.M. or approximately 110 lbs. at cranking speed.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Auto-Lite Type A-7. 14 mm. Metric type.  
 Gaps—.025"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020" **Cam Angle** 38° (closed).  
**Automatic Advance**—12° max. at 1750 RPM (distr.).  
**Vacuum Advance**—8° distr. with 12" vacuum (IGS-4101A-1), 16° vacuum (IGS-4101C-1); 10° distr. with 12" vacuum (IGS-4102B-2).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC. with dead center mark "DC" on impulse neutralizer at indicator on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw midway between "miss" and "roll" point. Idle speed 7-8 MPH.

**Float Level**—Fuel level  $\frac{5}{8}$ " below top of bowl.

**Accelerating Pump**—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.

**Fuel Pump Pressure:** 3½ lbs. max. (Type B, AL), 4¼ lbs. maximum (Type AT).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely When installing coil, wind free end up 1/3 turn counter-clockwise and hook end over stop pin.

**CAUTION**—Do not wind coil up more than 1/3 turn.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .008" Exh. hot. Remove right front wheel and housing panel for adjustment. NOTE—Tappet screws are self-locking (no lock-nuts). .002" additional exhaust tappet clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, Type 8054. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton. B & S No. 80651. Key Series—1BP to 1000BP. Groove—#24.

**COIL:** Auto-Lite Model IG-4657. Service coil (less switch and cable) IG-3224JS. Mounted on dash. Ignition Current—2.5 amperes idling, 5.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.  
 Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4101A-1 (First Cars), IGS-4101C-1 (Later Cars), IGS-4102B-2 (Canada). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and manual adjustment.

**NOTE**—IGS-4101A-1 distributor used up to Engine No. D11-13277 (U.S.), IGS-4101C-1 after this no.

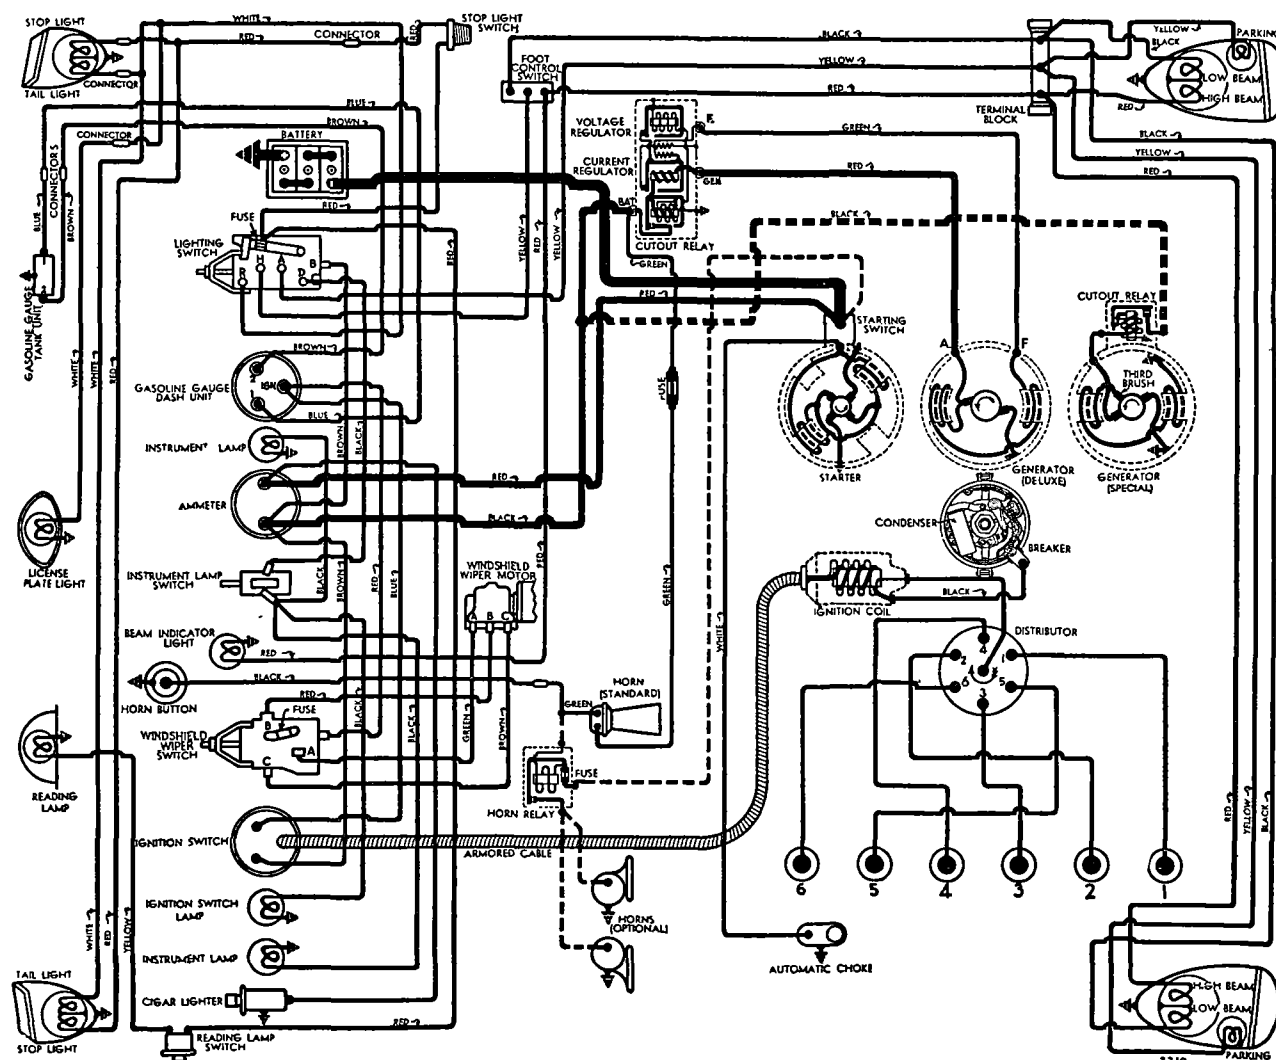

**Breaker Plate Identification**—Maximum vacuum advance limited by slot and marked with number (#8—IGS-4101A-1, #8—IGS-4101C-1, #10—IGS-4102B-2) stamped on plate.

**Breaker Gap**—Set at .020".  
**Cam Angle or Dwell**—38° (closed), 22° (open).  
**Rotation**—Clockwise viewed from the top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	700	10	1400
7	1000	14	2000
9	1300	18	2600
11	1600	22	3200
12	1750	24	3500

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark is retarded by return spring

Vacuum Advance—IGS-4101A-1			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start.....	0°.....	5"	
8°.....	16°.....	12"	

Vacuum Advance—IGS-4101C-1			
Start.....	0°.....	5"	
8°.....	16°.....	16"	

Vacuum Advance—IGS-4102B-2			
Start.....	0°.....	4.75"	
10°.....	20°.....	12"	

**Manual Adjustment**—Provides 10° advance or retard from center '0' position. See Ignition Timing

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes) shown below. See Manual Adjustment (following) for recommended corrections (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

**Flywheel Degrees** **Piston Position**  
6.5-1 cast-iron hd. ....0° at TDC.....0000" TDC.  
NOTE—Impulse neutralizer marked 'DC' at TDC. point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting), stop when correct mark on crankshaft pulley lines up with pointer on chain case cover. Loosen lock plate hold-down screw, center pointer on scale, tighten screw. Loosen lock plate clamp bolt, rotate distributor until timing light just goes out. Check manual adjustment setting (below).

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on crankshaft pulley (correct mark filled in with paint or chalk), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Standard ignition setting should be varied not more than 4° (piston 4° or .0068" before or after top dead center) so that slight ping noticeable between 10 and 30 M.P.H. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), counter-clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**CARBURETION**—Carburetor, Stromberg Model BXV-3. New single barrel, 1½" special downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open (fast idle inoperative), adjust throttle stopscrew so that idle speed is 7-8 MPH. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Throttle lever has 3 holes for pump link engagement. Set as follows: Inner Hole (short stroke)—Extremely warm temperatures or above 3000 ft. elevation.

Center Hole—Normal summer temperatures.

Outer Hole (long stroke)—Winter temperatures.

**NOTE**—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See Stromberg Jet Table in Carburetor Section for complete jet data.

**Throttle Cracker**—Interconnector between starting pedal and accelerator rod which opens throttle slightly when pedal depressed for starting. Adjust by loosening throttle pickup clamp bolt (above starter switch), shift clamp on rod.

**Fast Idle**—No adjustment. Throttle stopscrew should rest on high point of cam (choke valve closed).

**Automatic Choke**—Sisson Type AC-758B.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528200 oil-wetted type standard. #1529042 oil bath type optional.

**NOTE**—AC. #1525313 crankcase vent cleaner used.

**Fuel Pump**—AC Type AT #1523912, Type B #1523914 (RHD) Std. Type AL #1523915 (RHD with swinging windshield) fuel-and-vacuum pump optl.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite Electric. No. NG-9023-D (dash unit), NG-8989-T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Auto-Lite type PN-15A, 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal**—Positive (+) grounded to transmission.

**Dimensions**—Length 8⅞". Width 7". Height 8".

**Location**—On left side under front seat.

## STARTER

**Auto-Lite Model MAW-4016, Armature MAW-2030.**

**Drive**—Overrunning clutch, manual pinion shift.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—150-175 amperes, 5.1 volts.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data				
Torque	R.P.M.	Volts	Amperes	
0 ft. lbs.	4900	5.5	65	
.60 " "	3300	5.5	100	
2.75 " "	1480	5.0	200	
5.45 " "	820	4.5	300	
8.50 " "	400	4.0	400	
11.55 " "	110	3.5	500	
11.5 " "	Lock	3.0	505	
18.0 " "	Lock	4.0	670	

**Removal**—Flange mounted on left front face of flywheel housing. Remove cables, 2 clips on starter linkage, oil filter lines, 2 mounting bolts. Lift off.

**Starting Switch**—Model SW-2813. On starter. Manually operated by starter (pinion shift) pedal.

For complete data, refer to Electrical Equipment Index.

## GENERATOR

### SPECIAL (FIRST CARS)

**Auto-Lite Model GBM-4606C-1, Armature No. GBM-2065F.** Third brush control type.

**NOTE**—For cars equipped with GDF-4801A generator (3rd brush type) with VRD-4002B voltage regulator, refer to 1939 Plymouth Model P8 article.

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate (brush held in position by friction). **Commutator Bar Method**—Standard third brush setting (for maximum output as shown in table below) 4 commutator bars between third brush and insulated (nearest) main brush.

**Maximum Charging Rate**—18 amperes (cold), 15.2 (hot), 8.3 volts, 2500 R.P.M. Use test ammeter connected in charging line at battery terminal of Cut-out Relay to check generator output.

Performance Data					
Amps.	Cold Volts	R.P.M.	Hot Volts	Amperes	R.P.M.
0	6.4	800	6.4	0	850
4	6.8	950	6.9	4	1050
8	7.25	1125	7.4	8	1250
12	7.7	1375	7.9	12	1680
16	8.1	1800	8.3	15.2	2500
18	8.3	2400			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current**—5.7-6.3 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Swing generator out until 40-50 lb. reading secured on scale attached to generator.

## GENERATOR

### DELUXE & SPECIAL (LATER CARS)

**Auto-Lite Model GDA-4801-A, Armature GDA-2006F.** Two brush, shunt wound type with vibrating voltage and current regulation. Ventilated.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—28 amperes, 8.0 volts, 2025 R.P.M., 20 M.P.H. with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator.

Performance Data					
Amperes	Cold Volts	R.P.M.	Hot Volts	Amperes	R.P.M.
0	6.4	930	6.4	0	1010
4	6.6	1060	6.6	4	1180
8	6.85	1210	6.85	8	1350
12	7.1	1350	7.1	12	1530
16	7.3	1500	7.3	16	1730
20	7.5	1660	7.5	20	1950
24	7.75	1830	7.75	24	2220
28	8.0	2025	8.0	28	2520

**NOTE**—28 amperes is current regulator setting.

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—3.50-4.15 amperes at 6.0 volts.

**Removal and Belt Adjustment**—As given above.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATOR**—Model GCB-4802A (City Police). Used with Model VRB-4009A Regulator. See 1939 DeSoto Model S6 article for complete data. **Special Generators (Other Makes)**—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special generators and regulators which may be found on these cars.

C NTINUED ON NEXT PAGE

C NTINUED FR M PRECEDIN PA E

**CUTOUT RELAY**

Auto-Lite Model CB-4014 (GBM-4606C-1 Generator). Mounted on generator.

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge current.

Contact Gap—.015-.045". Air Gap—.010-.030" (closed).

**REGULATOR**

Auto-Lite Model VRB-4004B. (GDA-4801-A Generator). Voltage-Current Type. Vibrating type voltage and current regulators in case on dash.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**

Cuts In—6.4-7.0 volts Cold.

Cuts Out—.5 ampere min., 3.0 amperes max. Cold.

Contact Gap—.015" minimum.

Air Gap—.034" min., .038" max. with contacts open.

**Voltage Regulator**

Setting—7.3-7.6 volts at 70°F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage steady. Should be 7.3-7.7 volts Cold (70°F.), 7.1-7.4 volts Hot (140°F.).

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

Contact Gap—.010-.020" (armature against stop pin).

Air Gap—.0595-.0625" with contacts just opening.

**Current Regulator**

Setting—27-29 amperes (marked '28' on cover).

To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at 30 MPH., charging battery, add load (use bank of headlamp bulbs, or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 28 amperes.

Adjustment, Contact Gap, Air Gap—Same as for Voltage Regulator (above).

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused type. Upper and lower beams controlled by beam control switch on toeboard (lower beam deflected slightly to right—2331 bulb).

**Headlamp Adjustment:**—Place unloaded car 25' from wall with upper beams lighted and lenses in place. Aim headlamps straight ahead with center of hot spot 4" below center horizontal line of headlamps. Adjusting screws at top of lamp under lens ring. Center screw controls up and down movement. Screw to right controls horizontal movement.

**Beam Indicator:**—Red light on instrument panel above speedometer. Lighted with upper beam on.

**Switches**

**Lighting—Chrysler No. 853295 or 852535.**

**Beam Selector—Chrysler No. 853323 or 659512.**

**Instrument—Chrysler No. 695943.**

**Stop Light—Chrysler No. 677112 or 853228.**

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	1½	55
Beam Indic., Ign. Switch	1	51
Dome	15	87
Rear License	3	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere. On light switch.  
Single Horn—20 amp. In horn feed lead.  
Dual Horns—30 ampere. On horn relay.  
Windshield Wiper—14 ampere. On switch or in lead.

**HORNS:**—Single, Klaxon Model K-16 Type 2016, Std.  
Dual—Auto-Lite HH or HL-4001 (low pitch), HH or HL-4002 (high pitch). Horns operated by relay.

**Horn Relay:**—Auto-Lite Model HR-4101, 30 ampere fuse on base. Contacts Close—2.5-3.5 volts.  
Contacts Close—2.5-3.5 volts.  
Contact Gap—.026". Air Gap—.012-.017" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.  
Bore—3¼". Stroke—4¾".  
Displacement—217.8 cu. ins. Rated HP.—25.35.  
Developed Horsepower—87 HP. at 3600 R.P.M.  
Compression Ratio—6.5-1 cast-iron head. No optl.  
Compression Pressure—135-145 lbs. at 1000 R.P.M. or approximately 110 lbs. at cranking speed.  
Vacuum Reading—Steady 18-21" idling at 6 M.P.H.  
See Chrysler Shop Notes for Engine Removal data.

**PISTONS:**—Aluminum alloy, cam ground, split skirt, steel strut type. Length—3 11/16". Weight—17.45 oz.  
Removal—Pistons and rods removed from above.  
Clearance—Top .022". Skirt .0005" desired.

**Original Bore & Piston Sizes, Replacement Pistons:**—  
See Chrysler Shop Notes for sizes and markings.

**Fitting New Pistons:**—Check piston size with micrometer gauge on skirt across piston pin support ribs. Insert .002" feeler between cylinder wall and piston on side opposite slot. With piston and block at 70°F. pull to withdraw feeler should be 10-16 lbs.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge stepped), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	⅞"	.007-.015"	.002-.004"
Comp. (#2)	⅞"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings:**—Std. & .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2¾". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston:**—Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing:**—Thumb push fit at 70°F

**Replacement Pins:**—Furnished std. & .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD:**—Weight 30.01 oz. Length 7 15/16". Crankpin Journal Diameter—2 1/16".

**Lower Bearing:**—Removable, steel-backed, babbitt-lined. Furnished std. & .002", .010", .012" undersize.  
Clearance—.0005-.0025". Sideplay—.0055-.0115".

**Bearing Adjustment:**—None (no shims). Install bearings with boss engaging groove in rod and cap.  
**Installing Rods:**—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearing type with 7 counterweights  
Journal Diameters—2½" all bearings.

**Bearing Type:**—Removable, precision type steel-backed, babbitt-lined. Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. For Front Main Bearing Cap Removal, Bearing Adjustment, and Crankshaft Oil Seals, refer to Chrysler Shop Notes.

**Replacement Bearings & Bearing Caps:** See Chrysler Shop Notes for data.

**End Thrust:**—Taken by flange faces on rear (#4) bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.  
Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type:**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).  
Clearance—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:**—Morse Type 1866-N, No. 2661. Width 1". Pitch .500". Length 24" or 48 links.

**Camshaft Setting:**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
All valves	1 15/32"	.340-.341"	4 25/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.001-.003"
Exhaust	45°	5/16"	.003-.005"

See Chrysler Shop Notes for Exh. Valve Seat Insert data.

**Valve Guides:**—Remove from above. Press new guides in (tapered end up) so top ⅞" below top of block, then finish ream to .342-.343" Int., .344-.345" Exh.

**Valve Springs:**—Free length approx. 2 3/32". Limit of compression 1 9/32". Spring Pressure Length

Valve Closed	34-38 lbs.	1¼"
Valve Open	77-83 lbs.	1 7/16"

**Valve Lifters:**—Mushroom type. Stem diam. ⅝". Ream holes from above (pilot in valve stem guide) for lifters furnished .001", .008", .030", .060" oversize.

**VALVE TIMING**

**Tappet Clearance:**—.006" Intake, .008" Exh. (Hot). .002" additional exhaust clearance recommended for sustained high speed driving. NOTE—Tappet screws self-locking type (no locknuts). Remove right wheel and housing panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves:**—Open 42° BLDC. Close 8° ATDC. Correct with tappet clearance of .011" Int., .012" Exh.

**Valve Timing Check:**—Set tappet clearance #6 intake valve at .011". This valve should open with piston 6° (.0153") past top dead center when 6° ATDC. mark on impulse neutralizer at front of engine lines up with pointer. Reset tappet cl. .006" hot.

**LUBRICATION**

**LUBRICATION:**—Gear type pump, right of engine.  
Normal Oil Pressure:—30-45 lbs. at 30 M.P.H.

**Oil Pressure Regulator:**—Under cap below starter. Opens at 40-45 lbs. To increase pressure use heavy (green) spring, to decrease use light (red) spring.  
Crankcase Capacity:—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Capacity—15 quarts.

**Radiator Core Removal:**—See *Chrysler Shop Notes*.

**Water Pump:**—Packless type, belt-driven.

See *Water Pump Section for complete data*.

**Removal:**—Drain water; remove hood side panels, fan blade assembly, pulley, radiator outlet hose at pump, by-pass (with small hose), pump mounting stud nuts, fan belt adjusting strap at generator.

**Thermostat:**—Fulton. In water outlet on cyl. head.

**Setting:**—Start to open 157-162° F. Fully open 183°.

**Temperature Gauge:**—Motometer (Auto Lite) Vapor Tension type. Part No. H-9022.

See *Miscellaneous Section for complete data*.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7, 11A6 (Taxi).

#928 (10A7), #931 (11A6) stamped on cover. Single plate, dry disc type with spiral grooved facings, pressure plate oil baffle and new Over-center return spring (hooked to pedal).

See *Clutch Section for complete data*.

**Facings:**—Woven & compressed, 2 required. Inside Diam. 7" (10A7), 6½" (11A6). Outside Diam. 10" (10A7), 11" (11A6). Thickness .125" (all).

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal:**—Remove floorboard, unhook clutch fork pull-back spring and take out clevis pin in connector link. Remove transmission (see below) and housing underpan, mark cover and flywheel, remove clutch cover bolts evenly, lower assembly out.

**TRANSMISSION**

**TRANSMISSION:**—Own make (Warner design). All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse). Synchronizers made by Warner.

See *Transmission Section for complete data*.

**Transmission Control:**—Remote control type.

See *Transmission Section for complete data*.

**Removal:**—Remove floor boards, battery ground cable, disconnect front and rear U-joints (see *Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.*), hand brake cable at clevis, speedometer cable, and gearshifter rod and cable at lever on case. Remove mounting stud nuts, cover assembly, and 2 upper mounting studs (insert pilot studs). Withdraw transmission assembly.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200.

Ball and trunnion type with roller bearings.

See *Universals Section for complete data*.

**Propeller Shaft Center Bearing:**—On 7 pass. sedans.

See *Chrysler Shop Notes for Propeller Shaft Center Bearing Removal and Installation instructions*.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio:**—3.9-1 (Coupes), 4.1-1 (5 pass.), 4.3-1 (7 pass. and cars with 6.00x18 & 5.25x20 tires).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove cap screws on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims equally (at both sides). Endplay—.003-.008".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Direct acting type.

Domestic—Front 1110-C. Rear 1111-T, W (20" wh.).

Exp.—Front 1114-C. Rear 1115-T, W (20" wh.). Adj.

Exp.—Front 1134-E. Rear 1130-W, Y (20" wh.). Adj.

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

**Kingpin Inclination:**—5¼-6½° (4¾-6°—7 pass.).

**Caster:**—Minus ½° to plus 1½° (minus ¼° to plus ¾° —¼° preferred—7 passenger).

**Camber:**—0° preferred. Limits minus ¼° to plus ½°. Plus ½° to plus 2½° (7 passenger).

**Toe In:**—1/16" (0-⅛"). Set long tie rod to 31 11/16" (between ball centers). Adjust short rod only.

**Steering Geometry (Toe-out on Turns):**—Outer wheel turned 20°. Inner wheel 22°30'.

**STEERING GEAR**

**Steering Gear:**—Gemmer Model 300 (exc. 7 Pass.),

Model 305 (7 Pass. Models). Worm-and-Roller type.

Model 305 has "push-pull" adjustments.

See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See *Brake Section for complete data*.

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drums:**—Cast-iron. Diameter—11".

**Lining:**—Molded. Width 2". Thickness 13/64". Length (front shoe) 11 15/32"; (rear shoe) 7 31/32".

**Clearance:**—.012" toe, .006" heel for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See *Chrysler Shop Notes for data*.

**Drum:**—Cast-iron. Diameter—8".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**MISC. MECHANICAL**

**WINDSHIELD WIPER:**—Auto-Lite EW-5001, EW-5101.

Electric type. 14 ampere fuse in feed lead (first cars), on windshield wiper switch (later cars).

For complete data, and recommended changes on early cars, refer to Auto-Lite 'EW' Windshield Wiper article in *Miscellaneous Section*.

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN  
REMOVAL:**—See Chrysler Shop Notes.**MODEL IDENTIFICATION****SERIAL NUMBER:**—On right front door hinge post.

	Detroit	Canada
1940 D14 Deluxe	30,216,001	9,420,231
1940 D17 Special	4,349,001	9,494,721
1941 D19 Cust. & Del.	30,342,401	9,422,901

**ENGINE NUMBER:** First No. D14-1001 (1940), D19-1001 (1941). Stamped on left side of engine block between #1 and #2 cylinders.

See Chrysler Shop Notes for engine number lettering data ("Special Standard" Bore and Bearing sizes).

**TUNE-UP****COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.5-1 cast-iron hd.	140-150 lbs.	Approx. 113 lbs.
7.0-1 aluminum hd.	150-160 lbs.	Approx. 120 lbs.

**VACUUM READING:** Steady 18-20" idling at 6 MPH.**FIRING ORDER:** 1-5-3-6-2-4. See diagram.**SPARK PLUGS:** Auto-Lite Type A-7B (Cast Iron Heads), Type AL-7A (Aluminum Heads). 14 mm. Gaps—.025"**IGNITION:** See Coil, Condenser, and Distributor.**Breaker Gap:**—.020" **Cam Angle:** 38° (closed).**Automatic Advance:**—12° max. at 1750 RPM (distr.).  
**Vacuum Advance:**—8° distr. with 16" vacuum (IGS-4107-1, 4112-1, 4203-1), 7° distr. with 15" vacuum (IGS-4108-1, 4113-1, 4202-1), 11° distr. with 17" vacuum (IGS-4108A-1).**IGNITION TIMING:** See Ignition Timing.**Std. Setting:**—At TDC. (All Engines) with dead center mark "DC" on impulse neutralizer at indicator on front of engine.**CARBURETION:** See Carburetor & Carb. Equipment.**Idle Setting:**—Idle screw midway between "miss" and "roll" points. Idle speed 6 MPH.**Float Level:**—Fuel level  $\frac{5}{8}$ " below top of bowl.**Accelerating Pump:**—Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.**Fuel Pump Pressure:** 4 lbs. maximum.**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.See that shaft and valve rotate freely. When installing coil, wind up free end  $\frac{1}{2}$  turn counter-clockwise and hook end over stop stud.**CAUTION:**—Do not wind coil up more than  $\frac{1}{2}$  turn.**VALVES:** See Valve Timing.**Tappet Clearance ('40):**—.006" Int., .008" Exh. Hot.**Tappet Clearance ('41):**—.008" Int., .010" Exh. Hot..002" add'l exh. clearance desirable for sustained high speeds. **NOTE:**—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel (& pump shield on '40) for access to valves.**STARTING:** See Battery, Starter, Generator, Regulator.**IGNITION****Ignition Switch:**—Mitchellock Model 24-R, No. 8197.**Ignition Lock:**—Yale & Towne or Briggs & Stratton. B&S No. 80651. Key Series 1BP to 1000BP. Groove #24.**COIL:** Auto-Lite Model IG-4661 (1940), IG-4668 (1941).**Service Coil (less Switch & Cable)** IG-3224JS. Coil is mounted on the dash.**Ignition Current:**—2.25 amperes idling, 5.5 stopped.**CONDENSER:** Auto-Lite Part No. IG-3927A.

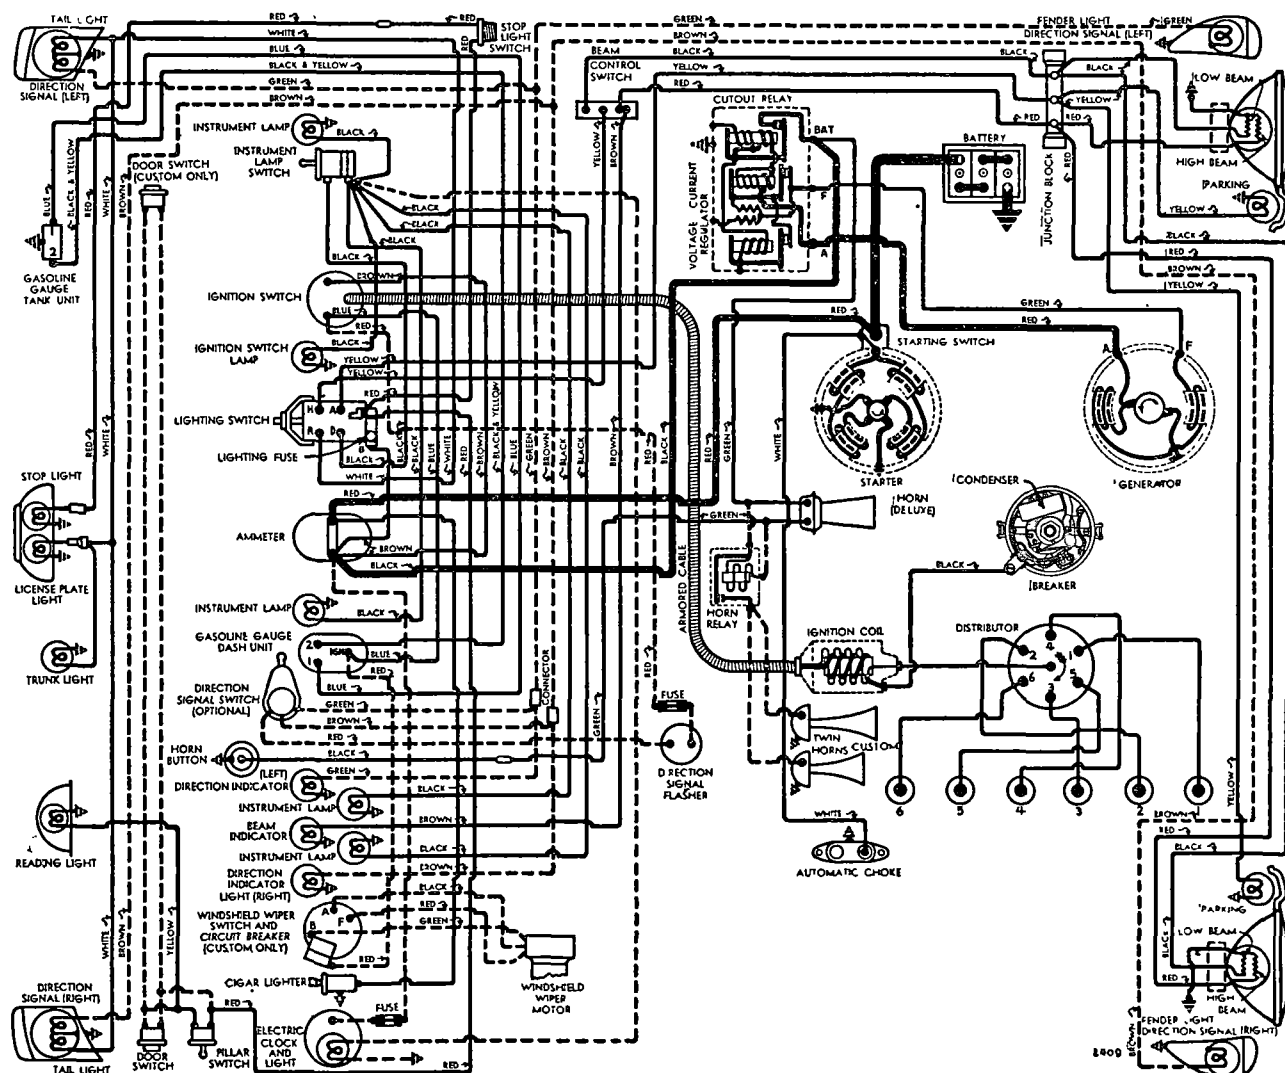

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4107-1 (D14, D17 U.S.), IGS-4108A-1 or 4108-1 (D14, D17 Canada), IGS-4112-1 or 4203-1 (D19 U.S.), IGS-4113-1 or 4202-1 (D19 Canada). Single breaker, 6 lobe cam,

full automatic advance type with auxiliary vacuum spark control and manual adjustment.

**NOTE:**—IGS-4108A-1 used before Engine No. D14-C-1313, IGS-4108-1 after this number.**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked with number as follows: #8 (IGS-4107-1, 4112-1, 4203-1), #7 (IGS-4108-1, 4113-1, 4202-1), #11 (IGS-4108A-1).**Breaker Gap:**—Set at .020". Limits .018-.022".**Cam Angle or Dwell:**—38° closed, 22° open (distr.).**Breaker Arm Spring Tension:**—17-20 ounces.**Rotation:**—Clockwise viewed from the top.**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).**Vacuum Advance****IGS-4107-1, 4112-1, 4203-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7 3/4"
4°	8°	10 1/2"
6°	12°	13 1/4"
8°	16°	16"

**Vacuum Advance****IGS-4108-1, 4113-1, 4202-1**

Start	0°	5"
1°	2°	6 1/2"
3°	6°	9 1/4"
5°	10°	12 1/8"
7°	14°	15"

## Vacuum Advance—IGS-4108A-1

Start.....	0°	5"
2° .....	4°	7 1/4"
5° .....	10°	10 1/2"
8° .....	16°	13 3/4"
11° .....	22°	17"

**Manual Adjustment**—At distributor. Provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes for both cast-iron and aluminum heads) shown below. See Manual adjustment (following) for correction (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

## Flywheel Degrees Piston Position

6.5 & 7.0-1 heads.....0° at TDC.....0000" at TDC.  
NOTE—Impulse neutralizer (D14), crankshaft pulley (D17) marked 'DC' at top dead center with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on the generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting above), stop when correct mark on impulse neutralizer lines up with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment as directed below.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (fill in correct mark on impulse neutralizer with chalk or paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Standard ignition setting should be varied not more than 4° (piston 4° or .0068" before or after top dead center) so that slight ping noticeable between 10 and 30 M.P.H. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), counter-clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model BXV-3 (Std. 1940-41), BXVD-3 (Fluid Drive Cars 1941). 1 1/2" single barrel, downdraft types.

NOTE—Model BXVD-3 has special dashpot type slow closing throttle device.

For complete data, and recommended changes on first BXVD-3 carburetors for improved economy, refer to Stromberg BXVD-3 Carburetor article in Carburetor Section.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (turn screw in for leaner mixture). Re-adjust idle speed. NOTE—Car manufacturer recommends use of vacuum gauge. Idle screw should be set to give highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows:

**Inner Hole (min. stroke)**—Extreme hot temperatures or altitudes above 3000 feet.

**Center Hole (med. stroke)**—Normal setting.

**Outer Hole (max. stroke)**—Winter temperatures.

NOTE—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See Stromberg Jet Table in Carburetor Section for complete jet data.

**Float Level**—Fuel level 5/8" below top edge of bowl.

**Throttle Cracker**—Interconnector between starting pedal and accelerator rod which opens throttle approximately one-third when pedal depressed for starting. Adjust by loosening throttle pickup clamp bolt (above starter switch), shift clamp on rod.

NOTE—1941 type not adjustable.

**Fast Idle**—Not adjustable. Throttle stopscrew should rest on high point of cam (choke valve closed).

**Slow-Closing Throttle (BXVD-3 only)**: Refer to Carburetor article for data.

**Adjustment**—With all slack removed from linkage, set adjusting screw on dashpot lever so that piston travel is 5/16-11/32" (turn screw in to shorten stroke).

**Automatic Choke**—Sisson Type AC-758B.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**: (1940) AC No. 1528200 oil-wetted type. (1941) AC No. 1529937 heavy duty oil-bath type.

**Fuel Pump**—AC Type AT #1523647 diaphragm type. Replacement Exchange Pump No. 505. Pressure—4 lbs. maximum.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite electric. No. NG-9342D Dash Unit 1940), NG-9674D (Dash Unit 1941), No. NG-9329T (Tank Unit 1940-41).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Auto-Lite Type PN-15A (1940), PD-1-15R (1941)**. 6 volt, 15 plate, 95 ampere hour capacity (20 hr. rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal**—Positive (+) grounded to the transmission case.

**Dimensions**—Length 8 3/8". Width 7". Height 8 5/8".

**Location**—Left side under front seat (1940), under engine hood in left fender shield (1941).

## STARTER

**Auto-Lite Model MZ-4062 or 4062A (D14, D17 U.S.), MAW-4016 (D14, D17 Canada), MZ-4089 or 4089A (D19 U.S.), MAW-4019 or 4019A (D19 Canada)**.

**Armature**—Auto-Lite MZ-2108 ("MZ" Starters), MAW-2030 ("MAW" Starters).

**Drive**—Overrunning clutch, manual pinion shift.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—150-175 amperes, 5.1 volts.

**Brush Spring Tension**—42-53 ozs. (new brushes).

Performance Data  
MZ-4062,A; MZ-4089,A

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70

11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal**—Flange mounted on left front face of fly-wheel housing. Remove cables, 2 clips on starter linkage, oil filter lines, 2 mounting bolts. Lift off. **Starting Switch**—Model SW-2813. On starter. Manually operated by starter (pinion shift) pedal.

## GENERATOR

## STANDARD

**Auto-Lite Model GDZ-4801A (Std. 1940), GDZ-4801B (Std. 1941), GEB-4801A (City Police), GEG-4818A (City Police & 1941 Taxicab), GEG-4818B (State Police)**. Two brush, shunt type with external vibrating type current and voltage regulation. Ventilated. **Armature**—Auto-Lite GDZ-2006F ("GDZ" Generators), GEB-2006F ("GEB" Generator), GEG-2006F ("GEG" Generators).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate**—35 amperes (GDZ Gen.), 32 amperes (GEB Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1400 RPM (GEB), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by voltage regulator.

C NTINUED ON NEXT PAGE

## C N TINUED FR M PRECEDIN PA E

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (GDZ Gen.), 64-68 ozs. (GEB & GEG Gen.) with new brushes.  
Field Current—1.60-1.78 amperes at 6.0 volts (all).  
Motoring Current—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.), 4.7-5.2 amperes (GEG Gen.) at 6.0 volts.

Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.  
Belt Adjustment:—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATOR (D19):** Auto-Lite Model GBM-4610A-5. Third brush control type. Used with Model CB-4014 Cutout Relay.

Refer to 1939 Plymouth Model P7 article for complete data on this Generator and Cutout Relay.

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special generators and regulators which may be found on these cars.

## REGULATOR

Auto-Lite Model VRP-4001A (GDZ Generators), VRP-4001B (GEB Generators), VRP-4001F (GEG Generators). Voltage-Current Types. In case on dash.

NOTE—For Negative Battery Ground, regulators are VRP-4005A (GDZ Gen.), VRP-4005B (GEB Gen.), VRP-4005E (GEG Gen.).

For complete data, refer to Electrical Equipment Index.  
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

Cuts In—6.4-6.6 volts at approximately 1000 generator RPM (VRP-4001A, 5A), 600 RPM (VRP-4001B, 5B), 820 RPM (VRP-4001F, 4004E).

Cuts Out—4.2-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" minimum.

Air Gap—.031" min., .034" max. with contacts open.  
Measure at hinge end of core.

## Voltage Regulator

Setting—7.2-7.5 volts at 70° F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.  
To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
Contact Gap—.012" Min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting (VRP-4001A, 5A)—34-36 amperes (marked '35' on cover). VRP-4001B, 5B—31-33 amps. (marked '32'). (VRP-4001F, 4005E) 39-41 amperes (marked '40').  
To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above.

Adjustment & Contact Gap—Same as for Voltage Regulator (above).

Air Gap—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. See article in Electrical Equipment Section.  
Headlamp Adjustment—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.  
Beam Indicator—Red light on panel above instrument cluster. Lighted with upper beam on.

## Switches

Lighting—Dodge No. 858050 Std., 858052 Optl. (1940), 863823 (1941).

Beam Selector—Dodge No. 859974.

Instrument—Dodge No. 853371 (1940), 903783 (1941).

Direction Signal—Dodge No. 865763 (1941).

Stop Light—Dodge No. 862556.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instrument	1½	55
Front Direction Signal	21	1129
Beam & Dir. Ind., Ign. Sw.	1	51
Stop & Tail (1940)	21-3	1158
Tail ('41—No Dir. Signal)	3	63
Stop (1941)	21	1129
Rear Dir. Sig. & Tail	21-3	1158
Rear License	3	63
Dome or Reading	15	87

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 amp. On back of light switch.  
Clock—2 ampere. In connector behind clock.  
Radio—14 amp. In feed wire behind instr. panel.  
Horns & Windshield Wiper—No fuse used.  
Direction Signal—30 ampere. In flasher lead.

**HORNS (1940):** Single—Delco-Remy No. 1999911 Std. Dual—Auto-Lite HO-5001 horn set. HL-4001 (low pitch), HL-4002 (high pitch) operated by horn relay.  
Current Draw—Approx. 7 amps. single, 35-40 dual.

**Horn Relay:**—Auto-Lite Model HRC-4001 (no fuse).  
Contacts Close—1.5-3.0 volts. Open—.5 volt.  
Contact Gap—.026". Air Gap—.016-.020" (closed).

**HORNS (1941):** Single—Delco-Remy 1999913 (low note), 1999914 (high note) or Auto-Lite HA-4001 Std. Dual—Auto-Lite HO-5003 horn set. HA-4026 (low pitch), HA-4027 (high pitch) operated by relay.  
Current Draw—Approx. 7 amps. single, 35-40 dual.

**Horn Relay:**—Auto-Lite Model HRC-4001 (no fuse).  
Contacts Close—1.5-3.0 volts. Open—.5 volt.  
Contact Gap—.026". Air Gap—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.  
Bore—3¼". Stroke—4¾".  
Displacement—217.8 cu. ins. Rated HP—25.35.  
Developed Horsepower—87 at 3600 RPM (1940), 91 at 3800 RPM (1941).  
Compression Ratio—6.5-1 cast-iron head. No optl.  
Compression Pressure—140-150 lbs. at 1000 RPM or approximately 113 lbs. at cranking speed.  
Vacuum Reading—Steady 18-21" idling at 6 MPH.  
See Chrysler Shop Notes for engine removal instructions.

**PISTONS:**—Aluminum alloy, cam ground, split skirt, steel strut, tin coated type. Length—3 11/16".  
Weight—15.2 ozs. (1940), 14.4 ozs. (1941) stripped.

Removal—Pistons and rods removed from above.  
Clearance—Skirt .00025-.00075". See Fitting Pistons.

**Original Bore & Piston Sizes, Replacement Pistons:**—See Chrysler Shop Notes for sizes and markings.

**Fitting New Pistons:**—Check piston size with micrometer gauge on skirt across piston pin support ribs. Insert .0015" feeler (1940), .002" feeler (1941) between piston and cylinder wall on side opposite slot (piston inverted). With piston and block at 70°F., pull required to withdraw feeler should be 10-16 lbs.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge stepped), #2 Comp. (lower outer edge stepped), #3 and 4 (slotted oil rings).

## Piston Rings—1940

Ring	Width	End Gap	Side Clearance
Comp. (Top)	⅜"	.007-.015"	.002-.004"
Comp. (#2)	⅜"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.001-.0025"

## Piston Rings—1941

Ring	Width	End Gap	Side Clearance
Compr. (Top)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	⅜"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.001-.0025"

**Replacement Rings:**—Std. & .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2¾". Floating type. Pin hole in rod bronze bushed.

**Pit Fit in Piston:**—Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing:**—Thumb push fit at 70°F.

**Replacement Pins:**—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight—30.4 ozs. (with bearings and bolts). Length—7 15/16".

**Crankpin Journal Diameter:**—2 1/16".

**Lower Bearing:**—Removable, precision type, steel & bronze-backed, babbitt-lined (1940), thin babbitt on steel (1941).

**Clearance:**—.0005-.0025". Sideplay—.0055-.0115".

**Bearing Adjustment:**—None (no shims). Install bearings with boss engaging groove in rod and cap.

**Replacement Bearings:** Refer to Chrysler Shop Notes.  
**Installing Rods:**—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearing type with 7 counterweights.  
**Journal Diameters:**—2½" all bearings.

**Bearings:**—Removable, precision type, babbitt (#4 steel-backed, others bronze and steel-backed 1940), thin babbitt on steel (1941).

**Clearance:**—.001-.002".

**Bearing Adjustment:**—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front & Rear Oil Seals.

**Replacement Bearings & Bearing Caps:** Refer to Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. See Chrysler Shop Notes for camshaft removal.

**Journal Diameters:**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type:**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance:**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**ENGINE****CONTINUED FROM PRECEDIN PA E**

**Timing Chain:**—Morse Type 1883-N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.  
**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**—

Head Diameter	Stem Diameter	Length
All valves..... 1 15/32"	340-.341"	4 25/32"
Seat Angle ('40)—Lift—('41)	Stem Clearance	
Intake ..... 45°	5/16"	3/8"..... .001-.003"
Exhaust ..... 45°	5/16"	3/8"..... .003-.005"

See Chrysler Shop Notes for Exh. valve seat insert data.  
**Valve Guides:**—Remove from above. Press new guides in (stepped end down) with upper end ⅛" below top of block (use Tool CM-83), then finish ream to .342-.343" Intake, .344-.345" Exhaust.

**Valve Springs:**—Install with closely coiled ends to top. Spring free length 2 3/32" (1940), 2" (1941).

1940 Springs	Spring Pressure	Length
Valve Closed .....	34-38 lbs.	1 3/4"
Valve Open .....	77-83 lbs.	1 7/16"
1941 Springs	Spring Pressure	Length
Valve Closed .....	40-45 lbs.	1 3/4"
Valve Open .....	107-115 lbs.	1 5/8"

**Valve Lifters:**—Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve stem guide). Oversizes .001", .008", .030", .060". Clearance in Block—.000-.001".

**VALVE TIMING**

**Tappet Clearance:** (1940) .006" Int., .008" Exh. Hot, (1941) .008" Intake, .010" Exhaust, Engine Hot and idling). .002" add'l exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and pump shield for access.

**Valve Timing (1940):** See Camshaft Setting above.  
Intake Valves—Open 6° ATDC. Close 46° ALDC.  
Exhaust Valves—Open 42° BLDC. Close 8° ATDC.  
**Valve Timing Check:**—With .011" (cold) tappet clearance, #6 intake valve should open with #6 piston 6° or .0153" ATDC with 6th graduation after DC mark on impulse neutralizer in line with pointer. Reset tappet clearance at .006" (hot and idling).

**Valve Timing (1941):** See Camshaft Setting above.  
Intake Valves—Open 9° BTDC. Close 47° ALDC.  
Exhaust Valves—Open 47° BLDC. Close 9° ATDC.  
**Valve Timing Check:**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 9° or .0343" BTDC with 9th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clear. at .008" hot.

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine). See Chrysler Shop Notes for oil pump removal.  
**Normal Oil Pressure:**—30-45 lbs. @ 30 MPH, 15 idling.  
**Oil Pressure Relief Valve:**—Under plug below starter. Opens at 40-45 lbs. To increase pressure use heavy (green) spring, to decrease use light (red) spring.  
**Crankcase Capacity:**—5 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Capacity—15 quarts. See Chrysler Shop Notes for radiator core removal.  
**Water Pump:**—Packless type with belt drive. See Water Pump Section for complete data.  
**Removal:**—Drain water. Remove fan blade assembly, pulley, radiator outlet hose at pump, by-pass elbow

(with small hose), pump mounting stud nuts, fan belt adjusting strap at generator, and belt adjusting strap stud from block. Pull pump off.  
**Thermostat:**—Bishop & Babcock or Fulton. On head Setting—Starts to open 157-162°F. Fully open 183°F.  
**Temperature Gauge:**—Motometer (Auto-Lite) Vapor Tension type. No. 9341 (1940), 9873 (1941). See Miscellaneous Section for complete data.

**CLUTCH**

**Borg & Beck Model 10A7 (Std.), 11A6 (Taxicab), 9A7 (1941 Cars with Fluid Drive)** with "Borglite" Driven Member. Single plate, dry disc type with spiral grooved facings, pressure plate oil baffle, and clutch pedal over-center return spring (except Model 9A7).

NOTE—Clutch marked for identification by number stamped on cover as follows: #928 (10A7), #931 (11A6), #952 (9A7).

See Clutch Section for complete data.

**Facings:**—Spiral wound moulded woven, 2 used. Inside Diameter 6" (9A7), 7" (10A7), 6½" (11A6); Outside Diameter 9¼" (9A7), 10" (10A7), 11" (11A6); Thickness .125" (⅛").

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal:**—Remove release fork pull-back spring, Transmission (see following) and housing underpan. Disconnect release fork from pivot and pull out as far as possible. Mark cover and flywheel, remove clutch cover screws evenly, lower assembly out.

**FLUID DRIVE**

**Optional Equipment.** Consists of fluid coupling at rear of engine. Used on 1941 models only. See Miscellaneous Section for complete data.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering column shift Std. Power Shift (vacuum operated type) Optl. in 1941. See Transmission Section for complete data.

**Removal:**—Remove propeller shaft (loosen comp. flange nut if transmission to be disassembled—See Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, battery ground cable, hand brake cable, and gear shift rod and cable at transmission. Remove mounting stud nuts and lockwashers. Pull unit back, lower and remove from car.

**UNIVERSALS**

**UNIVERSAL JOINTS:** Detroit-Universal Series 4200 (3 & 5 pass.), Series 7200 (7 pass.). Roller bearings with ball & trunnion (4200), cross type (7200).

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. See Chrysler Shop Notes for servicing.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.
